Many of the landmark laws which Cohen has helped push through congress such as medicare and federal aid to elementary and secondary education were once considered far out schemes. Whatever the past achievements, the next few years promise to be some of the most turbulent in the history of American public welfare.

Cohen, of course, may not be in the cabinet to preside over these exciting developments. He has cheerfully referred to himself as a "lame duck" and his confirmation 10 days ago came about six weeks after President Johnson's withdrawal from the 1968 political contest.

However, Cohen enthusiastically endorsed Vice-President Humphrey last month, just a few days before Johnson clamped a prohibition on political activity by top officials in his administration. So if Humphrey makes it all the way, it is probable that Cohen will stay in his job.

If Cohen has received some flak from the left it is nothing compared to the volleys from the right. But only South Carolina's ultraconservative segregationist, Sen. Strom Thurmond, opposed his confirmation on the senate floor. Objecting to HEW's role in promoting school integration, Thurmond denounced "the full scale (race) mixing that obsesses the Washing bureaucracy."

Most senators are impressed by Cohen's long service and the continuing flow of innovations to improve the welfare system. Former Sen. Paul Douglas once paid him the ultimate tribute.

"A social security expert," Douglas said, "is a man with Wilbur Cohen's telephone number."

Sen. Abraham Ribicoff (D-Conn.), "Mr. Cohen has done more to stave off socialized medicine than any man in America," Ribicoff said. "Many distinguished physicians know and understand this. The Arizona medical society has recently voted in favor of Mr. Cohen's designation."

Cohen also had letters of support from at least two officials of the American Medical association. For years before congress enacted medicare in 1965 the AMA fought bitterly against Cohen.

Ribicoff noted that Cohen was by no means limited to social security and welfare, but that he had turned "his innovative talents and boundless energy to the problems of education, mental health, water and air pollution, health manpower, child health and rehabilitation."

The New York TImes praised Cohen's appointment but made it clear that it believed drastic changes were necessary. "Mr. Cohen brings inexhaustible knowledge coupled with freshness of vision and originality of mind," the newspaper commented, "to the quest for roads out of the quagmire that now engulfs the public relief system."

Cohen said in an interview that the booming United States economy certainly had the capacity to lift every person out of poverty. That was not the case when Cohen left Milwaukee in the depression days of 1934. The main problems now, he contended, were how to do the job best.

A Political Realist

By his measure ($3,200 a year for a family of four is the dividing line), 13,000,000 Americans have been removed from poverty during the eight years of the Kennedy-Johnson administration.

But, as he has told many groups in recent speeches, 26 million people still live in poverty, including a third of the nonwhite population.

"The nonwhite unemployment rate is about twice as high as for white," he points out. "Discrimination still exists in hiring and job promotions. The quality of education in most inner city schools is poor.

"Our infant mortality rates are still shockingly high, with infant death rates of nonwhite children nearly double that of white children. Diseases that can be prevented or postponed still take a heavy toll."

Cohen is a member of Johnson's commission on income maintenance which is conducting a broad investigation of schemes which have been offered to replace the present welfare system.

One of the most popular suggestions has been the so-called negative income tax which would offer direct payments to families under certain income levels, but would give them an incentive to work by allowing them to keep a portion of any earnings.

With his sensitive political antennae, Cohen believes it is significant that "no senator or congressman has yet introduced any such plan in bill form." Rep. Melvin R. Laird (Wis.), chairman of the house Republican conference, is working on such legis- permient won't prove one thing." He contended that the subjects of the experiment would not react typically because they knew they were being studied.

Daniel P. Moynihan, the liberal sociologist who once was an assistant secretary of labor, has proposed a "family allowance" and has complained that "government is a disaster at distributing services." Cohen reacted strenuously in political terms.

"I don't know of a single vote in congress that Pat Moynihan controls," he said. "He is not the chairman of the ways and means committee."

Cohen was born June 10, 1913, in Milwaukee. His father, Aaron, 81, still operates a variety store on W. Wells st.

"I was privileged to study at the University of Wisconsin with Professors Alexander Meiklejohn, Edwin Witte, Selig Perlman and John R. Commons, the great teachers who guided me into my life work," he said in a recent speech.

"It was a time when ideas and innovations were flourishing at the university. And the university proudly encouraged its students and its faculty in the 'Wisconsin Idea' of public service.

"There I was nurtured in the wisdom of combining economic policy with the practical interest of understanding and solving social and economic problems. Wisconsin men and women introduced me to the spirit tion was to train graduate students for public welfare careers.

JFK Brain Truster

Never one to shun politics, Cohen joined John F. Kennedy's brain trust in the 1960 campaign and drew up recommendations that he would help push through congress in the next few years. One medical publication has described him as among "the most cooly efficient, pragmatic and persistent innovators Washington has ever seen . . . a man committed to social justice . . . who knows his way through the capital's jungle of politics and bureaucracy."

John W. Gardner, Cohen's predecessor, once suggested, only half in jest, that it was easier for him to get an appointment with the president than with his own undersecretary.

Now that Cohen has the full responsibility for the huge department it doesn't really mean longer hours for the 5 foot 6 inch sparkplug because that would be impossible. For years he has been up at dawn and has worked into the night.

Cohen told The Milwaukee Journal that he believes the federal government should take over the operation of the whole welfare system. That would end the variations among states and inequities which, in Cohen's words, "drive

Turn to page 3

In Milwaukee Today

Secretary Cohen is to give the keynote address today at the dedication of the Milwaukee county senior center in Washington park. Some 500 persons from industry and government are expected at the 1:30 p.m. ceremonies. Admission is by written invitation only. For the county's director of senior and youth centers, Edward J. Berry, it will be a reunion with an old schoolmate, for he was a Lincoln high school student at the same time as Cohen, who was a "big wheel" there: Editor of the Quill, student president, honor society member and manager of the football team.

Announcement of the peace talks complicated the job of selling to the public and congress President Johnson's proposed 10% income tax surcharge to control inflation. Economists like Harvard's Otto Eckstein, found themselves arguing that the end of war did not necessarily signal the end of the federal budget crisis or the need for an immediate tax increase.

Eckstein foresaw a continuing American military presence in southeast Asia and continued spending for other military purposes. Economists also pointed to a shift, not a reduction, in federal spending.

Spending Outran Output

Inflation has not always been cause for alarm. Moderate inflation, in fact, is the companion of good times like those America enjoyed just before the Vietnam buildup.

Vietnam changed this situation. From mid-1965, when the build-up began, military expenditures directly related to the war rose rapidly. Today the rate is more than $25 billion annually and growing.

At the same time spending for other federal programs rose.

Enormous amounts of new money gorged an already lively economy. But there was no corresponding increase in production. According to a CED re- It backs the 10% income tax surcharge because it could be imposed without cumbersome manipulation of the country's complicated tax structure.

CED has recommended, as further countermeasures to the inflationary impact of the war, cuts of about $3 billion in space, agriculture, reclamation, river and harbor and highway programs. However, it gave top priority to programs attacking poverty and urban ills.

Presuming that these moves curbed inflation, what about the postwar period?

"We see no reasons to doubt that the economic readjustment that would accompany reduction of military spending can be effected smoothly, both for the economy as a whole and for particular industries and localities, if available policies are used with reasonable intelligence and vigor," CED declared.

$20 Billion Cutback

The latest federal budget shows that defense spending will consume $78.8 billion in fiscal 1969 with $26.8 billion of it for the Vietnam war.

Assuming that the war ends soon, a defense budget of about $60 billion could be expected by fiscal 1971, CED said. The figure assumes a continued

Frantic Paris: No Place for Calm Talk

By PENDENNIS, London Observer News Service

PARIS, France – Only the French have ever thought Paris the ideal place for peace talks. As long ago as 1814, Lord Castlereagh, the British foreign secretary, said that "Paris is a bad place for business." The late Sir Harold Nicolson, surveying the shattered fragments of the treaty of Versailles, wrote that "Paris, in any circumstances, is too self-conscious, too insistent, to constitute a favorable site for any congress of peace."

The ghosts of the unfortunate peacemakers of 1919 are stirring here now. The talks are taking place in the vast, drab and ornate former Hotel Majestic, which was where the British delegation was housed in 1919. The French have given the dead and overheated conference rooms a lightning facelift, put down yards of vermilion carpet, installed vanloads of shiny green rubber plants and spiky palms, and hung up a batch of ponderous, 17th century tapestries in an attempt to dignify them.

The Americans this time are again at the Hotel Crillon, where they stayed in 1919. And journalist Walter Lippmann, who was there then on the United States delegation, is on hand again now, still holding forth.

Vietnamese Are Familiar

Had he been here, Sir Harold Nicolson would surely have been confirmed in his view. Students rioting; travelers in the Metro weeping from police tear gas seeping down through the shafts; and 2,000 international communications men swamping the bars in the hotels where the plenipotentiaries are staying—none of this exactly assists in the creation of the calm and privacy that serious peace negotiations demand. The other day the taxis were on strike; next, the postal services; and the telephone lines to the French foreign office have been out of order. Then there was a general strike.

It is the Americans who seem the strangers here. After all, the French and the Vietnamese know each other very well. A senior and respected French diplomat, who has recently visted Hanoi, said that the North Vietnamese prime minister almost has tears in his eyes when he recalls the view of Notre Dame from the windows of the Tour d' Argent, one of the best restaurants in Paris. In the Latin quarter there are two streets with Vietnamese restaurants every few yards.

Thousands of Vietnamese, from north as well as south, live here; several hundred of them greeted the North Vietnamese delegation on its arrival. The principal southeast Asian expert at the French foreign office, a Breton, is jokingly said to speak with a Vietnamese accent. The small, delicate, smiling Vietnamese may seem strange to the Americans and to the British, but they are very familiar to the French.

The American team gives off an air of easy opulence and competence. They have set up a press room in the Crillon hotel, which is the size of a transatlantic liner, and supplied it with neat rows of typewriters and stacks of maps of Paris. A sleek official wearing a white turtleneck sweater hands out press badges with a peased-to-have-you-with-us smile.

The Vietnamese seem less pleased. Callers at No. 2 Rue Leverrier, a quiet house in a comparative backwater, get a cross Asian face behind a wrought-iron grille. This is their Paris legation. The door is not opened; and no one knows anything about the Hanoi delegation's plans.

The delegation itself was desperately badly sited in the Lutetia hotel on the left bank, the riot area. The police were determined to stop any riots spreading across the Seine to the right bank, with the result that at times last week they barred the route from the Lutetia to the talks center.

The man here who gives everyone on the international conference circuit a warm and optimistic feeling is Averell Harriman, the chief American negotiator, even if they are puzzled that the Americans should have chosen, for what is certain to be an exhausting and maybe a protracted negotiation, an old fellow of 76 who does not hear too well.

However, the old fellow has arrived here looking 10 years younger than his age: Lightly tanned, fit looking, with that rangy, concave appearance of the good guy in a western movie; easy and confident, with the pink lozenge of his hearing aid in position behind his left ear.

The reason everyone feels confidence in Harriman is that he has, for over 20 years, maintained a consistent, rational, yet unillusioned attitude towards the Communist world, ever since he was talking in Moscow to Stalin. He is both patient and persistent, with unrivaled experience; and his age has this advantage: That he can conduct this negotiation entirely free from any suspicion of personal political considerations. It is 11 years since he gave up hopes of becoming president himself.

Xuan Is a Dandy

Because of Harriman's age, much of the weight is bound to fall on his No. 2, Cyrus Vance. Vance is a straight, reliable, always intelligent, tough but not nasty lawyer who is by nature a pacifier. He was second in command to McNamara in the Pentagon, so he knows the military. He has a close affinity with President Johnson: Both men work, from deep instinct, with an eye on consensus; and his calm and sympathetic temperament may be very useful to the atmosphere here.

Harriman and Vance fit readily into most people's picture of the United States. But the head peacemaker from North Vietnam, Xuan Thuy (pronounced swan twee), is somehow a total surprise.

His underlings look much as expected: Small, tense, parchment faced men in baggy dark suits, cardigans, and (in one case) open sandals. But Thuy is quite different: He has the air of a Chinese-American gambler who is making a killing out of a string of clipjoints in Las Vegas. He is not at

Our Turbulent Students

The student uproar that is rocking universities at home and abroad is often baffling and, therefore, easy to condemn. It deserves sensitive evaluation, not blind wrath and blanket denunciation.

Our student disorders — although they smack of a campus fad — are not in the frivolous panty raid tradition. They are authentic rebellions. Yet it is exaggeration to label them a deadly peril to higher education.

While student activists have more power of disruption than commonly supposed, while preachers of purposeless destruction prowl among them and exploit discontent, only a small fraction of the more than six million students attending more than 2,000 institutions of higher learning are directly involved in any form of insurrection. Moreover, most of the dissidents and most of the besieged institutions seem to be learning lessons that can make other head-on collisions less likely, and beneficial campus reforms more probable.

* * *

It is also important to separate just grievances from ridiculous demands. No university can abide strongarm tactics; when students seize buildings and hold officials hostage as they did at Columbia, they are guilty of anarchy and should expect punishment, not amnesty. But outrage over youthful mobocracy — a tragic sight at any university dedicated to rational resolution of conflict — should not wholly obscure the complaints of demonstrators. Excessive paternalism toward students, the silence of some administrators and faculty members on today's great moral

this makes for biased juries and impairs the guarantee of fair trial by juries that are representative cross sections of the community. High court affirmance of this point would make a so-called "hanging jury" more difficult if not impossible to attain, and death sentences, where juries have a role in sentencing, might be all but eliminated in practice.

Let State Pay Judges

The option for county boards to supplement the basic state salaries of circuit and county judges is a defect that the courts reorganization of 1962 failed to eliminate, even though it conflicts with a principal aim of the reorganization — to assure equal quality of judicial service.

Judges are no longer to be regarded as local officials. All are now subject to direction from the chief justice, through the courts administrator, to hold court anywhere in the state as needed. Many do receive such assignments with regularity.

Of course equal competence does not automatically follow equal pay, but it has to be assumed that unequal pay at least runs the risk of repelling first class aspirants on the lower paid benches, and of disgruntling even the best judges whose colleagues of equal rank may be substantially better paid. With county supplements varying from nothing to $6,500, the inequalities are substantial.

Nor is the courthouse politics aspect to be ignored. It is an obvious source of injustice and friction when one judge may be much better paid than his colleague in the next county just because he is personally more popular among his county board members or politically more skillful in negotiating for his added pay.

While the state is assuming the whole judicial payroll, as it ought to do, it could also correct another shortfall of the reorganization — the retention of two levels of trial courts, mainly because circuit judges then resisted having the county judges equated with them.

The distinction has been fairly lost by now anyway, except for the broader circuit jurisdiction. County judges may be and often are assigned to preside on circuit bench-

Briefcases are places for flights of fancy —AP Drawing

By His Briefcase You Shall Know Him

You Can Get a Good Idea of What's in a Man's Head by What's in His 'Madison Avenue Lunchbox,' Says Writer Who Peeked Into a Few

By SID MOODY of the Associated Press

TO KNOW the inner man ask not of his analyst, his blood type or whether dogs love him. Pry, rather, into his briefcase. There, like bits of bone and pottery in an ancient cave, the true male lies locked away.

The briefcase is merely the boy's pocket grown up, a storehouse, a well bred holster for the fang and claw to carry its owner through the jungle of life.

Come with me to Madison Avenue. Meet an account executive who prefers anonymity but permitted a probe of his attache case — $90, genuine leather, Brooks Bros.

Its contents were business oriented: a copy of Soap and Chemical Digest, a Wall Street Journal, a TV schedule. But there also was a registration for a new outboard boat as well as projected population figures for 1980 in East Hampton where he has a summer home.

Portable Home for Homework

Briefcases are places for dreams.

Consider the briefcase of John Archibald, a vice-president of the Chase Manhattan bank. He is busier with busi-

never knows. He just reads on in hope.

But also in Archibald's briefcase — bought in London, leather "because it lasts longer" — was a deck of cards "in case I get stranded in an airport," an air sickness bag from an airline bearing an old gin rummy score yet to be paid off and a tie clip from a customer "which I don't know what to do with."

Briefcases are for idle hours and idle artifacts.

Carl Tiedemann's briefcase, as is the case with many, is a gift from his wife. "I use it to carry papers back and forth to the office," said Tiedemann, a Wall Street broker. "I may open it only 10% of the time. But I'm always prepared."

Sometimes he packs a tie, razor and clean shirt for overnight trips.

Briefcases are for avoiding baggage delays at airports and for paying smaller tips to bellhops.

Gavin Spofford, president of the Summit-Elizabeth (N. J.) Trust Co. doesn't carry a briefcase at all. "I only take home what I can carry in my breast pocket. When I go to a

customer uses it for," said a discreet salesman who nonetheless allowed that his product was also known as a "Madison Avenue lunchbox." Unjustly, perhaps.

The Samsonite luggage people recently surveyed 10,000 men and found only 2% admitted to carrying food in their briefcases; 10% confessed, however, to carrying spirits from time to time.

Briefcases are for nourishment, more or less.

Food and Drink Found in Briefcase

A lawyer told us that briefcases are repositories for papers that "people wouldn't want left around the desk for peeping toms to read after hours, including things that should have been handled last week."

Briefcases are for guilty consciences.

A Colorado stock broker said he used his briefcase for his credit card wallet since "it's too bulky to carry on my person."

Briefcases are for overflow. Do they signify the go-getter?

Tiedemann: "There may be

Briefcases are symbols, depending on the beholder.

Briefcases are time capsules for the bygone milestones of a man's life.

And Men Laugh at Women's Purses!

A safari through the briefcases of two neighboring colleagues revealed the following:

A letter reporting that a business contact could be located care of his guru at Hanuman temple, Kenchi, PO Bhowali, District Naini Tal, India; directions from a plumber for putting water in the home furnace; "a W-2 form I've been looking for" — this was two weeks after Apr. 15; a picture from a newspaper of Noble Prince ridden by Charles Battazar to victory in the first race at Laurel race course paying $71.10 — "I don't know what that's for"; a bill from Tri-County Florist of Tappan, N. Y., for 15 red roses "That's from the last baby . . ." pause. . . . "No it's not. — That was the last anniversary, that's what it was"; and a yellow page torn from a phone book containing a listing of the restaurants in Wilmington, Del

Briefcases can be embarrassment.

Archibald once had his pop

mands. No university can abide strongarm tactics; when students seize buildings and hold officials hostage as they did at Columbia, they are guilty of anarchy and should expect punishment, not amnesty. But outrage over youthful mobocracy — a tragic sight at any university dedicated to rational resolution of conflict — should not wholly obscure the complaints of demonstrators. Excessive paternalism toward students, the silence of some administrators and faculty members on today's great moral issues, the impersonal nature of mammoth institutions, remote professors too preoccupied with research to teach or counsel — these and other sore points have been validly raised and need to be dealt with honestly.

Students of course should not run universities, setting curriculum, hiring and firing personnel. But they deserve an effective voice in shaping campus rules and general policies. Too frequently this has been coldly denied.

* * *

Much has been written about "alienated" college youth turning from the values of their parents. In some respects this is so. These middle class children of affluence are often contemptuous of materialism and the adult world of business and politics. They detect artificiality and hypocrisy.

Yet there is much in today's protests that indicates students aren't rejecting the older generation's deeper values, but rather are feverishly prodding it to make good on lofty pronouncements. Most university activists, for example, are not scrapping the idea that all men should have equal opportunity; they are demanding swift fulfillment — with the university serving as the cutting edge of change.

This challenges the old notion of a university as an enclave of scholars sheltered from the hurly-burly of the outside world. But alert administrators can meet the challenge, and cut the ground from under revolutionaries, by clearing clogged lines of campus communication, cultivating mutual respect and supporting reasonable reforms before, not after, they face uprisings.

Hanging Juries

The United States supreme court has an opportunity to strike another blow at capital punishment, which Wisconsin wisely abolished 115 years ago. Cases under advisement do not directly raise the question whether capital punishment in itself is "cruel and unusual" and therefore in violation of the eighth amendment. But they do challenge the usual practice, in possible death sentence cases, of systematically excluding persons from juries who have personal scruples against capital punishment.

The defense argument is that for his added pay.

While the state is assuming the whole judicial payroll, as it ought to do, it could also correct another shortfall of the reorganization — the retention of two levels of trial courts, mainly because circuit judges then resisted having the county judges equated with them.

The distinction has been fairly lost by now anyway, except for the broader circuit jurisdiction. County judges may be and often are assigned to preside on circuit benches. The move to a one trial court system, with all judges paid alike, might come more readily now.

That Korean Casualty Story

One of the undocumented assertions making the rounds is that American casualties were greater after Korean peace negotiations began than before. This is supposed to have some relevance to any peace talks about Vietnam, which it hasn't. Anyhow, the assertion is false. The facts, according to defense department records, are these:

From June 25, 1950, through July 12, 1951, two days after Korean negotiations started at Panmunjom, 20,929 Americans were killed or died in prison camps and 53,784 were wounded. From July 13, 1951, through July 27, 1953, when the Korean armistice was finally signed, 12,700 were killed or died and 49,500 were wounded.

Demeaning Welfare System

Critics of America's $8 billion a year public welfare system waste too much time bemoaning its cost. A nation that spends as much on pet food as it does on food stamps for the poor can hardly contend it is overburdened by relief recipients. The proper target is the system's shockingly bad results.

These defects were sadly summarized the other day by a dozen prominent industrialists and financiers in a report to New York Gov. Rockefeller. They said the system is "demeaning, inefficient, inadequate, and has so many disincentives built into it that it encourages continued dependency."

The executives, probing for a better way to guarantee a decent living to anyone unable to earn one, proposed establishment of a "negative income tax." In effect, this means direct cash payments to poverty level families that would taper off as earning power increased. The hope is to stimulate self-respect and, in turn, self-improvement.

The New York report is another sign of the plan's widening appeal among liberal and conservative alike. It is not the only idea for reforming the welfare structure, but by zeroing in on the red tape and regulations that perpetuate pauperism, the negative income tax is emerging as one of the most promising.

Chemical Digest, a Wall Street Journal, a TV schedule. But there also was a registration for a new outboard boat as well as projected population figures for 1980 in East Hampton where he has a summer home.

Portable Home for Homework

Briefcases are places for dreams.

Consider the briefcase of John Archibald, a vice-president of the Chase Manhattan bank. It is bulging with business reading matter.

"There has been a tremendous proliferation of reading in business," says Archibald, who spends an hour a day reading business reports at home to keep up with developments in industry, foreign trade, tax decisions, in the business schools, in trade magazines. Maybe some day it will come in handy Maybe never. The busy businessman carry papers back and forth to the office," said Tiedemann, a Wall Street broker. "I may open it only 10% of the time. But I'm always prepared."

Sometimes he packs a tie, razor and clean shirt for overnight trips.

Briefcases are for avoiding baggage delays at airports and for paying smaller tips to bellhops.

Gavin Spofford, president of the Summit-Elizabeth (N. J.) Trust Co. doesn't carry a briefcase at all. "I only take home what I can carry in my breast pocket. When I go to a meeting out of town, I let an assistant carry the junk."

Briefcases indicate status, but not at the top.

Well, there are exceptions. A Fifth Avenue leather specialty store has a trim attache case in alligator with gold plated clasps for $1,800. Would a man carry a sandwich and thermos in such elegance?

"We never ask what the cases are repositories for papers that "people wouldn't want left around the desk for peeping toms to read after hours, including things that should have been handled last week."

Briefcases are for guilty consciences.

A Colorado stock broker said he used his briefcase for his credit card wallet since "it's too bulky to carry on my person."

Briefcases are for overflow.

Do they signify the go-getter?

Tiedemann: "There may be a little imagery. You walk out of the office and people think there goes a busy man.' "

'But Spofford, who with most of us has lived to see the man in the gray flannel suit of the 1950s hardpressed by the man in the Mao jacket and turtle neck of the '60s; says: "Certain guys try to make an impression right out of 'How to Succeed in Business Without Really Trying.' "

per of Noble Prince ridden by Charles Battazar to victory in the first race at Laurel race course paying $71.10 — "I don't know what that's for"; a bill from Tri-County Florist of Tappan, N. Y., for 15 red roses "That's from the last baby . . ." pause. . . . "No it's not. — That was the last anniversary, that's what it was"; and a yellow page torn from a phone book containing a listing of the restaurants in Wilmington, Del

Briefcases can be embarrassment.

Archibald once had his pop open while walking between cars on the 7:22, and he had to spend the morning walking up and down the tracks retrieving his homework.

And briefcases can be lifesavers.

An ad friend once used his to fight off two muggers outside a Manhattan jazz joint.

In brief, a briefcase is no more, and no less, than the man who carries it.

From the People

Letters must include name and address, not necessarily for publication but as evidence of good faith. They must be kept as short as possible; the editors reserve the right to trim lengthy letters.

'Mayor With Courage'

To The Journal: I say, "Hats off to a courageous mayor." This letter is in answer to D. J. Bruckner's article in your Sunday Journal of Apr. 21 on Mayor Daley of Chicago. The article says Daley's "kill" order hurt him as a leader. Bruckner refers to Mayor Daley as "blowing his cool."

Just how much is any man expected or supposed to stand, when he has the health and safety of several million people under his jurisdiction? I think many people were pleased and happy to see

that finally a prominent politician is for curbing riots, looting and vandalism.

Lawyers and judges seem to be taking the part of the criminal, more and more. Here is Mayor Daley, a man governing a city that has had two holocausts of fire, several large individual fires, looting and burning last summer. The mayor has his people at heart. Is he not allowed righteous anger?

Jesus in fury turned over the tables of the money changers. Moses cast down his tablets and broke them. He took the golden calf and ground it to powder. Even God in His anger sent serpents and plagues to punish people.

When you take righteous anger from a man, you have a vegetable. And certainly Mayor Daley, in a plan for the protection of millions of innocent people, has a right to punish severely a few malcontents.

How quickly some of the leaders were ready to leave Chicago! Dick Gregory for one. He said, "I will leave here and try to get the Democratic convention moved to a more favorable city." Did he mean a city more favorable to lawlessness?

Later in his article, Mr. Bruckner admits certain pressures: A plan to move the Democratic convention. Insurance companies refusing to insure. Bankers worried. Loop merchants complaining. Communication companies asking for a crackdown.

These things are the heart and blood of the city. If all these demand help from the mayor, certainly no man could do less. LEE ADRIAN.

Crivitz, Wis.

Roads Without Trees

To The Journal: I was so happy to read your article on action to preserve our scenic roads. How right you are. This has been a pet peeve of mine for many years.

I live in Dodge county and last Sunday my husband and I went for a drive. It is disgusting to see that every road, those that go somewhere and those that go nowhere, has had every tree chopped down. Necessary or not, every tree is gone.

What is the reason for this? Is this supposed to protect the driver? I note that this year our highway traffic fatalities are headed for an all-time high. How can this be with our beautiful straight roads?

I have never seen our highway department plant a tree. Yet I note that our parks and waysides are covered with dead elms. Even our road that goes only to the garbage grounds has had every tree and shrub removed. Why? I wonder.

A Feigned Respect?

To The Journal: Psychiatrist Durward Baker stated in this column that self-respect cannot originate as the result of self motivated actions. It is, he said, in effect a gift received when one somehow senses "respect emanating from others."

But if a man cannot choose to earn self-respect through rational thinking and actions, how can others choose to act as though they respect him? Does free will mysteriously exist only for some? The answer is that we all possess the ability to choose to think or not to think; to act or not to act. Moreover, since the emotion, respect, is an automatic response to a value judgment, we are not able to turn it on and off at whim — or the suggestion of psychiatrists. We can extend it only to men whom we perceive to have the qualities we admire. To do other than that, we must lie.

Perhaps Dr. Baker would have us feign respect by lying to ourselves and others in an attempt to build an atmosphere of pseudorespect, to which we can all tune in and thereby hope to gain real esteem of selves and others.

Accordingly, if we see a man acting immorally and illegally, endangering his own life and the lives of others, we must not condemn him but must ignore the evil and pretend admiration for the man, so that he can gain "self-respect" from our attitudes toward him! To lend sanction to evil actions in this manner would be immoral, a farce and a fraud. It is exactly this kind of attempt to fake reality that leads to the mental diseases Dr. Baker is employed to eradicate.

The only way to achieve self-esteem, necessary for happiness, is by giving oneself a reason why one should be esteemed. The formulation of moral, rational goals or values, and learning to use one's mind to deal capably with reality, are essentials. These are individual actions, totally independent of the men around us. If we perform them, we gain self-respect, even if ostracized by the whole of society. If we do not, other men cannot give us a sense of personal worth. And we can only fake it.

Johnson and Taxes

To The Journal: The biggest mistake the Johnson administration makes is "business as usual," even though we have a costly war on our hands. Tax loopholes remain open. Oil millionaires are still "taken care of." Capital gain obviates the principle of fair sharing of burdens. Yet the common man is supposed to hold still for a tax surcharge! The whole idea is repugnant to the thinking citizen.

ROBERT HOLDORF.

Summer Jobs—Scholarships

To The Journal: The demand by Marquette students for 100 new scholarships for Negro students is noble and generous.

However, I understand that every dollar MU receives from private donation is already thinly spread to meet other worthy objects. Furthermore, it would be manifestly unjust to dun the already burdened parents of these students to make additional donations for scholarships. These parents over the years have made many sacrifices and foregone many pleasures just to be able to send their own children to school.

As a practical solution, why don't the students most dedicated to the scholarship idea take summer jobs and donate their earnings to a scholarship fund to be set up in their name by the university? If all who participated in the demonstrations also turned out for these summer jobs, a tremendous sum would be raised. Perhaps, any members of the clergy could be excused from their regular duties by the bishop to enable them also to take summer jobs.

In this way, the demands would be met, the parents would be relieved of additional financial burdens and the sense of dedication to moral commitments would be greatly strengthened.

As a side benefit, the students would learn a practical lesson in the relationship between money and labor which would enhance their appreciation of their parents' efforts.

Life Vests, Coast Guard

To The Journal: Your editorial suggesting wider use of life preservers overlooked the basic problem. It is that the approved life preservers are uncomfortable and restrictive. And therefore they are not worn.

Most Lake Michigan racing sailors have "legal" preservers aboard but wear comfortable jackets which are not "approved" since they do not hold your head above water if unconscious.

We respect the law and the lake but we need something we can work in. An alternative is to wear an inflatable vest,

which is unapproved but used by navy pilots. As long as the authorities approve only "cushions" (ever try to wear one?) or horse collar preservers there will be little use.

How much better it would be to approve the vest and gain greater use. The vest may not be the complete answer if unconscious but it is much better than nothing.

Preachments will not change the attitude of the people but possibly a little urging from you would cause the coast guard to approve vests which have been proven acceptable and are worn quite readily.

This approach could reduce boating drownings dramatically over the present situation where the approved device is usually stowed out of sight and mind.

A New Breed of Policeman Needed but Hard to Find

By BERNARD GAVZER, Associated Press

AMONG the jobs with awesome responsibility, include that of the American policeman. He has the power and authority to kill. But it is not because of this alone that he is caught in the center of one of his greatest crises: His own reshaping. The pressures for a "new cop" have come from court decisions dealing with arrest procedures; from social turmoil demanding new relations between the policeman and the community he serves; from the increase in crime and the demands for new methods to combat it. And they have come, lastly, from law enforcement agencies themselves, where rumblings for a higher professionalism and higher standards have long been heard.

All in all the pressures have meant that a new policeman was needed; a more professional policeman, a more intelligent policeman, a better educated, and better trained policeman.

But, the need produced another crisis: The inability to attract the right kind of man. First there has been the competition from other — and better paying — professions. And, even more importantly, there has been the unwillingness of men to become policemen because of the public's poor image of the profession.

The problem has been intensified both by the old chestnut jokes about the "dumb cop" and by the more contemporary charges of "police brutality," voiced particularly by militants in the civil rights struggle.

The result has been a serious manpower shortage.

Right now, there is one law enforcement officer for each 484 persons in the nation. Municipal police number 369,000 and state and other police, 44,000.

On the basis of authorized strength, there are 11,864 police jobs reported going begging in 313 police departments questioned in one survey.

Bodies alone are not the answer, because it no longer makes sense to put a uniform on a big strong boy and send him into the street.

Something Dehumanizing

The candidate has to be able to understand and respond to requirements and rules set down because of United States supreme court decisions. If he seeks to enter a department such as the one at Sausalito, Calif., he has to undergo a psychiatric examination to determine his emotional health in terms of police work.

Because of the quality of men sought, police recruiters must compete with industry. All sorts of hard-sell techniques are being applied, ranging from paid higher education to promises of being part of a profession that aims at being as respected as the law or medicine.

Says one New York policeman:

"I've been on the force 14 months and it is real boss, as they say. As a more complex. We see civil disorders in our streets that degenerate into wholesale destruction, killing and looting.

"At this point in time we are requiring our patrolmen with only high school level academic background to function wisely and instantaneously in a sociological environment that engages the cloistered deliberations of sociologists, legislators and judges."

The innovations were stimulated in the post-World War II period as academicians in police science and in law

—AP

Police training, new style: Study of law, psychology and other courses at university level are part of becoming a member of some police forces today.

began taking a critical look at the nation's system of criminal justice. They claimed they saw the policeman becoming a law unto himself.

"This situation had to be redressed," says Sol Rubin, legal expert with the National Council on Crime and Delinquency. "If the supreme court had not begun to preserve the constitutional rights of suspects and defendants, there could have been grave consequences. We were heading for a police state — or for bloody confrontations between the police and the ghetto and lower class individual who is most often in conflict with police."

To many police, the high court deciuring out how to cope with the decisions — or how to get around them.

In the handful of United States departments which have been top rated by police experts — New York, Chicago, Los Angeles, Cincinnati, St. Louis and Oakland, Calif. — the high degree of professionalism ordained that a way would be found to live with the rules.

"This placed new demands on the policeman and the police administrator," says St. Louis Police Chief Curtis Brostron. "We knew we'd need a policeman who was intelligent and resourceful and self-disciplined. We knew also that there had to be closer and more effective command supervision. We knew that training was a key. We've found that the court decisions haven't hurt us."

How does the impact of the high court decision reach the patrolman? In some cases, it filters down. But in St. Louis, for example, members of the mobile reserve — which is the elite aggressive patrol unit — get a rundown that amounts to a college course.

Capt. John Walsh, St. Louis homicide chief, says "the supreme court decisions have actually helped us. I think we're better and that we make better cases. In the past, we had to count on the confession to make a case."

Effect on Confessions

Top Yale law school students conducted an 11 week study of 127 police interrogations in New Haven, Conn., in relation to the effect of court decisions. Only one-fourth of the suspects — 31 — were warned about their full rights, and 21 of them gave full confessions after being warned. On the other hand, among those who were not warned, there were no confessions.

University of Michigan sociologists studied street interrogations in high crime areas in Chicago, Boston and Washington, D. C. In these settings, they said, the police always had evidence apart from the interrogation itself as a basis for arrest. Voluntary admissions were substantially more frequent than were admissions following interrogation.

A National League of Cities survey of 284 police departments found that only 17% thought that crime prevention and law enforcement could be helped by remaking recent court decisions.

In one deep south department — Birmingham, Ala. — Mayor George G. Seibels, jr., a Republican, is spearheading a reshaping of the police department. One of his key men in the department is Lt. J. C. Parsons, a 33 year old Alabaman, who heads the first active planning and research di-

—By a Journal Artist

What was called the Soviet bloc is dwindling. The shaded countries are no longer dependable Russian allies.

dynamic situation with very few answers ready made. His limited education makes it extremely difficult to adjust to his rapidly changing environment. His relationship with citizens, especially Negroes, is strained to say the least. The young recruit's training, for the most part, is provided by older officers who themselves are products of a past era with a different philosophy and a different set of values."

Parsons is convinced change is coming to the South. "You give us four years," he says, "and we'll show you the best department in the South."

The professionalization of police work has as its objective the raising of the policeman to the status of the teacher, doctor and lawyer.

Theoretically, this can be achieved by raising educational standards, improving police training, extending training periods, improving police management, organization and operations — and salary scales.

Many in College Courses

Higher education for policemen is getting more attention in police life. The National League of Cities study showed that 155 of 279 police agencies had 4,482 officers attending local colleges or universities.

While one survey showed that police administration was the major subject, almost as many studied psychology, with sociology and law close behind.

"The policeman belongs in the mainstream of American life," says St. Louis chief Brostron, "and to be there he needs to know more than the usual police skills."

What will the policeman of the future be like?

Answers Birmingham's Lt. Parsons: "You might say that he'll be a top individual with a college liberal arts education, drawing a pay of $12,000 to $15,000 a year. Less skilled employes will handle regulation of noncriminal conduct — traffic violations, burning trash and violating regulatory codes.

"The professional policeman will be the eyes and ears of the community

East Europe Drama Rises: Enter Russia, Stage Right

By MARK W. HOPKINS of The Journal Staff

THE art of politics and diplomacy in eastern Europe seemed last week to be a psychedelic creation in which audience participants moved amidst unusual forms and flashing strobe lights. But Czechoslovakia, the focus and cause of the whole phenomenon, also obviously was up against a strong traditionalist school of thought that tended toward well ordered and disciplined landscapes. Certainly the leader of socialist realism, in contrast to Czechoslovakia's experimental politics, is the Soviet Union. And what is happening now is an adjustment to new forms, which projected broadly into the future would redesign the mosaic of European relations.

That Soviet leaders are acutely sensitive to the changing scene was underscored Friday, when Premier Alexei Kosygin arrived in Prague, officially for medical treatment. Shortly before, Soviet Defense Minister Andrei Grechko flew in to talk with the Czechoslovak military. If there were small signs of conciliation in these visits, it was apparent that Czechoslovakia's liberalization had generated hostility.

The resistance of the old school was most dramatically, if not convincingly, suggested 10 days ago when Soviet troops rumbled south of Cracow, Poland, toward the Czechoslovak border. The consensus is that Prague survived a crisis in that flash of Clausewitz diplomacy. But its magnitude and intensity are difficult to measure.

The chief imponderable is the weight to give the irrationality factor in Soviet political decisions. Moscow indisputably has the divisions. One tank division of 9,000 men and a motorized rifle division of 10,500 are posted in Poland. Twenty more are in East Germany, and four in Hungary. And in the aftermath of "maneuvers" in Poland, there was a hint that other troops from western Russia had been brought in.

Though the intimidation value of Soviet war games is evident, the question is whether Soviet leaders would out of emotion re-enact Hungary in a Czechoslovak setting in 1968.

Direct military intervention against Communist party leader Alexander Dubcek's liberal regime registers as irrational on the scale of self-interest.

The probable consequences for the Soviet Union — new fear in western Europe of Soviet military threat, fresh anti-Soviet feeling in eastern Europe, a blatant denial of the civilized, peaceful country image that Moscow wants to project — are all bad, except that minority conservatives would hold power again in Prague.

A Dual Policy

If military force is Moscow's last trump card, held for the desperate situation or played at the illogical moment, the Soviet Union now seems to follow a dual policy toward Czechoslovakia.

The compromise course probably was mapped in conferences in the last

by the democratic sway in Czechoslovakia, the population as a whole does not seem to have reached that psychological point where the political bureaucracy must reform rapidly or face the impassioned populace.

But the effect of Prague's reform on foreign policy poses a contagion that Soviet leaders may not so easily manage.

Last week, Cernik appeared before Czechoslovak and foreign correspondents to announce a program that included greater trade with western countries, an invitation to foreign capital, and a suggestion that the Czechoslovak economy would be geared as much to western as to Comecon markets.

With one-third of Czechoslovak trade now tied to the Soviet Union, and nearly two-thirds to Comecon generally, the program could evolve only slowly. Yet, the necessary condition is autonomy in Czechoslovak economic and political negotiations with western Europe and the United States.

De Gaulle in Rumania

What such national independence portends was underscored in two separate events last week. The foreign minister of Yugoslavia, where Titoism was born, arrived in Prague and promptly and publicly lauded Czechoslovakia's reform as a path breaking event.

Almost next door, two other practitioners of national autonomy, France's President Charles de Gaulle and Rumania's Nicolae Ceausescu, agreed that no European nation should be dominated by policies of the great powers.

For the Soviet Union, the pattern was one of a suballiance, based on common interest, emerging between Yugoslavia, Rumania and Czechoslovakia, and encouraged by their counterpart in western Europe, France.

It seems true, at least, that of the former eight east European satellites, the Soviet Union now counts only

the one at Salisbury, Conn., he has to undergo a psychiatric examination to determine his emotional health in terms of police work.

Because of the quality of men sought, police recruiters must compete with industry. All sorts of hard-sell techniques are being applied, ranging from paid higher education to promises of being part of a profession that aims at being as respected as the law or medicine.

Says one New York policeman:

"I've been on the force 14 months and it is real boss, as they say. As a Negro, where could I do more to help shape society than as a policeman? I can steer a kid into an honest life and I can take a thief and remove him before he can infect an honest kid. That is something."

But in Miami, a detective with 22 years behind him confessed:

"There is something dehumanizing about it. I think I'm a real pro. But being a pro means being immune and desensitized to human frailty. You're always suspicious."

There was a time when all a man needed to get on the force was a political connection or a police department sponsor; sufficient height, and being white. There are still plenty of departments where it takes little more — a high school diploma or its equivalent — especially in those departments which have starting salaries of $4,000 or less a year.

"You would be sworn in at 11 a.m. and you'd get a badge and a gun and cuffs and be on the street that night, pounding a beat with an oldtimer," says a Kansas City veteran.

Now? Says Quinn Tamm, executive director of the International Association of Chiefs of Police:

"Until the last few years the problems that concerned us were relatively simple. The standards of social conduct were fairly clear cut.

"Now the situation is infinitely

"This situation had to be redressed," says Sol Rubin, legal expert with the National Council on Crime and Delinquency. "If the supreme court had not begun to preserve the constitutional rights of suspects and defendants, there could have been grave consequences. We were heading for a police state — or for bloody confrontations between the police and the ghetto and lower class individual who is most often in conflict with police."

To many police, the high court decisions setting rules for detention of suspects, right to counsel, and limits to interrogation and admission of confessions, amounted to calamity.

Live With the Rules

Model laws have been proposed, and the Council of Judges of the National Council on Crime and Delinquency has proposed specific ways to make legal arrests and interrogations, but for the most part it has been a case of municipal agencies simply fighting interrogation.

A National League of Cities survey of 284 police departments found that only 17% thought that crime prevention and law enforcement could be helped by remaking recent court decisions.

In one deep south department — Birmingham, Ala. — Mayor George G. Seibels, jr., a Republican, is spearheading a reshaping of the police department. One of his key men in the department is Lt. J. C. Parsons, a 33 year old Alabaman, who heads the first active planning and research division in the department. In describing a scheme for police operations in a model cities program for Birmingham's Ensley ghetto district, Parsons states:

"The selection process ordinarily used to recruit police officers is inherently dangerous. First, a young man with a high school diploma is selected and placed in a position of authority. This immaturity coupled with power is always potentially dangerous.

"The young recruit is forced into a there he needs to know more than the usual police skills."

What will the policeman of the future be like?

Answers Birmingham's Lt. Parsons:

"You might say that he'll be a top individual with a college liberal arts education, drawing a pay of $12,000 to $15,000 a year. Less skilled employes will handle regulation of noncriminal conduct — traffic violations, burning trash and violating regulatory codes.

"The professional policeman will be the eyes and ears of the community. He will recognize and identify complex social problems, define them, isolate them and refer them to other community services.

"If this will make him remote from people, then he'll have to get close to them through other techniques and skills. He will be a true policeman, preventing crime and apprehending criminals.

"We'll make that policeman through selection and through training."

Paris: Mobs, Men and Mood

From page 1

all a suitable-looking hero of the vociferous, wild-eyed Dutschkes and Tariq Alis, the partisans of the North Vietnamese in the west.

He is beautifully groomed: He wears a much lighter and much better suit than his subordinates: Grey tie, gleaming white shirt with flashing cuffs and large rectangular gold cufflinks. He greets people easily with a wide smile and waves to crowds and television cameras as if he loved every minute of it.

Somehow his appearance and manner are reassuring. He certainly does not look like a fanatic. The French press, detailing his revolutionary career, say, with their tendency to romanticize revolutionaries, that he is also a poet. It is hard to imagine him as a colleague of the ascetic and dedicated Ho Chi Minh.

These main combatants and their attenders are ringed meanwhile by a circle of bystanders—French, British, Australian, NLF Vietnamese, South Vietnamese—like people watching a street fight and uncertain whether or not to join in.

The Russians here are almost invisible. So are the Chinese, though two of them were seen, in their black Mao-type tunics, walking smiling down the Champs Elysees in a hailstorm.

The British are not the only ones with ironic memories of the past in this city. Fifty years ago Ho Chi Minh had been living in Paris for a year, working as a retoucher of photographs and already, aged 27, beginning to emerge as a revolutionary leader.

When the peace conference of 1919 started, inspired by President Wilson's 14 points and the fashionable idea of self-determination, he went to Versailles and presented the conference secretariat with his own eight points for the emancipation of his country.

These demands seem amazingly moderate in retrospect. All Ho asked for was representation in the French parliament, and basic civil liberties—freedom of the press, equality before the law. He tried hard to plead his case before President Wilson himself. But Wilson would not see him. Having since fought and won a war against the French, Ho now, half a century later, has not only another American president but most of the world watching his men in Paris and listening.

a bratant denial of the civilized, peaceful country image that Moscow wants to project — are all bad, except that minority conservatives would hold power again in Prague.

A Dual Policy

If military force is Moscow's last trump card, held for the desperate situation or played at the illogical moment, the Soviet Union now seems to follow a dual policy toward Czechoslovakia.

The compromise course probably was mapped in conferences in the last two weeks. Dubcek and Czechoslovak Premier Oldrich Cernik traveled to Moscow on May 4 for what turned out to be a "frank" exchange of views with Soviet leaders. Then, on May 8, a second hastily arranged meeting brought in East Germany's Walter Ulbricht, Poland's Wladyslaw Gomulka, Bulgaria's Todor Zhivkov and Hungary's Janos Kadar.

The result, judging from last week's events, was twofold. The Soviet Union is showing a limited tolerance of Czechoslovakia's "democratization." But the price is Prague's assurances that it will not break from the Warsaw military pact or the Comecon economic alliance.

If indeed this was the private bargain — as evidenced by statements on both sides and convening of a Comecon session last week — the observable relations are far from placid.

The Soviet press denounced Thomas Masaryk, founder of the Czechoslovak republic and national hero, as an "absolute scoundrel." Although clearly a retort to Czechoslovakia's dredging up of Soviet secret police involvement in the country's purge trials in the 1950s, the Prague press continued to reveal more of the lurid details last week.

Beyond these polemics over the past, Czechoslovakia has exchanged bitter comments with both Poland and East Germany, mostly over the latters' biased reporting of the Dubcek reform.

Czechoslovakia's strictly internal liberalization is probably the secondary issue, at least to Moscow. Although the Soviet Union has its own dissenting liberals who are nourished

former eight east European satellites, the Soviet Union now counts only

—Mauldin, Chicago Sun-Times

"Our Czechs have bounced"

four loyalists — East Germany, Poland, Bulgaria and Hungary — about in that order. And even Hungary is verging on the doubtful, to the extent that Janos Kadar also has praised the Czechoslovak liberalization.

Prague's intention to cater more to the west springs in good part from internal economics. Its need for capital and technology is simultaneously a political quandary.

Czechoslovakia reportedly has asked the Soviet Union for a $400 million hard currency loan, much or all of which would be spent outside Comecon. Moscow has not yet responded. But it is evident that the Soviet Union can employ economic devices at least to keep Czechoslovakia from defecting entirely.

What seems difficult, if not impossible for the Soviet Union now is to turn back the Czechoslovak reform. For the moment at least, Moscow is trying to minimize the impact, and make the best of a bad bump on the east European road to Moscow style socialism.

The Will for US Welfare

From page 1

people from states with low payments to those with high standards."

This notion certainly will draw fire from conservatives as another invasion of states' rights, but Cohen is accustomed to that kind of reaction to his proposals.

He has suggested the possibility of a payroll tax to finance some of the public welfare burden because the social security system has been widely accepted and there is no stigma.

"This is the crux of the issue," he has said. "Why the hell should I pay some 35 year old guy with a wife and two kids just to sit on his front porch? You don't mind paying welfare to a 75 year old disabled guy.

Psychological Barrier

"I don't think it is a case of money today — it is the psychological barrier. Now we don't have this feeling about social security. That's because you pay for it through payroll taxes —you're getting something you pay for. Maybe we could expand social security to cover part of welfare and pay more payroll taxes—both the employer and employee."

Howard Samuels, under secretary of commerce, has suggested in several speeches that Americans must give up some of their luxuries to finance solutions to the urban crisis and other problems.

"We spend as much for chewing gum as for model cities," Samuels said earlier this month. "We spend as much for pet food as on food stamps for the poor. We spend more for tobacco than government at all levels spends on higher education. We spend $300 million for jewelry and quarrel over $10 million for the teacher corps."

Surprisingly, Cohen doesn't agree with this approach. He agrees on the urgent need for more public funds, but does not believe that it is realistic politically to expect citizens to give up something they already have, no matter how luxurious.

Take 10% of Growth

Instead, he wants to take at least $5 billion more a year from an exuberant economy. Let us say, Cohen muses, that the economy grows at the rate of $50 billion a year. Taking $5 billion a year from that increase is reasonable and that would produce an increase of $25 billion a year for various welfare programs in five years.

Cohen sometimes finds himself resorting to a cliche when he protests that the American society cannot be transformed overnight. But his recent speeches have carried a new note of urgency. Ashe told business executives here last month, "time is running out."

"It is becoming intolerable for many American Negroes and other minority groups and rightfully so," he said, declaring that in the United States "more and more people are enjoying the benefits of prosperity" while there is a growing disparity "between those who have gained the most and those who have gained the least."

Wilbur Cohen has spent his entire adult life helping those who have the least and he doesn't intend to stop now.

Happy Worry: Economic Impact of Peace

From page 1

presence in Asia and development of an antiballistic missile system.

The almost $20 billion reduction in the annual rate of spending would be about $2.2% of the estimated gross national product (GNP) for fiscal 1969, a decline roughly similar to that following the Korean war. The United States Chamber of Commerce forecast a 3% GNP drop.

CED said that the broad objective of policies to deal with this reduction should be a stepped up attack on race-poverty problems and promotion of a higher private investment rate to accelerate economic growth, a necessity in quieting social conflict.

More Capital Spending

If defense spending declines as CED expects, "not much room will be left for tax reduction in the postwar transition period of about two years except for the removal of the wartime tax increases and extensions."

Why? Because CED assigns high priority to increased nondefense expenditures, especially for poverty, and to building up a moderate budget surplus. Since business is reluctant to invest when there is a federal deficit, a surplus is expected to stimulate capital spending.

CED also wants improved state revenue systems, a 10% cut in the federal corporate profits tax to be replaced by a tax on value added — the difference between the cost of purchases and the cost of goods sold — dismantling of temporary controls on capital investment abroad and repeal of the interest equilization tax and any taxes or restrictions on foreign travel.

To assure a smooth readjustment CED advised that new programs "come into the market fast enough to absorb the released resources without recession and unemployment, but not so fast as to stimulate inflationary forces."

Demand can be sustained best in the face of an unpredictable but possibly rapid release of labor and material from the war effort by prompt reduction of the wartime taxes and by freeing money, CED said.

"Federal spending cannot serve this function equally well, because the decision making process is too slow and is properly dominated by considerations other than the support of aggregate demand," he said.

The government, "to make clear its intention to support total demand," should review and update "a shelf of public programs deferred because of the war. While we do not foresee a sufficient surplus to finance most of these programs, readiness to put them into effect, quickly if necessary, will improve confidence in our ability to support total demand. Local governments could follow suit with respect to projects that have been postponed because of high interest rates," the committee said.

How would labor be affected by the end of the war?

CED estimated that about 250,000 federal jobs are directly related to Vietnam, 800,000 posts in the armed forces and 1 million workers in private employment, composing 1.7% of the total civilian employment in fiscal 1967.

Few problems are expected in shifting federal employes to other government jobs. The armed forces probably will be reduced gradually, with many men returning to school.

Impact in State

If total employment remains high, substantial job reductions are not expected in the private economy, with the possible exception of industries critically tied to the war effort, such as ordnance and aircraft manufacturing.

CED said that because of good prospects for new civilian aircraft, large scale layoffs may not hit big aircraft manufacturing communities like Los Angeles, Seattle and Wichita.

The ordnance buildup, it said, has occured mostly in areas where it consumes but a small part of the total labor force and opportunities for other work are plentiful.

The Wisconsin state employment service recently estimated that only 20,000 jobs are directly related to Vietnam. In places like Eau Claire and Baraboo, where ordnance is produced, there undoubtedly would be lay-offs, but the impact is not expected to be strong if the economy maintains its momentum.

The size and character of the expected readjustment does not indicate the need for a "crisis effort of large proportions," CED said.

"Since companies, communities and individuals most likely to be affected have adequate guidelines to follow if they take the initiative in undertaking planning, we urge that they exercise such initiative," CED said. "Aids from the government exist, although some temporary expansion may be needed as defense cutbacks occur. We think that these observations are not complacent but realistic."

Veronica Is Bossy and Gets a Lesson

By RUTH H. GEORGE of the Milwaukee Public Library

EVERY new kid in the neighborhood learned the hard way that one did not tangle twice with the tall Veronica, who was a bully. Boys and girls alike had been through a good fight with all the trimmings to establish who was boss of the eighth grade in PS 63.

Then along came that shrimp Peter Wedemeyer, whose clever tactics outwitted Vernoica each time they clashed even though he only came up to her shoulders. Many maddening days passed before Veronica discovered that being a girl has its distinct advantages.

"Veronica Ganz" by Marilyn Sachs (Doubleday, $3.50), is for the 9 to 12 year old who will see beneath the tough exterior a heroine loyal to her explosive mother, a docile stepfather, a dreamy younger sister, and an endearing little ent and went to a special school, but the others readily accepted Andy Hoddell with his warm smile and instant friendliness. Their favorite pastime was to "buy" and "swap" valuable property around the city — a game that Andy could never understand however hard he tried.

When a shabby old man "sold" Andy the Beecham Park racetrack for three hard earned dollars it seemed for a time that the boy really did own it. The fantasy grew, and with it his friends' concern over Andy's inevitable disillusionment.

Books of the Week

Philby, Who Betrayed Two Nations, Speaks for Himself, Is Spoken For

THE PHILBY CONSPIRACY. By Bruce Page, David Leitch and Philip Knightley. Foreword by John Le Carre. Doubleday. $5.95.

MY SILENT WAR. By Kim Philby. Grove. $5.95.

THE THIRD MAN. By E. H. Cookridge. Putnam. Cloth, $5.95; paper, 95c.

KIM PHILBY, THE SPY I MARRIED. By Eleanor Philby. Ballantine. Paper, 75c.

Moscow's Man in London and Washington Tells His Story and Is the Subject of Three Other Accounts

By BILL HIBBARD of The Journal Staff

WHEN H. A. R. (Kim) Philby entered the British secret intelligence service (SIS) in 1940, he was given the designator symbol DUD. Never was such a designator more ironic, for in 30 years of work for British intelligence Philby turned out to be, in the words of America's spymaster, Allen Dulles, "the best spy Russia ever had."

Coming in quick succession, these four books trace the incredible successes of this master of duplicity from different points of view: Through the eyes of a team of London Sunday Times newspapermen (Page - Leitch - Knightley) who at times had upward of two dozen assistants doing research, through the eyes of the main character himself, through the eyes of a former intelligence officer who followed the case from the time suspicions were made public (Cookridge) and through the eyes of Philby's third wife, who says she never had a clue that he was working for the Communists.

"The Philby Conspiracy," the most complete account of Philby's double life, is based on months of painstaking research and interviewing of his friends, associates and anyone else who had knowledge and would talk. It describes in detail his three decades of perfidy, in which he survived two investigations of his activities and, after the second, was publicly cleared of any betrayal of his country by then Foreign Minister Harold Macmillan, who, the authors say, believed the Philby affair simply a squabble among competing secret services.

Even though the British counterespionage agency known for his Arabian explorations.

Incredibly, when SIS created a special Soviet counterintelligence section in 1945, the man chosen to head it was the star Soviet agent, Philby. In 1949, more doors opened to him when he was assigned as the SIS liaison man with the central intelligence agency in Washington. This enabled him to pass United States secrets to his increasingly appreciative Soviet masters and to keep them posted on most plans and activities of all western intelligence.

Among operations he probably sabotaged was an attempt to provoke civil war in Albania to wrest it from Communist control, with the hope that the ferment would spread throughout the Balkans. All that resulted was a slaughter of Albanian volunteers who were infiltrated. In his book, Philby dismisses the operation as doomed by circumstances from the start, and adds that it was lucky it failed, since it passed the Albanian headache on to Red China.

How did Philby escape detection for 30 years? First, he was remarkably intuitive in knowing what to do when, and he apparently had excellent direction from his Soviet superiors. Then,

"Kim" Philby at a press conference in 1955, after his exoneration by Harold Macmillan, then foreign minister.

Eleanor Philby, third wife of the master spy.

he was protected by the appallingly naive "old boy" mentality of the SIS; he came from the right family, attended the right schools, had the right friends. As a member of the establishment, he simply couldn't be suspect.

Ditto for Maclean and Burgess. Actually, it was their defection that turned attention to Philby. But even then, for 12 years, though fired by SIS because of the suspicions that couldn't be proved, his ties were still strong enough so that he continued working for SIS on a "free lance" basis.

"Secret services have in common with freemasons and mafiosi that they inhabit an intellectual twilight — a kind of ambiguous gloom in which it is hard to distinguish between the menacing and the merely ludicrous," write the Sunday Times re-

Victor Sawdon Pritchett

V. S. Pritchett's England

With a Novelist's Charm, a Critic Recalls a Boyhood Among Plain People

A CAB AT THE DOOR. A Memoir by V. S. Pritchett. Random House. $5.95.

By FRANK RAHILL

THE author of these reminiscences is an English writer admired by a discriminating public for his book reviews (mostly in the New Statesman) and a few novels and short stories. The present work has the tidiness and charm of an old fashioned novel, but the tone and technique are contemporary and sophisticated.

The background consists of two important segments of English society of the Labor party era—small town and rural North country, and cockney London at the working class level. Yorkshire religious nonconformity in various forms and big city commercial enterprise compete for the soul of the narrator. He eludes these nets and takes flight for Paris at the end of the book at the age of 20—with a sequel to be expected.

The young Victor Sawdon Pritchett's ambivalent relationship with his dominating Victorian father constitutes the main line of development. The elder Pritchett emerges as a Micawber of the new middle classes—one of many delightful portraits in the book—who never quites makes it as a successful entrepreneur, in spite of an almost religious dedication to the mystique of selling goods.

Though the tensions of Pritchett's early life were favorable for the growth of an artist, literary associations were lacking except for a brief exposure to an extraordinary teacher of English at one of the many wretched slum schools he attended. This Mr. Bartlett was a pioneer in the case method of working up a theme, and he ignored grammar, practiced permissiveness and evoked doglike devotion from his ragamuffin classes. Bartlett soon disappeared, but not before planting a seed in his most promising pupil, which was to germinate in the congenial air of Paris.

The reviewer is a member of The Journal Company's promotion staff and a writer on literary subjects.

'Living Documents,' II

The second volume of "Living Documents in American History," edited by John Anthony Scott, has been published by Washington Square Press at $7.95. It contains contemporary material from many sources on the period that began with the reconstruction du-

ted Vernoica each time they clashed even though he only came up to her shoulders. Many maddening days passed before Veronica discovered that being a girl has its distinct advantages.

"Veronica Ganz" by Marilyn Sachs (Doubleday, **$3.50**), is for the 9 to 12 year old who will see beneath the tough exterior a heroine loyal to her explosive mother, a docile stepfather, a dreamy younger sister, and an endearing little brother who hiccups for hours when he is upset. Illustrations by Louis Glanzman add a humorous touch to the brisk text.

* * *

The gifted author-illustrator Leo Lionni has a new bright and bold picture book for the imaginative 3 to 6 year old, **"The Biggest House in the World"** (Pantheon, $3.95).

A tiny snail living on a big cabbage has grandiose ideas. He wants the largest house when he grows up. His wise father tells him a story to prove how impractical and disastrous this could be, and our friend goes happily on his way to

Jacket picture for "The Biggest House in the World."

inspect the fascinating world of nature around him, content with the thought that some things are better small.

* * *

Growing up in Missouri in the early 1900s, Peakie Maston felt she was the loneliest person in the world. Instead of curly hair and three best friends like her sister Beatrice, she had straight hair and no friends until she met Jo March in "Little Women."

Peakie confided in the fictional Jo whenever her mother's unconventional behavior embarrassed her to tears or the various boarding schools she attended proved unbearable. Her great love was her father, with whom she memorized and recited poetry.

"Over the Hills and Far Away," by Lavinia Russ (Harcourt, Brace & World, **$3.50**), is a nostalgic autobiographical novel for the independent 10 to 14 year old. The setting may be old-fashioned, but Peakie and her problems are a timeless delight.

From "My Friend John"

Wrightson presents, with insight and without sentimentality, a story of friends who genuinely cared for their retarded companion. The perceptive 10 to 12 year old will find it both entertaining and rewarding.

* * *

John's friend can't spell, but John can't multiply, so they help each other. They know what is in each other's refrigerators and where the secret places are in each other's houses. John knows where his friend keeps the things in his bureau drawers, and his friend knows what is in all the closets at John's house.

Thus in **"My Friend John"** (Harper & Row, $2.50), Charlotte Zolotow brings the concept of best friends to the 4 to 8 year old in warm and simple fashion.

Engaging pictures by Ben Shecter add more fun.

had knowledge and would talk. It describes in detail his three decades of perfidy, in which he survived two investigations of his activities and, after the second, was publicly cleared of any betrayal of his country by then Foreign Minister Harold Macmillan, who, the authors say, believed the Philby affair simply a squabble among competing secret services.

Even though the British counterespionage agency (MI-5) suspected what the highly placed Philby was doing, it could produce no conclusive proof. Only his defection to the Soviet Union in 1963 brought confirmation that he was, indeed, the "third man" who had sounded the warning that caused Donald Maclean and Guy Burgess to defect to the USSR. In league with Philby, both had been valuable Soviet agents since their college days, but the security services finally were catching up with them.

Philby's book, though containing many obvious omissions and, probably, many distortions, makes fascinating reading, for he adds the dimension of emotion to the facts. He describes the gut wracking tension that builds when exposure appears imminent, the satisfaction that a dedicated spy gets from his successes, and the frustration he felt while preparing lectures on the Soviet intelligence services because he had to leave out information based on his personal experience.

He admits that he was recruited by the Communists when he attended Cambridge in the early thirties, and he disputes the speculation that his course was influenced by his unorthodox father, St. John Philby,

They pieced together an appalling story: From left, Phillip Knightley, Bruce Page and David Leitch.

of the suspicions that couldn't be proved, his ties were still strong enough so that he continued working for SIS on a "free lance" basis.

"Secret services have in common with freemasons and mafiosi that they inhabit an intellectual twilight — a kind of ambiguous gloom in which it is hard to distinguish between the menacing and the merely ludicrous," write the Sunday Times reporters.

It was in this "ambiguous gloom" that Philby thrived.

Paris at the end of the book

'Living Documents,' II

The second volume of "Living Documents in American History," edited by John Anthony Scott, has been published by Washington Square Press at $7.95. It contains contemporary material from many sources on the period that began with the reconstruction during and after the Civil war and ended with the outbreak of World War I.

theme, and he ignored grammar, practiced permissiveness and evoked doglike devotion from his ragamuffin classes. Bartlett soon disappeared, but not before planting a seed in his most promising pupil, which was to germinate in the congenial air of Paris.

The reviewer is a member of The Journal Company's promotion staff and a writer on literary subjects.

'Interpretations'

Additions to Prentice-Hall's Twentieth Century Interpretations series deal with "Hamlet," "Twelfth Night," "Walden" and "The Adventures of Huckleberry Finn." The editors, respectively, are David Bevington, Walter N. King, Richard Ruland and Claude M. Simpson. The books, containing critical essays on each subject, sell at $1.25 in paper, $3.95 in cloth. The subjects of previous volumes were "All for Love," "The Frogs," "The Great Gatsby," "Henry V," "The Iceman Cometh," "Samson Agonistes" and "The Sound and the Fury."

On a Cold Island With No Compass

VOYAGE IN THE DARK. By Jean Rhys. Norton. $4.95.

By LEONA YOUNG

THIS highly regarded British novel of 1934 is breaking into American print for the first time. With its direct style, it settles comfortably into our present literary scene.

It is a brilliantly written, sensuous, environmental story about a late teen ager — a chorus girl named Anna Morgan. Born into the heat of a West Indian sun "that can be terrible like God," she is chronically cold in England. A chain of seedy boarding houses sets the pitch for the rather conventional plot, which Oliver Goldsmith might have suggested in his lines: "When lovely woman stoops to folly/And finds too late that men betray. . . ."

The voyage of the title is Anna's English adventure, chiefly involving two men and three girls; Anna's descent to prostitution and a brief pregnancy.

The impact is all in the telling. Anna's simple monologs are full of commentary. Without vulgarity and without sentimentality, her reactions are communicated to the reader. She comes through as a bewildered young woman, too infatuated with a man 20 years her senior to recognize the real values in her foggy world.

Into Anne's figurative voyage, memories keep floating like phantoms, crowding it with an assortment of poetic images: A sea that "was millions of spangles"; "little gray streets all exactly alike — leading to stage doors"; trays of salt fish cakes "all sweet and charmin'" — carried on the heads of black women. And, with razor edged perception, Mrs. Rhys shows us the British in unlovely colors, through eyes of the disenchanted.

The novel ends with Anna recovering from an abortion — "I drank the gin and listened to them whispering. Then . . . the ray of light came in under the door. . . . I thought about misty days when anything might happen."

Has the grisly episode changed the course of her voyage to a brighter port? Probably not.

Mrs. Young is a free lance writer who lives in Whitefish Bay.

The View From the Bottom

COUNT A LONELY CADENCE. By Gordon Weaver. Regnery. $4.95.

By LESLIE CROSS
Of The Journal Staff

AT THE heart of this first novel by a former Milwaukeean is an extraordinary portrayal of army life in the post-Korean war period. In the best sense, it is "From Here to Eternity" brought up to date, and if the book ends in a holocaust of the spirit rather than a Pearl Harbor, the catastrophe is no less affecting for being muted.

Ostensibly, it is the story of Frank Bean — Fairchild Franklin Bean of Milwaukee before he became a high school dropout and was coerced into enlisting because of petty thefts. But it is also the story of a wide range of "left footers," hapless trouble makers and those lowly of the military system who cannot find a sense of personal worth under the rules imposed upon them.

Frank Bean is always at odds with the system, stateside and overseas alike. He is battered but unbent. Inevitably, he becomes a military prisoner.

In a stockade in Germany, he finds himself the fellow of six Negroes accused of military crimes from desertion to rape and murder. His fellow prisoners, ironically, are the comrades whom he most respects. They are a fascinating assemblage of jailbirds, and not since "The Enormous Room," E. E. Cummings' great personal document of World War I, is it likely that a more engaging outlaw company has been put into a book. In the end, the white prisoner betrays them to revenge himself on another white man, the sergeant jailer who is determined to turn him into a soldier.

The novel is vivid with glimpses of the life that enlisted men encounter in Europe — the bars, the girls in the parks, the scheming civilians with whom they do business. The author enriches it with a deep understanding of both the dignity and the limitations of humanity in such a world. And it asks moral questions that cannot be ignored.

"Count a Lonely Caence" — the title is suggested by the count for exercise in a stockade, heard before dawn from afar — has its faults. The first person narrative does not always convince one that the bitter Franklin Bean could have had the insights that are an integral part of the novel.

The author is on the English faculty of Marietta (Ohio) college. He has dedicated his book to his wife and to a Wisconsin writer with whom he studied, Donald Emerson of the University of Wisconsin—Milwaukee.

Reading and Writing

'One Sitting' for Mrs. Popkin

By LESLIE CROSS
Journal Book Editor

ZELDA POPKIN was in holiday mood. A few days before we saw her in New York, she had turned in the completed manuscript of her latest novel, "Herman Had Two Daughters." It has since been published by Lippincott and was reviewed in The Journal three Sundays back.

"When I write a novel," said Mrs. Popkin, a spirited woman in her 60s, "I try to do it in one sitting — or in what is as close as I can come to a single sitting. This last sitting lasted two years. I write all day, seven days a week, when I'm working on a book. I can't visit friends or engage in any social activities. I live a monastic life."

With her manuscript packed neatly for delivery, Mrs. Popkin began celebrating by repotting her house plants at her Manhattan apartment. Next a rackful of clothes went to the tailor for cleaning, pressing or repairs. Mrs. Popkin telephoned a neighbor and asked whether she could visit her and play with her baby.

"And today," Mrs. Popkin announced with enthusiasm, "I'm going to see 'Fiddler on the Roof.' I haven't seen a show in those two years."

From Wilkes-Barre to Manhattan

Mrs. Popkin's new book is about a Jewish family in a small New Jersey city in the earlier decades of this century, and the divergent paths of its daughters through most of the rest of the century to date. Mrs. Popkin herself was a daughter in a somewhat similar family in another small eastern city— Wilkes-Barre, Pa.—and had her first whiff of printer's ink there. She was 16 when she got a job writing items for the Wilkes-Barre Times-Leader, and by the time she was 18 she was covering murder cases.

"I was such a little girl," she related, "that my father used to accompany me when I had evening assignments."

The then Zelda Feinberg went to New York later to attend the newly established school of journalism at Columbia university. "But it wasn't really exciting," she said. She got married and she and her husband, Louis Popkin, started a public relations business.

He died about 25 years ago, and his wife has since devoted most of her time to her books. Her present one is her twelfth.

"Before my husband's death," she said, "I had done some writing, but it was mostly as means of relaxation, just as another woman might knit."

Her first books, published in the late 1930s and early '40s, were mystery novels. The book she regards as her first serious novel, "The Journey Home," appeared in 1945. She went to Europe with the Red Cross at the end of World War II, and the experience had an outcome in a novel set in occupied Germany, "Small Victory."

In 1948 she was off for the new state of Israel. She lived under mortar fire in the siege of Jerusalem that fall and put her experiences to good use once more, in a book, "Quiet Street," that her publisher called "the first novel of contemporary Israel." She made another trip to Israel three years later, and lived briefly in Canada in the 1950s.

She found she couldn't write as easily in any of those places as she could in New York, and soon returned there.

"It's the only place I can really work," she told us. "Its tempo seems to suit me, and I think you can find more privacy in Manhattan than anywhere else. There isn't any gossip here, or even any curiosity worthy of mention."

She Gives Credit to 'a Great Editor'

She is fond on New York, too, because her editor, Miss Tay Hohoff works at Lippincott's Manhattan offices (its headquarters are in Philadelphia). Mrs. Popkin is one writer who praises her editor freely for having had a large part in her accomplishments. "Tay Hohoff," she remarked while that lady was out of earshot on our mutual visit to the Lippincott suite, "is a great editor. A writer like me, at least, needs an editor who can discipline and shape his work — one who knows what's in his mind even before

Zelda Popkin, whose 12th book is "Herman Had Two Daughters."

he becomes conscious of it himself."

Mrs. Popkin has two sons who do some writing, too, though of a less literary nature. One is Richard H. Popkin, chairman of the department of philosophy at the University of California in San Diego. With numerous professional monographs to his credit, he is completing a book on the murder of President Kennedy, in which he thinks two "Oswalds" figured. Roy Popkin, his brother, is the author of "The Environmental Science Services Administration," about the large federal agency of that name, published last fall by Praeger.

Mrs. Popkin lives near the East Village and finds the environment exciting.

"I knew the city," she said, "when the trees were higher than the houses, and horse cars were still running. I look up and am exhilarated. When I look down, of course, I'm sometimes distressed."

Music Stage

It's Spring Concert Season— Can Summer Be Far Behind?

By GERALD KLOSS of The Journal Staff

NOW starts the annual spring breathing spell in local stage and music activity, with performers and audiences resting from the exertions of a long season and gathering strength for the summer music and straw hat theater season ahead. Still, there are a few concerts this week to lure the indefatigable music lovers away from their TV sets.

The Arion Musical club spring concert will be given at 8:15 p.m. Tuesday at the Memorial Center, under the direction of Gerald Jenkins. The chorus will sing Haydn's oratorio, "The Creation," which many esteem the inspirational equal of Handel's "Messiah." Indeed, the text, merging parts of the book of Genesis and Milton's "Paradise Lost," originally had been prepared for Handel. Haydn composed the oratorio at 66 — his first attempt in that medium — and claimed that his inspiration came from on high.

Soloists will be soprano Marlene Rosen, baritone Frederick C. Frey and tenor Edwin Kappel.

The University of Wisconsin—Milwaukee symphony orchestra will give its final concert of the school year at 8:15 p.m. Monday in the ballroom of the student union.

Wolfgang Vacano will conduct the Schumann A minor piano concerto, with Richard Neher as soloist, and Donald Erb's concerto for percussion and orchestra, with Ronald George as percussionist. Stephen Colburn will conduct Mozart's overture to "The Magic Flute," a movement from Mahler's fifth symphony and the first movement of Mendelssohn's violin concerto, with Taik Ki Kim as soloist. Thomas Trimborn will conduct Humperdinck's "Hansel and Gretel" overture and Smetana's "The Moldau." Admission is free.

Opera Workshop

Scenes from four operas will be presented by the UWM Opera Workshop at the Skylight theater, 813 N. Jefferson st. at 8:15 p.m.

David Weber will be soloist Monday at Brookfield East high school.

music composed by Harold Bellman Green, dean of music theory, in the college concert hall, 1584 N. Prospect av. Faculty members and students will play compositions for solo piano and trumpet, flute and oboe, with piano, plus four part chorus settings of three Shakespearean sonnets.

Pianist Richard Zimdars will give his junior recital at the University of Wisconsin–Milwaukee's fine arts recital hall at 3:30 p.m. today, playing works by Schumann, Debussy and Beethoven.

The De Sales Seminary choir and St. Pius X Guild choir will present a memorial concert for the late Prof. John Rueping, seminary professor for 49 years, at 8 p.m. today in the De Sales Preparatory Seminary chapel, 3501 S. Lake dr. The principal work will be Faure's "Requiem," with the choirs assisted by members of the Milwaukee symphony orchestra, plus vocal soloists. The concert is public and free.

Clarinetist David Weber of the New York City Ballet orchestra will be the soloist in Carl Maria von Weber's second clarinet concerto in the spring concert of the Brookfield East high school music department at 8 p.m. Monday in the high school gymnasium. Dale Folsom will conduct the high school concert band in the concerto and other selections. Robert Potter will conduct the high school chorus. Band and chorus will combine for a performance of 13 sections of Carl Orff's vigorous and colorful "Carmina Burana."

Music Around State

A Bach festival of four programs will be given Friday and Saturday at the First Congregational church in Madison. Among the artists and groups in the programs will be harpsichordist Gunnar Johansen, organist John Wright Harvey, members of the Madison symphony, Madison Civic chorus, Philharmonic chorus and oboist and violinist Kathy and Norman Paulu.

Dr. John Mitchell will conduct the Ashland Civic orchestra in a concert at 2:30 p.m. today at the Alvord theater on the Northland college campus at Ashland.

Forthcoming events:

The City Center Joffrey Ballet will give six performances of works from its New York city season May 28 through June 1 at the Chicago Auditorium theater. Performances will be given at 8:30 p.m. nightly, plus a 2:30 p.m. matinee June 1. Eleven ballets will be performed.

Bela Nagy, professor of music and head of the piano department at Boston university, will supervise a piano workshop on the UW campus in Madison July 1-2. Dr. Nagy, who was a personal friend of Bela Bartok and introduced his third piano concerto, will also play a public recital in the campus music hall June 30.

Five attractions have been announced for the "Music by the Lake" summer concert series of George Williams college, Williams Bay, opening July 7. Lyric tenor Walter Carringer will be the soloist at that concert, followed July 14 by the Stanley string quartet of the University of Michigan.

An Indian dancer, Indrani, will appear with a company of eight dancers and musicians in a program of five different dance styles July 28. Pianist Leonard Pennario will be the soloist Aug. 11, and the final production will be the musical, "On a Clear Day You Can See Forever," Aug. 16-17.

The Lutheran A Capella choir will give its annual spring concert at 8 p.m. next Sunday in the gymnasium of Concordia college. Eldon Balko is the director of the 53 voice chorus.

Classical Records

Watts Rejoins Bernstein

By GERALD KLOSS
Of The Journal Staff

IT WAS five years ago last January that a slim 16 year old pianist, Andre Watts, walked onto the stage of Philharmonic hall and gave a sensational performance of the Liszt E flat concerto with the New York philharmonic under Leonard Bernstein.

What added to the drama of the occasion was the fact that Watts had only two days to prepare for the concert as a substitute for the ailing Glenn Gould. His performance made headlines around the world, and Bernstein immediately pronounced him capable of becoming one of the top dozen concert pianists in the world. (Bernstein had made a similarly dramatic debut 19 years before, filling in as a last minute substitute for conductor Bruno Walter in a New York philharmonic concert.)

donated to the Southern Christian Leadership conference (SR-61170).

Included is a five minute excerpt from his famous "I Have a Dream" speech at Washington, D. C., in 1963, and a half minute excerpt from a speech given the day before his assassination in Memphis Apr. 4. Other eloquent passages are on police brutality, the commitment to nonviolence, Dr. King's description of how he became actively involved in the civil rights movement and his instructions on what he wanted to have said at his funeral. A memorable album on a great man.

* * *

The eight Bach flute sonatas are given exemplary performances by the French flutist Maxence Larrieu, with harpsichordist Rafael Puyana and Wieland Kuijken on viola da gamba, for a two record Mercury album (SR2-9125).

Bach certainly didn't take it easy on the flutist in these works, which range from eight to 18 minutes in length, with most in the 10 to 12 minute category. The flow of notes proceeds with seemingly little chance for the soloist to catch his breath — indeed, one sonata is specified for either flute or violin, and a violinist, of course, doesn't have to worry about wind control.

Larrieu conquers these technical difficulties and goes beyond them to deliver a fleet, graceful tone, with sensitive aid from his partners. The album has been awarded the coveted Grand Prix du Disque award of

and the first movement of Mendelssohn's violin concerto, with Taik Ki Kim as soloist. Thomas Trimborn will conduct Humperdinck's "Hansel and Gretel" overture and Smetana's "The Moldau." Admission is free.

Opera Workshop

Scenes from four operas will be presented by the UWM Opera Workshop at the Skylight theater, 813 N. Jefferson st., at 8:15 p.m. Wednesday, under Vacano's direction. The production originally was scheduled for last night on the UWM campus.

The free program will include scenes from Gounod's "Faust," Massenet's "Werther" and Puccini's "La Boheme" and "Sister Angelica." "Faust" and "Werther" will be sung in French, "Sister Angelica" in English and "La Boheme" in Italian.

The Milwaukee Catholic symphony orchestra will give its spring pops concert at 7:30 p.m. today at Brooks Memorial Union on the Marquette campus. Edward Zielinski will conduct selections from Loewe's film score for "Gigi" and Offenbach's "La Perichole," plus Debussy's "Claire de Lune" and two Leroy Anderson pieces.

Also today, at 8 p.m., the Wisconsin College of Music will present a concert of

Prof. John Rueping, seminary professor for 49 years, at 8 p.m. today in the De Sales Preparatory Seminary chapel, 3501 S. Lake dr. The principal work will be Faure's "Requiem," with the choirs assisted by members of the Milwaukee symphony orchestra, plus vocal soloists. The concert is public and free.

Clarinetist David Weber

Bela Nagy, professor of music and head of the piano department at Boston university, will supervise a piano workshop on the UW campus in Madison July 1-2. Dr. Nagy, who was a personal friend of Bela Bartok and introduced his third piano concerto, will also play a public recital in the campus music hall June 30.

Five attractions have been announced for the

Arion soloist Marlene Rosen

The Lincoln Center Theater Story

By WILLIAM GLOVER of the Associated Press

NEW YORK, N. Y. – At long last, the mood is upbeat for Lincoln Center's troubled acting company. "This season we've solidified a beachhead," says Jules Irving, artistic director of the repertory theater.

"For the first time," Irving adds, "there is a sense of balance, a sense of equilibrium and at the least, hope for continuity."

The new optimism is tempered with caution, however.

"There's still a long way to go before we have what we want," Irving says. "Little by little, one fights for time."

He calls the statistical record of the current season "phenomenal."

Attendance has averaged 94.2% of capacity, compared to 75% last year and a national average of 67. Subscriptions have risen to 40,000, the biggest of any repertory company, and exceeded only by the first season mark of 46,000 — which subsequently fell to 29,000. And total income from boxoffice and subsidiary activities reached $1.6 million. Against a total operating budget of $2,280,000, that leaves $680,000 to be raised by the board of directors.

Irving, whose calm manner belies an intensely persistent spirit, took over under unfavorable circumstances as operating chief 17 months ago.

His partner Herbert Blau — they had come east after 13 years of running the San Francisco Actors Workshop — had quit abruptly, claiming he could no longer function artistically under the pressures of big city theatrics.

The pair took over the directorship in 1965-'66, succeeding the original management of Robert Whitehead and Elia Kazan. That regime had foundered on the rocks of conflict with the board of directors.

Emergency hasn't completely ceased. In his first solo production at the end of last season, "Galileo," the 42 year old Irving lost Rod Steiger to illness at the last moment. But Anthony Quayle, the replacement, won superb reviews.

For the final presentation this season, Irving found himself again suddenly deprived of a leading man. Richard Basehart, cast in the title role of "Cyrano de Bergerac" was felled by severe laryngitis.

Understudy Robert Symonds took over without a single preliminary rehearsal. Reviews were mildly favorable, but the boxoffice has been rocking along at 99% capacity.

Irving ran into further fuss when he launched the season with a revival of "The Little Foxes" boasting a stellar guest cast; then followed with "Saint Joan" and "Tiger at the Gates."

In comparison to previous, more offbeat schedules, the display to some people seemed on the safely conservative side.

"I don't know what safe is," declares Irving. "I'm basically a very instinctive and intuitive person. Theatrical instincts have to be obeyed. But one has to be practical and know when one can and cannot do something.

"I have not yet earned the right to fail, something which is often talked about in repertory work I feel I must do now what is most needed."

And that, he says, is to produce a body of work that will develop a strong public following.

"The long range purpose is what it has always been — to develop a company of actors," he says. Time is his most important ingredient.

Nineteen performers have been under season contract, with others hired according to production needs. The presence of an occasional name star he feels is good not only as a realistic boxoffice lure during the development phase, but also acts as an impetus for other actors.

Robert Symonds as Cyrano de Bergerac

Little Theater Activities

The Patio Players will present "Sunday in New York" at Menomonee Falls high school Friday through next Sunday, under the direction of Carrell Davis. The cast includes Judith Dees, James Zyduck, Casey Cohen, Tom Nulty, Harriette Burns and Bill Sherry.

* * *

An experimental one act play, "The Tenant," by William Shepard, a UWM student from Muskego, will be given at 3:30 p.m. Monday and Tuesday in the studio theater of the fine arts theater building on the UWM campus.

These will be the first performances in the 100 seat studio theater, located on the lower level of the building. The stage area is used for rehearsals when the main stage is in use in the large theater.

Shepard's play, set in a rooming house, will be directed by John Lubbers. Rory Levy, D. E. Desmond and Linda Garzonio are in the cast.

* * *

Other current little theater productions:

Sunset Playhouse, Elm Grove — "The Odd Couple," Sunday, Thursday through next Sunday and May 31-June 2 and June 7-9.

Sheridan Players, Cudahy senior high school — "Barefoot in the Park," Sunday, Saturday and next Sunday.

Milwaukee Players, West Division high school — "The King and I," Sunday.

Suburban Players, Greendale high school — "Finian's Rainbow," Thursday through Saturday.

Waukesha Civic theater — "Pygmalion," Friday and Saturday.

Haylofters, Burlington— "The Fantasticks," Sunday through next Sunday.

cert as a substitute for the ailing Glenn Gould. His performance made headlines around the world, and Bernstein immediately pronounced him capable of becoming one of the top dozen concert pianists in the world. (Bernstein had made a similarly dramatic debut 19 years before, filling in as a last minute substitute for conductor Bruno Walter in a New York philharmonic concert.)

Since then, Watts — born in Nuremberg of an American GI father and Hungarian mother — has expanded his concert schedule, including a state department tour of Europe last fall with the Los Angeles philharmonic. (He played his first Milwaukee area concert at Wauwatosa last month.) One of the works he performed to glowing reviews on the European tour was the massive Brahms concerto in B flat, now offered in a Columbia album with the New York philharmonic under Bernstein (MS-7134).

His performance justifies Bernstein's prediction of five years ago — there's more here than sheer technique and dazzling style. At 21 he displays interpretive authority as well as the youthful power necessary to make the piano equal to the orchestral surge. There's no timidity in his approach, certainly, but there is discipline as well, and his collaboration with the ever dramatic Bernstein is a triumph on all counts.

A Mercury album, "In Search of Freedom," consists of nine speeches and excerpts by the late Dr. Martin Luther King, jr., royalties from which will be

Memphis Apr. 4. Other eloquent passages are on police brutality, the commitment to nonviolence, Dr. King's description of how he became actively involved in the civil rights movement and his instructions on what he wanted to have said at his funeral. A memorable album on a great man.

* * *

The eight Bach flute sonatas are given exemplary performances by the French

breath — indeed, one sonata is specified for either flute or violin, and a violinist, of course, doesn't have to worry about wind control.

Larrieu conquers these technical difficulties and goes beyond them to deliver a fleet, graceful tone, with sensitive aid from his partners. The album has been awarded the coveted Grand Prix du Disque award of France.

Curtain Time

THE finals start tomorrow for 12 young pianists in the 1968 International Queen Elisabeth piano contest in Brussels, Belgium, but the audience favorite won't be among them.

This contest, held every four years, is one of the most prestigious in the world, with a $4,000 prize and instant fame for the winner. Contestants must be between 17 and 31.

Three American pianists made the finals — Edward Auer of New York city, Jeffrey Siegel of Chicago and Francois-Joel Thiollier, who was born in Paris. Four Russians also are among the 12. But the audience booed the jury for eliminating another American, 19 year old Joey Alfidi of Yonkers, N. Y., in the preliminary competition.

The newspaper Le Soir stated: "The jury preferred the most conscientious artists to the best gifted one." The late Queen Elisabeth of Belgium, after whom the contest is named, herself described Alfidi as a genius six years ago. As a result, the boy studied at the Brussels Conservatory and the Chapelle Musicale Reine Elisabeth, after earlier training at the Juilliard School of Music in New York city.

Alfidi, as well as Auer and Siegel, were pupils of Rosina Lhevinne, perhaps the most famous trainer of concert pianists of this era. Among her pupils have been Van Cliburn and Ralph Votapek.

Hurry up, you college theater groups, if you want to get in on the first American College Theater festival, scheduled for next spring at the John F. Kennedy Center of the Performing Arts in Washington, D. C. An organization called Friends of the Kennedy Center is sponsoring the competition, with the Smithsonian Institution and American Airlines, and has sent out applications to the more than 1,600 college theater groups across the country.

Applications must be submitted to the festival, with an entry fee of $25, by May 31. Ten college drama groups will be picked to put on their shows between Apr. 28 and May 12 at the Kennedy Center, with companies limited to cast and staff members of 20 persons. A committee set up by the American National Theater academy (ANTA) and the American Educational Theater association (AETA) will select the winning groups, apparently on the basis of next season's productions.

Actress Peggy Wood, honorary president of ANTA, told the Friends of the Kennedy Center recently: "The American College Theater festival will be a stimulus to better and better university theater and, eventually, better and better professional theater."

Conductor Leonard Bernstein and pianist Andre Watts

The World of Art

Inaugural Exhibition Surveys Current Art

By DONALD KEY
Journal Art Editor

AS AN inaugural show for the new fine arts galleries, so long awaited at the University of Wisconsin — Milwaukee, "Art 1968: Hang Ups and Put Downs" is a brilliant and bountiful survey of what is current in painting and sculpture.

There are remnants of pop, op and top (topographical) art, a sufficiency of flop (which some call funk art) and a gallery of minimal art that in many cases is an overstatement of what might better be called "nothing" art.

All of this is material making the scene. Whether it is disliked, disclaimed or dazzling, it is the current art and should be publicly displayed for viewer reaction.

UWM art faculty members who organized the exhibition did an admirable job in acquiring work well representative of widely varied directions. They borrowed from galleries in New York, Chicago and elsewhere for showing through June 11.

If there are any common denominators, one is a consistent denial, burlesquing or contorting of past images (of art, of nature, of humanity) and a consistent tendency toward mimickery and trickery.

Figures in nearly all the paintings incorporating them are copied from somewhere — burlesqued old masterworks, risque magazines or television.

A TV Sailboat

Remnants of pure pop involve nudes of photographic reality, curvaceous in contour and lush in flesh tone, by west coast artist Mel Ramos. One girl rides atop a hippopotamus; the other a rhinoceros. A sleepy disinterested nude decorates a static animal; one with a lively, happy attitude is poised on the hippo, its great big mouth wide open on a background of jolly green. Both are typical playboy paintings by Ramos.

Less typical and almost out of the pop field is "T.V. Boat No. 2," by James Rosenquist. It is painted on a canvas shaped like a TV master of op art who has worked at illusionary graphic effects for at least 20 years and long before op was top, is represented by two works. One is a black and white that uses bent lines like bars turned in diverse dimensions. His best work is a huge tapestry of checks in a gamut of glistening tones with contrasts that temper and animate one another. It is like a lively illusive chess game of squares on squares, circles on squares, diamonds on squares, wedges on squares, triangles on squares — all battling for visual attention.

This is a piece of lively luster and levity. Its play of tones and planes is so vigorous that it makes the work of younger cohorts in op seem shamefully slow.

Among the several shaped canvases in this gallery, "68-1" by Charles Hinman has the most purposeful contouring. It is arrow shaped, hangs diagonally on the wall and seems to thrust like an arrowhead, a missile or a rocket, with triangular areas of orange, blue and yellow. Hinman once was a pitcher for the Milwaukee Braves — which surely doesn't make him an artist, but from the vigor of this work it fortunately didn't ruin him, either.

There is a room full of funk art with pieces by Raymond Siemanowski and Peter Saul, most of them loaded with suggestive symbolism, blatant if not banal. A sculpture by Siemanowski has pipes and attached shapes (like exhaust pipes with mufflers) crawling along the floor. They are painted, bright colors of yellow, orange and green. Amid them is a striped slippery slide; on the wall behind them is a multipointed star of orange.

All this funk imagery seems squiggly or shaggy or ready to burst from its painted state. A viewer's inclination is to keep his distance.

two compositions with found object collage (he worked with this as early as 1942, long ahead of the assemblage art craze). These works open out to wider planes and areas of color than his earlier art.

One has figurative shapes cut out of the canvas and pasted back on in a diagonal position as if they were floating. It also has an attached mirror in which a viewer sees part of himself.

This brings viewers into the picture whether they want to be there or not.

The minimal art, with squares of iron set on the floor, strings outlining what the artist hopes will be imagined as transparent shapes, a plain canvas of blue against the same blue, and polished prism shapes that reflect and re-reflect, deserves minimal discussion. It has had it.

Among shaped canvas paintings in the inaugural show at the UWM fine arts galleries is this oil, "T. V. Boat No. 2" by the noted pop artist James Rosenquist.

"Phantom" by op artist Peter Sedgley is in the "Hang Ups and Put Downs" exhibit.

Spectators Are Involved in Electronic-Light Show

By MICHAEL KIRKHORN
Of The Journal Staff

THE cosmic humming cannot be heard from the main gallery, but there is another show, in addition to "Hang Ups and Put Downs," in the new University of Wisconsin—Milwaukee fine arts building.

This is an exhibition in the fourth floor weaving rooms by eight UWM electronic-light artists and one sculptor. Eight of the artists are students. The other, Ted Kraynik, is an associate professor of art at UWM.

Some of the light sculpture was shown in the recent Wisconsin Painters and Sculptors exhibition at the Milwaukee Art Center. But the new work—including an environmental chamber by Donald Weisflog and Allan Erdmann's six part "People" — have added impressive new dimensions to what has been shown here previously.

Correctly, this is not light

many of the sculptures. Kraynik, who will be continuing his research into electronic art next year at the Massachusetts Institute of Technology, prefers to call it "synergic art."

"Synergy is a term taken from medicine and used by social scientists to develop a philosophy which shows people how to relate to their environment more productively," he said. "It also creates a situation in which the viewer becomes a part of the work of art and not just a casual observer."

Audience Participation

This show provides several opportunities for the spectator to involve himself — even surround himself — with art. The involvement is not the total, annihilating immersion that one exper-

happening outside the light-connected framework of boxes. It is not necessary to enclose the spectator with walls. The art creates its own, more effective, environment.

Kraynik has two pieces in the show — both light panels behind opaque glass and activated by impulses from a television set.

"This is channel four," he said, watching the kaleidoscope shifting of snowflake-

great big mouth wide open on a background of jolly green. Both are typical playboy paintings by Ramos.

Less typical and almost out of the pop field is "T.V. Boat No. 2," by James Rosenquist. It is painted on a canvas shaped like a TV screen. Its images of a man and a woman pushing a sail boat are fuzzed as are so many fluttery TV screenings. This picture is softly blended with illusive tones shaded into one another, providing further subtle satire on television tube trauma and attesting to the often overlooked skill of Rosenquist as a painter. This was evident in his early pop canvases, which were composites of common place images.

These paintings are in the large main gallery that redounds with enough ripe color to ripple most retinas. Some of it smarts.

Two by Vasarely

An op art piece, "Phantom," by Peter Sedgley is a target rainbow of basic hues, ranging from a white bull's-eye that diminishes to a circular band of purple on a black background. It has the illusion of being lighted from within. There is a tendency to be drawn to it, as one focuses on a thought; yet there is the knowledge that this target would shatter at the piercing of the first bullet. It is purely a target for the eye and mind.

Victor Vasarely, the old

Amid them is a striped slippery slide; on the wall behind them is a multipointed star of orange.

All this funk imagery seems squiggly or shaggy or ready to burst from its painted state. A viewer's inclination is to keep his distance.

Mrs. Lee, curator of adult education at the center until her death last year, was a pioneer in film programing and in charge of the center's film programs.

the Milwaukee Art Center. But the new work—including an environmental chamber by Donald Weisflog and Allan Erdmann's six part "People" — have added impressive new dimensions to what has been shown here previously.

Correctly, this is not light art. Sound — humming, clicking, electronic wailing — is an integral part of

not just a casual observer."

Audience Participation

This show provides several opportunities for the spectator to involve himself — even surround himself — with art. The involvement is not the total, annihilating immersion that one experiences in clubs like the "Cheetah" in Chicago, where a combination of light effects and deafening, skull busting rock music leave one almost helpless.

The kind of audience participation offered by the UWM artists is not overpowering. In fact, it is not always very effective as a way of involving the spectator except in a very elementary way. But it is promising.

In Charles Waldeck's "Tonal Transcendental Tantrum," the spectator is able to modulate and combine the play of color and the sound by operating a half dozen simple controls. "Tantrum" is unprogramed. The spectator makes the art himself. But from this it is possible to envision a keyboard controlled environmental sculpture with infinite combinations of light and sound, perhaps recorded by computer, so that the work of art would be built from the primary structures — the technological apparatus.

The spectator enters Weisflog's environmental room, "The Womb," through a sphincterlike vinyl opening. Inside, lights play around the curving walls. The deeply cushioned floor adds to the feeling of suspension. Here, again, it is necessary to remember that this is student work. The chamber is more a novelty than a disconcerting and revealing art experience. But one senses an exciting direction, a movement into space that artists have not explored.

Six Sculptures

Allan Erdmann's "People" is a set of six electronic sculptures in variously shaped black boxes. The spectator creates combinations and sequences of flashing lights by walking through light beams connecting the boxes.

Because the spectator triggers sequences that flash unpredictably around him, the sense of involvement is even greater here than it is in Weisflog's room. This suggests, perhaps, that too much emphasis may be placed on the enclosure in an attempt to remove extraneous influences from the spectator's experience of these environmental sculptures. The effect of Erdmann's "People" is so absorbing that the spectator loses interest in what is

Allan W. Erdmann, one of nine artists in the electronic-light show in the new UWM fine arts building.

like designs against the glass. The panels can be moved closer or farther from the glass, increasing the intricacy of the effects.

The only unlighted sculptures in the show are four strongly composed, more or less minimal pieces by F. G. Lutz. (They do benefit, however, from light thrown on them by Erdmann's tall beacon, "Watt's Next.")

Lutz says he is interested in the kind of tension produced by the cutting through of one shape by another.

Illusion and Conflict

"My work is intentionally illusionistic," he says. "It deals with the ambiguous interaction of forms, at once separate and integral. This illusion of simultaneous separation and integration sets up a conflict between fact and fiction, in much the same way as an optical illusion."

His latest sculpture, a tall untitled piece, shows evidence of cleavage — a clean severance of a beamlike form with the top part slipping away from the bottom — but he has removed the outside, cleaving part of the form. The resulting effect is eerie, as if something devastating had happened to the piece the moment before you looked at it.

The artists not mentioned here — for reasons of space, not importance — are Edward Jankowski, Guy Baldwin, Robin Toellner and Al Blankschien.

The show will continue into early June.

A Style Evolving Toward Individuality

By DONALD KEY, Journal Art Editor

PAINTINGS in the debut show of Elke Nottelmann vary from sterile academic studies to a few canvases with some visionary ideas and promise.

Her exhibition of 30 oils opens with a reception at 2 p.m. today and continues through June 8 at the Fredericks gallery, 6907 W. North av., Wauwatosa.

This is the show of a painting style just evolving from accurate representation toward pictures of personal reflection.

Earlier paintings are labored landscapes or stilted still lives including a busy one with enough vegetables for a threshers' stew. Some later pictures attain scenic atmosphere or figurative focus.

Miss Nottelmann was born in 1938 in Kuestrin, Germany, where she spent her early childhood. When she was 6 her family fled from the advancing Russian army to a small town in northern Germany, where her grandparents lived.

She immigrated with her family to the United States in 1950. They lived for a year in Shawano, then moved to Milwaukee. Miss Nottelmann was graduated from Washington high school, attended the Layton School of Art and completed a two year course in commercial art at the Milwaukee Institute of Technology.

From 1962 to 1964 she worked in Germany as a commercial artist and studied with Wilhelm Thelen in Duesseldorf. She also traveled throughout Europe, visiting museums and sketching, from northern Denmark to southern Greece.

Three of her best landscapes are Grecian scenes. They give crumbled building stones enough personality to seem to whisper sadly about their days of grandeur in the midst of their present desertion. Now they are overshadowed by the growth and serenity of nature.

"Olympia I" has dark tree trunks leaning in opposite directions to create X forms around the ruins. "Olympia II" is more freely painted, with the bright green foliage snuggling closer to and effecting warmer contrasts with building stones crumbling into their native earth.

The structure of a building, crumbling but still retaining a basic shape with

Elke Nottelmann

Doric columns, commands the scene in "Aphaia Temple," sketched on an island near Athens. It is painted in a limited palette but with a wide repertoire of blues. The interior has a pink-blue light of Grecian intensity.

Lighting is one of the artist's most fully developed techniques. She makes it work well to create mystic mood in this temple, and she uses it to enhance contours and characters in recent figurative paintings.

It bathes a "Girl in Field" with late summer glow as she sits beside a tall stand of wheat, smiles and turns the stem of a plant in her hand.

These are Miss Nottelmann's best paintings, revealing a potential for future expression. She has acquired an admirable technique. It now must be developed into a style of individual vitality and vision.

"Olympia I" isi an oil in the debut show of Elke Nottelmann at the Fredericks gallery

Church Exhibit

May 29 is the deadline for entries in the art show opening the fine arts festival at Norway Lutheran church, Wind Lake, Wis., June 14-16. Entry forms can be obtained from Mrs. Allan E. Jones, 206 Harmont rd., Waterford, 53185.

THE MILWAUKEE JOURNAL

Intelligence Test on Culture of Negroes Is Devised

By JOHN KIFNER

"T-Bone Walker got famous for playing what?

"(a) Trombone, (b) Piano, (c) 'T-flute,' (d) Guitar, (e) 'Hambone.'"

Those who do not know that T-Bone Walker, a hoarse-voiced country blues singer out of Linden, Tex., who once accompanied Blind Lemon Jefferson and sang "T-Bone Blues" with the Les Hite Orchestra in 1940, played the (d) Guitar, may be classified as culturally deprived.

That, at any rate, is the conclusion of the Dove Counterbalance General Intelligence Test.

Bootleg Xerox copies of the 30-question, multiple-choice examination, which is also known as the "Chitling Test," have gained increasing circulation in the last few months among antipoverty and civil rights workers.

The test was devised by Adrian Dove, a socoliogist and Government worker. Mr. Dove, a Negro, designed the test as a rebuke to standard intelligence tests, which he and some other experts contend do not fairly reflect the intelligence of Negroes because they are oriented to white culture.

Composed in 1965

Mr. Dove drew up the test in 1965 when, as an employe of the California Fair Employment Practices Commission, he served on part of a technical advisory committee on testing established shortly after the riots in the Watts section of Los Angeles.

"People were failing employment and intelligence tests," he said in an interview from Washington, where he now works as a program analyst for the Federal Bureau of the Budget. They were failing, he said, "not because they were stupid, but because the test was geared to middle-class white society."

After the group struggled unsuccessfully to devise a so-called "culture-free" test, Mr. Dove drew up his own, designed to reflect the culture and knowledge of the Negro slums.

"It was kind of half-serious, a way of proving the point that we're not really measuring intelligence," he said.

"Actually, you could utilize this test for people working in the ghetto, like highway patrolmen or parole officers, to see if they were sensitive and alert to what's around them."

Even his test may not be completely relevant, Mr. Dove conceded.

'Yardbird' or Aretha

One of its questions is: "'Bird' or 'Yardbird' was the 'jacket' that jazz lovers from coast to coast hung on ——."

"That's being missed by a lot of younger kids, sadly," he said. "Imagine growing up not knowing about Charlie Parker.

"I suppose I'll have to substituted somebody else—maybe Aretha [Franklin], but I guess she's getting too well known."

Some of the other questions (with answers below) are:

1. Who did "Stagger Lee' kill?

(a) His mother, (b) Frankie, (c) Johnny, (d) His girlfriend, (e) Billy.

2. A "Gas Head" is a person who has a ———.

(a) Fast-moving car, (b) Stable of "lace," (c) "Process," (d) Habit of stealing cars, (e) Long jail record for arson.

3. If a man is called a "Blood," then he is a ———.

(a) Fighter, (b) Mexican-American, (c) Negro, (d) Hungry hemophile, (e) Redman or Indian.

4. If you throw the dice and 7 is showing on the top, what is facing down?

(a) seven, (b) snake eyes, (c) boxcars, (d) little Joes, (e) 11.

5. Cheap chitlings (not the kind you purchase at a frozen-food counter) will taste rubbery unless they are cooked long enough. How soon can you quit cooking them to eat and enjoy them?

(a) 45 minutes, (b) 2 hours, (c) 24 hours, (d) 1 week (on a low flame, (e) 1 hour.

6. "Down home" (the South) today, for the average "soul brother" who is picking cotton (in season) from sunup until sundown, what is the average earning (take home) for one full day?

(a) $.75, (b) $1.65, (c) $3.50, (d) $5, (e) $12.

7. A "handkerchief head" is ————.

(a) a cool cat, (b) a porter, (c) an Uncle Tom, (d) a hoddi, (e) a preacher.

8. "Jet" is ————.

(a) an East Oakland motorcycle club, (b) one of the gangs in "West Side Story," (c) a news and gossip magazine, (d) a way of life for the very rich.

'Walk Together, Children'

9. "And Jesus said, 'Walk together, children ————.'"

"(a) Don't get weary. There's a great camp meeting. (b) For we shall overcome. (c) For the family that walks together talks together. (d) By your patience you will win your souls (Luke 21-19). (e) Mind the things that are above, not the things that are on earth (Col. 3.3).

10. If a pimp is up tight with a woman who gets State Aid, what does he mean when he talk's about "mother's day?"

(a) second Sunday in May, (b) third Sunday in June, (c) first of every month, (d) none of these, (e) first and fifteenth of every month.

11. Jazz pianist Ahmed Jamal took an Arabic name after becoming really famous. Previously he had some fame with what he called his "slave name." What was his previous name?

(a) Willie Lee Jackson, (b) Le Roi Jones, (c) Wilbur McDougal, (d) Fritz Jones, (e) Andy Johnson.

12. What is Willie Mae's last name?

(a) Schwartz, (b) Matsuda, (c) Gomez, (d) Turner, (e) O'Flaherty.

13. What are the "Dixie Hummingbirds"?

Klan or Deacons

(a) a part of the KKK, (b) a swamp disease, (c) a modern gospel group, (d) a Mississippi Negro, paramilitary group, (e) Deacons.

14. "Bo-Diddley" is a .....

(a) game for children, (b) down home cheap wine, (c) down home singer, (d) new dance, (e) Moejoe call.

15. "Hully Gully" came from

(a) East Oakland, (b) Fillmore, (c) Watts, (d) Harlem, (e) Motor City.

16. Which word is most out of place here?

(a) splib, (b) blood, (c) grey, (d) spook, (e) black.

The answers:

1. (e); 2. (c); 3. (c); 4. (a); 5. (c); 6. (d); 7. (c); 8. (c); 9. (a); 10. (e); 11. (d); 12. (d); 13. (c); 14. (c); 15. (c); 16. (c).

MEMORANDUM

TO: Presidents and Education Directors of National and International Unions

FROM: George T. Guernsey, Asst. Director, Department of Education

SUBJECT: ADVANCED SOUTHERN LABOR SCHOOL

George T. Guernsey

Each year, as you probably know, the AFL-CIO Education Department in cooperation with the Southern Labor School sponsors a one-week institute open to full-time state body officers and international union representatives or business agents working full time in the South.

Each state AFL-CIO is allowed to nominate three international union representatives whom they would like to attend the institute. These are submitted to the AFL-CIO Education Department by the state AFL-CIO; our Department in turn submits these names to the international unions to see whether it will be possible for the southern representative to attend the one week institute.

This year the school is being held at the Flagship Motel in Galveston, Texas, November 17--22. The cost of the institute for room, board and tuition is $90 for two delegates to a room or $100 for a single room.

Only full-time southern representatives on international union staffs can be nominated by you for this institute. In the past, more than twenty international unions have selected southern staffs for the Advanced Southern Labor School. An additional twenty representatives have come from southern state labor bodies. If you would like to nominate a southern staff member to attend the school, a form is enclosed for your nomination. I would like this returned to me no later than November 1.

I am enclosing a list of the delegates who have attended the institute in 1967 and 1966, as well as a copy of the program for 1967.

Please let me hear from you soon.

Enclosure

1967 ADVANCED SOUTHERN LABOR SCHOOL

Buena Vista Hotel
Biloxi, Mississippi
November 12 - 17, 1967

TENTATIVE PROGRAM

Sunday	4:00	Registration
	7:30 - 9:00	Orientation and Discussion of Program
Monday	9:00 - 12:00	"Organized Labor in the South: Status and Prospects," Ray Marshall, University of Kentucky
	2:00 - 4:30	"Organized Labor in the South: Status and Prospects," Ray Marshall, University of Kentucky
	7:30 - 9:00	New Films
Tuesday	9:00 - 12:00	"Education and the Labor Movement Face the Challenge of Youth," Walter G. Davis, Director, AFL-CIO Department of Education
	2:00 - 4:30	Southern Advisory Committee on Civil Rights, Don Slaiman, Director, AFL-CIO Department of Civil Rights
	7:30 - 9:00	Southern Advisory Committee on Civil Rights, Don Slaiman, Director, AFL-CIO Department of Education
Wednesday	9:00 - 12:00	"Organizing Problems in the South," William Kircher, Director, AFL-CIO Department of Organization
	2:00 - 4:30	Boat Ride and Fishing Trip
	7:30 - 9:00	Boat Ride and Fishing Trip
Thursday	9:00 - 12:00	"Issues of the '68 Election in the South," Vernon Jordan, Southern Regional Council; Dan Powell, Wilbur Hobby, Earl Davis, National COPE Staff; Roy Evans, Secretary-Treasurer, Texas State AFL-CIO
	2:00 - 4:30	"Developing Understanding of State AFL-CIO Programs with International Union Representatives"
Friday	9:00 - 12:00	"Poverty in the South"
	12:00 Noon	Graduation Luncheon

WIRE ALL REGISTRATIONS DIRECTLY TO J. BILL BECKER, PRESIDENT, ARKANSAS STATE AFL-CIO, 1408 REBSAMEN PARK ROAD, LITTLE ROCK, ARKANSAS 72202, NO LATER THAN WEDNESDAY, NOVEMBER 8.

RETURN TO: Mr. George T. Guernsey, Assistant Director
AFL-CIO Department of Education
815 16th Street, N.W.
Washington, D. C. 20006

DUE DATE: November 1, 1968

SUBJECT: LABOR SCHOOL FOR SOUTHERN STAFF
(Full-time Staff Only)

I would like to nominate the following to attend the 1968 Advanced Southern Labor School to be held in Galveston, Texas at the Flagship Motel, November 17-22:

READERS' DIGEST
September 1968

Condensed from
NATIONAL CIVIC REVIEW

More Americans are on the dole now, in the midst of prosperity, than at the height of the Depression. Here is what one county is doing to reverse this disturbing trend

They Turn Welfare Recipients Into Taxpayers

NAT AND YANNA BRANDT

SUFFOLK COUNTY, New York, an 86-mile stretch of Long Island, is one of the fastest-growing counties in the nation. Part rural, part urban—with a maze of industrial parks on its western side, and dotted with potato and duck farms at its eastern end—it harbors a million-plus residents, 40-percent more than in 1960. This growth has brought with it that bogey of local government—a big welfare problem. But, as in few other places, the county has developed an excitingly effective program for turning taxeaters into taxpayers.

It started two years ago when Lou V. Tempera, Commissioner of Suffolk County's Department of Labor, recognized a curious paradox: while the welfare budget was mushrooming to $23,600,000, thousands of jobs were going begging. Companies were even resorting to busing workers from New York City, 40 miles away. To Tempera and to Deputy Commissioner (later Commissioner) of Social Services James E. Kirby, the solution seemed simple: let their labor and welfare departments work together. "You give me the people," Tempera said to Kirby. "I'll find them jobs."

Tempera, 42, a former tool-and-die maker and union shop steward, is a vigorous, athletic man with a drive to get things done. Rather than approach the county board of supervisors—which would have to approve any such joint project—with just a plan, he and Kirby decided to find jobs for ten particularly difficult welfare cases first. He ordered his deputy, George Meyer, to do it.

Meyer, to his own amazement, found jobs for nine of the men fairly easily. But the tenth, Bill Swink,* was a problem. "He didn't want to work," Meyer explains. A sheet-metal worker who had quit because he couldn't stand the noise, Swink took job after job that Meyer found for him, but always managed to get himself fired within a day or so. Then, on the 18th attempt, Swink stuck it out, as a tool grinder—ironically, noisier than sheet-metal work. He finally realized that Meyer *cared*, and wasn't going to give up.

Faced with the fact of ten men on jobs, doing well, and aware that potentially millions of dollars could be saved, the county supervisors created the Coördinated Welfare Job Placement Program. It went into operation in September 1966, and later received a budget of $45,000.

The project's real test had just begun. What had been possible to do for ten men might not be so easy to do for a larger group. Commissioner Kirby designated a thousand individuals—mostly men, representing, with their families, nearly 5000 of the 35,000 on Suffolk's welfare lists—who he felt could be helped without further training. Typically, they lived in modest private homes, heavily mortgaged, had four children, and were drawing about $350 a month in benefits. Used to living on handouts, they were dependent and apathetic, tired now of even trying.

A key point of the plan was that any suggested job had to be one the recipient liked: not just any menial job, but one that gave him dignity and status, and a reasonable salary—in short, one that would make it worth his while to get off welfare. Then, if a man repeatedly refused jobs, the Labor Department could recommend that he be dropped from welfare. "It may seem callous and inhuman," Tempera admits, "but we had to be armed with this weapon to make the welfare recipient realize that we wouldn't take no for an answer. I think we are showing more compassion in the long run."

The rule brought resistance from social workers, who raised the specter of "another Newburgh"—the Hudson River town that made headlines in 1961 by forcing welfare recipients to work out their grants in municipal jobs. Tempera, with Kirby's help, convinced the social workers that the program was not proposing forced labor just to get a person off welfare. Certain facts, he pointed out, had to be faced. Patterns of despondency and dependence go hand in hand with welfare, and defeat many before they really have the chance to get a new start. Motivating welfare recipients is not easy. They must be pushed into trying until they succeed.

Tempera hired five "job developers," men with business and manpower experience. They were told to do everything and anything to get a man working and in the right job—from taking him for a shave, or buying him a new shirt, to accompanying him on job interviews. Flexibility and perseverance were the key. The job developers were also told to play fair with the employers. If a man had a prison record or other personal problems, the facts should not be concealed.

Initially, employers had the usual stereotyped picture of a welfare recipient—lazy, shiftless, delighted to be getting a free ride. They feared that they would be used as a dumping ground. But many, after being persuaded to hire one on a trial basis, and finding him to be a productive worker, have asked for others.

At least half of a job developer's day is spent on the phone, sounding out employers about job possibilities or checking up on a worker. Is he learning? Does he seem happy? Is the employer satisfied? The developer also continues his supportive relationship with the worker, trying to anticipate trouble.

The project's offices in the town of Commack hum with activity. Usually eight or ten people are waiting, mostly men. Jim Moran's name is called. He walks slowly into the job developer's office.

"What kind of work have you been doing?" the questioning begins. The questioner goes on to find out about the man's family, previous employers, work preference.

Moran, 27 years a construction worker, has never been able to get together the union initiation fee.

The job developer begins to make calls, consulting an extensive file of companies. On the 12th call, Moran has an appointment for an interview with a firm that needs a worker all year round. He shakes hands and smiles gratefully.

Will Moran keep the job if he gets it? Hard to say. There's a lot of repeat business. Longtime patterns of inactivity and apathy are hard to break. A job takes discipline. The average is two referrals before a permanent placement is achieved.

John Hunter is a case in point. At 43, he was just able to make ends meet with his salary as a paint salesman. He lived with his wife and seven children in a small house, and life was difficult but bearable. Then Hunter was stricken with hepatitis and hospitalized for several months. He couldn't return to his former job for health reasons, and the bills took what little savings he had. Desperate, he forged a $10 check, was caught, convicted and placed on probation. When he tried to find

*All names of welfare recipients have been disguised.

(cont'd on p. 6)

PAGINATION INCORRECT

THEY TURN WELFARE RECIPIENTS INTO TAXPAYERS

(continued)

work he was rejected, sometimes because of his record, sometimes because he was "too old." He began drinking heavily.

The Hunters finally applied for welfare—a humiliating experience for both of them. Then Hunter was referred to job developer George Carr. After questioning him extensively, Carr learned that he had once worked as an accountant. He found Hunter a job after only a few phone calls. He told the employer, a manufacturer of coin-operated washing machines, about the forgery, and warned Hunter that "one sign of drinking and you're out."

That was six months ago. Within a month, Hunter won a $5 raise, and he is now handling the concern's billings, credits and auditing. He has stopped drinking.

Hunter's take-home salary is $382 a month, and he still gets welfare supplements totaling $149. Any further raises he gets will be subtracted from the $149, and he hopes to erase that support before the end of the year. (In many communities, *any* money a recipient earns has been automatically subtracted from his welfare grant, so there was little incentive to look for a job.)

After nearly two years in operation, the Coördinated Welfare Job Placement Program has paid off handsomely. It has found jobs for 1200 persons, who with their families represent some 4800 welfare recipients. The expected direct saving to the taxpayer, this year alone, is $4,300,000. The county stands to benefit also from the taxes the former recipients will be paying and the new purchasing power they represent. Of the 1200, about half have worked their way off welfare completely. The average recipient starts at about $2 an hour, and it may take him a year and a half to get out of debt, off supplemental welfare, and trained enough to command a higher salary. Thus far, only 38 persons have had to be dropped from the welfare rolls for refusal to work. Of those, 17 never reapplied for welfare, six got jobs on their own, and two moved away. Five were reinstated on welfare in full and the families of the remaining eight still receive some benefits.

Tempera, Meyer and Kirby still have their work cut out for them. As yet, they have been unable to help many mothers—who with dependent children represent the largest category of welfare costs—because the county has no day-care centers. Plans are being made to set up such centers at key industrial complexes and, once these are established, the county's plan will aid an additional 11,500 people. Tempera firmly believes that there is no such category as "unemployable," that the potential exists for helping all but the aged and the infirm.

With Suffolk's success has come a change in attitude. "Our statistics show that most welfare recipients *want* to work," says Tempera. "But they lack the skill to identify the work they'll be happy with. That's where we can help." If this is true in Suffolk County, then why not in every city and county in the nation?

Los Angeles Times
Los Angeles, California
Sept. 5, 1968

Jobs Experiment

THE CONCENTRATED Employment Program, which has had its share of criticism while on an experimental basis here and in 19 other cities, has the qualified approval of local antipoverty directors for a second year of operation.

The Economic and Youth Opportunities Agency board approved a proposal for $6,553,615 in federal funds to support the effort to make hard-core unemployables fit for jobs —$1,295,278 less than was available for the past 12 months.

CEP, conducted here in two target areas (Watts and part of East Los Angeles), combines various federal programs and fund sources in an attempt to package a sophisticated approach.

Among major modifications in the new proposal:

The Neighborhood Youth Corps component is being phased out of this particular program and standard on-the-job training is being dropped altogether in favor of a tie-in with the National Alliance of Businessmen and those Labor Department programs which subsidize hiring and training by private firms while guaranteeing some job permanency.

One of the biggest problems during CEP's first year has been its inability to contract for enough on-the-job training spots with companies, many of whom are unwilling to accept hard-core trainees under the standard on-the-job training terms.

AFL-CIO NEWS, WASHINGTON, D. C., AUGUST 31, 1968

Success of 'Outreach' Projects Attested by New Trades Jobs

THE AFL-CIO's civil rights director reported growing success of union-sponsored "outreach" programs aimed at bringing minority group youngsters into building trades jobs.

Donald Slaiman said "as a direct result" of the effort, more than 1,500 young Negroes and other minorities have entered building trades apprenticeships over the last three years—most of them during the last year.

But, he cautioned, apprenticeships alone can't solve the severe youth unemployment problems in the ghettos. The outreach programs are "models for finding good jobs . . . with a high degree of upward mobility," but there has to be more of this kind of effort and a general expansion of job opportunities for all workers to make a real dent in ghetto unemployment, he said.

Slaiman appeared on Labor News Conference, an AFL-CIO produced public service program aired Tuesdays at 7:35 p.m., EDT, on the Mutual Radio Network.

Slaiman said that going beyond the "simplistic view that the only problem was discrimination" has been one of the keys to success in the apprenticeship programs.

THERE IS NOW "realization that recruiting, prepping and motivating" qualified youngsters are essential, he noted, and those elements are emphasized in the outreach programs carried out by the Urban League, the Workers Defense League, the A. Philip Randolph Institute and other groups, in cooperation with building trades unions and councils, with federal financial help.

Questioned about the upcoming elections, Slaiman predicted that "in spite of all the talk of boycott and all the talk of black capitalism, the overwhelming majority of Negroes and other minorities who get registered and get out to vote will vote their own interests, which happen to coincide with the programs and candidates that the labor movement endorses."

Reporters interviewing Slaiman on Labor News Conference, were William Eaton, Washington correspondent for the Chicago Daily News, and Neil Gilbride, labor correspondent for the Associated Press.

20% OF PAYCHECKS BILK YOUTH PLAN

One of Five Issued in 1967 Held to Be Fraudulent

By RICHARD REEVES

A spot check of the city's Neighborhood Youth Corps records indicated that one of five corps paychecks was embezzled during part of the summer of 1967, according to reports prepared by Federal and city investigators.

That was the first major discovery of a series of investigations into the operations of the city's $1.36-billion-a-year Human Resources Administration.

The latest discovery, investigators said yesterday, is that fictitious work sites — where checks were sent to nonexisting employes — were being used by embezzlers as early as last January. City officials had previously said the work-site frauds apparently began last August.

Although various officials have offered estimates of how much Youth Corps money was missing, investigators said that studies by various agencies were all in preliminary stages and that it would be months before the final amount was known.

The initial estimates have ranged from about $1.5-million by city officials—who once announced that the total loss was $490,000—to about $6-million listed in some investigation reports.

The investigations by H.R.A. auditors, the city Department of Investigation, the United States Department of Labor, United States Attorney Robert M. Morgenthau and District Attorney Frank S. Hogan have resulted in the arrest of seven present and former H.R.A. employes, including Mrs. Helynn Lewis, who was recently dismissed as the adminstration's $19,000-a-year fiscal director.

Mrs. Lewis was arraigned yesterday in Los Angeles on charges of grand larceny and possession of stolen goods in connection with the embezzlement of $22,912.

Although Investigation Commissioner Arnold G. Fraiman had originally announced that the alleged embezzlement from an employe loan fund was not connected with the Youth Corps, he said yesterday that Mrs. Lewis would be accused of illegally transferring the money from Youth Corps funds to the loan fund.

Mrs. Lewis, who was arrested at a Los Angeles motel on Wednesday, waived extradition to New York and was ordered held in $10,000 bail in the custody of Edward Seidlick, an Investigation Department detective. They were scheduled to fly here last night.

Major investigations of H.R.A. began early this year when the Labor Department which has provided $51-million of the $61-million spent on the youth corps in the last two years, began a series of routine audits, according to Edward Weintraub, a department.

One audit by Federal and city investigators showed that one of each five paychecks was a "duplicate," a check issued against the same Social Security number as an earlier check the same week. In reporting their findings, the investigators reduced the "duplicate" ratio to 1 in 10 to account for statistical error. But even allowing for error, their report said, if the pattern held, about $1.8-million would have been embezzled that summer.

"That figure seems a little high at this point," Mr. Weintraub said yesterday. But no one has made any conclusions yet — we don't know how much money is lost. This is the biggest governmental mess I've ever seen."

In April, after more investigation, Mr. Fraiman announced that "at least $250,000" was missing in what he described as "pilferage." The minimum estimate for the summer of 1967 has now been raised by city officials to $450,000.

The loss for the summer of 1968 was first announced as $240,000 by Mr. Fraiman, but Human Resources Administrator Mitchell I. Ginsberg said Tuesday that the loss might "be under a million."

False Site Used in January

The two officials attribute the loss to employes who created fictitious work sites and cashed checks made out to nonexistent corps members "working" at those sites. The false work-site scheme was believed to have been initiated during the summer, but investigators said yesterday they had just discovered that fictitious sites were used as long ago as last January.

"If they used them in January," one investigator said, "they may have been used in 1967 and that would mean more money is missing than we thought. We have a lot more work to do."

Because of the investigations, the Labor Department has threatened to end city Youth Corps sponsorship on Oct. 31, unless reforms are introduced. The Federal officials want the power to review the appointments of officials like Mrs. Lewis, and want stricter inspection procedures for work sites.

Mr. Ginsberg has said the city will make the necessary reforms before the Oct. 31 deadline and Federal officials have said they will do everything possible to avoid transferring the summer job program to an outside agency.

The Youth Corps, which is designed to provide employment for slum youths, at $1.50 an hour, employed 43,000 people in the summer of 1967 and about the same number in the summer of 1968.

Program to Teach 7,503 Persons

[Chicago Tribune Press Service]

Washington, Oct. 4—A total of 144 new classroom manpower training projects to teach job skills to 7,503 unemployed or underemployed persons in 31 states were announced by Willard Wirtz, secretary of labor, and Wilbur J. Cohen, secretary of health, education, and welfare.

Skills to be taught range from hotel and restaurant cooking to psychiatric aid, and from landscape gardening to outboard motor and boat repairing. All are areas in which trained workers are needed.

The approvals included training for 782 in health occupations, where there is a marked shortage of skilled personnel. Besides 359 practical nurses and 336 nurses' aids, approvals were made for training 20 medical secretaries in Rochester, Minn.; 30 psychiatric aids in Madisonville, Ky.; 12 dental assistants in Louisville; and 15 surgical technicians in Little Rock, Ark.; and 10 in Greenville, Ky.

Need Office Workers

Another heavy field was that of secretary, clerk-typist or stenographer, for which there were 568 approvals.

Training was authorized for 500 auto mechanics and auto body repairmen. In California, 25 persons will be trained as tire recappers.

Eighty hotel and restaurant cooks ae to be trained, 40 in Houston and 40 in Chandler, Ariz.

An Eldon, Mo., project will give 40 weeks of training to 30 persons in the repair of boats and outboard motors. The courses will be taught in the city's public school facilities.

A Norfolk, Va., project was approved to give two years of highly-developed training to 20 persons to qualify them as "agriculture and landscape specialists." A repeat of a successful course started two years ago, this training is designed to produce supervisory personnel for federal and state forestry positions, and for jobs with large private landscaping firms. Training will be conducted at the Norfolk Vocational and Adult Education center, at a cost of $81,514. The state of Virginia will furnish $3,711 of the total.

Self Help Idea

Another approval makes $228,323 available to pay for the technical training for 380 disadvantaged persons thru the Opportunities Industrialization Center in Erie, Pa. A contract drawn by the department of health, education, and welfare will cover use of this money. Other contracts with other funding are drawn by the department of labor and offices of economic opportunity, in a tri-agency funding arrangement.

The OIC is a self-help venture, focused primarily on Negroes, which gives prevocational and job skill training, and enlists substantial community and industry assistance. OIC trainees receive no living or transportation allowances.

The 144 projects will cost $16,748,621, with the federal government providing $15,947,435 in manpower development and training act funds, and the states contributing $801,186.

Negro Union Apprentices Doubled From End of 1966

By a WALL STREET JOURNAL *Staff Reporter*

WASHINGTON—Negro participation in union apprenticeship programs nearly doubled in 18 months, the Labor Department reported.

An estimated 8,100 Negroes were enrolled as of June 30 in Government-registered apprenticeship programs, up from about 4,200 at the end of 1966, Labor Secretary Wirtz said. The number of Negroes entering such training rose from 1,800 during 1966 to 2,630 in 1967 and 1,400 in the first half of this year, he said.

Despite the improvement, the union training programs, long criticized for alleged discrimination against Negroes, remain overwhelmingly white. Negroes made up 3.6% of the 225,000 apprentices registered in mid-1968, compared with 2.3% in 1966.

The Labor Secretary said that programs sponsored by the Labor Department to recruit more Negroes for apprenticeship had played a "decisive role" in the improved Negro participation.

AFL-CIO NEWS, WASHINGTON, D. C., OCTOBER 5, 1968

Iowa Institute Explores Use Of Job Tests

Iowa City—A group of union representatives spent a week at the University of Iowa here focusing on an increasingly controversial subject—the use of tests by employers to hire and promote workers.

The occasion was the second annual AFL-CIO Institute on Testing which brought together 20 full-time representatives of eight unions and a faculty drawn from universities, the labor movement and the government.

The institute is sponsored by the research and education departments of the AFL-CIO and the University of Iowa's Center for Labor & Management.

Areas explored included the development and validity of tests, their administration, the union's right to bargain over them, how to adapt tests and the employers' obligation to furnish full information on them.

A number of speakers, including AFL-CIO Education Dir. Walter G. Davis and Rudy Oswald of the AFL-CIO Dept. of Research, described ways in which managements are using the tests to undercut union seniority clauses.

They cited a number of arbitrators' rulings of misuse of the tests. One session was devoted to preparing and presenting an arbitration case on tests.

Children's Allowances for the 'Working Poor'

By A. H. RASKIN

The most restless mind in the 175,000-member New York Teamsters Joint Council belongs to Nicholas M. Kisburg, its rough-hewn, rougher-spoken research director. The giant truck union does not go in much for elaborate statistical presentations in collective bargaining. Most of its leaders believe that all the economic argument they need is summed up in the single sentence: "Give us what we're asking or nothing rolls."

That leaves Kisburg plenty of free time in which to pursue his principal interest, an analysis of the meteoric growth in the municipal welfare rolls in a decade of unparalleled general prosperity. He has watched with even more dismay than the Budget Director the shift in the ration of relief recipients to workers employed in private jobs in this city. In 1957 there was one person on welfare for every ten earning a paycheck in private industry, now there are three. The total welfare population has now passed 900,000, and nearly 550,000 of these are children.

•

Kisburg sees enough social dynamite in these figures to blow up the community, especially since so much of the increase results from the acknowledged incentive that welfare provides for the disintegration of families and the rejection of low-paid jobs. Seventy per cent of the rise in Aid to Dependent Children, the biggest sector of relief, results from illegitimate births and illegal abandonment of mothers by their mates.

The current basic welfare allowance comes to more than $300 a month for a family of four and it goes up with every additional child. That means a worker holding a private job at $2 an hour or less can do his family a favor, economically, by moving out and letting the city take over his bills.

Quite apart from the human havoc created by this shattering of normal family relations, the political consequences are reflected in the growth of "black revolutionary" movements to force still higher relief standards through welfare riots and in the tidal wave of support for George C. Wallace's Presidential candidacy among white trade unionists.

Out of Kisburg's soul-searching has come a novel proposal for re-establishing the Puritan ethic, with its focus on a work-oriented, family-based society, by incorporating children's allowances of $5 a week for each child in a worker's regular weekly pay. Organized labor has traditionally frowned on all such approaches on the ground that they would undermine the principle of equal pay for equal work, but Civil Service Local 237 of the Teamsters, headed by Barry Feinstein, will test it in negotiations with the City Housing Authority this month.

The Lindsay administration, beset with astronomic contract demands from police, fire and sanitation unions, is not going to let the Housing Authority workers open another door to the municipal treasury. But the Kisburg-Feinstein sally is helping to create a climate that Mitchell I. Ginsberg, the city's Human Resources Administrator, hopes will bring Federal money for a much broader experiment in across-the-board children's allowances to help the working poor. Its aim is to end the two-pot system which makes it necessary for fifteen thousand New York workers now to get part of their income in full-time wages and the rest in relief and that has caused uncounted thousands more to shun any work in favor of total reliance on welfare.

•

The Office of Economic Opportunity has vetoed New York as the site of a demonstration project in children's allowances for fear that the city's size would speedily exhaust the Federal antipoverty funds that could be allocated to the venture. However, Mayor Lindsay and Mr. Ginsberg plan to meet with Secretary of Health, Education and Welfare Wilbur J. Cohen next week in hopes of getting money from his agency.

The entire undertaking springs from a recognition that the existing welfare structure is bankrupt of social purpose and that its perpetuation may lead to fiscal bankruptcy as well. What is sought is a floor under family income that will banish the indignities of the existing system, heighten inducements for taking jobs and erase the present prickly line between those who get benefits and those who pay for them in bigger taxes.

Family allowances represent the route taken by virtually all the nations of Europe, Canada, Australia, New Zealand and South America. Two principal arguments have been raised against the system's adoption here. One is that children's payments would be too costly if they were given to everybody and made high enough to be consequential by American standards. Thus, a universal allowance of $25 a month per child would come to over $20 billion a year. But all such estimates are delusive because tax policy could be adjusted to recoup payments to wealthy parents and also because the hidden costs of child neglect in delinquency, disease and other social ills never goes into the equation.

The other objection is that subsidizing children makes little sense when public policy is aimed at curbing the population explosion. However, the evidence in other countries, including those with active birth-control programs, provides no support for the idea that family allowances spur births. They merely contribute to a better living standard for those born.

The fact in this city is that there is no limit on births for those who depend entirely on welfare. Mothers having their tenth, eleventh or twelfth illegitimate child on relief have their budget expanded with every new child. Should not those who work have some systematic allowance to guard children against suffering?

Replacing Welfare

Test of 'Negative Tax' To Help Poor Families Starts in New Jersey

Grants Supplement Earnings; System Is Designed to Give People Incentive to Work

Seeking National Uniformity

By JONATHAN SPIVAK
Staff Reporter of THE WALL STREET JOURNAL

TRENTON, N.J.—A 24-year-old Negro cook, struggling to support his wife and three sons on $86 a week, received a handsome surprise the other day: Out of the blue, an odd organization known as CGF handed him a $21.75 check and promised to continue the stipends every two weeks for the next three years.

CGF—the initials stand for Council for Grants to Families—has also showered such tax-free gifts on more than 100 other impoverished families in this drab industrial city. A 52-year-old jobless laborer was given $76 to help provide for his family of four; a $70-a-week water department employe with nine children received $82.

These families have been encouraged to spend the sums any way they wish and assured that the money will follow them in any moves throughout the continental U.S. The only rigid requirement: The recipients must file an accurate monthly report on earnings and number of dependents.

The motive behind such munificence is not sweet charity but economic experimentation. With money from the Federal Office of Economic Opportunity, CGF is testing for the first time in this country the impact of a widely discussed alternative to the public welfare system—the guaranteed annual income. "It's unique in the history of social sciences, an experiment with a new political and tax instrument which could affect millions of people and cost billions of dollars," comments James Lyday, an OEO official.

The Negative Income Tax

The New Jersey test involves a form of guaranteed income commonly known as the negative income tax. Under this arrangement, poverty-stricken families receive payments from the Federal treasury, with the amounts determined by income and family size, instead of paying "positive" income taxes. To the proponents, this approach offers several advantages over the present welfare system.

The negative tax payments would be based on a single national standard; welfare payments now vary drastically from state to state. All the poor would benefit, including the unemployed and those holding menial or part-time jobs; state welfare systems cover only certain categories, such as the aged, blind and mothers with needy children, and many states exclude the unemployed.

While the negative tax payments would vary with the recipients' earned income, as welfare benefits do, an increase in earnings of the poor would not cut the negative tax payments so sharply; most welfare recipients now gain nothing by working at low-paying jobs because their relief checks are reduced by an equal amount, though that rule will be eased somewhat by next July.

"Perhaps most important of all is the establishment of a rational incentive system which encourages the recipient to obtain work, rather than penalizing him or her for working," insists Robert Levine, the OEO's research head.

The Problem of Cost

Apart from the issue of work incentives, however, various objections face the proponents of the negative income tax. The primary problem is cost. Even a modest national program would cost about $2 billion a year, according to Mr. Levine, and most antipoverty specialists figure a healthy start would require outlays of $4 or $5 million annually.

Public misunderstanding is another potential obstacle. A "negative tax" remains a cloudy concept at best, and many noneconomists are baffled by its computations. Finally, despite all the criticism of the present welfare setup, many experts are convinced the most politically practical approach is to reform the existing system rather than start a new one.

Federal poverty-fighters hope favorable findings from New Jersey will at least dispel public worries that the poor will loll around at Uncle Sam's expense. They claim the guaranteed income's advantages over the present welfare system are considerable: Simplicity, equity and universality. On a national scale, the Treasury would make the payments automatically, based on a simple income statement by the poor.

The long-run outlook for some such sweeping welfare reform appears favorable, whoever takes over the White House in January. There's mounting discontent among academic specialists, public administrators and politicians with the disadvantages of New Deal-devised public assistance programs: Demeaning investigations, cumbersome regulations and senseless state-to-state variations and the deadening of economic incentive.

A Special Commission

Furthermore, late next year a prestigious Presidential Commission on Income Maintenance Programs, led by railroad executive Ben Heineman, is expected to deliver its recommendations. It's a good guess the group will support a change to some form of guaranteed income. Moreover, the panel's conclusions will be specific enough to serve as the basis for legislation. Although a Humphrey Administration could be expected to be most receptive to the panel's ideas, Mr. Nixon might pay heed to them, too. Even if the next Administration favors a guaranteed annual income, of course, Capitol Hill resistance might delay any move toward such a plan if, as many analysts predict, the next Congress is more conservative.

For the short run, however, budget limitations make modest enlargement of existing social welfare programs, including increased Social Security payments and perhaps liberalized public assistance grants, seem more likely.

In any case, the New Jersey test serves mainly as a precedent-setting attempt to grapple with the practical problems of a guaranteed income. Simple as the system seems, some Trenton participants have trouble under-

Permanent Job Training Act Urged

WASHINGTON (AP) — Two members of President Johnson's Cabinet have recommended that Congress pass a national training act to provide permanent federal financial aid to job train-training programs in private industry.

Secretary of Labor W. Willard Wirtz and Secretary of Commerce C. R. Smith made the proposal yesterday in a report of the President's Task Force on Occupational Training in Industry.

"Congress should pass a national training act which would commit the federal government to supporting the highest level of training needed to meet the nation's economic, social, and security needs," the report said.

"It should also help individuals who wish to achieve their career objectives."

The report said the government should provide money for any industry job training program designed to train the disadvantaged, the hard-core unemployed, new workers entering the labor force, workers for critical jobs in short supply, and supervisory personnel who deal with the special problems of seriously disadvantaged workers.

The task force includes representatives of business, industry, organized labor and education. Vivian W. Henderson, president of Clark University in Atlanta, Ga., is chairman.

Los Angeles Times
October 3, 1968

A $65,257 grant from the Labor Department will enable the Mexican-American Opportunity Foundation to train 50 men to qualify as registered apprentices in the construction trades. The project is backed by the Los Angeles Building and Construction Trades Council. Federal approval was announced by Rep. John V. Tunney (D-Riverside).

YOUR MONEY'S WORTH

Help for Hard-Core Jobless

By SYLVIA PORTER

Jaime Juarez is an American of Mexican descent with a history as a school dropout, a drifter and an odd-job man who had never earned more than $2,000 in a whole year.

Juarez was 37 and had a wife and three children when he joined the Concentrated Employment Program in San Antonio in the spring of 1968.

After testing, counseling and tending to his medical needs, CEP sent him last April to General Dynamics, a giant company actively participating in President Johnson's JOBS (Job Opportunities in the Business Sector) program, spearheaded by the National Alliance of Businessmen.

For the first several weeks at General Dynamics, Juarez went through more testing, guidance, "special conditioning," training in metal working and woodworking. He listened well, learned well and worked well — well enough to be appointed, after three months, as a plant supervisor in charge of 25 of the plant's 107 employes. He now earns $535-a-month base pay, compared to a maximum of $35-$40 a week in the past.

The federal government has a training investment of about $3,500 in Juarez. In less than five years, that investment will be returned.

33,300 Success Stories

This is only one of more than 33,300 success stories about hard-core unemployed people who have moved into jobs via the Concentrated Employment Program, at a cost to the federal government averaging less than $2,000 each. Yet, outside of the professionals and those intensely interested in this problem, few Americans have even heard about CEP.

Despite so many years of unprecedented prosperity, there are still about 1,500,000 hard-core unemployed in this country, including about 500,000 in the 50 largest cities. "Hard-core unemployed" means a poor person who does not have a job and who also is one or more of these: a school dropout, a member of a minority, under 22 or over 45 years of age, or handicapped.

It was to help these hard-to-help Americans that CEP was created in March 1967 by Labor Secretary Willard Wirtz.

Today there are 72 CEPs in operation, 60 urban and 12 rural. Most are just gearing up, but they are expected to serve at least 150,000 people in the next 12 months.

Unified Effort

What the CEP tries to do is bring together in one unified effort all the Labor Department's various manpower programs to help the hard-core disadvantaged get ready for, find and hold permanent jobs.

Operating through a single local sponsor — a community action agency or a municipality — CEP seeks out the hard-core jobless in ghettos and other areas of concentrated unemployment and makes available such services as orientation, basic education, counseling, physical exams, medical treatment, day care for their children, work experience, training, job development and job placement.

It also identifies and locates the disadvantaged for the JOBS program, as in the case of Juarez and General Dynamics. A corporation trains the recruits and offers them jobs, with the corporation bearing the normal cost of training and the government paying for the additional costs of essential services.

As of Sept. 15, about 514 private firms in the JOBS program had hired and trained 49,410 people, at a federal investment of $141 million.

Other Programs

The CEP also operates through several other Labor Department programs. These include:

The Work Incentive Program, which helps shift people 16 years or older from welfare into productive employment.

The Neighborhood Youth Corps, which is designed to help poverty-level youths get part-time or nearly full-time jobs.

New Careers, which seeks to relieve critical manpower shortages by opening up subprofessional job opportunities for poverty-level adults at least 22 years old.

Operation Mainstream, which seeks permanent jobs at decent wages for adults with a history of chronic unemployment.

No matter who is the next president, all these manpower programs will be exhaustively reviewed. And they should be. But let us not permit the horror stories of waste, corruption and inefficiency to blind us to the brilliant value, in dollars as well as in social terms, of programs which can create today's Jaime Juarez.

Unemployable Battle Success Held 'Fantastic'

Employment of "hard-core unemployables" under a program of the National Alliance of Businessmen (NAB) has been described as "fantastically successful in the over-all picture" by its Phoenix director, Charles Miller, Ai-Research public relations assistant.

Miller pointed to a turnover rate of just under 5 per cent a month of 538 employes hired under the program during a four-month placement period. The number placed in jobs filled almost half the 1,221 positions pledged by 119 firms by Aug. 1, Miller said.

"WE CONSIDER this a highly successful retention rate in view of a normal turnover rate of 10 per cent a month experienced by a vast number of firms," Miller pointed out. "Further information we are working on shows that the turnover rate in the NAB program has gone as low as 2.5 per cent."

Business leaders in the United States were called upon early this year by President Johnson and Vice President Hubert Humphrey to help with the unemployment problem in target cities with civil disturbances.

"Response to the call was highly encouraging, indicating the willingness of business and industrial leaders to cooperate in an endeavor which has proved beneficial to the individual, the employer, the community and the nation," Miller said.

THE ALLIANCE requests that 2 per cent of the employer's payroll be hired from the hard-core unemployable group, he said.

One local situation, however, has drawn immediate consideration for plans to bring about corrective measures.

Arizona Public Service Co. has proposed the creation of a counseling service or "half-way house" in an effort to ease the transition of urban Indians from their situations into the working world.

THE PROPOSAL was made at a meeting of representatives of seven agencies concerned with Indian welfare after seven of 13 Indians hired left their jobs without offering any reason.

Two left after only one day and the others after several weeks, said Robert P. Radnich, APS senior employe development analyst.

He pointed out that urban Indians have no pre-employment program such as those available to African-Americans and Negroes. He said the establishment of such a program could prove helpful to other firms which may face the same problem. The firm has hired 55 under the plan and its over-all success has been noted.

A SALT-RIVER Project spokesman said the firm has hired 43 persons under the program since early spring, three of whom have quit for personal reasons and have been replaced by two others.

The only Indian in the program has remained on the job with no time lost, the spokesman said. He said, however, that SRP has been hiring Yaqui Indians, originally from Mexico, for about a half-century.

WASHINGTON POST OCT 11 1968

Potomac Watch

'Project Own' Offers Best Hope for Negro Firms

By William Raspberry

HOWARD J. SAMUELS, new head of the Small Business Administration, calls his brainchild Project Own; he describes it as "compensatory capitalism."

By whatever name or description, Samuels' ambitious proposals represent the biggest dose of hope ever administered to black business ownership in the ghetto.

He expects Project Own to help create minority-owned businesses at the rate of 10,000 a year by the end of the fiscal year, and double that rate a year later. Last year the total was only 2200.

"But even doubling the annual rate would only put us about one-fifth of where we have to be by 1971 if we are going to close the gap," Samuels told a meeting of SBA employes this week.

The "where we have to be" is reasonably full participation by blacks and other minorities in the business world. Samuels believes such participation is necessary for real racial equality.

"The Jews, Italians and the Irish tended to own business in the neighborhoods in which they lived," he said, and thus were able to prepare themselves for entry into the mainstream of commerce. Negroes, he believes, will have to take the same route.

ON THIS SCORE, he can find agreement among moderates and militants, white and black. But most of those who talk a good game of black entrepreneurship haven't the means to move from talk to action. Business ventures require investment capital and business experience, and there is precious little of either in the ghetto.

Project Own is designed to get around such problems by involving leading institutions and private industry along with community organizations.

Over the past few weeks, SBA officials have been meeting with bankers, in and out of Washington, to enlist their support of Project Own. Samuels describes their response as "one of the most historic revolutions of recent times."

"There is a whole new willingness on the part of banks to make loans in the inner cities of America," he said.

Washington banks in the past have shown very little interest in making SBA-guaranteed loans, both because of the added bookkeeping load and because of interest limits set by the SBA legislation.

IF SAMUELS really has persuaded local bankers to take a new look at ghetto financing, it will go a long way toward solving the capitalization problem.

To meet the second key problem for black businesses—the lack of business experience—Project Own is setting up a "buddy sysem" under which established businessmen will offer the benefit of their experiences to new entrepreneurs. Thus, a Negro who opens a men's clothing store would get help and advice from an established haberdasher.

In addition, Samuels is setting up special teams of SBA professionals to be located in ghetto areas and to provide liaison among prospective businessmen, the established business community, local community leaders, bankers and other Federal officials. He will be counting heavily on such groups as the Urban League, the National Business League and the Urban Coalition, he said.

A GOOD MANY Federal programs designed to help the black community have been crippled by spending cuts and face even more curtailment in the event the next administration is a conservative one.

Samuels believes Project Own will escape the budget ax. The agency already has enough money to make substantial numbers of smaller loans, and for the bigger loans it will rely on its guaranty authority, with private lenders putting up the actual cash.

Unforeseen problems are almost certain to crop up as Samuels' ambitious program unfolds.

But barring absolute catastrophe, Project Own just might make it possible for significant numbers of black people to enter the American mainstream without drowning in the process.

WASHINGTON POST OCT 11 1968

OEO Concedes Failure Of Chicago Gang Plan

The Office of Economic Opportunity failed in its attempt to salvage Chicago's youth gangs because, among other things, it didn't have enough professionals to work with trainees of limited learning capacity.

OEO director Bertrand M. Harding told Sen. John L. McClellan (D-Ark.) yesterday this was one of half a dozen reasons why OEO had trouble in its pilot project of working with the power structure of such gangs as the Blackstone Rangers.

Harding, who also criticized the "lack of neutrality" from the police and the press, said two other faults were inadequate on-the-job training and too few educational tools — even at the comic-book level— to communicate with dropouts.

He told the Permanent Investigations subcommittee there should have been more visits to plants "to offer a realistic picture of the work world," and more emphasis on tailoring jobs to fit elementary skills.

Nonetheless, Harding declared, the attempt in Chicago was a valid one even if no further Federal funds could be justified for it.

"Not only must the Federal Government act," he told the subcommittee, "it must act daringly and creatively. It must be willing to take responsible chances.'

ARMY TIMES OCTOBER 16, 1968

PO Training Spreads

WASHINGTON — Project Transition has spread to 107 military installations throughout the nation and is now imparting postal skills to more than 1,700 Vietnam era servicemen each month, according to Postmaster General W. Marvin Watson.

Interest continues to grow as servicemen in increasing numbers complete their tours of duty and return to the United States, seeking careers and places in their communities.

"We are happy to welcome them to the postal service," Watson said. "I want every serviceman to know that he has an invitation and an opportunity to join the post office and to continue his career in public service. As President Johnson has said, we intend to make the military a partner to productive careers."

At the start of the year, Project Transition was scheduled for 85 military installations; the expansion in locations already exceeds that goal by 26 percent, and if the present trend continues, the postal orientation courses soon will be turning out more than 2000 servicemen per month.

• • •

MORE THAN 85 percent of those who take the 40-hour course pass a civil service examination for clerk-carrier or mail handler. Servicemen then may be employed at any post office where jobs are open. Although reporting procedures still are being established, it is known that 416 new veterans already have been hired.

That total too is expected to grow sharply. There is some lag between course completion and hiring because the serviceman may not be discharged until two or three months after he takes the course. Then he may choose to vacation for a month before he seeks employment.

COLLEGES URGED TO ACT ON CITIES

Gardner Says Schools Have Not Responded to Crisis

By ISRAEL SHENKER
Special to The New York Times

DENVER, Oct. 10 — John W. Gardner, chairman of the Urban Coalition, charged here today that universities and colleges "have not responded impressively to the urban crisis," and he urged them to get involved.

In an address to the 51st annual meeting of the American Council on Education, Dr. Gardner complained that institutions of higher learning "have been notably laggard."

Declaring that crises are instruments of renewal, he said that this was the moment "to break the settled mold of life and create frash patterns."

Dr. Gardner urged the creation of "urban task forces consisting of representatives of students, faculty, trustees and administration together with neighborhood representatives from the immediate vicinity of the campus."

He proposed in addition:

¶"Significant intellectual questions involved in urban affairs" should be dealt with in undergraduate courses, and every student should be exposed to the courses.

¶Colleges and universities should prepare students to work professionally in urban affairs or to teach in this field.

¶Institutions of higher learning should extend technical assistance to American cities—just as they do to foreign cities.

'The Great Resource'

Dr. Gardner emphasized "the great resource" represented by students, and told his audience of educators: "You are accustomed to thinking of their educational potentialities as a resource, but you may not be accustomed to thinking of their activist inclinations in the same light.

James Farmer, former director of the Congress of Racial Equality took time off from Liberal candidate in the 12th Congressional District of New York, to address the luncheon meeting at the Denver Hilton. He said that there was "more de facto school segregation than ever before" and that the policy of "color blindness had failed."

Mr. Farmer backed color contion."

Samuel . Proctor, the university of Wisconsin's dean for Special Projects, urged his colleagues tossee education as "something more than a rehearsal for life in suburban America at $18,000 a year."

He warned that the black student "looks for a sign of commitment and that sign is when the liveliness of concern in and out of class centers around the critical issues of the time rather than on the effete busy work that is required for credits and degrees but is useless otherwise."

Literature of Revolution

Dr. Proctor added that "a serious approach to the literature of the angry revolutionaries, or a study of the aged poo, the rural dropout, the Spanish-speaking minorities, and the solo parent, live and breathing, may constitute a far more rewarding semester than much of what passes for college."

Hugh W. Lane, president of the National Scholarship Service and Fund for Negro Students, reminded the conference that "less than 1 per cent of those enrolled in undergraduate, post-secondary institutions in the fall of 1967 were black."

He called this a major source of fuel for the moral unrest that manifests itself as campus activism. "This clear sense of illegality, which is also immorality, cannot possibly be explained away to students — Neither to black students nor white — nor to the various minority segments of the American population."

Robert D. Clark, president of San Jose State College, suggested that disturbances at his own institution had helped matters considerably. The gains included, he said, appointment of an ombudsmen on racial questions; greater student participation in running the college; new courses concerning black and Mexican Americans; additional staff members from minority groups, and an enlarged program for technically inadmissable but promising minority students.

Dr. Clark claimed no particular credit for presiding over these achievements, noting wryly that effective leadership means leading where the people are going anyway.

Robert Bogulaw, sociology professor at the University of Washington, held that students' alienation was based on their contemplation of the future. "Even for those who successfully elude the clutches of the draft board or the recruiting sergeant," he said, "the prospect of a future devoted to tinsel, tedium, and trivia has become terrifying."

The American Council on Education is an association of 1,526 educational associations and institutions of higher learning.

REPLACING WELFARE
(continued)

standing the arrangements and satisfying the reporting requirements. To overcome such difficulties, CGF has set up an office in the Trenton ghetto to keep close contact with the needy families.

One recent day, office manager William Leggett, a former fight promoter, drove 21 miles about town visiting families to try to speed up filing of income statements needed to compute their payments. One woman objected to disclosing the amount of her welfare disability payment; she had been told such income was not included in the income used in determining her weekly CGF grant. "They are paying you money, and they've got a right to ask you anything they want and you've got to answer," Mr. Leggett bluntly told her.

The major responsibility for conducting the test here rests with an OEO off-shoot, the Institute for Research on Poverty at the University of Wisconsin. The institute, in turn, has contracted with Mathematica, a group of Princeton professors, to handle much of the actual administration, and the two organizations have formed CGF to deal with the participants and their problems.

The first payments to 160 Trenton families began last month; all 800 families taking part will be enrolled by January. Other participants will probably be selected in two of these New Jersey cities: Newark, Elizabeth, Jersey City, Camden and Paterson. But CGF may also go out of state. The project's total cost is estimated at $4 million.

In Trenton, the families were chosen at random from low-income groups without advance knowledge of the purposes of the project. Interviewers merely said they were conducting a "family management" survey. Only when the families received their first checks did they learn the identity and objectives of CGF.

Picking the Families

One practical worry, of course, is that participants may conceal their incomes so as to qualify for higher grants. "If we let people cheat and get away with it, the program is wrecked and . . . it militates against ever adopting the guaranteed income nationally," warns Albert Rees, a Princeton economics professor helping to conduct the study. To deter dishonety, the families must submit payroll stubs along with monthly earnings statements, and false statements will be grounds for loss of CGF grants.

The identities of most families enrolled in the trial will not be revealed. But to satisfy the curiosity of the press and television, the OEO will pick six families (three white and three Negro) for intarviewing after the first of the year.

On the basis of 1960 census results, the planners anticipated that eligible low-income families would prove plentiful in New Jersey. But economic conditions, at least in Trenton, have sharply improved, and 2,500 families had to be screened just to select 160 participants. An additional 30,000 families will be interviewed to complete the sample.

So far, most of the families selected have been Negro or Puerto Rican; if the trend continues, CGF may need to seek out more poor whites to be sure its sample is representative of all the nation's needy. Besides the 800 families receiving payments, 400 other poor families will serve as a control group, or basis for comparison; though not getting the grants, they will answer the same set of questions.

Through a series of lengthy interviews every three months, CGF will seek to find out what changes the income payments have produced: Do the unemployed find jobs? Do recipients get job promotions, enroll in training programs, move to communities where jobs are more plentiful? Does the extra income prompt any family members to quit the labor force? If so, who is most likely to quit—working wives, teen-age children or able-bodied males?

Personal expenditures will be examined. "To oversimplify, we will want to know whether the added income is spent on bread or booze," says Harold Watts, director of the Institute for Research on Poverty. Participating families sometimes will be asked to keep a weekly diary of food and other routine expenditures. In addition, their buying of such big items as refrigerators, freezers and television sets will be compared with the purchasing patterns of the other poor.

Beyond economic effects, the experiments will be watching for less measurable social adjustments: Do parents become more involved in their children's lives? Do pupils' school performances improve? Do families participate more in community affairs? Are there changes in the poor's political outlook?

Differing Payments

Seven separate negative tax schemes differing in amount of payment are being tested in Trenton. Each arrangement guarantees a different maximum grant (based on income and family size), ranging from $1,000 to $4,600 a year. Under the most generous plan, a family can continue to receive a small CGF payment even with earnings of over $10,000 a year. But most OEO negative tax arrangements are much less liberal.

Even if the New Jersey trial proves a failure, it's likely to spur other efforts to fashion acceptable alternatives to public assistance programs. "It's an experiment in running an experiment," says one welfare expert.

One guaranteed-income proposal, known as children's allowances, would furnish a fixed payment to all families, rich or poor, based on the number of children; the sum most frequently suggested is $10 per month per child. A children's allowance may be tested in coming months in Gary, Ind., through the Model Cities program.

CITY DELAYS PACTS TO AID MINORITIES

Action Awaited on Unions' Vow to Upgrade Negroes

By SETH S. KING

The city is withholding approval of two more contracts pending fulfillment of promises by two local unions to put more Negroes and Puerto Ricans in higher skilled ratings.

James D. Norton, director of the city's new contract compliance division, said yesterday that Local 1536 of the United Brotherhood of Carpenters and Joiners had agreed to upgrade approximately 50 minority group members to ratings of drillers' helpers.

Local 66 of the Pointers, Cleaners, and Caulkers Union has agreed, Mr. Norton said, to consider a referral plan whereby Negro and Puerto Rican workers could be moved into scaffolding work on waterproofing contracts in city construction projects.

In a related move, Theodore W. Kheel, the labor mediator, disclosed that the Sheet Metal Workers International Association had agreed to add 100 journeymen, to be chosen after tests next month, on "a nondiscriminatory" basis.

Housing Unit Delays Pact

The Housing Authority has been holding up a sheet metal contract because the construction firms could not guarantee that Negroes and Puerto Ricans would be hired.

Mr. Kheel, who is arbitrating this matter, said in an interview from Mexico City, where he is attending the Olympic Games, that the union had more than 200 applicants for journeyman ratings.

He said the union had agreed to hold a written test on Nov. 2 and a practical test on Nov. 16. Last year the union refused to accept 24 Negroes into its apprenticeship program after they had passed tests with scores that the union argued were "phenomenally high and statistically improbable."

The holding up of these city contracts was the first restrictive move made through the contract compliance division to implement an executive order by Mayor Lindsay that became effective last May.

This requires all contractors working on city building projects and all those selling goods prove that minority workers are being hired whenever possible.

Mr. Norton said contracts totaling $98,000 would be held in abeyance until he was convinced that the carpenters and the waterproofers unions had carried out their agreement.

The executive order requires each contractor and vender to include a compliance report in the agreement it signs on projects and purchase orders.

Mr. Norton said his office was demanding a manning chart from each contractor on a city project showing how many members of minority groups were actually to be employed.

Mr. Norton said the city had also obtained he cooperation of the Constructing Plumbers Association of Brooklyn and Queens, a group of plumbing contractors who bid on city projects. The association is screening all minority group workers referred to it by civic associations.

Lou Novak, president of the association, said that 20 Negro and Puerto Rican workers had been interviewed by a special committee to determine their experience on plumbing construction jobs.

Nine of these applicants were considered qualified and have been hired on city-financed projects, Mr. Novak said. They are paid union rates and may be offered a chance to qualify for a union card after they have been on the job for seven days.

There have been frequent complaints from civil rights organizations that many of the building trades unions have deliberately excluded or refused to train Negroes and Puerto Ricans.

"It's true now that the contractors are being caught in the middle," Mr. Norton said. "The city is demanding that they have minority workers and the unions are often claiming they cannot supply them.

"The contractors can hire any qualified worker they want, but in theory they would have to be offer the chance to join the union within a week. The trouble is that too often they get a work permit for the job, but they are never taken into the union."

Citizens Group Urges Welfare Assistance Be Federally Directed

• • •

Disparity of State Payments Seen as Inducing Migration To North From Rural South

By a WALL STREET JOURNAL *Staff Reporter*

NEW YORK—A family of four on welfare in Mississippi receives an average monthly payment of $35, whereas a similar family in new York gets $241.15 a month, a new report on the national welfare problem says.

Such disparity between welfare payments in different states is "an important consideration" in the migration of the unskilled poor to Northern cities from the rural South, according to the Citizens Budget Commission Inc., a New York businessman's group.

It was one of several conclusions in a commission report calling for national standardization of welfare assistance under the direction of the Federal government.

The report notes that the Mississippi family of four could travel from Jackson, Miss., to New York City by bus for $172—"substantially less" than the difference between Mississippi's payments for one month and New York's payments, which are the highest in the nation.

The commission also concluded that the disparities in levels of welfare assistance among various states is shifting an increasing proportion of the welfare burden to the high-paying states. The 10 states with the lowest levels of welfare payments decreased their share of the National Aid to Dependent Children Program to 19.2% last year from 30.3% in 1959, the report said. Conversely, the 10 states with the highest assistance levels increased their share of the national welfare payments to 30.1% last year from 21.2% in 1959.

For example, the report said, New Jersey, which pays $228.65 a month to a family of four, the second highest level in the nation, has experienced a 288% increase in its aid-to-dependent-children burden in the past 10 years. New York's burden in the period has climbed 197%. These two states showed the highest percentage increases in their welfare load.

South Carolina, on the other hand, which ranks 48th in its payments with a $67.55 monthly outlay for a family of four, enjoyed a 31% decrease for the same 10-year period in its burden of payments under Aid to Dependent Children.

"Because of these disparities and significant differences in the administration of welfare among the states, there is a critical need for Federalization of welfare standards," the commission's report concluded.

It recommended Congress legislate the amount of welfare payments that each state must make "with due allowance for differences in living costs."

If a state failed to pay welfare assistance at the Federally specified level, or failed "to administer the program without discrimination," then the Government would take over the administration of welfare within that state, according to the commission recommendation.

"Ways would have to be found," the commission said, to make a noncooperating state bear its share of national welfare costs.

The Federal Diary

Labor-Policy Study Reopens

By Jerry Kluttz

The President's advisory committee is reconsidering its recommendations for reforms in the Government's labor-management program, which gives recognition to the many unions that represent Federal employes.

Secretary of Labor W. Willard Wirtz is chairman of the six-man task force that made tentative recommendations to Mr. Johnson several months ago. But the study was reopened, an official has revealed, because of several new developments. He hinted they were.

- Actions by four employe unions in dropping from their constitutions the pledge not to strike against the Government.
- The promise by Democratic presidential nominee Hubert H. Humphrey to seek enactment of a modern labor-management program, and the pledge by **Richard M. Nixon,** the Republican nominee, to work closely with employe unions on programs that affect the 3 mililon Federal civilian employes.
- The congressional drive to enact guarantee that Federal employes have the right to join or not to join a union. The President's labor-management order carries such a guarantee. The effort was made to discourage the President from imposing a possible union shop in any form in the Federal service.
- A shift in thinking by some Federal officials on how best to accomplish a major overhaul of the program, from an order by the President to legislation by Congress. The Defense Department was among the agencies that questioned whether it wouldn't be better in the long run to allow Congress to make major changes in the program.

The point was raised whether employes and their unions would be satisfied for long with any revisions made by presidential directive.

AFL-CIO's Postal Clerks Union is the leader of the campaign to have Congress write into law a labor-management program, and it has the backing of most other employe unions affiliated with the AFL-CIO. But some of the independent unions oppose the legislation as written. In fact, some employe leaders would welcome a revised order by President Johnson before he leaves office.

If the political seers are correct and the next Congress is as conservative as they predict, it could be several years before Congress approves a labor-management program and it could turn out to be a disappointment to employe leaders.

Youth: The President has ordered agencies that don't already have them to set up youth career boards where young employes can have a voice in programs and policies of their agencies. Mr. Johnson has been favorably impressed with a youth-involvement program at the Labor Department and several other agencies.

His directive reminded agency officials that personnel and training practices must be kept current to meet the demands of the space age.

"It is time to re-examine our assumptions; it is time for a fresher and closer look at our systems for recruiting, selecting, placing, training, and above all, utilizing career trainees," he said.

Agencies have been told to find out how ideas from employes reach the top; the extent of training for career workers; whether young employes serve as links between the Government and young people on the campuses and how more minority-group employes can be moved into training and programs that can lead to Government careers.

Thousands seek work, although some jobs open

By ALBERT J. SITTER

The Arizona State Employment Service has a long list of job openings which have gone begging more than a month for lack of willing or able takers.

But, by the latest count, even if all of the 1,266 hard-core vacancies were filled today the state still would be left with 18,234 unemployed job hunters.

This fact conflicts sharply with the widely held belief that anyone can earn a living as long as he makes himself available for work. For in addition to its list of hard-to-fill jobs, the employment service has a much larger list of 20,500 persons actively seeking work.

Arizona's unemployment rate is 3.4 per cent of the work force, slightly less than the national average.

However, the complete unemployment picture is difficult to measure, said Charles A. Boyle, ASES administrator.

"OUR FIGURES," explained Boyle, "reflect those who are actively seeking work. There is no accurate method of quantifying those who have given up looking for work. And yet these persons are perhaps the most desperate."

Nearly half of the known unemployed in the state live in Maricopa County. However, only 403, or less than one-third of the jobs open for more than 30 days, were reported by employers in the county.

Of the nearly 10,000 jobless who are looking for work in Maricopa County about 20 per cent are Negro, although Negroes comprise only 3.8 per cent of the county's population.

The apparent paradox of having jobs available at the same time thousands of persons say they are looking for work is easily explained by one or more reasons.

THE PRIMARY reason is the lack of qualified applicants. Many other jobs pay wages considered to be too low by potential workers. With others, it's reportedly poor or substandard working conditions.

Lack of required qualifications have kept many able-bodied workers off the employment list. This category ranges from the highly skilled jobs in engineering, paying $600 to $800 monthly, to openings for waitresses, paying as little as 70 cents an hour.

For the most part, employers require applicants to be experienced in the type of work they offer, even though the job may pay less than wages considered to be below poverty level.

Because of the tightening of the labor market, some employers have lowered their standards to more realistic levels. Some, for instance, no longer demand that applicants for low-skill jobs have a high school diploma.

THE EMPLOYMENT service reveals that the greatest number of job orders remaining open in excess of 30 days are in the service occupations. Significant shortages exist for hostesses, waitresses, short order cooks, nurse aides, child care workers and attendants at lodging facilities.

Although the service sector reported the largest proportion of job vacancies due to inadequate pay, many of them also stemmed from lack of applicants who are trained.

CHRISTIAN SCIENCE MONITOR

A 'guaranteed income' vs. welfare

By Rep. William F. Ryan
Democrat of New York

Written for The Christian Science Monitor

THE GUARANTEED-INCOME IDEA HAS been around in one form or another since the early 1960's. Its more utopian proponents, like Robert Theobald, believe that our society is so affluent that no one should feel compelled to work merely for the ignoble purpose of earning a living; that lives will be richer if society guarantees the necessities of life and people do what they enjoy doing.

On the other hand, conservative economists believe that direct cash transfers are preferable to the multiplicity of subsidy programs now in effect. If cash is plentiful, the theory goes, the government will not have to tamper with the price levels of the private sector in areas such as housing, education, and transportation, and the poor will have the cash to spend on necessities, along with a greater freedom to decide how to spend it.

I do not share either view. The work ethic is too deeply ingrained in the American people for them to accept a plan which discourages earning a living. As for the second approach, many subsidy programs benefit middle-income as well as low-income people or are designed to meet needs beyond simple income redistribution.

Different approach

I was prompted to introduce the first guaranteed-income bill by the belief that present welfare programs are not effectively helping the poor, and that a different approach to income maintenance must be developed.

The term "guaranteed income" conjures up an entirely misleading picture of a program to subsidize idleness. The objective of a sound income-maintenance plan is precisely the opposite. It is to provide the very poor with a subsistence level of income in a form consistent with dignity while encouraging them to work. Welfare as it operates today does not do that.

Although the federal government finances about 50 percent of the overall costs, the welfare system is in reality a patchwork of state and local programs, with widely differing standards of eligibility and benefits. The maze of regulations and standards screens out approximately 3 out of every 4 persons whom the federal government defines as below the poverty line.

The wide disparity in benefit leve's promotes migration to the cities by rural persons least equipped to earn a living in an urban environment. It is not that the higher welfare payments attract migrants. In most cases, the rural poor migrate to the cities because their present states offer them neither jobs nor adequate welfare benefits, and they believe that opportunities will be greater in the cities.

Whatever their motivation, many end up on the welfare rolls.

The chaotic growth of welfare programs over the past 35 years has produced a tangle of red tape and a variety of controls over how benefits may be spent which leave the recipient resentful and consume too much of the social worker's time with paperwork and policing.

Conservative critics of welfare are not entirely wrong when they attack welfare for its top-heavy bureaucracy, its debilitating effect on human dignity, and its tendency to create a caste of welfare recipients.

But their prescription is faulty. We have a society with millions of poor who cannot work, because they are aged, because they are disabled, because they are young, or because they are mothers with dependent children. We still need to provide for these people.

There also are millions more who can and would work, but our economy has failed to provide jobs and job training. We also must provide for them through expanded employment opportunity and effective income maintenance.

How, then, to design an income-maintenance system which provides enough income for the necessities of life, but which is not so generous that it discourages work? How to keep it as simple as possible, but prevent fraud and abuse? How to keep its cost within limits which the Congress will at least consider?

Summary of program

Here is an outline of how it might be done.

The first factor would be a basic benefit, keyed to the size of the recipient family. The basic benefit would be paid in cases where the family income is zero, but the benefit would not be reduced by a full dollar for every dollar of earnings. If the benefit were $200 per month, and family income increased by $100, the benefit would not be reduced by the full $100, but by some lesser amount so that there would be an incentive to work. My bill specifies a 50 percent reduction.

Today, in most states, if a welfare family receives $200 monthly and the mother earns $100 scrubbing floors, the local welfare agency promptly reduces the benefit by $100, leaving the family no better off, and providing no economic incentive for working.

The second factor would be a simplified filing and enforcement system. Under my bill families would file simple monthly declarations of income; they would receive monthly checks, similar to social-security checks.

Enforcement would be based on spot checks, similar to Internal Revenue Service enforcement. If the income statement of 1 recipient in 20 is subject to complete audits, the law of averages is likely to keep the other 19 honest.

As a result, thousands of trained social workers would be freed from police work that destroys the trust of their clients and would be able to devote their time to needed and wanted services.

Benefit level suggested

The level of benefit would be $50 per month for the head of the family, and the spouse, plus $39 for each dependent up to a total of seven. This works out to approxi-

CHICAGO TRIBUNE
OCT 15 1968

HOTPOINT FIRM CLOSES PLANT AFTER SIT-IN

BY JAMES STRONG

Hotpoint closed its refrigerator plant in Cicero yesterday after 20 Negroes on the assembly line started a sit-down strike.

Fred A. Kaimer, manager of relations operations, said the decision was made to avert an outbreak of violence against the dissident group by 800 workers idled by the illegal sit-in.

The group, which calls itself the Afro-American Employes committee, was led by Willie J. Plunkett, 27, of 8233 Ridgeland av., an assembler. Plunkett said the action was taken to protest the firing of a Negro employe involved in a fight with a Puerto Rican who was not fired.

Refused to Leave

All 20 were suspended by Hotpoint after they were requested to leave the plant and they refused. When they refused to leave, the order was given to close the plant, at 1538-40 S. 54th av.

Unrest at the Cicero plant has been recurring since last June when Plunkett ran third in a three-man race for president of local 571, Sheet Metal Workers union. Delane Mitchell received 338 votes, James R. Crouch 207, and Plunkett 137.

Plunkett has since charged that the union and management have conspired to maintain "rascist patterns" and to deny Negroes equal treatment in seniority, rules, working conditions, and grievances.

Denies Charges

Mitchell denied the charges and explained that the unions' vice president, Roger Erskines, as well as 60 per cent of the union stewards are Negro. Mitchell said one of the five plant stewards is a Negro.

Mitchell said the union has began an investigation of the sit-in and raised the possibility of union charges being filed against the dissidents.

The company blamed outside influences for promoting the unrest at Hotpoint. Kaimer said Plunkett's professed reasons for the sit-in were false and that no one was fired in the incident cited by Plunkett. He said one man was suspended for two days and the other is under suspension pending the results of an investigation.

17 States Find Laws No Cures for Strikes

BY JAN HARTNETT
Associated Press Writer

Some of the 17 states with laws banning strikes by public employes have learned the hard way that such measures — even those with tough penalties —are not a guarantee against walkouts.

Thousands of teachers, sanitation workers and others on city, county and state payrolls have struck in defiance of the state laws. In some cases they have suffered minor, if any, consequences despite stiff penalty provisions.

Not all of the 17 state measures provide penalties.

Antistrike laws covering public employes are in effect in Massachusetts, Delaware, Illinois, New York, Connecticut, Pennsylvania, North Carolina, Florida, Virginia, Ohio, Michigan, Wisconsin, Nebraska, South Dakota, Texas, Hawaii and Oregon.

Court Bars Strikes

In Illinois, there are no statutory provisions specifically banning strikes by public employes. But the Illionis Supreme Court has ruled that strikes by public service workers—including teachers—are unlawful.

A 1947 Pennsylvania law bars strikes by public employes under penalty of dismissal. The law provides that if a striker subsequently is rehired, he shall not be hired back at a salary higher than he received when he struck; receive no salary increase for three years; shall lose his tenure and be on probation for five years.

North Carolina law bars municipal, county and state employes from belonging to trade or labor unions with national affiliation.

Florida has an antistrike law for public employes, but its constitutionality is being questioned by a suit pending in the Florida Supreme Court.

Virginia law prohibits any agency of the state or local political subdivisions from negotiating with unions. Under the 1946 law, any state, city or county employe who goes on strike or otherwise fails to report for work shall be fired.

Iowa has a so-called right-to-work law, but it has no legislation prohibiting strikes either by public employes or industrial employes. It does have a law prohibiting collective bargaining between state agencies and their employes.

Ohio has had a law for years forbidding strikes by public employes, but teachers and other public employes have struck, threatened to strike and stayed off their jobs for "study sessions" without suffering serious consequences.

The Massachusetts Legislature in 1958 passed a law that specifically exempted police from its provisions, allowing public employes to organize. Two years later, the law was amended to allow city and town employes to bargain collectively. In 1964, the legislature again amended the law, this time insuring that state employes could bargain collectively and at the same time prohibiting strikes.

Two years ago, Delaware adopted a law that permitted public employes to organize and conduct collective bargaining, but which prohibited them from striking.

New York has perhaps the most controversial antistrike legislation, the Condon-Wadlin law which forbids strikes by public employes. It provides penalties for strikers including automatic dismissal, loss of promotion rights and pay raises for those eventually rehired. But over the years, the law was regarded as so harsh that the state ignored it, as did employes.

Strikers Ignore Laws

Gov. Nelson A. Rockefeller and the New York Legislature fostered a study that produced the Taylor law, enacted last year. It forbids strikes, but does not mandate dismissal of violators. The law switches penalty emphasis from rank-and-file employes to their unions and union leaders.

Michigan's Hutchinson Act prohibits strikes by public employes, but it does not spell out penalties.

Wisconsin has had an antistrike law for county and municipal employes since 1962, and a similar law for state employes since January, 1967. Neither law provides for penalties. There have been 10 strikes by county or municipal employes in Wisconsin since February 1962.

Nebraska has a strong law making it unlawful to hinder, delay, limit or suspend the continuity or efficiency of any government service, or service of any public utility by lockout, strike slowdown or other work stoppage. The Nebraska Court of Industrial Relations has broad powers to prevent such strikes.

South Dakota has limited statutes to prevent public employes from striking, but lawyers say the laws must be tested in court.

Texas has a law prohibiting strikes or collective bargaining by employes of any subdivision of state, county or city government. The law includes teachers.

Public employes have the right to bargain collectively in Oregon. Strikes are illegal, but there is no penalty for violation of the law.

LABOR DEPARTMENT
(continued)

The announcement canceled the offer and gave MOER additional time to learn the specific nature of the charges against it.

Board members of the antipoverty agency met last night and appointed a committee, to be headed by Alderman Robert MacGregor, to meet with Labor Department officials to discuss the accusations.

Severe Blow

Loss of New Careers would be a severe blow to the antipoverty agency's prestige among the poor.

The program's budget provides approximately $10,000 a year for training and employing each enrollee, and Pillow estimates that the total $2.1-million grant accounts for about 20 per cent of the funds administered by MOER.

As to MOER's chances of retaining the program, the Labor Department, which still has a firm grip on the meat cleaver, continues to remain mum.

COAL STRIKE
(continued)

cil has said that increases exceeding 6 per cent a year threatened economic stabilization.

Present Wages Described

The basic wage of underground soft coal miners has been $27.25 a day. Three top classifications of underground workers—electricians, mechanics, and continuous mining machine operators—have been receiving $30 a day.

Miners in Alabama and eastern Kentucky have worked on a wage scale of about $2 a day less. The new contract will gradually wipe out that differential. The miners in those districts will thus eventually get increases of about $5 a day.

An innovation in the new contract is a Christmas bonus of $120, beginning in 1969. To curb unauthorized strikes, however, the operators insisted on, and won, a reservation that this bonus and pay for eight holidays would not be granted to miners who were absent on such strikes the day before or the day after the dates for which these extra payments are made. Absences because of illness or other bona fide reasons will not be penalized.

In addition to the 14 days' vacation now granted to employes with one year's service, a graduated vacation schedule will provide an additional day of paid vacation for each year of service after 10 years, with a maximum vacation of four weeks for employes with more than 19 years of service.

An employe earning $30 a day who qualifies for the maximum vacation would receive a $600 vacation payment in 1969, and a total vacation payment of approximately $2,000 during the three years of the contract.

Seniority clause improvements will permit a senior miner to change to a better paying shift, or a more desirable shift, with the same employer within the same union district.

Men reporting for work at the mine opening, unless instructed not to report, will be paid for four hours' work if their services on the reporting day are not used.

The new contract makes no changes in the health and safety code or in the "royalty" payment of 40 cents a ton, which supports the welfare and retirement fund.

More than 70,000 retired soft coal miners now receive $115 a month from the fund. They were raised from $100 to $115 in July 1967.

LBJ Could Try To Name Chief Justice

By CHARLOTTE G. MOULTON
UPI Writer

WASHINGTON — In the two months President Johnson has left in office, he still could try again to select Chief Justice Earl Warren's successor.

There's some talk that he might do just that, despite the defeat he suffered when the Senate failed to confirm his selection of Associate Justice Abe Fortas to replace Warren.

MR JOHNSON obviously would like to have another liberal as chief justice while President-elect Richard M. Nixon would pick a more conservative voice.

If Mr Johnson does try to pick Warren's successor before Nixon is inaugurated, there are two ways he could go about it:

● The use of a recess appointment, to be made before Congress convenes Jan 3. This appears the less likely way. It would be a temporary appointment pending action by the Senate.

● Considered more possible — at least by insiders at the Supreme Court — would be a nomination of a chief justice by Mr Johnson between Jan 3 when Congress reconvenes and Nixon's Jan 20 inauguration.

TO GET the Senate to approve such a late-date selection, Mr Johnson might pick someone of such stature that the lawmakers could hardly refuse him. Or he might pick a member of the Senate, since senators usually find it hard to vote against one of their own.

Another approach might be for Mr Johnson, who has already shown a talent for getting along with his Republican successor, to get Nixon's approval in advance — tacit or otherwise.

Another possibility is for Mr Johnson to elevate Justice Potter Stewart, 53, an Ohio Republican whose constitutional philosophy is more conservative than Fortas', to the chief justiceship.

OTHER SPECULATION centers around persons of impeccable legal background, such as a well-known judge or law school figure. In this group are Professor Paul A. Freund of Harvard Law School, an outstanding authority on constitutional law; U. S. Solicitor Gen Erwin N. Griswold, a former dean of Harvard Law, and Judge Henry J. Friendly of the Second U. S. Circuit Court of Appeals in New York.

Nixon promised during his campaign to appoint to the court only "strict constructionists" of the Constitution. Friendly would seem to fill this bill, since he recently called for a 350-word amendment to the Constitution to overcome some of the recent decisions on self-incrimination.

A PROMINENT Washington attorney mentioned for the nomination is Charles S. Rhyne, 58, the moving force behind the World Peace Through Law organization and originator of the annual Law Day U. S. A. celebration on May 1. Rhyne is a Republican.

Although the chief justice has given every indication that he wants to retire as soon as possible, legal opinion appears unanimous that he could withdraw his June 13 retirement letter to Mr Johnson if he chooses.

If nothing happens, there is disagreement as to whether the Supreme Court matter will be pending business for the income President.

SENATE Republican leader Everett M. Dirksen of Illinois, has said the Warren retirement carries over to the new administration. Under this theory, Nixon may act.

But Senate majority leader Mike Mansfield of Montana has said the letter is binding on the Johnson administration only. According to this thought, a separate retirement announcement would have to go to Nixon.

Nixon is said to have taken the Dirksen view.

On the other hand, the President could simply wipe out the effect of Warren's June 13 letter by getting a written commitment from Warren to stay on. The chief justice is sitting now because the President requested him to do so "until emotionalism subsides, reason and fairness prevail."

Warren and Nixon are longtime political protagonists.

SALES DIRECTOR — Jimmie D. Fore is the new sales director for the Greater Houston Convention and Visitors Council and assumes this position Monday morning. He spent a year as assistant director of the Civic Center. Fore, a native Texan, is a graduate of the University of Houston.

Stove Source of Blaze

2 Children Killed In Apartment Fire

Sheila Parnell, 3, and her 18-months-old brother, Joe Parnell Jr, died of suffocation in a bedroom at their apartment home early Sunday night when a fire damaged the kitchen next to the bedroom.

The two children were found by firemen, who were called to the fire at the Algiers Hotel and Apartments, 2412 Blodgett. The victims were in the same bed. They were declared dead at Ben Taub General Hospital.

Their father, Joe Parnell Sr, 41, told arson investigator C. R. Kent that he left the apartment about 3:30 PM, leaving the door to the apartment unlocked.

He said he believed his wife returned to the apartment because two pots of food were found on the stove, the source of the blaze. Parnell said he did not leave the burners on.

The investigators had not located Mrs Alma Parnell, the mother, early Monday morning. The fire was reported about 9 PM and was extinguished 30 minutes later.

Panel Will Hear Lucey Dissension

SAN ANTONIO — (UPI) — An 18-man fact finding commission begins a series of private hearings Monday in an attempt to ferret out the problems confronting the Roman Catholic Archdiocese of San Antonio.

The hearings are expected to last two or three weeks. Already 20 persons have asked to air their views before the board of 12 priests and six laymen.

MEANWHILE, officials of a [illegible]cal lay group have launched [illegible] drive to get as many lay[illegible] as possible to testify to [illegible]mmission.

[illegible]board was formed to [illegible] the controversy that [illegible]ly boiled around [illegible] Robert E. Lucey, [illegible]y 30 days.

[illegible], 51 priests an[illegible] had asked the [illegible]chbishop Lu[illegible] from the [illegible]e than 27 [illegible] response [illegible] other [illegible]ts'

London's Astir With Early Start on Christmas Season

LONDON — (UPI) — Londoners are already counting the shopping days until Christmas.

The Yule season starts early in Britain. Gilt reindeer already peer down from one department store on the Strand. More than 8,000 light bulbs glitter around another on crowded Oxford Street. Decorations have blossomed on Kensington High Street.

ONE FOOD store chain has [illegible] advertising Christmas [illegible] — and taking reserva[illegible] a month.

[illegible]ave announced [illegible] programs: [illegible] and chil[illegible]Peter Pan, [illegible] young[illegible]f the [illegible]

There are special Christmas matinees on the calendar for all of London's hits, ranging from nostalgic musicals to way-out fare.

IN THIS land of Dickens, Christmas traditions live on. But there's a modern touch.

One store offers a "packaged" stocking full of gifts — with a choice of stockings to suit little boys or little girls, bigger boys or bigger girls, and mom and dad.

At another store the express elevator to Toyland is fitted out like the inside of a rocket ship, with shiny walls, "portholes" looking out on "stars," and a countdown over a loud speaker. The elevator opens into a Toyland built around a Santa's village [illegible]

2 of 9 Escaped Felons In Utah Still At Large

POINT OF THE MOUNTAIN, Utah — (UPI) — Two of the nine prisoners who fled from the Utah State Prison's maximum security unit Friday night remained at large Sunday.

Meanwhile, three of the men, including two sentenced to death, were returned to the prison from Burley, Idaho, where they were apprehended Saturday.

STILL AT large are Michael Patrick Jones, 22, Berkeley, Calif, serving life for slaying an Ogden, Utah policeman, and Frank Lopez, 26, Rock Springs, Wyo, serving a five-year-to-life term for assault with intent to commit murder.

Warden John Turner and other prison authorities de[illegible]

BURLEY POLICE also apprehended Delbert Garrett, 32, burglar. Garrett, Lance and Kelbach told Burley officer Pete Rodriquez the trio stole a car in Riverton, Utah, drove it 50 miles to Ogden where they stole the four-wheel drive vehicle recovered in Burley.

The nine men were not missed until just before noon Saturday when they failed to show up for lunch. Turner said reports show all nine men were seen by guards at the nine o'clock check Friday night, and some were seen at 11 PM.

Vance Still Expects Saigon Will Join Talks

PARIS — (AP) — Diplomats from four points argued in public statements Sunday while awaiting a Saigon decision about attending the proposed expanded peace conference on Vietnam.

Ambassador Cyrus Vance, deputy chief of the U.S. delegation under W. Averell Harriman, said he expects Saigon will join the parley "and take a leading part in the forthcoming negotiations leading toward peace in South Vietnam."

THE WOMAN chief of the Viet Cong's National Liberation Front delegation here, Mrs Nguyen Thi Binh, blamed the Americans for the South Vietnamese government's reluctance to attend.

"The U.S. government must assume the entire responsibility for the obstinate attitude of its Saigon lackeys," she said.

South Vietnam's ambassador-observer, Pham Dang Lam, declared: "We cannot take part in four-party negotiations at which the NLF has independent status." He said President Nguyen Van Thieus regime is the legal government and the NLF is only a rebel movement.

"WE CONSIDER the NLF as the authentic representative of the population of South Vietnam," countered Col Hau Van Lau, Vance's opposite number of the Hanoi delegation.

The exchanges were carried in the French magazine L'Express and in separate statements while U.S. diplomats worked behind the scenes to persuade Thieu to accept an ambiguous formula aimed at bypassing the status issue.

President Johnson originally set Nov 6 as the opening date under his bomb halt package for a new round of discussions, with the Saigon government and the NLF joining in. But Thieu balked, forcing the Americans to ask for a postponement.

DESPITE THE cross fire of statements, none of the three delegations here was packing bags to go home. U.S. sources displayed mounting expectation that Saigon would send a mission, but avoided predicting when it would arrive.

RELAXING AND WAITING

Luci Johnson Nugent, daughter of President Johnson, wears a plumeria lei and crown while enjoying the show at the Polynesian Cultural Center near Honolulu. Luci and her son Lyn are in Hawaii awaiting the arrival Wednesday of Airman First Class Patrick Nugent, her husband, on a rest and recuperation leave from South Vietnam.—AP Wirephoto

Chimp Smokes Away To Aid in Drug Project

ATLANTA, Ga — (UPI) — Vickie doesn't worry about which cigarette travels the smoke further — or which is a bit longer or slimmer.

Brands don't matter to her either. She just keeps puffing and may some day become the world's champ chimp chain-smoker.

VICKIE IS one of several chimpanzees at Emory University's Yerkes Regional Primate Research Center learning to smoke in a new project to test the effects of drugs.

The project is financed by a one-year contract from the U.S. Department of Justice's Bureau of Narcotics and Dangerous Drugs.

"This project and others like it are attempts to develop methods for determining in advance the drug-abuse potential of any new compound, says Dr Walter A. Pieper, assistant psychobiologist at Yerkes and project director.

"Our goal is to be able to predict which new drugs are likely to be abused by humans, before these compounds are released for use by the general public."

A SMOKING machine just outside the chimp's cage eliminated the animal's need for matches or cigarette lighters.

The machine holds 36 cigarettes in a turntable. It is preset to allow enough time for the chimp to smoke one cigarette before positioning another.

After a stable smoking pattern is observed, Dr Piper will replace the tobacco with drugs, such as cigarette-like tubes containing dextro-amphetamine, a drug often used abusively as a "pep pill."

Rusk Sick; Talks With Madrid Off

MADRID —(UPI) — Fever and laryngitis plagued Secretary of State Dean Rusk Sunday and forced a new postponement in his talks with Spanish officials.

Rusk arrived here from the NATO meeting in Brussels Saturday night, and had appointments with Foreign Minister Fernando Maria Castiella and chief of state Francisco Franco.

OFFICIAL FOGGERY surrounded Rusk's visit. No one in an official position would commit themselves to saying exactly why he had come, and on what basis.

Last week it was generally accepted that he was coming to discuss the question of U.S. bases in Spain. This country has given the United States until March to sign a new bases agreement — and the government is demanding what the United States government considers an exhorbitant price.

If an agreement is not signed, the United States will be given one year to pull out its men and equipment from its nuclear submarine base at Rota and two major air bases at Torrejon and Moron.

SUNDAY, HOWEVER, no U.S. or Spanish official would confirm that Rusk actually was here to discuss the bases. They said he had merely come to inform the Spanish government about decisions taken at last week's Brussels meeting of the North Atlantic Treaty Organizations' council of ministers.

Such informative visits are not unusual, although it is not always a man of Rusk's rank who makes them.

It did appear to many political observers that both sides were trying to play down the importance of Rusk's visit and avoid all references to the question of military bases.

The Spanish news agency Cifra, which reflects the Spanish government's position, said Rusk would talk both about the NATO meeting and the bases, but these discussions would not have the status of "negotiations." They would be considered only as "informative contacts."

Jackie's New Friend

Mrs Jacqueline Onassis makes friends Sunday with a horse at Turville Grange estate near Henley, England. She and her husband Aristotle Onassis are spending a holiday there with her sister, Lee Radziwill, and her sister's husband, Prince Stanislaus Radziwill. (Story on Page 20)—AP Wirephoto

Tax Refund to Poor In Broad SS Reform Plan

WASHINGTON — (AP) — A new Brookings Institution report calls for broad "reforms" of the social insurance system, including income tax refunds of Social Security taxes paid by the poor.

The study released on Sunday also recommended two changes which President-elect Nixon endorsed in his campaign. These are:

- Automatic enlargement of old age pensions to match rises in the cost of living.
- Increases in widow's benefits to 100 per cent of workers' benefits.

THE BROOKINGS Institution is a privately supported research organization that focuses on economics and government.

Its report urged structural changes in the system that would go far beyond any pro-

Some immediate flaws, it said, are these:

- The Social Security tax is particularly burdensome on the poor because it is a flat deduction from earnings making no allowance for ability to pay.
- Working husbands and wives are treated as separate taxable units. This can mean that they pay more into Social Security and receive less on retirement than a retired man whose wife did not work.
- Widows receive lower benefits than retired workers, although their husbands may have contributed as much or more and their needs may be as great.
- Single retired persons are treated far less generously than couples.
- The ceiling on benefits

NIXON, IN addition to endorsing cost-of-living escalation for pensions and increased widows' benefits, has also advocated eliminating eventually the ceiling on earnings that Social Security beneficiaries may receive without loss of benefits.

However, it is understood that Nixon favors slowing down the expansion of Social Security and Medicare benefits and the frequent stepups in payroll tax increases.

The Brookings economists call for no slowdown; they suggest that the Social Security tax should be levied on family incomes up to the national median level, and that benefit payments of 40 to 50 per cent of such earnings are "a reasonable goal." The present taxable base, $7,800,

Marijuana Hearing on Island Today

FROM POST GALVESTON BUREAU

GALVESTON — A hearing is scheduled for 9 AM Monday for Oren Cleveland Jr, 48, of 1115 Broadway, who was charged with possession of marijuana after a raid on his business, Shorty's Grill, at 2802 Ave F, late Saturday night.

Cleveland, out on $20,000 bond, will appear before Justice of the Peace James L. McKenna.

OFFICERS James Bierman and Paul De La Rosa Jr arrested Cleveland after De La Rosa found a pack of 23 marijuana cigarettes between a stove and a post at the bar.

Biermand had obtained search warrants from Justice McKenna for both the bar and Cleveland's home. Five other officers took part in the raid.

Police entered the grill at 11:48 PM Saturday and found the marijuana at 12:04 AM. Police also found four bottles of unidentified pills, four loaded pistols and two knives. No narcotics were found at Cleveland's house.

BIERMAN said he obtained the warrants after two women testified in another case Nov 12 that Cleveland gave them two marijuana cigarettes each about three weeks ago.

De La Rosa said the grill had been under surveilance for a month and during that time six youths were arrested at the location and charged with possession of marijuana.

The study released on Sunday also recommended two changes which President-elect Nixon endorsed in his campaign. These are:

- Automatic enlargement of old age pensions to match rises in the cost of living.
- Increases in widow's benefits to 100 per cent of workers' benefits.

THE BROOKINGS Institution is a privately supported research organization that focuses on economics and government.

Its report urged structural changes in the system that would go far beyond any proposals currently pending. However the study foresees ultimately two separate but co-ordinated systems:

- First, a revised Social Security program assuring benefits to the aged at a uniform percentage of past earnings;
- Second, a "negative income tax or family welfare allowances designed to assure income at a minimum subsistence standard for all Americans who remain below the poverty line.

THE BROOKINGS volume titled "Social Security: Perspectives for Reform" was written by: Joseph A. Pechman, director of economic studies of the privately-supported research organization; Henry J. Aaron of the Brookings staff, former senior economist of the President's Council of Economic Advisers, and Michael K. Taussig, former Brookings economist now teaching at Rutgers University.

The authors note that Social Security has been operated "with efficiency as well as integrity." But they conclude that the system needs modernization not only to correct specific defects in the present structure but, in the longer run, to enfold the program into a broader system for the elimination of poverty.

ing no allowance for ability to pay.

- Working husbands and wives are treated as separate taxable units. This can mean that they pay more into Social Security and receive less on retirement than a retired man whose wife did not work.
- Widows receive lower benefits than retired workers, although their husbands may have contributed as much or more and their needs may be as great.
- Single retired persons are treated far less generously than couples.
- The ceiling on benefits hurts large families eligible for survivors' payments.

ings that Social Security beneficiaries may receive without loss of benefits.

However, it is understood that Nixon favors slowing down the expansion of Social Security and Medicare benefits and the frequent stepups in payroll tax increases.

The Brookings economists call for no slowdown; they suggest that the Social Security tax should be levied on family incomes up to the national median level, and that benefit payments of 40 to 50 per cent of such earnings are "a reasonable goal." The present taxable base, $7,800, is close to the 1968 median income level.

Yemen Aid Is Asked For 3 Accused in Nixon Plot

NEW YORK — (UPI) — A newly formed "Arab Immigrant Defense Committee" called on the government of Yemen Sunday to come to the aid of three natives of the Arab country accused of plotting to kill President-elect Richard M. Nixon.

The committee charged in a letter to the consulate general of the Yemen Arab republic in Washington that Ahmed Rageh Namer, 43, and his sons, Hussein, 20 and Abdo Ahmed, 18, "are being denied protection of their fundamental human rights, and equal protection of the laws of the United States in their present imprisonment."

The Namers, arrested Nov 9 after another Yemeni Arab told police they had tried to hire him as triggerman in the assassination plot, were indicted by a Brooklyn grand jury last week on charges of conspiring to commit murder, soliciting to commit murder and possession of dangerous weapons.

The father was released Friday in $25,000 bail, reduced from the original $100,000, but friends and sympathizers of the family still have not been able to raise funds for the release of the sons.

Nixon Considering Replacing GOP's Bliss

WASHINGTON — (AP) — President-elect Richard M. Nixon is considering replacing National Chairman Ray Bliss in an overhaul of the Republican Party organization.

However, associates of Nixon, who reported this prospect, said they expect Bliss to continue as head of the national committee for a while.

RAY BLISS
May Be on Way Out

But when he gets around to it, the incoming President is expected to supplant Bliss — a technician who has avoided policy making — with an individual more attention commanding than the present chairman in speeches and personal appearances.

PRESUMABLY the new chairman will be one of those among Nixon's close advisers during the presidential campaign.

Nixon was described as being anxious to gear the party organization quickly for an intensive drive to boost GOP strength in the Senate and to at least hold the line in the House in the 1970 elections.

Republicans at all levels look for the White House to maintain close liaison with the national committee and the Senate and House campaign committees which will be directly involved in the congressional election battles.

Nixon personally knows party workers from the county level on up, through his hundreds of appearances at fund-raising dinners, party conferences and state conventions in the eight years since he left office as vice president.

WHILE THE duties of the presidency may limit his personal campaigning, associates expect Nixon to devote what time he can spare to building up the party organization. It'll be needed for what has traditionally been an uphill battle with the opposing party after two years of a new administration.

A top Nixon aide, Herbert G. Klein, said over a national radio-television program — CBS' Face the Nation — Sunday that rebuilding of the Republican Party will be "one of the hallmarks of the Nixon administration.'

He said the next two years would see a strengthening of the party through Nixon's efforts "by bringing its registration of 27 per cent up to something more like the actual vote he (Nixon) received of 43 per cent."

KLEIN SAID Nixon would also rebuild and strengthen the Republican National Committee, giving it a more important role in both party and national affairs.

Since the Democrats control both houses in the new Congress, the Republicans will have no political cushion for the slide that usually develops against the White House administration in the offyear election.

The Republicans have a slim hope of ousting the Democrats from control of the Senate. But they would have to win a net of nine seats and utilize the vote of the new vice president to take over its organization.

THE DEMOCRATS control the new House organization by a margin of 51 votes. Tradition will be scrapped if the GOP can win the net of 26 seats in 1970 voting to take over that body.

Since 1954 the party in power has taken a drubbing in congressional contests, in nonpresidential years with one exception. In 1954, despite Dwight D. Eisenhower's personal popularity as President, the Republicans lost control of both houses.

The exception since then to the law of political gravitation that seems to work against the party of the White House occupant was in 1962. In that year the Democrats held their own in House races and added three seats to their substantial Senate majority.

IN THE 1966 elections, it was the old story again. Two years after President Johnson had won an elective term in a landslide, the Democrats lost 45 house and three senate seats. But they retained control of both bodies.

Unless Nixon can work some kind of political miracle or events submerge traditional voting patterns, the odds indicate he is likely to have a Democratic Congress on his hand for all of his first four years.

Nixon Is Alone for Respite

KEY BISCAYNE, Fla — (AP) — President-elect Nixon is spending a lot of time by himself, contemplating his responsibilities and problems, during a relaxing vacation here, aides said Sunday.

Press aide Ron Ziegler told reporters the President-elect had no plans for public appearances, including church, on the second full day of what is expected to be at least a four-day stay at his rented six-room house overlooking Biscayne Bay.

SINCE HIS arrival Friday night, Nixon's only public activity was his visit Saturday night to the nationally televised Alabama-Miami football game in the Orange Bowl. He stayed until the final minute of the contest, won by Alabama, 14-6.

An aide said Nixon went for a one-hour Sunday outing on the houseboat of his friend, C. B. (Bebe) Rebozo. But except for that, he was spending the day to himself.

A number of Nixon's top staff aides are also here, at a neighboring motel, including speech writers Raymond K.

SINCE HIS arrival Friday night, Nixon's only public activity was his visit Saturday night to the nationally televised Alabama-Miami football game in the Orange Bowl. He stayed until the final minute of the contest, won by Alabama, 14-6.

An aide said Nixon went for a one-hour Sunday outing on the houseboat of his friend, C. B. (Bebe) Rebozo. But except for that, he was spending the day to himself.

A number of Nixon's top staff aides are also here, at a neighboring motel, including speech writers Raymond K. Price Jr and Patrick J. Buchanan Jr, Leonard Garment and H. R. (Bob) Ealdeman, named last week as one of the top echelon of White House assistants.

BUT ZIEGER said Nixon is spending a lot of his time sitting by himself on the porch of the home, thinking about his new responsibilities and making occasional notes on a yellow pad of legal paper, both for his inaugural speech and messages he will send to Congress after his Jan 20 inauguration.

Occasionally, Ziegler added, Nixon also discusses matters with various of his staff members, but the pace is decidedly low-key, with the President-elect still unwinding from the campaign and the hectic 10 days of meetings here and in New York.

NIXON HAS also been swimming several times in the bay and appears well-tanned.

Ziegler said there are no plans for Mrs Nixon and daughters Julie and Tricia to join the President-elect. The Nixon family attended Saturday's wedding in Valley Forge, Pa, of Former President Eisenhower's eldest granddaughter.

WOOD — Texas Petroleum Exploration Co, Ltd, Tyler, Number 1 Wofford-Cain Unit in the W. H. Secrest survey, A-523, is a 9,000-foot Paluxy venture six miles northeast of Quitman.

MARION — Harry S. Phillips Number 1 Odie M. Haggard, a 6,200-foot Travis Peak test, will be drilled in the Robert Potter survey, A-307, 8½ miles southeast of Smithland.

Gas Industry Develops Low Cost Cooling Unit

POST OIL NEWS SERVICE

NEW YORK — The first phase of a proposed $2.6 million research and development project aimed at providing the homeowner with an economically priced combination heating and cooling unit fueled by natural gas was announced Sunday by the American Gas Association.

The two-year program will be one of the largest research and development efforts ever undertaken by AGA in behalf of the natural gas industry, according to Daniel M. Kennedy, the association's manager of climate control research.

HALF THE program's cost will be shared by AGA and the other half by four participating industry concerns — Thermo Electron Corp, Ford Motor Co, the Tappan Co and McQuay Incorp.

The program will be based upon two major technological advances developed by Thermo Electron. The first is a novel reciprocating vapor engine based on Thermo Electron's steam engine technology. The other is a basic heat-transfer process, an outgrowth of Thermo Electron work in gas-fired thermionic conversion of heat to electricity.

The system calls for combining the thermo electron engine with a reciprocating compressor to form a single, hermetically sealed unit. Development of the engine compressor using freon-22 as the refrigerant and working fluid will be undertaken by Thermo Electron and, if successful, Ford will assist in production engineering.

McQUAY WILL assist in system integration and environmental testing. Tappan and McQuay will manufacture prototypes for field test evaluation to determine the feasibility of full-scale production and distribution.

Although the initial program is oriented toward the development of a machine to provide 36,000 btu hr of cooling and 120,000 btu hr of heating, the system can be simplified to offer cooling only.

Christmas is only 3¾ books away.

That's all the books of S&H Green Stamps you need to get this Anscomatic Cadet camera. It's not only easy to own, it's easy to use. No complicated dials or focussing procedures. All you do is pop in the cartridge and shoot. Makes a great gift for beginning photographers. Just shop with us and fill your S&H books faster. Shop at all the stores and service stations that give S&H Green Stamps, and you'll have lots of extra gifts by Christmas.

S&H Green Stamps — our Christmas gift to you.

S&H GREEN STAMPS

Gonzalez Says

Report Disproves Race Bias at Kelly

SAN ANTONIO — (AP) — No systematic discrimination exists at Kelly Air Force Base, results of a six-week survey show, U.S. Rep Henry B. Gonzalez, D-Texas, said Sunday.

He said the survey also showed "dramatic gains by persons of Mexican descent within the past five years."

THE SURVEY was conducted by a 12-member team after a report by the Texas advisory committee to the U.S. Civil Rights Commission raised numerous allegations about employment practices at Kelly.

In an announcement issued over the week end, Gonzalez said more than 2,000 Kelly personnel either underwent interviews or completed anonymous statements regarding employment practices.

Also, the entire work force was reviewed, including all promotions, test scores and supervisory appraisals for a one-year period.

THE SURVEY, conducted by an Air Force-Civil Service Commission team, was termed "probably the most complete and thorough document of its kind in Air Force history," Gonzalez said.

The congressman said the team made several recommendations to curb misunderstandings and unrest due to "low visibility of the equal employment opportunity program."

The recommendations include reorganization of this program, including formation of an advisory council of employees and community lead-controls on promotions which could be manipulated.

A NEW SURVEY will be made in six to eight months to assure recommendations are being carried out, Gonzalez said.

From The Rich and The Super Rich

THE ELECT AND THE DAMNED
Ferdinand Lundberg, 1968

Most Americans--citizens of the wealthiest, most powerful and most ideal-swathed country in the world--by a very wide margin own nothing more than their household goods, a few glittering gadgets such as automobiles and television sets (usually pruchased on the installment plan, many at second hand) and the clothes on their backs. A horde if not a majority of Americans live in shacks, cabins, hovels, shanties, hand-me-down Victorian eyesores, ricket tenements and flaky apartment buildings....

At the same time, a relative handful of Americans are extravagantly endowed, like princes in the Arabian Nights tales. Their agents deafen a baffled world with a never-ceasing chant about the occult merits of private-property ownership and the the vaulting puissance of the American owners.

It would be difficult in the 1960's for a large majority of Americans to show fewer significant possessions if the country had long labored under a grasping dictatorship. How has this process been contrived of stripping threadbare most of the populace, which once at least owned small patches of virgin land? To this fascinating if off-color question we shall give some attention later.

Statements such as the foregoing on the rare occasions when they are ventured (although strictly true and by no means new) are bound to be challenged by the alert propaganda watchdogs of the established order. These propagandists, when hard pressed, offer an incantation about a mythical high American standard of living which on inspection turns out to be no more than a standard of gross consumption....

A Nation of Employees

Most adult Americans in the quasi-affluent society of today, successors to the resourceful (and wholly imaginative) Americans of Walt Whitman's lush fantasy, are nothing more than employees. For the most part they are precariously situated; nearly all of them are menials. In this particular respect Americans, though illusion-ridden, are like the Russians inhabit a less technologized society and have a single employer. There are, of course, other differences (such as the fact that Americans are allowed a longer civil leash), but not of social position. And this nation of free and equal employees is the reality that underlies and surrounds the wealthy few on the great North American continent....

(A) recent (study) made... by Professor Robert J. Lampman of the University of Wisconsin for the National Bureau of Economic Research (shows the following):

1. More than 30 per cent of the assets and equities of the personal sector of the economy (about 20 per cent of all wealth in the country being government-owned) in 1953 was held by 1.6 per cent of the adult population of 103 million.

2. The group of 1.6 per cent owned 32 per cent of all privately owned wealth, consisting of 82.2 per cent of all stock, 100 per cent of state and local (tax-exempt) bonds, 38.2 per cent of federal bonds, 88.5 per cent of other bonds, 29.1 per cent of cash, 36.2 per cent of mortgages and notes, 13.3 per cent of life insurance reserves, 5.9 per cent of pension and retirement funds, 18.2 per cent of miscellaneous property, 16.1 per cent of real estate and 22.1 per cent of all debts and mortgages.

3. The following table shows the percentage of national wealth-holdings for the top ½ of 1 per cent and 1 per cent for the indicated years.

	½ of 1 Per Cent of Adult Population (per cent)	1 Per Cent of Adult Population (per cent)
1922	29.8	31.6
1929	32.4	36.3
1933	25.2	28.3
1939	28.0	30.6
1945	20.9	23.3
1949	19.3	20.8
1953	22.7	24.2
1954	22.5	....
1956	25.0	26.0

Actually, in view of market valuations, the share of top wealth-holders at this writing is easily the greatest in history. It is my hyphothesis that the share of the top ½ of 1 per cent now exceeds the 32.4 per cent of this group for 1929. Later studies should show that the proportions for all groups of top wealth-holders studies by Lampman have been significantly exceeded....

It is going to be taken as fully established that 1.6 per cent of the adult population own at least 32 per cent of all assets, and nearly all the investment assets, and that 11 per cent of households own at least 56 per cent of the assets and 60 per cent of the net worth. It is even possible, as we have seen, that ½ of 1 per cent own more than one-third of all productive assets as of 1965-67. It is evident that this leaves very little to be apportioned among 90 per cent of the population....

Sargent Shriver, director of the Office of Economic Opportunity and former President John F. Kennedy's brother-in-law, suggested that a family of four with a yearly annual income under $3,000 and an individual with an income under $1,500 be classified as poor, which would put more than 30 per cent of all families in the poverty-stricken category according to University of Michigan figures. For the University of Michigan Survey of Consumer Finances showed for 1962 that, while the figures of the lowest tenth of all spending units (households) were not then available, the figure for the next to the lowest tenth was $1,510 for each household; and for the third from the lowest tenth it was $2,510. For the fourth tenth from the bottom it was only $3,350. Mr. Shriver subsequently raised his figures to $3,130 and $1,540.

The United States Chamber of Commerce predictably challenged Mr. Shriver's first gauge of poverty as too high. "The Chamber of Commerce based its criticism of the old gauge," said the New York Times, "on the fact that a small family living in a warm climate and growing most of its own food could live comfortably on $3,000 a year....

For my part, I would say that anyone who does not own a fairly substantial amount of income-producing property or does not receive an earned income sufficiently large to make substantial regular savings or does not hold a well-paid securely tenured job is poor. He may be healthy, handsome and a delight to his friends--but he is poor. By this standard at least 70 per cent of Americans are certainly poor, although not all of these by any means are destitute or poverty-stricken. But, as was whown in the 1930's, Americans can become destitute overnight if deprived of their jobs, a strong support to mindless conformity. As a matter of fact, many persons in rather well-paid jobs, even executives, from time to time find themselves jobless owing to job discontinuance by reason of mergers, technical innovation or plant removal. Unable to get new jobs, they suddenly discover, to their amazement, that they are really poor, and they also discover by harsh experience to what specific conditions in the word "poverty" refers. And even many of those who never lost their jobs often discover in medical and similar emergencies that they are as helpless as wandering beggars. They are, in fact, poor. In such eventualities the man of property is evidently in a different position. He is definitely not poor.

Let me tell you about the very rich. They are different from you and me. They possess and enjoy early, and it does something to them, makes them soft where we are hard, and cynical where we are trustful, in a way that, unless you were born rich, it is difficult to understand. They think, deep in their hearts, that they are better than we are because we had to discover the compensations and refuges of life for ourselves. Even when they enter deep into our world or sink below us, they still think that they are better than we are. They are different.

__F. Scott Fitzgerald

The Other America
Michael Harrington

Michael Harrington is a free-lance writer who has dedicated his talents to the betterment of the working man. His book, THE OTHER AMERICA, stimulated the development of the legislation which became known as the "War on Poverty." He describes the special kind of poverty that afflicts the U.S.A.

There is a familiar America. It is celebrated in speeches and advertised on television and in the magazines. It has the highest mass standard of living the world has ever known.

In the 1950's this America worried about itself, yet even its anxieties were products of abundance. The title of a brilliant book was widely misinterpreted, and the familiar America began to call itself 'the affluent society'...

While this discussion was carried on, there existed another America. In it dwelt somewhere 40,000,000 and 50,000,000 citizens of this land. They were poor. They still are.

To be sure, the other America is not impoverished in the same sense as those poor nations where millions cling to hunger as a defense against starvation. This country has escaped such extremes. That does not change the fact that tens of millions of Americans are, at this very moment, maimed in body and spirit, existing at levels beneath those necessary for human decency. If these people are not starving, they are hungry, and sometimes fat with hunger, for that is what cheap foods do. They are without adequate housing and education and medical care.

But even more basic, this poverty twists and deforms the spirit. The American poor are pessimistic and defeated, and they are victimized by mental suffering to a degree unknown in Suburbia.

This book is a description of the world in which these people live; it is about the other America. Here are the unskilled workers, the migrant farm workers, the aged, the minorities, and all the others who live in the economic underworld of American life.

Poverty is often off the beaten track. It always has been. The ordinary tourist never left the main highway, and today he rides interstate turnpikes...and everything is black and dirty....

Then, too, beauty and myths are perennial masks of poverty. The traveler comes to the Appalachians in the lovely season. He sees the hills, the streams, the foliage--but not the poor....

The American city has been transformed. The poor still inhabit the miserable housing in the central area, but they are increasingly isolated from contact with, or sight of, anybody else.... The failures, the unskilled, the disabled, the aged, and the minorities are right there, across the tracks, where they have always been. But hardly anyone else is....

Clothes make the poor invisible too: America has the best dressed poverty the world has ever known. For a variety of reasons, the benefits of mass production have been spread much more evenly in this area than in many

others. It is much easier in the United States to be decently dresses than it is to be decently housed, fed, or doctored....

Then, many of the poor are the wrong age to be seen. A good number of them (over 4,000,000) are sixty-five years of age or better; an even number are under eighteen....

And finally, the poor are politically invisible. It is one of the cruelest ironies of social life in advanced countries that the dispossessed at the bottom of society are unable to speak for themselves. The people of the other America do not, by far and large, belong to unions, to fraternal organizations, or to political parties... They have no face; they have no voice.

But the real explanation of why the poor are where they are is that they made the mistake of being born to the wrong parents, in the wrong section of the country, in the wrong industry, or in the wrong racial or ethnic group. Once that mistake has been made, they could have been paragons of will and morality, but most of them would never even have had a chance to get out of the other America.

There are two important ways of saying this: The poor are caught in a vicious circle; or, The poor live in a culture of poverty....

Here is one of the most familiar forms of the vicious circle of poverty. The poor get sick more than anyone else in the society. That is because they live in slums, jammed together under unhygienic conditions; they have inadequate diets, and cannot get decent medical care. When they become sick, they are sick longer than any other group in the society. Because they are sick more often and longer than anyone else, they lose wages and work, and find it difficult to hold a steady job. And because of this, they cannot pay for good housing, for a nutritious diet, for doctors. At any given point in the circle, particularly when there is a major illness, their prospect is to move to an even lower level and to begin the cycle, round and round, toward even more suffering....

...a way of looking at reality, a series of attitudes, a special type of life...Everything about them, from the condition of their teeth to the way in which they love, is suffused and permeated by the fact of their poverty....

The family structure of the poor, for instance, is different from that of the rest of the society. There are more homes without a father, there are less marriage, more early pregnancy and, if Kinsey's statistical findings can be used, markedly different attitudes toward sex. As a result of this, to take but one consequence of the fact, hundreds of thousands, and perhaps milions, of children in the other America never know stability and 'normal' affection....

There is, in short, a language of the poor, a psychology of the poor, a world view of the poor. To be impoverished is to be an internal alien, to grow up in a culture that is radically different from the one that dominates the society.

Permanent Poverty, An American Syndrome, 1967
Ben B. Seligman

The War on Poverty is grinding to a halt. The expectations of many poor have been aroused; they have anticipated entry into that society which has been denied to them for so long. But now, after several years of agitation, the Great Society seems to be no different from the Ordinary Society. The poor will return to their urban and rural slums, as quiescent as they have been through all the years back to the beginning of time. The promise has not been fulfilled, and it appears that poverty, even in an affluent society, has congealed and hardened into a kind of subculture that represents a social syndrome, an ineradicable condition.

What has happened is aptly described by Oscar Lewis. He speaks of a culture of poverty to which millions of people in this country have been relegated. It is a culture, or more accurately a subculture of the larger society, in which the capacities of the poor for self-help and leadership may often be clearly present, as evidenced by some of the experiences of OEO. But other behavior shows such destructive effects of poverty that some observers can see only middle-class guidance to remedy the situation. As Lewis indicates, and as the evidence demonstrates, these contending views have resulted in bitter political conflict.

Yet the battle may be academic, for poverty seems ineradicable. In an industrial society where large segments of the population must suffer joblessness because they are unskilled, low wages when they are employed, a distorted family structure, and inadequate services in such areas as education and health, there are many who will find themselves rejected. They will be illiterate and as a consequence will develop those traits that accompany the subculture of poverty—illiteracy and indifference. Their behavior will express an attempt to deal with despair, hopelessness, and failure. And these traits will pass from generation to generation to create unseen chains that constitute a social syndrome. Inhabitants of this subculture do not participate in the larger society because they cannot or are not allowed to. The latest illustration is the War on Poverty. The poor do not take part in the economic order, or only peripherally, and they partake of the fruits of society in marginal ways.

Lewis tells us that poor people are aware of middle-class values and would like to "claim some of them as their own," yet one cannot measure their behavior by middle-class criteria. In the United States the dominant characteristics of the subculture of poverty are a sense "of marginality, of helplessness, of dependence...of inferiority...of racial discrimination," all calculated to create the kind of provincial feeling that removes one from the mainstream of social life. Wars on Poverty notwithstanding, it is a situation extraordinarily difficult to alter, especially when a small public effort is converted into lack of concern, or worse, complete retreat.

Anthropologist
Def. of Poverty as
Sub-Culture

The Children of Sanchez, 1961
Oscar Lewis

It is the anthropologists, traditionally the spokesmen for primitive people in the remote corners of the world, who are increasingly turning their energies to the great peasant and urban masses of the less-developed countries. These masses are still desperately poor in spite of the social and economic progress of the world in the past century. Over a billion people in seventy-five nations of Asia, Africa, Latin America, and the Near East have an average per capita income of less than $200 a year as compared with over $2,000 a year for the United States. The anthropologist who studies the way of life in these countries has become, in effect, the student and spokesman of what I call the culture of poverty.

To those who think that the poor have no culture, the concept of a culture of poverty may seem like a contradiction in terms. It would also seem to give to poverty a certain dignity and status. This is not my intention. In anthropological usage the term culture implies, essentially, a design for living which is passed down from generation to generation. In applying this concept of culture to the understanding of poverty, I want to draw attention to the fact that poverty in modern nations is not only a state of economic deprivation, of disorganization, or of the absence of something. It is also something positive in the sense that it has a structure, a rationale, and defense mechanisms without which the poor could hardly carry on. In short, it is a way of life, remarkably stable and persistent, passed down from generation to generation along family lines. The culture of poverty has its own modalities and distinctive social and psychological consequences for its members. It is a dynamic factor which affects participation in the larger national culture and becomes a subculture of its own.

The culture of poverty, as here defined, does not include primitive peoples who backwardness is the result of their isolation and undeveloped technology and whose society for the most part is not class stratified. Such peoples have a relatively integrated, satisfying, and self-sufficient culture. Nor is the culture of poverty synonymous with the working class, the proletariat, or the peasantry, all three of which vary a good deal in economic status throughout the world. In the United States, for example, the working class lives like an elite compared to the lower class of the less developed countries. The culture of poverty would apply only to those people who are at the very bottom of the socio-economic scale, the poorest workers, the poorest peasants, plantation laborers, and that large heterogenous mass of small artisans and tradesmen usually referred to as the lumpen proletariat....

The economic traits which are most characteristic of the culture of poverty include the constant struggle for survival, unemployment and underemployment, low wages, a miscellany of unskilled occupations, child labor, the absence of savings, a chronic shortage of cash, the absence of food reserves in the home, the pattern of frequent buying of small quantities of food many times a day as the need arises, the pawning of personal goods, borrowing from local money lenders at usurious rates of interest, spontaneous informal credit devices (tandas) organized by neighbors, and the use of second-hand clothing and furniture.

Some of the social and psychological characteristics include living in crowded quarters, a lack of privacy, gregariousness, a high incidence of alcholism, frequent resort to violence in the settlement of quarrels, frequent use of physical violence in the training of children, wife beating, early initiation into sex, free unions or consensual marriages, a relatively high incidence of the abandonment of mothers and children, a trend toward mother-centered families and a much greater knowledge of maternal relatives, the predominance of the nuclear family, a strong predisposition to authoritarianism, and a great emphasis upon family solidarity—an ideal only rarely achieved. Other traits include a strong present time orientation with relatively little ability to defer gratification and plan for the future, a sense of resignation and fatalism based upon the realities of their difficult life situation, a belief in male superiority which reaches its crystallization in machismo or the cult of masculinity, a corresponding martyr complex among women, and finally, a high tolerance for psychological pathology of all sorts....

Many of the traits of the subculture of poverty can be viewed as attempts at local solutions for problems not met by existing institutions and agencies because the people are not eligible for them, cannot afford them, or are suspicious of them. For example, unable to obtain credit from banks, they are thrown upon their own resources and organize informal credit devices without interest. Unable to afford doctors, who are used only in dire emergencies, and suspicious of hospitals "where one goes only to die," they rely upon herbs or other home remedies and upon local curers and midwives. Critical of priests "who are human and therefore sinners like all of us," they rarely to to confession or Mass and rely upon prayer to the images of saints in their own homes and upon pilgrimages to popular shrines.

A critical attitude toward some of the values and institutions of the dominant classes, hatred of the police, mistrust of government and those in high position, and a cynicism which extends even to the church gives the culture of poverty a counter quality and a potential for being used in political movements aimed against the existing social order. Finally, the subculture of poverty also has a residual quality in the sense that its members are attempting to utilize and integrate into a workable way of life the remnants of beliefs and customs of diverse origins.

Guaranteed Income

United Negro College Fund Guaranteed Income

Evan Dealey —
Problems of GI

R. Lampman
A.H. Cutler
October, 1969

UNCF Chase Manhattan Bank Series in Economics —

A. Three Transfer mentalities (philosophy) — Way of responding or pre-set

Guaranteed income plan variables

tightly tied together — change one & will change another

- G = guarantee (the amount of neg. tax in event of no income)
- Tax Rate =
- Breakeven Point — when pre & post allowance income are equal

Definitions of income, Unit, Period

Administration

A. People are pre-conditioned: ① to accept ② So hostile as not to hear

① Social ~~Security~~ Insurance — pre-conditions against G-I
New Deal Liberals (Altmeyer, W. Cohen,) Restitution for loss — Replace a normal income — departs from norms of typical welfare — not well adapted to poverty (didn't have income or coverage)

② Minimum Provision — Social obligation to underwrite a min level — Public Asst., also in Ed (min ed. for all), usually case by case & equity among cases not highly prized

③ Income Tax (as in progressive) — emphasis on equity, classified in into groups thought to be useful in identifying individuals — equity within a groups & same equity as between groups —

① (above) almost no U.C. to poor —

② " " Public Assist not receptive to G.I.

horizontal equity principle

a) ~~Some~~ tax free income (no ability to pay below a given level)

b) Tax = negative transfer

Current taxes net 14% — 70% (Marginal tax rate — what margin of dollars taxed —

lowest dollars — highest dollars

only after $3T for family of four
$600 exemptions × 4 + $300 standard deduction for wage earner & $100 for each other member —

Pre allowance Income		Allowance	Post Allowance Income	
0		1500	1500	
1,000	1000 difference	1000	2000	500 difference
2,000		500	2500	
3,000		0	3000	

1000 ÷ 500 = 50% margin

Change in benefit divided into gives marginal rate

Pre allowance	Allowance	Post Allowance
0	1500	1500
1000	1250	2250
2000	1000	3000
3000	750	3750
4000	500	
5,000	250	
6000 — 0		

Marginal rate now 25% —

less disincentive than 50% — comparable to rates on upper-middle incomes —

Breakeven point

Lower the marginal rate, higher the breakeven point —

g. High	g. Low
Tax rate high	T. R Low
Break Even high	B.E low

Friedman — low g & low TR

Heabaud — High g & high TR

What income is included in pre allowance base —

a way to account for total resources input to equity & for PR & legislation

former — include food he raises

i.e., imputed rent where family owns house — $100,000 farm, but bad year —

what about high asset total; e.g.

how about losses — e.g. medical, day care center —

Unit — Any family can repat? who defers —
~~Fathe~~ Might Divide family w/ those receiving income and those not —
perhaps use a forced joint repat

(e.g. if millionaire's daughter goes to V, Nay as hippie &

Period — One year's, one mathis or something dat —
& income tax thinking
Public Asst & Soc. Ins. use different periods
Year is much too long for poor —
Nixon proposal vague about period —
Sounds as if quarter —
will take into account past & forecast
of ~~periods~~ income but don't say what
period —

Admin — IRS, Public Asst. offices, Soc. Sec.
Nixon plan proposes Soc. Sect. — Federally administered

Could ask what federal income expected, start payments,
then reconcile at end of yr.
or look at prior 12 mos, still monthly,

Tendency for parents to adhere to specific plans of also to get discouraged and to abandon because of a particular snag. —

Unit —

what about 21yr & over earning but from poor family —
Any age of separate filing (cut off age for young) you will create difficulty — if too low might encourage youngsters to leave home —
~~but~~ what about 16yr old girl with illegitimate child —
Many legislators look to impact on promiscuity & illegitimacy
Martha Griffiths of this Dept

Is there a "chemical" or other "valid" difference in graph line for positive & negative tax — or a difference in the people

If woman headed family under public assist.
U.C. OAIS

a) pol power use —

b) fundment "deirf" benefits

e.g. medical to the younger adult
U.C.

e.g. earns 1500 & g.i. then men then becomes 1500

if earlier would add 750
will be continue bennk

effect of the added amount on
Income effect

Substitution effect

AFL-CIO argues UI will depress wages -
Security to business, if bus. reduces wages to
extent of benefit
will maintain sub-marginal employers -

Politics *and* People

By ALAN L. OTTEN

Income Strategy

WASHINGTON—A phrase the Nixon Administration long reserved for internal use only has now begun to surface publicly.

The phrase is "income strategy," and it means the Administration has decided that the best way the Federal Government can go about improving the lot of the poor, black or white, is to get more money into their hands, and let them decide how best to spend it. Put that way, it sounds absurdly obvious and unimportant. But income strategy is commonly posed as an alternative of sorts to a "service strategy" that Nixonites believe characterized the approach of earlier Administrations —trying to have government itself provide the poor with the housing, food, medical care or other needed goods and services, rather than the money to buy them with.

The idea of an income strategy—or a jobs-and-income strategy, as it is also described—has long been urged, in scholarly journals and within the Administration, by Presidential adviser Daniel P. Moynihan. Other officials such as Labor Secretary George Shultz seem to agree. The President himself, aides say, has for some time adopted the term and the idea in remarks at staff meetings and Cabinet-level sessions such as those of the Urban Affairs Council.

Mr. Nixon now, though, has publicly stamped his seal of approval on the approach. In a generally overlooked portion of his remarks to the White House food conference early this month, he declared that "our basic policies for improvement of the living conditions of the poor are based on this proposition: That the best judge of each family's priorities is that family itself; that the best way to ameliorate the hardships of poverty is to provide the family with additional income, to be spent as that family sees fit."

And with the President setting the tone, other Administration men have begun to employ the "income strategy" term in speeches and background briefings for reporters.

* * *

An income strategy has various facets—welfare and other direct payments to the poor, tax relief for the poor, job and business opportunities. White House men cite efforts in each area.

Mr. Nixon's proposed family assistance plan would, of course, give the poor a massive infusion of income—the millions now on welfare and millions more of working poor. Though Congress originated the drive for tax reform, the Administration takes credit for having pushed hard for changes to take millions of the poor off the tax rolls or give them extra-large tax cuts. (People formally defined as "poor" by government statistical standards have, paradoxically, been paying some $600 million a year in taxes, equal to one-third the cost of the war on poverty, one Administration man pointed out last week.)

[illegible] approach lies behind

way to ameliorate the hardships of poverty is to provide the family with additional income, to be spent as that family sees fit."

And with the President setting the tone, other Administration men have begun to employ the "income strategy" term in speeches and background briefings for reporters.

Though Congress originated the drive for tax reform, the Administration takes credit for having pushed hard for changes to take millions of the poor off the tax rolls or give them extra-large tax cuts. (People formally defined as "poor" by government statistical standards have, paradoxically, been paying some $600 million a year in taxes, equal to one-third the cost of the war on poverty, one Administration man pointed out last week.)

The jobs-and-income approach lies behind the Administration's efforts to overhaul job training programs, with greater leeway for local government units to tailor training and counseling to the local job market, and it's also behind the currently controversial Philadelphia plan to set goals of specific numbers of jobs for Negroes on Government construction contracts. Officials say their mass-transit plans envision substantial efforts to get local lines to take the unskilled worker from his slum home out to the suburbs where new factories and jobs are, and that a major purpose of "Operation Breakthrough" to lower home-building costs is to get more low-cost housing in those same suburbs.

Expanded help for black businessmen is another aspect of the overall income strategy—though admittedly one getting off the ground slowly.

The contrasting "service strategy" is probably best exemplified by the ambitious public housing programs of the 1930s and '40s, with Uncle Sam financing the building of special housing for low-income groups. Medicare and Medicaid, food stamps, a shopping list of welfare services, school lunches and breakfasts, special payments for teachers and textbooks in slum schools—all are examples of the Government's deciding what the poor need and trying to supply those needs itself.

* * *

The case Mr. Moynihan and others make for an income strategy is simple. The thing the Government does best, they argue, the thing it does most economically and efficiently from long practice, is to pass out money—tax refunds, Social Security and veterans' benefits. Somehow the Government doesn't know how to provide goods and services nearly as efficiently.

Large amounts of Federal money go for huge bureaucracies of middle-class experts—teachers, social workers, lawyers; less is left for the poor. Distribution systems often work out badly; in some counties, as little as 16% of poor families eligible for food stamps actually get them. In short, service programs have fallen short on performance, leaving wide disappointment.

Moreover, the critics contend, large infusions of Government effort in service-type programs tend to deteriorate the market. Public housing projects become economic and architectural nightmares. Medical costs spiral upward, consuming much of the Government outlay.

An extra advantage of the income approach, some advocates say, is that it is less obviously "black" than many service programs, and so may stem growing white hostility to Government aid for the poor. Only about one-third of the people who would benefit under the Nixon welfare plan, for instance, would be Negroes, compared with almost half those helped by the present Aid to Families With Dependent Children program. Other efforts may give the Negro just as much help as present, but may not appear so evidently aimed at him.

Previous Administrations, of course, pursued some elements of income strategy, and in such programs as rent supplements they were moving more in that direction. And the present Administration will continue to offer school lunches, medical help and other politically popular service programs. But there may well be a steady and significant shift in emphasis—eventually trying, for example, to cut back food stamps as family assistance payments increase.

"This is no occasional tactic, but a consistent strategy," one top Nixon aide maintains. "The President is committed to it. He is pursuing it, and will continue to pursue it."

Decorated Room

$10 BILLION A YEAR FOR PUBLIC WELFARE!

WHO GETS IT...

THE nation begins a new decade with a massive domestic problem few understand—widespread poverty side by side with widespread prosperity.

Many of us just can't believe, even at this late date in our history, that such deprivation can exist in the United States.

Why can't we believe it? Because most of us—fortunately—are literate, employed and well housed, and enjoy good health, own cars and all sorts of things, have no long background of want, or any such background.

Besides, few of us know that tens of millions of Americans can't read, don't have the most elementary work skills, are chronically ill or otherwise disabled, live in decayed houses, own practically nothing—and always have—and come from two or three generations damaged by human want.

Consequently, in 1970 poverty is still the biggest domestic problem in our country. One measure of that burden, public welfare, involves 10 million public dependents and $10 billion in annual expenditures. And those welfare recipients represent less than half of all Americans living in poverty. How can so many people really be in need? Why don't they go to work like everybody else? Where do "these people" come from? These and other questions are asked of public welfare administrators every day.

All the questions have one answer: the stark facts of life.

What stark facts?

These:

Sickness, accidents, disability, old age, death, unemployment, illiteracy, inadequate work skills, low income, absence of a breadwinner, bad housing, discrimination.

Such adverse conditions affect tens of millions of Americans—Unable Americans—who are the "source of supply" for our welfare rolls in the past, today—and tomorrow.

With a constantly rising population, more and more people are exposed to these social and economic hazards—and the toll, in people and in money, continues to rise. For example, in the last 30 years our population increased by more than 70 million.

To spell it all out—

Sickness and Disabilities

Aproximately 22 million persons 17 years of age or older are disabled to some extent by a chronic ailment.

Of these, 4 million cannot carry on their major activities—earning a living or keeping house. 12 million others are limited in the kind or amount of work they can do.

Over 29 million persons are admitted to hospitals each year, and at any given time 1,400,000 patients are in these hospitals.

20 million adults and children are afflicted with mental and emotional disorders.

Some 5 million others are mentally retarded.

Another 6½ million suffer from alcoholism to the point where they cannot hold jobs.

115,000 accident victims die each year and 11 million others are disabled—a number of them permanently.

More than 400 million work days are lost annually because of illness.

30 million Americans have no health insurance.

A steady rise in the cost of medical care is prompting many people to risk going without medical attention and forcing others to turn to Medicaid to pay for medical care.

Sickness and disability are major causes of public dependency, accounting for three-fifths of all public welfare costs.

Inadequate Income

25 million people, or 13 percent of the total population, live in poverty, according to government standards.

10 million are children.

About one-third of the Negro population are poor, and half of them are in families headed by a woman.

Nearly one-fourth of the white poor total of 17½ million are over 65 years of age.

Many who are on the welfare rolls do not get enough assistance to support a minimum subsistence scale of living.

Jobless and Part-timers

3 million persons are totally unemployed.

More than 2 million who want full-time work are able to get only part-time jobs.

It is estimated that only 5 percent of all public assistance recipients are employable in today's labor market.

Lack of education and lack of work skills needed in today's labor market condemn large numbers of adults and young people to unemployment, under-employment, or low-pay jobs.

More than 3 million adults are illiterate.

Half of all unemployed youth, ages 16-21, are functionally illiterate.

An estimated 10 million children and teenagers have some significant reading difficulty.

About 20 percent of the labor force have only eight years of education or less.

Lack of Education

More than 6 million Americans age 25 or over have not completed the fifth grade.

What lack of education means in earning capacity is shown in the following figures:

1968 Median Annual Income

(25 yrs. of age and over)

	Males	*Females*
Less than 8 years of school	$3,333	$1,238
8 years of school	5,096	1,590
1-3 yrs. of high school	6,569	2,177
4 yrs. of high school	7,731	3,073

The high school dropout underlines the importance of education. The unemployment rate among workers who failed to finish high school is almost double the rate among those with more education. There are almost 5 million dropouts in the 14-24 age group of the population.

In today's economy fewer and fewer persons can look forward to spending their lives in one occupation or in one location. Workers must be prepared to switch from one type of work to another and, in many cases, move their families to distant points to get jobs. However, lack of education and currently marketable job skills frequently preclude such mobility and opportunity.

Forms of Discrimination

Approximately 60 million Americans are age 45 or older; of these, more than 19 million are 65 or older. Workers in both groups find their age is a serious handicap in keeping or finding employment because of discriminatory age deadlines in business and industry.

Discrimination based on color has been another obstacle to employment for many of the nation's 24 million nonwhite citizens, along with lack of work skills. The unemployment rate among nonwhites is twice as high as among white workers. And the average income of nonwhite families is 60 percent that of white families.

Poor Living Conditions

Approximately 9 million families live in the slums. It has been

and why

demonstrated repeatedly that the incidence of disease, crime, delinquency, and school dropout is greater in the slums than in other neighborhoods. These and other factors combine to limit the employability of young people growing up in the slums and to perpetuate a pattern of life marked by poverty, sickness, and crime.

Over 5 million public assistance recipients, most of them women and children in families receiving aid to dependent children, live in housing that is deteriorating, dilapidated, unsafe, insanitary or overcrowded. In more than 3 million of these households, the average allowance for housing is less than $400 a year. More than 40 percent of all old-age assistance recipients live in deficient housing; in some rural and Southern areas the range is from 45 to 70 percent.

These stark facts of life add up to why 10 million Americans are on the nation's welfare rolls at an annual cost of $10 billion, and why some 95 percent of them are too sick, too disabled, too old, too young, too illiterate or too unskilled to hold a job.

Our Frustrated Poor

The Rev. Charles Fahey, director of Catholic Charities in Syracuse, N.Y., summed it up this way recently:

"At the heart of our economic system is advertising which stimulates in all of our people—poor and affluent alike—a desire for more material things. The poor have the same aspirations as do others, only theirs tend to result in dramatically increasing frustration and alienation.

"It would be a shame were our desire for material wealth to dull our sensitivity to human needs and blunt the compassion for which America has been so long noted. Welfare and social programs to provide food, clothing, shelter, training, and medical care to our people cost money, but the alternative is absolutely unacceptable because it costs people, and they may in turn cost our very civilization.

"The welfare system tends to be that which inherits the failures and problems of all other sectors of our society. As a result it can never alone hope to solve the problems which surface within it.

"It can and should be revamped in such a way that those who have no or limited access to the productivity of the nation can live in dignity. Furthermore, it should serve as a constant reminder of all the unfinished business of our society and as a spark to many social and legal reforms."

Who Gets Ahead?

by Christopher Jencks

If you ask Americans what they think about politics, religion, child rearing, or almost any other subject, northerners will give different answers from southerners, whites different answers from blacks, small towners from suburbanites, blue-collar workers from white-collar, men from women. There is one exception to this rule, however, namely the job market. This otherwise

The American Occupational Structure
by Peter Blau & Otis Dudley Duncan
(Wiley; $14.95)

diverse society is held together by a national economy, and almost every group uses the same criteria for judging the desirability of various kinds of work. The higher the average pay and the average level of education of men in an occupation, the higher its prestige with every sort of American. (The major exception to *this* rule is farming, which ranks in the middle of the prestige scale but at the bottom of the economic and educational scales, an inconsistency that has been a continuing source of political ferment during the past century.) The status of various occupations has remained stable over the 40 years since sociologists first investigated the subject.

Under such circumstances the competition for desirable jobs inevitably is fierce, and bitterness among those who have to accept undesirable work is commonplace. These feelings lie at the root of whatever class consciousness there is in America. One way to defuse the revolutionary potential in such feelings might be to reduce the pay, prestige, and power differences among occupations, but America has never seriously attempted this. Instead, it has tried to convince people that their troubles were largely of their own making, and that they could get desirable jobs (or at least their children could) if they worked harder and behaved better. This hope has been embodied in the slogan "equality of opportunity." If realized, it would mean that a child's life chances would depend entirely on his own capabilities and choices, rather than on such "accidents" as whether his parents were rich or poor, white or black, natives of Iowa City or Palermo.

This ideal is inevitably elusive, since individual capability and temperament depend partly on the genes a man inherits. Capability and temperament also depend to a substantial degree on early childhood experience, and so long as there are dramatic inequalities among parents some children will inevitably have the benefit of more favorable environments than others. Yet the dream of equal opportunity persists, inspiring all sorts of idealistic demands for new government programs and new social institutions.

Despite its political importance, however, we have surprising little reliable evidence about the extent to which this ideal is being realized. To what extent does a man's eventual position in the occupational hierarchy depend on his father's position? How much difference does it make if his parents are well educated? If they stay married? If they have a lot of children or only a few? How important is it to be brought up in a big city rather than a small town? In the north rather than in the south? How much of a handicap is it to have Italian-American parents? How important is skin color? If these considerations are not the whole story – and they certainly are not – how important are the individual's own early choices: to stay in school or drop out, to marry a rich girl rather than a poor one, to leave the community he was born in or stay, his choice of his first job? And to what extent are man's eventual jobs determined by factors different from all these, factors completely unrelated to family background and early experience?

A number of social scientists have investigated these questions over the years, but they have never had the resources to study large representative samples of men from all over the country, nor have they been able to draw reliable conclusions about historical trends. Until recently, moreover, their statistical analyses of their data have been relatively primitive. In March, 1962, the Bureau of the Census set out to remedy this situation by collecting information on the family backgrounds of a representative sample of some 20,000 men between the ages of 20 and 65. This data has now been analyzed by Peter Blau, a sociologist at the University of Chicago, and Otis Dudley Duncan, a demographer at the University of Michigan.

While it is not the last word on occupational hierarchy and mobility in America, *The American Occupational Structure* is by far the most impressive book on the subject to date and will certainly become the point of departure for future research. Yet, like most modern quantitative social science it is virtually unreadable. In part this is because the authors have a penchant for Germanic syntax and Latinized diction which makes it easy to forget that they are talking about real phenomena. (They are, however, less culpable in this respect than many academic writers.) A more serious problem is that they present the heart of their argument in a statistical shorthand that will baffle the lay readers. Here again they are less guilty than many of their colleagues, for they explain enough of their method so that a statistical semi-literate such as myself can grasp their meaning. Nevertheless, many readers will have to accept their conclusions on faith.

The authors' most politically important finding is probably that the factors which determine a man's eventual position in the occupational hierarchy

PAGINATION INCORRECT

"A significant and fascinating study of religious and political paradox."

—The Rev. Malcolm Boyd

The Rome correspondent for *The Times* of London has undertaken an *objective* study of the papacy, from the beginnings to the present. How brilliantly he has succeeded is indicated by these first reviews.

"Although he admits that it is difficult for a non-Catholic to understand the papacy, Peter Nichols' study of its history as a political institution and his evaluation of its place in the modern world does much to disprove his thesis. He shows in detail how historical antecedents . . . formed, and still influence, the modern papacy. He describes the structure and works of the Curia and analyzes the policies and politics of recent popes. His account of the relations of the Vatican with the Communist world is especially well done. . . . A wealth of information."—*Library Journal*

"Comprehensive. . . . A book of amazing scope and clarity. . . . A freshness of style that is very welcome. . . . Clearly explains the governmental aspects of the Church. . . . He surveys, too, the characters of Pius XII, John XXIII and Paul VI."

—*Publishers' Weekly*

do not seem to have changed much since World War I. In particular, the relationship between a father's occupational status and his son's has been remarkably stable.

How strong is this relationship? One answer is that a father normally passes along about two-fifths of his occupational advantage to his children. Consider, for example, a group of men near the top of the occupational ladder, at the 84th percentile. Their sons will almost all end up above the 50th percentile, but only a small minority will do as well as their fathers did. The typical son of such a father will fall from the 84th to the 65th percentile. In absolute terms, of course, such a son may not *feel* downwardly mobile, first because expanding GNP means he will almost certainly make more money than his father did, and second because changes in the occupational structure mean that some of tomorrow's 65th percentile jobs will have titles almost as prestigious as today's 84th percentile ones. Nonetheless, while elite sons have a considerable advantage in competing for top positions, the majority of these positions go to young men moving up from below, simply because there are so many more of these youths.

If we turn to the bottom of the occupational hierarchy we find the same pattern of mobility, only inverted. If we look at fathers whose jobs put them at the 16th percentile, for example, we find that their sons typically move up to the 35th percentile. The sons, in other words, inherit only two-fifths of their fathers' disadvantage vis-à-vis the average American. As with the well-to-do, this picture is complicated by the fact that the overall standard of living is improving and low-status, unskilled jobs are gradually being eliminated. The men who end up in poverty are therefore those who have stood still while others born in similar circumstances moved ahead. The great majority of these men are downwardly mobile in *relative* terms, even though in *absolute* terms they often have the same kinds of jobs and the same income as their fathers. Much writing about the cycle of poverty seems to ignore this.

There is another way of looking at the same phenomenon. Suppose we divide the multitudinous factors which help determine a man's position in the occupational hierarchy into two sets, one associated with family background and one completely independent of it. Although Blau and Duncan don't analyze their data in precisely this way, it is clear that family factors account for less than a quarter of the variation in man's eventual occupational success, while non-familial factors account for more than three-quarters.

What aspects of family background are especially important? The father's occupational status is by far the best single predictor of his son's status. The size of the community a son grows up in has some additional effect, with big city boys doing better than those from small towns or farms. Indeed, the community a boy grows up in has more effect on his later success than the community he chooses to live in – a strange finding which seems to imply that geographic inequalities bear more heavily on the young than on adults. Coming from a broken home is a slight disadvantage, but not nearly as great as the disadvantage of having numerous brothers and sisters. If you must have them, however, older ones do less harm than younger. (A boy with younger brothers and sisters is apparently under a certain amount of pressure to drop out of school, get a job, and help support them, thus hurting his later career chances. A boy with older brothers and sisters, on the other hand, may get some help from them, though it is seldom enough to offset the fact that older siblings also compete for parents' financial and emotional support.) Being born in the south is a disadvantage, but largely because the typical southerner comes from a worse educated and lower status home than the typical northerner. Having immigrant parents is *not* a significant disadvantage, or at least it wasn't in the post-World War I years covered by this survey. Indeed, men with immigrant parents did slightly *better* than men whose parents were born in America, perhaps partly because they were concentrated in big cities, rather than like Wasps, in small towns and farms.

These aspects of family background exercise most of their effect indirectly,

by influencing a child's character and competence, rather than having a direct effect on the careers of otherwise identical men. More than half the advantage of having a successful father, for example, can be measured in the amount of "extra" education an advantaged son gets. This means that while most upper-middle-class children get college degrees, the career prospects of those who merely finish high school are only marginally better than those of other high school graduates. Conversely, a child whose father is an unskilled laborer seldom gets as much education as the average boy from middling circumstances, but if he *does* finish high school he has overcome more than half the disadvantage normally associated with his origins. Other family background characteristics, such as father's education, family size and structure, and geographic roots have even less independent influence on career chances. They affect a man's educational attainment, but they do not do much beyond that.

The principal exceptions to almost all the foregoing rules are Negroes. Blau and Duncan demonstrate quite forcefully that the consequences of being black are entirely without parallel in American life. There are, to be sure, many whites whose circumstances are as bad as or worse than those of the typical Negro. But their disadvantages, unlike those of similarly situated Negroes, do not seem to be cumulative. A white boy from a large broken home in the backwoods of Kentucky, for example, has less chance of getting a college degree than does an only child from New York City. But if he *does* get such a degree, its occupational value to him will be as great as it is to the New Yorker. This does not mean his career prospects will be quite equal to the New Yorker's, it means that they will have been *improved* as much by getting a degree as the New Yorker's were. This is *not* true for Negroes. A Negro whose father is, let us say, a carpenter with a high school diploma, has less chance of going to college than a white youth from a similar background. If he does finish college, however, he still has less chance of getting a desirable first job – or he did from 1914 to 1962. And if he got the same first job as a white, his subsequent career prospects were still

worse. What this suggests is that the return from any given amount of effort is lower for Negroes than whites. Knowing this, many Negroes *make* less effort. When combined with the initial handicaps of poverty, ignorance, family disorganization, and so forth, this reduction of effort creates a vicious circle. The only other group that finds itself in a somewhat similar situation is women, and they are conspicuously missing from this survey (and from almost all previous studies of social mobility). Blau and Duncan's data make clear that white immigrants, including those from Southern Europe, have not been caught in any such vicious circle, at least since World War I.

When all is said and done, however, family background, and particularly the socio-economic status of a man's father, seems to play a rather modest role in determining life chances. This may seem somewhat surprising, especially to those on the Left. Blau and Duncan point out, however, that the correlation between fathers' and sons' occupational statuses is about the same as their correlations for many other traits: head size, height, weight, IQ score, and educational attainment, to name a few. This recurrent pattern can be generalized into what I will call Jencks' First Law of Human Relationships. The "law" states that *no* characteristic of a parent will *ever* explain more than a quarter of the variation in this same characteristic among the parent's children. To put it another way, fathers cannot usually pass along to their children more than half their advantage or disadvantage over the general population.

If ancestry accounts for only a quarter of the variation in men's life chances, what accounts for the rest? Blau and Duncan examine a number of factors which, while somewhat related to family background, also exercise considerable independent influence. The most important is schooling. A survey of this kind could not collect reliable information on the quality or character of schooling, but it seems reasonable to assume that quality is closely related to quantity. The number of years of school a man finishes accounts for twice as much of the variation in his career prospects as does his father's occupational status. We cannot tell whether this is a causal relationship. It could be, for example, that education merely *looks* important, because clever men stay in school longer than dull ones and also get better jobs.

Blau and Duncan do, however, resolve another question which has received a good deal of attention over the years. Defenders of public schools have long argued that they are a great instrument for equalizing opportunity, since they treat all children more or less alike and sort them out according to individual ability, without regard to ancestry. Critics have denied this claim, arguing that the schools are so dominated by middle-class values and place such undue emphasis on middle-class abilities that poor children have virtually no chance of success. As a result, the critics have argued, the real effect of the public school is to legitimate established privileges and perpetuate the status quo. Blau and Duncan show that there is some truth in both these views, but far more in the first. Fathers' socio-economic positions account for only a sixth of the variation in the number of years of school sons complete. If we take account of other variables which indicate something about the intellectual climate and emphasis on schooling in a home, we can explain another fifth of the variation. This leaves more than sixty percent of the variation in men's school attainment completely unaccounted for by *any* background characteristic. It therefore seems safe to say that the primary effect of universal schooling is to undermine the privileges rather than to perpetuate them. (Schooling does, of course, seek to perpetuate the habits and values on which established privilege is founded, but that is an entirely different matter.) Blau and Duncan also find, however, that despite enormous increases in the absolute number of young people attending high school and college since 1914, the relative advantage of the well-to-do has not diminished at all. If anything, it has increased very slightly.

The data assembled in this book also cast doubt on another commonplace assumption, namely that education plays a larger role in determining a young man's career prospects today than in the past. Blau and Duncan report such a trend, but it is so small and so slow as to be almost inconsequential. Other Census studies of the relationship between education and income have also failed to turn up significant tightening of the links between schooling and careers, at least since 1940 when the first reliable data was collected.

Apart from education, the best predictor of eventual occupational status is the first job. Here again, however, the surprising thing is that the status of a man's first job only accounts for about a quarter of the variation in his eventual status. Those who have worried that it is becoming harder for talented young men to work their way up through the ranks without academic credentials should also take heart, for the relationship between first and later job status seems about as stable as the other relationships investigated.

The authors report on what demographers call assortative mating, with particular emphasis on homogamy (the tendency of like to marry like). They found a relatively modest correlation between the family backgrounds of husbands and wives – less, for ex-

ample, than that between fathers and sons. When they looked at the *educational* attainments of husbands and wives, on the other hand, they found relatively high correlations – higher than between any two of the other variables they studied. They also found that men who "marry below themselves" tend to have worse career prospects than one would otherwise expect, while men who make an especially good match from a socio-economic viewpoint have a better chance for a good job than one would otherwise expect. Whether this is a primarily causal relationship we do not know. Obviously some people do well by marrying the boss' daughter. But equally obviously a woman can tell more about a man than a demographer can, and high status women may latch onto disproportionate numbers of men without rich fathers or college degrees who nonetheless have good career prospects. Conversely, ambitious men may tend to make good matches for the same social and psychological reasons that they later get good jobs, even though the former may be of limited value in pursuing the latter.

After taking all this information into account, half the variation in men's career patterns remains entirely unexplained. This is not unexpected, for a Census survey like this can only gather indirect evidence about men's intelligence, personality, values, and other critical factors. Yet even when social scientists collect additional information of this kind, they can seldom explain more than about half the variation in individual behavior. College admissions officers, for example, often use extremely refined techniques for predicting college grades, yet their predictors can seldom account for more than half the variation in such grades.

This recurrent pattern suggests another rule of thumb, Jencks' Second Law of Human Relationships: social scientists cannot learn more than half of what there is to know about a man, and that they therefore cannot account for more than half the variation in *any* individual characteristic or pattern of behavior. This law has a corollary: clever social scientists conceal their ignorance by studying groups rather than individuals, since it is much safer to make general predictions about groups than specific ones about individuals. Thus while we cannot accurately estimate an individual's occupational status simply by knowing his father's status, we can estimate the *average* status of a large group quite well from the average status of their fathers.

This brief summary hardly does justice to Blau and Duncan's 520-page report. It does suggest a number of general conclusions. First, the American occupational structure is much more open than radical critics usually assume. Second, the reason the radicals are easily misled is that they tend to see the widely (and rightly) publicized problems of black Americans as an extreme manifestation of a general American pattern, whereas these problems are in most respects unique. Third, despite enormous technological and historical changes over the past half century, the amount and nature of social mobility in America has remained remarkably constant. Nor is there any reason to expect significant changes in the foreseeable future. Fourth, the only way to increase the rate of mobility significantly above its present level would be to reduce the influence of family background. This would probably require the elimination of the family itself, perhaps in favor of collective child-rearing along the lines of the Israeli kibbutz. Fifth, since the demise of the family does not seem imminent, reformers probably ought to concentrate on issues other than the mobility rate. They might, for example, turn their attention to reducing the amount of inequality built into the occupational structure, instead of trying to increase vertical movement through that structure. They might, in other words, try to *abolish* failure instead of simply trying to make sure that every group got its fair share.

NOW READY—

Gunnar Myrdal's

EPIC WORK ON ECONOMIC DEVELOPMENT

In this landmark Twentieth Century Fund study on South Asia, Gunnar Myrdal calls for sweeping changes if economic collapse and mass starvation are to be averted.

Asian Drama focuses on India and Pakistan, Ceylon, Burma, Thailand, Malaysia, Indonesia and the Philippines, with added commentary on Laos, South Vietnam, and Cambodia. Its three volumes provide critical analyses on almost every element of the social and economic life of South Asia. Its conclusions have significant implications for the American commitment in that region.

"As in *An American Dilemma*, Myrdal's contribution lies not merely in the conclusions he reaches, but also in the neglected questions he reveals. Asian Drama is, like its predecessor, a major work. One can only wish that its message will be heeded."

—Oscar Handlin,
The Atlantic

"And for YOUR penance, Father Groppi, stop them marches and forget that open housing nonsense!"

DOCUMENT # 1

TASK FORCE COMMITTEE: HEALTH AND HEALTH CARE SERVICES

The purpose of this brief outline is to supply a framework within which the Task Force Committee on Health may work toward suggesting regional priorities and Council programs. The Health Committee may find it necessary to alter the outline or the approach suggested. The problem areas and lists of actors provided is admittedly partial and suggestive, rather than all inclusive.

General Statement of Purpose:

"We tend to forget that health is a broad social concept, encompassing not only illness but complex interrelationships of genetic, psychological, social, environmental, and pathological factors that affect the individual's ability to perform his life tasks effectively."

(Raymond Wheeler, p. 15, New South, Fall, 1971)

TASK FORCE COMMITTEE: HEALTH AND HEALTH CARE SERVICES

Health Problems

1) Malnutrition

2) Infant and Maternal mortality
   a. Prenatal care
   b. Prematurity
   c. Infant care

3) Communicable diseases
   a. Veneral diseases
   b. Childhood diseases
   c. Other

4) Non-Contagious disorders

5) Mental health, including:
   a. Drug abuse
   b. Alcoholism
   c. Due process

6) Environmental conditions:

a. Pollution

(1) Air

(2) Water

(3) Noise

b. Parasites

c. Environmental sanitation

7) Occupational diseases and accidents, including:

a. Black lung

b. Brown lung

8) Old age

TASK FORCE COMMITTEE: HEALTH AND HEALTH CARE SERVICES

Problems in Health Care Delivery

1. Cost factors: medical economics

2. Services to the poor — Urban / Rural

3. Racial, sex, age discrimination — Urban / Rural

4. Location of services — Urban / Rural

5. Quality of care — Urban / Rural

6. Consumer understanding

7. Organization of health services

8. Medical research
   a. Priorities
   b. Funding
   c. Delivery of results

A partial list of actors in the Health Care and Delivery System:

1. Federal government
   a. OEO
   b. USDA
   c. HEW
   d. Public Health
   e. EPA
2. State and local government
   a. Public health agencies
   b. Environmental control agencies
   c. Health educational groups (i.e., state medical schools, para-professional programs, accrediting boards, etc.)
3. Physicians
   a. Establishment oriented - status quo
   b. Activists re reorganization of services and concern for minority and poverty groups.
4. Other interest groups
   a. Community organizations and consumer associations
   b. Hospitals, insurance groups, drug manufacturers and sellers
   c. Professional associations (M. D.'s, nurses, etc.)
5. Media
6. Citizens
   a. Those only moderately concerned with health
   b. Those strongly concerned or immediately affected with health care and delivery systems.

DOCUMENT # 2

This document and the one that follows should be used with several general considerations in mind. In each delivery system and in each problem area the rural/urban, racial relations, poverty, and demographic factors should be kept in mind. Further, consistent with the "Proposed Matrix" (attached) the general actors of mass media, youth, and governmental and political agencies should be included where appropriate as a resource, a part of the statement of the problem, or as a part of the problem.

Delivery Systems Related to Health & Health Care Services

Direct Professional Services

1) U. S. and local Public Health Agencies
2) Private physicians
3) Private and public clinics
4) Comprehensive medical centers
5) Education and training of professionals and Para-professionals.
6) Insurance programs (public and private)

Research

1) Funding, control, and priorities (private & public)
2) Delivery of results.

Environmental Factors

1) Pollution: air, water, land, noise
2) Industrial conditions
3) Residential environmental sanitation
4) Community services; water, sewer, garbage

Pharmaceuticals

1) Research, including testing & quality control
2) Manufacture
3) Distribution
4) Control through patents
5) Licensing authorities

Institutional Care

1) Public & private hospitals
2) Mental institutions
3) Nursing homes

Nutrition

1) Food stamps and commodities
2) School lunch programs and other "speical" projects
3) Possible impact of Nixon FAP
4) Consumer information

PROPOSED MATRIX FOR EACH TASK FORCE AREA

TASK FORCE COMMITTEE ON_____

SPECIFIC PROBLEM AREAS	GENERAL CONSIDERATIONS	CONCERNED AGENTS AND AGENCIES
	BROADER PROBLEM CONTEXTS 1. Urban/rural factors 2. Demographic Factors 3. Poverty factors 4. Racism	
	CLASSES OF ACTORS (May be: Resource, agent for change, part of the problem) 1. Mass media 2. Political and governmental agencies 3. Youth	

DOCUMENT # 3

(Note: Just one of the six (6) delivery systems in Document # 2 is treated here as an example of how each could be treated).

HEALTH AND HEALTH CARE SERVICES
PROBLEMS AND AGENCIES IN DELIVERY OF DIRECT PROFESSIONAL SERVICES

Problems	Agencies (Actors)
1. Need for comprehensive centers especially to serve the poor and rural areas.	1. Training institutions: Medical schools Nursing schools Institutions for Allied Health Service training
2. Cost of direct services	2. Professional associations: M.D.'s(i.e., AMA & speciality groups) Nurses Allied health occupation associates
3. Health manpower problems a) Inadequate supply b) Uneven distribution [rural, urban, income level] c) Cost of direct services d) Training Cost, Focus (Priorities including preventive medicine, comprehensive care, service to rural, poor, etc.) Discrimination	3. Unions 4. Hospital--Administration, Boards, Physicians & Review Committees. 5. Licensing agencies 6. Accrediting agencies 7. Public Health Programs: Local State Federal 8. Foundations 9. Insurance companies 10. Activists: Physicians, Consumer groups
4. Rationalizing work load: Group practice Extended use of allied health services Para-professional training Consumer understanding	11. Public Insurance 12. Private Physicians 13. Comprehensive Centers 14. Federal Role in Funding -

Problems	Agencies (Actors)
5. Quality of service a) Training b) Licensing c) Review of practice	
6. Social perception of professionals in relation to: nutrition, housing, transportation, economic status, education, and environmental factors, as related to individual health.

A PROPOSED APPROACH FOR DETERMINING SRC PRIORITIES

OUTLINE

A. REPUBLIC OF EQUALS -DEFINITION

1. Systems problems or human relations problems

2. Developing new structural models based on perceptions and experience of those excluded by present structure of social institutions.

3. Imperfectability of human social organization, assuming social growth and change.

4. Implications of "Republic of Equals" frame of reference for SRC historic emphasis on interpersonal racial relations.

B. NATURE OF INFORMATION NEEDED FOR REGIONAL INVENTORY

1. Agencies responsible for providing instutionalized services,

2. Mechanisms through which vested interests maintain status quo.

3. Change efforts by groups and individuals most injuriously affected.

   a) resources available, needed
   b) allies
   c) orientation (syst. human rel. problems)

C. STAFF STRUCTURE TO OBTAIN REGIONAL INVENTORY

1. Kanuga Consensus

   a) reduced hierarchical staff structure
   b) more direct program involvement by all staff members

2. Staff Task Force

   a) on Economic Development
   b) on Health
   c) on Housing
   d) on Education
   e) on Justice
   f) Special Task Force on Community Organization--compiling committee

      1) Committee-of-the whole

3. Staff self-selects and appointed to Task Forces

D. TASK FORCE COMMITTEES

1. Each task force committee will review evaluative literature re their respective institution.

2. Each committee will develop a sample of agencies across the region and conduct in-depth interviews with respective agency officials.

3. The interviews will include that agency's official assessment of the nature and distribution of the appropriate social problem, resources available to the agency to resolve the problem, structure of the agency, constituency of the agency, role of the government re the problem, role of race re problem, urban and rural scope of the problem innovative and dangerous trends re the problem.

4. Each committee will compile cross-referenced list of agencies and individuals.

5. Task Force Committee on Community Organizations

   a) Develop a sample of CO's. Size of sample conditioned only by time.

   b) Discover what groups and individuals most injuriously affected by distribution of resource problems are doing, are attempting to do, would like to do better to resolve the distributuon of resource problems.

   c) Discover what groups and individuals professing solidarity are doing, are attempting to do, would like to do to help resolve the distribution of resource problems.

   d. Conduct in-depth interviews as in D. c. above.

   e) Task Force will compile cross-referenced list of organizations and individuals.

E. Time Table

1. Reports of both Task Forces due on November 1, 1972.

2. Priorities decided between November 1 and December 1, 1972.

3. Priorities reported and staff structure for program fixed by December 1, 1972.

F. Budget for Regional Inventory.

TASK FORCE COMMITTEE: HEALTH AND HEALTH CARE SERVICES

The purpose of this brief outline is to supply a framework within which the Task Force Committee on Health may work and to suggest areas of concern to the Council. Our framework is not of iron; it is flexible and the Health Committee may find it necessary to alter somewhat the outline or the approach suggested. The problem areas and lists of actors provided is admittedly partial and suggestive, rather than all inclusive.

General Statement of Purpose:

"We tend to forget that health is a broad social concept, encompassing not only illness but complex interrelationships of genetic, psychological, social, environmental, and pathological factors that affect the individual's ability to perform his life tasks effectively."

(Raymond Wheeler, p. 15, New South, Fall, 1971)

TO: GE, HB, GH, EV, AC, LW

DATE: February 12, 1972

FROM: Bob Anderson

COPIES: 5

SUBJECT:

Philip Sorensen of the Economics Department at Florida State (not to be confused with the Philip Sorensen on the Citizens Board of Inquiry into Hunger) called me a few days back about Hunger U. S. A. Revisited which he had just read. As we talked, it was obvious that he and his colleague had some of the same interests as SRC's Task Forces. He was most interested in talking with some of us and finally agreed the Monday, February 19, would be an acceptable date for them to come up. Attached is an outline of what they are proposing. I hope that all of you can at least get to talk with them, if not in a meeting in the conference room, at least individually. And if that is impossible I hope you can give me your comments on the attached.

Miss. Blacks Face Loss of Health Clinic

MOUND BAYOU, Miss. (NYT) — A political dispute over $5.5 million is threatening the existence of a widely acclaimed government health program for the poor in this all-black delta town of 2,200 persons.

A hospital and an outpatient clinic that treat a few hundred poor people every day are running out of vital medicines because the institutions are out of money.

Their 468 employees have worked without pay for several weeks and some have joined the patients on the welfare rolls.

The black residents of northern Bolivar County, 90 per cent of whom are medically indigent by government standards, are increasingly fearful that a program that has brought them hope and better health might soon end.

Dr. Thomas Gualtieri, the 28-year-old white medical director of the Delta Community Hospital and Health Center, said: "Unless we get some help in the next week or two, we'll have to cut medical services drastically. People will not get medicine. Some will get sick, some will die. We're not dealing with staff members losing their jobs or the economic impact on the community. We are in fact talking about deaths."

The dispute began June 1 when Gov. William L. Waller vetoed a $5.5 million grant from the federal Office of Economic Opportunity to finance for another year a program of health services that reaches from here into four Mississippi delta counties.

The federal agency for five years has supported two institutions that provide those services. The two merged this spring at the agency's insistence.

The new single institution is the Delta Community Hospital and Health Center, Inc. It operates a 51-bed hospital that was known as the Mound Bayou Community Hospital and an outpatient facility that was established a few years ago by Tufts University and was known as the Tufts Delta Health Center.

The merged institutions is governed by a board most of whose members are delta blacks. Some leaders on the board and in the administration have been active in civil rights and other antipoverty programs and have incurred the hostility of many Mississippi whites.

Waller, who has been publicized in some places as a racial moderate, said he had vetoed the grant because the Mound Bayou facility had failed to meet certain state requirements in renovating its buildings, because the two merged institutions duplicated some services and because he was concerned over the legal status of the new board.

It has developed since then that those reasons might have been less important than a fourth unstated one. Waller is trying to organize a new governing board to run the Mound Bayou facilities, one that would operate under state government control and that presumably would get rid of some of the present black leaders.

The Office of Economic Opportunity has the power to override the governor's veto. It has not done so, although federal officials and important Mississippi Republicans hint that it might soon.

Dr. E. Leon Cooper, director of health affairs for OEO, has asked Waller to reconsider his veto. He said in a telephone interview Friday that direct funding of the program through the governor's office, as state officials have indicated they would prefer, would not be acceptable to the OEO without assurances that the people now running the program would be involved. He said his agency would decide during the next few days whether to override Waller.

Owen H. Brooks of Greenville, chairman of the board of the newly merged facility, and Richard Polk, its project director, have charged that Waller's veto was still standing because the Nixon administration was courting the Democratic governor and trying to persuade him to become a Republican to help insure Nixon's carrying Mississippi in the November election. Waller has hinted that he might support Nixon.

Republican officials and spokesmen for the governor deny the charge. One prominent Mississippi Republican who asked not to be identified said of Waller and the election, "Everybody knows we don't need him." Nixon is expected to carry Mississippi easily unless Gov. George C. Wallace of Alabama enters the race on a third party ticket.

Talks Prove Costly

BELGRADE (UPI)—A Yugoslav judge Tuesday sentenced a Belgrade law professor accused of making speeches advocating Serbian nationalism to two years in prison. The judge said remarks made by Mihajlo Djuric condemning alleged discrimination against Serbs were "criminal acts of hostile propaganda."

UAW WASHINGTON REPORT
Vol. 12 No. 31, 32 July 31 and August 7, 1972
Page 8

haste.

ANOTHER DENNENBERG SPECIAL—There are 2 million unnecessary surgical operations and 24,000 deaths as a result—so says Pennsylvania's Insurance Commissioner Herbert Dennenberg in a new booklet called "Shopper Guide to Surgery." He cites 15 studies and books for his facts and suggests ways in which you can avoid being taken by the fastbuck surgeon. Go to a general practioner first, make sure doctor is properly certified, make sure surgeon belongs to college of surgeons, get two or three opinions from others, make sure surgery is performed in accredited hospital, don't push surgeon to perform surgery, make sure doctor explains alternatives to surgery, discuss fee frankly with doctor, check out surgeon's reputation, make sure surgeon works with general practitioner, consider a surgeon who is part of a group practice, select a surgeon who is not too busy, be extra careful about hysterectomies, hemorrhoidectomies, and tonsillectomies, and make the ultimate decision yourself.

Health TFC

Do Hospitals Keep Patients Who Owe? Writer's Charge Denied in New Orleans

8/8/72

By MIKE THARP
Staff Reporter of THE WALL STREET JOURNAL

NEW ORLEANS—Does tender loving care end at the cashier's window?

That's the issue in a lively local hospital rhubarb that is provoking angry accusations, heated denials and at least one formal complaint of illegal detention.

The dispute centers on the question of how much muscle the nation's financially pressed hospitals can legally flex in extracting payment before the patient dons his street clothes and leaves for a waiting auto.

Not as much as they do, contends David Chandler, a free-lance writer and unsuccessful 1971 candidate for governor, who has accused Touro Infirmary, a private hospital, of "extortion and a holding for ransom."

Mr. Chandler says his problem arose in February when his jubilation over the arrival of a 9½-pound daughter to his French-born wife, Patricia, was soured by four Touro employes. He says they told him that the $235 bill would have to be paid in full before his wife and daughter, Beatrice Aube, could be released.

"A Little Tantrum"

"I threw a little tantrum," the former Life reporter says, "and arbitrarily removed my wife and child from the premises after our personal physician had advised it was medically safe to do so." He says he then returned to the hosptial's cashier and arranged to pay the $235 within 30 days.

While the hospital didn't physically restrain him from removing his dependents, the alleged threat to do so violated his rights, Mr. Chandler charges in a complaint to the U.S. Attorney's office here.

The Touro administrator is Dr. Murray Diamond, an ex-Navy rear admiral and former assistant surgeon general in the Department of Health, Education and Welfare. He denies Mr. Chandler's version.

"The incident described by Mr. Chandler did not occur," he says. "If you ask me whether the rooms here are 100% roach-free, I can't answer for sure. But I can say for sure about this incident—it just didn't happen." He adds that at no time has Mr. Chandler contacted him about the matter.

Gerald Gallinghouse, U.S. Attorney here, says Mr. Chandler's allegations and subsequent publicity spawned numerous other complaints to his office charging similar practices by area hospitals.

Assurance Given

During the six-month investigation, Mr. Gallinghouse says, hospitals in the area have assured him that they aren't detaining people against their will. "But we recently received another complaint," he adds.

Observes a New Orleans pediatrician, "I'm sure hospitals will say it's not their policy, but I know in the past many of them have said you have to stay in until the bill is paid."

The hospitals do say that isn't their policy. Indeed, local hospital administrators add that detaining patients is not only illegal but also illogical. The administrators cite the demand for admission. And one asks, "Why should I keep somebody in the hospital? If you can't pay your bill now, why would we want to keep you and add more expense to what you can't pay?"

The American Hospital Association, a national service organization for health-care institutions, says there's no evidence that complaints of patient detention are widespread.

Another New Orleans physician tells, however, of a girl who was admitted to a local hospital while her father, a merchant seaman, was away at sea. "He belonged to a union with an excellent health-insurance plan," the doctor says, "and her mother had a letter from the union. But when it came time to release the child, someone from the hospital said no."

He adds, "I told them that if the child wasn't released, I'd refer the mother to an attorney and the hospital could then collect its bill from a healthy legal settlement awarded to her." The girl was released.

A Statement of Policy

In another case, Roger Stilling rushed his wife to Mother's Hospital in Baton Rouge for an emergency Caesarean operation. He says he was told he would have to sign "a statement of the hospital's credit policy" before his wife could undergo surgery.

He signed and 15 days later, when his new daughter was ready to come home, he asked for an explanation of the hospital's credit policy. The response: No credit. "They told me that I'd have to pay the bill in full and that they expected a check," Mr. Stilling recalls. "We presumed the baby wouldn't be released to us until we did."

He wrote a $450 check on the spot and borrowed that amount the next day from the credit union at Louisiana State University where he is an assistant professor of English.

The assistant administrator at Mother's Hospital verifies that the hospital doesn't normally extend credit. Patients must pay by cash, check, Master Charge or Bank-Americard.

Nearly all hospitals require evidence from patients as to their ability to pay the bill. And most are loath to provide extended credit arrangements. "We're not in the banking business," says one administrator.

"Prudent Business Practice"

Consequently, cash deposits or guarantees of insurance coverage are standard at most hospital business offices. "This is nothing but a prudent business practice," says a spokesman for the American Hospital Association. "By no means is it meant as a financial barrier."

Hospitals say they have good reason to press for collection of bills. Touro's 1971 financial report, for instance, shows $2.1 million in accounts receivable—cumulative bad debts outstanding—against a total income base of $19 million for the year. Most hospitals turn over unpaid bills to collection agencies after 90 days, according to one hospital source.

To keep bad debts at a minimum, some hospitals set up a variety of credit arrangements, but even some of these draw fire from patients or relatives of patients.

Critics score hospitals for charging interest on extended payments, for alleged failure to provide itemized billing statements unless requested, and for pre-admittance deposits ranging from $150 to $700 in the New Orleans area.

Welfare Report/Nixon, Congress decline to check soaring social services costs

by John K. Iglehart

1300
8/12/72
NATIONAL JOURNAL
©1972

Congress and President Nixon have made independent policy decisions not to bring the HEW Department's open-ended social services program under fiscal control until after the November elections.

The judgments were rendered on separate policy issues, but their combined impact will allow states to continue to tap the program, which, if left unchecked, could triple in size to $4.7 billion by the end of fiscal 1973.

Congress, for its part, rejected the imposition of a ceiling on the social service program's open-ended appropriation. The issue was considered July 25 in a House-Senate conference on the HEW appropriations bill (HR 15417).

The Senate Appropriations Committee had imposed a ceiling of $2.5 billion on the program, and the Senate rejected an amendment to remove it by a 39-52 vote on the floor. But House conferees, led by Appropriations Committee chairman George H. Mahon, D-Tex., objected strenuously and prevailed in conference.

Congressional rejection of the ceiling is a tribute to the effectiveness of Governors, state welfare directors and county officials who stormed Capitol Hill to lobby against the ceiling.

These forces besieged the conferees, urging rejection of the ceiling and arguing that the action would be wholly inequitable to states that were late-bloomers in the race for the federal social service dollar.

The only potential counterforce was the Administration, which has sought for three years to clamp a lid on the open-ended appropriation. But the Administration chose to lie low.

"The (HEW) Secretary was silent; the White House was silent," said Harley M. Dirks, a professional staff member of the Senate Appropriations Subcommittee on Labor-HEW. "Where were they when we needed them? And now the President wants to impose a $250-billion ceiling."

Presidential decision: The Administration's failure to lobby for a ceiling resulted from a view that Mr. Nixon expressed in late June on the shape of new regulations HEW was developing for its social services program.

The President directed HEW to prepare new regulations that would require states to develop better methods of accounting for their social service expenditures, but would not significantly obstruct the states' access to the program's open-ended largesse.

That Mr. Nixon made a personal judgment on a regulation for an HEW program reflects the political importance the White House has attached to social services.

The President arrived at his decision after HEW Secretary Elliot L. Richardson sent him a memorandum June 23 which outlined four possible options that the Administration could pursue in seeking better control of the program. The President selected by far the most expensive option, one that would delight Governors whose states were in financial distress, but also would result in a costly budget overrun.

In explaining this option, Richardson told the President:

"The obvious advantage to this approach is that we would not prevent states from continuing to exploit this source of fiscal relief. We would thus avoid a major political controversy.

"The equally obvious disadvantage is the price tag that we would have to pay for this approach: At least $2.7 billion above our FY 1973 budget and a program level of $6 billion or perhaps more in FY 1974.

"An additional disadvantage is that we cannot describe or account programmatically for these enormous sums. In fact, we may be helping, through our refinancing, to perpetuate some poor programs."

By selecting this approach, Mr. Nixon has avoided, for the time being, a major confrontation with the Governors, who have come to view the social services program as important a source of new federal funds as revenue sharing.

Program: HEW's social services program operates under the legal authority of the Social Security Act (49 Stat 620) and finances a wide range of services on a ratio of 75-per cent federal funds to 25-per cent state.

The services are rendered to former, current and potential welfare recipients and include child care, protective services for children and aged individuals in danger of abuse or neglect, mental health services, and alcoholic and drug abuse prevention.

HEW estimates that in fiscal 1972, 664,600 adults and 12 million children will receive social services financed principally by the department.

Although the states find somewhat attractive the prospect of increasing services to the welfare population, their chief interest in the program is that it is a major source of fiscal relief.

California and Illinois were the first to recognize the program's potential for easing their financial problems. Recently, most of the other states have awakened to the program's seemingly limitless money supply.

Now, a great race is under way by late-starting states to make the necessary changes in their social service programs that will enable them to share the wealth.

Two extreme examples of states that are seeking new service dollars are Maryland and Mississippi. In fiscal 1973, Mississippi estimates that the federal share of its service expenditures will be $14.2 million. The state is seeking changes in its social service plan that would raise the federal commitment to $463.6 million in fiscal 1974.

Maryland estimates that the federal share of its fiscal 1973 social service expenditures will total $21.8 million. Maryland has estimated the federal share in fiscal 1974 at $417.7 million, if HEW approves its proposed state-plan amendments.

Regulations and timing

The debate over the content of any new social service regulations raged so heatedly within the executive branch and became so important in terms of federal dollars that the Office of Management and Budget turned to the President for a decision.

Now that Mr. Nixon has decided upon the course of action, the question of when to promulgate new service regulations has become almost as big an issue as the substance.

Richardson sent to the President a nine-page memorandum listing the four possible options the Administration could follow, but did not offer a recommendation. The Secretary warned: "Unless we take decisive administrative action, the budget for social services threatens to exceed $4 billion in fiscal 1973; $2.7 billion over your budget request."

The Secretary characterized the social services phenomenon as "a virtual open-ended raid on the federal treasury," but added: "To control these costs is politically hazardous. Several

Social Services

This is the second *National Journal* report on the HEW Department's social services program. The first report was published June 17 in Vol. 4, No. 25, p. 1007.

states, such as New York, Illinois, New Jersey, Texas and Pennsylvania, have refinanced state programs to their advantage. They can be expected to resist any effort to curtail federal expenditures."

Alternatives: Richardson outlined four possible courses of action, three of which would have significantly curtailed social service program expenditures; a fourth called for states to improve their accounting procedures. Mr. Nixon selected this option.

Preferred option—Under this alternative, HEW would issue regulations requiring states to develop a planning and accounting system that would provide detail on how they use the federal social service dollars.

This approach was developed by HEW's Social and Rehabilitation Service, the agency under which social services is administered. As developed by social service program personnel, the proposal has been viewed generally as one that would prod states into developing better management structures to administer services, but not result in the loss of many federal dollars.

Other options—Richardson also raised the prospect of issuing regulations that would include a so-called "expansion-of-effort" restriction. Under such a requirement, federal social service funds would be available for matching only in relation to higher state expenditures. Such a structure would significantly curtail the program's uncharted growth rate.

"This approach still leads to an unacceptable level of federal expenditures for future years," Richardson said. He estimated that the program would grow to $2.8 billion in fiscal 1973 and $3.1 billion in fiscal 1974.

The toughest option Richardson put before the President was a proposed regulation that included an expansion-of-effort rule plus a curtailment in scope of services already financed partly through federal funds.

Under this option, which is the route favored by HEW's budget office, federal funding would be withdrawn for all room-and-board costs in public institutions, all health, mental health and medical services.

Richardson said: "This approach will have significant effect on almost all states, and states such as New York, Illinois, Massachusetts and Texas, which have recently revised their programs and thereby eased their fiscal problems, will be particularly agitated."

The fourth option presented by Richardson called for a phased implementation of the Administration's strategy for controlling the services program. Although it was rejected by the President, top HEW officials said they believe that it is the approach that the Administration ultimately will take.

In short, the strategy goes like this: do nothing that will cause a furor among the states before the November election; then issue regulations that will sharply cut the growth rate of social services shortly after the election.

"This combination," Richardson said, "seeks a balance between budget savings and political reaction. However, it will still leave severe budgetary problems and will result in considerable political repercussions."

John D. Twiname

Timing: Although the Administration has decided what shape its new service regulations will take in the short term, the question of when they will be promulgated is one that the Office of Management and Budget has not finally resolved.

C. William Fischer, chief of OMB's human resources division, laid out the pro and con arguments in a memorandum to OMB Director Caspar W. Weinberger in late July.

Fischer made no recommendation to Weinberger on when the regulations should be issued, but he noted that HEW believes that any delay would be viewed as hypocritical by the states.

John D. Twiname, administrator of HEW's Social and Rehabilitation Service, feels most deeply among top department officials about the need to issue new service regulations now that would call for states to adopt better management procedures.

Twiname expressed his view to Fischer in a memo dated July 14. He said:

"The more I contemplate this issue, the more it appears to me that the Administration is taking a far greater risk to delay issuance of the regulations than otherwise . . . I think the most serious element . . . is its delay of the effort to establish controls of some sort in a program that appears to be running away with the federal dollar."

Congress

The Administration's indecision about when it should publish proposed social service regulations in the *Federal Register* is bound up in the OMB's hopes that Congress will take action to control the program.

Reflecting the decision Mr. Nixon made in declining to curb the program's growth before November, the OMB is hesitant to publish the regulations for fear of the political repercussions.

The OMB is hopeful that Congress will move up one of the available avenues to halt the open-ended assault on the social services account. There are several possibilities for action, but none looks very promising.

Although the Senate Finance Committee and the House Ways and Means Committee have acted to impose a ceiling on the program, the attitude of most Members is best expressed by the action of the House-Senate conference on the Labor-HEW appropriations bill. The conference removed a ceiling from the program.

Conference: The tale of the conference is best told by looking at the Members who were in the best position to make the ceiling stick and chose otherwise.

House Appropriations Committee chairman Mahon, an acknowledged conservative with the federal dollar, went into the conference as an agressive advocate of removing the ceiling.

Although the conference had 77 differences before it to resolve, Mahon appeared to argue his position on behalf of only one: removal of the $2.5-billion social services ceiling imposed by the Senate.

Mahon was acting out of concern for Texas, which has only lately gotten on board with other states to tap the social services open-ended account in a significant way. A ceiling imposed now would hurt Texas and other states that are seeking new service dollars from HEW.

Texas Gov. Preston Smith, D, impressed on Mahon and Rep. Bob Casey, D-Tex., another House conferee, the absolute necessity of removing the Senate-imposed ceiling.

Smith did not limit his lobbying activities to Texas Democrats. Edwin F. Powers, an assistant to Smith, said: "Sen. (John G.) Tower (R-Tex.) has helped us clear up roadblocks in OMB. His influence has been helpful within the Administration."

Tower did not participate in the conference committee, but Powers said he had eased Texas' access to the first installment of new service dollars to the state.

Assuming other installments follow, Powers said, the federal share to finance services in Texas will increase from $15.2 million in fiscal 1972 to $178.6 million in fiscal 1973.

Flood's influence—Another member of the conference as important as Mahon in removing the services ceiling was Rep. Daniel J. Flood, D-Pa., chairman of the House Appropriations Subcommittee on Labor-HEW.

Flood has long been a champion of an open-ended services program and Pennsylvania has fared as well as most states in tapping the account. Flood argued in conference that it was the responsibility of the committees which authorize social security legislation—Senate Finance and House Ways and Means—to make any substantive changes in the services program.

One conference participant said privately: "Flood was so strong in favor of removing the ceiling that the other subcommittee members were virtually silent on the question, even those who favored a ceiling."

Senate effort—The Senate conferees went into the session July 25 holding the upper hand, at least on paper. The Senate, in rejecting a floor amendment, 39-52, to remove the ceiling, had provided its conferees with a strong bargaining point.

Sen. Norris Cotton of New Hampshire, the ranking Republican on the Labor-HEW appropriations subcommittee, used the argument in conference and also emphasized that he was not wedded to a ceiling of $2.5 billion; he just wanted a reasonable ceiling.

The conference zipped through all but one of the 77 items before it in one day and, in the view of several participants, the Senate conferees receded from their position on a ceiling because their House counterparts were so reasonable on most of the other issues.

Six-Fold Cost Increase in Three Years

The HEW Department's burgeoning social services program will have grown six-fold between fiscal 1971 and fiscal 1973, according to the latest state estimates. States now estimate that the federal share of their service expenditures in fiscal 1973 will total $4.7 billion. Listed below for each state are the federal share of social service costs in 1971, the May 1972 estimates of fiscal 1973 federal expenditures for social services as submitted to HEW by the states, and July 1972 estimates as provided by states at a meeting of Governors' representatives and state social service administrators in Washington on July 17. The figures are in millions and are rounded.

State	Federal share of social service costs in 1971	May 1972 estimates of federal share of social service costs in 1973	July 1972 estimates of federal share of social service costs in 1973
Alabama	$ 6.8	$ 41.2	$ 144.5
Alaska	1.8	18.9	19.7
Arizona	2.8	6.3	6.7
Arkansas	2.0	4.7	18.4
California	210.8	273.0	273.0
Colorado	11.7	22.7	29.8
Connecticut	7.6	15.8	18.8
Delaware	2.8	35.0	46.7
District of Columbia	7.0	10.1	32.0
Florida	12.5	112.6	112.6
Georgia	12.1	58.0	222.6
Hawaii	.5	2.1	2.4
Idaho	1.2	2.3	3.9
Illinois	28.3	147.5	172.5
Indiana	2.5	6.7	15.0
Iowa	6.8	12.8	13.5
Kansas	5.9	7.4	8.4
Kentucky	6.4	19.4	30.0
Louisiana	9.3	16.3	34.9
Maine	3.6	7.2	20.0
Maryland	15.0	21.8	417.7
Massachusetts	8.4	19.7	60.0
Michigan	17.6	85.8	85.9
Minnesota	15.4	24.1	96.5
Mississippi	1.1	14.2	463.6
Missouri	11.9	16.3	16.3
Montana	2.1	3.3	1.0
Nebraska	5.8	12.6	12.6
Nevada	1.0	2.0	2.0
New Hampshire	2.0	3.0	6.0
New Jersey	20.0	38.3	58.3
New Mexico	3.8	6.4	47.0
New York	88.2	618.4	850.0
North Carolina	11.6	47.1	50.4
North Dakota	2.5	4.0	5.0
Ohio	11.1	22.5	60.0
Oklahoma	7.5	11.6	54.0
Oregon	25.6	24.9	30.7
Pennsylvania	36.3	100.6	265.0
Rhode Island	4.4	6.2	15.8
South Carolina	3.6	14.1	214.1
South Dakota	2.0	2.9	2.9
Tennessee	9.9	43.5	230.2
Texas	13.0	42.4	178.6
Utah	3.1	5.2	7.2
Vermont	1.6	2.6	2.6
Virginia	10.2	19.6	32.0
Washington	31.1	57.9	74.1
West Virginia	7.9	7.9	15.4
Wisconsin	18.0	58.5	113.5
Wyoming	.7	.6	.6
Total	**$745.9**	**$2,158.3**	**$4,692.5**

"A conciliatory climate prevailed in the conference," said one participant. "The House members were a pretty reasonable group on every item except social services. That had an effect on the attitude of the Senators."

The Senators accepted as a compromise solution to the issue language in the conference report (HRep 92-1280) which urges the Administration and Congress to work "with the states to devise effective means of exerting fiscal control over social services programs."

The conference report also directed HEW "to submit to both the House and Senate Appropriations Committees no later than the commencement of the second quarter of 1973 a comprehensive plan for a system of fiscal restraint and programmatic accountability in social services programs.

"Such a program is expected to include a system of allotments of social services funds among states with proper consideration to population, per capita income, welfare consolidation, and past experience in social services program delivery. It is anticipated that such a plan could become effective no later than Jan. 1, 1973."

Authorizing committees: With the imposition of an appropriations ceiling an impossibility, the Senate Finance and House Ways and Means committees have acted to control services through other legislation.

During its consideration of HR 1, the Administration's social security-welfare reform bill, the Senate Finance Committee approved on June 11 a ceiling of $1 billion on the services program and scaled down the federal matching requirement.

Last year, the House approved a ceiling of $800 million in HR 1, with the exception of child-care and family-planning services, which would continue to be funded on an open-ended basis. The Finance Committee treated these two services in a similar fashion.

Although both committees have approved ceilings, the bill which includes the stricture is in deep trouble because of its welfare reform provision.

With the chance of HR 1's passage growing dimmer every day, these committees will have to find another legislative vehicle to which to attach a services ceiling.

Revenue sharing: Sen. Russell B. Long, D-La., chairman of the Finance Committee, has expressed an interest in tying firmer federal control over services to the House-passed revenue-sharing bill (HR 14370) that his panel is considering. *(For a report on the revenue-sharing bill, see Vol. 4, No. 32, p. 1245.)*

George H. Mahon

Norris Cotton

Long opened a hearing July 20 that took testimony from a dozen Governors on the merits of revenue sharing by criticizing the spiraling cost of social services. "We cannot afford to continue the present social services system if we are going to provide $5.3 billion a year, and more, in revenue-sharing funds under the bill before us today," he said.

The committee approved Aug. 9, the day it completed action on its revenue-sharing bill, a provision that would sharply retrench the federal financial commitment to social services next year.

Under the provision, HEW could honor current services contracts for six months. But, after that, the department would finance only child-care and family-planning services on an open-ended basis.

HEW would distribute an additional $1 billion on a formula based on population. Large states that have done well in the services program would suffer under the provision and will presumably object to it.

Sen. Wallace F. Bennett, R-Utah, estimated that the provision "would save at least $3 billion" of the $4.7 billion the states estimate they will now spend for services in fiscal 1973.

Bennett said the provision will have "all-out Administration support." However, the President expressed Aug. 3 in a letter to Richardson his desire to keep the revenue-sharing bill free of "selected elements of HR 1."

The President said he would "strongly oppose" any move to amend HR 14370 "because it could doom the possibility of real welfare reform in this Congress and could seriously jeopardize the revenue-sharing bill."

Outlook

The prospect that Congress will impose a ceiling on HEW's social services program this session is not bright; states that are racing to fatten the federal commitment to their services program seemingly have a green light.

But it is unrealistic to expect that the Administration will adhere after November to the generous attitude it is now taking to the growth of the program.

Such a posture simply does not square with the President's announced intent to hold federal expenditures in fiscal 1973 close to $250 billion.

Mr. Nixon warned the Congress in a message July 26 that "no matter what the political pressures, no matter how frequently I may be told that in an election year a President cannot veto a spending measure," he will consider such action in bills that reach his desk that are too expensive.

The first real test of Mr. Nixon's intent, is likely to be the Labor-HEW appropriations bill which should clear Congress before it adjourns Aug. 18 for the Republican National Convention. As approved by the House-Senate Labor-HEW appropriations conference, the bill exceeds the President's fiscal 1973 request by $1.8 billion.

A veto, though, will have no effect on the social services program because of its open-ended appropriation. Therefore, unless the White House sharply changes its course, it will likely be early next year before any sharp curb is placed by the executive branch to slow the unconstrained growth of the social services program.

Use of Lead-Based Printing Inks May Pose A Health Problem, Some Researchers Say

8/14/72

By [redacted] GRAHAM
Staff Reporter of THE WALL STREET JOURNAL

NEWARK, N.J. — The widespread use of lead-based printing inks may contribute to environmental lead contamination and could pose a serious health problem.

That's the warning from researchers at the College of Medicine and Dentistry of New Jersey, New Jersey Medical School, who said that during the past month they found high lead concentrations in newspapers and large-circulation magazines they analyzed. Printing ink makers dispute the findings.

Spot tests showed that black and white sections of newspapers had lead concentrations ranging from five to 20 parts per million, while the colored pages of most of the national magazines disclosed up to 800 ppm lead. Red, yellow and orange inks were found to contain the largest amounts of lead.

According to Dr. Morris M. Joselow, director of the Laboratory of Environmental Toxicology of the Department of Preventive Medicine and Community Health at the school, children who habitually chew on newspapers or magazines could easily take in lead in excess of "safe" or acceptable limits.

Easily Obtainable From Spitballs

The Bureau of Community Environmental Management of the Department of Health, Education and Welfare has stated that the maximum acceptable lead intake for children is 300 micrograms per day. As there is an unavoidable daily intake of up to 200 micrograms per day of lead from sources such as food and air, Dr. Joselow said, "It would only take the ingestion of another 100 micrograms of lead, easily obtainable from only a few spitballs, to exceed an intake of 300 micrograms." The result, he said, would be elevated blood lead levels that could lead to lead poisoning. Chronic lead poisoning causes mental retardation.

The three largest printing ink manufacturers—Inmont Corp., Sun Chemical Corp. and Sinclair & Valentine Inc., a division of Wheelabrator-Frye Inc.—denied that lead pigments used in certain inks are a health hazard. They said most colored inks and all black inks are based on nonlead pigments.

A spokesman for Inmont said the industry uses certain lead-bearing pigments in production of printing inks. "This has been true for more than 50 years," he said. "We have no knowledge that these pigments have ever created health problems."

Jerome F. Cole, director of environmental health for the New York-based Lead Industries Association, noted that the 800 ppm levels found on some magazines were well below the FDA's current acceptable lead level for internal paint. "We're dealing here with low concentrations of lead," he said. "Given the other sources of lead in air and water, (ink) is a minor contributor at best."

Lead-Free Printing Ink

Peter R. Lantos, vice president for research and development for Sun Chemical, New York, said, "We have an active program under way to reformulate our printing ink products to make them lead-free. There are very few instances where this can't be done." Noting that the lethal dose of lead is 100 milligrams per kilogram of body weight, he said a 50-pound child would have to eat 80 pages of paper printed solidly in yellow ink to receive a lethal dose of lead.

While conceding that substances used in ink to hasten drying contain soluble lead compounds that might be absorbed by the body, Mr. Lantos asserted that lead pigments in inks are inert, insoluble compounds that can't be absorbed.

In response, Dr. Joselow said, "Inks contain lead salts, some of which are easily dissolved and passed into the system. Inks contain about the same form of lead as paint. If a problem exists in paint, it also exists in ink."

The scientist also warned that when burned, lead-laden newspapers and magazines could release lead into the atmosphere.

Dr. Joselow urged that printing inks containing lead be limited to uses where accessibility to children isn't possible. He suggested that the federal Hazardous Substances Act might be applied to lead-based inks "to eliminate this unnecessary hazard to public health."

Delivery Systems Related to Health & Health Care Services

Direct Professional Services

1) U. S. and local Public Health Agencies
2) Private physicians
3) Private and public clinics
4) Comprehensive medical centers
5) Education and training of professionals and para-professionals.
6) Insurance programs (public and private)

Research

1) Funding, control, and priorities (private & public)
2) Delivery of results

Environmental Factors

1) Pollution: air, water, land, noise
2) Industrial conditions
3) Residential environmental sanitation
4) Community services: water, sewer, garbage

Pharmaceuticals

1) Research, including testing & quality control
2) Manufactual
3) Distribution
4) Control through patents
5) Licensing authorities

Insitutional Care

1) Public & private hospitals

2) Mental institutions

3) Nursing homes

Nutrition

1) Food stamps and commodities

2) School lunch programs and other "special" projects

3) Possible impact of Nixon FAP

4) Consumer information

JAYCEES TO AID POOR UNDER OEO GRANT

The U.S. Jaycees are recipients of a $275,000 Office of Economic Opportunity grant for the creation of what OEO termed an "action-oriented partnership" between the Jaycees and OEO's Community Action Agencies. Over the next year, Jaycee chapters will develop programs making their resources available to aid the CAAs and the poor. OEO Director Phillip Sanchez said the grants would focus on technical assistance in the areas of economic development, housing development, resource mobilization, and public relations, with the intention of providing not only immediate aid but also a basis for long-term cooperation between the Jaycees and CAAs.

The Jaycee-CAA project will select 10 cities for major grants and 80 to 90 other communities for smaller allocations during the next 12 months, OEO said. A coordinating committee, with 19 members drawn from Jaycee chapters, CAAs, OEO, and other federal agencies, will oversee the projects. Bern L. Gentry, director of human improvement for the U.S. Jaycees, was named executive director. □

$11 MILLION HEALTH MANPOWER PLAN SET

Improved health services for medically underserved areas is the goal of an $11 million program to support Area Health Education Centers (AHECs), which will provide clinical education for the health professions and allied health occupations in areas which lack adequate health manpower. The program, run by the Bureau of Health Manpower Education (BHME) in HEW's National Institutes of Health, is to follow the recommendations made in a Carnegie Commission report titled "Higher Education and the Nation's Health."

AHECs will provide residency training, clinical instruction for undergraduate medical students, and continuing education for practicing physicians in manpower shortage areas. In addition, training for health professions, nursing, and allied health occupations will be made available through the centers. The nucleus of an AHEC will be an established public or nonprofit hospital or consortium of hospitals where, under a written agreement with medical and other schools, the training will be provided.

The $11 million appropriated for fiscal 1972 will be available for commitment through this September and an additional $11 million has been appropriated for fiscal 1973. The program is funded under the Comprehensive Health Manpower Training Act of 1971, which also extends to support projects to improve the distribution, supply, quality, utilization, and efficiency of health personnel and the health services delivery system. According to BHME, only the AHEC program is being implemented at this time.

(Additional information may be obtained from the Manpower Initiative Program, Office of Special Programs, BHME, NIH, Bethesda, Md. 20014.) □

'WIN' ISSUES RULES FOR HEARINGS

The Labor Department has spelled out procedures for administrative hearings and appeals under the Work Incentive (WIN) program for welfare recipients who refuse without good cause to accept jobs under the program. The new regulations, published in the *Federal Register* July 18 (Vol. 37, no. 138, page 14268), went into effect on July 1, 1972, with the implementation of the so-called Talmadge amendments to the WIN program.

Under the WIN amendments proposed by Senator Herman Talmadge (D.-Ga.) and enacted last December, able-bodied adults must register for jobs or training in order to be eligible for Aid to Families with Dependent Children (AFDC). Persons who refuse employment or training are entitled to a hearing. If no grounds are found for the refusal to accept employment or training, the welfare recipient is given a 60 day period of counseling or other services designed to persuade him to participate in WIN. Should he still refuse, the Labor Department will discontinue welfare payments to the individual—although dependent children or other relatives may continue to receive welfare payments for which they are eligible.

The new WIN regulations provide for a hearing by a state hearing officer provided by the state WIN sponsor. An adverse decision may be appealed either to an appellate body provided by the state WIN sponsor or welfare agency, or, if the state does not provide for an appellate procedure, to a national review panel consisting of a Labor Department chief hearing examiner and eight appointed hearing examiners.

Persons who are terminated from AFDC because of their refusal to participate in WIN "without good cause" may be reinstated if they register for manpower services after a period of 90 days has passed. The WIN staff must feel they have demonstrated their willingness to participate before readmitting them. A person who has been readmitted and once again refuses employment must wait six months before registering again.

Although the hearings and appeals rules became effective on July 1, the Labor Department will accept comments or suggestions for changes if they are received by August 17. Comments should be addressed to the Assistant Secretary for Manpower, U.S. Department of Labor, Washington, D.C. 20210. □

22 STATES NOW HAVE STATEWIDE JOB BANKS

Computerized Job Banks, linking all Employment Service offices within a state, are now in operation in 22 states, according to Assistant Secretary of Labor Malcolm R. Lovell, Jr.

The statewide Job Bank systems provide local ES offices access to a daily computer printout of job openings. Thus, a job seeker at an ES office may apply for

THE DOCTOR DILEMMA

TFC - HEALTH

AUG 1 4 1972

by Kenneth M. Endicott, M.D.

With more than 4.5 million employees, the health industry has become the Nation's largest employer—a network of medical centers, hospitals, educational institutions, government agencies, clinics, offices, facilities, and people engaged in hundreds of activities to maintain and protect the Nation's health. Our supply of health workers has doubled in the past decade, yet the gap between the demand for and availability of the central figure in our medical care system—the physician—has never been as acute.

For more than 40 years the Nation has been suffering from a growing deficiency in the supply of physicians and other health professionals—dentists, nurses, optometrists, and the like. Today this manpower problem is a major reason behind a tarnishing image of the health professions, a changing pattern of medical care and medical economics, and a vast upheaval in the previously conservative, tradition-bound system of medical education.

As recently as 1950 most of today's physicians were not yet in practice. The Nation had about 233,000 physicians—149 per 100,000 people. Medical bills were lower than they are today—about $78 per person compared with about $358 last year. It wasn't as difficult to get an appointment with a physician or dentist as it is now; there were physicians in the inner city, and doctors even made house calls.

Today there are about 334,000 physicians—162 per 100,000 people—and they work an average of more than 50 hours a week. Yet we don't seem to have enough to go around.

What have we done with the added physicians who have come into practice in the past two decades? According to one recent survey, physicians earn a mean annual income of $40,550. They rank first in income among 321 occupations, according to the Census Bureau. Add these incentives to the rising demand for physicians and another question develops: Why haven't even more candidates stepped forward to fill the need?

The answers are as unsettling as they are complex. The reasons behind the physician manpower problem are the same ones which have pushed national spending on health to $75 billion annually and brought the Nation to the brink of medical crisis. Hopefully, some of the root causes of this situation are now in the process of correction through a variety of Government programs.

Much of the new physician manpower has gone simply to take care of the Nation's rapidly rising health workload. Demands for health manpower vary according to the size and distribution of the population, patterns of living, consumer income, the educational attainment of consumers, insurance coverage, and services for special groups such as the disadvantaged. Programs such as Medicare and Medicaid that help pay medical expenses also affect the demand for health care.

Ironically, a contributing factor to the physician supply problem has been the improvement in the quality of our physician manpower. According to a Department of Commerce survey, 26 percent of the Nation's physicians in 1929 were specialists, having undergone further study, training, and examination than the general practitioner. By 1959, 46 percent were specialists, and by last year, more than 75 percent were actively engaged in one of the specialties.

In 1971, the general practitioner, the primary provider of family care, accounted for only 17 percent of all physicians. The pediatrician might be considered the youngsters' general practitioner, but he accounts for only 5 percent of the physician work force. Internists, specialists in internal medicine, fill some of the void, but they account for less than 13 percent of the Nation's physicians. The result is that today about 118,000 physicians are engaged in a form of general practice, 5,000 less than in 1957.

Many Foreign Doctors Practice in U.S.

Much of the total increase in physician manpower that has occurred is accounted for by an influx over the past 25 years of some 63,000 graduates of foreign medical schools. They comprise one-fifth of our active physicians, about one-third of hospital interns and residents, and a similar proportion of newly licensed physicians. About 3,000 immigrant physicians and over 5,000 exchange visitor physicians enter the U.S. annually, with many of the exchange visitors later remaining here permanently.

Not only have we not kept pace with our own demands for physicians, but we are stripping the medical resources of some countries whose needs are greater than our own.

Compounding the problem still further is that few new physicians set up practice in areas where they are most needed. Every major city has one of those buildings where shiny brass plaques near the entrance identify the offices of perhaps dozens of physicians—mostly specialists. In some cities there are more doctors in one of those buildings than in an entire urban ghetto. In Washington, D.C., the virtually all-black Anacostia section had 67 doctors' offices in 1969 for a population of 217,000. On the other side of town, a

Dr. Endicott is director of the National Institutes of Health's Bureau of Health Manpower Education.

Although opportunities are increasing, minorities still are grossly underrepresented in the health professions. Blacks, for example, represent only 2 percent of the Nation's physicians. This intern, wearing a watch for timing obstetric contractions, is one of the 879 minority students who composed 7 percent —the largest proportion in history—of last year's graduating class.

primarily white neighborhood listed 347 doctors' offices for a population of 86,000.

Similar situations exist in other major cities. One study in Chicago shows one physician for every 518 people in the north section of the city, while a southside area has one physician per 1,724 residents. Few new physicians are setting up practice in poor areas, and in many of these underserved areas physicians are leaving for safety, financial, or other reasons. The suburbs, with their booming, affluent populations, are able to accommodate these relocating physicians plus all the new ones who wish to set up shop there.

Rural areas also are unable to draw physicians in adequate numbers. According to one study reported last year by the American Medical Association, "Rural counties of under 10,000 containing 2.5 percent of the population attracted less than 1 percent of the 1960-65 medical graduates. Counties in major metropolitan areas of more than 2 million attracted 17.1 percent of the graduates although they contained only 12.8 percent of the population. In fact, the ratio of population per physician is inversely related to total county population."

The difficulty in channeling more physicians into rural areas finally overwhelmed a joint program of the Sears-Roebuck Foundation and the American Medical Association late last year. Since 1956 the program had been attempting to lure physicians to rural areas by establishing 162 small-town medical centers. While about 100 of the centers are in operation, seven have never attracted a practitioner, 51 are vacant or have been converted to other uses, and many others have seen a procession of practitioners who stay for a year or two and then move on to greener pastures.

But the situation is far more serious than even 51 abandoned medical centers would indicate. There are 132 counties in the United States with a combined population of 472,000 people without a physician. Towns are finding themselves in the same plight as Tionesta, Pa., population 1,000, which early this year was flying a banner on its main street reading, "Help! We Need a Doctor." Tionesta has been without a physician for over 3 years. The banner, hanging for about 6 months, had not produced any applicants at last report.

And as if a maldistribution of physicians in terms of quantity, geography, and specialty were not enough, the situation is further complicated by serious racial imbalances. For example, the 23.5 million blacks who represent 11.5 percent of the Nation's population account for but 2 percent of the Nation's physicians, 2.7 percent of the dentists, and 5.7 percent of the professional nurses.

As recently as 10 years ago racial prejudice was perhaps the major factor preventing most young black students from aspiring to medical careers. Quota systems in professional schools, lack of financial help, the inadequacy of much of the dual education system, restrictions on staff privileges for black physicians in teaching institutions, and numerous other forms of discrimination all served to limit the opportunities and aspirations of black recruits into the health careers. Many of these barriers have largely disappeared; those which still remain are primarily economic pressures and, in some cases, poor quality education which too often handicap the black student in competing for admission to the Nation's 108 medical schools.

More than 35,000 applicants—a conservative estimate—are now being considered for the 12,970 places that will be available to the incoming class of medical students this fall. A significant number, possibly as many as one-third of the qualified applicants, will be denied admission simply because there is no room for them. Of those who enter, the combination of their qualifications, motivation, and aptitude will result in about 90 percent completing their studies. For some medical students it might be said that their last major obstacle to becoming physicians will be getting admitted to a medical school.

Schools Raise Admission Standards

Generally, medical training takes about 8 years from high school to M.D. degree, although specialists and researchers may continue training for another 2 to 5 and even more years. Most medical schools require a minimum of 3 years of college prior to admission. Some schools require the baccalaureate, many others recommend it.

Considering the medical school's reputation for tight admissions policies, prerequisite course requirements are not extensive—90 percent of the schools will accept qualified students with 1 year of biology, 3 years of chemistry (inorganic and organic), and 1 year of physics.

Admissions committees base their judgments on undergraduate grades, the candidate's score on the Medical College Admission Test (MCAT), personal interviews, and letters of recommendation. With competition so keen, medical schools are very definitely selecting the cream of the qualified applicants, leaving the others to pursue other careers. Mean scores on the MCAT are appreciably higher than they were a decade ago both for accepted and unaccepted applicants.

"A few years ago, any applicant with a straight B average in college was virtually assured of admission to some medical

Freshmen medical students at George Washington University (GWU) take notes during a physiology lecture.

school, and many admitted students had a lower grade average," wrote the dean of one medical school recently. "Today there are far more candidates with a 3.0 (B) average than can be accepted."

At another medical school, the chairman of the admissions committee says, "A rejection by the Committee on Admissions certainly does not imply that the student is not qualified to study medicine in this school. It merely indicates that other applicants have been evaluated a bit more favorably."

One barrier to obtaining a medical education, the cost to the student, has not risen as rapidly as one might expect during the past decade. According to the Association of American Medical Colleges, the average annual expense of medical students for tuition, lodging, board, and related costs has increased from $3,577 in 1963 to $4,394. The study showed resident tuition in public medical schools ranging from $387 to $1,215, and private medical schools from $950 to $2,500.

More than three-fourths of the income of medical students reported in the study came from a spouse's earning (29 percent), gifts or loans from the family (25 percent), and their own earnings (24 percent). By the time they graduate, 3 out of 5 medical students are married, and among this group the spouses are providing 50 percent of the cost of the medical student's education.

The student's economic plight certainly is not easy, and perhaps it is no wonder that one-fifth of the medical students come from families with incomes of $25,000 or more, although that group represents less than 5 percent of the total population.

Money Squeeze Slows School Expansion

Despite the mental, physical, and economic challenge, young people seem to be turning to medicine in increasing numbers, both as a reflection of their desire to help others and as the result of a decline in job opportunities in other scientific and technical fields.

The major reason schools are not expanding fast enough to accommodate the demand is financial. The cost of educating a physician is difficult to measure. Typically the school itself encompasses, in addition to classrooms, a teaching hospital which provides medical care as well as education, and laboratories which conduct research as well as train the student. Faculty members may split their time among teaching, research, and patient care, all of which may be woven together in a manner which defies separation for cost accounting purposes.

The Comprehensive Health Manpower Training Act of 1971 provides for a study to determine the costs of health professions education and to set up cost accounting standards for the health professions schools by Jan. 1, 1974. Until the study is completed, the best estimates place the cost of medical education at about $9,000 per undergraduate medical student per year. Since the highest tuition charged is $2,500, without Federal incentives there is obviously little reason for a school to expand enrollment.

The financial pinch which seems universal in higher education has been felt by the medical schools in various ways. In

some schools needed improvements in physical plant were postponed. Expansion of enrollment was impossible. The traditional sources of support for medical education — fees charged for medical care; the philanthropy of various individuals, businesses, groups, foundations, and the like; tuition; and assistance from State governments—have not been enough to pay the bill.

For this reason the Federal Government in 1963 began to develop various health manpower programs. Under the Comprehensive Health Manpower Training Act of 1971 the assortment of programs aimed at increasing the supply of physicians and other health professionals now consists of:

- Grants to professional schools on a capitation (per-student) basis, with bonuses for increases in enrollment.
- Construction grants to schools of medicine and other health professions and loan guarantees and interest subsidies for school construction.
- Grants to assist new medical schools in opening.
- Grants for special projects to expand or improve training in the health professions.
- Grants to hospitals to provide training programs in family medicine.
- Health Manpower Initiative Awards to finance health education for areas where health services are in short supply.
- Training for health professions teachers.

Medical and dental students are assisted by a program of loans and scholarships of up to $3,500 a year, and loan forgiveness provisions for students who agree to practice in areas which have health manpower shortages.

Black Enrollment Climbs to 7 Percent

The Federal programs are designed to encourage an expansion in medical school enrollment, greater practice of family medicine, better geographic distribution of physicians, and expanded enrollment in medical schools of minority students and students from disadvantaged backgrounds.

The transfusion of more than $1.4 billion over the past 9 years into the schools of the health professions has helped spur the greatest growth, improvement, and innovation since the modern system of medical education was established some 60 years ago. Where our medical schools graduated 7,300 M.D.s in 1963, this fall they will graduate about 9,000. Since 1965, 20 new medical schools have been established, more than in the previous three decades combined.

First-year black enrollment in medical schools has risen from 3 percent (265 students) in 1963 to 7 percent (879 students) in 1971. The intent of the 1971 health manpower

by Harrison Allen

A student holds forth on a patient's records as Dr. Ronald Karpick (second from left) and two other students listen during medical rounds at George Washington University Hospital.

Working under the supervision of Dr. Jeff Crandall, student Allan Lewis examines a patient in the GWU Community Care Center.

With medical students observing and assisting, an orthopedic surgical team performs a knee replacement operation at GWU Hospital.

legislation is to eliminate the deficiencies in our health professions manpower pool by the end of the decade.

Within the schools the trend is toward shortened curricula, fewer required subjects, reemphasis of family medicine, integration of educational goals with the needs of the community, and development of auxiliary manpower.

Each of the Nation's 108 medical schools has introduced a new teaching program or is seriously considering such a step. At least 30 medical schools have shortened the traditional 4-year curriculum or plan to do so. Six of them offer

Senior medical student Brenda Kiessling checks kidney tissue for cross-matching in the GWU Hospital pathology laboratory.

Student Max Helfgott views X-rays during clinical clerkship in GWU Hospital emergency room.

an M.D. degree within 6 years after high school graduation. Johns Hopkins University has recently announced it will take students into its medical school as early as after the sophomore year of undergraduate school. Jefferson Medical College of Philadelphia and Pennsylvania State University have joined in offering an accelerated program granting students a B.S. and M.D. degree in 5 years after high school graduation.

Today's medical student also can better tailor his courses to his needs and aspirations than the student of decades ago. He can select electives and, at a few universities, students are even encouraged to take courses outside the medical school. Stanford University School of Medicine no longer has any required courses. All courses are elective although most of them must be within a broad approved framework.

The University of Miami School of Medicine is conducting an experimental program which both shrinks the curriculum and tailors it to the needs of students who already have doctoral degrees in the biological, physical, or engineering sciences (*see Making Doctors [M.D.'s] of Doctors [Ph.D.'s]*, MANPOWER, November 1971). Twenty students are en-

rolled in this program, which began last September and is designed to make them M.D.'s in 2 years. Such a program can retrain scientists who wish to change careers or to combine their previous backgrounds with medical training.

Generations of medical students have nodded under hours of formal lectures, particularly in the first few years of medical school. Today's students have the technology and freedom to advance at their own pace, through courses they choose, with a minimum of lectures. At Ohio State University Pilot Medical School, first and second year students are learning from computerized teaching machines and a variety of audio-visual devices. Lectures have been almost completely eliminated. Students still meet together, however, for occasional seminars, lab sessions, and anatomical prosections.

Two of the newest medical schools, Michigan State University's College of Human Medicine and the Pennsylvania State University College of Medicine at Hershey, are stressing the training of family physicians. Michigan State, which admitted its first class to its medical school in 1966, was founded with the idea that training in a university hospital was too specialized for the future general practitioner. Students there are receiving all their clinical training in community settings through a system of community-wide, non-profit health education corporations.

Specialists in Family Medicine Certified

These corporations, which are being formed in five cities and planned in others, include the health care facilities in which teaching will take place. The community furnishes the facilities and the physicians to staff them. The college supplies the students and the faculty supervisors. But control of these corporations is vested in the community. This approach combines the production of more physicians in a needed area of practice with the provision of needed community health services.

Another interesting indicator of renewed emphasis on general practice is the certification of more than 3,200 physicians, mostly former general practitioners, as specialists in family medicine by the new American Academy of Family Physicians. Hopefully, the recognition of this new specialty will encourage more students to enter this field.

A number of schools are demonstrating their recognition of the communities around them through new kinds of experiments. Johns Hopkins, for example, is developing comprehensive care plans for some residents of Baltimore's inner city and a suburban community. And the University of South Alabama Medical College is planning to set up a prepaid group practice offering comprehensive care to the universe community in Mobile and clinical training for medical students.

In still another direction, efforts to improve health service and increase physician productivity are being attempted through the use of new types of allied health workers, although progress has also brought problems of a special nature. About 3,250 formal programs now exist in colleges and junior colleges for training allied health manpower. Much publicity has gone recently to the 20-odd programs training a new type of worker called the physician's assistant.

Length of Training Bars Rapid Solution

The development of this new occupation can serve as an example for several problems in the allied health field. Programs to train physician assistants came about as a result of local needs. Since these needs vary, the training programs vary, and consequently there are different kinds of physicians' assistants. They are felt in some quarters to be encroaching on duties which might be performed by an existing specialty—a nurse, or technician, for example. Others are warning that the public will be unwilling to settle for the services of a physician's assistant, although he may be perfectly adequate in many cases. Finally, there are significant legal obstacles in some States which prevent effective use of the physician's assistant, prohibiting him from treating patients, fixing responsibilities for all his actions on the physician, and preventing both physician and assistant from obtaining insurance coverage.

The problems, however, are similar to those which have been encountered in the development of many of the new allied health occupations that have emerged over the past few decades. They can be overcome and the training of more physicians' assistants is being encouraged under the provisions of the Comprehensive Health Manpower Training Act of 1971.

The attack on the physician manpower problem, encompassing a variety of approaches, is thus making slow but significant progress. The vast numbers involved and the time required to train the physician prevent any really rapid solutions, but the impact of what is being done should soon be felt in those geographic and specialty areas where the need is greatest. In addition, when more physicians are coupled with new kinds of auxiliary medical personnel and new ways of using physician manpower, the result should be a more efficient health care system that can magnify the effects of increased numbers. □

GRAVE ILLNESS HITS MIDDLE INCOME HARDEST

Medical Bills: What's a Family to Do?

BY CHARLES SEABROOK

Two Atlanta parents, looked on helplessly for eight months as their 6-year-old daughter struggled against and finally lost her battle with leukemia.

But after they had wiped away their tears and had accepted the fact that they would never again see their daughter's sparkling blue eyes, they faced still another crisis in the form of a ruinous $16,000 medical bill.

More than two years ago in Fairfax, Va., Susan Shepherd was involved in the kind of auto accident that can happen to any teen-ager. Since then she has hovered on the brink of death, kept alive by intravenous feeding, circulatory machinery, special air mattresses and constant medical care.

The medical techniques that keep her alive are miraculous. They are also very expensive.

Susan's hospital bills have now exceeded $80,000. And Susan's father, a $118-a-week drycleaner, is one of an estimated 30 million Americans who has no medical insurance whatever.

Is there any financial salvation for such families? Not likely, say insurance and health officials.

"Medically indigent" is the term applied by the medical world to families whose financial resources are exhausted by medical bills brought on by catastrophic illnesses.

SOARING MEDICAL costs and inflation make sure that the already-long list of medically indigent families will continue to grow.

The American Hospital Association (AHA) predicts that by 1975 the national average cost of hospital care will exceed $150 per day. That means, says U.S. Sen. Edward Kennedy, that hardly any American is immune from going from riches to rags because of health care costs.

Kennedy claims, "There is not a family in the nation that does not live in fear of sickness and ill health, and the very real prospect of financial ruin and worse because of accident or serious illness."

Members of an Atlanta Methodist church recently attrophic medical bills," says an Aetna Insurance Co. representative.

"Usually the monthly premiums are $43 to $50 for most major medical insurance coverage," he said, "which is a financial impossibility for many American families."

THE FILES of the Visiting Nurses Association of Metro Atlanta and the Community Council of the Atlanta Area are jammed with requests for help from medically indigent families.

"We first see if the person is eligible for any government or private programs, and if he is not, we try to work with the hospitals to plan for some type of payment plan," says Mrs. Margaret York of the Community Council.

"But usually our help is just not enough," she adds.

The Christian Council of Metro Atlanta also attempts to help, but all the organization can afford to do is provide aid for immediate emergency costs faced by the medically indigent family. Such emergency costs include rent, food, and clothing bills.

"LET'S FACE it," Mrs. York recently told her staff, "there is just not any organization in Atlanta set up to assist the family who must pay medical bills."

And the bills which lead to medical indigency can be large or small. Even a relatively small medical bill can be devastating to families on marginal incomes.

One organization that does exist in Atlanta and which has been responsible for reducing the huge medical bills of cancer patients is Our Lady of Perpetual Help Free Cancer Home.

"In years past, we kept some patients for as long as two years before they died, and we were able to provide tremendous aid to the family of the victim in both financial matters and psychological matters," said Sister Marie Cordis of the cancer home.

"But now," she says, "with new developments in cancer treatment, families of cancer victims are trying all means of treatment, and we are not getting the patients until the

Fourteen heart clinics, supported in part by the Georgia Heart Association, are scattered throughout the state and provide care for medical indigents suffering from various heart diseases.

The clinics have been very successful in arranging free open heart surgery for indigents who are referred by physicians.

The clinics also will occasionally accept persons who must undergo expensive heart treatment and who can afford to pay some of the costs, either through insurance policies or personal financial resources.

BUT THERE is one major catch to persons in the latter category. A physician must first certify the person as capable of being employed after the treatment is performed.

Otherwise, if the patient's condition is incurable, he—or she—can forget it, because the clinics cannot help.

The same is partly true for several state-supported crippled children centers throughout the state. The clinics serve as treatment and referral centers for persons up to 21 years old who are faced with various catastrophic illnesses and who subsequently face huge medical costs as a result.

Again, the state clinics will not treat those who are suffering from incurable diseases.

Here in Atlanta, Grady Memorial Hospital and St. Jo- and national health authorities predict that some form of national health insurance will be passed within the next two years.

The bill proposed by Sen. Kennedy is perhaps the most liberal of these measures. His version would provide cradle-to-grave health care for Americans, including those faced with catastrophic illnesses.

But opponents of Kennedy's bill say the country would be "taxed to death" to support such a concept, probably as much as 50 per ecnt of an individual's income, as is the case in Denmark and other countries with socialized medical programs.

Other authorities say health maintenance organizations (HMO), or prepaid health-care plans, might provide some solution to the problem, but few persons would be able to take advantage of such programs because of the costs.

GEORGIA'S BOARD of Human Resources recently approved Medicaid coverage of persons who must undergo costly kidney dialysis or kidney transplants in order to stay alive.

Kidney disease victims also will be covered by Medicare coverage beginning July 1, 1973.

Critics point out that kidney disease is only one of many catastrophic illnesses. Maladies such as cancer and heart disease also should be covered.

Dr. David Osborne, director of the Physical Health Division of the Georgia Department of Human Resources, says the only solution to the health cost woes is to extend Medicaid coverage.

Several key Georgia legislators foresee some bill to extend Medicaid coverage in the state coming up in the next General Assembly, which convenes Jan. 8. But the cost of such a proposal may lead to its defeat.

Several other states, however, already have extended Medicaid coverage and appear to have met with relative success.

PRIVATE insurance companies have felt the pressure of public opinion, and, foreseeing some national health insurance plan being established, are experimenting with increasing major medical coverage limits from $15,000 to $250,000.

Again, the costs of such coverage would be beyond the means of most Americans.

As Loretta Roberts of the Visiting Nurses Association of Metro Atlanta puts it, "We've got to educate the public to plan for the probability of medical indigency, or else the problem will be with us forever."

Say "Always Yours" with Diamonds

A. Diamond w.g. bracelet $1695
B. Diamond Pear shape ring $3750
C. Diamond w.g. cluster $1750
D. Platinum sapphire, diamond, emerald ring $2950
I. 18 karat y.g. brooch $360
J. 18 k y.g. diamond bracelet $2717
K. Prong-set diamond ring $1000
L. Diamond platinum ring $6000

cost of hospital care will exceed $150 per day. That means, says U.S. Sen. Edward Kennedy, that hardly any American is immune from going from riches to rags because of health care costs.

Kennedy claims, "There is not a family in the nation that does not live in fear of sickness and ill health, and the very real prospect of financial ruin and worse because of accident or serious illness."

Members of an Atlanta Methodist church recently attempted to raise funds to help defray the medical bills of a severe-burn victim, who has been in an Atlanta hospital for more than four months.

The members raised almost $4,000 through various projects. That is a mere fraction of what the total medical bill will be.

IRONICALLY, a person on welfare is not faced with the possibility of paying huge medical bills. Georgia's welfare recipients are covered by Medicaid, a federal-state-sponsored program for medical care of the poor.

And disabled persons and persons older than 65 who are receiving Social Security benefits are eligible for Medicare.

"It's the middle man who is hit hardest with these medical bills," says Dean Grogan of Blue Cross and Blue Shield in Atlanta. "He's the man who's making a comfortable living, and possibly covered by some type of medical insurance.

"But when he or his family is hit with catastrophic illnesses or accidents, his financial resources can be easily reduced to zero, and he might be paying for the bills the rest of his life."

MORE THAN 30 million Americans are not covered by any medical insurance at all, says the Committee for National Health Insurance. At least 50 million more have insurance that adequately covers such woes as broken limbs and appendectomies, but pays little or nothing toward the costs of major, extended illnesses.

But only a few Americans are covered by "major medical" health insurance policies, and the average limit of such policies is $10,000 to $15,000.

"That would only be a fractio of the cost for many catas-

Home.

"In years past, we kept some patients for as long as two years before they died, and we were able to provide tremendous aid to the family of the victim in both financial matters and psychological matters," said Sister Marie Cordis of the cancer home.

"But now," she says, "with new developments in cancer treatment, families of cancer victims are trying all means of treatment, and we are not getting the patients until the last few days of life.

"And in those situations, we can provide very little help for the victims and their families."

GEORGIA ALSO has operated statewide cancer clinics, which now number 17, since 1937. The clinics provide some measure of relief for medical expenses of cancer victims by treating the patients and charging them on the basis of income.

Other clinics throughout the state exist which provide some degree of care for patients with other catastrophic illnesses.

The same is partly true for several state-supported crippled children centers throughout the state. The clinics serve as treatment and referral centers for persons up to 21 years old who are faced with various catastrophic illnesses and who subsequently face huge medical costs as a result.

Again, the state clinics will not treat those who are suffering from incurable diseases.

Here in Atlanta, Grady Memorial Hospital and St. Joseph's Infirmary attempt to work out an "easy payment plan" for families forced with crushing medical expenses. But such hospitals are few and far between, and several facilities will not accept patients who cannot guarantee payment.

"IT'S A SHAME most people don't know about Grady's plan, because they are mortgaging themselves to the devil to pay hospital bills," said an official in Grady's business office.

Several national health insurance bills already have been introduced in Congress,

Legislature Leaders Hit Federal No-Fault

MIAMI BEACH (UPI) — Leaders of the nation's state legislatures have taken a stand against federal no-fault insurance.

The National Conference of State Legislative Leaders opposed "federal legislation in any form regarding the auto reparation system because such legislation could preclude meaningful and wide-ranging experimentation at the state level destroying desirable flexibility, freezing mistakes and preventing self-determination."

END OF LIFE—New York—Bill Shogren, color director for Life magazine, takes a long look at past covers of the pioneering publication in Life's New York offices after learning it will fold. The first issue was published Nov. 23, 1936; the last will be dated Dec. 29.

Irate Businessman Foils Kidnaping of Wife

PACIFIC PALISADES, Calif. (UPI) — An irate businessman, roused from his sleep by a gunman attempting to kidnap his wife, attacked the gunman, wrestled his pistol away from him, and sent the suspect fleeing with two shots.

Police said the incident occured Friday when the gunman knocked at the front door of Tony Assinesi's home. Assinesi's wife Roxie answered the door and was threatened with a .38 caliber revolver.

She said the gunman put the pistol to her head and demanded that she bring her son to the door.

Lying, she told the man the boy had left for school and the gunman barged into the home. Meanwhile, the boy, alerted by the ruckus, slipped out of the house.

The gunman roused Assinesi and forced the couple outside where he ordered Mrs. Assinesi to accompany him.

"No way are you going to take her," Assinesi shouted and leaped at the intruder.

Grappling on the driveway, Assinesi managed to wrest the pistol from the gunman and fired two shots as the suspect fled the hilltop home in a red coupe.

Police helicopters and squad cars scoured the fashionable residential neighborhood but found no trace of the gunman's car.

Ex-Legislator Dies

HAMPTON, N.H. (AP)—Ernest Underwood, 59, a former staff member of the U.S. Senate Appropriations Committee and a state legislator, has died. Recently he was an industrial analyst for the Federal Aviation Association in Washington.

Story Contradicted On Professor-Hero

PARIS (AP) — A French passenger aboard an Ethiopian jet airliner on which seven hijackers were killed said Saturday it was a female hijacker and not an American professor who tossed a dropped grenade into a section of unoccupied seats

The report by the Frenchman, Bruno Rouvillois, contradicted a version of an American passenger, Richard Wylie, about Friday's attempted hijack.

Wylie said one of the hijackers dropped the grenade and that Roderick Hilsinger, a professor at Temple University in Philadelphia, picked it up and threw it into an empty seat.

The blast blew a hole in the side of the jet and knocked out one engine and the rudder

★ ★ ★ ★ ★

BURGLARS BREAK INTO WRONG HOME

man, Bruno Rouvinois, contradicted a version of an American passenger, Richard Wylie, about Friday's attempted hijack.

Wylie said one of the hijackers dropped the grenade and that Roderick Hilsinger, a professor at Temple University in Philadelphia, picked it up and threw it into an empty seat.

The blast blew a hole in the side of the jet and knocked out one engine and the rudder control. The four-engine Boeing 720B returned safely to Addis Ababa in Ethiopia from where it had taken off half an hour before the hijack attempt began.

A security squad aboard the plane killed the seven hijackers.

In Addis Ababa Emperor Haile Selassie conferred decorations Saturday on the nine-member airliner crew and four security guards. For Capt. Ketsela Hailu, 38, of Addis Ababa, it was the second time in three years he commanded an aircraft involved with hijackers.

On Sept. 13, 1969, his Ethiopian Airlines DC6B with 39 passengers aboard was hijacked to Aden on a flight from Addis Ababa to Djibouti. Ketsela had to fly the plane with a gun at his head. In Friday's drama, his cockpit door was locked.

The jet hijacked Friday carried 94 persons. Seven passengers and two stewardesses were wounded, some by shrapnel from the grenade. One of the two women hijackers was mortally wounded and died after the airliner returned.

One of the wounded passengers, S.V. McCollum of Houston, Tex., was hit in the abdomen by shrapnel. The hospital would give no information Saturday on the injured passengers' names, nationalities or condition. McCollum's condition was said Friday to be "semi-serious."

The airline said it was withholding all information until relatives had been informed.

The identities of the hijackers were not disclosed, but it was thought they might have been members of a separatist guerrilla movement in the northern Ethiopian province of Eritrea.

The Eritrean Liberation Front has claimed responsibility for other hijackings and attempted hijackings of Ethiopian airliners.

Dental Society Honors Malone

Dr. Lee B. Malone, an Atlanta dentist for the past 26 years, Saturday night was named 1972 "Man in Dentistry" by the Northern District Dental Society during the group's annual awards dinner.

Dr. James O Dickinson Jr. was installed as the society's new president, while Dr. Theodore C. Levitas became president elect.

Texas Rules Marriage of Men Illegal

AUSTIN, Tex. (UPI) — The marriage of two men, one of whom dressed up like a woman, is null and void and the man who posed as a woman could be jailed for false swearing, Texas Atty. Gen. Crawford Martin ruled. Friday.

Martin said William "Billie" Ert swore falsely when he wrote his name in the space on a marriage license application for a female.

"Billie Ert is not a woman as called for by the statute," Martin said. "Therefore, the information given as to the woman's maiden name on the application is false."

Ert and Antonio Molina, a former high school football star from Brownsville, were united in a double ring wedding Oct. 5 in Houston, but when they tried to file their marriage license, authorities said it was not legal.

Their attorney, Richard Cross, has taken the matter to court.

"I can find nowhere in the statute that one has to be a woman," Cross said. "If the attorney general would read his own opinion, he would find that it didn't require one of the applicants to be a woman."

"It's a shame that two people can't get married when they want to live together in a legal sense," Ert said.

But Martin said the legislature indicated it intended for marriages to be only between two persons of opposite sexes when it specified that "a woman's maiden name" be included on marriage license applications.

Charges have not been filed against Ert, but Martin said if he is charged and convicted of false swearing, he could be sentenced to two to five years in prison.

Ert is a female impersonator who has a night club act and Molina has worked as a shipping clerk.

Little Girls' Sizes 5.97

Bigger Girls' Sizes 6.97

Pretty-Plus Sizes 8½-16½ 7.97

Come see our colorful collection of festive holiday dresses! Some are styled with crisp simplicity, others are softly frilled with lots of trims. All are made of PERMA-PREST fabrics for easy care that belies their dainty looks. Sizes 3-6X, 7-14 and 8½-16½. Hurry!

SEARCH A Report From The Urban Institute
Volume 2, Numbers 3 and 4
Summer Issue, 1972

Nursing Manpower Estimated

The supply of professional nurses in the United States will increase substantially during the 1970s, according to Stuart H. Altman, Deputy Assistant Secretary for Health Planning and Evaluation in HEW.

Altman, who undertook much of his research on nursing manpower projections while serving as director of health studies at The Urban Institute, reaches findings that seem surprisingly optimistic in light of several recent factors:

—A severe shortage of nurses occurred during the early 1960s. Over 20 percent of hospital nursing positions were reported vacant.

—Hospital-operated schools, the traditional primary source of new nurses which accounted for 78 percent of the nation's graduating nurses in 1960, are sharply declining in number. Two hundred of these hospital-operated diploma schools ceased business altogether in the 1960s.

—The percentage of female high school graduates who are entering nursing training has declined. Those choosing nursing dropped from 7 percent of their class in 1956 to 4.8 percent in 1969.

The prospects for future nursing supply appeared quite grim, therefore, to many observers. Altman points, however, to other important changes in the nursing field that lead him to a contrary view:

—More foreign trained nurses are entering the U.S. labor market each year. In 1950 they accounted for only 1.7 of the new supply, but their numbers and proportion grew to 6.1 percent in 1960 and 10 percent in 1967. Altman anticipates they will comprise 16.4 percent of the new annual supply by 1980.

—The decline of hospital-operated diploma schools has been more than offset (and to a degree caused by) the rapid growth of 2-year associate degree schools and 4-year baccalaureate degree schools catering to nursing professionals.

—Nursing salaries have risen substantially from previously low levels.

—New admissions to nurse training programs will grow from 69,000 in 1969 to between 85,000 and 92,000 by 1980.

Also taking into consideration such other complex features as regional mobility, labor force participation rates, part-time work, and nursing school drop-outs, Altman projects that the 1970 level of 700,000 practicing registered nurses will have grown by 1975 to between 785,000 and 809,000 nurses, and by 1980 to between 864,000 and 924,000. Compared with the 1960s, the annual growth rate of professional nurses will decline from six nurses per 100,000 population to about five per 100,000 in this decade. The supply of professional nurses measured 341 per 100,000 residents in 1970; the supply will increase to between 379 and 406 per 100,000 residents by 1980, Altman concludes.

Details of the findings and methodology are included in *Present and Future Supply of Registered Nurses*, published by the Department of Health, Education and Welfare, and available also from the Institute.

Altman emphasizes that his projections do not address the question of whether the future supply will be adequate. Changes which defy accurate prediction are occuring in demands for medical care, medical technology, and the reliance on substitute personnel such as assistant physicians, nursing aides, and practical nurses. He cites Public Health Service estimates of nursing needs that would result in serious shortages by 1980 even if the calculations of a much improved supply prove reliable. □

or to particular government programs that are not succeeding. Officials on the spot, who must respond to such news, then, are likely to tune their antennas toward those who offer answers. It is said of a key cabinet official that he takes nothing seriously until it appears in the newspaper.

Second, special bodies in and out of government take it on themselves to lay out serious problems, map out solutions, and get the information privately or through public hearings to the right people. The Joint Economic Committee, the Committee for Economic Development, and the Advisory Commission on Intergovernmental Relations are examples.

Third, a select number of individuals are one-man bridges. Their stature as recognized experts in special fields gives them access and acceptibility to decision makers. One finds them in government agencies, on Congressional staffs, and in universities or other institutions. Examples include Wilbur Cohen on social security, Jerome Brunner on the learning of the young, Phileo Nash on Indian culture, and many economists on fiscal and monetary policy. Such persons may be controversial and are not followed slavishly, but when they speak, policy makers usually listen. One trouble with the stars is that they frequently have it all figured out already and they are not effective bridges to new insights by lesser lights.

Fourth, policy or research offices are built into various government agencies to serve their own departments and the larger federal network through participation in budget and program reviews. Planning-programming-budgeting systems, and the predecessors and successors of PPBS, have been attempts to bolster this capacity. These generally are still fragile links. They frequently suffer from weakness of staff and bureaucratic isolation. However, they remain perhaps the most promising mechanism for the future.

In my judgment, the greatest hope for good policy research—and *its use* to improve government—lies in the understanding and development of these bridging mechanisms. In future columns, I plan to devote further attention to these matters. □

SUBJECT: Proposed Research on Rural Poverty in the South

OVERALL AIM:

The overall aim of this research is to evaluate the living standard of rural households with an eye toward proposing a set of policies to aid the unaided poor. We have chosen to study rural families for several reasons: (1) The large scale migration from rural to urban areas places a massive burden on the nation's large cities. It is our belief that as urban problems continue to multiply, it will become increasingly important to keep rural households from migrating to urban areas. In order to do so, improvements in the standard of living of rural families will be required. Yet little information is available on what this standard of living currently is or where it is deficient. (2) This nation has committed itself to improving the lot of all its citizens. But the needs of urban and rural families differ. In recent years, the plight of the urban poor has been studied extensively and new programs created to deal with their needs. Surprisingly little is known about the character of rural poverty or the type of programs which might serve those

in rural areas. (3) The number of programs serving the poor has increased substantially. Nonetheless, some poor families receive little or no aid because of the quilt-work character of the laws, deficiences in the administration of the aid programs, and lack of knowledge of alternatives. A need exists for a careful enumeration of the sources of income of the poor and for a comparison of income and needs. This information will be useful to these administering various aid programs by enabling them to determine where, despite the existence of several aid programs, needs are going unmet. (4) Finally, the problems of providing services to those in rural areas are serious ones. Rural households are usually spread out, sometimes in areas far removed from highways and streets. Finding them and providing aid can be expensive and time consuming. Transportation of goods and services from the origin point to program recipients poses serious problems for policy-makers and raises anew the question of whether a cash or a service program is superior. Yet, despite evidence that an innovative approach is necessary to cope with the problem of delivering aid to the poor, gaps exist in our knowledge of which programs would best serve the needs of those in rural areas.

Thus our program is designed both to fill existing gaps in our understanding of rural conditions and to provide a basis for improving existing aid programs to rural areas. In order to fulfill these dual objectives we propose to answer the policy questions suggested in the next section.

THE MAJOR POLICY QUESTIONS:

What is the standard of living of rural Southern households and does it meet the standards suggested by the Bureau of Labor Statistics?

In this phase of the study we will use a survey research technique to acquire information both on the income and expenditures of households. By comparing the

amount spent on various categories (viz., food, housing, taxes, etc.) with the amounts suggested by the Bureau of Labor Statistics we can make a judgment as to whether basic needs are being met. Households would be broken down by demographic groups and comparisons made both between groups and between states. The purpose of this phase of the study would be to determine how many families are meeting basic standards of need. Hopefully, we would also consider the adequacy of the BLS standard and make some modifications of it based on our data.

How effective are federal and state aid programs in meeting the needs of the rural poor?

For this phase we would define effectiveness in terms of the need standards proposed above. Questions would be raised in terms of the percentage of need met both with and without the various aid programs. Where services are provided it would be possible to determine whether the existence of these services helps a household to fulfill BLS standards. Moreover, comparisons would be made both between counties within a state and between states to determine the degree of variation attributable to administrative causes. As a separate phase of the study we would attempt to explain this variation either using factor analysis or regression techniques. We would also try to determine which programs are best suited to the needs of the young, the old, the disabled, the uneducated, minority groups, etc. Our goal would be to evaluate the overall performance of aid programs.

What accounts for the failure of some poor families to take advantage of existing aid programs?

To answer this question we would include questions on our questionnaire as to knowledge about existing programs, access to transportation, attitudes toward public programs and public officials, and past experience with public programs. It

might also be necessary to examine self-concept, educational levels (viz, reading skills?), contact with others receiving aid, etc. This aspect of the study would be sociological and social psychological but it would have a strong inter-relationship to the last question and the one following. The aim would be to help policy-makers identify the causes of failure in existing programs and thus to formulate programs designed to overcome these.

What would be the impact on unmet needs if alternative programs are provided?

Several different research phases are required to answer this question. First, it is necessary to examine where households fall short of need standards. Is it in housing or food expenditures or neither? And are they falling short in one area but exceeding standards in another? If so would a services strategy be superior to an income strategy? Second, it will be necessary to identify the conditions unique to rural areas. One of these involves the question of transportation and a set of questions will be posed to survey respondents regarding the distances they travel to receive aid and their means of travel. Another involves the availability of goods and services at reasonable prices at local food stores. To determine this, we shall have to select a sub-sample of counties and send interviewers out to identify both the prices and availabilities of various goods. The technique used here will probably be analysis of variance. A related problem involves the delivery systems in rural areas. What problems are posed to the aid-dispensing areas, how are they met, and what alternatives are available?

Related to these issues would be the key question of what it would cost to provide for the unmet meeds of the poor.

The aim of this phase is to provide a series of policy alternatives to existing programs, formulated in a manner which will make them useful to those inside and outside government.

A RATIONALE

The present re-organization of the Southern Regional Council and the development of special task force committees does not represent a significant departure from previous Council actions or motives, but follows from a desire to improve the Council's handling of its business. The target groups remain the Southern Black and Poor, the disinherited and powerless of the region. It is anticipated that an easier identification of the specifics of problem situations and program approaches for their amelioration will result from the new internal structure of the SRC.

The ultimate goal of our efforts is the establishment of a social order which is truly reflective of the term, "A Republic of Equals," a society characterized by high promises kept, by hopes fulfilled, and by justice and liberty known and treasured by all. It is the hope of the Council that its new structure of involvement will serve the development of a systematic approach to social re-organization, away from a society of oppressed and oppressor and to a society of free and equal men. And it is hoped that the new structure of SRC will prove itself a vehicle for sensitizing and meshing together the resources men of good will might apply to the problems that affect us all.

MISSISSIPPI HEALTH CENTER ENDANGERED

by
Vernon E. Jordan, Jr.

One of the most successful health experiments in the country is in danger because of a struggle for control by political leaders. The Delta Community Hospital and Health Center, located in the all-black town of Mound Bayou, Miss., may lose its federal funding because of a veto by the state's governor. And even if the funds eventually come through, the Center will remain in danger of a takeover by forces outside the community and a cutback in services.

The dispute is important not only because it could cripple the town's economy and retard health services in the area, but also because it illustrates the continuing difficulty federally-funded local groups often run into with the state and local political powers.

The Delta Center was established five years ago with funds from the Office of Economic Opportunity. It consists of a 51-bed hospital and an outpatient clinic that treat hundreds of poor people each week. Federal authorities view the Center as a great success and authorized $5.5 million to keep it in operation for another year.

But in June, Mississippi Governor William Waller vetoed the grant, placing the Center in jeopardy. It's hard to understand the reasons for the veto. The state claims the hospital doesn't meet certain regulatory requirements, but neither do over half the hospitals in Mississippi.

The real issue seems to be who will control the federal money coming into the state -- the community-controlled health center or state political authorities. Time and time again, in communities all over the country, this has been the basic source of dispute over federal grants. OEO projects bring money and jobs to a community and it is a rare political leader who can stand to see all that power and potential patronage slip from his hands.

As of this writing, the dispute is unresolved. OEO wants to continue the project, and it is still possible that the governor will relent and allow a temporary grant. But that won't end it. If the grant is allowed to flow through the state capital,

...more.

the Center will still be endangered because control may pass from the community.

There is no question about the importance of this health center. It serves some of the poorest counties in the whole country, counties that never had decent health services before. Its survival is literally a life-and-death issue for many people whose illnesses might otherwise go untreated.

There seems little question that the Center ought to be continued and that control over its operation should remain where it has been for the past five years -- in the genuine community-controlled board that has run it so well for so long. If anything, the state of Mississippi should replace its present efforts to sabotage the Center with matching grants to really make an effort to provide health care for poor people in that area.

And it is increasingly clear the crucial services delivered by federally-funded groups must be insulated against local political storms. There is no reason why a governor or a mayor should have veto-power over federal monies for federal programs run by local citizens.

So long as the professional administrators of OEO are satisfied that a program is doing what it was funded to do, it should be immune from local political pressures. Poverty programs and especially important health programs like the Delta Center aren't just another political pork barrel; they are too important for that. In fact, they exist because local political authorities never cared about the poor and never fulfilled their responsibilities to all the people of their state or city.

THE WHITE HOUSE

WASHINGTON

March 19, 1968

Dear Edgar:

I was impressed by your excellent interim report on housing needs and programs for Urban America.

It is bright testimony to the hopeful future that calls our growing country forward. In that, it is also a reflection of the success that leadership like yours can always create for all Americans to enjoy. I am most grateful to you and the distinguished members of your Committee for the devotion and effectiveness of your efforts.

My own Message on the Crisis of the Cities owes much to your incisive analysis. The ten-year goal to build six million new low and moderate-income housing units was guided by your findings. I also welcome your organizational and program recommendations, including the proposal for a National Housing Partnership.

We have already achieved much together. I rely on the Committee to move on now, recommending newer and larger roles for private enterprise in housing our needy people. Your final report, I know, will increase the admiration and confidence I offer you.

Sincerely,

Mr. Edgar F. Kaiser
Chairman
President's Committee on
Urban Housing
1016 16th Street, N. W.
Washington, D. C. 20036

It's time we stopped wishful thinking

Our programs to house the poor do not cut the mustard and it's time we all face up to a few hard facts.

by Richard W. O'Neill

Many years ago, when I was in college, I automatically assumed that all my professors really knew what they were talking about. After leaving the quiet halls of Academe for the rude streets of the marketplace, I found that many of their views had to be tempered somewhat. Now I don't include Walt Lewis in that group, which when I am peeved I call frivolous academicians. Walt is not frivolous, I'm not even sure he's an academician. At any rate he does know what he's talking about, and he's a good guy, even if he is so old. So I'm sure that what you have learned here is good stuff, because your faculty was selected by Walt and all of them have good practical experience in their fields.

But I'm fairly serious in my thoughts about a good many deep thinkers—I've often been told that I'm not a deep thinker: anyone who shoots his face off as often as I do can't be a deep thinker. In the past year as a member of the National Commission on Urban Problems, the Douglas Commission, I've heard and read a lot of good stuff, and heard and read a lot of stuff that is pure horsefeathers.

So I'd like to give you a few of my views on horsefeathers. Let's start with new towns. In Washington they're all the rage among the eggheads who didn't notice when Reston—the darling of Interior Secretary Udall—went down the tube to become just another big subdivision. And they probably won't be able to draw any lessons from the demise of Jim Rouse's great plans for Columbia.

Continued on next page

Richard W. O'Neill is the editor of House and Home, and a member of the National Commission on Urban Problems. From a talk delivered at the Building Officials Institute, University of Illinois, February 1, 1968.

Wishful thinking . . . *from page 7*

The fact is that the new town concept, as envisioned by today's city planners, is meaningless and bankrupt, because in popular parlance a new town is a self-contained city offering employment to a majority of its citizens. But experience to date has shown us that new towns with any viability are simply bedroom communities feeding off our major metropolitan areas. No one is going to be able to go out into the boondocks and create a new town, self-sustaining and a whole unto itself, without the expenditure of billions of dollars—and with no initial return on that investment. Private enterprise can't afford to do that and, in the view of most Americans, neither can the federal government. That kind of money would much better be spent in improving our cities and our community facilities, because everyone wants to come to existing major metropolitan areas.

Another hang-up that many people have today is the belief that just around the corner there is some sort of technological breakthrough which will produce low cost housing. It makes little difference whether you build that house out of mud block, precast concrete, wood, straw or cornflakes—it all costs the same if you include the amenities the larger society deems adequate. If the housing industry could get the exterior walls of single family homes installed free, at absolutely no cost to them, it would lower the price of the house only about 5 percent. The fact is that the house structure is probably the cheapest part of a dwelling unit. Most of the cost lies in land, financing, mechanical equipment, interior finishes and other amenities not included in those items.

Another hang-up people have is the belief that there is some magic way to get money into housing easily. But there is no magic way. Housing has to draw on the same capital pool that the consumer, big corporations and the federal government draw on. And capital in that pool must earn the accepted market yield. To draw money at low interest rates and long terms takes big subsidies.

All too often we hear about a shortage of land. And it so happens that our urban plant now only covers something over one and one-half percent of our land mass in the US. If we could improve our mass transit systems—and our very loose body of zoning laws—there would be plenty of room for all of us and all of our activities for generations to come.

Here is one of my favorite horsefeathers subjects. Our programs to house the poor do not cut the mustard and it's time we all face up to a few hard facts.

Fact No. 1: There are today in the US almost ten million families who anyone in this room would describe as poor.

Fact No. 2: About half of these families are virtually trapped in cramped and often stinking quarters in our urban cores, where they erode the tax base and hasten the flight of businesses and the affluent to the suburbs.

Fact No. 3: FHA's 221d3 program and rent supplements are workable, but they are a drop in the bucket and will remain so. Why? Because it is bad politics to give some borrowers a subsidized interest rate while everyone else pays up to 7 percent and to pay part of someone's rent because he doesn't earn enough to pay it himself.

Fact No. 4: Public housing can't do the job either—partly because it, too, is bad politics and partly because of its unusually high cost. Over the past decade, public housing construction has averaged 20,000 new units a year, even though the average authorized has been 30,000. And if Congress authorized 30 times that amount for the next ten years, the total would still not be enough to house all the families who live in one kind of slum or another.

Fact No. 5: Urban renewal programs have not involved much low-income housing because local agencies have not designed them for that purpose.

Fact No. 6: Rehabilitation of old and dilapidated housing is workable only on a block-by-block basis, and it's too risky to tempt private enterprise on big jobs. Rehab costs cannot be estimated with anything like the accuracy of new construction so they can range from 50 percent less than new building costs to 50 percent more.

Fact No. 7: There's a steady increase in substandard housing. In New York City, for example, the number of substandard units has risen from 420,000 to 540,000 since 1960. Replacing these slum dwellings with state-subsidized public housing would now cost roughly $14 billion. And New York City is not about to get more than a tiny fraction of that amount for existing programs.

Another hang-up that many people have today is the belief that just around the corner there is some sort of technological breakthrough which will produce low cost housing.

Everytime the administration says we are going to do more about low-income housing, they fail to tell us how. And the reason they fail is because solving the problem will take a political commitment, purely and simply from the American people to spend that much money on poor folks.

In this area of housing the low-income families, FHA is often held up as a whipping boy who should have housed low-income people but failed to do so. But FHA was not created to house poor folks. It was created to get money moving again in the 1930's and it did just that. FHA regulations until last fall stipulated that any project on which it insured the mortgage must be economically sound; FHA could not insure mortgages which could only be backed by social benefit.

Next let's talk about urban sprawl. Urban sprawl offends what I call the sweet people, the deep thinkers and do-gooders. But it is pretty clear that urban sprawl does not offend the vast body of the American public because they purchased it by the square mile without so much as a murmur ever since World War II. Every other week it seems some pundit writing in one of those thoughtful journals that clutter the hall table in the University Club, says, "My God, if our cities go on like

this, getting uglier and uglier, and sprawlier and sprawlier, we will have to flee the country and go and live suitably structured in a tree-house on the upper Zambesi." Well I hope he has a lot of fun up there because I am going to stay right here and I believe all of you are to. Yes, we do have sprawl and we do have ugliness but we know in this country that we can rebuild anything that we want to rebuild. If the people of Illinois wanted to make downtown Champaign into a botanical garden, they could do just that by voting for it in a referendum. The expense spent out over the economic base of this state would not be that great. In the progress of a city's evolution, areas always do get built and rebuilt and we continue to pass the necessary legislation so that we can do that. One example is the Urban Renewal Act of 1949 which has rejuvinated downtown Pittsburgh, downtown Boston, downtown Baltimore, downtown New Haven and scores of other cities. If we want to turn junk yards in outlying areas into beautiful park lands, all we have to do is want it bad enough and we can have it.

In fact, because the US is not a needy nation we can have damn near anything the people want.

To continue just a bit more in the area of horsefeathers, let me cite four things that the National Commission on Urban Problems was charged with looking into in section 301 of the Housing Act of 1965—zoning, property taxes, building codes and development standards.

The problem in zoning lies in local parochialism (keep out poor people, low-income people, colored people; let in the well-to-do, clean industry, high-type offices and universities) and a body of law which is not really law.

The problem in property taxation lies in the inequitable way in which it is levied and in the reliance that municipalities must place on it to do a job it clearly cannot do.

The problem in codes lies in the constitutional right of any municipality to do whatever it chooses. We have four national codes right now which hardly any community in the US adopts without changing something to please local interests.

The problem in development standards lies first in the ability of zoning ordinances to ignore them, second, in the ability of the municipality to tax them right out of existence, and third in the fact that no one can agree on any.

All of this, of course, leads us right back to topic "A" these days. We hear about the urban crisis almost daily and it is a crisis that might have a fairly marked effect on our industry and your activities in the next decade. Simply stated the urban crisis is a slum problem, and the slum problem is the gulf between the frustrations of the poor and the consumer appetites of the larger society.

The history of such frustrations shows that riots and civil disorders come about when conditions are improving, but not improving as fast as rioters (or revolutionaries) expect them to improve. When the poor expect more, they feel their deprivations most deeply. Detroit is testimony to that.

In the five years from July, 1962 until August, 1967, Detroit received over $230 million in federal funds to combat poverty, to create employment and training centers, for pollution control and health programs, for recreation, housing and urban renewal programs, plus a good many other millions generated by local programs with no federal funds. Like New Haven, Detroit was a model federally-aided city and in July, 1967 Detroit had one of the worst riots in the nation's history.

Every society has needed a spark, or an explosion, to create change and to come to grips with entirely new problems. Those sparks for the US have not always been civil disorders: the military had Pearl Harbor to create an entirely new and responsive defense system within two years; our space industry had Sputnik in 1957 which gave us horizons most of us had never thought about. Now we as a society have a sputnik for the cities: riots—which need not intensify before we come to grips with urban problems.

In fact, because the U.S. is not a needy nation we can have damn near anything the people want.

New York City is cited so often in urban crisis discussions that a great many people tend to discount its value as an example of what can happen. But New York does give a good reading of what a good many cities may face in even less than a decade.

Federal and state funds provide $1 billion per year for New York City's welfare program. In addition, the city gets up another $500 million, but that's only part of the story. The city's slums exact a subsidy in the taxes they don't pay, in the extra police and fire protection they call for, and in all the social and health problems they create. That all adds up to another $1.7 billion, says mayor John Lindsay. So New York City's slums call for, directly and indirectly, an annual levy on business, industry and the general public of $3.2 billion.

Furthermore, New York's regional planning association says that New York City right now needs an estimated $300 million more per year for educating poor children and $800 million more per year for other poverty services—principally increased health and welfare payments. This would bring New York City's annual grand total levy to $4.3 billion for slums.

But the story doesn't end there. It gets worse. The cheapest and oldest housing is located in central cities, so lowest income groups settle there because it is the only thing they can afford. This hastens the departure of middle- and upper-income families and some industries to the suburbs. This reduces the tax base, cuts retail business and leaves major business firms the burden of paying a greater portion of city taxes than others who share community facilities at the same rate.

So central cities face a bigger need for revenues at the very same time that their capacity to produce revenues is reduced. And business faces a shortage of clerical help and skilled labor: these people have moved out of the central city—one good reason why business continues to move to suburban areas.

Continued on next page

Wishful thinking . . . *from page 9*

Now, six roadblocks lock the poor in ghettos.

1. No freedom of choice. Our economic system rests on freedom of choice; the market and competition are designed to assure the buyer of everything from tooth paste to locomotives that he has available alternatives. Yet this is precisely what is lacking in the lives of those who live in the ghetto. They are denied the full range of opportunity in training, employment and residence that their more fortunate countrymen take for granted. Business leadership, above all, should strive to expand freedom of choice as far as possible—which, translated into economic terms, means bigger markets.

2. Discriminatory zoning. A major element in denying choice to the slum dweller is the body of zoning law in most of the suburban ring around major metropolitan areas. Zoning, which is barely a body of law (the US Supreme Court won't touch a zoning case), very effectively keeps the poor and those with low incomes out of suburban areas by stipulating lot sizes way beyond their economic reach. Zoning is also used by most suburban areas to keep out blue-collar industry which could go a long way in providing the type of jobs low-income people could take if they could afford to live in the suburbs. The combination of fiscal zoning and zoning restricting industry effectively locks the poor into most center cities.

3. Income disparity. The slum negro may be better off today than his counterpart of 50 years ago, or huge segments of the population during the depths of the great depression. But poverty then was a tragedy because the nation did not have the resources to deal with it. Today, however, over 30 million Americans are living in poverty (family incomes under $3,130) and almost another 30 million are living in deprivation (family incomes under $5,000 and over $3,130). Roughly half of each group lives in center city slums.

It is true that real incomes per household in most central cities are steadily increasing, but this is not true of the worst slum areas. And the rate of real income increases for most central city residents is slower than that for suburban residents. So the gap is increasing. Family income in New York's central Harlem in 1966, estimated by the Department of Labor, was estimated at $3,907 as compared with $3,997 reported in 1960 by the US Census. At the same time recent studies by the Bureau of Labor Statistics showed that the cost of a moderate living for a city family of four in New York City was $10,195 a year. That gap as seen from the person in poverty is clearly astronomical.

4. A bad welfare system. Currently more than 8 million poor partake of a $7 billion annual welfare program in the US. In spite of that tax, there is good reason to believe that existing programs aggravate the condition of poverty. In the first place the burden of welfare falls heavily on northern cities and lightly on those areas where a good part of the poor came from. In the second place even states with liberal benefits do not meet federally defined minimum income levels. In the third place welfare practices kill the incentives of the poor to find jobs and to hold families together. If an able-bodied father of a family on welfare gets a job, he is taken off welfare, even if he only earns $50 a week. His only alternative to quitting his job is to abandon his family. Incidentally, less than 2 percent of welfare recipients are employable in the conventional sense of the word.

5. No political voice. People with a suburban orientation vastly outnumber those in slums. Some 70 percent of all urban growth in the US during the decade of the '50s took place in the suburbs and more than 16 million of the 17 million suburban population increase consisted of white persons most of whom were leaving central cities. In the decade of the '60s our suburbs embraced almost 80 percent of all urban growth.

In state legislatures and in congress, it is now fairly apparent that the old rural-city rivalry has been replaced by a rural/suburban-city rivalry. This new suburban and rural coalition until now has effectively limited the ability of urban legislators to change the nature of statutes and programs which effect the central city, and it also reinforces suburban zoning, and the power blocs behind it. This reinforcement, in effect, exacts a subsidy from the central city by imprisoning low-income families in the central city and permits no dispersion of low-income families to the suburbs.

It is worthwhile to note in the federal budget for fiscal '67-'68 that the Department of Agriculture has a net federal expenditure of $6.6 billion, while the Department of Housing and Urban Development has a net credit of $100 million.

6. A wrong-way governmental structure. Ideally, programs to handle slums should be co-ordinated with local and/or state governments, where the ability to react to a situation could be easier and faster than in the federal government. The problem is that the basic powers of tax collection are vested in the federal level, and local governments do not have the financial base to undertake programs of any appreciable scale.

(The basic problem in property taxation by municipalities lies in the inequitable way in which the tax is levied, and in the reliance that municipalities must place on the tax to do a job it clearly cannot do.)

This year activities of business and industry will generate, ultimately, over $150 billion of internal revenue. That figure far over-shadows the resources that our cities will get. So the federal government alone possesses the necessary resources to fund slum programs, if one assumes that private enterprise can do nothing without those funds to provide a public market. Yet, the commitments of the federal government indicate quite clearly that congress is in no mood to raise its ante in the slums in any appreciable way at the present moment.

The barriers around the slum dweller have created a potentially but not necessarily dangerous population trend. White population in central cities, which increased by 5 million in the decade of the 1950s, declined slightly in the 1960s. All growth of central cities now consists of non-white population increases, and nearly all non-white population increases, anyplace in the US, occur in our

Continued on page 14

Wishful thinking . . . *from page 10*

central cities or metropolitan areas. According to the most conservative estimates of present trends by the Bureau of the Census, by 1983, the total population in Chicago, Philadelphia, St. Louis, Detroit, Cleveland, Baltimore, Manhattan, Newark, Gary, Washington, Berkeley, Oakland and Trenton, will be over 50 percent non-white.

The tide of migration from the rural south is big: between 1950 and 1960 alone 10 million people came from the south to cities like New York, Detroit, Philadelphia and Chicago. This means that there must be an exodus of some size of the rural poor from big cities like New York before another decade goes by, or big cities which are now in the midst of social decay may well become social and economic disaster areas. A continuation of non-white population increases in the central city over the next three or four decades will produce a society more racially segregated than any in our history.

Aside from those thoughts, we must consider that any solutions to the problem of providing adequate housing for the poor will have to face the fact that today there is no such thing as new low-cost housing, if it is adequate. Furthermore, all evidence to date points to the fact that adequate rehabilitated dwellings cost as much as new ones without increasing densities or changing land use patterns.

The experience of the building industry indicates that if it could build without a code at all, it could not build any more cheaply and still have a structure that any financial institution would put its money on for 30 years.

For at least two generations one entrepreneur or another, often aided and abetted by the federal government, has tried to put housing technology on the assembly line. What has blinded most of these people is that building is essentially a materials handling technique, not a manufacturing technique. Assembly line practice in other industries are based on movable products, not products like houses.

Mind you I am not talking about the assembled components, like the window and door units, that go into houses. No one questions the good sense of assembling a refrigerator completely in one piece at the factory, rather than putting it together at the site. But the house itself is quite different from the components that go into it.

Housing, whether single-family or multifamily, is tied to a piece of ground, physically, legally, financially, and often even emotionally. Institutionally, therefore, housing does not lend itself to the assembly line.

Attempts to cut the cost of housing by putting it on an assembly line have reduced construction time to be sure, but the structure of the dwelling unit itself is not a big cost item. Saving money on the structure is usually a drop in the bucket compared to the costs of land, financing, overhead, profit and the various appointments within the structure itself.

The blame for high costs is often placed at the doorstep of building codes, and critics clamor for national codes and uniformity. The truth is that we have four national model codes now that are perfectly adequate, but the problem is that almost every municipality in the US has the constitutional right to change its building code to suite various pressure groups. Hardly any city in the US has adopted one of the model codes without making a great many amendments. Furthermore, the experience of the building industry indicates that if it could build without a code at all, it could not build any more cheaply and still have a structure that any financial institution would put its money on for 30 years.

The building trades also come in for a good kicking around when the cost of building is under construction. The truth is that labor's productivity per dollar, and I mean subcontractors working for a good builder, is almost the same in most high cost union areas as it is in most low cost non-union areas. Increasing productivity with new techniques does not affect costs materially, because labor costs accounts for less than 20 percent of the price of any dwelling unit to its occupant.

Congress has created one program after another with enough visibility to convince voters that something is being done. But most of these programs are too poorly funded to have any impact on urban problems. And many of them overlap and even contradict earlier programs. So each new program adds more chaos to the already chaotic machinery of federal, state and local governments.

What's more, most programs are wrapped in restrictions that make them almost inoperative. The builder who has the temerity to enter an urban renewal program is usually rewarded by being put on a rack and stretched in four directions by four different agencies, while the building trades jump up and down on his stomach.

Things may be changing for the better, however, Last fall HUD assistant secretary Philip N. Brownstein told his district directors: "I want you, in the multifamily area, to slash through red tape, indecision, and pussyfooting, to set rigid time goals and see that they are met . . . I want you to be prudent as well as urgent, but I want you to be prepared to take the risks necessary to accomplish the job and to know that you will be fully supported in the decisions you make."

Brownstein's conclusion was most direct: "You should work at this task as though your job depended on it—because it may!"

Whether or not the FHA succeeds in speeding up its processes, it is clear that it understands its position viz a viz private enterprise. Said Brownstein in the same speech: "As the unit of HUD with principal responsibility for administering private housing programs, it is our job to enlist and encourage private enterprise to play a leading role in providing decent housing and related human conditions for the inner city—especially in the slums and blighted portions of the inner city."

Two consistent problems have plagued most FHA programs. First problem is that a bureaucrat lays his career on the line everytime he makes a decision, especially a decision in the area of housing. Congress blasts FHA if a builder makes any money, and it blasts FHA for

PAGINATION INCORRECT

mortgage defaults, critizing its radicalism and lack of sober conservatism.

Second problem is that housing programs are too subject to the administration's fiscal maneuverings. Despite the administration's talk about the need for action now, the 221d3 program is literally strangling while several hundred million dollars of below market d3 money is still being withheld by the Bureau of the Budget.

Now then, how much does it cost and how can we do it?

Those are tough questions but there are some possible and reasonable answers.

Yet for some unexplainable reason there is a belief that profitability in housing is dirty and unacceptable.

New housing units in multifamily buildings—the kind needed in most center city slum areas—cost between $17,000 and $22,000 per unit with an urban renewal land write-down. Rehabilitated structures, in any volume and in densities desirable in center city slums, cost about the same and sometimes more.

This means that the rent level for an average $20,000 dwelling unit (one-bedroom in center city) would be approximately $150 per month, including 1) maintenance; 2) operating costs; 3) amortization and interest on a subsidized loan (interest rate a few points below market yields and a term up to 40 years); 4) partial realty tax abatement (about 50 percent); and a 5) two-thirds write-down of the land cost.

Half the poor families in the slums can only afford to pay from $65 to $110 per month rent. The other half of the poor families and households in the slums can only afford to pay from $35 to $60 per month in rent.

Since there is clearly a gap between what it costs to supply adequate housing and what the slum dweller can pay, the question is: how do you provide the difference?

Costs like these can only be cut in time by involving private enterprise with the traditional tool of subsidies: precisely the tools proposed by senators Kennedy and Percy—tax incentives to give entrepreneurs profits in the slums. Yet for some unexplainable reason there is a belief that profitability in housing is dirty and unacceptable. We don't find profitability in the supplying of food an unacceptable theory. We don't find profitability in in the supplying of clothing unacceptable.

Most businesses benefit from one or a number of subsidies, hidden or open. Air travel, automobiles, agriculture, communications, middle and high income home owners, the oil business, the aircraft industry, research and aerospace industries, and just about anything else you can name. Take just one example: each year in the United States, the federal government finances irragation for agriculture to the tune of $1 billion per year on a 50-year term and at a zero rate of interest.

If the same subsidy approach could be used in slums, private enterprise could go a long way towards solving slum problems.

It's clear that under present practices of taxation and financing, even with a subsidized interest rate and long-term mortgages, private enterprise cannot supply low-income housing in central city.

When figuring the costs of housing, you cannot eliminate maintenance and operating costs of the building over its economic life.

But you can eliminate some others. The most obvious: total land write-downs, which would mean in essence state or municipal ownership, and total tax abatement on the dwelling unit as long as it is occupied by a poor family.

However, no major city can afford to write-down land entirely and abate local taxes entirely. It would bankrupt most of them. One way to get around that problem would be to have the federal government provide all welfare, health and education costs for poor people in the slum areas (they are national concerns anyway). This would allow widely expanded tax abatement and land purchase by the cities.

Finally, government must be prepared to give subsidies without insisting on hidebound procedures which invariably lead to delay, red tape and high costs. Rules that keep every conceivable bad guy out of a program seriously impair the willingness of good guys to take part. Of course government has a right to regulate what it subsidizes. But too often it imposes rules that destroy incentive. If government wants private industry to invest in its programs, it must be willing to let investors make a profit.

BAXTER-PYRESOTE
fire-retardant treated
LUMBER & PLYWOOD
may now be used for the following:

In type 1 and 2 construction for partitions, structural elements and roof framing and sheathing.

(Source: BOCA Approval No. 61-17A. See Table 5, section 903.8, from the 1961 Supplement No. 1 to the 1960 edition of the BOCA Basic Building Code.)

BAXTER-PYRESOTE
products are always kiln dried after treatment. Prompt shipments available to jobsite, or to local dealers.

Senate Panel Clears $5.2 Billion Bill to Aid Needy to Get Housing, Riot Insurance Plan

By a WALL STREET JOURNAL *Staff Reporter*

WASHINGTON—An expanded effort to improve housing for needy families and to provide Government-guaranteed property insurance against riot losses was recommended by the Senate Banking Committee.

The panel also endorsed an Administration plan that would transfer from the Government to private investors the full ownership of the Federal National Mortgage Association, which supports the mortgage market by buying Government-backed home mortgages from private lenders.

In general, the Johnson Administration achieved the committee's approval to expand and initiate an array of old and new housing programs for low-income and moderate-income families. These programs are aimed at producing 300,000 new and rehabilitated housing units in the year beginning July 1, almost triple the current annual level. This would be the first step in a 10-year effort the Administration hopes will produce 6 million housing units under Federal aid programs.

But to make the price tag look lower, the committee scaled down to three years the Administration's request for a five-year spending authorization. Over the three years, the omnibus bill would allow the Government to spend $5.2 billion; the Administration had asked for $7.5 billion over five years. Several existing programs already have spending authority over the next year, so the bulk of the new $5.2 billion authorization would come into play after mid-1969.

Massive as it is, the legislation falls well short of meeting the housing goals recommended by the President's Riot Commission. The commission recommended an attempt to upgrade ghetto housing at a pace roughly twice as fast as that proposed by the Administration and endorsed by the Senate committee.

Among the big outlays the bill would authorize, beginning in mid-1969, are $1.4 billion for brick-and-mortar urban renewal and $1 billion for the relatively new "model cities" program, which gives cities extra money for a comprehensive effort to renew slums. These major authorizations would be for one year; both programs already have received lower spending authorizations through mid-1969.

Other Provisions

Other major sections of the bill would authorize:

—A new mortgage-subsidy plan to help low-income and moderate-income families buy homes.

—A new rent-subsidy plan that would augment existing subsidy schemes to help needy tenants.

—Establishment of a National Housing Corp. that would attempt to attract private investment into low-income and moderate-income housing projects.

—Issuance of Government-subsidized flood-insurance policies to some property owners in flood-prone areas; this plan, which made headway toward enactment last year, has become bogged down in a dispute over how it should be financed.

—A requirement that developers of subdivided land, in most instances, comply with Federal requirements of "full disclosure" when offering land for sale by mail or other interstate means.

—A new Federal subsidy program for college housing.

—Expansion of Federal aid for mass transit systems and urban planning.

—Federal guarantee of bonds and other debt obligations issued by developers of "new towns," in an effort to further encourage development of these communities.

It is highly uncertain whether the Senate committee's three-year, $5.2 billion estimate for these and other programs would turn out to represent the actual cost. Though the Senate is likely to expand the bill if anything, it almost certainly will face a paring attempt when it reaches the economy-minded House. In any event, before spending starts, a second go-round would be necessary to obtain appropriations, and the money Congress allots usually falls below the level authorized.

But other factors could boost the cost. The riot and flood insurance proposals would allow open-ended borrowing from the Treasury to pay for losses on insured property, if that became necessary. So no one knows what these activities could cost. Also, the various housing subsidy schemes typically would commit the Government to large long-term annual outlays, though they involve only small yearly costs.

FHA Interest Hike Hits Self-Help Plan For Poor

VISALIA — The Goshen Self-Help housing technique, started here five years ago and now spread over 20 states, is being hit by an administrative order that increases costs and decreases the number of poor families that can qualify.

Robert Marshall, director of California's Self-Help Enterprises, says, "The Federal Farmers Home Administration has raised interest rates from 4 to 5 per cent."

From California to Florida, 252 homes have been built by rural, low income families utilizing self-help techniques and FHA 4 per cent, 33-year loans. However, since the first three homes were built in Goshen, the cost and re dtape have been creeping higher, eliminating the poorest of the poor.

"There has been such an increase in the self help program across the nation," he says, "that the FHA was running out of funds, but instead of asking for more direct loan funds, they are insuring 5 per cent private loans."

The 1 per cent increase means $5 a month more in payments. "This doesn't sound like much," he says, "but consider the fact that many of these people are just barely able to show FHA they can meet the loan repayment range from which Self-Help applicants can be drawn. The Office of Economic Opportunity in Washington has established maximum income limits for self-help families.

Eligibility not only is tied to income but the FHA demands the family concerned by fairly free of debt. This means that a family of five with an income of $3,499 but with monthly debt payments of $15 to $20 is not able to qualify under FHA rules because it does not have "repayment ability."

Sunday, March 8, 1964

The Federal Government spends hundreds of millions in interest-free money to deliver subsidized irrigation water for rich growers. That same Government has stopped appropriating 4% loan money to build housing for poor farm workers. Farmers Home Administration officials inform us that the above story is correct. The 4% money has been exhausted. No more is included in the budget now before Congress.

What kind of liberty and justice for all is that? The rich get interest-free loans while the poor get soaked 25% more by the same Government of all the people. If you think that is a lousy deal, write some of your friends in Washington.

CHICANO....AND FRIENDS OF THE CHICANO....ON THE MOVE....CRUSADE FOR JUSTICE!!! WRITE TO MURPHY, KUCHEL, LBJ, ORVILLE FREEMAN AND YOUR CONGRESSMAN AND GIVE THEM HELL....IT WILL HELP!!!....ALSO, LET SENATOR MONTOYA, CONGRESSMEN ROYBAL, GONZALEZ AND DE LA GARZA KNOW HOW YOU FEEL!!!

URBAN CRISIS

THE BATTLE WE CAN WIN

By Lt. Gen. James M. Gavin
and
Arthur Hadley

RECORDINGS

THE PASSIONS OF PENDERECKI

by Irving Kolodin

Finance

Loan company joins conglomerates

GAC Corp. is adding all sorts of operations—the latest is land development—to its original business

GAC Corp. agreed late last winter to pay the Mormon Church $100-million for 265,000 acres of Florida land. That land, situated west of Cape Kennedy, is now a working farm with 60,000 head of cattle, citrus groves, and timberland.

When the deal goes through, perhaps within a month, the Allentown (Pa.) company, which started as a finance company known as General Acceptance Corp., will emerge as one of the biggest land developers in the country.

GAC's back-to-the-land movement is recent but vigorous. Earlier this year it handed over $230-million in stock for Gulf American Corp., Florida's biggest but most troubled land development company. Since then, it has bought a Miami contracting firm, an ocean-front Miami Beach apartment hotel (to be replaced with a 17-story, $20-million condominium), and paid $38-million for 918 acres south of Fort Lauderdale (where it plans to build more high rises).

Beyond this, GAC is a partner in an office building in the Wall Street area, and recently entered into a pair of joint ventures with Florida builders—one for construction of the condominium in Miami and the other to build single family homes.

Many hats. Land development is one part of GAC's thrust out beyond finance. Indeed, in an industry with a dictum of diversify or die, the company is more a conglomerate than any of its finance company rivals. Though consumer installment debt is sky-high, a growing chunk of that business now goes to commercial banks and to the captive finance arms of big manufacturers and retailers.

So C.I.T. Financial Corp. now makes greeting cards, and Beneficial Finance Co. owns Spiegel, Inc., the mail-order house. Household Finance Corp. just bought National Car Rental System, Inc., and Commercial Credit Co. belongs to Control Data Corp., the computer maker.

As for GAC, it still makes loans, but it also makes truck trailers and library shelving. It runs small loan offices, but it also runs retail stores that sell auto parts, hardware, and toys. It got into computer leasing a year ago, and it owns both a savings and loan association and a mortgage banking concern in Portland, Ore. Last month it agreed to pay $5-million in stock for Sherwood & Roberts, Inc., a Walla Walla (Wash.) concern that does a mortgage loan, real estate, and insurance business.

Dovetailing operation. But GAC, under S. Hayward Wills, its super-aggressive, 43-year-old president, thinks it has a more sensible approach to diversification than any of its rivals. It keeps moving into new fields—but only when there is a chance for GAC to do what it knows how to do best: handle installment loan paper. In fact, earlier this year, GAC sold off a perfectly healthy, quite profitable subsidiary, Kahr Bearing Corp., because it didn't do any credit business. "It simply didn't fit in with our philosophy of financial assets," explains Delbert D. Reichardt, financial vice-president.

S. Hayward Wills is masterminding GAC's imposing array of acquisitions.

Land does fit. It was Wills who pushed GAC headlong into that boom industry (which finance companies have so far shied away from). "Land," says Reichardt, "happens to be a product you sell on an installment basis."

All this diversification has had a very dramatic effect on GAC's finances. GAC's net receivables—the stock-in-trade of any finance company—have swollen from $383-million in 1963, the year before Wills succeeded his father, Francis R. Wills, as president, to around $900-million now. GAC earnings have gone from $4.4-million in 1963 to $11.2-million last year. This year, things are really starting to fall into place, with Gulf American, a money-loser in the past, profitable once again. So GAC earned $14.5-million in the first half of 1969 against $5-million in the first half of 1968.

Private brand clients. GAC has been acquisition-minded almost since the day Francis Reed Wills launched it as a small loan company in 1933. Mostly, though, it kept buying other finance concerns, along with several small insurance companies.

It came up with one intriguing concept in 1961, called "private brand financing." Under that program, GAC organizes and runs, on a fee basis, captive finance operations for companies that for one reason or another don't want to operate financial captives themselves. The captive bears the client company's name but is, in fact, a GAC subsidiary. There are 27 private brand clients today, including units of RCA and Sylvania, along with Fisher Radio Corp. and Coleman Co. Private brand deals accounted for more than $72-million of GAC's receivables last year—up eightfold in five years, making it the fastest-growing in-house business.

Acquisition timetable. GAC kept growing through its years as a finance company. In common with most finance companies, though, its growth—in income and in profits—just wasn't spectacular.

Things began to change after Hayward

PAGINATION INCORRECT

Wills took over in 1964. Instead of just the finance business, there are a slew of operating groups today: insurance, manufacturing, retailing, computer leasing, mortgage banking, land development, and real estate. The shift to a holding company, under the GAC Corp. name, came just a year ago. The old parent company, General Acceptance Corp., is now the financial arm of GAC Corp., responsible for raising money for the operating groups.

In terms of diversification, the move into manufacturing came first.

GAC bought Highway Trailer Industries, Inc., makers of truck trailers, cargo containers, and construction equipment (and an early private brand financing client) in 1965, and pushed deeper into the truck trailer business last year by buying Miller Trailers, Inc., of Bradenton, Fla. In 1965, it also picked up Aetna Steel Products Corp., a manufacturer of library shelving. Kahr Bearing was acquired as payment on a defaulted note, in 1967.

GAC moved into computer leasing in March, 1968, by creating GAC Computer Leasing Corp. (which now has $38-million worth of computers out on lease). A month later it bought Dean Phipps Stores, a 72-store retail chain that sells auto accessories, housewares, garden supplies, and the like. Early this year, it bought the Home & Auto Div. of Eckmar Corp., a 58-store operation that sells a similar product line under the American Auto Stores, Noah's Ark, and Checker Sales names.

Still in finance. GAC has made as many deals inside the finance field as out.

In early 1968, GAC made a $30-million tender offer for the capital stock of Equitable Savings & Loan Assn. of Portland, Ore. Wills says he had been hunting for an S&L for years and finally hit on Equitable. Equitable's earnings were in a decline, but it had $315-million in assets, and did business in an area (Oregon, Washington, and Idaho) where personal saving tends to run quite high. The deal to acquire Equitable finally went through this summer.

In November, 1968, GAC picked up Commonwealth, Inc., the Portland mortgage banking outfit. With Commonwealth came a $360-million mortgage portfolio, but also a $1.7-million loss last year.

Often enough, GAC is called in to save a distressed operation—sometimes taking over the concern, and sometimes just taking over its receivables. GAC has a reputation for working well in troubled situations. Says analyst Ernest Widmann at Drexel Harriman Ripley, Inc., the investment bankers: "There are a lot of companies that with a little work can be turned around and GAC has found more than its share of them." GAC also has one of the top acquisition men around—54-year-old W. R. Strothman, a former Price, Waterhouse accountant and now GAC's vice-president and comptroller.

Three years ago, GAC picked up some of the pieces of Atlantic Acceptance Corp., the Canadian finance company that is

'After all, the guy who buys land is the same consumer we've been dealing with all along'

now in receivership—emerging with 100 new Canadian offices and some $20-million in receivables.

In 1967, GAC was called in to help Pioneer Finance Co. of Detroit, which was in deep financial trouble and has since been liquidated. GAC entered into a consulting agreement with Pioneer—helping to sell some of the unattractive finance paper the company held on low-cost shell homes. Later, GAC assumed Pioneer's debt and acquired its remaining receivables—most of those in more profitable mobile home paper.

GAC was called to the rescue twice last year. In March, it took over New Hampshire Finance Corp. when the parent company ran into financial trouble. In September, it took over $30-million in long-term debt and other liabilities of Modern Homes Construction Co., a Georgia producer of shell homes, in return for acquiring $65-million in mortgage receivables.

GAC, meanwhile, keeps trying to beef up the rest of its finance business. It is all but out of automobile financing now—an area where the competition is brutal. Similarly, it is moving away from retail sales finance—the notes it buys from retailers at a discount. That's another low-profit side of the business.

Diversification hasn't been an absolute success, of course. GAC's manufacturing group last year had sales of $45-million, but lost $296,500—after earning $234,000 in 1965, $1.8-million in 1966, and $2.4-million in 1967. The big loser ($1.4-million) was Aetna Steel Products, the maker of library shelving. This year, GAC has turned Aetna into a supplier for Highway Trailer and hopes to have the manufacturing group running at a profit.

GAC's old-line businesses offset the manufacturing loss last year. GAC earned $5.1-million from its finance operations, plus $3.7-million from its life insurance business and another $2-million from its casualty insurance business.

Land profits. The big field now, of course—in terms of growth and of profits—is land. Around 60% of GAC's profits for 1969 are expected to come out of Gulf American—still another troubled situation that GAC is turning around.

Gulf American always was a giant among land companies. It had 560,000 acres either developed or under development in Florida—making it that state's biggest land outfit—plus 55,000 more near Tucson, Ariz., and holdings in New Mexico, Utah, and British Honduras.

But, Gulf American let its operation get out of hand. Selling expense—a benchmark of profitability in the land business—had reached a horrendous 47% of sales a couple of years ago. On top of that, Gulf American got into trouble with the Florida Land Sales Board. Accused of such sleazy practices as switching lots on buyers, and selling the same lot to more than one buyer (a practice known in the trade as "double decking") it was suspended from selling land for a month in December, 1967. Subsequently, it had to wait almost six months for the board to register for sale some 15,000 acres at its various properties.

Fringe benefits. GAC took over Gulf American's operations in late 1968, even before the deal to acquire the company was closed. Bit by bit, it has been bringing Gulf American back into line. Selling expenses have been brought back to 30% of sales, and fewer sales are being canceled by buyers these days. Gulf American lost $1.6-million in 1968 but earned $9.6-million in this year's first half. Drexel Harriman Ripley now reckons that Gulf American will earn $23-million to $25-million this year, on $180-million in sales.

Moreover, there have been some nice fringe benefits from the deal. Gulf American, for instance, is developing what will become the world's largest mobile home park—6,000 home sites near Melbourne on Florida's east coast. One of GAC's more profitable businesses is financing mobile home purchases.

Deseret Farms was mostly swamp land when the Mormon Church, through its wholly owned subsidiary, Zion Securities Corp., bought the tract in 1950. GAC plans to put that site to residential, commercial, and industrial use. Wrapping up the deal has been held up for several months while Zion Securities waits to see whether it can take a capital gain on the sale.

Oriented. GAC says it finds itself right at home in the land business. "After all," says Strothman, "the guy who buys land is the same consumer we've been dealing with all along. It just so happens that historically, finance companies have not been involved in the land segment of the finance business."

Finance companies haven't done much building either—another field GAC is starting to sink its teeth into. "Construction," says Reichardt, "is an important part of the real estate business and we should be in it." To get started, GAC recently formed a new subsidiary, GAC Realty Corp., which will operate independently of Gulf American. Earlier this summer, it paid around $4-million in cash to buy the Miami contracting firm of Robert L. Turchin, Inc., which has built many of Miami's hotels and apartments buildings.

Even the Wall Street building—actually at 130 John Street—in which GAC is a partner—figures in the company's plans. Since it was started, GAC has operated out of Allentown. Now Wills figures it's time to move to a bigger pond. So GAC will soon shift its headquarters to John Street. **End**

Housing Gloom

Home Builders Expect The Decline in Starts To Persist This Year

Soaring Costs, Tight Money Make Medium-Price Units Rare in Much of the U.S.

Cheering On the Recession

By ERIC MORGENTHALER AND JAMES TANNER
Staff Reporters of THE WALL STREET JOURNAL

HOUSTON — If you're looking for a new house this year, it would help to be either poor or affluent. If you fall somewhere in between, you'll find the pickings slim.

Average-income Americans who want new homes may well have to settle instead for apartments or mobile homes. The reason: Few modest single-family houses are being built these days, and their prices are soaring. Moreover, in these tight-money times it's very hard to finance a house in many areas even if you find one.

Only if you're poor enough to qualify for Federal housing subsidies or well-off enough to afford a stiff down payment and high interest rates do you stand a reasonable chance of finding a new house within your means.

This less-than-cheerful picture emerges from a broad sampling of builders, construction analysts and materials suppliers gathered here this week for the annual convention of the National Association of Home Builders (NAHB).

Less Product, Higher Price

"The housing crunch is going to get worse before it gets better," sums up Nathaniel Rogg, executive vice president of the 51,000-member association. House hunters lucky enough to find a friendly mortgage lender this year, adds John Lynch, a Wall Street construction analyst, "will have less product to choose from, because builders are cutting back, and they will be paying 30% more than three years ago."

The number of housing starts is the key indicator of how home-building is doing—and the news at the moment is all bad. The seasonally adjusted annual rate of housing starts plummeted 34% from 1.9 million in January 1969 to 1.3 million starts in December. The actual number of starts in all 1969 was 1,463,000, a decline of 3% from 1968.

Indications are that starts are continuing to skid this month. Indeed, some estimates put total starts for all 1970 at one million units or less, the lowest level in more than 20 years.

Generally, however, economists and other housing observers agree with the NAHB official forecast of around 1,261,000 homes and apartment units for 1970, down some 200,000 from 1969 housing starts. A much more optimistic forecast came late yesterday from New Jersey builder Louis R. Barba, NAHB president. Following a discussion of the housing plight with President Nixon, he said housing starts could rise possibly to 1.8 million this year. Even at this rate, construction of residential units will fall far short of the 2.6 million average annual starts estimated by Government housing experts as the minimum necessary to provide adequate residential accommodations for the nation.

Help for the Poor

To be sure, there are hints of some bright spots in the housing outlook. Massive new Government-subsidy programs aimed at housing the poor are attracting increasing numbers of builders into the construction of apartments and homes for families whose incomes don't go beyond an upper range of $5,000 to $7,000 a year.

There also is some hope of a turnaround, possibly beginning as early as midyear, in the generally stagnant construction of homes in the popular $20,000-to-$40,000 price range. But builders point out that even a dramatic increase in starts at midyear wouldn't have any noticeable effect on the availability of houses until late this year or early 1971.

A few builders say they're actually planning to build more homes in the middle price range than they did last year. But these are mostly high-volume builders with far better access to mortgage money than the typical home builder. Many also are capitalizing on purely local situations where mortgage money is more readily available than it is in most areas.

An 80% Sales Gain

In Florida, for example, some savings and loan associations still make new loans on new houses at rates as low as 8¼%, compared with a national average of around 9% for conventional mortgages. (The maximum on Federally insured mortgages currently is 8½%.) Thus, 1st Development Corp. of America in Sarasota, Fla., currently is building 100 homes priced between $25,000 and $80,000, has doubled its advertising budget for 1970 and expects an 80% sales gain this year, says Charles H. Parr III, vice president and general manager.

The Larwin Group, a subsidiary of CNA Financial Corp., plans to build some 3,500 houses in 1970, up nearly one-third from 1969 volume, says Michael L. Tenzer, senior vice president. Levitt & Sons, the home-building giant that's now a subsidiary of International Telephone & Telegraph, plans to build 10,000 to 11,000 single-family houses and multifamily units this year, up from around 8,000 in 1969.

But these companies account for only a tiny percentage of total U.S. home building. Both Larwin and Levitt belong to an organization called the Council of Housing Producers, whose 15 members built 41,729 housing units in 1969 and project an increase to 55,684 units in 1970. But this won't amount to more than 4.5% of total units this year, and these builders are generally as pessimistic about the overall housing situation as are smaller builders.

Most houses are built by small contractors who put up less than 100 units a year, and it is among these builders that the construction cutback is most severe. Typical is Fred Hunt, a Little Rock, Ark., contractor who built only six houses last year, down from 20 the year before. He currently has only one house for sale—for $40,000—and he says he won't start any new ones until he sells that.

Some builders are abandoning all middle-income housing construction. Carl Mitnik, a Somers Point, N.J., builder, says, "I'm going to go into low-income housing entirely. There's no

Please Turn to Page 8, Column 2

Housing Gloom: Home Builders Expect Downturn to Persist

Continued From First Page

room to take care of the middle-income fellow any more."

If the trend continues, the nation faces an acute housing shortage unmatched since the post-World War II days when millions of returning veterans scrambled for homes. Formation of new households, demolition of deteriorating older homes and pressure from families that have outgrown their present homes all are combining to fuel a growing demand for houses.

Lowest in a Decade

Yet housing starts last year dropped about one-third from the 1965 level. Secretary George Romney of the Department of Housing and Urban Development says the nation's housing vacancy rate is the lowest in a decade. The rental vacancy rate, he says, is down to an extremely tight 1% in urban areas like Chicago and New York. He contends the nation is short 2.6 million housing units.

Practically everybody agrees that the scarcity of mortgage money is the key problem. The Government's anti-inflation efforts have led to an increasing shortage of loan funds, combined with skyrocketing interest rates for money that is available. "Home builders have repeatedly learned that they are the first casualties in the battle against inflation," says Richard M. Wasserman, president of Levitt. "And that battlefield is strewn today with the bodies of bankrupt builders."

Factors other than tight money are also contributing to the housing slump, however. Chief among these, builders say, are higher land and labor costs that keep driving the prices of the houses higher.

$3-an-Hour Raise

Builders say labor costs are rising as much as 15% annually. "Labor costs are the governing factor," contends Al Brawn, vice president of a Jacksonville, Fla., construction concern. His company is negotiating currently with carpenters who are demanding a $3-an-hour raise, plus substantial new fringe benefits, over the next three years. They now make a top scale of $6.92. In many other areas, carpenters already make $8 to $10 hourly.

Rising costs of land are equally important. Ernest Comeau, a Weston, Mass., builder, says a typical lot in his area now is priced at $25,000 to $30,000, ruling out all but very expensive homes. The ones he builds, for instance, are priced at $100,000 to $450,000. Salt Lake City builders are appealing to zoning officials to permit them to build on lots as small as 3,000 square feet (roughly 35 feet by 85 feet), compared with the customary 8,000-square-foot lots. Around the country, there is a growing trend to increased density of occupancy, largely because of inflated land values, with builders switching from single-family dwellings centered on spacious lots to townhouses, condominiums and apartments.

Though many economists believe a recession is imminent—or, indeed, already here—builders foresee little effect on construction costs. Interest rates might drop some, says a big Dallas builder. "I don't think we'll ever see interest rates go back to 5% or 6%," he says, "but if they just leveled off at 8% or 8½% and down payments dropped from the current level of around 30%, more people could afford houses."

Nonetheless, builders expect that a recession would mean the availability of more mortgage money—and many are actually rooting for a recession. Watching economic indicators closely, they have been heartened by an apparent halt in real growth of the Gross National Product in the 1969 fourth quarter. "If these indices remain static for two quarters in a row, we are in a recession," says a major Seattle-based builder. "I suspect that will happen," he adds, "and then the Administration perhaps will unscrew the monetary restraints a little."

How long would it be before an easing of monetary restrictions would be felt by the home-building industry? At least 10 months, suggests Michael Sumichrast, chief economist for the NAHB. As far as 1970 housing starts are concerned, he adds, "the die is cast, and it's too late to do anything about it."

Atlanta, Georgia 30303

Dear Mr. Anthony:

Mr. John Wheeler and I thought you would be interested in seeing a copy of our Preliminary Prospectus which was filed with the SEC last week. As you may know, the National Housing Partnership was established pursuant to a recommendation by the President's Committee on Urban Housing and Title IX of the Housing and Urban Development Act of 1968. Pursuant to the 1968 Act the President of the United States appointed sixteen individuals to serve as incorporators and initial directors of the National Corporation for Housing Partnerships, to establish the National Housing Partnership with the Corporation as general partner and to arrange the Venture's initial public offering.

We believe that the Corporation can carry out important activities related to the development of housing for low and moderate income families. We hope to work closely with community groups, non-profit housing sponsors and others interested in producing such housing. We would very much like to meet with you in Washington sometime within the next two weeks to discuss the Partnership in more detail and to review how we can cooperate with your organization in a variety of ways. We will be contacting you shortly to arrange such a briefing meeting and lunch here in Washington.

Sincerely,

Carter L. Burgess

Washington, D. C. 20036

Dear Mr. Burgess:

At our Executive Committee meeting last week, Mr. John Wheeler raised the question of whether or not the National Corporation and SRC had gotten together. This was a reminder to me that I had shared your letter with several members of the staff, particularly those interested in housing, and that neither had I acknowledged it or heard from you further.

Please know we are very interested in your program and very anxious to cooperate in any way possible. I do look forward, af the earliest opportunity, for several of us at the Council to meet with you.

With best wishes,

Sincerely yours,

Paul Anthony
Esecutive Director

THE WALL STREET JOURNAL, Tuesday, February 24, 1970

Romney Expected to Back S&L Subsidies In Program to Shore Up Housing Industry

By a WALL STREET JOURNAL *Staff Reporter*

WASHINGTON—The Nixon Administration is scheduled to tell an anxious Congress today how it hopes to shore up the rapidly sagging housing industry.

Although many details were still being nailed down during the long weekend, Housing Secretary Romney's testimony to the House Banking Committee is expected to include endorsement for a Treasury subsidiary on borrowing by savings and loan associations and creation of a secondary market operation in conventional private mortgages.

With private-housing starts having plummeted to a seasonally adjusted annual rate of 1,166,000 units in January from 1,878,000 a year earlier, officials think the only trouble their proposals might face is rivalry from more radical Congressional alternatives, such as forcing the Federal Reserve Board and pension funds to buy mortgages.

For fear such schemes would be inflationary and disruptive of the existing mortgage system, the Nixon Administration is striving to sell Congress on improvements of modest cost that they say could bring disproportionately big returns.

Two Steps Decided Upon

And at least two costless steps have already been decided upon, officials told the Banking Committee Friday. To cut the competition their high-paying securities pose to the limited interest rate that S&Ls can pay, Preston Martin, chairman of the Federal Home Loan Bank Board, and Allan Oakley Hunter, president of the Federal National Mortgage Association, said they would shortly increase the minimum denomination of their agencies' securities to $10,000 from the present $5,000.

The S&L subsidy plan being drafted, Chairman Martin said, would have the Treasury provide up to $300 million "over the next several years." With this sum, he said, the interest rate that the 12 district Home Loan Banks charge on advances to S&Ls would be reduced by one percentage point below "what would otherwise be" the rate. "For every dollar spent in this way," he testified, "the result could be as much as a $15 to $20 increase in mortgage lending."

The reasoning, an industry source explained, is that without the rate relief, S&Ls would stop borrowing supplementary funds from the FHLB system because the cost—now as much as 7.75%—would be more than they can afford. If the advance rate went to 8% or higher, he said, "our people just wouldn't borrow," as their return on older lower-rate mortgages wouldn't cover the cost. And if they did borrow such costly funds, he added, Congress "wouldn't like it" because they'd have to jack the rates they charge on new mortgage loans to 9% or so.

Borrow and Relend

If the subsidy plan is adopted, sources said, the bank system might borrow, say, $1 billion at 8% on the open market, for an annual interest cost of $80 million. With $10 million of the subsidy money, the $1 billion could be relent to S&Ls at 7% thus costing them $70 million a year. If S&Ls kept the $1 billion in advances for five years, during which the subsidy would amount to $50 million, the 20-to-one ratio would result because they'd have $1 billion more than otherwise with which to make mortgage loans.

If put into practice promptly, Mr. Martin and aides explained, the one-percentage-point subsidy probably would mean only a half-percentage-point outright reduction in advance rates. The 7.75% charged by some of the banks currently is about half a percentage point less than their own costs of borrowing, they explained, so that a one-percentage-point subsidy would mean reducing the rate to 7.25% instead of letting it climb to 8.25%.

If Congress allows the funds, Mr. Martin promised that the Bank Board would act "the next morning at 9 o'clock." Advances at the reduced rate would be offered to an S&L, he said, only if they would be in addition to its already outstanding advances, thus assuring they'd be used for expansion of the S&Ls mortgage lending and not for refinancing old advances. Over a period of time, Mr. Martin said, the subsidy "would be spread over advances of $5 billion to $6 billion."

A "far-reaching" proposal being drafted, he also reported, would clarify the board's power to set up "a secondary mortgage market in conventional as well as Federally underwritten mortgages." The bank system would "issue notes, bonds and other obligations" to raise funds, he said, which it would use to purchase and "warehouse" loans especially from those S&Ls that are reluctant to borrow money from the district banks. When "fully active," Mr. Martin said, this could mean purchase of up to $2 billion of mortages a year, leaving the selling S&Ls with enough cash to finance about 80,000 extra homes annually.

Unresolved at the weekend was whether the Administration would give its blessing to the Bank Board plan, or would favor having the Federal National Mortgage Association expand its secondary market dealings—now limited to Government-backed loans—to the much bigger field of conventional loans. Mr. Martin and Mr. Hunter agreed to supply written arguments on behalf of their respective agencies.

Without any new legislation, Mr. Martin reported, the Bank Board and Home Loan Banks plan a consortium that will purchase and pool $200 million of Government-backed loans from S&Ls, and issue against them mortgage-backed bonds guaranteed by the Government National Mortgage Association. The issues are designed to be "attractive to pension funds and or the lenders who do not find it advantageous to originate or purchase mortgages directly," he said.

Active Support Planned

Fannie Mae plans active support of the market for Federal Housing Administration-insured and Veterans Administration-backed loans in 1970, Mr. Hunter testified. Commitments will likely run between $6 billion and $8 billion, he said, compared with $6.5 billion in 1969. And actual purchases, he said, are estimated as climbing to $6 billion from last year's $4.2 billion, even assuming "an abatement of inflationary pressures, a moderate decline in interest rates, and some reentry of traditional investors in the mortgage market."

In making its massive commitments, Mr. Hunter conceded, the Government-sponsored, stockholder-owned corporation "has taken considerable risks." The net yields on mortgages recently purchased, he said, "have been running below the current cost of borrowed money."

Eager as they are to hear the Administration's proposals, Banking Committee Chairman Patman (D., Texas) and such members as Congresswoman Sullivan (D., Mo.) appear sure to continue pushing proposals of their own that Administration men have been resisting. These include bills that would require private pension funds to acquire a specific amount of mortgages on pain of losing favorable tax treatment, call on the Federal Reserve to purchase housing agency securities directly from the issuer with newly created money, and cre-

Hung-Up Housing

Detroit's Try at Breakthrough in Building Reels From Snafus and Alleged Mafia Tie

By NORMAN PEARLSTINE
Staff Reporter of THE WALL STREET JOURNAL

DETROIT—Three years ago, Walter Reuther quietly embarked on a project that soon showed promise of making him the Henry Ford of the housing industry. He sought to demonstrate that low-cost, comfortable homes could be turned out on assembly lines, just like cars.

His ideas caught the attention of Walker Cisler, a Detroit industrialist, and won the financial and managerial support of the auto capital's business community. Top officials of the "Big Three" auto companies agreed to serve on the board of the newly formed Metropolitan Detroit Citizens Development Authority. George Romney, Secretary of Housing and Urban Development, who was Republican governor of Michigan at the time, got excited about the project, and the MDCDA eventually became the model for "Operation Breakthrough," the Nixon Administration's national low-cost housing program.

Now, the Detroit prototype languishes. Although more than $2,650,000 has been spent, only 62 dwelling units are occupied. Assembly-line techniques have yet to be proven. One black builder the MDCDA helped get into business has quit working for the authority. Another builder who won the authority's national low-cost housing design competition has been linked with an alleged member of the Mafia and is in such serious financial straits that the company has stopped building houses.

And the rapport and respect the authority was gaining in the black community and among professional builders is fading because of snafus and slow progress. "Several black leaders who have dealings with MDCDA have come to realize that it is an exercise in futility," says Haywood Wilson, a former president of Detroit's chapter of the Congress of Racial Equality.

"MDCDA's reputation is horrendous and their progress, or lack of it, is a joke," says one of Detroit's major builders, who asks anonymity. Jack Wood, executive director of the Detroit Building Trades Council and a critic of factory-built housing, says "some of the most powerful people in the world sit with me on the MDCDA board. They are in a trap and don't know how to get out of it."

Optimism at the Authority

The MDCDA, of course, may yet prove itself. It has hundreds of housing units in various stages of construction, and thousands more are on the drawing boards. It is shaping ambitious plans for a racially and economically integrated "new town" in a Detroit suburb that, among other things, would give black factory workers a chance to live near their suburban jobs. And Edward J. Robinson, the MDCDA's optimistic executive director, declares that the authority has accomplished more during the last year "than any other nonprofit organization in the country and more than any other city or state government program in the country."

Nevertheless, many observers believe that its experience so far demonstrates how difficult it is to stage a revolution in the building industry, even when the effort has high-powered support from the industrial establishment and the second biggest labor union in the country. The revolution in Detroit has snagged on a bizarre series of human foibles: Gambles on concepts and promoters that didn't pay off, miscalculations on costs and the inexperience of staffers in technicalities of building industry red-tape.

The MDCDA originally was incorporated in late 1966, but didn't really get going until after the Detroit riots in the summer of 1967. It gathered important support from the business community (the original slate of officers included James Roche, Henry Ford II and Lynn Townsend, the men that now run the "Big Three" auto companies. Mr. Roche still regularly attends executive committee meetings.) It got money from New Detroit, the post-riot urban coalition.

It got enthusiasm, push and a set of ambitious goals from Mr. Reuther, president of the United Auto Workers union and the acknowledged father of the MDCDA. He and some of his UAW aides took nearly a week to draw up the authority's bylaws and draft its statement of purpose. Even during the 1967 labor contract negotiations, he was always available to MDCDA staffers. One time, he even kept his entire international executive board waiting for several minutes while he studied details of a bathroom plan with members of a building company that was working on an MDCDA project.

By the summer of 1968, the housing venture in Detroit was in high gear. Staffers were working on 17 projects with a total of 3,436 units and calculated that almost all of them would be under construction by early 1969. Meanwhile, the authority was moving toward important changes in Detroit's building code and it was launching its national competition for innovative low-cost housing.

Problems Pile Up

But then, one thing after another went awry. Some of its problems stemmed from high interest rates, increased construction and labor costs and strikes—and were no fault of its own. The MDCDA also was hurt by a recent decision of the Federal Housing Administration that boosted the maximum cost of houses eligible for financing under its subsidy programs to $21,000 from $17,500. The ruling has made the MDCDA's low prices less attractive to builders. And one MDCDA director close to Mr. Reuther thinks the authority's decision to "involve community groups in every phase of the housing development has slowed us down considerably."

But many other major problems were of its own making. For one thing, the MDCDA deliberately sought to keep its thinking free from the "conventional wisdom" of the building industry, so it didn't invite any home-building experts to sit on its executive committee. Its staff was filled with novices, including the executive director, Mr. Robinson, a former state senator with almost no experience in building. "We were really pulling people in off the streets in the beginning," he concedes.

The inexperience has hurt in many ways. When the MDCDA sought bids for its design competition in late 1968, it sweetened the competition by offering a construction contract for 800 units to the winner and promised to provide cleared sites as part of the package. But some put up by Peerless Manufacturing Co., Fort Worth, Ind., a subsidiary of Toona Inc. About a week before the winner was announced, Peerless was placed in receivership. Two Peerless officials and a suburban Detroit builder who participated on the MDCDA application with Peerless set up Prebuilt.

The next day, the MDCDA, in announcing Prebuilt the winner, called Prebuilt "a corporation to be formed as a successor to Peerless." There was no mention that Peerless was in receivership. A few weeks later Peerless was thrown into bankruptcy, and the trustee in bankruptcy now says he intends to find out "whether the MDCDA contract and other Prebuilt assets really belong to Peerless."

Neither Prebuilt nor MDCDA officials expect any possible claims by the Peerless trustee to stand up in court. But that possibility is only the least of Prebuilt's troubles. They started to snowball about a month after Prebuilt got the MDCDA contract. In desperate need of capital, Prebuilt agreed to sell an 81% interest in itself to Intercontinental Industries Inc. of Dallas.

Intercontinental Industries is an operating vehicle of S. Mort Zimmerman, a Dallas promoter. It has interests in a diversified manufacturer and in 1968 picked up control of Valley Die Cast Corp., an auto supplier, from Michael (Big Mike) Polizzi, who continued as Valley Die's president. Mr. Polizzi was named in 1963 Senate hearings as a ranking member of the Detroit Mafia, and Valley Die was named one of the "legitimate businesses owned, infiltrated or influenced by the Mafia"—allegations that Mr. Polizzi vehemently denies.

Intercontinental made bold statements about its new acquisition. Various press releases said Prebuilt had orders "in various stages of approval" for $130 million in modular housing, including the MDCDA order. "The potential figures both as to sales and earnings (of Prebuilt) are staggering," one release stated. As Intercontinental Industries' stock more than doubled in three months, the press releases about Prebuilt attracted the attention of both the American Stock Exchange and the Securities and Exchange Commission. Ultimately, American exchange trading was banned in Intercontinental, the SEC filed civil suit alleging fraud against Intercontinental and Prebuilt, and the exchange sought delisting of Intercontinental.

Intercontinental is still contesting the delisting move before the SEC. And the SEC suit has been settled through an agreement under which Intercontinental, Prebuilt and two officials of each company agreed not to make any false or misleading statements about Prebuilt in the future; they didn't admit the charges.

Mortgages Held Up

But in the interim, Mr. Polizzi's possible connections with the Mafia have caused further difficulties for the MDCDA. The Justice Department has been investigating those possible ties, and pending completion of the investigation, the FHA has held up all of Prebuilt's mortgage applications. Under its contract with the MDCDA, Prebuilt must arrange FHA fi-

WORDEN & RISBERG

The MDCDA, of course, may yet prove itself. It has hundreds of housing units in various stages of construction, and thousands more are on the drawing boards. It is shaping ambitious plans for a racially and economically integrated "new town" in a Detroit suburb that, among other things, would give black factory workers a chance to live near their suburban jobs. And Edward J. Robinson, the MDCDA's optimistic executive director, declares that the authority has accomplished more during the last year "than any other nonprofit organization in the country and more than any other its own. The MDCDA also was hurt by a recent decision of the Federal Housing Administration that boosted the maximum cost of houses eligible for financing under its subsidy programs to $21,000 from $17,500. The ruling has made the MDCDA's low prices less attractive to builders. And one MDCDA director close to Mr. Reuther thinks the authority's decision to "involve community groups in every phase of the housing development has slowed us down considerably."

But many other major problems were of its own making. For one thing, the MDCDA deliberately sought to keep its thinking free from the "conventional wisdom" of the building industry, so it didn't invite any home-building experts to sit on its executive committee. Its staff was filled with novices, including the executive director, Mr. Robinson, a former state senator with almost no experience in building. "We were really pulling people in off the streets in the beginning," he concedes.

The inexperience has hurt in many ways. When the MDCDA sought bids for its design competition in late 1968, it sweetened the competition by offering a construction contract for 800 units to the winner and promised to provide cleared sites as part of the package. But some builders were skeptical that the green MDCDA staff could deliver.

At least one builder says he shunned the competition because it seemed to him that the MDCDA was too inefficient to come through with the cleared sites. The MDCDA sought bids from 40 builders, but got them from only three. (Authority officials say many companies stayed away from the competition because they feared building trade union opposition to it.)

Site clearance problems are still plaguing the MDCDA. Redman Industries Inc., a Dallas company that placed second in the competition and got a contract for 200 units, recently threatened to withdraw from its commitment. Sources close to Redman say its management became frustrated over the slowness of the MDCDA in providing cleared sites. Redman has agreed to stay on, but won't be able to deliver any houses before next November, 20 months after its original contract award. Sources say that when Redman was faced with delays, it was forced to sell units originally planned for the MDCDA to other customers.

Costs Underestimated

In its enthusiasm to promote low-cost housing, the MDCDA has underestimated costs on some projects. One involved a new concept in single-family homes that could be slipped into scattered sites from a truck. To spur the concept, the MDCDA helped LeBon Walker, a black former auto accountant, get into business as a builder. The expectation was that the houses could sell for $10,800 each. Veteran builders say they looked at the plans and concluded they couldn't be built to sell for less than $15,000.

Mr. Walker now says they will have to sell for $16,000 or more. He has dropped out of the MDCDA program, and is selling the houses privately because he says he can make more money in the open market. His departure has left the MDCDA with 225 building sites scattered across the city.

But the MDCDA's biggest problems so far have stemmed from its decision to award a $12 million building contract to Prebuilt Homes Inc., a company without a factory and with meager resources but with a desire to go into the modular home business and an impressive design concept. The MDCDA, in fact, is still reeling from the ramifications of that decision.

Prebuilt got the contract as the winner of the MDCDA's national low-cost housing design contest. That competition sought new ideas, and the judges, who were representatives of community groups, architects and a real estate manager, placed 60% of their stress on "livability," 25% on the price per unit and 10% on the willingness of the winner to put up a housing factory in Detroit. The applicant's financial and organizational strength counted for only 5%, says Mr. Robinson. "Almost everyone thought the Prebuilt unit was by far the most livable," he adds.

Some officials of the MDCDA, including Mr. Robinson, were concerned from the start about the winner's ability to perform under the contract. But a gamble was taken to go with Prebuilt because of its snappy design. It was a monumental gamble.

For Prebuilt was organized last March 14, the day before it was named winner of the design contest. The winning prototype units were

Housing Agency Picks 22 Concerns to Build Models Utilizing Best of Existing Methods

By a WALL STREET JOURNAL *Staff Reporter*

WASHINGTON—The Department of Housing and Urban Development named 22 winners in the competition to build prototype housing systems under "Operation Breakthrough," the Nixon Administration's major effort to solve the nation's housing problems.

More than 2,000 model housing units for all income levels will be built by the companies on 10 previously announced sites, Housing Secretary Romney said at a press conference. Construction is expected to start this summer, Mr. Romney said, and the units will be added to the nation's housing supply within "a year or two."

Operation Breakthrough seeks to achieve volume production of housing by encouraging state and local officials to aggregate large land areas and by stimulating new cost-cutting housing technology. About 236 housing producers initially entered the technological competition. This number was reduced to 37 last December, and yesterday the 22 final winners were announced.

Winners Are Listed

The winners and their headquarters are Aluminum Co. of America, Pittsburgh; Ball Brothers Research Corp., Boulder, Colo.; Henry C. Beck Co., Atlanta; Boise Cascade Corp., Boise, Idaho; Christiana Western Structures, Los Angeles; Descon-Concordia, Montreal; Forest City Enterprises Inc., Cleveland. General Electric Co., Philadelphia; Hercules Inc., Wilmington, Del.; Home Building Corp., Sedalia, Mo.; Keene Corp., New York; Levitt Technology Corp., Lake Success, N.Y.; Material Systems Corp., Washington, D.C.; Module Communities Inc., Yonkers, N.Y.

National Homes Corp., Lafayette, Ind.; Pemtom Inc., Bloomington, Minn.; Republic Steel Corp., Youngstown, Ohio; Rouse-Wates, Columbia, Md.; Scholz Homes Inc., Toledo; Shelley System, San Juan, Puerto Rico; Stirling-Homex Corp., Avon, N.Y.; TRW Systems, Redondo Beach, Calif, an operating group of TRW Inc.

The total cost of the awards hasn't been determined, Mr. Romney said, but the amount of money involved in each contract will be disclosed as final contracts are negotiated with each of the winners.

Other Technology Under Study

The 22 winning proposals amount to the best of existing technology, the Secretary said. Still being studied are 365 proposals covering more advanced technology; winners in this category will be announced in a few weeks.

Mr. Romney said yesterday's winning proposals all employ, to varying degrees, industrialized techniques ranging from complete production of modules in a factory, to on-site assembly of completed panels and other components, to on-site poured concrete systems. "Taken together," the Secretary declared, "these systems accelerate the introduction of the industrial revolution for the production of homes."

In appearance, most of the systems are conventional, which Mr. Romney said "is necessary to contribute to current marketability and consumer acceptance." Seven of the systems use concrete, six use wood, five use metal as structural framing, two use plastic foam-core panels or modules and two utilize plastic fiberglass materials. "As a group," the Secretary said, "this represents a (switch) from potentially scarce wood to the innovative use of concrete, metal and plastic systems."

Innovations Highlighted

Mr. Romney mentioned these innovations:

—Material Systems and TRW Systems will build plastic fiber glass systems, each using a different technique. The Material Systems technique involves spraying a mixture of glass fiber, resin and sand onto a mold to form a wall-size panel; the TRW process winds fiber glass cloth and other materials over a large revolving core to produce modules.

—The Keene system involves an innovative configuration that would, in a sense, "create land" in the dense inner-city. At intervals of three stories, concrete platforms are constructed on which dwelling units are placed in a manner that leaves walking space in the front and garden space in the rear, advantages similar to those of ground-level units.

—The Shelley System method offers two advanced techniques. It utilizes complete precast concrete modules and stacks them in an unusual checkerboard manner to create additional usable space and to lower costs.

—Other proposals offer innovative subsystems. These include water-conserving vacuum toilet systems by National Homes; wall-length plywood with glass fiber surface, to avoid plaster and dry-wall seaming problems, by Christiana Western, and totally self-contained mechanical systems for different zones of the house by Republic Steel.

Mr. Romney said most of the selected producers will build their prototype housing units on at least two sites, and all sites will contain a variety of housing types and price levels. "We don't want these units to be identified as units for the poor," he emphasized, "because they are not just for poor people but for all income levels."

The 10 sites, previously announced, are Houston, Indianapolis, Jersey City, Seattle, Memphis, St. Louis, Wilmington, Kalamazoo, Mich., Macon, Ga., and Sacramento, Calif.

Housing & Planning (copy to M. S. & A. C.)

ENGLAND'S NEW TOWNS

By Anne Woodward Corrigan

A thatched roof pub and a few houses now comprise the English village of Milton Keynes. If all goes according to plan, however, by the turn of the century it will be a complete new city of 250,000 people. Milton Keynes is the newest bud on England's now old growth of new towns. Like most other English new towns, it is part of a concerted effort to solve a problem that also troubles the United States: Too many people and too few adequate dwellings in the older major cities.

Building in Milton Keynes, at the rate of 2,500 houses a year, is expected to begin soon. Average density will be eight dwellings to an acre—low for England but high by American suburban standards. Milton Keynes will be no glass-spired dream city. Its planners have dismissed skyscrapers as uneconomical. A monorail system, once seriously considered, was ruled out as impractical.

But England's newest new city—the first postwar town to be built to a large extent through a "private enterprise" system—has lofty social goals. Among the most notable is to make available in the new community jobs for all the people who live there. Residents could, if they desired, commute to jobs elsewhere. But the goal is to make it possible for all who wish to work as well as live in the city to do so.

Employment patterns and policies and their impact on other aspects of life have figured heavily in the planning of Llewelyn-Davies, Weeks, Forestier-Walker, and Bor, the British architectural firm handling Milton Keynes. (The same firm is making studies which will lead to a master plan for two U.S. new towns, one to be called Amherst, near Buffalo, N.Y., and a second, as yet unnamed, near Racine, Wis.) To the usual array of building, landscape, transportation, and land-use experts have been added a sizable group of demographers, sociologists, and economists. They are considering the problems of people and how they wish to work, travel, shop, and use their leisure time. They are considering, for example, the different uses of leisure which may come with a shorter workday or shorter workweek. They have noted the increasing employment of women, and the resultant need for child care centers and part-time jobs located close to home.

The planners of Milton Keynes hope to avoid the growing pains which have plagued other English new towns. And since England has been a leader in the development of these communities, they have a wealth of experience upon which to draw. Letchworth and Welwyn Garden, which date to the early 1900's, served as prototypes for the spate of new towns established after World War II. Each was laid out with a town center, neighborhoods with small shopping centers of their own, and industrial sites located along rail lines.

England's New Towns Act of 1946 launched a ring of communities outside the 5- to 10-mile stretch of undeveloped land (the green belt) that encircles London. The aim of the new towns was simple—to relieve congestion in London by making it possible for the poor to find better homes and jobs elsewhere.

Development Corporations were appointed by the government to buy land within each designated new-town area, construct housing, and develop the town. The corporations are empowered to borrow money from the national treasury at the going rate of interest (currently 9½ percent), to be repaid in 60 years. Their financial success varies. Stevenage, first new town constructed after World War II, was making a profit in only 6 years. When development is complete, a new body, the Commission for the New Towns, takes over.

Over the years the role of private enterprise in new towns has grown. As the development corporations, using government money, proved that the new towns could be a financial success, more private investment has come in for shops, industry, and housing. But the government continues to be a major factor. Sir Frederick Osborn, one of the leading advocates of new towns in Britain in the early postwar years, says:

"We must marry private enterprise to government control. The future is in the mixed economy."

Few of the towns were totally new. Most had at least a nucleus of houses—some, even shops or industry. Industries were given special inducements to locate in them, instead of in already compacted cities. Established industries in London were encouraged to move to new towns, with the government having the final say about what industries would go where. Initially, it was hard to lure firms to new

Mrs. Corrigan, a member of the Manpower Administration information staff, is spending a year in Europe studying new towns under a Department of Labor fellowship.

MEMORANDUM

TO: Paul Anthony

FROM: Emory F. Via, Director, Resources Development Center

- o -

Regarding the proposal to the National Foundation on the Arts, the National Foundation is an independent federal agency created by an Act of Congress. It receives funds by appropriation and by gift. Grants made to private organizations may be given only if such organization is non-profit according to IRS standards.

The national endowment accepts the accounting proceedures of the grantee organization so long as those proceedures are normally acceptable in the business world.

It does not require a special accounting proceedure. The grant may be audited by a staff person from the national endowment. A grant from them, as is the case in all ~~gift~~ grant expenditures is subject to the possibility of an audit from the general accounting office.

We are asking for what they call a group grant and for the maximum amount which they will give, $10,000.00. Equivalent matching funds by the receiving institution is required. The proposal needs to be executed within one year.

At least one progress report at an appropriate time during the project is required as well as a final report at its conclusion. Proposals will be evaluated by "experts from various environmental design fields to ~~issue~~ insure excellence, objectivity and scope. The National Council on the Arts will make the final determination subsequently."

The announcement of these grants includes: "the endowment recognizes the need for freedom and flexibility in the pursuit of creative work. Clarity and precision in the proposal statements, therefore,

is not to be interpreted as an attempt to constrain creative freedom. Rather it is to facilitate comparison with other proposals for purposes of selection."

The problem is that if we are to submit this proposal it needs to be post marked "not later than March 6."

Re: Summer Intern Program - Housing and Planning and the Community Organization Project

Attached is a brief outline of a proposed summer intern program for your perusal and reactions. Since time is crucial, your early reply is necessary.

It would be helpful if you would address your comments to:

a. A desirable project time

b. Potential Project benefits

c. Your interest in the project (e.g. what might be done relative to your area of interests.)

d. Suggestions relative to procedures, scope and finances.

e. Anything else you deem pertinent

Q. Is this time? How does it relate to other priorities? 6 mos of Art's time
Too broad in scope: specify

ENVIRONMENTAL AWARENESS AND RESTORATION

This project is designed to engender in the residents of small communities an understanding of the redevelopment process. The primary goal is to find tangible ways for residents of such communities to participate in the design and implementation of projects to stabilize their communities and to make them more esthetically pleasing.

This project will be conducted by interns of the Housing and Planning and Community Organization Projects. These interns will work with local volunteers to implement the proposed program.

The program will be geared for research and action with an overiding objective of documenting the towns needs in a variety of areas. For instance, in Hobson City, the project might be the development of a park. They might also investigate the entire subject of recreation and determine what groundwork must be laid to allow an effective ongoing recreational program. Out of firsthand experiences, the interns should be able to make a report on all facets of the community's problems.

Weekly contacts must be made with projects to allow close supervision. Actual visits to the locality are recommended. During the visits, information relative to problems

should be gathered in order that investigations of resources may be initiated. These sources of aid will be available to local officials at the end of the summer during a two day "Planning Education and Resource Development" conference. During the conference, arrangements will be made for continuous planning assistance from the Housing and Planning Program.

When did they come into act

The probable benefits of the described program to SRC and the town are varied. Hopefully, it would furnish some groundwork for influencing policies relative to small towns; especially federal funding policies. It should help the community become more aware of its own problems and possible resources.

Where?

Places Under Consideration for Summer Program

Triana
Jacksonville
Hobson City ALABAMA
Ridgeville
Roosevelt City

Budget Items

(1) Salaries
(2) Travel
(3) Room and Board (Orientation - Atlanta, Georgia; intern meeting, Birmingham, Alabama; conference, Atlanta.)

How much

Orientation

June 11th and 12th

Thursday - Arrive at SRC office (5 Forsyth Street) by 12:00 noon.

Introduction to SRC's staff and a briefing on the Councils activities. (All sessions to be held in SRC conference room.)

Friday - Briefing on:

a. Community Organization

b. Housing and Planning

c. Program in Environmental Awareness and Restoration

Saturday - All interns depart for target communities.

Interim Meeting - Program Reports

Place: Birmingham, Alabama

Date: July 10th and 11th (all day Friday and Saturday morning.)

Purpose: Have interns make progress reports. Provide a forum for questions and answers.

Conference at End of Summer Program

Place: Atlanta, Georgia (Will be planned in detail during summer.)

H&P

NATIONAL URBAN LEAGUE, INC. REGIONAL TECHNICAL TASK FORCE/HOUSING

MEETING 70-1; April 13, 1970; 4:00 PM - SRO/NUL Offices: 136 Marietta St.NW
Atlanta,Ga. 30303

ATTENDEES: Hubert Jackson, Moreland Smith, Clarence Coleman & Bruce Gruber.
Robert Thompson and John Edmunds were unable to attend.

Discussion centered on the AD HOC Jackson, Mississippi effort to be held May 19-21, 1970. Suggestions included names of persons who might be invited to sponsor and participate in the programmatic activities which may be included in the outlines developed to date.

Both Mr. Jackson and Mr. Smith offerred strong recommendations that "people-oriented" discussion opportunities be organized within the structure of the conference. These recommendations join the concern articulated earlier, that national groups should sponsor the conference "in association with" local and regional groups concerned with various aspects of housing.

Mr. Smith suggested that housing production required employment of laborers whose number could be solicited, with proper training provided, from among the agricultural (and, therefore, seasonally employed indigent work force). Further study on the possibility of a program in this area will be made.

NEWS RELEASE

METROPOLITAN FUND, INC.
211 WEST FORT STREET
DETROIT, MICHIGAN 48226
TEL: 961-7887

Gwen ~~Mrs.~~ & AC. ~~Should we get this?~~ G.J.V.

September 1, 1970
For Immediate Release

~~Yes - Lets order it~~

The physical, economic, social and governmental dimensions of new town development are explored in "Regional New Towns," a study by the Metropolitan Fund, Inc.

Metropolitan Fund in October of 1969 convened a citizen conference on new towns in an attempt to analyze some realistic answers to one of today's most pressing urban problems ... inadequate housing. The result of that conference is "Regional New Towns," an informative publication covering much of the comprehensive material and information available on the new town concept, as well as original materials from the conference.

A Policy Committee statement preceding the report specifically points out the advisability and desirability of "paired" new towns, "a design which would couple the rebuilding of a central city area with the building of a peripheral new town. The two would be paired through transportation, business, social and communications interlinks to provide the widest possible freedom of choice for all residents of both communities as to where and how they will live, learn, earn and enjoy themselves."

(more)

Pg. 3

Please order. Fill out form & charge to Housing & Planning

The Committee is quick to emphasize that, "a competitive relationship between peripheral development and central city rebuilding would be pointless ... competition between the two necessities could cause both to fail."

The need for social justice and order and a stable ecological balance are challenges which must be met with today's realities, "if we are to preserve the opportunity to live fully, rather than to exist ... if we are to leave our children a legacy of enrichment, rather than an environmental debt," the report opines.

The report contains an extensive series of briefing papers on new town development which conference participants were requested to read prior to the meeting, as well as original papers presented at the conference, and a special section devoted to participant discussion of new towns.

Program speakers included local, national and international experts in the field of planning, finance, realty, political science, transportation, urban studies, regional and national government, architecture and new town development.

Correspondingly, citizens invited to the conference to explore the future of new towns were members of the financial community, the automotive industry, the Michigan Legislature, planning agencies, unions, the home building industry, members of seven major Detroit neighborhood rehabilitation and housing projects, and representatives of the poor.

Joining with Metropolitan Fund in sponsoring the regional new town conference were the Metropolitan Detroit Citizens Development Authority (MDCDA), Wayne State University Center for Urban Studies and Urban America, Inc.

(more)

The report, "Regional New Towns," may be purchased for $5.50 from the Metropolitan Fund office, 211 West Fort Street, Room 1407, Detroit, Michigan 48226.

> "Urban growth should be our opportunity, not our enemy. It invites us to correct the past; to build new places that are infused with nature and stimulating to man's creative sense of beauty; places that are in scale with people and so formed as to encourage and give strength to real community."

Urban Planning + Housing

Panel Calls Model Cities 'Over-Regulated,' Urges Nixon to Push for Revenue-Sharing

9-11-70

By a WALL STREET JOURNAL *Staff Reporter*

WASHINGTON – A 10-man task force told President Nixon that the Model Cities approach as a remedy for urban poverty was a "long step in the right direction," but the program was both "over-regulated and undersupported."

The Model Cities program was spawned during the Johnson Administration and has been under continual review since the Nixon Administration took office. Mr. Nixon's task force on Model Cities, headed by Prof. Edward C. Banfield of Harvard University, concluded that the Model Cities program, as well as some 400 other grant-in-aid programs to the cities, all would benefit greatly if local communities were given more freedom to use the funds they receive as they see fit.

"With about 400 grant-in-aid programs involving roughly $10 billion a year, Federal aid to cities is now on such a scale that the Federal bureaucracy is incapable of administering it," the report declared. "Most city governments can be trusted to use Federal funds in the manner Congress intends, but whether one trusts them or not it is necessary to allow them much more latitude because the alternative is waste and frustration and-or their replacement by a vastly expanded Federal-state bureaucracy."

In the future, the task force recommended that revenue-sharing, rather than categorical grants-in-aid, become the principal means of dispensing financial help to the cities. The group urged the President to "use his influence with Congress" to switch 25% of the present level of categorical funds to revenue-sharing by fiscal 1972 and another 25% by fiscal 1974.

Specifically, the report favored continuing the Model Cities program "as a means of asserting the interest the nation has in improving the quality of life in the city slums," but recommended that the program's scope be limited to the 150 cities already selected.

"The cities should be required to use the funds to improve conditions in their poorest neighborhoods, to keep current a plan, to afford citizens of affected neighborhoods opportunities to contribute to the planning and operation of Model Cities programs, and to meet a few other standards," the task force said. "The Model Cities administration should make an annual review to see that these requirements are met; beyond this it shouldn't regulate the Model Cities."

To assure adequate support of the program, the task force urged the President to "make it unmistakably clear to heads of urban agencies that he attaches importance to it," directing them to set aside up to 25% of available funds for the program.

Two members of the task force – Joseph W. Barr, head of Pennsylvania's department of community affairs, and Charles M. Hill Sr., deputy secretary of Wisconsin's department of local affairs and development – wrote a separate report that found more positive results in the Model Cities planning process to date and urged the President to ask Congress to continue the program for a five-year period and pledge $1 billion-a-year to it.

To: Moreland Smith
Robert Anderson

From: Horace Barker

Re: Suggested follow-up questions for Robert Affeldt

1. It has been reported that Shermon Unger (the conservative HUD General Counsel) was forced on Romney by the White House. Can you confirm or deny? Do you believe Unger was deliberately based at HUD to keep the EO program "in check." For example: To prevent implementation of an enforcement program? How strong is the possiblity that the new G.C. will be more receptive to more effective enforcement?

2. What other personal changes do you feel are necessary in order for HUD to have an effective program such as you outlined in your resignation statement?

3. You point out that Frank Fisher was fired from his position as Regional Administrator because of "over-enforcement." In what specific programs did he cut funds and for what cities? Is he the <u>only</u> production administrator to do this?

4. You say there is a "pressing need today to publish guidelines defining discriminatory practices upon the part of private institutions such as builders. . ." How would you describe the reason for this inaction? Does it involve a lack of initiative, commitment, and administrative expertise on the part of EO officials? Or, have guidelines been proposed but held up by the White House or, other political considerations? Or, does the strucuture and organization of HUD singly permit the program directors so much power that their objections can't be overcome?

5. On page 7, you indicate that in 1968, many federal agencies sent HUD proposals for abiding by Section 808(d) "A summary of the reports was made by HUD. The matter ended there . . ." Would it be possible for us to get a copy of the summary for background information if not for publication?

Cut-Rate Housing

Cheaper Homes Play A Part in Forecasts Of '71 Spurt in Starts

Builders Reduce Floor Area, Drop Extras in Attempt To Broaden Their Market

Government Aid Is a Factor

10/16/70

By TIMOTHY D. SCHELLHARDT
Staff Reporter of THE WALL STREET JOURNAL

Levitt & Sons, the big New York-based builder, recently added a "new" model to its Long Island line of homes. It doesn't have carpeting, air-conditioning or a dishwasher. It has a one-car instead of a two-car garage. The second floor is unfinished; the buyer divides it into rooms when he can afford it.

The model is "selling like crazy," declares a Levitt spokesman. The main reason, he says, is its price of $23,990, fully $5,000 under the firm's cheapest home till now. He explains: "The fact is that a lot of people aren't interested in the frills anymore—they just want the basic home. We haven't seen a trend like this since the 50s."

Talks with other builders indicate that the phenomenon is occuring all across the country. Home buyers, stung by inflation, are more price-conscious now than any time in the recent past. They are demanding—and finally getting—the housing industry's counterpart of the compact car.

This development is contributing to the expectation that new housing starts, which have tailed off during the last two years, will rise sharply in 1971. The National Association of Home Builders, a trade group, estimates that 1.7 million new homes will be started next year, 20% more than in 1970. If that prediction comes true, it would make 1971 the industry's best year since the postwar boom of 1950.

The Ripple Effect

Such a development would bode well for the whole economy. "As housing goes, so go sales of lumber, furniture and a host of other products," notes Sherman Shapiro, an economist with the Federal Home Loan Bank Board. "Few things would help get things moving again like a healthy boost in home building."

Builders' estimates of next year's production aren't crystal-ball guesses. Builders borrow money, line up labor, prepare sites and order supplies in the fall for houses they plan to start in the spring, and many contractors report that they are committing themselves far more heavily this year than in the previous two years.

J. W. Underwood Co., a Jackson, Miss., housing concern that last year built 224 homes, now is getting about 400 sites ready for construction, "enough for 12 to 18 months of busy activity," says Ralph McDaniel, senior vice president. That's double the number of sites the firm readied a year ago. Ryan Homes of Pittsburgh, one of the nation's largest single-family home producers, has arranged mortgage commitments to handle financing for 20% more home buyers next year than in 1970. And Mastercraft Homes Inc. of Phoenix, expecting home sales to jump to 1,000 in 1971 from 600 this year, is increasing its labor force to 500 men from 300, says Charles Gundrum, president.

New Sawmills

Among the suppliers, Georgia-Pacific Corp., a major maker of materials, has been rushing the completion this year of 17 new sawmills, particle board and plywood plants "to meet a sharp rise in demand anticipated for our products next year," says a company official.

Several developments underlie the expected housing surge. Mortgage money is becoming more readily available as the flow of funds increases to savings and loan institutions, the major mortgage lenders. In addition, the recent dip in the prime interest rate—the rate banks charge their biggest and best customers—to 7.5% from 8% is likely to signal lower long-term mortgage rates within the next two to three months, builders say.

At least equally important is the increased help that Government-connected agencies are giving to families that haven't been able to afford homes.

These Governmental units plan to pump close to $13 billion into the housing market next year, up from $10 billion in 1970. All in all, the National Association of Home Builders expects that Government housing programs will play a part in almost 50% of 1971 housing starts, a sharp rise from only 27% in 1969 and 20% two years ago. The recipients of much of this aid are families with annual incomes of $9,000 or less.

A Cautious Attitude

These assistance programs, several authorized by recent legislation, help account for much of the move to simpler, less expensive homes, builders say. Under terms of the programs, the most expensive home a family buys can't exceed $25,000, and most homes purchased are priced below $20,000.

However, families who can afford higher-priced homes also are being attracted to the less-expensive models. "Families have watched inflation eat at their savings, and they're more concerned about job uncertainties now," says George Katona, director of the University of Michigan's quarterly survey of consumer sentiment. "They're afraid to overextend themselves in a long-term investment like buying a home."

A case in point is Michael Hills, a 28-year-old New York attorney. Mr. Hills and his wife were in the market for a house for a year before buying one of the basic Levitt models. "We could have afforded something more expensive, in the $40,000 to $45,000 range, but we figured we'd better go easy at first," says Mr. Hills. "Times being what they are, we wanted to conserve our money. If we need more later, we can always move up."

Such attitudes have forced builders to change their offerings to get home prices in line with what many buyers are willing to pay. Many builders simply are offering smaller models. The Larwin Group, a large Los Angeles-based builder that sold 2,000 houses in 1969, has designed a three-bedroom model containing 1,100 square feet of floor space; the smallest present model contains 1,300 square feet. Denver-based Golden Key Homes Inc., which

Housing
urban

Cut-Rate Housing: Lower-Priced Homes Help Increase Starts

Continued From First Page

built 403 homes last year, now offers houses starting at 1,100 square feet, half the size of its smallest model previously. "That's the only way we can get our homes into the $20,000 to $30,000 range," says President Michael Cooper. His firm's houses had been priced above $35,000.

Builders also are offering fewer amenities. "Instead of the top appliance names, we're offering manufacturers that are a little bit lower on the list. Air-conditioning is optional, and we have one type of carpeting now. It all helps lower the price," says Samuel Primack, partner in the Perl-Mack Companies of Denver, which sold 1,210 homes last year. Other builders say they're omitting glamor features such as fireplaces and automatic garage door openers.

Notes Robert Stephens, an Indianapolis home builder who sells about 35 homes each year: "My buyers used to insist on spacious homes with air-conditioning, dishwashers and intercoms. Now they say, 'Bob, just give us the old square footage. And leave room until later for those other things.' "

Attached hereto is an agenda for a Congressional Study on the Effectiveness of Housing Laws - gotten up by the CS staff.

Bruce Gruber is trying to get up a southeastern Task Force to testify and prepare background for testimony.

Possibly, SRC is going to do "their thing" alone. If so, fine, if not, I can co-ordinate with Bruce as "Housing Advisor" to the Urban League office.

GENERAL PROCEDURE FOR PANELS

(1) Subcommittee Meeting - October 13

-- discuss panels

-- discuss general procedures

-- appoint Subcommittee members to panels

(2) Panel Sessions - November

-- discuss existing programs

-- plan field activities

(3) Field Trips - December through March

-- conduct field trips

-- prepare report of recommendations

(4) Conclusions - April

-- Subcommittee review of panel recommendations

-- prepare and introduce legislation

PRIORITY

Gruber

OUTLINE OF MATERIAL TO BE COVERED

PANEL I Production: Increasing the Supply of Housing

*Background -- This material will not be reviewed formally by the panels or the discussion groups. It will be treated in preliminary papers and brief presentations at the outset of each seminar.

*A. Housing Needs -- Review of National Housing Goals

(1) The Existing Stock
- a) Number
- b) Characteristics, i.e., size, type, etc.
- c) Condition
- d) Location
- e) Costs i.e., rents and sales prices
- f) Economic patterns i.e., "Filtering down", coops versus rental, etc.

(2) Current Housing Production
- a) Conventional
- b) Industrialized and Modular
- c) Mobile Homes
- d) Location and Land

(3) Government Assisted Housing Production
- a) Federal
  - -FHA Subsidized
  - -FHA Unsubsidized
  - -Public Housing
  - -Other
- b) State and Local

(4) Rehabilitation
- a) Conventional
- b) Subsidized
- c) Special Efforts

(5) Performance
- a) By Goals
- b) By Comparison to the other Nations
- c) By other Projections and Standards

(6) Projections
- a) Next year, five years, decade

B. Producing Housing - Review of Existing Housing Laws and Programs

(1) Who Builds?
- a) Private Developers
- b) Limited Dividends
- c) Non-Profits
- d) Coops
- e) Government
- d) Large Corporate Enterprises
- f) Others

(2) How Do They Build?
- a) Manpower
- b) Organization of the Industry
- c) Technique and Technology
  - -Conventional
  - -Pre-fabricated
  - -Factory Built

(3) Where Do They Build?
- a) Central City -- Costs and Availability
- b) Suburb -- Costs and Availability
- c) Rural -- Costs and Availability

(4) What Do They Build?
- a) Costs
  - -Materials
  - -Labor
  - -Land
  - -Financing
  - -Processing
- b) Regulation
  - -Mortgage and Cost Limits
  - -Minimum Property, Design and Construction Standards
  - -Cost Certification
  - -Davis-Bacon
  - -Amenities
  - -Workable Programs
  - -Local Controls
  - -Processing

(5) Why Do They Build?
- a) Development Profit
  - -Land
  - -Fees
  - -Allowances
  - -Equity (Sales)

b) Cash Flow
- -Distributions
- -Operating Fees

c) Tax Savings
- -Interest
- -Taxes
- -Depreciation

d) Residuals
- -Sales
- -Refinancing
- -Non-Profit
- -Taxes

e) Yields

*The following is the matter to be considered by the members at the public sessions and private seminars.

*C. How to Increase Production

(1) What Should our Production Objective Be -- National Housing Goals

a) How Many Units Should be Produced?
- -Next decade
- -Next five years
- -Next year

b) What Kinds of Units Should Be Produced?
- -Single family
- -Multi-family
- -Combinations
- -Others

c) Where Should They Be Located ?
- -City
- -Core
- -Suburb
- -Rural

d) How Should They Be Held ?
- -Rental
- -Ownership
- -Other

e) How Many Units Should Be Subsidized ?
- -Houses versus People
- -Income Limits versus Needs

f) What Kind of Construction Methods Should Be Used?
- -Conventional
- -Industrialized
- -Mobile Homes

g) What Emphasis Should Be Given to Rehabilitation?
h) Who Should Build These Units?
- -Organization of the Industry
- -Private Developers
- -Limited Dividends
- -Non-Profits
- -Coops
- -Government
- -Large Corporate Enterprises
- -Others

(2) What Should the Federal Government's Responsibility Be?
a) To answer these questions
b) To help achieve these objectives

(3) Government Action (Matter to be covered depends on answers to 2(a) and (b)
a) Provide Adequate Financing
b) Reduce Costs
- -Land Program
- -Expand and Improve Work Force
- -Improve Construction Technology
- -Alter Financing and Processing Methods

c) Assure Proper Sites
d) Additional Incentive for Private Participation in Federal Programs
- -Increase Distribution
- -Tax Incentive
- -Fees and Allowances
- -Cost Certification
- -Davis-Bacon
- -Mortgage Amounts

e) Improve Administration of Federal Programs -- Housing and Urban Development Act of 1970
- -Consolidation
- -Uniformity
- -Procedure.

f) Other

D. Criteria For Evaluating Federal Initiatives

(1) Goal to be Achieved
(2) Program Specifications
(3) Priority of Effort
(4) Administrative Load
(5) Operating Efficiency
(6) Comparative Cost of Program Initiative

E. Recommendations

OUTLINE OF MATERIAL TO BE COVERED

PANEL II Demand: Reducing the Amount People Must Pay for Standard and Substandard Housing.

*Background -- This material will not be reviewed formally by the panels or discussion groups. It will be treated in preliminary papers and brief presentations at the outset of each seminar.

*A. The Present Subsidy -- Review of Current Law and Programs

(1) Characteristics of the Existing Assistance Formula

a) To Get Housing Built
- -The Supply Oriented Subsidy
- -Project Subsidies Tied to Specific Unit
- -Production Subsidies to Promote New Construction and Rehabilitation

b) To Lower Cost Of Occupancy of New Units
- -Methods Used
- -Interest Support
- -Principal Support
- -Other Operating Support
- -Need - Allowances for the Purchase or Rental of Standard Housing

(2) Administration

a) Current Subsidy Devices and Techniques
- -Interest Payments--(Section 235-236)
- -Principal Payments
- -Direct Payments--(Rent Supplements)
- -Public Housing Formula
- -Loans--(Rehabilitation)
- -Special Grants and Devices (the Piggy-Back Subsidy)
- -Taxes
- -Others

b) Controls Over Who Receives Assistance
- -Income Limits
- -Income Certifications
- -Preferences
- -Rent-Income Ratios
- -Asset Limitations
- -Occupancy Rules
- -Eligibility Rules
- -Exemptions & Deductions
- -Others

c) Operations - How the Subsidy is Allocated ?
- -FHA Central and Local
- -HHA Central and Local

-Public Housing Authorities
-Other Local Administration

(3) Who Benefits From Current Subsidies and to What Degree?
a) Rich
b) Middle
c) Moderate
d) Poor
e) Very Poor
f) Families or Individuals
g) Elderly
h) Handicapped
i) Displaced
j) Others

(4) What Are Current Costs of the Subsidy Program
a) Authorizations
b) Appropriations
c) Indirect
-Federal Taxes
-Local Taxes
-Other
d) Administration
e) Other Local Costs

*The following matter will be the subject to be considered by the members at the public hearings and private seminars.

*B. <u>The Future Subsidy -- Improvements of Existing Subsidy and/or Introduction of New Subsidy</u>

(1) Who Needs Assistance to Afford Standard Housing?
a) How much income should a family devote to housing?
b) Should aid relate to financial capacity?
c) How many families should be assisted?

(2) The Nature of the Subsidy
a) What should the subsidy do?
-<u>Houses</u> -- Should it Stimulate Production and Be Tied to Dwelling Units ?
-<u>People</u> -- Should it Be Tied To Family Need and Should All Those With Need Receive Assistance?
b) Who should receive the subsidy?
-What Should Be the Coverage of Subsidy Programs?
-Should All Those Eligible Receive Assistance?
-How much Subsidy Should Be Paid to Rich and Middle Class Families?

c) What should receive the subsidy?
- -New Units
- -Rental Units
- -Owned Units
- -Existing Units
- -Rehabilitated Units

d) What should be the extent of the subsidy?
- -How Deep Should the Subsidy be ?
- -When Should the Subsidy Stop?

(3) What Other Objectives Besides Decent Shelter Should the Subsidy Seek to Achieve?
- a) No Concentration by Income and Race
- b) Stimulate Individual Choice
- c) Stress Quality, Design, Style
- d) Facilitate Administration

(4) How Should the Subsidy Be Administered?
- a) Who should pay the subsidy?
  - -Federal
  - -State
  - -Local
  - -Combination
- b) How should it be paid?
  - -Federal
  - -State
  - -Local
  - -Combination
- c) What kinds of standards Should be used?
  - -Income
  - -Eligibility
  - -Assets
  - -Others

(5) What Would be the Cost of Subsidy?
- a) Costs
  - -Direct
  - -Indirect
- b) Priority

C. Related Programs

(1) How Should other Government Programs Relate to the Housing Subsidy?
- a) Physical Evnironment
  - -Urban Renewal and Model Citites
  - -New Communities
  - -Physical Facilities Programs, i.e., water and sewer, open space.
- b) Community Development

-Tenant Involvement i.e., tenant councils, management and maintenance, planning and construction
-Housing Counseling

c) Open Communities
d) Welfare and Income Maintenance
e) Social Service
-Operation of Related Health, Welfare and Education Programs

D. Recommendations

OUTLINE OF MATERIAL TO BE COVERED

PANEL III Development of a Suitable Living Environment

*Background -- This material will not be reviewed formally by the panels or discussion groups. It will be treated in preliminary papers and brief presentations at the outset of each seminar.

*A. Metropolitan Development -- Review of Current HUD Law and Programs

(1) Central City Development
- a) Urban Renewal
  - -Planning
  - -Action
- b) Model Cities
  - -Planning
  - -Action
- c) Interim Assistance for Blighted Areas
  - -Planning
  - -Action
- d) Neighborhood Facilities
- e) Demolition Grants
- f) Code Enforcement
- g) Urban Beautification and Improvement
- h) Historic Preservation
- i) Urban Property Insurance
- j) Urban Parks

(2) Metropolitan, Suburban and Rural Town Development
- a) Public Facilities Loans
- b) Open Space Land
- c) Water and Sewer Facilities
- d) Parks and Recreation
- e) Advance Land Acquisition
- f) Land Development
- g) New Communities
- h) Small Town Services
- i) Flood Insurance
- j) Community Development Training

(3) The Planning Imbroglio
- a) Comprehensive Planning Assistance
  - -The Section 701 Family

b) Urban Renewal
- -CRP
- -GNRP
- -S & P
- -NDP

c) Model Cities
d) Public Works Planning
e) Planned Areawide Development
f) Urban Mass Transportation Planning
g) Social Planning
h) Planning Requirements
i) Others

(4) Relationship to Other Programs
a) Transportation
b) Interior
c) HEW
d) OEC
e) Labor
f) Other

*The following matter will be the subject to be considered by the members at the public meetings and private seminars.

*A. Towards a National Urban Growth Policy

(1) Urban Growth and New Communities--the Housing and Urban Development Act of 1970.
a) Unfinished Business

(2) Objectives of National Urban Growth Policy
a) Choice and Balance in the Development of Human and Physical Resources in Urban Areas
b) Continued Economic Strength in Urban Areas
c) Balanced Migration and Physical Growth
d) Comprehensive Treatment of Unemployment and Poverty
e) Open Communities
f) Strengthened Capacity of Government to Contribute to Coherent Urban Growth
g) Coordination of Administration of Federal Programs

(3) How Should the Federal Government Define and Implement this Policy?
a) Domestic Council and the Executive Office of the President
b) HUD
- -Organization of Department (1965)
- -Convener Responsibility

*B. The Next Steps in Achieving a Policy

(1) Resolving fiscal disparities and the multi-jurisdictional metropolitan problem
   a) Need to Induce (or coerce) Jurisdictions within Metropolitan Areas to Develop Institutions Which Can Resolve these Questions
      -Metro Area Political Process in the Inner and Outer City
      -Metro Area Organization, i.e., City/State/County/Town /Satellite/Suburb/Country
      -Comprehensive Metropolitan Planning
   b) Need to Equate Service and Development Requirements with Available Fiscal and Administrative Resources
      -Planning Assistance at Federal, State and Local Levels
      -Development Assistance at Federal, State and Local Levels
      -Proposals, i.e., Urbank, Planning Assistance, Incentives (Title II), Others

(2) The HUD Delivery System--Rationalizing the categorical grant program
   a) Alternative Methods of Delivering Federal Assistance for Comprehensive Metro Development and for Resolving Problems of Physical Environment
   b) Alternative Subsidy Devices for Aiding Development at Different Government Levels
   c) The Post-Audit or Performance Approach
   d) Proposals, i.e., Consolidation, Block Grants, Administrative decentralization, Others

(3) Improving Administrative Capacity of State and Local Governments
   a) Federal Incentives for Shifting Administrative Responsibility for Areawide Functions to Larger Government Units
   b) Shifting Fiscal Burdens to State or Federal Government, i.e., Welfare, Education, Others
   c) Shifting Methods of Raising Revenue by
      -Government, i.e., State, County, Local
      -Tax Method, i.e., Property, Sales, Income, Other
   d) Professionalism
      -Pay
      -Education
      -Continuing Training

MINERAL BLUFF, GEORGIA 30559

MEMORANDUM October 31, 1970

TO: Emory Via, Southern Regional Council

FROM: Si Kahn

SUBJECT: Farmers' Home Administration

In 1966 thru 1969, while serving as Deputy Director of Community Action for Improvement, Inc., an eight-county CAP agency in West Georgia, I worked extensively with the West Georgia Cooperative. This co-op was organized originally about 1965 as an okra marketing operation among black farmers in Harris County, Georgia, and at the time was called the Harris County Farmers Cooperative Association. Some thirty farmers formed the original membership. Okra was marketed under a pre-season contract to Southern Foods, Inc. in Montezuma, Georgia. The co-op used the local black 4-H building as its headquarters. Behind the 4-H building the co-op had constructed a rough log and tin marketing shed to be used for grading, and to cover the truck scales they had purchased.

From 1966 to 1968, the co-op expanded rapidly, increasing its membership to over 300, and expanding into neighboring Talbot County. With the increase in membership came a growing diversification of interests, and a new definition of the role of the co-op. Many of the members were not farmers, and were interested in having the co-op provide services in addition to those for its agricultural members. Gradually the idea evolved for a co-op center, which would include not only facilities for farm marketing operations,

~~Energy~~ File — Housing & Plan.

Any suggestions?
I plan on telephoning Mike Brooks on the 4th January for an appointment preferably on the 11th January if these dates are okay.

DEPARTMENT OF
CITY AND REGIONAL
PLANNING

UNIVERSITY OF NORTH CAROLINA • CHAPEL HILL • 27514

December 18, 1970

Mr. Moreland Griffith Smith
Director, Housing & Planning Program
Southern Regional Council, Inc.
5 Forsyth Street, N.W.
Atlanta, Georgia 30303

Dear Morey:

We're interested in your proposal and want to do all we can to help.

As to your Item (1), I believe your key people would be Mike Brooks and Jon Howes. Why don't you plan a return trip in early January to talk further with them, and preferably at a time when Mike Stegman and Bob Mayer would also be available.

Evaluation of H&P

Their telephone numbers are as follows: Brooks 919 933-3983; Howes 919 933-3074.

I've already indicated our interest in the summer intern program.

Your Item (3) suggesting some type of long range affiliation might best be worked out with Jon Howes and the Center for Urban and Regional Studies. Jon is in close touch with our people and others in the University who would be interested in participating.

Let me know when you're coming again so we can arrange to talk further about all this.

Sincerely,

Jack

John A. Parker

JAP/me

cc: Brooks, Stegman, Mayer, Howes

(919) 933-3983

TELEPHONE 933-3983 • AREA CODE 919

but space for a gas station, cafe, grocery store and recreation and community center as well. After almost a year of frustration, caused by the unwillingness of white landowners to sell land to a black cooperative, two sites were purchased out of co-op operating funds: a 1.9 acre site on U.S. 27 south of Callaway Gardens, and a 3.0 acre site on a nearby state highway.

A decision was also made by the co-op Board of Directors to apply for a loan from FmHA. The co-op manager contacted the district manager for FmHA, Travis Turner, in Newnan, Georgia. Mr. Turner assured the co-op's representatives that there would be no difficulty in getting a loan, and that the money would be in the hands of the co-op within thirty days after the completed application was received.

Completing the application turned out to be another matter entirely. Over the next year, FmHA showed an amazing ability to come up with "just one last form" before the application could be completed. This included the following actions, none of which were mentioned in the initial meeting:

1) Obtaining deeds and plats of the two sites purchased by the co-op.

2) Coding maps of Harris and Talbot County to show the location of all families who would use the proposed facility.

3) Obtaining itemized bids and architectural drawings from two construction firms for the proposed building.

4) Obtaining certified copies of the co-op's Articles of Incorporation and Charter.

5) Holding a special membership meeting to approve the proposal.

6) Obtaining individual surveys of each family in the co-op. Each survey was, in effect, a complete FmHA loan application form. This step nearly compromised the proposal, since a number of families got the impression that their assets, which they were required to list, would be used as collateral against the co-op's loan. Some 100 of these forms were completed.

7) Developing a projected income plot for the co-op over a five-year period. This required obtaining an agricultural economist from Tuskegee to develop the necessary data.

8) Preparing a certified financial statement for the co-op.

It should be emphasized that these steps were not outlined in the initial conversations between the co-op and FmHA, but were introduced one by one as other steps were completed. As a result, over a year was necessary to satisfy FmHA that the application was complete. After the final form was submitted, some six months went by, punctuated only by Mr. Turner's continual reassurance that the money would be in "any day now." What finally arrived was a

one-paragraph letter from FmHA in Atlanta stating that the loan had been disapproved because the co-op did not meet the requirements for an organization to be eligible for FmHA funds!

At the request of the co-op, I made a visit to see Mr. Van Landingham, the Georgia State FmHA Administrator, in Atlanta. Mr. Van Landingham was extremely curt and unpleasant, but well informed concerning the West Georgia Cooperative. He stated that they had refused assistance which he had offered to them; that instead of accepting his employees' recommendations they had to go all the way to Tuskeegee"; that the co-op could never repay the loan; and that they were asking for too much money in the first place. In fact, the co-op was in almost continual contact with Travis Turner, Van Landingham's representative for that area; the loan was for 33 years, and could have been repaid at the rate of about $1,700 a year, not an unreasonable sum for a 300-member cooperative; and the amount requested, approximately $25,000, had been specifically suggested by Turner as a "good amount to request." Furthermore, none of the above were given as the official reason for denying the loan.

Based on these facts, it seems obvious that FmHA never intended to make a loan to the West Georgia Cooperative; and that it simply

kept demanding additional information and forms in order to put off making an official turn-down as long as possible. It is also obvious that the eligibility of the co-op could have been determined without the numerous forms which were required.

Whether or not the West Georgia Cooperative was in reality eligible for the proposed loan was never determined. The Board of Directors of the co-op discussed the possibility of appeals or legal action against FmHA, but finally decided that enough time had been wasted - almost two years, in fact. An application was made to the Federation of Southern Cooperatives for $2,000 to construct a smaller building with volunteer labor; additional funds were raised locally. At last word, the building was open and running well.

* * * * * *

Several months ago, my wife and I decided to improve the house we were living in. The construction was to include adding a bathroom; building a 10' x 20' addition to the back of the house; installing a septic tank; building a hygenic water system; adding central heating; underpinning; and improving the road and two bridges leading to the house. When the local bank turned us down for a loan, we decided to go to FmHA. Because of my previous experiences dealing with them, I asked around locally first, and was told it was best to approach

them through a local contractor who did much of their work in the area. I talked to the contractor, who gave me the necessary forms, which I filled out in his office. He also told me to take the forms to the FmHA office in Blairsville, and to mention that he was assisting me with the application and construction.

The FmHA representative, Mr. Dean, reviewed the application, and said that we apparently met the standards for eligibility, but did not show where we had been turned down by conventional lending sources. I told him that the bank had turned us down, and I could easily get a letter to that effect; and that since there were no other banks in the county, there was obviously no other place I could go to get the money. Mr. Dean replied that the Federal Land Bank in Dalton would make the loan to me, based on the information I provided in the application, using my entire 114.6 acre farm as collateral for approximately $3,500 dollars. I explained that the farm was already financed, at 6½%, and that I couldn't see anyone taking a second mortgage on it. He said, No, the Federal Land Bank would refinance both the farm and the house - at 8½% interest. I told him a man would have to be a fool to refinance a 6½% loan at 8½%. He said that was up to me to decide, but that according to regulations, since I <u>could</u> obtain the loan from another source, FmHA could not consider the application.

Such an arrangement would have cost me about $600 additional on what I already owed on the farm - not to mention the interest on the additional money borrowed to complete the house.

Because we were trying to get the house ready for winter, we decided not to try to appeal, and to borrow the money elsewhere. We eventually borrowed less than half of what we needed from a bank at 8% interest, mortgaging our remaining savings in the process, on a six-month note; and by doing the remaining work ourselves, were able to complete about 75% of what we had planned. However, we have not been able to purchase materials to complete the job; and will probably have to sell our collateral in order to meet the note when it comes due in three months. If Farmers' Home had made us the loan, we would have been able to pay a more reasonable interest rate of about 7%; to borrow the full amount necessary; to contract for some of the work which we could not get to because of job pressures; to keep our savings intact; and to pay off the note over a period of several years, instead of in six months. It is obvious that in this case, FmHA was more interested in having us borrow $7,000 from the government at 8½% interest than in loaning us $3,500 at 7%; and had no interest whatsoever in the effect this might have on our family finances. If there is any consolation, it is that we found this out within a week, rather than in two years, like the West Georgia Cooperative.

These two examples represent two widely different situations: a cooperative made up mostly of poor black farmers in South Georgia attempting to improve their marketing and other services, and a white moderate-income family in North Georgia trying to provide themselves with decent housing. But in both cases the response of FmHA has been similar - and, for an agency which supposedly represents one of the Federal government's main thrusts in improving poor rural areas, inexcusable.

MEMO FROM THE DESK OF:

Harry & Ping

Moreland G. Smith

December 22, 1970

Emory:

I will be out of town on December 23, 28, 29, and 30th - SRC work days. As I am now only one-half time for SRC, I believe I have spent more than the one-half hours involved above in extra SRC hours within the past two (2) weeks. However, it is my plan upon returning on the 31st to spend the immediately following four (4) SRC work days (full days) on SRC things to be absolutely sure.

I will check with you further upon my return to see if there is anything I should know about while I was away on the 23, 28, 29, 30th.

RURAL HOUSING

a periodic newsletter published by the NATIONAL RURAL HOUSING COALITION

1346 Connecticut Avenue N.W. Washington D.C. 20036 • (202) 296-4945

H&P

Volume II December '70 - January '71 Number 1

THE NATIONAL RURAL HOUSING COALITION CLOSED OUT THE FIRST YEAR of its operations feeling quite satisfied with its achievements. In the funding field Coalition supported efforts had brought about:

..... $86 million for Farmers Home Administration to use in expanding its undersized staff. The President had asked for $85 million.
..... $100 million for rural water and sewer system grants. The President had asked for $24 million.
..... $98 million for direct rural water and sewer system loans. The President had asked for $40 million.

THE COALITION IN ITS MELLOW END-OF-THE FIRST-YEAR MOOD was even complacent about the Farmers Home Administration's goal of placing $1.5 billion in support of rural housing during fiscal 1971, even though $7 billion was needed to do the job. After all $1.5 billion would nearly double the volume of the previous year.

THE COALITION ALSO TOOK PRIDE IN ITS LEGISLATIVE ACCOMPLISHMENTS and in a January 2 press release called attention to the following changes brought about by the passage of the 1970 Housing Act, all of which had been recommended by the Coalition, none by the Administration:

..... The maximum grant for farm labor housing had been increased from 66 and 2/3 percent of the cost of construction to 90 percent. Interest rate on farm labor housing loans reduced from five to one percent. The financing of household furnishings for farm labor housing units had been authorized. In addition financial assistance for farm labor housing was now authorized to nonprofit organizations of farm workers and to broadly based public or private nonprofit organizations operating on a state-wide basis.
..... Under the new Act Farmers Home was authorized to serve rural communities of up to 10,000 population in size.
..... The ceiling on loans made for minor repairs was raised from $1,500 to $3,500.
..... The ceiling on loans for rental housing projects was raised from $300,000 to $750,000.
..... The FmHA was authorized to make loans to people who work in cities but want to build or buy a home in the country.

..... FmHA was given discretionary authority in the use of county credit committees.
..... FmHA was authorized to make housing loans to lessees of nonfarm tracts, like Indian reservations, school lands.
..... FmHA was authorized to grant up to $2,500 to rural and small town families whose homes are damaged or destroyed by hurricanes, floods, tornadoes, or other natural disasters.

WHAT THE COALITION SUCCEEDED IN PERSUADING THE CONGRESS TO DO IS BEING UNDONE BY THE WHITE HOUSE. The Coalition heard in mid-January, the Administration was going to cut the fiscal 1971 rural housing program by nearly a half billion dollars. The Associated Press on January 19 ran a story on the impending cut and noted in detail the Coalition's position that such a cut would be "absolutely incomprehensible." The story was carried in hundreds of papers here and abroad and on radio and TV news programs. The Coalition enjoyed the publicity it received as spokesman for the rural poor but shuddered at the consequences to the rural poor should the Coalition's predictions prove correct.

THE RELEASE OF THE 1972 BUDGET ON JANUARY 29 CONFIRMED all of our worst fears. The fine print of the Budget disclosed:

..... The 502 rural housing insured loan program for fiscal 1971 was cut from $1.4 billion to $946 million.
..... The Administration had frozen $56 million of the $100 million appropriated for rural water and sewer grants and $68 million of the $98 million appropriated for rural water and sewer loans.

THE PICTURE IS BECOMING EQUALLY BLEAK on the implementation of the new rural housing authorities provided by the 1970 Housing Act. FmHA by the end of January had taken these actions:

..... The interest rate on farm labor housing loans had been reduced to one percent. No action taken on the 90 percent grant and other features.
..... FmHA was fiddling with a formula that would allow county supervisors to make loans in communities between 5,500 and 10,000 population only if (a) such community was outside an SMSA and (b) located 50 miles from a place with a population of 25,000 or more.
..... No action had been taken to raise the ceiling on 504 loans to $3,500 or to raise the ceiling on rental housing project loans to $750,000.
..... When it came to making loans to people who work in the cities FmHA announced it was only going to experiment with the idea in three states.
..... No action had been taken on lessening the authority of county committees or making loans to lessees.

..... No action had been taken on making the $2,500 grants available to non-farmers whose homes are destroyed or damaged by natural disasters in rural areas and small towns. Though the similar provisions that pertain to farmers had been implemented.

THE COALITION HAS ITS WORK CUT OUT. As a starter Coalition members should seek to get the funds restored for the 1971 fiscal year. The two main cuts are in the insured 502 housing loans and the rural water and sewer grant program.

..... The insured 502 housing loan cut amounts to $472 million. These funds would house 40,000 low-income rural families. FmHA state offices have been asked to spread their remaining funds out over the rest of the year. Florida and several other states have already exhausted all their allotment, so they have no funds to spread. The agency had 70,000 applications on hand January 1 and only had enough funds to make about 26,000 loans. What it all means is that the rural housing loan program is closed down for the rest of the year so far as more than half of the people who have filed applications are concerned, and closed down completely so far as any new applications are concerned, unless the Coalition can pry the frozen funds loose.

There is absolutely no legitimate reason for the freezing of the funds. These are insured loans and have negligible impact on the Budget. In fact at the present time FmHA is paying investors 6 to 7 percent for the funds it is lending at up to 7 1/4 percent.

..... The water and sewer grant cut amounts to $56 million. To use these funds would have an impact on the budget but any fair listing of priorities would place the expenditure of these funds above the $2.8 billion tax bonanza recently given industrialists, and similar expenditures.

If the grant funds are not unfrozen about 800 small communities will have to postpone, once more, their development of adequate water and sewer systems.

Since the action freezing insured rural housing loans and the water and sewer grant funds is purely administrative, pressure must be brought to bear upon the White House. Letters, phone calls and telegrams should be sent directly to the White House and to the Secretary of Agriculture. Congressmen and Senators, particularly those who are members of key committees, should be asked to request the White House to remove the cutbacks.

MEMBERS OF THE SENATE APPROPRIATIONS COMMITTEE, 92nd Congress, are Allen Ellender, John McClellan, Warren Magnuson, James Eastland, John Stennis, John Pastore, Alan Bible, Robert Byrd, Gale McGee, Mike Mansfield, William Proxmire, Joseph Montoya, Daniel Inouye, Ernest Hollings, Milton Young, Karl Mundt, Margaret Chase Smith, Roman Hruska, Gordon Allott, Norris Cotton, Clifford Case, Hiram Fong, Caleb Boggs, Charles Percy and Ed Brooke.

MEMBERS OF THE SENATE COMMITTEE ON BANKING, HOUSING AND URBAN AFFAIRS, 92nd Congress, are John Sparkman, Bill Proxmire, Harrison Williams, Thomas McIntyre, Walter Mondale, Alan Cranston, Adlai Stevenson III, John Tower, Wallace Bennett, Ed Brooke, Robert Packwood, William Roth, Bill Brock and Robert Taft, Jr.

Correspondence to Senators should be addressed to them at the Senate Office Building, zip code 20510.

MEMBERS OF THE HOUSE APPROPRIATIONS COMMITTEE, 92nd Congress, are George Mahon, Jamie Whitten, George Andrews, John Rooney, Robert L. F. Sikes, Otto Passman, Joe Evins, Edward Boland, William Natcher, Daniel Flood, Tom Steed, George Shipley, John Slack, John Flynt, Jr., Neal Smith, Robert Giaimo, Julia Hansen, Joseph Addabbo, John McFall, W. R. Hull, Edward Patten, Clarence Long, Sidney Yates, Bob Casey, David Pryor, Frank Evans, David Obey, Edward Roybal, William Hathaway, Nick Galifianakis, Louis Stokes, Ed Roush, Gunn McKay, Frank Bow, Charles Jonas, Elford Cederberg, John J. Rhodes, William Minshall, Robert Michel, Silvio Conte, Glenn Davis, Howard Robison, Garner Shriver, Joseph McDade, Mark Andrews, Louis Wyman, Burt Talcott, Charlotte Reid, Donald Riegle, Wendall Wyatt, Jack Edwards, Del Clawson, William Scherle, Rober McEwen and John Myers.

MEMBERS OF THE HOUSE COMMITTEE ON BANKING, HOUSING AND URBAN AFFAIRS are Wright Patman, William Barrett, Lenore Sullivan, Henry Reuss, Thomas Ashley, Willima Moorhead, Robert Stephens, Fernand St. Germain, Henry Gonzalez, Joseph Minish, Richard Hanna, Tom Gettys, Frank Annunzio, Thomas Rees, Tom Bevill, Charles Griffin, James Hanley, Frank Brasco, Bill Chappell, Edward Koch, William Cotter, Parren Mitchell, William Widnall, Florence Dwyer, Albert Johnson, William Stanton, Benjamin Blackburn, Garry Brown, Lawrence Williams, Chalmers Wylie, Margaret Heckler, Philip Crane, John Rousselot, Stewart McKinney, Norman Lent, Bill Archer and Bill Frenzel.

Correspondence with Representatives should be addressed to them at the House Office Building, zip code 21515.

TAKE ACTION NOW.
KEEP LIST FOR FUTURE USE.

Gory Details of
Farmers Home Administration Budget
(in thousands of dollars)

Program	1970 actual	1971 as estimated in Jan. 1970	1971 as estimated in Jan. 1971	1972 estimated
Low to Moderate Income Housing:				
Direct	$ 5,330	$ 7,000	$ 7,000	$ 000
Insured	729,411	1,418,000	946,000	1,555,000
Above Moderate Income Housing (Insured)	21,573	000	000	000
Rural Housing Site Development Loans (Insured)	000	000	5,000	5,000
Rental Housing Loans:				
Direct	1,308	2,000	2,000	000
Insured	27,133	35,000	35,000	35,000
Very Low Income Housing Repair Loans (Direct)	5,253	10,000	10,000	10,000
Farm Labor Housing Loans (Insured)	1,549	10,000	10,000	10,000
Farm Labor Housing Grants	2,134	3,761	3,700	3,767
Mutual and Self-Help Housing Grants	000	2,125	2,450	2,450
Self-Help Housing Land Development Fund Loans (Direct)	114	1,600	1,225	1,225
Housing Total	$793,835	$1,489,486	$1,022,375	$1,622,442
Water and Sewer Loans:				
Direct	$ 64,280	$ 40,000	$ 30,000**	$ 000
Insured	81,751	86,000	130,000	189,000
Water and Sewer Grants	46,000	24,000	44,000*	42,000
Salaries and Expenses	71,450	85,000	90,494	92,800

* Congress appropriated $100,000,000

** Congress appropriated $ 98,000,000

THE FIRST ANNUAL MEETING OF THE NATIONAL RURAL HOUSING COALITION will be held in Washington, D. C. on March 23. Subjects on the tentative agenda include: legislative program; organization of state, area and local coalitions; and implementation of existing federal programs. Details on the meeting will be sent to all Coalition members.

A THREE DAY RURAL HOUSING WORKSHOP, SPONSORED BY THE RURAL HOUSING ALLIANCE, will be held in Washington, March 24, 25, and 26. Workshop sessions will cover: basic information on rural housing programs; development of public housing in rural areas; rural community facility development; and rural planning. Registration will be limited to the first 50 who notify, in writing, the Rural Housing Alliance, 1346 Connecticut Avenue, N. W., Washington, D. C. 20036, of their intention to attend the workshops.

OEO IS PLANNING TO HIRE EIGHT MORE STATE STAP HOUSING SPECIALISTS at salaries ranging between $15,000 and $18,000 a year. OEO is looking for people with experience in rural housing programs and a knowledge of how, why and where local CAAs function. Send resumes to Rural Housing Alliance, 1346 Conn. Ave., N. W., Washington, D. C. or to Frank Haendler, State and Local Government Division, OEO, 1200 19th Street, N. W., Washington, D. C. 20506.

COALITION WINS !!!!!!!!!

On February 11, as this newsletter was being printed, Secretary Hardin announced the funds for rural housing had been restored to the $1.4 billion level.

The coalition requested this action in a letter to President Nixon on February 5. This is a major victory.

February 8, 1971

Mr. Paul Anthony
Executive Director
Southern Regional Council
5 Forsythe Street, N.W.
Atlanta, Georgia 30303

Dear Mr. Anthony,

The Jackson Area Council On Human Relations is concerned about the patterns of housing in Jackson. It appears to be moving in the direction of continued segregation, with areas moving from White to Black rather than towards integration. We therefore, voted at our last meeting to undertake a project of working towards a stabilization of our neighborhoods in terms of both integration and values.

To do this job most effectively, we would like to ask the Southern Regional Council for help in setting up our organizational structure and strategies. In particular we would like to ask that Mr. Art Campbell be made available to us. Mr. Campbell has already been in Jackson for preliminary discussions with Miss Joan Bowman and Mrs. Jane Schutt and has appeared before the full Council when we discussed and voted on this matter.

The Mississippi Council On Human Relations is giving full backing to this program and we hope to enlist the cooperation of other local organizations as well. We feel with the expertise your office can furnish, along with the efforts of our people, that we can help build a positive stable housing situation in Jackson.

Sincerely yours,

Dick Johnson

it is the point where the new outer harbor crossing of the Beltway will land. When that happens, more of the land available for blacks in the county will have been taken away.

Much of the housing in Turner's Station was built as temporary accommodation for black workers at the Point during World War II. About 6,000 persons lived there in 1960. Since, the number has been diminished by the removal of some of the wartime housing. When such buildings are condemned and demolished, no new housing is built to replace them. The land is rezoned for industry.

Many of the other black housing areas in the county are vestiges of a rural past, and have been gradually eroded. Some housing is lost to public improvements for roads and county buildings; some is lost to commercial expansion; some to fires, decay, and code enforcement. The two decades that saw the emergence of Towson also saw its black population wither from 700 to about 400. For Baltimore County, the percentage of black population has declined from 6.7 in 1950 to 3 in 1970.

The poor — black and white — are rejects in the laissez faire atmosphere of the county. They are a burden on the tax rate. After the defeat of the urban renewal referendum in 1964, the county's urban renewal and housing agency was abolished. Federally assisted housing programs were successfully discouraged from operating in the county. Official policy has tended to ignore the poor in the hope that they would go away — a policy that has been generally successful in achieving its ends.

County Executive Anderson articulates the view that providing housing for low- and moderate-income families in the county is not a local problem, but a federal one. Meanwhile, jobs continue to move to Baltimore County. During the period from 1963 to 1967, employment grew by 40,000 — about 10,000 in manufacturing. During the same period, the city gained 26,000 jobs, with only 4,300 in manufacturing.

No simple projections for future black population in the county can be made. Attrition in the older rural settlements will probably continue. On the other hand, the predominantly black sector of Baltimore has just reached the invisible western boundary of the city and begun to move across into the county. In addition, the changes in federal policy toward moderate-income housing could have the effect of moving people closer to their jobs. But these anticipations deal only with the future distribution of population, not with the social integration of a society.

There is no regional planning agency operating on such problems as matching jobs and housing in the metropolitan area. Baltimore and Baltimore County face their problems as the two equivalent cities that they are becoming. The Baltimore Regional Planning Council performs some necessary functions. It acts as a coordinator between city and county, and as an effective study and social bookkeeping agency. It has handled planning for medical services and rapid transit, where a high proportion of the funding comes from federal sources, and local agencies are not designated to deal with the problems. But it is effectively removed from the operating decisions that emanate from Towson or Baltimore's city hall.

Planning has been effective in providing highways and schools in Baltimore County, but inadequate in dealing with housing, commercial development, and the treatment of environmental amenities, to provide a basis for dealing with the county's interests for the next decade.

Large-lot zoning and development controls seem to be doing what they were intended to do around affluent Towson, but in the peninsular area the level of housing environment seems to have regressed under these controls.

The public environment is in a state of neglect. Contrast the older public square at Dundalk with the concentration of similar facilities built more recently in Essex. Here, a large new shopping center gazes out on a bare parking lot. Next to it the new area library broods over the same parking lot, cut off from the highway by a sparkling new tire store. That's all.

How much of the future will be enacted in the exurban lands of Baltimore County? Already the pace of development in the peninsular east has slowed. New, higher-cost waterfront and recreational developments seem to prefer Anne Arundel County to the south, where they have accessibility and can tap the Washington market as well.

The well-known new town of Columbia is currently generating the suburban excitement as it booms in Howard County farther out to the west. Here, where current planning and development techniques are applied with skill and verve, hopeful progress in social and racial integration is being made.

Baltimore County finds itself no longer at the physical frontier of suburbanization today. Blight — most evident in commercial structures and detached houses cut off from their neighborhoods — creeps along the highways. In many places, there are surface indications of a failing vigor.

Tomorrow, two cities here will face the future side by side. Then age and creeping ruin, the social frontier, and all the forces which beset the older city will turn their face on the one newly made.

Atlanta In terms of providing low-income housing, 'the county governments want the city to do the job for them.'

Atlanta has moved into the '70s with an extraordinarily tough act to follow: its own. It was, surely, the country's Cinderella city of the '60s. Its population and economic growth attracted almost as much attention as its new baubles of American urban culture: major league sports (with Hank Aaron as resident hero), convention hotels (one with a bluish flying saucer revolving on top to accommodate drinkers and eaters), a culture center (with Robert Shaw on the baton), and merchandise mart display rooms.

Some of the country's fascination with Atlanta arose from the curiosities: a political range that encompassed Julian Bond and Lester Maddox, liberal mayors whose power came from white businessmen and black voters, racial moderation in a sea of segregation. The achievements, surprises, and eccentricities made Atlanta "good copy" for magazines and newspapers and, in most reports, gave it a kind of golden image.

In the national promotion advertisements, Atlanta liked to call itself "a new kind of city"; and in promotion, it had no peer in the nation. Early in the decade Atlanta was advertising its "new kind of city" ways regularly in the New York press; by the end of the decade, other Southern cities which had been left further behind by this blitz were running almost exactly the same kind of advertisements in *Atlanta*-printed publications. By 1970, that was where they could reach executives who might decide about *their* cities.

So much for the Cinderella city of the '60s. There were believers, and rightly so. Atlanta did and does seem to have some decided advantages over most major cities, in room for action, cohesion for decision-making, strong and diverse black leadership, and the degree of economic health in its central city (not to mention some of the pleasures of living). Believers, with their corporation offices and headquarters, often came to Atlanta on the strength of the "image"; and they helped make it so.

Cinderella had to go home at midnight, though, or see her elegance turn to rags. Almost as if its godmother were a census director, the end of the '60s was, for Atlanta, the striking of midnight. Precisely at that time there was an appreciable and definable alteration of the city's temper and mood; a changing of leadership; a new confrontation of the tatters and rags that had been there at home through the distractions of the ball. The latter are most evident in the increasing division between prosperous white suburb and blackening inner city.

This report is no doleful account of the

PAGINATION INCORRECT

end of a Cinderella era. (There were, remember, sisters who never got to the palace, and for them Cinderella-at-the-ball never was a very happy story, anyway.) In fact, the prospects for Atlanta in the '70s seem good, by the standards of other American cities. But the "good copy" of the '60s will not be as good in the '70s if it is the same kind. Determining a good relationship between the central city and the suburbs, between white and black, will be Atlanta's principal challenge in the '70s.

By 1980, the metropolitan area's population, now 1,325,000, is expected to be about 2,000,000. In the area circumscribed by the present city limits, the population is under half a million, and it is expected to increase by 13.5 per cent; and within that area, the inner city is expected to decline by about 12 per cent from the present 264,000. A recent planners' projection indicated that most of the growth will be in suburban counties, and especially DeKalb, now 414,000 and expected to reach 649,300 in the decade. Three less populous counties, having changed from rural to suburban in the '60s, are anticipating 80- to 100-per-cent growth. Racially, though Atlanta is half black, the metro area is about 22 per cent black; that figure is not likely to increase in the decade.

Transportation and growth

In the '60s, expressways and interstate highways substantially reshaped Atlanta. A basic expressway system started in 1949 was rounded out by connection with three cross-country interstates meeting in an interchange close to the downtown, and by a perimeter interstate which is rapidly being lined with industrial parks, office buildings, and residential developments.

The '70s equivalent to the '60s interstate highways will be, for Atlanta, the development of a rapid transit system, whose shape and purpose will largely determine future growth patterns and metrowide relationships. Basic decisions about this billion-dollar system, a part of which could be completed by 1975 or 1976, are being made in an atmosphere of public disinterest on the one hand and disagreement among experts on the other. Will it be designed mainly for suburban residents or, first, for people now without transportation and, second, as a device for directing growth and planning a metro city?

The people of the inner city, largely poor and black, had no control over the development of the highway system. (Expressways alone displaced more than 23,000 persons from 1956 to 1966, without providing alternative housing; urban renewal relocated 80 per cent of the more than 17,000 it displaced.) But, because of the bond issue needed for rapid transit, inner-city blacks will have a powerful vote to influence transit planning. Three years ago the lack of enthusiasm among black voters—about half the city's electorate—was a major factor in defeating rapid transit bonds. A rapid transit issue probably will come before the voters again in about a year, and the Metropolitan Area Rapid Transit Authority at least seems to be working toward placing enough stations in the city's mostly black West Side to satisfy the earlier complaints. If a transit system is designed to meet the needs of those who have no transportation, and if it is used effectively to renovate areas through the placement and planning of its stations, it could be as helpful as expressways were destructive to the residents of the inner city. Beyond that, little thought has been given to how the system may reshape the metro area racially.

Atlanta's suburbs are now so little integrated that, except for areas that appear to be in transition, the whole process is less than nominal and "fair housing" is a theoretical term. In three of the five metro-area counties, there is simply no ascertainable desegregation in housing, except for the remnants of an older South's rural and small-town housing mixtures. Here and there a black family is found in a white neighborhood of DeKalb, Atlanta's principal bedroom county, and Fulton, in which most of Atlanta lies. But real estate firms continue to find ways to circumvent the law, and black disinterest in the suburbs (or concern about what blacks would meet once there) has resulted in much less change than might have been suspected three years ago. In fact, Atlanta as a whole is probably more segregated than it was two decades ago in terms of census tracts with both black and white residents.

Middle-class black housing, in developments, has been extended outward from the central city's older black middle-class areas, though usually these semi-suburban developments are contiguous to the older neighborhoods and consequently represent an extension of the existing pattern. New residential areas for blacks largely follow the geographical lines laid down in the 1940s and 1950s, when City Hall concerned itself with establishing "buffer zones" and corridors to assure that all concerned would understand which sectors were for blacks and which were for whites.

Closer to the newer black areas are the kind of middle-class white neighborhoods which, once Negroes begin to move in, have always begun to change to all-black. One strong effort by blacks and whites to preserve an integrated area in the southwestern part of the city seems to have failed. Some whites fled immediately. But many who stayed were determined to accept integration if they could avoid an overwhelmingly black neighborhood. The pressure on the area, much in demand among middle-class blacks because of a shortage of the housing easily available to them, was too great. Most disastrous was what the city school administration did to hasten racial transition of the area's schools. Despite its failure to produce much integration in the schools, Atlanta was still operating under the "freedom of choice" plan. The school system permitted schools serving the Southwest Atlanta integrated area to become overwhelmingly black in a year's time; the racial nature of the area is following.

Those are the semi-suburban middle-class areas. Whether a similar pattern will develop in areas that are clearly suburban is uncertain.

A test is taking place just outside the city limits in the southern part of DeKalb, where South DeKalb Neighbors has been formed to stabilize an area which otherwise will be just one more transitional community near all-black communities. Residents filed what they believe was the nation's first anti-blockbusting suit brought by private citizens, seeking punitive damages from a real estate company. Since the first black family arrived in 1969, the area has been plagued by real estate operators using, usually subtly, the scare tactics that have always hastened transitions. South DeKalb Neighbors may succeed; but it seems unlikely to unless enough general suburban desegregation takes place in time to relieve it of some pressure.

The income of blacks in Atlanta has risen substantially in the past few years. White-collar blacks employed in government offices alone have added substantially to the number of blacks whose incomes could place them in the white suburbs. They simply are not, with few exceptions, pressing hard to make the move.

The stark fact is that nowhere in the Atlanta area is there even one large and substantially integrated neighborhood that is stabilized racially. That is true of middle-income and upper-income neighborhoods, as well as of declining lower-middle-class and shabbier neighborhoods.

An example of the latter group is Kirkwood, also in DeKalb just outside Atlanta. To say that it has become a slum is to exaggerate. But since it is an area of older houses and since the blacks who moved in are generally of a lower economic class than the whites who have been leaving, it may continue to slide downward. In Kirkwood, crime rates are up and physical decline is evident. That picture is not encouraging to neighborhoods nearby, where whites still tend to associate the coming of blacks with—see what happened in Kirkwood?—a lowering of values and community standards. In the absence of forceful governmental policies, local and federal, to provide a different kind of example in suburban desegregation, that attitude no doubt will remain.

The three-member Georgia Real Estate Commission is headed by a real estate executive who describes himself as a segregationist and whose own firm has been named in one of the few suits filed by the Justice Department anywhere against discrimination by a real estate firm. That would seem to indicate that, though the commission recently adopted an anti-blockbusting policy, it will not do much to enforce it. The FHA sometimes takes small steps to encourage an end to discriminatory patterns, but it remains the principal culprit in Atlanta's suburban residential segregation, largely by failing to undo the segregation it helped create over a period of decades, and by failing to deal forcefully with all the real estate firms that

perpetuate the patterns. Even in the time since passage of the 1968 Fair Housing Act, the Atlanta and Washington administrators of federal programs have helped produce large new areas of segregated housing in Atlanta's suburbs; in that span alone, federal practices have added far more to segregated housing than all the local fair-housing efforts have offset.

Atlanta's suburbs are a mixture of the bedroom-community areas, principally in DeKalb but increasingly moving into other counties; rural counties such as Clayton, little affected by Atlanta's boom until the 1950s but now 96,000 people and expected to reach 193,000 by 1980; and small cities, such as Decatur, East Point, College Park, Hapeville and Marietta, all of which have long histories of their own, though they are now Atlanta satellites. Racially, the smaller cities are usually typically Southern, with their share of blacks. (Decatur, an older town than Atlanta and the county seat of DeKalb, has about an even division among blacks and whites in its main high school.)

The city of Atlanta bears far more than its part of the load of federally subsidized low-cost housing and public housing. Not one of the five county governments of the metro area has a "workable program," so that none may receive funds for public housing or urban renewal. This may be assumed to be a calculated policy. For a time DeKalb, under a progressive administration later defeated at the polls, had a workable program; when the administration changed, it was allowed to lapse. The county governments want the city to do the job for them.

To meet that problem, the Atlanta Housing Authority has moved to obtain land outside the city and to place some public housing there. In the first test of this, Congressman Fletcher Thompson did his best to block the housing, but he was overridden by HUD. The commission of Fulton County, where the housing would be, had given its approval; the Congressman perhaps had more sensitive political ears. Thompson and his suburban colleague, Ben Blackburn of DeKalb, now are very much a part of Atlanta's problem in finding ways to scatter low-income housing and to break up the ghettos. They replaced incumbents who would have had an opposite inclination.

Despite the appearance of numerous office manufacturing parks on its periphery, Atlanta has maintained the strength of the central city. In the 1950s, when downtown business was worried about the pull of the suburbs, the city encouraged massive construction of parking facilities, business development of areas cleared by urban renewal, and expressway convenience in reaching central business points. The design of the rapid transit system probably will have similar influence, insofar as downtown business is concerned. Atlanta's tax digest defies the common cliché about major cities; it has grown rather than declined as the suburbs have developed.

Metro government has been discussed for years, but it seems as distant now as ever. Mayor Sam Massell, elected in 1969 with overwhelming black support, looks askance at proposals for metro government and for the merger of Atlanta with Fulton County, a move which would somewhat whiten the electorate. Strong arguments—including the valid question of "What's in it for us?" from white as well as black residents of the city itself—can be made against city-county merger. It may come, however, since the Georgia Legislature can enact the change and since the city often is frustrated by the failings of the county government.

Mayor Massell has advocated a Minneapolis-St. Paul type of metro cooperation in lieu of metro government and county merger. Cooperation among the five metro counties and their 45 municipalities (with 38 water systems and 23 sewer systems) has increased in recent years. The Metropolitan Planning Commission, established in 1947 and enlarged in 1960 to guide and coordinate physical planning in the five counties, is the oldest publicly supported areawide planning commission of its kind in the country. Its influence is great but its powers limited; the most important recent increase in power came when Washington, under the "A-95" requirement, gave it the authority to grant or withhold approval of numerous federally funded projects.

The planning commission has been instrumental in the creation of metrowide organizations: the Metropolitan Council of Governments, a largely powerless consultative body; Metropol, for police cooperation; the Metropolitan Atlanta Health Planning Council, an umbrella for HEW grants channeled through the state government; the Atlanta Area Policy Committee, which deals with transportation policy decisions; the Metropolitan Council of Alcohol and Drugs, and others. The Metropolitan Atlanta Rapid Transit Authority is the most important metro organization, except, possibly, for the planning commission itself. A most urgent need is for a metro for comprehensive planning with power to enforce regional decisions.

Help for Cinderella?

For help in extending the authority of metro organizations, Atlanta has to look principally to the state. It was the state that made possible the rapid transit authority. The increasingly urban nature of Georgia makes the legislature more responsive to some of Atlanta's needs, despite a long history of rural and small-town orientation. Georgia is ahead of most states, on paper, in area planning, and the new governor, Jimmy Carter, has long had a strong interest in the area planning councils. (The Metropolitan Planning Council is one of these 19 multi-county apparatuses.)

To most people aware of what the state does not do to help the cities solve core problems of race and poverty, the prospect is discouraging, but gradually Atlanta will have to find more of its metro solutions through the legislature. The state does have an extraordinary interest in seeing Atlanta move forward. The capital city is the dynamo amid many areas which are economically soft and whose populations are declining. Far from representing an economic rival, Atlanta is a magnet which has benefited the whole state economically. Whether this consideration can be translated into enlightened self-interest that will move the state to foster political and social progress in the metro area remains to be seen. But the Cinderella of the '60s was a beautiful presence for Georgia, and the state will have to help substantially if she is to get back to the palace in the '70s.

Chicago

Metropolis today means 'segregation—of land uses, activity systems, income groups, family types, and . . . minorities.'

During the summer of 1966, Chicago's racial problems exploded in headlines across the country. The massive conflict centered on racial segregation in housing, in the attempt to eliminate artificial constraints on the housing choice of Chicago's black population.

The late Reverend Dr. Martin Luther King Jr. of the Southern Christian Leadership Conference, along with the Chicago Freedom Movement, initiated a series of marches and demonstrations in and around Chicago. At a rally held in Soldier Field, Dr. King said, "For our primary target we have chosen housing. As of July 10 we shall cease to be accomplices to a housing system of discrimination, segregation, and degradation. We shall begin to act as if Chicago were an open city." The housing marches were met with violence and widespread hostility, and received nationwide attention.

In response to this crisis, the leadership of business, labor, government, civil rights, housing, industry and religion made commitments in a series of meetings to create a single, nondiscriminatory housing market throughout the Chicago metropolitan area. The organization designated on December 6, 1966, to carry out this mandate was the Leadership Council for Metropolitan Open Communities.

How successful have the council's programs been in desegregating black Chicagoans and, in particular, in opening up previously all-white suburbs?

March 3rd, 1971

Mr. Moreland Griffith Smith, FAIA
Southern Regional Council, Inc.
5 Forsyth Street, N.W.
Atlanta 3, Georgia

Dear Sir:

Since meeting you and Mrs. Smith at the Boston AIA convention I have desired writting you. Your being associated with the Southern Regional Council reminded me of my past membership in the Southern Conference on Human Welfare. It may be strange since I have been here in New York for a long time, that I still have strong feelings for the South. I think the solution of the problems of humanity can best be solved by cooperation and mutual respect. My Southland has made great steps forward since I "immigrated" to the North.

I would like to know more about the work of the Southern Regional Council. Perhaps you will favor me with information.

My New York Chapter, AIA has seen fit to nominate me to Fellowship in AIA. I await the approval of the National organization. To be sure, for me a native of Mississippi, being a Fellow will mean more than that great honor can ever mean to any other Architect. I feel that I have your good wishes in this regard and am hoping to see you at the Detroit convention.

I enclose my late brochure.

My wife joins me in sending fond regards.

Sincerely yours,

John Louis Wilson

A Power Struggle Divides Rights Project

By JAMES T. WOOTEN
Special to The New York Times

GREENVILLE, Miss., March 6—A power struggle rooted in ideological differences has jeopardized the future of the Delta Ministry, which was once regarded as one of the most energetic and innovative civil rights enterprises in the South.

Long-simmering dissensions between a leadership sympathetic to black separatism and a staff committed to interracial cooperation burst into discord here yesterday in a closed hearing before representatives of the group's sponsoring agency, the National Council of Churches.

The Delta Ministry has been active in voter registration, citizenship education, welfare rights, relief of the indigent and other social activities. From a high in 1966 of 55 staff members and volunteers, the program has been steadily reduced by a lack of funds. This year's budget is about $125,000, down from $31,000 in 1970.

Ten of the ministry's 14 staff members said they had asked at the hearing for the dismissal of the six-year-old organization's director, Owen Brooks, whom they consider a disciple of separatist philosophies.

They accused him of alienating potential allies, discouraging and repressing indigenous leadership and creating "a constant aura of tension, criticism and exploitation."

Impairment Charged

They also charged that the effectiveness of the program had been severely impaired by the director's policies.

Mr. Brooks, a Massachussets native who has held his post since 1966, declined to comment on the charges. But he did confirm that the staff members had asked at the hearing that he be dismissed. Dr. Jon Regier, a council executive, earlier denied this.

Dr. Regier, associate general secretary of the Division of Christian Life and Mission, said there had definitely not been any requests for Mr. Brooks's dismissal.

The churchman, in a gray beard and brown tweeds, seemed intent on playing down the importance of the closed hearing. He described the complaints as "just a bit of a problem" and discounted the insistence of the disgruntled staff members that the Delta Ministry and reached a "crisis point" in its existence.

'Proper Action' Pledged

Dr. Regier said that the record of the hearing would be forwarded to the Commission on the Delta Ministry, an agency of the council, and that the commission, in a meeting later this month, "will take the proper action, if any, on this little matter."

The 10 dissenting staff members, nine blacks and one white who call themselves the the Concerned Staff of the Delta Ministry, earlier sent to 20 "friends" of their organization a telegram in which they said that "the purpose of promoting justice, love and equality for the liberation of the poor has been lost."

They requested an immediate investigation, and as a result yesterday's hearing was scheduled.

According to the 10 dissenting staff members, the dispute within the organization deepened after Mrs. Sarah Johnson, a secretary in the ministry's headquarters here in Greenville, was dismissed by Mr. Brooks, who is black, for "acts of insubordination."

Mrs. Johnson asked Dr. Regier for a hearing on her dismissal, and seven other staff members wrote letters to Dr. Regier supporting her request. On Feb. 11, Dr. Regier wrote to Mrs. Johnson, denying her request. The next day, he wrote a similar letter to the staff in which he said, "It is clear to me that Mr. Brooks's action is well within National Council personnel policy."

Hearing Asked

That same letter informed the staff members that there would be substantial reductions in the program of their organization.

On Feb. 15, Mr. Brooks terminated the employment of five of the staff members who had supported Mrs. Johnson's request for a hearing. He cited the cutback in funds as the reason for the dismissals.

About a week later, on the same day that the telegram of protest was sent, Jean Phillips, also a secretary in the Greenville office, resigned in protest against Mrs. Johnson's dismissal.

Thus, in four weeks, the staff members contend, the ministry staff was cut in half by the dismissal of Mr. Johnson, the five terminations and Miss Phillips's resignation.

The contention of the staff members who asked for the hearing yesterday is that because of their friction with Mr. Brooks over various issues—primarily the question of whether the Delta Ministry should be involved in interracial pursuits or all-black programs—they have been forced out of the organization.

The commission will have to decide if this is true.

*WESTLAKE OF DEKALB

Conservative to Head HUD in State?

By DAVID NORDAN and DON WINTER
Journal Washington Correspondents

WASHINGTON—One of the more militant GOP conservatives in the Georgia House of Representatives may be named by the Nixon administration to head up operations of the U.S. Departmtnt of Housing and Urban Development (HUD) in Georgia.

The position would give the Georgian immediate sway over any efforts aimed at achieving HUD Secretary George Romney's announced policy of integrating the suburbs.

But where do housing officials live?—Page 11A.

And, according to observers, Rep. James R. Westlake of DeKalb County would likely be one of the last persons who could be expected to do anything to push construction of low-rent housing in white suburbia.

During the past year, he has been a leader of South DeKalb homeowners fighting at least one low-cost housing project and several apartment zoning applications.

ON THE POTOMAC

Westlake, an insurance man who hails from staunch consvative South DeKalb, is a proclaimed foe of "the Kennedy-LBJ-Mackay-Weltner brand of liberalism." A few years back he made headlines by sponsoring, and pushing heavily for, a Georgia un-American activities committee which would have had full subpoena and investigative powers.

According to sources here and in Georgia, he is one of two final contenders for the important HUD job.

TWO WEEKS ago, it is reported, he was vying with Atlanta Rep. Rodney Cook, a former city alderman and a 1969 mayoral candidate, and Savannah Rep. Herbert Jones Jr.

Cook and Jones also are Republicans.

The HUD area directorship is a patronage job on which Secretary Romney will have to make final approval. The name of the nominee is sent up by GOP congressman Ben B. Blackburn and Fletcher Thompson and national committee members Howard "Bo" Callaway of Pine Mountain, and Florence Cauble of Canton.

Westlake purportedly was being backed by Rep. Blackburn, three-term congressman from Decatur; and Cook, for a time at least, was Rep. Thompson's man.

Jones's name reportedly was offered to avoid a possible conflict between Thompson and Blackburn and a subsequent party squabble.

However, Cook apparently has taken his name out of the running for the job, which will pay from $24,000 to $31,000 a year, because he would have to give up his Atlanta insurance business.

THE HUD JOB is a new post being created as part of Romney's program to decentralize the field operations of his agency.

The area office in Atlanta, which will open in September, will pass on all applications for low-cost and other federally sponsored public housing programs in all 159 counties of Georgia.

The Atlanta facility is to short circuit some of the red tape involved in the housing programs by by-passing the HUD regional office and processing applications straight on to Washington.

Consequently, the activities of the HUD regional offices, which performed the same functions but on a multistate basis, will be scaled down.

According to sources, the name of the state GOP's choice for the job is on Romney's desk and will be passed on in the near future.

At this point, it would seem that the nominee is either Jones the Savannahian who is a close friend of GOP moneyman Roy Foster of Wadley, or Westlake.

STATE REP. JAMES R. WESTLAKE
Proclaimed Foe of Liberal Leaders

If it is the latter, many feel Atlanta suburbanites who yearn to keep public housing for the poor and the black confined to the central city may have gained a powerful ally.

Old Enemies Unite

Rep. Phil M. Landrum is one of the more outspoken men in Congress. Last year during consideration of a textile quota bill, he was asked to comment on a proposal by Liberal Rep. Sam Gibbons of Florida, a free trade advocate.

The Gainesville congressmen shot back: "I've never been on Sam Gibbons' side yet."

Last week he was. Landrum reacted to the Lt. William Calley's guilty verdict with a strong denunciation of the conduct of the Vietnam war, and when the draft bill came up for a vote, found himself on Sam Gibbons' side, voting against it.

Brinkley Gets Aide

The latest in the string of aides that have been coming and going to and from the offices of the Georgia delegation is a brand-new graduate of the University of Georgia School of Journalism who will become press aide to Jack Brinkley of Columbus.

Rodney Smith, 23, Martinsville, Va., reported to work Thursday in Brinkley's office. He is a former public relations officer for the Federal Environmental Protection Agency office in Athens and a staff writer for the Red and Black — the Georgia campus newspaper.

Brinkley, normally one of the most quiet members of the delegation, has never had a full-blown press aide as such. Apparently the uproar around Columbus wrought by the Calley trial and the threat of military cutbacks at Ft. Benning have convinced the soft-spoken congressman he needs to raise his voice more often.

Georgians Junket

As far as international junketing went, 1970 was a middlin' good year for the Georgia delegation.

Last year four of the 10 house members managed to squeeze in trips to 11 countries, all between January and early April, at an indirect cost to the taxpayers of $5,703.50.

As travel years go, this was somewhere along the middle of the scale.

The Georgians have measured mileage both lower and higher in recent years.

Eighth District Rep. W. S. "Bill" Stuckey of Eastman led the travelers in the amount of money spent but only because Rep. Fletcher Thompson of East Point, who traveled on the same trip, took his wife along.

Because he had to pay Mrs. Thompson's fare on a swing through South America to inspect stock exchanges and tourist facilities, Thompson flew tourist.

Stuckey, as is customary on official committee business, went first class. The difference came to $239. Stuckey spent $1,691 and Thompson, $1,452.58.

THE PAIR, both members of the Interstate and Foreign Commerce Committee, spent four days in Mexico City, two in Venezuela, a week in Brazil—mostly in Sao Paulo —and a day in Trinidad.

First District Rep. G. Elliott Hagan found it necessary to inspect military post exchanges and commissaries in Germany, Italy, Spain and England. He stayed in each country from one to three days and spent $1,026.

Fourth District Rep. Ben Blackburn rounded out the list of delegation travelers by hitting four countries, on two different trips, at an expense of $1,533.

The Decatur Republican journeyed to Nicaragua and Guatemala and spent four to five days in each place as a Banking and Currency, Committee delegate to the Eighth Annual Savings and Loan Conference.

He later went to Japan and Korea to an Asian development bank meeting.

THERE WAS no committee travel logged on the Senate side of the Georgia delegation although Sen. Herman E. Talmadge managed to travel to the West Coast and Alaska on an Air Force plane with Sen. John Stennis of Mississippi, chairman of the Senate Armed Services Committee.

The party went out to inspect military installations and figured while they were there they might get in a little fishing.

The travel pace set by the Georgia delegation last year promises to pick up this year as the group is already off to a good start.

With the Congress no more than two months old, at least five of the 10 House members had already found themselves called out of the country on official business.

Sand Traps and Rough Aren't Main Hazards Today's Golfer Faces

* * *

Golf Carts Are Worst Hazards, Some Hobbled Golfers Say; Beware the Tanked-Up Driver

4/20/71

By BILL PAUL
Staff Reporter of THE WALL STREET JOURNAL

It's a tough game. Each year, scores of players are carried away with broken bones, crushed ribs and torn ligaments. R. E. Lassa of Muskego, Wis., came away from a session with a triple fracture of the ankle and a dislocated shoulder. A lady in Pittsburgh suffered a severely fractured leg and knee that kept her in the hospital for 11 weeks and on crutches for a year. The National Safety Council is predicting "several thousand" mishaps this year.

What fearsome sport speak we of? Alligator wrestling? Street fighting? Free love? Nope. Golf.

Well, not really. Golf itself is quite safe, the greatest risk being the possibility of a long drive plunking some poor fellow in the wazoo. The *real* danger is golf carting. Many golf carts, it seems, are unsafe on any fairway.

Who would have guessed it? Well, the Ward brothers, Harry and Alton, for two. The Wards, of Winston-Salem, N.C. (Harry), and nearby Goldsboro, N.C. (Alton), were tooling along the fairway of the Pinebrook Golf Club in Winston-Salem when their three-wheeled cart came to an old wood-plank bridge and rather abruptly became a two-wheeled cart. The cart plunged 15 feet to the rocks below. Harry was thrown to safety. Alton ended up dangling by his fingertips from the side of the bridge. But neither was maimed for life. They patched each other up at the clubhouse and went back on the course to finish their round.

Get This, Ralph Nader

Some aren't so lucky. The National Safety Council is unhappy enough about the increasing numbers of golfers getting mangled in golf cart accidents that it has declared carts "a safety problem that warrants immediate attention."

More and more, golf cart accidents are winding up in litigation. Mr. Lassa of Wisconsin and the broken ankle, recently won $97,500 from the golf course involved in an out-of-court settlement. The brakes on his cart failed as he was whizzing down a hill; he slammed into a fence and another cart. The Pittsburgh lady is suing her golf course for $75,000. She was thrown from her cart when the steering wheel snapped and the cart veered sharply.

Gold cart manufacturers—who insist upon calling golf carts golf cars—say the trouble is with the drivers, who often are older folk with slow reactions and poor eyesight. Not to mention the terrain they drive on—the sharp turns and steep inclines that make golf courses golf courses instead of fields. Notes one golf club manager: "If you go sideways along a hill, there's a danger the cart will roll over on you." No small danger, that; golf carts generally weigh 900 pounds.

But attorneys who handle golf cart liability suits say the fault is with the manufacturers. One calls the golf cart "golf's hidden danger," and says, "Many are unstable and serviced by ordinary greenskeepers." Manufacturers concede the 50 or so cart makers that sprung up in the 1950s—there are around a dozen left—turned out a lot of flimsy vehicles, many of which are still around because golf course managers keep renting them out year after year for fat profits. (A golf cart costs around $1,500 and a golf course can make over $2,000 per season renting one out at $10 per round or higher.) Naturally, there is little incentive for a golf club to scrap a cart until it absolutely has to.

But the golf carts coming off the golf cart assembly lines today are much safer, manufacturers insist, and steps are being taken to improve performance standards even more. The American Golf Car Manufacturers' Association, an association of American golf cart manufacturers, says it is investigating such things as golf cart speed—12 to 15 miles per hour is tops for most carts, but one can pick up considerable speed whizzing down a hill. The trade association says it expects a report by the end of the year recommending new standards that may result in better steering, braking and balance.

Fun Times in Golden Valley

But some say the balance of the golf cart drivers is the real problem. "Liquor on the course is our number one nemesis," laments Charles T. Hvass, president-elect of the Golden Valley Golf Club of Golden Valley, Minn., a suburb of Minneapolis. Mr. Hvass recalls that some members of a local civic club on an outing last year got so tanked up that they started playing "chicken" in their golf carts, ramming into one another head on.

It turned out that no one was injured, but then Mr. Hvass figures that "even if they had been hurt, they probably wouldn't have felt any pain."

Golfers, in defense, say one of the reasons it's hard to stay sober is that many clubs encourage guzzling—by placing "water holes" at strategic points along a course.

One group of golfers unlikely to suffer golf cart injuries is the pros. For one thing, carts are banned from most pro tournaments. For another, most pros prefer caddies, many of whom are knowledgeable about the courses on the pro tour. Says a spokesman for the Professional Golfers Association: "It's a little difficult to get advice out of a golf cart."

ATLANTA CONSTITUTION

4/19/71

New Firm To Aid in Housing

A mortgage banking firm specializing in obtaining funds for the small investor in commercial property and in making it easier for low-income families to buy homes has been established by eight black Atlantans.

City-wide Mortgage Corp. was founded by Miller Johnson Jr., of Miller Johnson and Co., who is its president.

Johnson said City-Wide would work "in close cooperation" with the Scott Hudgens Mortgage Co. in obtaining funds for its activities.

CITY-WIDE PRESIDENT
Miller Johnson Jr.

Johnson said City-Wide "is attempting to make it easier for persons traditionally prohibited from buying their own homes or property by the lack of ready cash or credit" to obtain Veterans Administration and Federal Housing Authority loans.

City-Wide is the second firm of its kind to be formed in the South under black ownership.

Apr 20, 1971

Housing Study Set By Lawyers

Special to The Constitution

ST. LOUIS, Mo. — Atlanta attorney John L. Moore Jr. and other members of the American Bar Association are here this week to discuss housing problems and to be briefed on a project in Atlanta.

Plans for starting a "Lawyers for Housing" program in Atlanta to be sponsored by the ABA in cooperation with the Atlanta Bar Association will be detailed.

Moore, an attorney with Alston, Miller & Gaines in Atlanta, will also participate in the first national seminar dealing with "The Lawyer and Housing and Urban Development."

JOSEPH H. BATTLE
3129 Keswick Road
Shaker Heights, Ohio 44120

Dear Sponsor of Open Housing:

As a black American and a Realtor, I know from personal experience that equal housing opportunity in an open society, although guaranteed by law, is far from a reality. From personal experience as head of the Cleveland Urban League's Operation Equality, I also know it can become reality.

In 1968, a Federal Fair Housing Law and a US Supreme Court decision banning all housing discrimination gave us an opportunity to end racial segregation in housing. With the law now firmly on our side, widespread local and personal action can make rapid changes in housing patterns.

SPONSORS OF OPEN HOUSING INVESTMENT (SOHI) works with individuals and groups across the country to spark development of local multi-racial housing. The enclosed report from Jack Tatum, SOHI's new Field Secretary, to Congressman Fraser tells how SOHI continues to expand its activities - it makes exciting reading.

NATIONAL NEIGHBORS, as you remember, is the new and growing association of interracial neighborhoods founded with SOHI's help. Its member groups are actively challenging housing industries to implement open housing.

In working to stimulate local efforts, SOHI and National Neighbors have the advantage of leverage - each unit of work or money brings magnified results as it helps local persons and groups to act.

I urgently ask your support in strengthening this work. Please fill in the enclosed card and send it along with a check to Congressman Don Fraser, Chairman, SOHI, 1914 Connecticut Ave., N. W., Washington, D. C. 20009.

Your generous tax-deductible gift today will help SOHI and National Neighbors work in more communities that ask - and need - our aid.

Sincerely

Joseph H. Battle

President, National Neighbors

P. S. An autographed copy of James Hecht's excellent book on tactics of community action, BECAUSE IT IS RIGHT - INTEGRATION IN HOUSING (Little Brown & Co., Boston, 1970, $7.50), will go to all who send $16 or more to SOHI. With your help we can point the way together towards an open, humane society.

JACKSON AREA COUNCIL ON HUMAN RELATIONS

108 South President Street
Jackson, Mississippi 39201

JUN 10 1971

Dear Fellow Jacksonian:

In its recent report on housing in Jackson, the Chamber of Commerce Task Force on Housing estimated that "...14,000 of the city's 53,000 housing units are substandard, and that 7,000 of these substandard units are delapidated beyond repair." It also reported a vacancy rate of approximately 1% (with 4% or less considered an emergency).

What other problems exist in the area of housing? What steps are being taken - by the city, by groups of citizens, etc. - to meet Jackson's housing needs?

How much do you know? What can you do?

On Saturday, June 19, a workshop on "HOUSING: FACTS AND CHALLENGES" will be held at Farish Street Baptist Church, 619 N. Farish Street, from 9:00 a.m. until 4:00 p.m. This workshop is being sponsored by the Jackson Area Council on Human Relations in the interests of the entire Jackson community. You are cordially invited to participate.

It will be possible to register on the day of the workshop, but early registrations will be appreciated. A registration fee of $2.00 will cover the cost of lunch and workshop materials. For further information call 948-0878.

I wish to register for the workshop HOUSING: FACTS AND CHALLENGES

Sponsors of Open Housing Investment

SOHI

1914 Connecticut Avenue, N.W., Washington, D.C. 20009 (202) 265-9448

June 30, 1971

Dear Open Housing Supporter:

May of you, we are sure, have wanted to meet the man personally responsible for the establishment of racially open communities in varied areas of the country.

SOHI, Sponsors of Open Housing Investment is pleased to invite you to join us and the hosts listed below in a series of house meetings in the Atlanta area where Morris Milgram will discuss the future of open housing and the new SOHI program. Note enclosed Christian Century editorial hailing SOHI's work.

It is our position that the question of equal access in housing must be resolved within the decade of the 70's or we must be prepared to face social consequences of very grave proportions in the decade of the 80's.

Our hosts join us in extending this invitation for an enjoyable and exciting evening to talk with Morris Milgram - one who works now to create unrestricted housing choices - who will present new and refreshing methods of vigorously creating a truly open housing market.

Do plan to bring a friend and to come early for refreshments, which will precede these meetings at the homes of:

Moreland & Marjorie Smith 38 Peachtree Circle, N.E., Atlanta	(892-7850)	Monday, July 26, 10 a.m.
Helen Horton 2228 Nivelle Drive, Decatur	(241-0505)	Monday, July 26, 8 p.m.
Clarence & Margaret Bolden 3543 Lynnfield Drive, S.W., Atlanta	(349-0627)	Wednesday, July 28, 8 p.m.
Ramona Cowart 70 Old Ivy Road, N.E., Atlanta	(233-7340)	Thursday, July 29, 8 p.m.

Please check the meeting you plan to attend and return the enclosed slip to: Jack Tatum, Field Sec., SOHI, c/o Interfaith, Inc. 881 Peachtree St., N.E., Atlanta, 30309. (Phone 872-2390)

Critics Rap Nixon View On Housing

7/4/71
Atlanta Constitution

WASHINGTON (AP) — A coalition of major civil rights and urban organizations said Tuesday President Nixon's open housing statement "has diagnosed a cancer and prescribed aspirin as the remedy."

"While we are greatly disturbed by the negative aspects of the President's statement and the failure of the administration to take firm steps to assure equal housing opportunity, we are not bereft of hope," said the Leadership Conference on Civil Rights. It was joined by such other major organizations as the National Urban Coalition and the NAACP Legal Defense and Education Fund.

"The administration has recognized for the first time the seriousness of the problem and has taken the first halting steps toward solutions," said the statement responding to the President's June 11 open housing policy announcement.

In a related action, the leadership conference said ithas written all major 1972 presidential possibilities challenging them to state their own policies on "expanding and creating housing opportunities for all people at all income levels in an open society."

Bayard Rustin, chairman of the executive committee of the leadership conference, said the letters were sent because most politicians "do not want to declare themselves on so sensitive an issue." He said the group hopes to "force them on the record."

In regard to the Nixon administration's open housing policies, the civil rights organizations said:

"It is the President's duty to counter prejudices and fears, to make clear that the remedies are not to impose a quarantine or to reinforce the ghetto conditions that bred them in the first place; to place before the American people the hard alternatives they face in the cities; and to offer programs responsive to legitimate concerns."

Specifically the leadership conference and its allies criticized the administration for:

—"Failure to challenge zoning ordinances and other exclusionary devices that bar people who are poor and members of minority groups from obtaining decent housing outside ghettos.

7/14/71

1) We welcome this further indication that you intend for your administration to use governmental machinery to solve problems that ~~affectall the people~~ all ~~sge~~ segments of the Georgia community.

2) We suggest that your charge to the committee be broadened to include all aspects of housing discrimination so that they will not feel confined to the single issue of blockbusting.

3) We ~~I can understand~~ realize that you might have limited your charge to the committee ~~to make its endeavors parallel to~~ becuase current state ~~legis~~ law is so limited. But as we ~~I~~ have indicated a this true effective problem solving approach would find such a limitation self defeating.

4) Ideally, all citizens should ~~would~~ have equal access to housing, without any racial bar whatsoever. Short of that ideal it might be argued that "blockbusting" at least serves black interests in that it helps secure new options for housing albeit on a discriminatory basis. To accept such an argument is to ignore the undue financial loss to whites and costs to blacks in a blockbusting situation. And it is to ignore ~~that~~ the root problems of discrimination and prejudice which make it possible for such situations to arise.

The continuing failure of governmental bodies to deal adquately with discrimination increases the ~~pressure~~ liklihood that blockbusting-like tactics will be used both to secure profit and to ~~widen~~ increase the housing supply for blacks.

EVIA -
Here is my proposed letter to Carter. AC.

July 14, 1971

The Honorable Governor Jimmy Carter
Atlanta, Ga.

Dear Sir:

We noted with interest your recent appointment of a six-member committee to investigate blockbusting. Because this move seems to typify your Administration's overall effort to make government solve problems confronting all segments of the Georgia community, however sensitive politically, it is more significant.

Insert 1

Its primary significance, we believe, lies in the fact that beyond the urgency of halting a "corrupt" practice is the necessity to alter in a lasting and fundamental way, not only real estate practices, but, all the forces ~~xx~~ that conspire to cause a Black Georgian to buy a house in an all-black area because he would rather not ~~risk the~~ suffer the inconveniences of buying (or attempting to) in an all-white area; or on the other extreme those forces that downright forbid him to buy a house he truly desires and can afford because it happens to be located in the "wrong" section of town.

~~It seems axiomatic~~ We believe that any committee, designated to address itself to the "unethical business practice" of blockbusting, must also be willing to look at the larger issue of discrimination in housing.

Blackbusting is not the taproot of housing discrimination. However, the amount of blockbusting in a given city is directly proportional to the amount of housing discrimination, subtle, overt or otherwise. In light of this correlation any serious effort to find ways to end blockbusting must necessarily deal with ~~the~~ housing discrimination. In spite of the interelatedness of these two issues ~~the~~ your Committee might , as directed, deal only with blockbusting. ~~There-~~

Insert 2

~~In spite of the inherent inability of the Committee to focus on one of these areas exclusive of the other~~ ~~for we think our charge~~ Since your charge, naturally, to the Committee acts as a parameter we suggest that it be broaden and reissued.

Insert 3

We trust that blockbusting was not singled out for state attention because it is merely to your administration the most unpalatable manifestation of housing discrimination. ~~However~~ Such a conclusion, however, proceeds logically from previous state action on the question. I make reference to your blockbusting committee and the anti-blockbusting law passed by the Georgia Legislature during the previous Administration. (and in the private sector there is the continuous projection by the news media of blockbusting as the sole evil of housing discrimination.)

?.tw

E.V. #3

We think it is unfortunate that previous state action and most news coverage have focused on blockbusting.

Insert 4

We hasten to point out a major benefit accruing to Blacks from blockbusting. The most obvious is the resulting availability of a new supply of decent, sanitary, dwellings in a suitable living enviroment. When one considers the restricted range ofhousing choices available to Blacks this method of supplying housing ~~xx~~ can be extremely important. And to the extent that these choices are restricted due to (racial) discrimination is the extent that anti-blockbusting efforts are pro-segregation and harmful to the best interest of Black Georgians.

Not so for a state that is to where state

In spite of the failure of public entities in Georgia (Ga. Real Estate Commission, Ga. Legislature, Governor's office, zoning boards and housing authorities) to act in small ways to secure equal access to housing for Blacks, we cannot advocate blockbusting. ~~x~~Neither can we condemn neighborhood stabilization projects, even-though they say to some Blacks -- "there are enough Negroes in this neighborhood; go elsewhere". Stabilization ~~is not a~~ solution to blockbusting but , instead, is a means of "sandbagging" ~~against~~ the flood of racial fears of ~~residents of~~ whites in transition areas. Unless an attitude of fair housing is established, stabilization is doomed to failure and blockbusting is destine to thrive.

ok tc

~~So~~ W, with ~~all~~ due respect for the action you have taken we felt compelled to point out its limitations and inequities, now, while the Committee is just beginning its study and deliberations.

Be'll Albuquerque?

We attached no particular significance to the absence of any Blacks on this Committee; except that it becomes more important that this body, acting at your behest, be encouraged and directed to deal, not only with blockbusting, but, with the larger issue of discrimination in housing.

Other reason for exclusion?

In connection with this suggestion we are enclosing an SRC report on discrimination in housing just published by ~~the SRC on July 15, 1971.~~ m us this week This report should further illumine the points ~~I~~ we have attempted to make in this letter.

~~I~~ we trust the perspective ~~I~~ we ~~have~~ sketched here will receive your sincere consideration. ~~I~~ we might add that it is only out of a desire to offer an objective and constructive assesment of ~~xxxxx~~ the mission of your Blockbusting Committee that ~~I~~ we tender ~~my~~ our views on this matter.

Again thanks for any consideration you might give these suggestions and ~~request.~~

Sincerely,

Arthur C. Campbell, Co-Director
HOUSING & PLANNING

File H&P

40.

July 22, 1971
From: A. Campbell

H&P

Paul —

We believe that housing discrimination is systemic, ~~[illegible]~~, a way of shaping infant residential developments into segregated housing patterns. Our strategy in proposing this conference is to mobilize key individuals in the public and private sector ~~[illegible]~~ with the hope of forging new coalitions across economic and class lines ~~that will~~ ~~be~~ to ~~further dam~~ implement the ideals of the open society concept.

It seems a pragmatic and ideal step for SRC to take, especially, in the publication of our housing report and light of its recent self-evaluation.

We would like your reaction to the proposal itself, and potential for securing financial backing, ~~[illegible] family foundation~~.

PROPOSED: A Regional Conference on Discrimination in Housing / Organization of SRC Task Force?

PURPOSE: "To publicize efforts to end housing discrimination.

2. To educate citizen groups and government officials on various aspects of housing discrimination.

3. To establish contacts, develop new information, begin to weave together a regional program and strategy for the eradication and prevention of discrimination in housing.

Rationale

AREAS of Concentration:

1. State and Local Action
   A. Establishment of State Human Affairs Depts. (e.g. Kentucky)
   B. Legislation
   C. State Planning
   D. Politics of Housing
      eg. - In Jackson Miss. Mayor Davis efforts to get voter approval of low-income housing thru referendum.

      - Gov. Dunn's (Tenn.) veto

of legislation establishing a similar referendum on low-income housing projects.

- State Housing Development Corporations

2. Restrictive Land Use / Exclusionary Zoning.
   A. Location of housing near jobs
   B. Political implications vis-a-vis efficient delivery of services.
   C. Programmatic Possibilities

3. Blockbusting and Neighborhood Stabilization
   A. Anti-Blockbusting Measures
   B. Stabilization: Organization, effectiveness, potential.
   C. Real Estate Practices

4. Redress Procedures
   A. Complaints thru HUD
   B. Suits
   C. Other

5. The Federal Role
   A. As a Domestic Problem
   B. Priorities: money, manpower.

Rationale:

That discimination in housing is a problem has been documented over and over. That a major governmental and citizen commitment to solve the problem has not been made is axiomatic.

This proposed conference is ~~aimed at~~ conceived as a ~~first~~ vital step toward establishing a more favorable attitude toward the concept of an open pluralistic society. It would bring together the issue before a diverse group of southerners, to explore ~~ways~~ possible solutions, ~~develop~~ start a program for region wide government and citizen action, make information available to government officials and ~~existing~~ citizen groups, perhaps most important--mobilize people to consider the ideals of

an open society and implement them in their local communities.

It is generally agreed that a tremendous amount of urbanization will occur in the South in the Seventies. ~~If this decade~~ A "South" in transition would provide numerous opportunities for ending discrimination in housing and, even more exciting, developing cities and towns free of the problems (deteriorated tax-bases, ghettorized housing, de-facto school desegregation) that plague Northern metropolises. However, unless a wide range of people are mobilized these unique opportunities, ~~[illegible]~~ probably ~~[illegible]~~ will not be ~~[illegible]~~ fully capitalized.

Programmatic Implications:

1. Recommend establishing a SRC Task Force on discrimination in housing. The proposed Conference might serve as their first project.

To follow ~~our~~ Conference:

2. Publish handbooks on various aspects of discrimination in housing

Examples:

a. Modification of the normal planning process ~~to~~ so that it might consider problems in transition areas. It would be aimed at planners and government officials

b. Neighborhood stabilization and housing assistance handbook aimed at community groups. Would provide information on complaint procedures, how to develop cases for filing suits, available legal resources, how to organize housing assistance programs and how to combat exclusionary zoning.

3. Help establish Housing Opportunities Centers

4. Serve as on-going Information Center

Budget

1. Field Investigation

2. ~~Recruitment~~ Selection of Participants

3. Background Research and writing

4. Actual Cost of Conference
   - facility
   - program publication, brochures
   - telephone, postage
   - Expenses and/or honorariums for resource people.
   - Incidental expenses

5. Organization of SRC Task Force

FROM: Horace Barker HB

RE: Loose leaf collected materials on open housing.

I would think that at this time SRC would not want to put together any publication dealing primarily with "neighborhood stabilization." A more likely possibility would be an "action guidebook" which explains how citizens may get at the interrelated aspects of housing discrimination. Following are examples of issues that might be covered:

1. An analysis of the role of local planning agencies and other local government officials in maintaining a restricted housing market. Discuss how citizens can understand and influence the decisions affecting their neighborhoods.

2. An analysis of local real estate establishments, linkages between real estate agencies, banks, developers. Discuss

how to get cooperation on open housing, how to force compliance with the law.

3. Discuss "neighborhood stabilization". Show how it can contribute to open housing; discuss the psychological and educational benefits derived from group cooperation, the tendency toward segregationist attitudes and practices; and explain why "stabilization" alone can't solve the problem.

The collected materials provide a good start towards the gathering of information for use in an action guidebook. I especially like some of the suggestions in the government commission study (pp. 59-62).

Before SRC plans any more publications in housing, however, a careful evaluation is needed of how available resources can be used. The meeting on September 16 (or a week later) should prove useful in this regard.

It may well be that more field activities, a regional conference, or something else will emerge as the proper course to take in lieu of immediately publishing another document. (I believe John Ingle's proposal, date 8/12/71, explains well the need and opportunity to act in some capacity.)

The real value and usefulness of the information collected in the binder depends of course on what goals and strategies H&P choose to pursue.

HNB:lb

In terms of organizational characteristics of the industry, the study found that general contractors accounted for over 30 percent of the man-hours in on-site construction, while carpentry contractors accounted for 17 percent. In terms of the occupational distribution, however, carpenters accounted for 35 percent of the on-site man-hours. Based on a comparison with the earlier study, carpentry man-hours have increased considerably while hours worked by general contractors have declined, indicating that general contractors are concentrating more of their effort on coordinating, financing, and purchasing while subcontracting more on-site work to carpentry contractors.

Distribution of costs

Materials, including equipment, represented $442.90 per $1,000 or 44 percent of the construction price. (See chart 1.) The most important materials category was lumber and wood products, accounting for about 18 percent of the total or $179.60 per $1,000. The second most important material grouping was stone, clay, and glass products representing $95.30 per $1,000 of construction price.

On-site wages and salaries (including overtime) accounted for over 20 percent of construction price. Employer contributions for social security, unemployment insurance, and other benefits make up an additional 3 percent. The remaining 33 percent included profit, selling expenses, and overhead (such as architectural fees, office and warehouse expenses, and contractor financing).

The complete report, in addition to extending data contained in this article, will include man-hours and costs by selected characteristics of houses, a listing of types of materials used, costs by type of contractor, and wages by occupation. Other information: extent of unionization, degree of specialization in homebuilding, prevalence of apprenticeship training programs and recommendations for improving construction efficiency. In addition, the published study will include a description of methodology, scope, and limitations of the survey. □

Chart 1. Distribution of construction costs for single-family houses, 1969

[1] Supplemental benefits (fringes), FICA (Social Security), and Unemployment insurance.

———*FOOTNOTES*———

[1] These estimates, while representing only jobs created by houses built for sale and custom-built under contract, actually accounted for virtually all jobs in single-family housing construction, because the other major grouping, owner-built houses, provides relatively few on-site jobs. The estimates were derived using 1,800 hours a year for on-site construction workers and 2,080 hours for other workers.

[2] In residential construction, the following detailed bulletins have been published, and summaries of the studies appeared in the *Monthly Labor Review* (issues in parenthesis after bulletin citations): *Labor and Material Requirements for Private One-Family House Construction* (BLS Bulletin 1404, 1964) (*MLR*, July 1964, pp. 797–800); *Labor and Material Requirements for College Housing Construction* (BLS Bulletin 1441, 1965), (*MLR*, September 1965, pp. 1100-1104); *Labor and Material Requirements for Public Housing Construction* (BLS Bulletin 1402, 1964). Other studies in this series include civil works projects of the Corps of Engineers, federally aided highways, Federal office buildings, hospitals and nursing homes, elementary and secondary schools, and sewer works. In progress are studies of multi-family houing and a recycling of public housing and Federal highways.

[3] See John C. Musgrave, "The Measurement of Price Changes in Construction," *Journal of the American Statistical Association*, September 1969, pp. 771-786.

Labor requirements for construction of single-family houses

Building single-family houses involves more than 500,000 full-time jobs for workers in the construction industry

ROBERT BALL AND LARRY LUDWIG

ILDING AN AVERAGE single-family house requires ut 1,337 on-site man-hours of labor—slightly re than two-thirds of a construction man-year—cording to a recent Bureau of Labor Statistics dy. In this survey, the "average" house cost close $26,000 and had roughly 1,600 square feet of or space.

In terms of the value of the house, each $1,000 erates about 137 man-hours of labor in all sectors the economy. Of these man-hours, 62 are exnded in construction—52 on-site and the balance -site, in contractors' offices and warehouses.

In addition to the direct employment generated in e construction industry, 75 man-hours of employent per $1,000 of construction are created in inistries which mine, manufacture, distribute, and sell e materials used in single-family house construcion. Thus, for every hour of on-site construction ork, an additional .2 hour is spent in contractors' ffices and warehouses and 1.4 hours in other indusries. (See table 1.)

Estimates of man-hours required and full-time employment generated are based on a survey conducted by the Bureau of Labor Statistics under contract with the Department of Housing and Urban Development. This article presents a summary of findings, with a full report scheduled for release later this year.

Table 1. Man-hour requirements, by industry, 1962 and 1969

Industry	1962			1969		
	Per 100 square feet of livable space	Per 1000 current dollars of construction [2]	Percent [1]	Per 100 square feet of livable space	Per 1000 current dollars of construction	Percent [1]
All industries	238	202	100.0	218	137	100.0
Construction	99	84	41.6	98	62	45.3
On-site	85	72	35.6	82	52	38.0
Off-site	14	12	5.9	16	10	7.3
Other industries	139	118	58.4	120	75	54.7
Manufacturing	72	61	30.2	65	41	29.9
Wholesale trade, transportation, and services	36	31	15.3	32	20	14.6
Mining and all other	31	26	12.9	22	14	10.2

[1] Calculated on basis of man-hours per $1,000. Except for rounding, percent distribution would be the same on square footage basis.

[2] Revised data.

According to the survey, construction of this type provided an estimated 450,000 construction workers with full-time jobs and required an additional 74,000 jobs for off-site construction personnel such as administrators, appraisers, engineers, architects, secretaries, and clerks in 1969. In addition, about 561,000 jobs were generated in industries which provide materials used in construction of houses.[1]

The survey

The study was designed to measure the number of man-hours required for each $1,000 of single-family house construction price. It was based on a sample of 250 houses built in the continental United States stratified by geographic location, estimated cost of the houses, and degree of urbanization where they were built. Only private, new, conventionally built, single-family houses were considered within the scope of the survey.

Most of the houses in this study were located within metropolitan areas and had one story, a wood frame, basement, two or more bathrooms, forced air heating and a garage. Moreover, more than one-third of the houses surveyed had central air-conditioning. On the average, the construction of a single-family house took about 21 weeks to complete. Actual construction took place during 1968 and 1969; however, most of the homes were completed and sold during 1969.

On-site man-hour requirements, material requirements, and construction costs were obtained by BLS field representatives directly from over 4,000 general and specialty trade contractors. In addition to labor and material costs, profits, overhead, and selling expenses were included in the construction price. Ex-

Robert Ball and Larry Ludwig are economists in the Division of Productivity Research, Bureau of Labor Statistics.

cluded were the value of the land or lot and all capital improvements in the community, such as streets, sewers, recreational facilities, and so on.

Man-hour requirements other than for construction were developed from the interindustry growth model and reflect the labor expended to mine, process, transport and distribute the materials used in construction. Estimates were derived by first classifying and aggregating material values by type and deflating by an appropriate price index. These deflated values were matched with the appropriate industry sectors in the interindustry growth model to generate estimates of final demand. Sector productivity factors were then applied to derive employment and man-hours by industry group.

Change in on-site labor requirements

Comparison of data with an earlier study's results (from 1962) [2] reveals a decline in on-site man-hour requirements. This change reflects a host of economic factors including the introduction of new processes and materials, geographic shifts in demand, shifts in types of housing produced, and, of course, productivity growth. It is extremely difficult to isolate the effects of productivity change on labor requirements from these other factors.

In addition, the size of the sample in 1962 was considerably smaller than in the current survey, with only about a third as many respondents, and was limited to FHA- and VA-approved houses, in contrast to the current study which covers all new, conventionally built, private, single-family houses built for sale or custom-built under contract and costing $75,000 or less.

With these limitations in mind, two measures of change in on-site man-hour requirements were developed, one based on square footage, the other on constant dollars, using a Bureau of the Census single-family housing price index[3] to deflate the current dollar value.

On a square footage basis, man-hours per unit of output declined by slightly more than one-half of one percent a year. On a constant (1962) dollar basis—the effects of price increases having been removed—the decline was much sharper, almost 2 percent a year, as shown below.

	1962	*1969*	*Average annual percent change*
Man-hours per 100 square feet	85	82	—0.6
Man-hours per 1000 constant dollars	72	64	—1.9

The difference between these two measures reflects the lack of standardization of a square foot of single-family housing. That is, since homes built in 1969 have more bathrooms, air conditioning, and other features of improved quality, real value increased substantially faster than a measure of output based on square footage alone. These improvements also required a greater number of man-hours to install, but the increase in labor time was not proportionate to the increase in real value.

Distribution of on-site man-hours

In the construction of the houses studied, 69 percent of the on-site man-hours were worked by skilled tradesmen, 28 percent by semiskilled and unskilled workers, and 3 percent by nonproduction employees (supervisors, engineers, clerks). (See table 2.) Four major building crafts—carpenters, painters, bricklayers, and plumbers—accounted for three-fourths of the skilled employees. Carpenters were the most frequently used occupation at the site. With wood still used so extensively to frame, cover (in whole or in part), floor, and trim single-family houses, it is not difficult to understand why carpenters hold such a commanding position.

Over one-fifth of the man-hours were expended by laborers, helpers, and tenders, a somewhat larger proportion than was found in the earlier study. To a very large extent this reflected the greater use of prefabricated materials, which often require less skill to install. Except for this shift, there was relatively little change in occupational requirements.

Table 2. Percent distribution of on-site man hours by occupation and type of contractor, 1969

Occupation	Percent distribution	Contractor	Percent distribution
Total	100.0	Total	100.0
Supervisory, professional, technical and clerical	2.8	General	31.3
Carpenters	34.9	Carpentry	16.9
Painters	7.3	Plumbing, heating, ventilating and air conditioning	8.7
Bricklayers	5.7	Painting and paper hanging	6.5
Plumbers	4.3	Masonry and stonework	9.0
Cement finishers	2.5	Concrete and stucco work	7.2
Electricians	3.0	Electrical (except heating)	3.7
Plasterers and lathers	1.7	Plastering and lathing	1.4
Sheet-metal workers	1.3	Roofing and siding	2.0
Roofers	0.9	Ceramic tile, terrazzo, and marble work	2.2
Operating engineers	1.8	Excavation and grading	1.6
Tile setters	1.4	Wood flooring	0.9
Soft floor layers	0.6	Other flooring	1.6
All other skilled trades	3.3	Wallboard	4.0
Laborers	14.1	All other types	2.9
Helpers and tenders	13.8		
Truckdrivers and miscellaneous workers	0.5		

NOTE: Detail may not add to totals due to rounding.

This is the most urgent letter we have ever sent to you. It is an emergency appeal asking every Board member to make an immediate personal contribution to NCDH, in as substantial an amount as possible. A similar letter is going to each national cooperating organization, urging agency contributions.

As you know, NCDH from its inception has faced continuous financial problems, but somehow, with the determined efforts of a small group of people, it has managed not only to survive, but to expand its influence and effectiveness. We need not set down here NCDH's record of accomplishment in this most complex of all civil rights areas -- you know it well.

Right now NCDH is faced with the most severe financial crisis in its history. Despite sharp reduction of staff and retrenchment down the line, we have entered the fourth quarter of 1971 with a large deficit. The remaining professional staff has met the situation with unreserved loyalty and confidence. They have not been paid in three months, but have willingly added new duties to their already overloaded schedules. The debt for past-due salaries alone now stands at more than $25,000; unpaid expense accounts are outstanding; and the employees' pension plan has had to be cancelled.

How did this come about? The answer lies in a combination of unfortunate circumstances: the tax reform law which scared off many smaller foundations; the economic recession and adverse climate, resulting in a sharp drop in cash flow; inflated costs; carry-over expenses from expansion of space and facilities required for special projects such as the landmark jobs/housing study funded by the Carnegie Corporation; and an overbalance of restricted funds and insufficient monies for general operations.

Yet, despite the current crisis, the long-range outlook is encouraging. The Ford Foundation has just approved an interim grant for three months until consideration can be given our proposal for a two-year renewal grant (but with the proviso that the interim funding is to be used entirely for ongoing program expenses and none of it applied to the deficit). Renewal grants from other foundations are expected during the

coming months, and negotiations are underway with others. The corporate program is moving ahead and additional consultative contracts and corporate grants are being sought. Meanwhile, every potential resource is being explored for money to wipe out the deficit on as rapid a schedule as possible, with special drives now being planned in Chicago, San Francisco and New York. All of these efforts, of course, take time.

The immediate emergency is lack of cash to make "good faith" payments on the most pressing bills now. Thus, each of us must not only contribute personally to the limit of our ability, but we must each make a concentrated effort to get generous contributions from friends, acquaintances, and any other source we can tap.

Ed Rutledge is back at the helm after the serious illness brought on by overwork and intolerable strain. If each Board member matches the determination and commitment of Ed and his loyal staff, NCDH will weather this storm and continue its vital role of leadership and service to the nation's open housing forces.

We are counting on your generous help now.

Sincerely,

Bob Carter

From: A. Campbell
Re: Rural Housing

I am exploring the feasibility of working with several organizations/agencies in the area of rural housing and development. This is related to the rural housing element of our 72 program proposal.

The Rural Development Center at Tifton, Georgia is the prime promoter of an ad hoc ~~effort in the~~ group that met on November 18. The RDC's apparent agenda at that meeting was to have the assembled group express itself on the wisdom of having a "listening conference" on rural housing under the aegis of RDC.

This group recognized the need for organizational coordination/mobilization of resources to deal with rural housing problems but was generally lukewarm to the idea of a conference without adequate attention to its overall effectiveness (i.e. the above mentioned needs).

I am scheduled to serve on the

strategy committee to develop a role for this group. Tentatively the intentions are to pull together information, establish contacts with potential consumers of low-income housing throughout the state and sponsor a conference in the spring of 72.

This committee is scheduled for a meeting next Tuesday (Dec 7) in Tifton, Ga. While the expenses here will be nominal, it seems an appropriate time to raise the general question about SRC policy relative to travel (relative to HPP) as well as to request your ~~specific~~ reaction to this specific trip.

MEMORANDUM

TO: All Officers, Board of Directors, Sponsors, and Members

FROM: Clay L. Cochran

SUBJECT: Brief Report on 1971

DATE: December 13, 1971

Somehow it has been a very fast year, and it has slipped away with only one formal meeting, the Annual Meeting in March here in Washington. I will be contacting Board members for a get together in January to discuss problems and plan the new year.

Working with a largely volunteer staff, and economizing where we can on funds, it is not possible to do a decent job of keeping members informed on developments other than the general reports in RURAL HOUSING.

You have all received our up-dated 1971 edition of PEOPLE HAVE A RIGHT TO DECENT HOUSING, which was actually our statement for policy for the year, up-dated from June, 1969.

In addition, we appeared or submitted statements in accordance with those policies at 11 different Congressional hearings.

It is not possible to measure the results of the efforts of any person or organization very precisely, but I think the Coalition is serving a very vital function in providing a voice for a lot of small town and rural people. We really are recognized as a reliable, legitimate source of information on matters related to rural housing, community facilities and related things.

The legislation I recommended on our behalf at the Hearings of the Senate Select Committee on Nutrition and Human Need in late 1970, has been introduced, in the Senate by McGovern and others (S2897); in the House by Representative Abourezk and others (H.R. 12072). These bills would create a new agency, the Emergency Rural Housing Administration with instructions and resources to clean up the worst of the rural housing problem in five years, starting with the lowest income people.

On the other hand, the Nixon veto of the OEO bill has apparently killed the housing section which Representative Carl Perkins has inserted in the bill, the first direct housing instructions to OEO in its history. The President is also slashing Farmers Home personnel by 5 percent and cutting out all temporary personnel, including construction supervisors hired to speed up the housing program.

If you feel that we should employ more of our time in keeping you informed on organizational activities, I will try to do so but I have felt that we should spend every moment we can on the task of getting legislation and funds for programs clearly to the neglect of internal organizational information. If you differ with me, please say so.

At the Board meeting in January, we will discuss our financing, but since all of the promises of easy and large sums of money seem to have vanished like the mist, I am personally resolved to maintain and expand our membership which will provide us with enough money to keep RURAL HOUSING going, and retain the organization as a voice that has been useful and, I think, most fruitful.

There has been a very encouraging increase in contributions of $50 or more from rural electric cooperatives and CAP organizations as well as from individuals; our single big contributor is the United Presbyterian Church of the USA which contributed $3,000 again in 1971. (A financial report will be sent out after audit early next year.)

Within the year it may be possible to secure enough money for one staff member which is very desirable, but I am convinced that our voluntary efforts are very important, and if we have to we can make do on the contributions now available, if they continue.

I felt pretty rotten physically for several months this year, and the voluntary staff lagged a little on membership expiration dates and the inclusion of new members on mailing lists. This is being entirely cleared up this month, and if you have suffered from the delay, please bear with us. We now have a one-day, per week membership clerk who will see that this does not happen again.

Please let me have your suggestions on procedures, plans, programs, and finances. I regret I have not had more time to communicate with you and get the Board together more often, but so it goes.

Sincerely,

Clay L. Cochran
Chairman of the Board

National Research Council Urges Matching Of Socio-Economic Levels in Desegregation

1/4/72 HFP

By a WALL STREET JOURNAL *Staff Reporter*

WASHINGTON—A top-flight research panel issued a report that tends to argue against the incipient federal government effort to house subsidized inner-city families in suburban neighborhoods.

Though much evidence shows that people of different races but of similar socio-economic levels can live peacefully in the same neighborhoods, the report declares, little is known about whether people of different economic levels, regardless of race, can live together harmoniously.

Thus, the National Research Council recommends that federal housing desegregation policy be directed primarily toward "matching" socio-economic levels. Indeed, the council suggests that "simultaneous efforts to reduce racial segregation class stratification may in fact be counterproductive."

Dr. Amos Hawley, a University of North Carolina professor who chaired the panel, said that putting subsidized black families in more affluent white neighborhoods probably would harden prejudices that really were based on class, not on race. "It's a very strong probability," he declared, that such socio-economic mixing would be harmful.

List of people I met with in Columbia last week.

Re: Housing & Planning Program

There are several matters pertaining to the operation of the Housing project that I need to get your reactions/answers to. It is important that I get your input this week in order that the Housing project can make realistic commitments, or non-commitments, for the current year.

(1) How much money for how long a time is SRC presently prepared to put into HPP activities?

(2) Are you (i.e. SRC) willing at this time to employ a secretary/research assistant for the Housing project?

(3) Relative to question #1 would you sit down with me to establish an estimate of that total that can be made available for consultants and/or temporary assistants?

(4) What is your position on my exploration of funding possibilities for the Housing project? You indicated last December that some initiatives would be undertaken to to procure funds to support the Housing program for the current year. As far as I know nothing has been done along this line. That no time has been devoted to this, I am sure, can be attributed to your heavy work load. However, as project head it is encumbent upon me to assume this responsibility. I should mention that, while not a very promising prospect, the Project has been verbally invited to make a presentation to the Housing Assistance Council for funds to provide technical assistance to rural housing efforts.

MEMORANDUM

TO: E. Via

FROM: A. Campbell AC.

Re: (F.Y.I.) Atlanta Metropolitan Open Housing Coalition

I am a member of the executive committee of the newly-created Atlanta Metropolitan Open Housing Coalition. In this capacity I have made available the resources of the Housing and Planning Project for helping to develop Coalition programs.

Specifically, HPP will be working on the development of a Metropolitan Housing Opportunities Center and strategies for developing a metropolitan housing dispersal plan.

You may remember that the Housing Opportunity Center is an idea we spent a good deal of time on over the past 1½ years. A skelton proposal and some of the other information materials pulled together during that period are to be used in developing a new proposal for a metropolitan housing center under the aegis of the New Metro Coalition.

Basically, HPP's assistance is to consist of my time and travel expenses.

I am in the process of developing an itinerary for a delegation from Atlanta, including myself, to visit on March 13, 14, 15, Louisville, Ky.; Dayton, Ohio; and Washington, D. C. respectively. In Louisville the local metro open housing organization will brief the group on its operation. The Miami Valley

Regional Planning Commission in Dayton is to relate to the group its experiences in developing a regional housing dispersal plan. And in Washington, meetings are being arranged with James Harvey or the Housing Opportunities Center and members of Samuel Simmon's staff in HUD's Department of Equal Opportunity in Housing.

Tentatively, I am scheduled to brief the group on the itinerary and the trip objectives on March 8.

Nixon Presents a Rural Development Plan Adding $1 Billion of Fiscal '74 Loan Backing

2/2/72

By a WALL STREET JOURNAL Staff Reporter

WASHINGTON—President Nixon sent Congress a plan for developing job opportunities in rural America that includes $1 billion in additional federally backed credit for industries and communities.

The plan has a catch, though: The money wouldn't become available until mid-1973.

The proposed $1 billion expansion of available credit is in line with earlier indications from Agriculture Department officials. A wrinkle that wasn't previously mentioned, however, is that Washington would delegate to the states responsibility for administering the bulk of these and other funds included in the same rural development program.

As envisioned by Mr. Nixon, an initial $1.3 billion for rural development credit would be authorized in the fiscal year beginning July 1, 1973. This total includes $300 million in Farmers Home Administration lending authority that ordinarily would be sought to finance local rural water and sewage projects authorized by existing law.

The plan calls for 75% of the lending to be in the form of loans placed directly by local banks and other financial institutions with a 90% federal guarantee of repayment. The Small Business Administration already is making extensive use of such 90% guarantees in its loan programs, but this credit mostly serves more urban areas.

Interest Rate Ceiling Would End

The remaining 25% of the credit would be offered through the Farmers Home Administration's regular insured loan procedure. In this case, the agency makes and services the loans directly, but finances its operations by selling notes to the public with 100% federal backing.

One current advantage for rural communities that would be erased by the Nixon plan is the present 5% interest rate ceiling on Farmers Home Administration water and sewer loans. The Agriculture Department agency must pay significantly higher rates on its notes, and the difference amounts to a federal subsidy. In contrast, rates on the entire $1.3 billion proposed for fiscal 1974 would be set using a Treasury formula that takes into account "the market interest rates on comparable loans."

An Agriculture Department official predicted that the disadvantage of higher interest rates would be offset by rural communities' ability to have credit when they want it.

Of the $1.3 billion Mr. Nixon wants for the first year, 65%, or $845 million, would be for "commercial and industrial" purposes for businesses unable to obtain credit elsewhere. The remaining 35%, or $455 million, is to finance communities' water and sewer systems, industrial parks, community centers and "related items which would enhance the opportunities for employment," the White House said.

Eighty percent of the loan program would be administered by states, with each receiving a prorated share of credit authority. The rest would be under the Agriculture Department.

Why the Delay

At a White House briefing, Agriculture Secretary Earl L. Butz indicated that the delay in starting the program was dictated by the administration's desire to fight inflation. Later, however, Joseph Coffey, acting deputy under secretary for rural development, said it was prompted by a wish to extend the expanded credit simultaneously with $1.1 billion in federal grants to the states that would become available through rural revenue sharing.

Mr. Nixon's revenue sharing idea, first broached last year, was restated in the latest message. It would scrap most or all of 11 federal programs and agencies, including the Commerce Department's Economic Development Administration, the Agriculture Department's Cooperative Extension Service and the Appalachian Regional Commission. To obtain these programs' funds, states would draw up a rural development spending plan that also would cover lending policies for the $1.3 billion credit program.

So far, the House and Senate have been decidedly chilly to the idea of abolishing any established programs to finance revenue sharing. Conceivably, though, Congress could authorize new money for state rural development grants.

HUD Bars Contractor From Federal Work Over Minority Hiring

Philadelphia-Area Firm, Randeb, Penalized; Agency Says Case Is a Warning to Other Builders

3/28/72

By a WALL STREET JOURNAL *Staff Reporter*

WASHINGTON—The Department of Housing and Urban Development served notice that it intends to press contractors to hire minority-group workers on federally subsidized housing jobs.

HUD barred a Philadelphia-area company from future federal contracts, at least for the time being, because, the department said, it failed to honor a commitment to use minority-group steamfitters on a public housing construction project. The company is Randeb Inc., a heating and ventilating contractor based in the Philadelphia suburb of Newtown Square.

A spokesman for Randeb Inc. said company officers weren't available to comment upon the HUD action.

Samuel Simmons, a HUD assistant secretary, said the action shows "we mean business" and should be interpreted as a warning to companies doing business with the federal government that if they don't take "affirmative action" to employ minority-group workers, they will be punished.

The Randeb case grew out of the "Philadelphia Plan," under which contractors on major federally funded construction projects in the area agree, at the time they are awarded the federal work, to make good-faith efforts to employ minority-group members in several specified trades. Mr. Simmons said 13 other Philadelphia Plan contractors, as well as some companies in other cities, are under scrutiny and could be the targets of sanctions by the end of the year if they don't come into compliance.

Two years ago Randeb received an $86,000 contract for work on the Point Breeze public housing project. At the time, the company agreed to a goal of 12½% minority-group employment in steamfitting positions on the job, HUD said.

Mr. Simmons said Randeb failed to fulfill this pledge and didn't appear at a hearing called to check the alleged contract violations. Therefore, he said, the company, until it mends its ways, is barred from future federal business because it "failed to achieve its minority hiring goal and failed to demonstrate that it had engaged in good-faith effort to achieve that goal."

This was the second time the federal government had taken such action. The earlier case was initiated by the Department of Health, Education and Welfare against Edgerley Air Products, also of Philadelphia.

Clarostat Cuts '70 Sales Figure

DOVER, N.H.—Clarostat Mfg. Co. said it revised its 1970 sales downward to $9.8 million from $10.7 million "to eliminate certain intercompany transactions." The restatement of sales hasn't any effect on the year's earnings, the electrical equipment maker said.

SIHDC

Southern Indiana Housing Development Corporation
BOX 1152 COLUMBUS, INDIANA 47201 (812) 372-4477

March 31, 1972

Mr. Les Dunbar, Executive Director
The Field Foundation, Inc.
100 East 85 Street
New York, New York 10028

Dear Mr. Dunbar:

Enclosed is a copy of the Prospectus for funding for fiscal year 1973 for SIHDC. As background, let me explain that SIHDC is a nonprofit corporation funded by OEO to provide housing training and technical assistance to eleven Community Action Agencies, other groups, and local governmental subdivisions toward greater and more effective utilization of existing resources for low income housing. While in operation for only six months, we are quite proud of our record to date as outlined in the Prospectus.

Unfortunately our current funding of $62,400 is grossly inadequate to do the job. For this reason, we are seeking funding from three sources, the Office of Economic Opportunity, the Dept. of Housing and Urban Development through 106A funds, and the Field Foundation.

OEO has committed $50,000 of new money and $20,000 carry over, and HUD is now considering our proposal.

As you will see in the Prospectus, we plan to expand our attack through the use of seminars for local elected officials, and by direct production of 236 rental projects under an experimental "interim" sponsorship.

We are seeking foundation funds for the one element of our program that we feel may be the key, and for which OEO and HUD funds may not be used. That is, the employment of a Governmental Relations Specialist. Simply stated, we wish to employ a retired congressman, governor, or other public official who has both the ability to move the federal bureaucracy, and knows the elected officials of southern Indiana on a first name basis.

A detailed plan for financial assistance from your organization is being prepared. We anticipate submitting a funding request to the Field Foundation persuant to recommendations for improvement which may result from your critical examination of the Prospectus.

Sincerely yours,

D. Bruce Wallace
Executive Director

DBW/rk

Thanks for the suggestions on foundations, I hope we are successful. Please offer comments on the Prospectus. We're open for suggestions or criticism.

Bruce Wallace

Introducing SIHDC	1
How Big Is the Problem?	4
Dealing With the Problem	6
What Will It Cost?	11
Evaluating Our Performance	12
What Will Be the Return?	13

INTRODUCING SIHDC

The Southern Indiana Housing Development Corporation was formed on July 1, 1971. It was created as a joint venture of eleven Community Action Agencies. The principal corporate offices were established in Columbus, Indiana.

* Serving a population of 895,255 (1970)
* Living in 26 Indiana counties
* Encompassing 10,171 square miles

SIHDC was developed to meet the growing demand for more adequate housing in Southern Indiana, through -

* Providing information on available resources for housing improvement
* Planning for resource utilization
* Developing proposals for financial assistance
* Technical assistance for program operation

SIHDC became functionally operational September 27, 1971, with the employment of the Executive Director. The initial funding was provided by the Office of Economic Opportunity.

* First year funding level of $62,440
* Employing 3 regular staff members
* Supplemented by 10 VISTA Volunteers and their supervisor

SOUTHERN INDIANA

HOUSING DEVELOPMENT CORPORATION

AREA OF SERVICE

HOW BIG IS THE PROBLEM?

The real magnitude of the severity of housing needs in Southern Indiana is not clear. However, there are sufficient elements of base data to firmly establish the inadequacy of housing in the Southern Indiana area of service. For example -

* There are 36,051 housing units without all plumbing within SIHDC coverage area. This represents 12% of the total housing within the area.

* Inadequate housing in the SIHDC area comprises 32.4% of total inadequate housing in the state.

* While the area has approximately 1/3 of the state's deficient housing, it has only 17.2% of the state's population.

Working within a limited framework of information and staff, many programs are under development. For instance -

* Nine (9) HUD 237 counseling programs

* Two (2) Self-Help programs

* Five (5) FmHA Housing Placement programs

* Single programs in HUD 235, 235j and 236 rent supplement and FmHA 504 programs

A more significant impact requires a broadened scope of activities. A further, more detailed analysis of housing needs is required. The precise potential for utilization of housing rehabilitation programs, rent supplement programs, home ownership programs, local housing authorities, et al, needs to be ascertained. Only then can realistic priorities be established.

On the basis of those determinations, new approaches should be sought in the areas of rental housing and home ownership. More satisfactory avenues ought to be explored in the operation and management of rent supplement programs and local housing authorities.

DEALING WITH THE PROBLEM

SIHDC was formed to fill a void. It was clear that insufficient housing resources were available to facilitate the provision of decent housing for all of the citizens of Southern Indiana. Our mission is to fill that gap by assembling sufficient human and financial resources to have a significant impact on the housing deficiencies of the area.

Goals

* Participation of local units of government is an essential element in a comprehensive housing program. Our goal is to educe a widespread participation.

* A second essential element is the supportive involvement of church and other non-governmental groups. We shall elicit that involvement.

* Most of those who make their homes in inadequate housing are poor. Frequently they are also members of minority groups. The involvement of these groups is fundamental to successful housing programs. Our goal is to enhance the Community Action Agencies' unique capability to include the poor in the full spectrum of finding solutions to the housing problem.

* Knowledge of housing conditions necessitates an advocacy role for SIHDC. We will support further progress toward fair housing practices.

* The pace of housing construction must be increased. We intend to serve as a liaison between builders and developers, and potential housing sponsors. We intend to develop innovative roles for SIHDC to facilitate that acceleration.

Objectives

The Southern Indiana Housing Development Corporation (SIHDC) will -

* Sponsor a minimum of two (2) Regional seminars for local elected officials to provide information and a forum for the exchange of ideas and opinions in the area of housing.

* Generate the active participation of four (4) additional elements of local government in developing new housing proposals.

* Conduct a minimum of one (1) Regional seminar for church and other non-governmental groups to provide information about their potential role as housing program sponsors.

* Assist in the development of three-year housing plans by each of the eleven participating CAAs.

* Effectuate a minimum of six (6) additional housing activities in member CAAs.

* Conduct one (1) conference of builders and developers, and financial institutions to introduce them to the resources of SIHDC.

* Develop a plan to enable SIHDC to act as an "interim sponsor" of housing projects, e.g. HUD 236. As an "interim sponsor", SIHDC anticipates a considerable reduction in pre-construction lead time, as well as improvements in management and utilization.

Activities

Achievement of the SIHDC objectives will be accomplished through activities in three major functional units. Broadly stated, the major activities will include -

Planning

* Acquire comprehensive census data for the region, CAA areas and major urban centers.

* Disseminate housing data to local CAAs and other community groups.

* Establish goals and objectives, alternative approaches and the activity matrix in order to establish SIHDC's "interim sponsorship" capability.

* Provide assistance to CAAs and other groups in the technical aspects of planning.

Training and Technical Assistance

* Coordinate development of seminars and conferences on available housing resources, e.g. HUD, FmHA, etc.

* Provide training for CAA staffs in technical knowledge of housing program development.

* Assist sponsors in preparation and presentation of quality housing proposals to appropriate funding sources.

* Explore alternatives and prepare comprehensive participatory management systems as part of the "interim sponsorship" package.

* Help existing housing projects in development of improved management systems.

Inter-Governmental Relations

* Open channels of communications between SIHDC and all segments of local government.

* Assist local elected officials in understanding their role in the development of successful, comprehensive housing projects.

* Serve as a liaison between SIHDC and the various state-wide and national housing organizations.

Staff

The scope of projected SIHDC activities will necessitate assembling a staff of committed, highly qualified personnel in all positions. The minimum staff required to accomplish our objectives will be twelve (12) persons.

Executive Director

Inter-Governmental Relations Specialist

Housing Management Specialist

Planner

Planner (Field)

Planning and Graphics Assistant

Technical Assistance Specialist (HUD)

Technical Assistance Specialist (FmHA and others)

Training and Technical Assistance Research Assistant

Fiscal Officer

Secretary

Clerk-Typist

WHAT WILL IT COST?

Assembling sufficient fiscal resources to carry out the essential activities requires multiple funding sources. This prospectus solicits the financial support of the Department of Housing and Urban Development (Sec. 106a), the Office of Economic Opportunity (SPRIF) and local private foundations. The consolidated cost projections which follow illustrate the cost to each separate funding source and the importance of an interlocking financial approach.

Personnel	OEO	HUD	Foundation
Wages and salaries	$ 45,400	$ 58,020	$ 22,650
Fringe benefits	5,450	6,960	2,720
Consultant costs	700	7,000	300
Subtotal	51,550	71,980	25,670
Non-personnel			
Travel	8,600	12,200	3,900
Space and equipment	4,660	5,640	980
Communication costs	3,630	3,630	1,000
Resource material and training costs	740	4,650	
Seminar and conference costs		400	400
Other costs	820	1,500	425
Subtotal	18,450	28,020	6,705
Total	70,000	100,000	32,375

EVALUATING OUR PERFORMANCE

The objectives of SIHDC are quantifiable and therefore easily measurable. However, counting the number of things we have done is not totally revealing. The success of the plans, conferences and other activities hinges upon the quality of our work. Judgments as to the quality of our labor can best be made by people somewhat removed from daily operations.

The sources of financial assistance in conjunction with the SIHDC staff and Board of Directors can most objectively judge quality of production. The specific format for evaluation should be a joint venture of funding sources and the Board of Directors. Evaluation should be designed as an ongoing activity to measure progress toward objectives periodically, allowing for operational changes to constantly upgrade and improve the program.

WHAT WILL BE THE RETURN?

Investment of human and financial resources as detailed in this prospectus can have sizeable economic impact. The prospect for a stimulated economic environment in Southern Indiana can be greatly enhanced by an increase in public and private investment. The concept of using the interlocking sources identified in this SIHDC plan to apply leverage for increased economic participation is exciting.

The multiplier effect of expanded cash flow could have a significant impact on the day-to-day lives of hundreds of people in our area. The problems of joblessness and under-employment could be considerably diminished and human dignity restored to hundreds of dependent Indiana citizens through the creation of new employment as a result of expanded economic investment.

There are many sources of assistance: HUD, FmHA, RHA, NHC, OEO. They have been available for years. They are underutilized. Many of our people are still ill-housed. We hope to demonstrate that the concepts embodied in this proposal can be the catalyst for bringing the programs and the people together.

Many of the benefits expected are not really measurable. We do not offer this prospectus as a panacea. We offer it as a realistic major step.

Does Art Caspleck have the copy of the proposal that this refers to — Please get them together

April 5, 1972

APR 21 1972

Mr. Les Dunbar, Executive Director
The Field Foundation, Inc.
100 East 85 Street
New York, New York 10028

Dear Mr. Dunbar:

In reviewing my letter to you regarding submission of our Prospectus, I note that my reference to the key element of a Governmental Relations Specialist may leave some question as to intent.

I am aware of the provisions of the 1969 Tax Reform Law, and the concern that may arise with regard to possible partisan activity by a Governmental Relations Specialist. It is not our intent, nor did I want to suggest that this person would be involved in any partisan political activity or pressure for passage of legislation.

The Governmental Relations Specialist should be a person skilled and knowledgeable of the governmental processes, and who knows the public officials of Indiana. His role would be to open doors for discussion and consideration of the options available under existing federal housing programs, and in conjunction with other staff members, provide technical assistance in preparation and processing of appropriate applications.

The need for this element of the program is based on the existance in Indiana of a very conservative attitude about federal programs in general, and particularly public housing.

Unless we can gain sufficient confidence and rapport with public officials to create an atmosphere for fair exchange of knowledge and ideas about the reality of local control of planning and operation of public housing under the current program, this one program that offers a housing alternative for the very poor will continue little used in Indiana.

I hope that this clarification will answer any question with regard to the role of the Governmental Relations Specialist. I will appreciate your comments on our Prospectus.

Sincerely yours,

D. Bruce Wallace
Executive Director

Dear Mr. Campbell:

The Southern Regional Council has been designated by the HAC bylaws to be represented on the Housing Assistance Council Board of Directors. Unfortunately, this position became vacant at the resignation of Dr. Raymond Wheeler. At his recommendation, the Executive Committee voted on April 27 to elect you to serve as the SRC representative.

I am enclosing a copy of our guidelines and statement of purpose to familiarize you with the organization. I am also enclosing copies of the HAC NEWS.

If you are willing to serve, please send us your acceptance as soon as possible. I hope that we will be able to welcome you personally at the next Board meeting in late July or August.

Congratulations on your appointment.

Sincerely yours,

Gordon Cavanaugh

FDIC Proposes Rule To End Discrimination In Mortgage Lending

9/18/72

Regulation Would Require Banks To Explain Rejections if Forms Contain Racial or Ethnic Data

By a WALL STREET JOURNAL *Staff Reporter*

WASHINGTON—The Federal Deposit Insurance Corp. proposed a regulation designed to carry out provisions of the 1968 Civil Rights Act that prohibits discrimination in mortgage lending.

Among other things, the proposed regulation would require banks under FDIC supervision to allow loan applicants to fill out forms stating their racial or ethnic background. Then, if the loan were denied, the rule would require the bank to fill out a second part of the form, giving the reasons for the decision. The form would advise loan applicants that, if they think they were denied a loan because of race, color, religion or national origin, they can request a copy of the full statement and file a complaint with the Department of Housing and Urban Development.

Banks would have to keep copies of these "fair housing informational statements" on file for two years after the date of the loan application.

In addition, the FDIC is proposing that banks list on every loan application the number of the census tract in which the property is located. An FDIC official explained that this would provide a way "to pinpoint a lending pattern" so as to determine whether a bank is limiting lending to particular areas or, perhaps, refusing loans to blacks who want to move into white areas.

The FDIC's proposed rules, which are subject to public comment until Nov. 1, would affect approximately 8,000 insured commercial banks and 326 insured mutual savings banks that have state charters and aren't members of the Federal Reserve System.

H&P

Mr. Smith,

Thank you very much for the literature. It is of great personal interest to me, and I would like to know more about your program. Many people here at the university are also interested and found the reading material quite enlightening. I intend to take most of the pamphlets and books back to California with me, to be used by various programs which I am involved in related to human rights, national and international cooperation. However, Prof. Shapera would like copies for use by both Nairobi university and our program here, California Education Abroad. Would this be possible? I imagine that Prof Shapera could arrange to pay for the postage.

A copy of my talk, given while you were here, will be sent to you soon. I am sorry for the delay, but we have just completed a month of final examinations. You might be interested to know that Prof. Shapera was strongly criticized by architecture students here for not including them in the symposium, for not inviting more Africans to participate, and for not presenting an African student's opinion in an "American Diary" to contrast with my "Kenya Diary." In fact, Prof Shapera did attempt to do these things in the short time she was given, but African staff and student representatives were less than enthusiastic. This may give you some idea of the precarious and complex diplomatic situation here.

Memo

To: Art
From: Horace
Re: Atlanta Open Housing Scene

1. Jerry Cohen returned the revised bylaws with his comments. They are in the folder marked "bylaws-charter".

2. I talked with T.M. Alexander by telephone on 8/31/71. He ruled out the idea of inviting people from Chicago to come to Atlanta to tell Atlantans how to solve their problems. He said Atlanta is "different" and must evolve its own programs.

T.M. said he wanted to check with the Mayor and other members of his committee before

taking any action on open housing here.

He said also that he wanted to check with his son who works in Washington on HUD's FHA non-assisted programs.

He also suggested that I might want to meet with his Steering Committee which convenes again sometime about Sept. 22. I told him that something needs to be done before then since Caruso plans to see Romney on Sept. 14-15. That's when T.M. said he wasn't interested in what Chicago has done.

I have written T.M. directing him to address all further communication to you. (Copy of letter attached.)

T.M. did not rule out the possibility of supporting some kind of open housing program. What kind, I don't know. However, I would urge that you prod him to act if you feel his help is needed.

3. On 8/31, ~~[illegible]~~ prior to talking with Alexander I talked with Bob Newman who is a member of Alexander's steering committee. (Membership list attached.) Newman is very interested in the Legal Action Program, and he seemed to recognize the value of an organization like MAHC operating a comprehensive open housing program.

Newman said that he was going to call Caruso to see if HUD funds really are available. If

funds are available, Newman said he could put together an organization without any difficulty.

I have written Bob a letter (copy attached) urging that he try to involve MAHC in any attempt to operate a Legal Action Program. When I talked with him on the 31, Bob seemed very willing to do this –

It seems to me that Bob is a potentially valuable ally in getting something going here –

4. I talked with Randy Taylor by telephone on 9/3 – Hallerstedt was on vacation all of this week so we did not get to meet. However, Taylor is confident that he can arrange a meeting with you and Hallerstedt soon after you

return. Gellerstedt had not had time to read our stuff when I talked with Taylor, but Taylor was hopeful that Gellerstedt would be receptive to the idea of providing some kind of support for open housing.

PAUL ANTHONY
EXECUTIVE DIRECTOR

A Council to attain the ideals and practices of equal opportunity for all peoples in the South

EAST AFRICAN REPORT

by

Marjorie L. and Moreland Griffith Smith

Presented to the

Southern Regional Council, Inc.

The co-director of the Housing and Planning Program of the Southern Regional Council and his wife have recently returned from East Africa where they had the opportunity of attending a Kenyan-American Symposium on Architecture and Urban Design. Dean Sam T. Hurst of the School of Architecture and Fine Arts of the University of Southern California, Dean Robert H. Dietz of the College of Architecture and Urban Planning of the University of Washington, and Dean Ron H. Helms, Faculty of Architecture Design and Development, Nairobi, led a tightly scheduled two-day discussion of problems in housing, rural-urban relationship, economy, education, industrialization, and employment in both

countries. Though details may differ widely, the underlying problems have a striking similarity. Slums in Africa may consist of shanties constructed from old boxes, but the living there is no better or worse than in the deteriorating neighborhoods in the United States. Africa may indeed have a brighter future than we, for it can start from scratch. We have so much to undo.

Following the conference we were able to travel about the area and form personal impressions of the countries we were visiting, namely Kenya and Tanzania.

A two-week, first trip to East Africa is an exhilerating experience, leaving us almost over-stimulated by the wonder of it all. We had anticipated the herds of animals living in their natural setting, but we had not anticipated being able to observe some of their habits in so short a visit. Nor were we prepared for the wealth of exotic birds and the strange and beautiful plant life, the changes in scenery as we rose or descended in altitude. East Africa is high, most over 5,000 feet above sea level. Though it straddles the equator, the climate is cool at all times.

All of this was enough, almost more than we could absorb, but another and more important aspect of the land captivated us -- the people. In the territory we covered, two tribes ~~were~~ predominate, the Masai and the Kikuyus. The latter is traditionally agricultural. In the more remote areas, they live much as they have always done, in cleverly constructed round houses made by sinking poles into the ground, interlacing them with flexible boughs, and packing the spaces with clay. A thatch roof completes the structure. A single family may live in a complex of several of these units. Yet, even in the remote areas, tin roofs are beginning to replace the thatch, concrete blocks the mud. Some changes are taking place. However, the rural Kikuyu woman is no candidate for Women's Lib. She is never seen without a tremendous burden on her back. She carries it from a strap placed on the head. Most develop a deep groove in the bone structure of the head and a badly distorted spine early in life. Unlike most other African tribes, they do not carry loads on top of the head, so lack the erect, beautiful posture of most other African women. The men work outside the home, and many out of necessity, live most of the time away from their families. All hotel services are performed by men. The Kikuyu tribe also con-

tains many educated and urban people, including President Kenyatta. And just as the housing is beginning to change, so are other aspects of Kikuyu life. Every village has its school where the grounds are full of earnest young children in simple, attractive uniforms. In one field, the women are forking up the dirt for planting, all by hand. Yet the next farmer may possess a plow and a team of oxen. Domestic animals are subject to disease from the tsetse fly and thus are rare. But tractors are coming into use, particularly on the cooperative farms.

It is very easy to get false impressions in so short a visit, and we must emphasize that our observations make no claim to accuracy. Wherever possible, we questioned and probed. For example, one day we were taken to a coffee plantation. We were greeted by a white lady, offered coffee, and shown a staged performance of Kikuyu ritualistic dances. The costumes were obviously faked. Oil cans served as drums. All the white spectators had seats on one side of the performance, while a group of raggedy native women and children sat on the ground on the opposite side. Our reaction was one of disgust. We felt as though we were in Lowndes County, Alabama. Then we learned that the white lady did not own the plantation. She is the hired

manager. It is a Black cooperative venture. Perhaps the resident Blacks still have not freed themselves from the subservience they had to affect during white ownership, but at least they are on the way, and in time it will come. East Africa has more in common with the South than West Africa, for it was actively settled by whites several generations ago, and Blacks were used in a menial capacity, whereas in West Africa colonialism took the form of government by an absentee power.

President Kenyatta has charisma. He is respected and loved. While we were there he made a speech in which he said Kenya could move forward by hard work and "harambee" (cooperation, pulling together).

For a visitor, life is comfortable and pleasant. The city of Nairobi is beautiful. The streets are clean, litter free. Tall, clipped trees of bouganvillia and hibiscus line the major thoroughfares. Carefully trained ground cover of bouganvillia fills the center of the parkways. Several high-rise buildings are under construction. The skyline is already impressive. City services are efficient. The post office is the most orderly we have ever encountered. Food and hotel services are deluxe. Roads are rapidly being improved. Some are even being made four-~~land~~ LANE, with overpasses where railroads cross. This may give some

idea of the tremendous contrast within the country. Yet, perhaps it is more in kind than in degree than the difference between Buckhead and Summerville.

The treatment and attitude of minorities is of importance in East Africa. Again, we can make no statements of fact, only our subjective observation. Our tour guide was a young Kenya born, white man. He speaks fluent Swahili and appears to have real comraderie with the Blacks. He is issued a work permit for thirty days at a time, and knows that when he can be replaced by a Black, he will join the ranks of the unemployed if he choses to remain in his native land. For this reason, whites feel insecure in proportion to their own inner security. We have a white friend, Violaine Junod, a native of South Africa but of Swiss parentage. She came to the United States on a Phelps-Stokes fellowship during the Montgomery Bus Boycott, went to the SRC and was sent to Montgomery because the action was there at the time. She spent several months, attended many mass meetings, and knew Dr. King. She was subsequently expelled from South Africa where she had taught at the University of Durban. She now travels on a Swiss passport, but lives in Kampala, Uganda and teaches at Makerere University. We had a visit with her, and

she expressed complete satisfaction with her life. She feels that life everywhere is insecure, that ones only security is a skill, and she will continue to live and work in East Africa as long as she is needed. She said that many whites who left in fear are trying to return.

The sizeable Indian population creates another problem. East Africa has for centuries been influenced by Asiatics whose ships were blown to Africa in the fall by the Monsoon and home again in the spring. Many settled permanently, and their children were born there, yet they retain their ethnic ties. They are the shopkeepers, and money flows out of the country through them to India and Pakistan. Kenya has just put an embargo on Tanzanian money. Miss Junod said that it is because Tanzania has a larger Asian population than Kenya and this move will somewhat help stop the outward flow of money from Kenya. Americans in our group were saying that the new monetary policy was created because Kenya was more allied to the West and Tanzania to Red China. Miss Junod discounted this. She said that Red China is building the railroad in Tanzania, but there is no sharp division between the two countries except in the minds of westerners. In fact, we found western capital being invested in Tanzania. There

is a growing number of elegant safari lodges being built.

One problem facing these countries is ecological. Tourism is vital to the economy, and tourists come primarily to see the game which is the most unique in all the world. About fifteen years ago, Dr. Bernard Grzimak of the Hamburg, Germany zoo came with his son Michael to study the animals of Serengeti. The son was tragically killed. The work of these men ~~have~~ has born fruit, and now the local governments realize the necessity of extending the park areas to provide grazing land for all seasons. Yet there is continual pressure for more land for crops and a great deal of poaching. Natives have always been able to kill animals as needed for their personal use. Now it is prohibited. At the same time, the demand is greater as westerners clamor for items made of skins. Natives see western huntsmen drive by, their cars laden with trophies, and are naturally resentful. They cannot be expected to understand that this game was taken under a strict quota system. Money is too scarce to employ the game wardens needed to deter poaching. There is real danger that this last great stand of wildlife may be threatened with extinction. The East Africa Wildlife Society is hard at work to protect this vital resource.

One of our concerns on the trip was the complete absence of American Blacks in the most beautiful areas of the country, the parks. American Blacks travel extensively in Africa, but most have gone to West Africa. We did see a few in the hotel in Nairobi. They seem to travel abroad for professional reasons, and their schedules and expense accounts evidently do not permit what are probably considered as extras. Yet they should not be denied the wonderful experience of seeing the game, nor should western whites have these beautiful lodges in a Black continent ~~which are~~ as segregated as any American resort hotel.

We have left for last what is perhaps the most interesting of all the tribes in Africa, the Masai. These people spurn civilization, though they are considered of superior intelligence. As much as possible, they retain their tribal, semi-nomadic life. They herd cattle and goats, live on milk and blood. What money they need in this world that encroaches on their way of life, they get from selling beaded items. As we drive through the vast wilderness teaming with wildlife and see a single Masai among the game, armed only with his everpresent spear, we wonder about our sense of values. We sit in our car, walled off from nature. We fear. The Masai is part of nature, not apart from it. We

are tempted to conclude that civilization is evil and corrupted. Then we remember the great art, literature, and music produced in civilization, and we feel that perhaps civilization is neither good nor bad per se. Yet how to retain the good, how to recapture our sense of man's place in the scheme of things, this is the great unanswerable question we find ourselves facing.

KENYAN-AMERICAN SYMPOSIUM ON ARCHITECTURE & URBAN DESIGN

MARCH 20/21 - TO BE HELD AT NAIROBI HILTON HOTEL

Saturday, March 20th

10:00	WELCOME	Prof. Nathan H. Shapira, Head, Department of Design University of Nairobi
10:15	THE POLITICS OF HOUSING IN AFRICA	Mr. Niels Jorgenson (Copenhagen) Research Fellow, Housing Research & Development Unit
10:45	THE POPULAR ECONOMY	Mr. Bruce Creager (Boston) Architect, Lecturer, Department of Architecture, University of Nairobi
11:15	NAIROBI & THE MATHARE VALLEY	Dr. David Etherton, Architect (London) Research Fellow, Housing Research & Development Unit
12:00	MAIN ADDRESS	Mr. David Mutiso, Riba, Chief Architect, Ministry of Works, Government of Kenya
1:00	LUNCH	Mr. & Mrs. David Mutiso, Guests of Honor
2:30	VISIT TO THE DEPARTMENTS OF ARCHITECTURE & DESIGN, UNIVERSITY OF NAIROBI	Professor Flemming Jorgenson, Head of Department of Architecture and Members of the staff

4:00	EXPERIMENTS IN EDUCATION	Dean Sam T. Hurst, University of Southern California, Los Angeles. Dean Robert H. Dietz, University of Washington, Seattle.

<u>Sunday, March 21st</u>

10:00	KENYAN DIARY	Hillarie Kelly, (University of California) Los Angeles.
10:30	HOUSING AND HIGHRISE U.S.A.	Dean Sam T. Hurst, University of Southern California, Los Angeles.
11:30	INDUSTRIALIZATION OF HOUSING & NEW TOWN IN EUROPE AND U.S.A.	Dean Robert H. Dietz, University of Washington, Seattle.
12:30	LUNCH	Guest of Honor: Dean & Mrs. Ron H. Nelms, Faculty of Architecture Design and Development.
2:30	SIGHTSEEING IN THE NAIROBI AREA	
5:00	END OF SYMPOSIUM	

PARTICIPATING PANEL

File RDC - Housing & Planning

Outline of what Task Force is up to

M

Goals of a report on equal opportunity in housing:

I. To evaluate HUD's and the Department of Justice's efforts to enforce the open housing law (Title VIII) in the South.

A. To point out weaknesses; e.g. inadequate manpower, absence of field offices, unnecessary administrative impediments to effective enforcement and to point out successes and suggest ways to improve enforcement.

II. To report state and local efforts to ensure fair housing in the South:

A. State and local fair housing statutes and anti-blockbusting laws.

B. Citizens groups concerned with neighborhood stabilization and fair non-discriminatory real estate practices. For example, SWAP. South Dekalb Neighbors --- hope to do a southwide survey.

III. Examine problems of locating public housing outside the central city -- role of federal and local government in achieving this goal.

I. Basic question raised concerning specific implementation of housing as typified by the Red Oak and Nishey Lake projects is how effective is the administration's commitment to dispersed low-income housing in the face of strong election year political pressures to prevent construction of the housing throughout the metropolitan area.

It is logical to assume that if the citizens of Red Oak and Nishey Lake succeed in halting the projects already approved for their areas, then every other community in metropolitan Atlanta will expect the same assistance from the likes of Congressman Thompson.

The purpose of a report on the Red Oak case is to counteract rumor, heated political rhetoric and misleading information about property values, zoning regulations.

A second purpose is to emphasize metropolitan Atlanta's need for dispersed housing vis-a-vis job opportunities, schools and available open land.

A third purpose is, hopefully, to point out and commend the administration's commitment to housing lower-income people outside the central city.

RDC - Housing & Plan.

Discussion Paper

Subject: Open Housing in Metropolitan Atlanta

Nat Welch, Director of the Community Relations Commission, (CRC) requested in June 1970 that SRC's Housing and Planning Program develop a research project on open housing in the Atlanta Metropolitan area. This paper presents the consideration given that request.

We recognize the absence, in the Metropolitan area, of any effective efforts to implement federal fair housing legislation. At least two communities have launched neighborhood stabilization programs but there is no evidence of a metropolitan approach. The merit of Welch's suggestion is readily apparent, without detailed documentation of other substantiating facts.

Presently, Horace Barker is conducting a study of fair housing laws and policies. Barker's study, however, is on a regional (and national) level. Certainly some information will be presented in that study helpful to fair housing efforts in Atlanta.

Generally, SRC's research projects are of a general nature and regional in scope. Therefore, it seems that we have several courses of action open.

1. Develop an SRC fair housing demonstration project.

2. Coordinate fair housing programs between existing agencies and organizations.

3. Help organize an independent agency to implement fair housing legislation.

Comments and Analysis: (?)

Reasons for one course as opposed to another:

<u>Outline of Proposed Program for Metropolitan Fair Housing and Neighborhood Stabilization</u>:

I. Research

A. Survey effectiveness of existing Fair Housing legislation throughout the region.

1. Recommend new local and state fair housing legislation.

B. Research Bias in Real Estate Advertisements in Atlanta

C. Monitor marketing of Real Estate

D. Periodic Measurement of Housing Demand

II. Information and Assistance

A. Complaint Procedures

B. Individual Rights

C. Redress greviances at local level

III. Organization and Training

A. Provide Educational assistance to existing fair housing and neighborhood stabilization organizations.

B. Organize stabilization groups in areas about to undergo racial transition.

C. Coordinate fair housing programs of all existing organizations.

IV. Monitoring of Institutional Planning that Affects Fair Housing.

A. City Departments whose programs affect stabilization and/or racial transition.

B. Zoning Policies of the various counties and municipalities in the metropolitan area.

Reasons supporting SRC Demonstration Project

1. No similar project in the region

2. Help us organize similar projects around the region

3. Have received request for research assistance in this area

4. Atlanta is a key city in the region

5. Could engage existing educational institutions to contribute relevant research

6. To demonstrate the effectiveness of a Metropolitan approach to open housing

RDC - Housing & Planning

1. Federal - Division of Equal Opportunity - Donald Webster

   a. Other cases in which this department has detected political pressure to prevent dispersal of similar projects.

   b. Is there Federal policy favoring dispersal of public housing?

2. State - Enabling legislation

3. Atlanta Housing Authority - Public Housing Section - George Sander

   a. criteria used in site selection
   b. other cases of similar opposition

4. Emory Legal Aid Service - Bob Newman

   Newman is working with citizen groups in Bedford Pines, an urban renewal area that is contesting the Atlanta Housing Authority's policies relative to relocation and (significantly) dispersal of projects throughout metropolitan area. May have identified cases where other Housing Authorities have refused to locate projects in white residential areas. In any event, we may have cases that are relevant to the present situation and interesting too.

5. Fulton County Planning Commission - Larry Fonts

   Review the zoning, noting what use is allowed

6. Fulton County Commissioners

   Establish normal procedure for permiting a project to be constructed.

   Action required of the commissioners.

7. Fulton County Building Inspector - Same Information.

8. Project Builders

   Establish procedure for this type turnkey project

   Review turnkey program before contacting builders

Establish character of proposed dwellings, cost/unit; number of bedrooms; general design.

9. Check the other turnkey project of the Housing Authority

especially for distance from central city. I think the project is in an unincorporated area of the county. The situation may be similar to the proposed South Fulton project except for the fact that it is not in close proximity to middle-income white residential areas.

10. Establish present and projected job situations in the immediate area of site.

1. Atlanta Housing Authority

2. Fulton County Planning Commission

RDC — Housing & Planning

STATEMENT OF OBJECTIVES AND PROGRAM
METROPOLITAN ATLANTA HOUSING CONFERENCE

Atlanta needs more and better housing. If we are to be "a new kind of city", we will need more than just replacement housing; we need a surplus of housing, particularly in the range of low and middle income units, or we shall be simply another inadequate form of the old stagnant urban complex of ghettos. America needs a new kind of city, and Atlanta has the ingredients for meeting that need. The objective of the Metropolitan Atlanta Housing Conference, therefore, is the provision of adequate housing for all the people of our city.

To this end, we commit ourselves to three specific areas of service:

1. Communication and Coordination.

   To act as an agent of communication and information, seeking through the most effective use of community media to sensitize the city to its needs and opportunities in housing.

   To establish an Office on Housing Resources which can serve as a clearinghouse for information concerning housing and a service center for people seeking assistance in finding housing, providing counseling and guidance on testing, financing, zoning, purchasing, and renting.

   To focus attention upon different neighborhoods of the metropolitan area, using a Neighborhood Spotlight Week and seeking to make available housing an important emphasis in such community programs as the Dogwood Festival.

   To develop and strengthen ties with other groups related to housing, both public and private.

   To publish a newsletter and other resources on housing as a means of keeping the community informed and of coordinating the activities of those concerned.

2. Low and Moderate Income Housing.

   To provide information to governmental agencies, from the municipal to the national level, of the need for more and better housing for low and moderate income families in the Metropolitan Atlanta area.

To work with such public agencies as the Atlanta Housing Authority and also with such tenant organizations as Tenants United for Fairness in order to bring about a more effective program of public housing.

To study laws relating to housing and to educate the public and governmental offices to get zoning regulations, tax assessments, and rental levels which are unduly restrictive or oppressive changed.

Pvt. efforts non-profit corp.?

To provide help and information to groups seeking to build or rehabilitate low income housing and to support public agencies in their effort to broaden the housing market.

To interest the business community in the support of housing for low income families and to encourage major private investment in the field from the Atlanta business community and beyond, seeking - if necessary - the introduction of major national firms into Atlanta's housing picture.

3. Equal Opportunity in Housing.

To coordinate groups interested in equal opportunity in housing and to stimulate the development of such groups throughout the metropolitan area.

To work with realtors and citizens to fight blockbusting and other unethical and illegal practices.

To institute a program aimed at breaking the traditional real estate buying habits of homeseekers in the Atlanta area, which results in a segregated residential pattern.

How funded

To educate government officials to the need for laws or changes in existing laws in keeping with the new Federal statute on equal opportunity in housing.

To act as a community spokesman in support of equal opportunity in housing and to assist the appropriate agencies in the implementation of the law.

H&P

Meeting of Consultants on Housing Discrimination

It is proposed that the individuals whose names appear below be convened in Atlanta on August 26 to consult with Housing and Planning staffers on discrimination in housing. Specifically, the purpose of this meeting is to have selected housing experts discuss the issue of discrimination in housing with a view toward suggesting one aspect of it that an SRC task force might focus on.

The proposed individuals are knowledgeable in various aspects of discrimination in housing:

Participants

- - - - LEON EPLAN, Urban Planner. Vice President of Eric Hill Associates, Inc., an Atlanta-based planning consultant firm. Good understanding of the impact of local and national policies on discrimination in housing.

- - - - PAUL DAVIDOFF, Co-Director, Surburban Action Institute - A White Plains, New York-based Institute for Surburban Research and Action. Was first to develop the concept of advocacy planning. An attorney and a planner. Probably understands as well as anyone in the country, the practice of exclusionary zoning. Now putting his ideas into practice in Westchester County, New York.

- - - - JOSEPH BATTLE, President, National Neighbors/Real Estate Agent in Cleveland, Ohio. Has thorough understanding of blockbusting and neighborhood stabilization.

- - - - BOB NEWMAN, Attorney with Emory Legal Aid. Attorney for the plaintiff in Red Oak Case in Atlanta. Sensitive to problems of concentration of public housing and wants to use the law to force local authorities to adopt dispersal policies.

- - - - JOHN INGLE, Field Representative of NCDH, also Director of Housing Opportunities Made Equal, Inc. in Raleigh, N. C. Has experience in working with private groups in the South.

- - - - GRADY NORRIS, HUD Atlanta. Has understanding of individual complaint process potential of Title VIII.

- - - - WAYNE C. THOMPSON, Owner of local Real Estate Firm. Should know practices and policies of real estate industry.

- - - - Representatives from Kentucky Open Housing Operation.

ITINERARY

July 29-31st

For: Arthur Campbell
Edward Cazayoux

Thursday, July 29th

Leave Atlanta 7:30 a.m.
Montgomery, Ala. 9:30 a.m. - 11:00 a.m.

State Highway Department I-59: proposed route and access points

Livingston, Ala. 2:00 p.m. - 6:00 p.m.

County Tax Assessor, Sam Webb: ownership patterns between sites. (topos, plat maps.

Farmers Home Administration - physical housing construction and design standards for loans - grants for construction of small water systems.

(After 6:00 p.m. - can be reached at: (205) 652-7406 - Meeting Hall of the Panola Landbuyers Association)

Friday, July 30th

Livingston 9:00 a.m. - 11:00 a.m.

County Engineer - water, sewage systems (I-59)

Local Realtors - land prices

Panola 12:00 a.m. - 6:00 p.m.

Field Survey of Tract # 2

Saturday, July 31st

Panola 10:00 a.m. - until

Annual meeting - Panola Land Buyers Association - Questions regarding: Program proposals and future land use

E.VIA

Proposed SRC Task Force and Housing Education Project

Housing discrimination is systemic, characterized by a set of forces that shape infant residential developments into segregated housing patterns. This proposal, therefore, is designed to (1) publicize efforts to end discrimination in housing; (2) educate citizen groups and government officials on various aspects of housing discrimination; (3) develop new information; and (4) mobilize individuals in the public and private sector to implement the ideals of the open society concept.

Rationale

Discrimination in housing is a problem that has been documented over and over. However, there has been no major coordinated effort -- public or private -- to solve the problem.

It is generally agreed that a tremendous amount of urbanization will occur in the South in the seventies. A "south" in transition would provide numerous opportunities to alleviate discrimination in housing and (perhaps even more exciting) start new cities and towns free of the problems (deteriorating tax bases, ghettorized housing, de-facto school desegregation) that plague Northern metropolises -- to a critical degree in Newark for instance. However, unless a wide range of people are mobilized to implement a variety of programs, these unique opportunities probably will not be fully capitalized.

The proposed task force is intended to focus on a specific aspect of housing discrimination (e.g. exclusionary or "snob" zoning, financing practices, blockbusting) that is to be selected after consultation with certain housing experts.

The proposed conference is conceived as a rallying point for mobilizing a diverse group of southerners to consider the issue and, hopefully, sti-

mulate them to develop and implement programs in their local communities. Information on all aspects of discrimination in housing would be disseminated to participants. The conference is useful with or without the task force. The task force is a vehicle for SRC action on the issue, but, without it, the Council will continue to provide information on the subject in hopes of stimulating others to act (as in the case of the Jackson Council, Jackson, Mississippi).

Tentative Program for Regional Conference

I. State and Local Action

A. Establishment of state human affairs department

B. Legislation

C. State Planning

D. Politics of Housing

II. Exclusionary (or "snob") Zoning/Restrictive Land Use Practices.

III. Blockbusting and Neighborhood Stabilization

A. Anti-Blockbusting Measures

B. Stabilization: Organization, Effectiveness, Potential

C. Real Estate Practices

IV. Redress Procedures

A. Complaints through HUD

B. Suits

C. Other

V. The Federal Role

A. Priority

B. Money

C. Manpower

Programmatic Implications

The conference is conceived as a vital step toward establishing a Housing Education Section as an on-going function of the Housing and Planning Program.

As a follow-up to the conference, this section would:

A. Publish handbooks on various aspects of discrimination in housing

B. Help establish housing opportunity centers

C. Serve as an on-going information center

Depriving the Consumer

How Local Building Codes Help Perpetuate the Housing Crisis

This year the United States fell 1.6 million units short of a national housing goal of 2.6 million units. If we seriously seek to solve our housing crisis, we must begin to act against those institutional obstacles that frustrate housing programs. This article is addressed to one of those obstacles, local building codes, which have eluded public attention and public action. The present pattern for local building codes inhibits the development of housing innovation and growth of large-scale production — thus effectively depriving the final consumer of any benefits from these advancements. In the following pages, I shall describe the existing archaic pattern of building codes and show how it obstructs advancement in the homebuilding industry. I conclude, after analyzing three alternative solutions, that statewide building codes supplemented by federal incentives offer the most feasible approach to countering the detrimental effects of local building codes.

We are challenged today by the need to provide a large volume of housing at reasonable prices. In other areas of manufacturing, industrialization has been used to meet consumer needs. It should serve the same purpose in housing. By transforming the present system of housing production into a volume production process, we can build more housing at lower costs than is generally provided today.

Preliminary studies of the homebuilding industry indicate that industrialization can achieve cost reductions of five to 30 percent over conventional construction techniques. These estimates must be considered as best guesses, for industrialized mass production of housing has yet to be realized in the United States. But even if the reductions were no more than 10 percent, the aggregate savings would still be substantial. In 1967, $18.6 billion was spent on residential construction. This was an average of $14,060 per privately built housing unit, excluding the cost of land and site improvements. A reduction of 10 percent would have lowered the average cost of a unit to $12,660 and the aggregate savings would have been $1.86 billion. If those savings were reinvested into housing, an additional 146,900 units could have been built. Although the addition of these units would not have solved the housing crisis, the addition of 100,000-200,000 units over the span of a decade would result in a net gain of 1-2 million units, a major contribution to our housing needs.

ECONOMIES OF SCALE Secretary George Romney, by placing HUD's current emphasis upon "Operation Breakthrough," has directed the federal thrust toward increasing the efficiency of the housing industry itself. This new direction stands in sharp contrast to past programs. Instead of providing incentives to house building as such, HUD is offering incentives to transform the industry.

The crucial assumption underlying Operation Breakthrough is that, because the housing industry has been slow to industrialize, it is operating at a low level relative to its industrial potential. Volume production is the missing ingredient. If we can achieve volume production, we can enjoy cost savings resulting from factory production and economies of scale.

For the past 25 years both architects and engineers have possessed the technology to industrialize homebuilding. But institutional factors have blocked the implementation of this technology. Local building codes, in particular, have contributed to the housing industry's impotency. Much has been said about building codes; little is known for fact; and almost nothing has been done. Yet if we cannot overcome the existing out-of-date pattern of building codes, the efficiency sought through Operation Breakthrough will not be reached.

Today's pattern of codes is best described as a patchwork of small jurisdictions. With few exceptions, the states have delegated to municipalities the power to promulgate, administer, and enforce their own local building codes; and this is a power that the municipalities have eagerly used. Enactment of specification codes based upon traditional ways of doing things, the liberal use of prohibitions against the introduction of new materials and building techniques, are hallmark consequences of this state-granted freedom. To understand better why codes distort and defeat efforts at housing industrialization, we shall isolate three critical dimensions of the current building code structure: fragmen-

THE AUTHOR

Charles Field, 29, is currently a Catherine Bauer Wurster Fellow at the Harvard-MIT Joint Center for Urban Studies and a Ph.D. candidate in the Department of City and Regional Planning at Harvard. He received his BA from Cornell and MA from the Department of Urban Planning at NYU. He has published articles in the Journal of Urban Law *and* Reviews in Urban Economics.

PAGINATION INCORRECT

tation, restrictiveness, and the imposition of additional costs.

Fragmentation

According to the Advisory Commission on Intergovernmental Relations, approximately 12,000 individual communities issued building permits in 1966. In 1968, the Douglas Commission made a comprehensive survey of building code regulations in 2,500 governmental jurisdictions with populations of 5,000 or more. It found that slightly over 80 percent of all the communities had some form of building code. For cities over 50,000 in size, the figure was 90 percent.

DISUSE OF MODEL CODES Proponents of the existing pattern argue that some uniformity does exist, since many communities use one of the four national or regional model codes (National Building Code, Uniform Building Code, Southern Standard Building Code, and the Building Officials Conference of America's Basic Building Code). These are modern performance codes, and each sponsoring organization is constantly testing, approving, and incorporating new materials and techniques into the code. According to the Douglas Commission survey, almost 52 percent of the communities with building codes reported that their codes were based substantially on one of the models; an additional 15 percent had codes which were modifications of one of the models; and a significant number, 33 percent of the communities surveyed, indicated that their codes were not patterned on any of the models.

Although these statistics indicate a substantial degree of uniformity, they belie the real diversity stemming from the way in which codes are administered and enforced locally. The lack of any real uniformity is attested by the immediate victims of the system, the builders. Richard Wasserman, President of Levitt and Sons, testified before the Subcommittee on Housing and Urban Affairs of the Committee on Banking and Currency that:

> There is not a single home in the entire Levitt and Sons line — and we have some 60 houses in the line — which can be built in different locations without modifications to respond to the requirements of local building codes and the local building inspectors who interpret these codes. These changes are costly to us. They keep us from using modern management techniques and result in higher costs and lack of efficiency.*

Wasserman's statement succinctly summarizes the negative effect of fragmentation. The process of innovation, particularly the radical type of innovation envisioned in Operation Breakthrough, is a difficult and costly undertaking. The need to readjust continually to meet local code requirements compounds the problems of procedure and product design and increases the uncertainty of market success. The greater the degree of fragmentation, the greater the uncertainty for private firms undertaking research on new and improved products and techniques of construction.

ACCOMODATING SMALL BUILDERS Fragmentation also affects the industry by inhibiting large-scale production. The small builder operates in one or two communities at any one time, minimizing the number of codes and code enforcement agencies he must satisfy. The larger producer relates to many communities. Problems of accommodating to codes and agencies increase as fragmentation increases. The greater the number of problems, the more difficult it is for the volume producers to survive. Obviously, small builders will favor fragmentation as an institutional means of protecting themselves from the invasion of volume producers into their markets. When fragmentation is severe, which is the case today, savings to the consumer from volume production are lost.

Restrictiveness

Local governments are notorious for obstructing the introduction of innovative building techniques. Communities do this through the use of specification codes which list in detail the type of materials to be used, how they are to be used, and the method of construction. The specification code invariably spells out the old, tried, and tested way of doing things. Performance codes embody a more progressive approach to building regulations. They specify the objectives to be attained and leave the choice of material and construction method to the designer. For example, the performance code will establish the minimum acceptable load-bearing capacity for a wall, rather than specifying what materials will be used. The four regional model codes are essentially performance codes.

The Douglas Commission survey asked local communities whether fourteen building features, accepted by the regional model code groups, were permitted or prohibited under their own local codes. The responses, reproduced in Table 1, underscore the substantial lag between tested and approved technological advances and local institutional acceptance of those changes. The prohibition rate for some of the features was quite high.

A surprising finding was that communities which adopted model codes were not significantly more progressive than the national pattern. In fact, the differences in restrictiveness for each item were often minor between those who adopted and those who did not adopt model codes. The problem does not lie with the model codes themselves but with local modifications which exclude certain forms of innovation.

---

*(*Housing and Urban Development Legislation of 1969*), Hearings before the Subcommittee on Housing and Urban Affairs, p. 390.

RADICAL AS PLASTIC PIPE The more radical the departure from the conventional wisdom, the more pervasive the restrictions. Among the fourteen features listed, for example, the greatest discrimination is against plastic pipe. Yet it is most likely that the greatest cost savings will come with the most radical changes in homebuilding. The imposition of prohibitive codes works toward the preservation of those local economic interests currently doing business in residential construction. The real loser is the consumer, who is deprived of the advantages in quality and lowered cost possible with innovation.

Imposition of Additional Costs

The fragmentation among communities and the restrictiveness of many obsolete codes together add extra construction costs without adding extra quality. A *House and Home* colloquium of housing experts in 1958 asserted that building codes add almost $1,000 of unnecessary cost to each new home. A New York builder reported in 1967 that the cost of building a house in Scarsdale, New York, was $2,000 greater than that of building an identical house in Greenburgh, Connecticut. In Scarsdale he built under a specification code. The builder commented: "If the Scarsdale code produced better housing, we'd have nothing to say . . . but it simply puts an extra charge on housing that has no value to the home owner."

A more recent study by the Home Manufacturers Association for the Douglas Commission asked home manufacturers to indicate the additional cost of a home built to local code standards over the same home built to their regional model code or F.H.A. standards. For a 1,000-square-foot house which would have cost $12,000 under the model code of F.H.A. standards (cost of land excluded), the 20 reporting manufacturers estimated an average extra cost of $1,838. In terms of three particular factors, the additional cost due to rigid specifications for electrical conduits was given as $300;

Table 1

PROPORTIONS OF LOCAL BUILDING CODES THAT ENTIRELY PROHIBIT VARIOUS FEATURES IN RESIDENTIAL CONSTRUCTION: 1968

	Percent of Governments Prohibiting Feature	
Construction feature	*All governments with building codes*[1]	*"Model code" governments*[2]
Plastic pipe in drainage system	62.6	61.7
2" by 4" studs 24" on center in non-load-bearing interior partitions	47.3	43.5
Preassembled electrical wiring harness at electrical service entrance	45.7	44.8
Preassembled combination drain, waste, and vent plumbing system for bathroom installation	42.2	39.6
2" by 3" studs in non-load-bearing interior partitions	35.8	34.7
Party walls without continuous air space	26.8	27.4
Single top and bottom plates in non-load-bearing interior partitions	24.5	23.5
Wood frame exterior for multi-family structures 3 stories or less[3]	24.1	22.0
½" sheathing in lieu of corner bracing in wood frame construction	20.4	21.1
Prefabricated metal chimneys	19.1	16.9
Nonmetallic sheathed electric cable	13.0	13.0
Wood roof trusses 24" on center	10.0	10.3
Copper pipe in drainage systems	8.6	9.4
Bathroom ducts in lieu of operable windows	6.0	5.3

[1]These data pertain to the 3,273 municipalities and New England-type townships of 5,000-plus that have building codes.

[2]These data pertain to the 2,199 units (of the 3,273 total) that have building codes reportedly based primarily upon one of the four national or regional model codes.

[3]Calculation excludes governments that entirely prohibit frame residential construction (77 altogether, including 59 "model code" governments).

Source: Manvel, Allan, *Local Land and Building Regulation,* Research Reports No. 6 of the National Commission on Urban Problems (Washington, D.C.).

the required use of plaster instead of gypsum board added $200; and sheathing requirements above F.H.A. standards added $125.

Richard Wasserman of Levitt & Sons, testifying before Congress in 1969, stated: "We arbitrarily increase our costs because we are forced to adhere to codes and requirements imposed upon us from without, codes which stifle innovation and stifle any rational approach to mass production, codes not required of other major industries." The consumer pays for these excesses in the purchase price of the house, but he does not know that they are not necessary for a pleasant, safe, and sanitary home. Other families pay by not being able to buy new housing. For them, the marginal increase in costs due to outdated codes places the price of housing beyond their financial reach. Low-income families pay, by being forced to remain in substandard housing. At any given level of subsidy, the higher the costs of construction, the fewer the number of subsidized units which can be created for low-income families.

Local building codes, through fragmentation, restrictiveness, and the consequent imposition of additional costs have placed and continue to place severe restraints upon the industrialization of housing. The negative consequences are twofold. First, innovation is stifled. Second, the development of mass markets, a prerequisite for volume production, is inhibited.

REPEATING APPROVAL Specific innovations are either prohibited in the code, as in the case cited of plastic pipe, or blocked because of the high costs of obtaining product approval or of trying to amend local codes. To protect the public, innovators must test new products and building processes to ascertain their performance characteristics. Innovators willingly accept this cost of testing if they can then see their way clear to a sufficiently large market. But the local building code pattern is counterproductive because the innovator is forced to repeat the process of product approval or code amendment in each community that he wishes to enter. Approval in one community does not automatically mean approval in the next. This decision depends upon the local building code commissioner.

If the specific innovation poses an economic threat to local interests — for example, prefabricated housing is a threat to the sales of local material suppliers, to the jobs held by local unions and to the contracts held by local subcontractors — it is not surprising that pressures are brought to bear upon the local code commissioner to prevent its introduction by refusing to grant the innovation approval under the local building code. Interest groups such as material producers, unions, code officials, and subcontractors have been, and still are, more influential in the creation and maintenance of codes than the home manufacturer. Many communities require, for example, that a member of the local building trades union or local builders association be included in the community's building code agency.

THE INNOVATOR AS OUTSIDER The innovator stands as an outsider, attempting to persuade the community to act in opposition to certain local interests. Consequently the battle for innovation is likely to become a long and costly encounter. The more radical the departure from the traditional, the more arduous the fight. It is not surprising to discover that there is a willingness sometimes to make incremental changes in housing technology but rarely to make major breakthroughs.

The second consequence of fragmented and restrictive building codes is to limit the potential size of any individual firm. The jigsaw puzzle of local code jurisdictions and the variations in standards that exist from code area to code area significantly increase marketing problems and production costs. Home manufacturers, unable to aggregate large markets, hesitate to invest monies in the plant and equipment prerequisite for mass production. The risk of failing to develop a mass market is great; thus there is a tendency to keep investment at relatively low levels. Given that the market potential for large-scale production is minimal under the existing structure, the possibilities of achieving the economies of large-scale production are almost nonexistent.

If we hope to industrialize the homebuilding processes, we must come to terms with the problem of local building codes. The approach of Operation Breakthrough is to subject innovative concepts to stringent tests. By this testing, Assistant Secretary Finger asserts, "It is our hope that local authorities will accept the concepts in lieu of their existing codes. That is what we are driving for" (*Journal of Housing*, November, 1969, p. 590). It is HUD's experience that national testing with the aid of the various code groups is required, because these groups have had difficulties in coordinating their mutual efforts. By working together Finger believes that a breakthrough can be made.

However, a policy which aims to persuade communities to change on the basis of stringent federal tests is precarious. HUD's implicit argument is that restrictiveness and the hesitancy to accept innovation stem from a lack of local technical understanding of innovative systems. Once the community's building code agency understands the technical performance of the system, HUD believes, the community will be more receptive to change. Thus, stringent federal testing is seen as an appropriate strategy. Although there is some merit to the argument, it obscures the more basic and selfish reasons for restrictive local codes. To rely too heavily upon persuasion is to do too little. More direct action is needed.

MORE THAN PERSUASION There are three possible courses of action: First, at the local level, voluntary adoption by each community of one of the four existing model codes might provide the sought-after modernization and uniformity of codes. Second, a compulsory federal code could be legislated. Third, the building code function might be returned to the state level in the form of statewide, compulsory building codes.

Voluntary adoption of a model code is the least appealing alternative. At issue is not the quality of the model codes. That quality is high. At issue is the procedure by which model codes are adopted by local communities. In most states, communities can voluntarily adopt one of the model codes, but they are free to modify the code as they see fit. Furthermore, once the model code has been adopted there is a tendency not to keep it up-to-date.

Existing federal incentives for local communities to modernize and adopt nationally recognized codes have so far proved ineffective. Section 701 of the Housing Act of 1954, as amended, provides federal assistance to local and county governments who modernize their codes. Under the "workable program," another federal incentive, the locality must adopt a building code based upon a national model before the community can become eligible for urban renewal assistance. The existing pattern of local building codes attests to the failure of these approaches at the present time. As long as the power to promulgate building codes is left in local hands, the probability of rectifying the building code mess must be considered low.

A federal building code is an attractive alternative solution. A national code with appropriate modifications to provide for local soil and climatic variations is technically possible to develop. But this solution seems the most politically remote of all. A federal code would represent a shift in public powers, and this is contrary to the current emphasis on the movement of power from Washington to the states. Moreover, the federal government has yet to establish a uniform code for its own construction (roughly 35 different agencies are responsible for construction) which raises questions about the feasibility of establishing a uniform code for the nation.

FHA - SET STANDARDS The federal government does act in an indirect manner, however. F.H.A., for example, sets minimum standards of construction. A building that does not meet minimum construction requirements cannot secure government-insured mortgages. Widespread use of F.H.A. insurance, therefore, means widespread use of these standards. But the standards are not applied to whole communities nor do they restrict a community from tacking on excessive standards.

Government has acted through incentive programs to bring local codes up-to-date. Although the incentive approach has achieved questionable results at the local level, it should not be discounted as a useful stimulant to code reform. Incentive was directed at the wrong level of government. States, not local government, should be the prime recipients of a federal incentive.

The federal government can facilitate the innovative process by creating a national testing agency which will provide state and local building agencies with authoritative test data on new products and building processes. The lack of such data has often slowed the rate of innovation acceptance. Many building code commissioners, cautious about accepting unfamiliar new techniques and materials, require stringent tests before approving their use.

A constructive step toward federal responsibility is the concept of a National Institute of Building Sciences. This Institute, proposed in Congress by Senator Jacob Javits (R-N.Y.), and others in 1969, would have the power to develop standards for all building materials, and standards for use in creating local building codes, and it would also promote studies on new construction techniques. Its functions would be oriented primarily toward research, and its decisions would not be binding upon local communities.

GREED IS AN OBSTACLE A key postulate to the bill is that the absence of uniform building codes inhibits innovation and increases construction costs. Senator Javits, in presenting his bill, concluded that "this fragmentation [of building codes] is clearly not in the public interest. . . . We cannot allow fragmentation to defeat the housing goals which the Congress, itself, has set for the nation." The absence of an authoritative national source of information on recent innovations in building techniques, Javits feels, hinders the local acceptance of new procedures. This same premise was a crucial one for Operation Breakthrough. Certainly, increased knowledge can eliminate problems of ignorance, but it cannot on its own in the American system eliminate the other obstacles presented by the preservation of economic interests or local political power.

The bill faces political difficulties because several government departments are currently doing their own research on building codes; in particular HUD and the Department of Commerce. Both these departments were critical of the bill since it conflicted with their own interests. But the major flaw in the bill is its lack of power to coerce. It fails to suggest how one gets from the promulgation of Institute standards to the implementation of uniform local building codes.

The third alternative, the creation of statewide building codes, is the most desirable solution. Mandatory statewide codes that are based upon performance standards could stimulate both mass production and

innovation in homebuilding. They would allow for the creation of large markets, a precondition for mass production. They would also result in the consolidation of 12,000 jurisdictions into 50. Innovators would need to convince only one testing agency, the state, as to the acceptability of their products, and this would eliminate the costly and time-consuming process of applying for approval in each local community.

Statewide building codes are constitutionally and politically feasible. Although the states have delegated to local communities the authority to enact building regulations, they have the constitutional power to rescind that grant of power and enact their own codes. California, Connecticut, Indiana, Minnesota, New Mexico, New York, and Wisconsin have all passed statewide codes. Unfortunately, to facilitate political acceptance, one- and two-family dwelling units have been exempted from several of these codes. Such exemptions leave a large portion of new housing under the old, outdated local codes. Furthermore, in most of these states, the codes set only minimum standards, allowing localities to legislate stricter standards if they wish. This has effectively fragmented the state code pattern, and any benefits of uniformity have been lost. In New York and North Carolina, the codes provide both minimum and maximum standards. Any community seeking special local variances to the state code must appeal to the state code authority. Both states have looked with disfavor upon any major departure from uniformity.

HOME RULE VS. NEW CODES Connecticut has one of the most progressive codes on the books. Beginning in October, 1970, the code will be compulsory for all communities in the state. Like New York and North Carolina, local deviations from the code must be appealed to the state code authority, but such deviations are discouraged. Connecticut goes further than the other two states with the insertion of a provision for the state certification and approval of new materials and building techniques, certification being binding upon the local communities. This certification is a major step in favor of innovation. California has recently passed a similar certification program for factory-produced housing.

Home rule has always been a major stumbling block to compulsory statewide codes. New York circumvented the problem by passing a voluntary code. Once adopted by a community, the state code becomes binding and covers all future amendments. The North Carolina code exempted rural and farm buildings along with one- and two-family dwellings, thus taking some of the bite out of the bill but making it more politically acceptable.

Massachusetts, a strong home rule state, is currently attempting to reconcile the localism with the progressivism of a statewide code. The author is assisting Republican Representatives Martin Linsky and Bruce Zeiser, who have submitted a compromise bill that would establish a voluntary minimum-maximum statewide code. To insure the modernization of local codes, they will have to be approved every five years as being consistent with the statewide building code. State certification procedures are also to be established to insure the benefits of innovation. Once a product or system is given certification, it will be binding upon all local communities whether the community uses the state or an approved local code.

States do have the resources to establish and maintain a state building code agency, though the costs of adequately staffing such an agency are high. Professionals from architecture, engineering, and building construction are needed to develop codes and to keep them up-to-date. Additional costs are involved in research into new products and building techniques, as well as in offering continuing education for building inspectors. Only a few of the largest cities have the resources to undertake this burden and none of the smaller cities or towns. But it is within the reach of the states.

HILL-BURTON GRANT PROGRAM The federal government can give the states added leverage. A successful precedent for such a building code incentive program is the Hill-Burton Hospital and Construction Act. The grant program, designed for hospital construction, works through the states to local communities. States are required to adopt construction standards which meet federal minimum standards. Moreover, to qualify for grant assistance, states are required to establish standards of maintenance and operation of the hospitals built under the program. To date the program has funneled $3.3 billion of federal assistance to the states.

Statewide codes, similar to those recently passed in several states, can overcome the local building code problems of fragmentation, restrictiveness and imposition of additional costs. These codes should be compulsory, specify maximum as well as minimum standards, and incorporate certification procedures. The benefits of statewide codes would be major while their costs would be relatively small. The public will benefit through cost savings, responsiveness of the building industry to technological change and in housing quality improvement. In the final analysis, the issue is whether the states are willing to exercise their political responsibilities in the area of building codes. The passage of statewide codes is the best available solution today to free the housing industry from the regressive effects of the local building code pattern.

—CHARLES FIELD

Sponsors of Open Housing Investment
1914 Connecticut Avenue, N.W., Washington, D.C. 20009 (202) 265-9448

To: Congressman Don Fraser, *Chairman*

From: Jack Tatum, *Field Secretary*

> "The time is short, the hour is late, the matter is urgent. It is not incumbent upon us to complete the task; but neither are we free to desist from doing all we can."
>
> — *The Ethics of the Fathers*

On my initial field trip across the country, the attitude of the loosely federated SOHI sponsors was that we must assault that involuntary entity, "The Ghetto" — so Morris Milgram and I found many of our friends from Harrisburg, Pa. to Dallas and Houston, Texas and to the Bay Area of California hungry for new possible investment opportunities.

The message which was taken to our friends was that SOHI had a valuable service to offer — to locate and identify local housing efforts which were in the spirit of SOHI and to bring these projects into the same arena with sponsors. In some instances perhaps just the idea was there, in others just willing and concerned supporters. But our pooling resulted in some very interesting beginnings.

Harrisburg, cold, wet and snowy and on the surface inhospitable, was really something else again in terms of interest in SOHI program proposals.

There were four well-attended meetings arranged by Kay Pickering. This set of meetings was mostly a presentation of SOHI and an effort to seek out new sponsors and new ideas for programming. I think if our mail — following the meetings — is an indication, things went well.

The group in Harrisburg is ready to operate as a local SOHI Committee. There was a great desire to do this first and later do more with SOHI nationally.

Texas meetings produce return request

In Houston, Texas, our meetings put together a group which included the leader of Operation Breadbasket, a real estate broker, a clergyman, a politician, and a physician with real estate holdings in a good area of Houston. I left that meeting with the feeling that a fine proposal for development of housing with a social purpose in mind would soon find its way into the SOHI office, and after carefully evaluating this proposal SOHI would then be able to introduce our Houston area sponsors to a possible new Open Housing Project.

The Dallas visit produced similar results. The Dallas trip was beautifully handled by the Greater Dallas Housing Opportunities Center and was well covered by the media. Morris Milgram's speech received a standing ovation at the annual meeting of GDHOC and generated much interest in new ways to approach the open housing question. Dallas also provided an opportunity for me to switch hats and provide some neighborhood open housing counseling. The Stults Road area of Dallas, which lies to the north of the city, was experiencing the beginning of the "turn" — the neighborhood syndrome. A fifty-lot development just to the rear of a presently-tokenly integrated community is being marketed solely to black families by a local real estate entrepreneur, who also happens to be black. The result of all this is that SOHI has received a request by the neighborhood group to return to Dallas to give further assistance and speak to groups other than GDHOC on various approaches to successful equality of opportunity in housing programs.

Local SOHI Committee sought in California Bay Area

The San Francisco Bay Area was where most of the work was done — it was like being the welcome traveler from the East. At four house meetings arranged by SOHI board member Lee V. Barker, our sponsors were truly happy to at last see the representatives of the group held together by mails. They now really believe that we do work out of Washington and that we really do care. It was there that more talk of SOHI Committees was heard. In fact a local black architect, Jim Stephens, volunteered to convene the first meeting. I think this is an indication that we should move rapidly to consider some possible structure arrangements for SOHI nationally; for the feeling of sponsors is very much in favor of tightening up the more than 23,000 sponsors and really looking at what we have here. I am of the opinion that the potential of this nationwide group to have a tremendous impact on the housing trends in this country has not been weighed thoroughly.

The situation in Northern California is critical and the communications gap is very wide. There were real estate people who had ideas and had never heard of an architect who shared the same dream. There were developers who weren't aware of possible land parcels where a part of the dream might be fulfilled. In these cases we proved to be a helpful catalyst.

Possible investment opportunities in Atlanta

After returning to Georgia, I was so thrilled with the response our idea received on the West Coast that I spent some time ferreting out some possible investment opportunities. I talked with several groups in the Atlanta area and once again the idea was well received. I heard more talk of organizing SOHI Committees in Georgia cities.

I am hopeful that we will be getting soon a proposal from NOVATION, Inc., a diversified Atlanta group of architects, builders, planners and social workers who want to do some open housing construction in the Metro Atlanta area.

Bill Edwards of Modular Sciences of Atlanta has also expressed interest in working with SOHI and our sponsors on the local level.

I am spending time with Arthur Campbell of the Southern Regional Council of Atlanta discussing possible ways our sponsors in the Alabama and Mississippi area can get involved now in the Pinola Land Buyers Association Project in Pinola, Ala. This is a group of rural residents who after a long legal battle have acquired 1,132 acres of ground and are desperately in need of funds and technical assistance.

I also found that black groups respond well to the idea that ghettos are involuntary places and that, when properly presented, this concept can move them towards favoring the abolition of ghettos.

Indeed the time is short and the hour is late, the matter is urgent, the necessity of great private assaults on the walls of ghettos is of utmost importance.

SECOND TRIP

I returned to Dallas for four days at the request of Kay de Wit of the Greater Dallas Housing Opportunities Center to assist on the problems of the Stults Road neighborhood, where we were able together to work out some approaches that may help prevent the concentration of black families in one section of the community.

A proposal from Dallas

This trip was also our first opportunity to test our local project identification program. As a result of our initial trip to Dallas, a proposal was submitted by Bill Stehr, President of the North Texas Association of Unitarian Universalist Societies, seven local churches which have 152 low-income units under construction. The proposal is a very interesting one, in that it offers an opportunity to get a long-term option on a suburban plot good for about 100 garden apartments. If the details can be worked out, we will see a chance to develop 100 units of racially and economically mixed housing.

Procedure for SOHI assistance

Here's how SOHI could provide assistance. The project would be written up with a one page summary by the principals and would be submitted to the SOHI Board. If the Board felt it met SOHI's goals, a meeting with local SOHI sponsors would be arranged and this project, hopefully along with others, would be presented as a possibility for our local supporters to become involved right at home.

There's lots of local enthusiasm for this project and we hope a favorable method for carrying it to completion can be worked out.

Interest from Louisville

A side trip to Louisville, Ky. at the request of the Louisville Housing Opportunities Center has started the wheels moving toward similar proposals from that area. They want local private funds directed toward increasing housing options outside of ghetto locations.

SOME POST-TRAVEL REFLECTIONS

My trips confirmed my suspicions that my black brothers and sisters and I are still isolated and captured in ghettos so that a full view of America's promise is not possible for so many of us.

Constant rebuffs of attempts to enter the mainstream have resulted in a severe lack of enthusiasm for strategic participation on the part of many blacks.

Thus, the work of SOHI and National Neighbors becomes ever so urgent, since open neighborhoods, like the 37 affiliated with NN, afford a unique opportunity to blacks for a broader view of American life so that we can develop a more realistic strategy for full participation in an open society.

H & P

The Myth of Housing Costs

by Nathaniel Goldfinger

In the next 30 years America's population is expected to grow by at least 80 million—equal to adding the present populations of England and France to the United States. And the overwhelming majority of these people will live in urban areas. Yet millions of Americans today are ill-housed and major portions of central cities are dilapidated or decaying areas.

The Housing Act of 1949 established a national housing goal of "a decent home and a suitable environment for every American family." But the government did not place major emphasis on meeting the nation's housing needs and for many low- and moderate-income families that goal was not fulfilled.

Nineteen years later, Congress adopted the Housing and Urban Development Act of 1968, to speed up the building and rehabilitation of housing through federal assistance and a variety of incentives to business. The Act's 10-year goal of 26 million additional dwelling units, including at least 6 million subsidized units for low- and moderate-income families, can be met only if there is a national commitment backed by effective government policies to achieve it.

But today, more than a year after the 1968 Act was adopted, there is little evidence of such government policies and measures. The clear-cut evidence, in terms of actual construction, is to the contrary.

To achieve 26 million additional dwelling units in 10 years—an average yearly rate of 2.6 million—the number of housing starts in 1969, should be moving up sharply from the 1.5 million units in 1968 toward 2 million. But the government's restrictive monetary and fiscal policies and the highest interest rates in 100 years are causing a sharp decline of residential construction rather than a sharp increase.

Between the winter months of 1968-69 and the past few months, the yearly rate of housing starts has dropped from 1.7 million dwelling units to 1.4 million. Housing starts are headed down, not up. Unemployment among construction workers is increasing.

The soaring trend of interest rates is pricing an increasing percentage of families out of the market for single family homes and new apartments. Skyrocketing interest rates have increased costs to home builders, prices and monthly payments to home buyers and rents to those who seek new apartments.

The economics department of the National Association of Home Builders reports that monthly payments on principal and interest on a 25-year mortgage with 20 percent down payment rose from $139.80 for a $25,000 house purchased in June 1968 to $156.96 for a similar home bought in mid-August 1969, as the result of soaring money costs. This is a rise of $17.16, or over 12 percent to be paid each and every month for 25 years.

While the Secretary of the Department of Housing and Urban Development speaks in general terms of the need to increase home building, the Federal Reserve, the Treasury Department and the White House are embarked on a severely restrictive economic policy that tightens the money supply, shoots interest rates upward and hits residential construction. The Administration's talk and actions have been in opposite directions.

America is actually moving backward in home building, while there is considerable talk of moving forward.

Some of this talk about moving ahead, towards

JACKSON AREA COUNCIL ON HUMAN RELATIONS

A Chapter of the Mississippi Council on Human Relations

302 First Federal Building

Jackson, Mississippi 39201

Phone 948-0878

February 8, 1971

Mr. Paul Anthony
Executive Director
Southern Regional Council
5 Forsythe Street, N.W.
Atlanta, Georgia 30303

Dear Mr. Anthony,

The Jackson Area Council On Human Relations is concerned about the patterns of housing in Jackson. It appears to be moving in the direction of continued segregation, with areas moving from White to Black rather than towards integration. We therefore, voted at our last meeting to undertake a project of working towards a stabilization of our neighborhoods in terms of both integration and values.

To do this job most effectively, we would like to ask the Southern Regional Council for help in setting up our organizational structure and strategies. In particular we would like to ask that Mr. Art Campbell be made available to us. Mr. Campbell has already been in Jackson for preliminary discussions with Miss Joan Bowman and Mrs. Jane Schutt and has appeared before the full Council when we discussed and voted on this matter.

The Mississippi Council On Human Relations is giving full backing to this program and we hope to enlist the cooperation of other local organizations as well. We feel with the expertise your office can furnish, along with the efforts of our people, that we can help build a positive stable housing situation in Jackson.

Sincerely yours,

Dick Johnson

Dick Johnson

PANOLA LAND BUYERS ASSOCIATION

The short synopsis below of what transpired in Panola over the past two years was provided by the Federation of Southern Cooperatives.

BACKGROUND:

In 1966, the tenants on Roger's Plantation in Sumter County, Alabama (1960 census, population 21,000; 81% Black) with the assistance of civil rights lawyers requested their just portion of the federal cotton price support, subsiding and deferred acreage payment from Mr. Rogers. Rogers was forced to pay his tenants but in retribution, he ceased farming operations and leased his land to the Hammermill Paper Company.

Some of the tenants moved in with local relatives and friends; some seven families were moved by the NAACP to Tuskegee Institute, Alabama and a few of the families moved on to Chicago. Some are still living in their old houses on Roger's land but they have pine trees planted by Hammermill up to their doorsteps.

There is not even enough land available for growing a home garden, the source of the mainstays of southern rural diet: greens and blackeyed peas. These folks also pay two sets of rent, one to Rogers for the house, and another to Hammermill for land.

Various community development organizations, including the Federation of Southern Cooperatives helped to organize the families into the Panola Land Buyers Association (a non-profit entity) and began looking for some land the group could buy and resettle.

The Panola Land Buyers Association has recently purchased 1164 acres of farm and pastureland in Sumter County, Alabama for $186,000.00. With the acquisition of this acreage, several agricultural enterprises are being initiated. A year-round crop rotation program is being developed including vegetables and specialty crops for the commercial market, grasslands for grain and hay and pasture.

The Housing and Planning Program's Role in Developing Housing and Long-Range Plans for the Panola Land Buyers Association

Arthur C. Campbell, Associate Director of the Housing and Planning Program (HPP) was contacted during October, 1970, by Merith Richardson of the Federation of Southern Cooperatives, about the possibility of Housing and Planning assisting the Panola Land Buyers Association to develop a housing project and to develop long-range comprehensive plans for 1164 acres of land in Sumter County, Alabama. Campbell expressed a positive interest in the project. In this regard, he later met with Richardson and Wendell Parish (also of the Federation) to further discuss how HPP ~~'s~~ might be of assistance.

Field Trip:

On October 22nd, Campbell visited Panola. The 1164 acres are in three separate tracts, of 200+, 300+ and 500+ acres. ~~and he got to see some of all three tracts~~. Based on ~~this~~ a short windshield survey of the property, ~~it seems that~~ the 200+ acre tract ~~is~~ seems more suitable for housing, mainly because of its gently rolling contour and its access to county roads on two sides. One of these, a paved road, provides direct access to Gainsville -- a small village situated approximately three miles due north of the present site. The 300+ acre

tract borders the Tombigbee river for approximately 1/2 mile and generally seems suitable for industrial development and some row-crop farming. Most of the third tract, 500+ acres is ideal pasture land (with, apparently, an abundant deer population) with some land suitable for row-crop farming.

During the visit, Campbell met several of the members of the Panola Land Buyers Association who indicated to him that their primary concern was "How soon can some houses be built?"

Alternative Courses of Action for Assisting Panola

An initial assessment of Panola suggest two broad approches to its problems:

1. The organization of a development team to make the necessary preliminary studies and to file applications for selected federal programs that would enable the Association to get at least ___ units of housing built at the earliest possible time.

2. The initiation of long-term planning aimed at providing a Master Plan for developing the 1164 acres. Such a plan should sufficiently cover the following areas:

   (a) General Physical development

      1. Comprehensive Land Use Plan

      2. Economic Base Analysis

   (b) Development Control and Incorporation

   (c) Financing

   (d) Goals and Objectives

Within the two broad approaches outlined above there are specific alternatives for action that seem feasible at the moment.

Approach No. I

1. Contact other housing orgainizations in an effort to find seed money and/or technical assistance for Panola to hire professional consultants. Some of the groups we might negotiate with are:

   a. National Corporation for Housing Partnerships/ Washington, D. C.

   b. Non-Profit Housing Center/Washington, D. C.

   c. Rural Housing Alliance/Washington, D. C.

2. Housing and Planning could use its consultants to obtain architectural plans and other preliminary items for PLBA. In this capacity, Housing and Planning would assume the responsibility of "Packaging." i.e. filing applications with the appropriate federal agencies and arranging meetings with builders, mortgagers, and local FHA officials.

3. Housing and Planning could develop a Section 106(b) application, on behalf of Panola, to obtain financial assistance to pay for preconstruction costs, "before the proceeds of the federally insured mortgage loan become available."

4. Seek established consultants who would be willing to provide preconstruction services based on their analysis of PLBA's eligibility for funding, and contingent on being reimbursed after the federally insured mortgage loan become available.

Approach No. II

Only one idea for effectuating this approach has been given some thought.

It is felt that Approach No. II lends itself to student participation. For one thing, time is not as crucial as in Approach No. I, and two, there is precedent for student involvement in community development projects. Perhaps most important is the fact that student labor is less expensive than professional labor -- automatically making it attractive to PLBA with its meager finances. Therefore, student participation is central to the initial proposal for providing long-range planning for Panola.

The following elements comprise the skeletal proposal:

A. Recruit teams of students from various schools in Alabama to prepare specific parts of the comprehensive plan. A faculty member would be engaged in each case to supervise the project.

B. Recruit a panel of architects, planners, economists, builders and other necessary professionals to review the students' work on a specified time basis, HPP would work out the logistics of this arrangement.

C. Hold seminars on housing and rural planning at the participating schools. Lecturers for the seminars would be drawn from the panel of professionals.

D. Housing and Planning would meet expenses associated with the student project. These would include: Production expenses (e.g. maps, reproduction, etc.), travel, cost of convening seminars and telephone and postage involved in student communication with local people. [illegible] reimbursed after the federally insured mortgage loan become available.

Charles Hieght, Head of the Department of Architecture, [illegible] Tuskegee Institute, advises that the major considerations in a project of this type are: (1) student expertise; (2) constraint

of time; (3) available faculty members and (4) the logistics involved in having outside professionals critique student work. He underscores time as perhaps the most crucial factor. A "tricky" factor not to be overlooked is how to combine the project with course work.

The approaches and alternatives above are listed to suggest how we can most effectively assist Panola and to indicate how our involvement might benefit HPR.

We are now looking into items on our present agenda.

Present Agenda:

Each activity is aimed at effecuating, either, the immediate program to build housing or the long range planning program.

1. Check out the availability of seed money for Panola from the sources suggested above.

2. Take a close look at University of North Carolina model where students prepared some preliminary studies for Soul City.

3. Check into the set-up for developing the new town of Greenevers in North Carolina.

4. Check out student interest in the described project and their availability from other Alabama universities.

5. Now reviewing selected federal programs that seem available to meet Panola's needs. e. g. 106(b) technial assistance and FmHA's site development program.

6. Met with Bruce Andrews of the Charter Corporation in Birmingham, Alabama to review the housing units

that they manufacture. Have in hand, basic information on this outfit.

7. Will meet with the Board of Directors of the Panola Land Buyers Association on Monday, November 9, 1970.

From: Arthur Campbell

Re: Panola

Date: September 30, 1971

From June 14 to August 31, 1971 two graduate students from Georgia Tech interning with the Housing and Planning Program did basic research on the physical and socio-economic characteristics of three separate tracts of land (totaling 1164 acres) owned by the Panola Land Buyers Association. This research effort produced a 187-page background and evaluation document and three schematic site plans for a housing development on 273 acres.

On September 23, the written report and site plans were officially presented to the membership of the Panola Land Buyers Association, at a special meeting arranged by the Housing and Planning Program. Meeting with the members were Roger Wilcox, President of Techni Co-op, Inc. (A non-profit subsidary of the Foundation for Cooperative Housing), William Edwards of the Valley Forge Corporation, John Hill and Al Broglin of Commonwealth Systems, Arthur Campbell from SRC and representatives of the Federation of Southern Cooperatives.

All of the above named individuals were invited because of their capability to provide specific technical expertise needed to develop a rural cooperative housing program (the details of each consultant's involvement are available).

Status of the Housing Program

The Federation of Southern Cooperatives has a commitment from a couple of sources for a $100,000-plus short term construction loan to build from 5 to 10 houses. Consideration for this type of immediate building program was incorporated into HPP's preliminary site plans. Under this arrangement, construction on as many as 10 houses could conceivably begin within 30 days.

Long range planning

Training?

HPP is exploring the possibility of using some kind of modular housing in this "10-house" stage. The objective is to negotiate for reduction in cost per unit on the basis of promotional benefits accruing to the producer.

Meanwhile, specific actions are underway to develop the larger long-range housing cooperative community. On the 274-acre proposed site, a topographic survey is being prepared at two feet interval contours. The Commonwealth System is preparing rough cost estimates for water and sewage facilities. Techni-Co-op's architect is revising the preliminary site plans to reflect the views of the PLBA members expressed at the September 23 meeting. Also, Wilcox has outlined the steps necessary to undertake a suitable program.

The Intern Program

The second phase of the Panola/Georgia Tech intern program involves the production of 1) a technical report, 2) a public relations brochure, and 3) a visual presentation.

The basic objectives of the planning exercises of phase II are threefold:

(1) To assimilate and synthesize the existing needs,

(2) To analyze these needs in light of constraints and develop practical next steps, and

(3) To project long-range needs, resource potential into a horizon plan.

At least three, and possibly four, students will be involved in the project.

A detailed cost breakdown is not possible at this point, however the estimated cost is placed at #3,000-plus based on figures from a similar project.

Memorandum - 3.
September 30, 1971

Budget Items:

1. One group trip to the site $150.00
2. Aerial photographs $50.00
3. Technical report production cost 700
4. PR brochure production cost 500-1000
5. Visual presentation production cost
*(6). Co-Sponsorship with Georgia Tech of a seminar on the development of planned communities in the rural south.)

*(6) Under exploration/consideration

3)

PANOLA INTERN PROGRAM

A Housing and Planning intern program in Panola is aimed at developing long-range physical development plans.

Objectives

To document and analyze all the physical and social aspects of 1164 acres of land owned by the Panola Land Buyers Association in Sumter County, Alabama for the purpose of developing comprehensive land use plans and an "economic development model."

Proposed Program

Two Georgia Tech graduate students would spend the summer gathering data in the ~~main~~ following categories:

1. People - family size, economic condition, housing needs, general demographic profile.

Earlier Study.

2. Jobs - where availability, type, variety.

3. Physical - site analysis, ecological, ground water sources, soil capability, soil type, flood controls, visual survey -- sketches, photographs.

4. Other areas of investigation:

   A. Comprehensive survey of all plans for the immediate area. For example: corp of engineers, state recreation, health department, regional council of government, etc.

Soil Survey

from Feel.

B. Major economic developments contemplated for ~~the~~ area~~s~~.

C. Census data on the county (design area)

D. Transportation facilities

Goals of Program

1. A compilation of background data on Panola to be used as a basis for developing a comprehensive land use plan and an "economic model." From Dunlap

A. ~~It is contemplated that~~ This Background Study will be used by students in the joint graduate programs of Architecture and City Planning at Georgia Tech to develop more detailed and technical documents. For example: land use plans, site design, and a program of development that will include an "economic model."

2. Two types of documents are contemplated:

?

A. A slick public relations brochure that will be used for promotional purposes.

B. A series of technical studies to help guide development and programming.

Budget Estimates

The following estimates are based on two interns working a period of 10 - 12 weeks during the summer of 1971.

1. Travel

A. 8 man-trips to Panola via Tuscaloosa, Alabama at $69.00 per trip -- $552.00

B. 1-man-trip to Montgomery, Alabama -- $60.00

2. Hotel and Meals

Is 12 days enough

$200.00 - based on 24 man-days in the field (no hotel cost at Panola

3. Telephone and Supplies

$100.00

4. Salaries

$3, 250.00 -- 650.00/month/man for 10 weeks.

Total -- $4,162.00

Note: Allowance for additional part-time work on the project may be proposed at end of the summer program. However, it is contemplated that our financial commitment would be limited to expenses involved in executing the proposed documents.

"A Statement of Housing and Planning's Activities at January 16th Board Meeting of the Panola Land Buyers Association"

We arranged for the Foundation of Cooperative Housing (e.g. FCH Services, Inc.) and Modular Services (a housing manufacturer) to meet with the Board of Directors of the Panola Land Buyers Association on Saturday, January 16th.

Representatives from both organizations explained to the Board their respective companies' methods of operation and services offered. There were some discussion about what procedure PLBA might follow in developing a co-op project. One of the key questions is whether or not land can be released from the mortgage for the purpose of selling it to a development corporation (of PLBA) to build houses. (This question was originally raised when the Federation of Southern Cooperatives proposed to buy 300+ acres of the land.) The Board's attorney believes, but must review the matter in detail, that PLBA can sell a portion of the land without impairing the mortgagor's security.

FCH Services Inc.'s role would be to organize and develop a co-op housing project for Panola. FCH's scope of services

is spelled out in their "Agreement for Technical and Advisory Services." They are proceeding now to determine the feasibility of the project. Modular Sciences, of course, is interested in supplying the housing units.

Usually when FCH develops a co-op project, a builder comes to it with a proposal and would have collected much of the data FCH needs to file preliminary application. In this case, we solicited FCH's assistance and there is apparently inadequate energies in the PLBA to perform the task of collecting data. There is a need for a liaison person between FHC and Panola to coordinate the project.

Such a person might perform the following activities:

1. Collect information on the following subjects:

   a. Alabama Welfare Allotments for housing

   b. Survey surrounding areas to determine income level, family size, housing conditions, housing needs, population, etc.

   c. Help develop a training program for employment in construction of proposed housing and recruit participants.

   d. Help recruit members for the co-op

   e. Check into local zoning regulations

   f. Locate topographic maps

   g. Determine what are the local real estate taxes

2. Use experience of #1 above to help PLBA develop a comprehensive plan.

We need to arrange to gather some of the information in order that FCH might proceed with its feasibility study regardless of the inavailability of a full time person to perform all of the activities.

Dear Les:

Enclosed is a proposal to The Field Foundation for support of the Council's Housing and Planning Division for 1972. We very much hope that it will be acted on favorably by the Foundation.

The proposal is longer than I would normally like, but you will note that it includes reporting on this year's activities. It seemed to me that The Foundation needed a fuller report of a program it has so generously supported, and that the report itself helps demonstrate the Council's capacity for performing in this important area of social concern.

Please call on me if you have any questions regarding this request. I hope that there will be an opportunity for you to talk with me and Art Campbell about the proposal.

Sincerely,

Emory F. Via, Director

A Request for Support of the Housing and Planning Division of the Southern Regional Council, Inc.

The Housing and Planning Division works toward the goals of increasing the supply of housing for low-income groups and to end discrimination in housing. Through both of these efforts we work for a physical and social environment conducive to an open and humane society. We are especially mindful of the need for housing in rural and small town areas and aware of a significant potential for constructive activities in those areas.

Our activities have fallen into four broad categories: (1) Community planning activities, (2) anti-discrimination projects, (3) housing and planning advocacy, and (4) information sharing.

These four areas provide opportunities for SRC to express its standards and values expertly in the fields of housing and planning. Also direct assistance can be given to selected projects to demonstrate methods, planning, and the harnessing of resources for producing better environments for living.

I. Community Planning Activities--We will offer planning assistance to low-income community groups that are interested in developing housing projects in small towns and rural areas. Primarily this assistance includes:

1. Data gathering to define the group's housing problems.
2. Pulling together the necessary resources for developing solutions to the problems.
3. Assessing government progrmas to determine their adaptability to the community's housing needs.
4. Tapping university resources--especially using graduate student skills to provide preliminary planning.

Our work with the Panola Land Buyers Association during the past year illustrates how SRC can provide the kinds of assistance outlined above.

Our major effort in PLBA's behalf is an intern program utilizing Georgia Tech graduate students in planning. During the summer these interns developed a comprehensive background report and preliminary site plans for 1164 acres of land owned by the PLBA.

Their research while full-time Housing and Planning interns is the basis for a class project in Urban Design (at Georgia Tech) that is geared to produce: (a) a master plan, (b) a public relations brochure which depicts the PLBA story to potential investors, and (c) a visual presentation to be used for promotional purposes.

Those organizations/corporations brought in to assist the PLBA include: The Foundation for Cooperative Housing, Inc., and its subsidiary Techni Coop., Inc., Common Wealth Systems, Inc.,

(for its experitse in developing rural water and sewage systems) and Valley Forge Corporation (a prospective builder).

Based on the Panola experience we would like to expand in a more systematic way this type of assistance to similar groups elsewhere in the South. We have undertaken the following exploratory steps toward this end:

1. Identified counties in seven Southern states that have no housing authorities (or authorities that are inactive).
2. Confronted several housing consultants about their willingness to develop, on a contingency basis, applications for government housing assistance provided SRC would gather sufficient preliminary data to determine a proposed project's feasibility. The response here is encouraging.

The purpose of the proposed expansion of the Housing and Planning Division's community planning assistance is four-fold: (1) to focus our limited resources on selected geographic areas with great housing shortages; (2) to identify community leaders, i.e., prospective sponsors of low-income housing; (3) to make available information on federal assistance and other resources; and (4) to cause housing to be developed where it is most needed.

The major elements of the program would include:

1. Field surveys of the selected counties (identifying leaders, existing programs, problems, plans).
2. Preliminary data gathering, problem definition and

analysis for each target area.

3. Workshops involving technicians and community residents to develop strategies for dealing with the local community's housing problem.

4. On-going consultations/assistance in implementing housing strategies.

II. Anti-Discrimination Projects--The Council recognizes the need for more programs in the region which aim at ending housing discrimination. We are persuaded that such efforts must be more sophisticated in recognizing the variety of decisions and practices which lead to housing discrimination. Although local efforts may at a given time emphasize one or two program area, we are committed to assisting them in understanding the depth of the problem they face.

We have during the past year engaged in the following activities:

1. In conjunction with the SRC Research Department we published an in-depth report on housing discrimination.

2. Helped initiate, plan, and organize a workshop around housing in Jackson, Mississippi.

3. In Atlanta, Georgia we organized and coordinated a project designed to test and document discrimination in housing.

4. We developed a proposal for establishing a staffed

metropolitan housing opportunities organization in the Atlanta area.

5. We have identified the fair housing groups operating in the South. To some of these we have provided information and technical assistance.

It is our desire to continue to offer assistance to local groups, to publish materials which inform and expose, and to initiate appropriate specific projects.

One such project has been suggested from our own experience and in consultation with other experts in various aspects of housing discrimination. It is that we work to insure off-base housing opportunities for minority military personnel. This project is suggested not just because of demonstrated need but because it can provide substantial leverage in altering community housing patterns. The following elements argue for such an undertaking:

A. A substantial portion of actual housing complaints to the regional office of H.U.D. come from servicemen.

B. There is an identifiable clientele group.

C. Adequate counseling and legal assistance are not now available.

D. In towns and smaller cities even one successful complaint can have substantial impact.

E. The importance of military bases to local communities provides special leverage.

F. The existence of administrative regulations as well as federal law provide potential extra pressure.

A second project which we have been urged to undertake is the making of an inventory of lawyers throughout the region who are able and willing to take housing discrimination cases. Such a list would not only be of use to other agencies, and insure a broader protection of individual rights, but can serve informational purposes for the attorneys themselves.

III. Housing and Planning Advocacy--Our role in developing advocacy positions has been somewhat limited, though important, in the past. Council publications do state positions on important issues as has been the case in our treatment of the Farmer's Home Administration role in the housing field and our more general critique of national practices affecting low-income housing and discrimination in housing.

The Housing and Planning Division advocated a broader approach to discrimination in housing to Georgia Governor Jimmy Carter and members of a special Carter Committee on real estate practices (whose focus was defined as anti-blockbusting). Aside from the statement to the governor and the committee, staff met on several occastions with the committee's chairman.

We propose enlarging our advocacy role based either upon our special research or other reliable information. There

is a growing need for an informed Southern voice, based on reason and experience, to state positions in the housing and planning area.

We plan to hold a regional conference which would bring together city and regional planners with open housing advocates. A major purpose of the meeting would be to get those involved in planning to better understand the need and desirability for dispersed housing to promote a balanced distribution of low and moderate income housing. It would be our aim to bring about an awareness of the role of planning instrumentalities in this process and to contribute to public support for such moves.

IV. Information Sharing--An important part of all Council activities is the sharing of information. This is the case whether the information is aimed at the broadest possible audience or at select publics. The Housing and Planning Division has supplied information for a television documentary, interviews for television newscasts, news releases, a study of the Farmer's Home Administration, a study of housing discrimination and the federal role, provided critiques of statements or positions of other agencies, answered routine information requests, developed a report on "new towns", and produced a limited specialized report on progress to date in the Panola Project.

We have, of course, worked with a number of smaller groups and with interested academics. In most of these activities it

is difficult to accurately assess our contribution. We know that a more ordered point of view is at times presented, that certain values get clear expression, and that at times the right information gets to the right person so that the prospect of constructive change is enhanced.

The Housing and Planning Division plans special reports for the coming year. Two areas of interest for such publications are: (1) The effect of realtor practices on discrimination in housing, and (2) the impact of public policies on housing discrimination with special attention paid to exclusionary zoning practices.

The budget that follows would allow us to substantially fulfill the program outlined here and we earnestly request its consideration by the Foundation.

PROPOSED BUDGET FOR 1972

HOUSING AND PLANNING DIVISION

Southern Regional Council, Inc.

Staff and fringes	$21,000
Consultants and Technical Assistance	3,000
Special Projects and Reports	3,500
Travel and Communication	2,000
SRC overhead at 20%	5,900
	$35,400

Atlanta, Georgia 30303

Dear Emory:

This is in reference to your letter and proposal of November 2, regarding renewal of the Housing and Planning Project.

Foundations are restless souls. Don't you think you can find another to pick up support of this? I believe and hope very much you can.

Sincerely yours,

Leslie

Mr. Leslie W. Dunbar,
Executive Director
The Field Foundation
100 East 85th Street
New York, New York 10028

Dear Les:

We are disappointed, of course, not to have further support from the Foundation for our Housing and Planning Division. Field has made it possible for us to find our way to new ground and develop a competent staff person in this area. It is our hope and plan to see that this program is continued; we feel it is most worthy of support.

Please know how much we appreciate your support of this effort in the past. The Foundation's readiness to continue to fund Council activities is reassuring to us all. I have written separately about your support of the School Desegregation Project.

Sincerely,

Emory

Modular Housing Plants Set by Westinghouse, LTV Aerospace Units

#1

Facilities to Be in Fredericksburg And Chatham, Va.; Each Is Due To Begin Operation Later in '70

Urban Planning

A WALL STREET JOURNAL *News Roundup*

Two companies best known for their space-age technology said they are planning factories in Virginia to construct housing modules, building blocks that can be stacked together on a site to make a private home or an apartment complex.

Westinghouse Electric Corp.'s Urban Systems Development Corp. subsidiary said it will build a 68,000-square-foot plant near Fredericksburg, Va., to mass produce steel and wood mudular units for townhouses and garden apartments.

LTV Aerospace Corp. said its Service Technology Corp. subsidiary will build low-cost modular housing units for apartment houses at a factory planned for Chatham, Va. LTV Aerospace is a subsidiary of Ling-Temco-Vought Inc., Dallas.

Westinghouse said its plant, expected to be operation by year-end, will assemble modules for use within 200 miles of Fredericksburg. This would include Washington and Baltimore.

Output in 1971, Westinghouse said, will be about 700 dwelling units. This will grow to 1,200 in 1972 and 1,400, the maximum planned, by 1973, the electrical producer said. The initial output will be taken exclusively by the Urban Systems subsidiary, but Westinghouse said it hopes eventually to market the modules to other builders as well.

Westinghouse set up Urban Systems in 1968 to build low and moderate income housing, under Federally subsidized programs. The subsidiary has so far built about 700 homes in the Washington, Atlanta and Wilmington areas. The parent concern said about 2,100 units are planned or under construction in seven states.

The modular assembly plant is Westinghouse's first. A spokesman indicated, though, that several others are planned throughout the country. "Depending on the success and volume of this plant, there would hopefully be about six others in the 1970s," he said.

LTV Aerospace said its Service Technology unit, also a newcomer to the field, has contracted to build 12,000 low-cost modular units for Garme Realty Inc. over a 10-year period. The LTV Aerospace subsidiary will operate the Chatham plant. Construction of the factory will begin this month and the first output is expected in September.

Garme will own the housing and will transport and install the completed modules at building sites in North Carolina, Georgia, Florida and Washington, D.C., LTV Aerospace said.

The first units, LTV Aerospace added, will contain about 1,000 square feet and be designed for two, three and four bedroom apartments in multi-family houses.

Re: Urban Design Conference

This year the National Urban Coalition's Urban Design Conference is focusing on mass industrialization in housing -- a subject that is of paramount interest to our project. The conference appears to be an opportunity to get some first-hand insights into the whole field of mass produced housing. Accordingly, both Moreland and I think that I should attend.

There is no conference registration fee mentioned in the announcement. The major expenses are the cost of a round-trip air travel ticket between Atlanta and Boston and room and board for three days. In view of the distance involved, I think you should pass judgement on the desirability of my making the trip vis-a-vis our program goals.

The program is attached in case you wish to review it.

* * *

4/20/70

Art, I think you should plan to attend this. Please see if you can send copies of papers (even before they send them out to participants, if they do). I have attached a request notice form which came in a mailing to me which indicates a $100 registration fee. Jay

The National Urban Coalition
Development Forum 8
13th Annual Urban Design Conference
Graduate School of Design
Harvard University
Sanders Theatre-Memorial Hall
Cambridge, Massachusetts
May 6-8, 1970

The Harvard Graduate School of Design and The National Urban Coalition have joined together to sponsor an Urban Design Conference-Development Forum focused on the broad implications of mass-industrialized housing.

The program will begin on Wednesday, May 6, with discussions of research, development, marketing and financing. Thursday morning, May 7, will be devoted to a general overview of housing technology and a review of OPERATION BREAKTHROUGH. The program links these business concerns with design and environmental issues through a court-room style proceeding Thursday afternoon. On Friday, policy sessions led by interdisciplinary panels will explore these issues further and attempt to arrive at policy recommendations.

In view of his lifelong commitment to the principles of merging design and industrialization, it seems particularly appropriate that the memorial events for Walter Gropius take place in this context. The Gropius Lecture has traditionally been associated with the Urban Design Conference. This year, in addition, there will be a presentation on the Bauhaus, a retrospective exhibition at the Busch-Reisinger Museum, and the "Grope Fest" to which all participants in the Conference-Forum are invited.

Housing Bright Spot

Sales of Condominiums Rise Sharply as Rest Of Home Market Lags

Tax Advantages, Freedom From Maintenance Worry Lure Young and Elderly

Problem: Neighbor's Stereo

By TIMOTHY D. SCHELLHARDT
Staff Reporter of THE WALL STREET JOURNAL

CHICAGO—The Kenneth C. Naslund family lived in a rambling, 16-room house here for four years, but they didn't enjoy it. "It was too much trouble to maintain," says Mr. Naslund. Then they moved into an apartment, which they liked, but they disliked paying rent and forfeiting the tax advantages and equity accumulation that go with home ownership.

Now, Mr. Naslund hopes he has found the perfect solution: A $65,400 condominium he has purchased in a high-rise structure under construction on Chicago's lakefront. He will own the three-bedroom apartment, but the building will be maintained by a manager.

Mr. Naslund is buying a form of housing that is catching on rapidly in this country. A condominium is an individually owned apartment, usually in a high-rise building or in a townhouse. The condominium buyer obtains a mortgage from a bank or savings and loan, just like the buyer of a single-family house does. He then repays the loan and sends a monthly maintenance check to the building manager.

The One Bright Spot

The condominium owner's monthly payments—maintenance, taxes and financing—usually total more than he would have to pay if he owned a comparably priced house. On the other hand, the condominium owner needn't worry about mowing the lawn or fixing the roof; his maintenance fee takes care of that. It's difficult to compare the monthly payments on a condominium with the monthly rent on a similar-sized apartment—the size of the condominium loan can make the payments vary widely—but the condominium owner has several advantages over the renter. The condominium owner builds up equity, unlike the renter, and he also can deduct from his income taxes the interest on his loan and the portion of his maintenance fee that is allotted for real estate taxes. The renter can't deduct the portion of his rent that goes for taxes.

This double advantage of tax benefits and freedom from worries about maintenance has made condominiums the sole healthy factor in the U.S. residential-construction scene. In the last six months of 1969, construction starts on single-family houses were down 17% from a year earlier. Starts on rental apartments were down 12%. But construction of condominiums soared 30%. (There are no figures for so-called cooperative apartments, in which the apartment dwellers jointly own their building. Cooperative apartments have the same tax advantages as condominiums but usually are ineligible for mortgages and are more difficult to finance. They are primarily a New York City phenomenon.)

These construction trends are expected to continue this year. Starts on single-family homes will decline 14% in 1970, housing experts forecast, while rental apartment construction will decline 19%. This year, says an executive of a company that charts housing trends, will be "the poorest year for those sorts of housing since World War II." But construction of condominiums this year is expected to far exceed last year's totals.

Land Is a Luxury

The swing toward condominiums has been most marked in hot weather and resort areas,

dominiums this year is expected to far exceed last year's totals.

Land Is a Luxury

The swing toward condominiums has been most marked in hot weather and resort areas. There, many buyers are retired couples seeking a trouble-free, year-round residence or younger people who buy a unit for vacation use and rent it out the rest of the year. In the Miami-Ft. Lauderdale area, for instance, 8,460 condominium units were sold last year, a 64% jump from 1968. In Phoenix, Ariz., it's estimated that 1969 unit sales of condominiums topped the previous year by about 35%.

Some observers believe the growing acceptance of condominiums may herald a far-reaching change in American attitudes toward housing: The separation of home ownership from ownership of a piece of land.

"In the past, the two notions have been indivisible, but they are getting to be a luxury that more and more people can't afford," says John W. Baird, president of Baird & Warner Inc., a large Chicago realty firm. Indeed, Census Bureau statistics show that in 1960 single-family homes accounted for 77% of total U.S. housing starts but that the figure declined to 54% last year. The total is expected to drop below 50% by 1972.

Some Disadvantages

"Land, labor and materials are getting so expensive that a lot of people who might have bought a house 10 years ago can't do it today, and the situation promises to get worse," says Mr. Baird. "Many people are going to have to forget about land ownership."

That may be so, but chucking long-held ideas about homes isn't always easy. "It took a while to get used to the thought that we *owned* our apartment—it just didn't seem like a real home without a garage, big yard and the rest," says Raymond C. Nelson, assistant professor of journalism at Northwestern University, who last fall bought a three-bedroom condominium in Wilmette, a Chicago suburb. Yet he adds: "Now that we're used to it, we think traditional home-ownership ideas are archaic. We've got all the advantages."

Mr. Nelson does overstate his case somewhat, though, for owners of condominiums don't have all the advantages of homeowners. Owners of apartments often have the same woes as renters of apartments—noise from a neighbor's stereo, inability to get the manager to fix things, lack of a yard for the children to play in and constantly rising monthly charges as taxes and the price of help increase.

John R. Harris, a Californian who used to live in a condominium, says one bad feature was that the committee of residents elected to set rules for the complex often set restrictive regulations. "What you can have is a bunch of silly people setting a lot of silly rules about when to use the swimming pool and shuffle-

ad: The Top Pros d $100,000 a Year

bus to the airport, downed a quick breakfast, and boarded a plane for Philadelphia, where he was to play in the International Tennis Players Association Open Championships.

En route to Philadelphia, Newc explained how a knack for playing tennis can be parlayed into a healthy income. The fees paid by companies for endorsement of tennis equipment have skyrocketed, he said. Newc soon will sign a contract with Rawlings Sporting Goods, a unit of Cleveland-based A-T-O Inc., to endorse a new aluminum racket. He didn't disclose the fee but commented: "One of the world's top-ranked players should be making $35,000 to $50,000 a year from his racket endorsements." This is about double the figure of two years ago.

"I've never played with metal before," Newc said, "so I'll have to get used to that." (He since has played with the metal racket in several matches.) Newc also is under contract with Slazenger, an English and Australian company, to play with wood rackets in several countries but not in the U.S. Thus, he will play with the Rawlings racket in the U.S. and countries where he isn't bound by the Slazenger endorsement.

Taking one of his rackets from beneath the plane seat, Newc said that there was little difference between good rackets. The important factor, he said, is how a racket is strung. He held the racket close to his ear and hit it against the heel of his hand, listening to the pinging sound. "If the stringing is off the slightest bit I can tell instantly," he said. Newc likes exactly 60 pounds of tension. "If it's not right," he continued, "I just take a knife and cut the strings out and have it redone."

Shoes and a Tennis Clinic

Newc also is under contract to two shoe companies and a clothing company for endorsements. But there are other sources of income. Many pros have private, tennis-related

Urban Renewal Lesson Still Unlearned

Urban Plan W-S-J 5/27/70 - Copy to

By HENRY ELLIOT WEINSTEIN

SAN FRANCISCO—The Yerba Buena redevelopment project here would demolish a 12-block section containing 43 run-down residential hotels, 92 other residential structures, cheap restaurants, pawnshops and seedy bars—replacing them with what local businessmen have viewed as "San Francisco's Rockefeller Center."

These plans have been brought to an abrupt halt, though, by the objections of the area's present residents, the same objections so often ignored in past urban renewal projects. George Woolfe, an 80-year-old former longshoreman, says "We who are living our last years in the places that have been our homes for over a decade have asked only that we be treated fairly. We have asked that, if our homes are to be destroyed, that new places be built for us to live."

U.S. District Judge Stanley Weigel recently agreed, halting all work on Yerba Buena pending guarantees of low cost housing elsewhere for present residents—serving notice on the city's redevelopment agency and the U.S. Department of Housing and Urban Development (HUD) that he won't allow the Government to uproot people without far greater provision for their welfare. The Redevelopment Authority sought to have the order considerably revised, and on Monday a Federal court appointed former Governor Edmund G. (Pat) Brown a special master to seek an agreement resolving the conflict.

The $200 million Yerba Buena center is one of the nation's largest urban renewal projects. Uncle Sam is committed to the tune of $31 million in capital grants and $49 million in temporary loans to it. It is the largest commercial urban renewal project to be halted by judicial decree. The ruling in favor of residents here could mark a significant turning point for the much-criticized Federal program to renovate blighted city areas.

The court injunction has demoralized local businessmen who saw Yerba Buena as a key element in maintaining the city's appeal as a tourist and convention center. M. Justin Herman, executive director of the San Francisco Redevelopment Agency, refers to the complex as a potential "Lotus land." Located southwest of the present business district, about a 10-minute walk from the new 52-story Bank of America building, it would include a convention center, a sports arena, a high-rise luxury hotel, an Italian cultural center, six office towers, an airline terminal and garage space for 4,000 cars.

But Judge Weigel sees the project as a classic example of "urban removal." His stinging opinion suggests that urban renewal hasn't yet escaped what HUD Secretary George Romney once conceded were the sins of "its early history." Mr. Romney said urban renewal "was literally a way of bulldozing poor people out of their homes and then using the land to build commercial structures, or luxury or middle-income housing."

Only 276 Housing Replacements

In all, the Yerba Buena project would destroy over 4,000 existing housing units now inhabited by mostly single, elderly pensioners and minority families. To replace them, it contemplates building only 276 new, low-cost housing units.

Judge Weigel's ruling was issued on behalf of a suit by the tenants' group in conjunction with minority group leaders in renewal areas.

The decision, which is being appealed, states that unless the redevelopment agency can demonstrate by July 1 that it will provide decent, safe and sanitary housing for each person who lives in the project area, further Federal funds for Yerba Buena will be cut off. In the interim, the injunction provides that those persons must be "completely secure in the peaceful use and occupancy of the places in which they live." The redevelopment agency is also prohibited from demolishing or condemning any residential structures in the project area, or raising rents of any residents living in buildings it owns.

Since San Francisco is currently plagued by an acute housing shortage, the redevelopment agency may have a difficult time complying. In December the City Planning Department said the city's overall vacancy rate was 2.3% for all apartments at all rent levels. There are almost no vacancies at rents below $100 a month. In addition, the city is way behind its quota of low-cost public housing construction. Many individuals have been on the waiting list for such housing for as long as five years.

Sidney Wolinsky, who represented the tenants as director of litigation for the San Francisco Neighborhood Legal Assistance Foundation, a Federally funded anti-poverty agency, says the decision "in effect, means the city will have to provide firm guarantees that new low-cost housing will be built in order for the injunction to be lifted."

It seems ironic that such a decision has landed on Mr. Herman's door; he has talked in terms suggesting an alteration in the normal dreary pattern of urban renewal. Just last year, Mr. Herman remarked "the natives say San Francisco is so beautiful that we don't need to push redevelopment. They don't see, for one thing, the desperate need for low-to-moderate cost housing and, for another, the potential for more cultural and social amenities." He has often said "there is a benefit of being in redevelopment. You can go to bed each night knowing you have helped the people in the slums."

When it comes to low-cost housing, though, the image and the reality are poles apart in San Francisco. A July 1969 report of the City Planning Department revealed that approximately 6,000 housing units have been destroyed in redevelopment areas here, but only 662 units of housing have been built in renewal areas thus far.

Last December, a group called "The Citizens Emergency Task Force for a Workable Housing Policy" issued an angry report on the city's housing problems and the failure of the redevelopment agency, the Board of Supervisors, and Mayor Joseph Alioto to deal with these problems. William McCabe, an attorney who chaired the task force, said "The city seems to have adopted a course of action making it very difficult to meet low-income housing needs . . . and one that seems aimed toward forcing poor people out of the city."

Mr. Herman staunchly defends his agency's programs to find suitable housing for those displaced by redevelopment. At the lawsuit's first hearing last December, the redevelopment agency claimed it had already "successfully relocated 825 individuals and 150 families."

By the agency's own figures, though, 866 pear and the displaced resident is left with a rent which he cannot afford."

Another issue in the dispute concerns the boundaries of the redevelopment area. The legal brief for the tenants' group asserts, "The boundaries are irregular because the project area has been 'gerrymandered' for no other reason than to maximize the benefits of the plan to wealthy and influential sectors and corporations owning contiguous property."

Gerrymandering or not, it's clear that the redevelopment agency considerably broadened the meaning of the designation "blight" in order to achieve the current boundaries. Ironically, the project now bears a remarkable resemblance to a plan first suggested in 1954 by Benjamin Swig, prominent Democrat and owner of the prestigious Fairmont Hotel on Nob Hill. However, Mr. Swig's "San Francisco Prosperity Plan" was rejected by the redevelopment and planning agency in 1956 on the grounds that it "perverted" the basic reason for redeveloping the area.

A Long-Sought Goal

Mayor Alioto, a good friend of Mr. Swig, and then chairman of the redevelopment agency, lobbied vigorously for the 1956 proposal. Since that time he has been an ardent champion of what San Francisco Business, the official organ of the Chamber of Commerce, calls the "long-sought San Francisco goal" of "large-scale commercial, tourist, and sports development" in precisely the area where Yerba Buena is located.

The San Francisco media, similarly, have been whole-hearted in their support of Yerba Buena. (The two leading dailies, the Chronicle and the Examiner, own property adjacent to the project area which may appreciate in value upon completion of the complex.)

In addition, the labor movement has been united with the commercial interests here in a coalition that has been instrumental in seeing to it that the project has come this far. Labor's interest is clear. According to the redevelopment agency, the Yerba Buena project will create $385 million in construction work and 9,400 construction jobs, including related work on nearby areas. Commenting on the project, John Hogg of the Building and Trades Council said "We are in favor of building with no respect to where it is and how it is."

Jack Morrison, a member of the Board of Supervisors from 1961-1969 who consistently opposed the project, asserts "The whole process of approving Yerba Buena has been disgraceful. This city has just bowed down to business and commercial interests who want to exploit that property." As for the labor support, Mr. Morrison adds "some of those building guys would pave the bay if the city would agree."

Local vested interests are hardly the only ones on the defensive in the drama here, though. Before a local public agency's renewal plan can be granted Federal funding, its plans must be approved by HUD. Judge Weigel's opinion leaves little doubt that HUD's review procedures in this case were negligent and sloppy. The evidence "is overwhelming in establishing that the secretary of HUD was not presented with any proof at all in regard to several vital matters requisite to his approval," he noted.

Kenneth Phillips, director of the National Housing and Development Law Center, an

Redevelopment Agency, refers to the complex as a potential "Lotus land." Located southwest of the present business district, about a 10-minute walk from the new 52-story Bank of America building, it would include a convention center, a sports arena, a high-rise luxury hotel, an Italian cultural center, six office towers, an airline terminal and garage space for 4,000 cars.

But Judge Weigel sees the project as a classic example of "urban removal." His stinging opinion suggests that urban renewal hasn't yet escaped what HUD Secretary George Romney once conceded were the sins of "its early history." Mr. Romney said urban renewal "was literally a way of bulldozing poor people out of their homes and then using the land to build commercial structures, or luxury or middle-income housing."

Only 276 Housing Replacements

In all, the Yerba Buena project would destroy over 4,000 existing housing units now inhabited by mostly single, elderly pensioners and minority families. To replace them, it contemplates building only 276 new, low-cost housing units.

Judge Weigel's ruling was issued on behalf of Tenants and Owners in Opposition to Redevelopment (TOOR), a group of project area residents, and was based on his finding of two fundamental violations of Federal law.

The first is the redevelopment agency's failure to demonstrate the availability of adequate relocation housing for persons still to be displaced from the project area. The other is the redevelopment agency's failure to comply with the HUD regulation calling for consulta- the people in the slums."

When it comes to low-cost housing, though, the image and the reality are poles apart in San Francisco. A July 1969 report of the City Planning Department revealed that approximately 6,000 housing units have been destroyed in redevelopment areas here, but only 662 units of housing have been built in renewal areas thus far.

Last December, a group called "The Citizens Emergency Task Force for a Workable Housing Policy" issued an angry report on the city's housing problems and the failure of the redevelopment agency, the Board of Supervisors, and Mayor Joseph Alioto to deal with these problems. William McCabe, an attorney who chaired the task force, said "The city seems to have adopted a course of action making it very difficult to meet low-income housing needs . . . and one that seems aimed toward forcing poor people out of the city."

Mr. Herman staunchly defends his agency's programs to find suitable housing for those displaced by redevelopment. At the lawsuit's first hearing last December, the redevelopment agency claimed it had already "successfully relocated 825 individuals and 150 families."

By the agency's own figures, though, 66% of the people who have been moved are paying higher rents. The agency asserts that these individuals are now living in "better accommodations" and boasts that they are being assisted with rent supplements. Judge Weigel's opinion points out, however, that "the rent supplements can only be used to make up the deficiency in low-rent vacancies during the first two years after a resident's relocation. After that time the rent supplements disap- lated work on nearby areas. Commenting on the project, John Hogg of the Building and Trades Council said "We are in favor of building with no respect to where it is and how it is."

Jack Morrison, a member of the Board of Supervisors from 1961-1969 who consistently opposed the project, asserts "The whole process of approving Yerba Buena has been disgraceful. This city has just bowed down to business and commercial interests who want to exploit that property." As for the labor support, Mr. Morrison adds "some of those building guys would pave the bay if the city would agree."

Local vested interests are hardly the only ones on the defensive in the drama here, though. Before a local public agency's renewal plan can be granted Federal funding, its plans must be approved by HUD. Judge Weigel's opinion leaves little doubt that HUD's review procedures in this case were negligent and sloppy. The evidence "is overwhelming in establishing that the secretary of HUD was not presented with any proof at all in regard to several vital matters requisite to his approval," he noted.

Kenneth Phillips, director of the National Housing and Development Law Center, an OEO foundation in Berkeley, notes a key problem in regard to the HUD investigative procedures. In the few cases where HUD checks relocation complaints he says "its investigation is usually conducted by the same officials who worked with the city to prepare the challenged plan and have reviewed and approved it." Such a procedure clearly does not lead to the sort of independent, objective analysis that is needed if the interests of project area residents are to be fairly represented, Mr. Phillips concludes.

Shortly after issuing his decision, Judge Weigel left on vacation. Just last Friday, the Redevelopment Agency went before Federal Judge George Harris, in an attempt to modify the injunction so that some buildings in the project area could be demolished, residents relocated, and construction could commence on buildings to be erected in the Yerba Buena complex by Crocker Citizens National Bank, Pacific Telephone & Telegraph Co., Del Monte Corp., and Taylor Woodrow Properties Ltd. of London. The tenants' group strenuously objected.

Special Master's Powers

A compromise was reached with the appointment of former Gov. Brown, now an attorney in Los Angeles. As a special master, he will serve as an arbitrator under supervision of the court, with power to conduct surveys, hearings and conferences relating to revision of relocation plans and alleged fire hazards in some of the older structures still standing in the project area.

Mr. Brown said he is anxious to get the project under way, but he made it clear he is bound by Judge Weigel's original findings of fact and conclusions of law. He will start his hearings immediately and says he hopes to have an agreement formulated before the July 1 deadline Judge Weigel set for a modified relocation plan.

In appointing Mr. Brown, Judge Harris commented on the "complicated, practical problems" that may be more easily resolved by a special master than through ordinary court hearings. Perhaps Mr. Brown may be able to devise a practical solution implementing Judge Weigel's opinion concluding observation on the Federal urban renewal law: "The statute makes it abundantly clear that Congress intended residents of blighted areas to be the beneficiaries, not victims of urban renewal."

 Housing & Planning

In Glasgow, Housing Hopes Gang Agley

By GEORGE MELLOAN

GLASGOW, Scotland — When Glasgow a few years ago held a design competition for a new public housing project, the winning architect described his high-rise building as a "monument to Glasgow's gaunt power."

Many Glaswegians are indeed proud of the new skyline this city has created with a massive public housing development plan. But some are beginning to wonder whether Glasgow is in fact creating monuments or a monster.

Their doubts may hold some warnings for other cities that are tempted to plunge too deeply into public ownership of housing. Glasgow's experience shows that public housing does not necessarily solve social problems but may in some ways aggravate them, that overemphasis on public development tends to drive out private development and that belated attempts to make public housing pay its own way can produce political uproars.

Glasgow's plunge was dictated partly by political choice. The city has a strong socialist tradition that supports widespread welfare benefits.

A decade ago the city council became aware that Glasgow's sprawling blocks of four story, gray stone tenements—built during a rapid industrial build-up in the early 1800s—were all deteriorating at once and becoming uninhabitable. The council launched an urban redevelopment scheme that eclipsed anything ever before attempted in Britain. It called for demolition of nearly one third of the city's housing in 20 years and its replacement with city-owned flats. Some 120,000 flats were to be demolished.

The project is only about half complete but already the city, which operated some housing before, owns and maintains nearly half of Glasgow's total housing. Its debt has climbed to over $810 million from $367 million in 1960. The rents and taxes it receives from its tenants do not even cover the interest on the debt, let alone reduce the principal.

As the city's ownership has risen, its tax burden has been spread over fewer private taxpayers, with the result that taxes have risen for owners of private property. Glasgow's per capita property tax is over $110 a year compared with $70 for Liverpool, a city of roughly similar size and composition. Private building has slowed to a trickle, and there are widespread resentments among private homeowners.

Some More Equal Than Others

"Those people who are not in public housing have high costs and high taxes compared to those who are in," says Peter Gemmill, a leader of the Progressive-Conservative Coalition on the Glasgow city council. "Rather than the socialist theory of more equality, we are going in the opposite direction."

The obvious answer to this, of course, is to raise the rents on council housing. But attempts to raise rents, in the words of Mr. Gemmill, are "political dynamite." At one recent council meeting on housing, "we had to call the police in," Mr. Gemmill says. "No blows were struck but things were flying around the room."

The Progressive-Conservatives did manage to push through a rent boost. Average rents per family will go up to $220 a year in November from $184. But with higher interest rates on the city's debt even this will not cover interest costs. The city also is exploring the idea of selling houses to tenants but this is meeting the same sort of opposition as higher rents.

As still another solution to its problems, Glasgow would like to get the British government to simply absorb its debt as it has with at least one debt-ridden public corporation. But this would set a precedent that the government is not eager to establish since there are plenty of other British cities with sizable debts as well.

Part of the political volatility of the housing issue no doubt derives from the fact that new housing has not turned tenants into happy, contented citizens. Since early last century when the city began an industrial build-up that was to make it, for a time, the "second city" of the British empire and the third largest of Europe it has had a reputation as a restless, brawling city.

Two main groups migrated here to work in the burgeoning shipbuilding, heavy machinery and textile industries. One consisted of poor Irish Catholics, forced out of Ireland by the potato famines. The other was made up of Protestant Scotch Highlanders driven from the Highlands, amid much bitterness, by the "Highland clearances" when British landlords undertook to make more room for sheep grazing.

Descendants of the two groups, Catholic and Protestant, each comprise about half of Glasgow's population and still feud as they have for decades. The feud becomes most intense when the city's two professional soccer teams meet in heavily policed matches. One team, the Rangers, is supported by the Protestants, and the other, the Celtics, is supported by the Catholics.

Partly because of this enmity, Glasgow is one of Britain's most violent cities. It accounts for only about 1.8% of Britain's population but about 7.5% of its murders and other forms of violent crime. "It really isn't safe to take your wife downtown on a Saturday night," says a young newspaper reporter here.

In recent years, much of the violence has been conducted by youth gangs and some of these gangs have emerged from the housing projects that Glasgow hoped would solve some of its social problems. One of the most notorious centers of gang warfare was Easterhouse, a pleasant looking development on the city's east side.

Whether the gang warfare is merely a carryover from a generation that had its beginnings in the slums, no one can say for sure.

Social problems are not at all uncommon in housing projects in many places where established—albeit decrepit—neighborhoods have been demolished and their occupants placed in new and unfamiliar surroundings.

But Glasgow planners admit that the city, partly in its haste to simply provide shelter, created some new problems for tenants. Initially, it went in heavily for high rise buildings in an effort to make the best use of the limited building space. But, says Ian Robert, the city's assistant chief planning officer, the architects for some of the buildings didn't provide enough elevator capacity there.

"As a result," he says, "there are some buildings where occupants have to wait 20 or 25 minutes for an elevator when children are leaving for school and parents are leaving for work." Also, he says, some of the wives in the higher reaches of such buildings seem to suffer from tensions as a result of the difficulties of getting their young children out to play. Because of such problems, Glasgow has suspended further high-rise construction.

A Sizable Oversight

Another sizable oversight occurred in one large area where housing was built for some 100,000 people but no space was left for shops or service facilities. The residents, few of whom own cars, often have to ride a bus for a mile or so just to meet simple shopping needs.

Glasgow has, however, tried in its building to reduce the density of its central city population and provide more space for recreational areas, schools and the like. To accomplish this it has followed a program of planned depopulation of the city by arranging "overspill" agreements with 65 surrounding towns and cities. It makes grants to help these communities provide housing for Glaswegians who are willing to move out. Its aim is to cut Glasgow's population from 1.1 million a decade ago to around 900,000 by 1980.

However, this idea is working too well. The city is losing population at faster than the planned rate. It has almost reached the target of 900,000 already. A lot of the people who are leaving are doing so without encouragement and many of them are people with skills and abilities Glasgow would prefer to keep.

A good many are not only migrating out of Glasgow but out of Scotland entirely, to Australia and Canada. "This city stinks," is the vigorous opinion of one recent migrant on his way to Australia. "I want to go to a place where I can select the place where I live rather than being assigned to a (city) council house."

This greater than expected out-migration coupled with a decline in Glasgow's traditional shipbuilding and textile industries, is a source of worry to Mr. Robert. "This city is running down and dangerously so," he says. "People are leaving in fantastic numbers."

Whether Glasgow could have avoided its difficulties is a matter for debate. But there is every reason to believe it might have if it had given more thought to finding better ways for its citizens to become independent and self-supporting and adhered less to the idea that it could provide them with a better life that no one would have to pay for.

George Melloan, who recently joined the Journal's editorial page staff, researched this story while still a member of the Journal's London bureau.

HUD Supports Utility Sponsored Housing

Secretary Romney has urged Congress to amend the Public Utility Holding Company Act of 1935. The proposed amendment would authorize the Securities and Exchange Commission to approve utility holding company systems investment in low-and moderate-income housing projects. This action results from a June 1970 SEC decision that Michigan Consolidated Gas and other gas and electric utility holding company systems are prohibited by the 1935 Act from diversifying their holdings by building or owning housing projects. HUD and SEC are preparing legislation which would permit utility holding company involvement in housing. . . subject to SEC approval. Michigan Consolidated Gas. . . which had earlier contemplated court action to overturn the SEC decision. . . has decided to await the outcome of this legislation rather than to appeal the June SEC decision to the courts at this time.

☆

FHA Helps Contractor

Fred W. Eversley, Jr., a black construction contractor who has been involved in an increasing number of FHA-assisted housing projects, called the New York City FHA Insuring Office to express his thanks for "your interest and support." The FHA staff. . . in making its routine evaluation of the projects. . . felt that additional commitments being processed and on the horizon might severely strain Mr. Eversley's capital resources and bonding capability. They so advised him. . . **and he was urged to take the necessary steps to strengthen his financial position.** He did so.

In his telephone call he disclosed that he had just received a $1.6 million line of credit from a major New York bank. . . along with additional credit totaling $2.5 million from several insurance companies.

☆

Mobile Homes Gain in Market

Mobile homes will probably constitute more than half of all the new homes sold in the United States this year, a leading mortgage banker predicts.

J. Philip Gilligan, president of the Southern California Mortgage Bankers Association, says that in 1969 mobile homes represented 46 percent of the single-family residential market, with sales of 396,500 units.

"With the traditional housing market still knee deep in the doldrums, the odds are quite in favor of mobile homes taking at least 50 percent of new home sales this year," says Gilligan.

"By 1971 it is estimated that some $3 billion in financing will be needed for mobile home loans."

Significant Court Decisions

A number of important court decisions... concerning zoning, housing, and related subjects... have recently been handed down. Summaries of those with the greatest impact on HUD programs are reported in this *Newsletter* from time to time. Because of the steadily growing volume of litigation affecting public housing, renewal, and Model Cities programs ... local agencies administering these programs have asked for assistance in identifying significant rulings that may affect their operations.

As a result... in addition to the brief summaries appearing in the *HUD Newsletter* ... **HUD will now reproduce and circulate court opinions of interest to counsels for public bodies handling HUD grant programs. The material will be in the form of unpublished, uncertified copies... with a brief discussion of each opinion accompanying the distribution.** Although HUD is not directly involved in much of the litigation, the information will be useful in permitting public agencies to learn how certain issues are being handled by courts across the country.

In *Housing and Redevelopment Authority in and for the City of Minneapolis, et al. v. City of Minneapolis, et al.* (Fourth Judicial District, Hennepin County, Minnesota, No. 666074), the trial court permanently enjoined the defendant aldermen from ordering a special election to submit to the voters of the city, pursuant to a referendum petition, a proposed Charter Amendment which authorizes a referendum and requires the approval of a majority of voters **residing within an urban renewal area** before a project is initiated. The court found the amendment vague and unconstitutional. It concluded that the State law on urban renewal preempted the field and nonresidents of an urban renewal area having substantial interests therein were denied equal protection of the law by not being able to vote at the special election.

In *Jersey City Redevelopment Agency et al. v. Hugler et al.* (Superior Court of New Jersey, Appellate Div., Docket No. A-853-69), the Appellate Division affirmed a judgment upholding the validity of a 1967 New Jersey statute which provides that the value of land condemned for urban renewal purposes shall be determined to be no less than its value on the date of the declaration of blight. Various contentions based on improper classification, equal protection of the law, and abolition of "defenses" of the condemning agency were considered and rejected.

State courts recently have awarded monetary damages for mental suffering in housing discrimination cases. *United States Law Week* reported that the Supreme Judicial Court of **Massachusetts** awarded $250 to a prospective tenant... for the "considerable frustration, anger, and humiliation" caused when he was refused an apartment because of race ...*(Massachusetts Commission Against Discrimination vs. Franzaroli).* The **New Jersey** Superior Court awarded *$2,000* to a Malaysian official and $500 to a black woman in a joint suit...*(Farouk-Bivans vs. DeHart)*... and $500 to a black minister...*(Gray vs. Serruto)*...who had been denied housing because of race... according to the *Philadelphia Inquirer.*

A U.S. District Court in Rhode Island struck down a two-year residency requirement imposed by the Newport Housing Authority. In *Cole vs. Housing Authority of the City of Newport*... the Court held a two year durational residence requirement as a condition of eligibility for low rent housing to be in violation of the equal protection clause of the Constitition's 14th Amendment... "in interference with the basic constitutional right to travel freely... and an unlawful addition to the specific provision of the 1937 Housing Act." Suits seeking to bar similar requirements have been brought in Perth Amboy (New Jersey), Syracuse, and New Rochelle (New York).

A Trainload of Homes

Five hundred residents of Corinth (Mississippi)... many of whom will occupy the houses... looked on. Sen. John Sparkman of Alabama and Harold B. Finger... HUD Assistant Secretary for Research and Technology... came down from Washington for the occasion. A 2,000-foot long, 18-car freight train pulled into the railroad station... carrying 56 preassembled module sections of 14 townhouses. Six of the modules were removed from the flatcars... taken to a building site... and erected on a concrete foundation. This was the first of a group of 33 houses to be erected in the next 30 days.

The newly erected homes will be used to house the victims of a tornado that struck Corinth in April... killing four persons and destroying the homes of more than 100 families. The homes... which had been manufactured in Avon (New York)... have been purchased by the Tennessee Valley Regional Housing Authority... and will be rented to needy families who will pay 25 percent of their income for rent. The Government will make up the difference.

The event had two-fold significance. It provides housing for the victims... more quickly than they could otherwise get it... and the manufacturer... Stirling Homex Corporation... announced it would soon build a factory in Mississippi to manufacture the units ... creating a large number of new jobs. The factory will be operated on a unionized and integrated basis.

☆

What Business Is Doing

The front cover of the 1969 Annual Report of the Advertising Council depicts a check made out for $450 million to the American Public. The Council states this sum is the traceable dollar value of media contribution of time and space in the public interest in 1969. **During the past 28 years... according to the Council... the Nation's communications media have contributed more than $5 billion worth of services and facilities to persuade individual citizens to take actions that would improve their own lot, or their community's, or the welfare of their fellow citizens.**

The Report emphasizes not only what has been done in the past... but the Council's future direction... to cooperate with any positive action efforts... public and private... in attacking environmental pollution... solving the crises in our cities, including racial relations ... coping with the problems of hunger, malnutrition, crime, and delinquency... and bridging gaps between promise and fulfillment of the American economic system. For the first time in 1970... the Council's activities will become international... helping leaders of 23 countries establish their own councils to stimulate voluntary citizen action.

☆

World's Largest

The City of Oakland will build the world's largest underground garage... a $20 million, 3,600-space facility... as part of the City Center renewal project. The garage... part of a shopping mall, office building, and hotel complex... will be financed by revenue bonds... at no cost to the taxpayers.

☆

Land Sales Office Self-Sustaining

HUD's Office of Interstate Land Sales Registration is the rare Federal agency that brings money into the United States Treasury repaying the cost of its operation... plus.

For the first six months of 1970 it took in $259,932.75 from filing fees. Salaries for the same period... for its staff of 39 people... came to $235,839.25.

Interstate Land Sales is charged with the administration of a consumer-oriented act designed to protect buyers of land being sold in interstate commerce from the consequences of material misrepresentations made by land developers.

National Chamber Urges Enactment of Housing and Urban Development Act

Prompt action and passage of the Housing and Urban Development Act of 1970 has been urged by the U.S. Chamber of Commerce.

Otis M. Mader, president of Alcoa Building Industries... and chairman of the Chamber's Construction Affairs Committee... said, "The Nation is suffering from a major housing shortage and housing production is moving backward at a time when it should be moving forward... the bill will eliminate Federal housing program inconsistencies, consolidate programs which have similar objectives, standardize elements common to similar programs, and allow flexibility to meet local needs."

In another action, the Chamber has published the results of surveys it conducted into socioeconomic activities and successful urban programs involving businessmen, chambers of commerce, or trade and professional associations. Summaries of these activities are available in *Where the Action Is,* which lists more than 150 successful examples of how businesses are working to solve social problems in their communities... Price $1.50... and *Socioeconomic Activities of Trade and Professional Associations*... free from Urban Action Clearinghouse, Chamber of Commerce of the United States, 1615 H Street, N.W., Washington, D.C. 20006.

Deposits and Savings Up

There was a net inflow of $730 million in June of time deposits in commercial banks... compared to an outflow of just under $2 billion in June 1969... and a 38 percent increase in mutual savings deposits... $450 million in June... compared to the same month in 1969. In May... savings and loan associations had a net inflow of $754 million... 17 percent above a year ago.

New Publications

Urban Renewal: One Tool Among Many...the Report of the President's Task Force on Urban Renewal... price $.20. *Toward Better Housing for Low-Income Families*... the Report of the President's Task Force on Low-Income Housing... price $.25.

Basic Laws and Authorities on Housing and Urban Development... revised through January 31, 1970. Prepared by the House Committee on Banking and Currency. A comprehensive listing of laws, Executive Orders, and other authorities... cross referenced by U.S. Code citations and Section numbers... price $4.00.

Preserving the Past

Groups Fight to Stop Leveling of Landmarks By Urban Developers

Laws to Save Old Buildings Often Don't Halt Razing; But Air-Rights Plan Works

Trip to a New Jersey Dump

8/10/70

By JOHN V. CONTI
Staff Reporter of THE WALL STREET JOURNAL

CHICAGO—A battle is raging between the bulldozer and preservationists trying to save fine old American buildings, and so far the bulldozer seems to be winning.

The fight over the old Chicago Stock Exchange Building on North LaSalle Street here shows the sort of thing that has been happening. Designed by the noted architects Louis Sullivan and Dankmar Adler in 1893, it is one of the finest buildings in the city and one that preservationists hoped would be saved by a new city law aimed at saving landmarks.

But it looks as though the 13-story office building will soon come down anyway. It stands on prime commercial property in the heart of the Loop, and a group of real estate developers have plans to replace it with a 40-story office tower that, among other things, would yield the city an estimated $800,000 a year in taxes, more than five times the current tax take at the site.

The developers have committed themselves to buying the old building for $7 million. To preserve it under the new landmarks law, the city, which is already pressed for cash, would be obliged to buy the building for $7 million. Not surprisingly, a committee of the Chicago City Council recently voted against trying to save the building. The full council is expected to cast a similar vote today.

In Good Company

If the North LaSalle Street building does come down, it will be in good company.

Of some 12,000 buildings listed as worth preserving in the Federal Government's Historic American Buildings Survey, fully 50% have been torn down since 1933. If anything, the pace of destruction has accelerated in recent years. Those demolished range from New York City's monumental Penn Station, which has been replaced by an office building and sports arena, to a block of historic old homes in Lexington, Ky., some dating to the 1780s, which were razed to make way for an urban renewal project late last year.

The landmarks controversy, though not new, has recently grown as preservationists, armed with new but often ineffective laws, have begun to pit themselves against property owners, real estate planners and even governments. Landmark battles often involve lengthy delays for would-be developers as they go through protracted negotiations, public hearings and sometimes into court. At times, there have even been bulldozer-blocking demonstrations.

The battles are erupting just about everywhere:

—In New York City, the Landmarks Preservation Commission is seeking to keep the Penn Central Co. and a group of builders from straddling Grand Central Terminal, a monumental beaux arts-style structure, with a modern 55-story skyscraper.

—In San Francisco, preservationists are seeking to find a new use for the abandoned old U.S. mint, a classical building, which the Government might allow to be torn down.

—In Cincinnati, landmark lovers are trying to persuade Procter & Gamble Co. not to level a quaint old church—the oldest public building in the city—to make way for an addition to the company's headquarters.

A Larger Dilemma

To most preservationists, the landmarks problem is simply one facet of a larger dilemma: How to preserve what's good in the environment in the face of the need for the new.

Preservationists say they're trying to prevent the forces of change and economics from sweeping away what they regard as many of the historical showpieces of American civiliza-

ments. Landmark battles often involve lengthy delays for would-be developers as they go through protracted negotiations, public hearings and sometimes into court. At times, there have even been bulldozer-blocking demonstrations.

To most preservationists, the landmarks problem is simply one facet of a larger dilemma: How to preserve what's good in the environment in the face of the need for the new.

Preservationists say they're trying to prevent the forces of change and economics from sweeping away what they regard as many of the historical showpieces of American civilization. "We think these early buildings are part of our total heritage in the same way that manuscripts and archives are," says Sylvester K. Stevens, chairman of the White House-appointed National Advisory Council of Historic Preservation. "We're trying to save those buildings and parts of cities that are typical of our history and illustrate it by their character."

But saving old buildings, events are proving, is not an easy thing to do.

Many are in advanced stages of disrepair. Even when they're structurally sound, as the Old Chicago Stock Exchange is, what beauty they have is often obliterated by age. The Old Exchange is faced with richly ornamented cream-white terra cotta, but no passerby would ever notice it because it has been totally blackened by three-quarters of a century of Chicago grime.

For such reasons, many persons don't recognize the buildings preservationists want to preserve as anything special. "One of the biggest messages we get back (from builders planning to demolish a landmark) is that they didn't know the building was important," says James Biddle, president of the National Trust for Historic Preservation, the country's biggest preservation group.

The Economics Problem

The chief problem for preservationists, however, is economics. In big cities, where land is scarce, the problem is particularly acute. Most big city landmarks don't occupy all the space that zoning codes permit for a site. A new, bigger building that would use more space would normally also make much more money. In most cities, that's the key consideration.

Beyond that, old buildings generally are more expensive to maintain and operate and aren't as attractive to renters of office space, who usually want modern quarters.

Interestingly, landmarks such as the Old Stock Exchange here aren't doomed because of a lack of laws aimed at saving them. Some 144 American cities have landmark laws of one sort or another. About half have been passed in the last five years. Many, however, like the one here, are turning out to be ineffective in the face of hard economic requirements.

Generally, landmark laws give local agen-

Please Turn to Page 15, Column 5

Preserving the Past: Groups Fight to Stop Leveling of Landmarks

Continued From First Page

cies power to regulate additions or alterations to a landmark. However, they often cannot save a building from being torn down. If an owner insists on demolishing a building and the particular local agency can't find a willing buyer, it generally must either buy the building itself or let it come down. To do otherwise would be an unconstitutional taking of property without compensation. Buying or subsidizing is usually out of the question: Few cities or states have resources to spare on old buildings, and available Federal funds are negligible.

One way in which preservationists are attempting to supplement landmark laws is through proposing additional legislation that would give incentives to property owners and developers willing to forego tearing down old buildings.

One such plan is being tried in New York City. The New York plan, which recently became law there, permits a landmark owner to sell "air rights" over his property. These air rights are the difference—say 10 stories—between how big the landmark building actually is and how big the zoning law would allow a new building on the landmark site to be. The owner can sell these rights to a developer planning a new building on another site nearby.

Transfer of Air Rights

The developer may transfer the purchased air rights to his own site and is allowed to exceed the zoning limit for his site by the amount of air rights he's purchased—the 10 stories. Thus, if the zoning laws on the builder's site limited him to 50 stories, he may increase his building to 60 stories.

Preservationists are optimistic about the scheme. It can be handsomely profitable for both sides. In the one case where a transfer has actually been arranged, a New York landmark owner, James Amster, stands to realize a $500,000 windfall for selling the development rights over his landmark—a group of small one to four story red brick buildings, all 100 years old, set right in the middle of giant office and apartment towers a few blocks east of Rockefeller Center. "I finally am bagging a fortune," Mr. Amster, an interior designer, remarks.

He is selling the air rights to Laird Properties Inc., which is putting up a 40-story office tower next door. Laird will be able to build the equivalent of two stories higher than the zoning law would normally permit. That will mean at least $30,000 a year in additional profit for Laird, according to William E. November, Laird's vice president.

Other Advantages

The transfer scheme has other advantages. Once the air rights over a landmark are sold, no building larger than the landmark can ever be built on the landmark site. This strips away the economic incentive for redeveloping the site. By selling the rights, moreover, the landmark owner can raise extra money to maintain his building. Mr. Amster plans to set aside $100,000 from his half million for a permanent maintenance fund. "If I died and my estate was smart cookies they'd pull these buildings down," he says. But now, says Mr. Amster, "I'm delighted that nobody can ever change them."

Preservationists also are trying hard to find new and profitable uses for buildings saved from demolition. San Francisco's Ghiradelli Square, a waterfront block of red brick factory buildings surrounding a court, has been converted by a private investor into an arcade of shops, restaurants, theaters and an art gallery. The stores registered sales of $11.7 million last year.

Many historic landmarks have been less fortunate. The Philadelphia home of Dr. Benjamin Rush, a signer of the Declaration of Independence and one of the first physicians in the Colonies, was demolished by accident last year by developers who were simply unaware of the house's importance. Preservationists later retrieved some fragments of the house from a New Jersey dump.

CITIES

The golden days are gone in suburbia

The worsening problems of the cities have spread beyond their borders

The traditional vision of suburbia has almost entirely faded. That vision once promised attractive homes in bucolic settings, good schools, quaint downtowns, and a leisurely life style free from overtaxed and racially troubled central cities. Millions of white middle-class Americans reached for that dream following World War II, and thousands of businesses followed them. It now is only an illusion.

Instead, many suburban communities are in deep trouble. U. S. Census Bureau figures this year reveal that more people now live just outside central cities than in them or in rural areas. "The worsening conditions of the cities have only speeded the outward movement [of people]," maintains a Committee for Economic Development study released earlier this year, "and the result has been that many problems of the cities have spread beyond their borders."

Suburban physical plants—the housing stock, schools, sewers, streets—are still not so antiquated as those of the cities. Pollution is not so widespread, crime not so rampant, fiscal solvency not so tenuous. But as urban expatriates continue their quest for the golden fleece in suburbia, ominous signs are cropping up. Among them:

- Heavy reliance on the property tax to finance essential services has boosted rates to levels often higher than those in the central city. The suburban taxpayers' revolt is not fiction: Voters in burgeoning Orange County, Calif., have turned thumbs down on more school bond issues than they have passed over the last five years.
- A growing body of court cases, carried by alliances of civil rights groups, social theorists, and the federal government, is threatening suburban zoning practices, especially in housing. The result: Many suburban communities have grown even more defensive in their land-use policies.
- Suburban black belts, thin mini-ghettos that stretch across several adjacent communities, usually older ones closest to the central city, are expanding. In such suburbs, a cycle of urban renewal is beginning. At the same time, the increasing cost of social services for their poor has helped push suburban county budgets out of shape.
- A plethora of overlapping jurisdictions augments tax burdens and often impedes both rational land-use planning and the responsiveness of local government so highly valued by suburbanites. In the Chicago metropolitan area, there are 1,113 local governments, or 186 per county. Most suburban residents are served by at least four: a county, municipality, school district, and one or more taxing districts whose functions range from garbage collection to mosquito control.

"The suburbs no longer exist in a separate world even though they do exist in a relatively privileged part of the world," says S. J. Schulman, a planner who oversees a new joint venture arrangement between Westchester County and New York State Urban Development Corp. But he and other urbanists believe that most suburbanites hold change, any change, highly suspect, and that this attitude may prove the biggest stumbling block in coping with the maladies of large metropolitan centers.

Explains William Shore of New York's Regional Plan Assn., a tri-state (New York-Connecticut-New Jersey) independent planning agency: "Suburbs naturally are afraid of life becoming worse instead of better. This can mean the loss of green space, a sense of crowding, a fear of crime. Suburbanites may not be happy with what they have, but they are afraid that change will be negative."

Zoning power. Perhaps the biggest challenge for change in the suburbs and in their relationships with central cities focuses on zoning, one of the trinity of sovereign powers—the others are taxation and eminent domain—that states have willed their localities. Zoning is the power. It can dictate the caliber of municipal services (box, page 39), determine the character of the community, control residential growth, shun or solicit industry, exclude minority groups. It is the tool that suburban officials can wield to foster the homogeneity many "urbophiles" decry.

Suburban governments contend that their zoning practices are only monuments to fiscal reality. Industry, commercial shopping centers, and expensive homes zoned on large lots yield more tax revenues and eat up less in high-cost services, especially schools, which account for half of every tax dollar in some communities.

In the tri-state New York metropolitan region, for example, 48% of the vacant land zoned for residential use, excluding the city itself, requires single-family homes on one acre or more. In prestigious Westchester, only 14 of 44 cities, villages, and towns have built or planned for middle-income housing. New homes there generally start at $45,000. And, across the Hudson River, half of Bergen County's 70 municipalities ban any apartment construction. Few multifamily dwellings pay their own way. Many suburbs that do allow them insist only on luxury, one-bedroom apartments, a device planners call architectural birth control.

Such zoning tactics can produce fantastic results for a suburb. Ten years ago, for example, Highland Heights, Ohio, just east of Cleveland, was a growing upper-middle-class community of 3,000—with no industrial tax base. "We were getting caught in a financial bind," recalls Mayor William J. Brennan. "When we wanted a traffic light, we didn't have the money to pay for it. We had no police patrol cars at night. Rubbish collection was once a month." Now, thanks to two small industrial parks, Brennan can point to new air-conditioned police cars for his 11-man force and to weekly garbage collections. "Our problems are much less acute now," he says.

> 'Local zoning restrictions merely determine the character of the town'

Highland Heights has doubled in size since 1960 but its property tax base has zoomed 314% to $30-million. And with its new industry, the community still can cling to its single-family residential zoning pattern.

"It [zoning] is designed for the very purpose of trying to avoid the costs implied in residential growth and its effect on public school growth," explains Sidney L. Willis, director of the State & Regional Planning Div. for New Jersey's Community Affairs Dept. Willis believes that municipal zoning is primarily a defensive tactic, but most local officials would agree with the assessment by Nelson G. Gross, a former chieftain in Bergen County and now Republican candidate for the U. S. Senate: "Local zoning restrictions keep no one out. They merely determine the character of the town."

Challenge. Despite such disclaimers, several groups are challenging zoning practices—variously labeled exclusionary, restrictive, large-lot, or fiscal—on the basis that suburbs have abrogated their power to zone by not pro-

PAGINATION INCORRECT

Race and taxes were controversial issues at Teaneck (N. J.) town meeting.

Downtown Teaneck, once uncluttered, now is jammed with traffic.

'Suburbs want to control their own destinies'

moting the general welfare. At the same time, urban planners argue that such zoning creates suburban land-use patterns that are unrealistic, even destructive, in the face of a skyrocketing metropolitan population.

Local insistence on large-lot zoning also produces a cruel mismatch between expanding industrial jobs in the suburbs on the one hand and housing for workers to fill them on the other. Says Ernest Erber, research director for the National Committee Against Discrimination in Housing, whose attorneys have challenged zoning practices in courts from Montclair, N. J., to Union City, Calif.: "Companies have leverage while scouting prospective suburban locations, but few use it. It's essential, for both employee and employer, that companies think of employment and housing as linked."

Take one community in northwestern Bergen County. Mahwah has a population of 10,700 living within its 26 sq. mi.; 10% of its land still remains vacant. But the community also contains two elements that work at cross purposes: Ford Motor Co.'s mammoth assembly plant and a mere smattering of apartments. Only 20% of the auto maker's 5,000 employees, 40% of them black, can afford to live in Bergen, much less Mahwah itself. For Ford, these facts contribute to a 5% rate of absenteeism and an annual turnover of about 20%. "To find suburban municipalities with a 5% to 10% minority population is to come upon islands of democratic living," a recently released NCDH report comments sardonically.

State action. Only a few state legislatures have tampered with politically explosive local zoning ordinances. Massachusetts, for one, has a new law that allows builders to appeal large-lot zoning impediments to a state panel for review. New York has taken the boldest step, however, with the creation two years ago of its Urban Development Corp.

With the power, as yet unexercised, to overturn local zoning restrictions, UDC signed agreements earlier this year with Westchester and Suffolk counties for housing and development programs. Top priority will be given to low- and middle-income housing, but UDC is treading carefully. In Westchester, for instance, it will concentrate its first projects in older suburbs—New Rochelle, Mt. Vernon, Yonkers, White Plains—which already bear the scars of urban blight.

Such poverty pockets stick out like sore thumbs in Westchester, Bergen in New Jersey, Cook County around Chicago, and other suburban locales where affluence is the norm. Says John W. McMahan, president of Development Research Associates, a Los Angeles-based economic consultant active in suburban work: "Too often, suburbs have considered themselves immune to decay. And ironically the problems of blight are all the more pronounced because suburbs have not recognized them. From now on, suburbs are going to have to spend more and more on repairing their physical plants."

Roadblocks. That job will be complicated by two decades of mindless land-use planning. From Los Angeles to New York, transportation arteries in many suburban counties are barely distinguishable from those of their central cities: a garish tangle of automobiles, billboards, strip developments, and other signs of creeping urbanization and population explosion.

In Dekalb County, Ga., just north of Atlanta, main roads bulge with fast-food franchises, service stations, and apartment complexes, despite efforts of subdivision associations to guard against encroachment by commercial developments. But nowhere is the problem more dramatically illustrated than in Orange County, Calif., a living example of the horror of nonplanning.

"It is 10 years too late in coming," bemoans County Supervisor David L. Baker of Orange's first master plan, adopted earlier this year. "There was a reaction to growth here rather than a plan for it." With no center of its own, Los Angeles sprawled south into Orange County during the 1950s and reached breakneck speed in the 1960s when population doubled to 1.4-million, making it the largest all-suburban county in the nation. During one period in the late 1950s, schools were built at a rate of one every 17 days. But with an almost total absence of coordination among residential, industrial, and commercial elements, Orange's 25 municipalities hardly considered interior roads or open space. Instead, they scrambled to annex every piece of land in sight. What has emerged is a traffic-choked, crazy-quilt pattern of municipal boundaries that gives fits to residents, companies, and local officials.

Orange County's explosive growth has influenced the delivery of services as well. Laments Baker: "We're faced with a need to provide higher education, mass transit, airports. There is a solid waste problem. The sewage lines are underdeveloped and overloaded." The morass of taxing units is awesome: 133 self-governing districts covering such things as cemeteries, flood control, and water. Many of them clash directly with municipal services.

What is needed. This fragmentation of governmental services in Orange and many other suburban counties cries out

The growth of the suburbs nationally . . .

. . . is reflected in major metropolitan areas

Data: Census Bureau and BW estimates

for a more rational approach. In Bergen County, for example, each of 70 localities maintains its own police force, hears cases in its own municipal court, usually operates its own school district, appoints its own planning board, building inspectors, health officers, and assessors, and elects its own governing body. Since the property tax pays for almost all of them and more, the strain on local budgets is tremendous.

That strain may make regional approaches to metropolitan problems more palatable to many suburbanites. Says Robert C. Wheeler, community development group manager for Evanston, Ill., a large suburb just north of Chicago: "I don't think Evanston by itself can solve its problems. Each problem needs more resources than the city can produce to solve it. Most of our hope is for cooperation between governments." But because of a substantial number of poor, Evanston differs from most suburbs. Until they are convinced that intergovernmental cooperation will more than compensate for their loss of autonomy, most suburban communities will continue to resist superagency solutions.

Explains one Orange County official: "We are a county of stable Jeffersonian Democrats and Republicans who feel regional agencies, not close to the problem, would be passing judgment on matters of life and death to the community. A supergovernment is contrary to thought in America."

Successful experiences in metro government do exist, of course, in Jacksonville, Nashville, and Indianapolis, where city and county were consolidated. Each city now can achieve certain economies of scale—in purchasing, for instance—and can avoid unnecessary duplication of services in such areas as public safety. However, unusual conditions spurred these consolidations—official corruption in Jacksonville, a new, exciting, and Republican mayor in Indianapolis. Even in metropolitan areas where a large urban center dominates, as opposed to a totally suburban county, both suburbanites and inner-city blacks resist regional agencies.

"Suburbs want to control their own destinies," emphasizes Allen Fonoroff, a planner and chairman of a program in urban and environmental studies at Case Western Reserve University in Cleveland, the focal point of Cuyahoga County. "They don't want to share the problems of the central city. What reason does Shaker Heights have to give up its autonomy? It can provide the services its residents need."

Inner-city blacks, for their part, fear dilution of their growing power, especially in older Midwestern and Northeastern urban centers. In 1959, for example, an ambitious "Metro Plan" for

Utopia in suburbia

Cuyahoga Heights, a 52-year-old suburb that borders Cleveland, has a population of just 960 and, at $2.59 per $100 of assessed valuation, maintains the lowest property tax in its county. Yet the middle-class community maintains full-time 15-man police and 26-man fire departments, spends $1,000 for each pupil in its school system, picks up garbage regularly twice a week, elects a mayor who makes $14,200 and seven councilmen who make $2,700, and has two parks, a municipal pool, and a playground supervisor.

"If it were not for industry, we would have a part-time mayor, a volunteer fire department, and two policemen, just like a lot of other suburbs our size and bigger," says Mayor Stanley W. Klima. Indeed, Cuyahoga Heights developed for industry when its founding fathers seceded from another village reluctant to accept big business. It now houses within its borders plants of Republic Steel Corp., Harris-Intertype Corp., Ford Motor Co., American Steel & Wire Co., and others, which provide 90% of its tax base. Its residents willingly suffer the dislocations big industry brings—for example, traffic jams caused by the 30,000 people who work in town—because their services rank among the best in the country. It is a living example of one way suburbs can lick their fiscal problems.

Envy. Naturally enough, other suburban communities in the Cleveland area often complain bitterly about Cuyahoga Heights's low tax structure and its zealously guarded services. Klima rejects any suggestion that his town share its wealth in some system of cooperative regional government: "Our low taxes are part of our compensation for having the industry, three landfills, and the sewage plant." The sewage plant serves Cleveland, and for providing a site, Cuyahoga Heights treats and disposes of its liquid wastes free.

In an age when the gulf between local government and the people is growing, Cuyahoga Heights provides highly personalized service. Special garbage pickups are frequent. Streets are sprinkled regularly during hot summers and plowed quickly during snowy winters. The community even runs an employment service. And it probably has the only town hall in the nation with bowling alleys in the basement.

Dreams can turn real

Kids today, leaders tomorrow. They'll have an easier time dealing with the problems of racial and cultural misunderstanding because they'll know a lot more about other peoples, thanks to books, movies, TV and increased chances for personal contacts.

The Sumitomo "Fairy Tales of the World" pavilion at Expo '70 is dedicated to this understanding between children, just as Sumitomo Shoji activities in every corner of the globe do the same for their parents.

International business organizers with contacts and friends literally everywhere, handling every aspect of foreign trade and technical exchange, Sumitomo Shoji makes short work of political and cultural barriers to find the best product, technique, investment opportunity, joint venture or market possibility in any country—then smooths the way from start to finish.

Sumitomo Shoji: international trade experts, member of the great Sumitomo Group, one of Japan's oldest and largest industrial groups.

One answer is tax reform and better distribution of present tax revenues

Cuyahoga County was narrowly defeated. The suburbs gave it 48% support, but blacks in Cleveland's ghettos rejected it 2-to-1.

Recommendations. Many metro government advocates believe that voluntary Councils of Governments (COGs) may be one way to convince city and suburb that a regional approach to many problems can pay off for both of them. But with no statutory authority and despite a push from Washington, COGs can only encourage, advise, and cajole their member localities to cooperate in the delivery of services. Most have stuck to such services as health, sewage, water, and public safety, and have steered clear of the more substantive questions—zoning and public education, for instance.

The Committee for Economic Development offered one recommendation in its report released earlier this year. It advocates a two-tiered system of government modeled after Toronto's successful experience, now 17 years old. A senior, areawide level would be given responsibility for the solution of truly regional problems, such as transportation and planning. Community districts would be assigned more routine tasks. The touchy zoning function would be shared. Says the CED: "In general, the metropolitan-wide level should specify broad areas of industrial, commercial, and residential activity which the local communities could zone into subareas."

Harried officials in most suburban communities, however, have been so concerned with attracting big tax revenue producers to service their burgeoning populations that they have had little time or inclination to dwell on broad land-use policies. Their efforts to introduce social heterogeneity have had to take a back seat to the need for schools, paved streets, police and fire departments.

One answer to such money woes, short of metropolitan government, is tax reform and better distribution of present tax revenues. In its "Agenda for the '70s," for instance, the Advisory Commission on Intergovernmental Relations recommends that states ease the burden on local property taxes by allowing municipalities greater flexibility for income and sales levies.

"Tax reform also is the simplest way to improve the planning mechanism," claims Shore of New York's Regional Plan Assn. "With relief from the property tax, people could concern themselves much more with the kind of community they want, not with balancing the tax roles with big ratables." ■

POLICY

SRC STAFF MANUAL 16
1962

HOURS OF WORK

The Council office is regularly open from 9:00 a. m. to 5:00 p. m. Monday through Friday.

SALARY PAYMENTS

The staff is paid by check on the fifteenth and the last day of the month. Whenever the fifteenth or the last day of the month falls on a Saturday, Sunday, or holiday, pay checks are written on the day preceding.

OVERTIME

The Council does not pay for overtime for professional personnel.

For other personnel, additional compensation at the individual's regular rate will be made at the next pay period. If the individual chooses, and if work schedules permit, compensatory time may be taken rather than additional pay. In either instance, a written record of the time worked and the preference of pay or compensatory time should be given to the Secretary-Treasurer immediately following overtime work. For all overtime work, permission must be obtained in advance from the employee's supervisor.

EXPENSES

Travel

Staff will be reimbursed for travel and actual expenses in connection with field work for the Council. Per diem in lieu of hotels, meals, tips, taxicabs, and related costs may be authorized.

Members of the Council will also be reimbursed for travel and actual expenses when attending official meetings or carrying out other duties as requested by the Executive Director of the Executive Committee.

Attached to this Manual is an SRC expense guide.

Incidental

If any member of the staff has to incur other expenses in connection with his or her official duties, the cost will be paid by the Council.

Moving

Where arranged beforehand, the Council may be responsible for moving expenses for furniture and household effects, but not personal transportation costs, for permanent employees one-way from point of origin to Atlanta. No moving expenses are paid by the Council on termination of employment.

For temporary employees, by prior arrangement, the Council may be responsible for transportation expenses to and from point of origin at the beginning and end of employment, but not moving expenses for furniture and household effects.

HOLIDAYS

The office of the Council is closed on the following holidays: (See Lloyd memo of 5/30/63 + memo of June 5, 1963)

New Years Day
~~Good Friday~~ Memorial Day (May 30) ~~Easter~~
Independence Day
Labor Day
Thanksgiving Day and the Friday following
Christmas Day and, whenever practical, Christmas Eve.

Whenever a holiday falls on Sunday, the following Monday may be taken. Holidays falling on Saturday may be observed upon the Friday before the holiday. Other special religious holidays may be observed by persons upon authorization.

VACATION AND SICK LEAVE

General: Each employee of the Council who is serving in a permanent status earns both vacation and sick leave at the rate of one and one-half work days for each full month of service. Vacation and sick leaves are not granted to temporary employees. A temporary employee who subsequently is employed on a permanent basis will be credited with any accumulated vacation or sick leave he may have accrued from the date of first employment.

Records are kept by the Secretary-Treasurer of all absences from the office on work days. A specific form is provided for this purpose. The individual employee, not the Secretary-Treasurer, is responsible for presenting written records of all absences on the first day of work following any absence. No charge will be made against vacation for absences on holidays, Saturdays, Sundays, or other non-work days.

An employee who is absent from the office on official business, or who is taking prearranged compensatory time, is not considered on leave.

Vacation: Employees of the Southern Regional Council may take vacation at any time that will least interfere with the efficient operation of the office. Requests for leave of any duration should be made in writing in advance to the employee's immediate supervisor and if approved, should be forwarded to the Secretary-Treasurer. Requests for leave of more than two days should, if at all possible, be made in writing at least 10 days ahead. This will allow time for securing approval.

If not taken, vacation may accumulate up to 24 work days, and if an employee resigns or is asked to resign, he or she will be paid for his accrued leave up to the maximum of 24 days, at his or her current rate of pay.

An employee who has accrued 24 days leave may take vacation during any year for a number of days which does not exceed the days earned during his or her current year of employment, or the days over 24 he or she has accrued, whichever is lesser, without having these days deducted from his or her 24 day accrual.

No vacation time or salary to be earned following vacation is advanced under any circumstances.

When employment is terminated, if accurate and full records are not on file, no accrued leave will be paid.

SICK LEAVE with pay is allowed whenever an employee is incapacitated due to sickness, injury, or when some member of his immediate family has a contagious disease, is seriously ill, or dies.

Notification of absence on account of sickness shall be given as soon as possible on the "Record of Leave" form provided.

Sick leave may accumulate up to a total of 49 days. Untaken sick leave beyond this total is forfeited.

If an employee has a serious illness which keeps him away from the office for a period of time beyond the sick leave accrued to his credit, the Executive Director may approve either of the following plans:

(1) Leave without pay, after all accumulated sick leave and vacation are exhausted.

(2) Sick leave advanced, up to 20 work days, with the understanding that the employee will remain with the Council until sick leave has been earned, or that adjustment will be made in final salary.

When sickness occurs within a vacation period, the period of illness may, upon written authorization, be charged to sick leave, and the charge against the vacation reduced accordingly. Applications for substitution of sick leave for vacation shall be made immediately after the expiration of the vacation period.

When an employee resigns, all accrued sick leave is forfeited at the time of resignation.

Maternity Leave: In cases of maternity leave, the Executive Director may grant leave of absence without pay for a period not to exceed eight months after all accrued sick leave and vacation have been taken.

Leave Without Pay: Leave without pay, for reasons other than sick leave, may be granted with approval of the Executive Director.

An employee returning from leave of absence without pay will be credited with any accumulated sick leave he had accrued when granted leave of absence.

Termination of Employment: If an employee resigns his position with the Southern Regional Council, a minimum notice of two weeks will be expected; if it is necessary to reduce staff, the employee laid off will be given at least two weeks notice. In instances of dismissal, where it seems advisable for the employee to leave immediately, he will be paid for the notification period.

As stated above, an employee whose services are terminated voluntarily or involuntarily will be paid for all of his accrued vacation at the time of his leaving. Any accrued sick leave is forfeited.

OTHER MATTERS

Where questions arise on any items not covered in this manual, the employee is invited to discuss them with the Executive Director. No information pertaining to official policy should be accepted from persons other than the Executive Director or his authorized representative.

SOUTHERN REGIONAL COUNCIL EXPENSE GUIDE

The following requirements and suggestions are given as a guide for SRC staff and others who incur expenses to be paid by the Council. The guide is not established to create severe restrictions or to curtail efficiency. Rather it is a reminder of our responsibility to use the funds available as effectively as possible.

TRAVEL:

Automobile: Reimbursed at the rate of .08 per mile. This amount includes all travel costs related to the use of the automobile except items as parking and tolls. Private automobiles should not be used unless common carriers would be more costly or not available or would not permit fulfillment of duties.

Air: Tourist accommodations whenever possible. Except in unavoidable circumstances, first class fares will not be paid between points where frequent tourist service is available.

Train: Coach accommodations on short and day trips. Minimum adequate Pullman accommodations for overnight travel.

Bus: For short trips, bus schedules should be checked. Frequently these schedules are as convenient, and no more time consuming, than available air schedules.

Airport Limousine: Should be used at all times rather than taxicabs, except in unavoidable circumstances.

Auto Rentals: Should be used as little as possible. Except for those persons with SRC auto rental credit cards, this service should never be used without prior permission.

Hotels: Reservation requests should always stipulate, "minimum available rate." Generally, room service charges, laundry, and like expenses will not be honored.

Taxicabs: Please use this service as sparingly as possible. However, note that heavy use of taxicabs where necessary is often cheaper than car rental.

Meals: No set formula. Generally, $1.50 for breakfast, $2.00 for lunch, and $3.50 for dinner are considered maximum-adequate amounts. It is recognized that costs in, e.g., New York may be somewhat higher and those in a small southern town or city may be somewhat lower.

OTHER:

Travel costs or any portion thereof for spouses are not honored.

Hotel bills, tickets, and other available supporting data should always be submitted with expense accounts.

Entertainment of others is not encouraged.

Requests for reimbursement of expenses should be made on the regular SRC expense form. If this is not convenient, the request should indicate the purpose, destination, and date(s) expenses were incurred and similar information.

Travel advances are available on request to the Secretary-Treasurer.

If not taken, vacation may accumulate up to 24 work days. Accrued vacation in excess of 24 days will be forfeited.

If an employee who has accrued maximum leave (24 days) takes a vacation, the amount of time taken will be subtracted from the total and additional vacation time will be earned at the regular rate of 1½ work days per month. (For instance, if an employee with 24 days accrued leave takes a 10 day--two week--vacation he will then have 14 days accrued leave remaining and will need to work thereafter for 7 months before his maximum accrued leave has again been reached.)

No vacation time and salary therefor--to be earned following vacation--is advanced under any circumstances.

If an employee resigns or is asked to resign from his position he is entitled to receive pay for all of his accrued vacation which has not been taken (up to 24 days) up to and including the date of his leaving.

When employment is terminated, if accurate and full records are not on file with the Secretary-Treasurer, no accrued leave will be paid.

Sick leave with pay is allowed whenever an employee is incapacitated due to sickness, injury, or when some member of his immediate family has a contagious disease, is seriously ill, or dies.

Notification of absence on account of sickness shall be given to the Secretary-Treasurer as soon as possible on the "Record of Leave" form provided.

Sick leave may accumulate up to a total of 48 work days. Untaken sick leave beyond this total is forfeited.

If an employee has a serious illness which keeps him away from the office for a period of time beyond the sick leave accrued to his credit, the Executive Director may approve either of the following plans:

1) Leave without pay, after all accumulated sick leave and vacation are exhausted.

2) Sick leave advanced, up to 20 work days, with the understanding that the employee will remain with the Council until sick leave has been earned, or that adjustment will be made in final salary.

When sickness occurs within a vacation period, the period of illness may, upon written authorization, be charged to sick leave, and the charge against the vacation reduced accordingly. Applications for substitution of sick leave for vacation shall be made immediately after the expiration of the vacation period.

NATIONAL COUNCIL OF ARCHITECTURAL REGISTRATION BOARDS

Annual Report as to Continued Experience and Professional Practice
Since November 15, 1967

NCARB File No. 2860 NCARB Certificate No. 1055

Name in full Moreland Griffith Smith, FAIA

1. I have acquired registration as an architect in additional states. Yes ☐ No ☒. If yes, list the additional states and certificate numbers

2. I have voluntarily allowed a previously acquired registration to lapse. Yes ☐ No ☒. If yes, list the states Not this year

3. I have been an employee for the period covered. Yes ☒ No ☐. If yes, supply the following information:

4.

Names and Addresses of Employers	Dates of Employment From	To	Description of Major Responsibilities
Southern Regional Council	1965-8		Director, Urban Planning
5 Forsyth Street NW Atlanta Georgia 30303			Research

If more than two separate employments have been involved since 15 November 1967, continue and complete the listing on an attached page.

5. I have practiced architecture as a principal. Yes ☒ No ☐. If you are other than an individual practitioner or a general partner, officer or director in an architectural firm your answer to this item should be "No". If your answer is "Yes", also answer Items 6, 7, 8 and 9.

6. I, or the firm of which I am a principal, was the architect for the following projects, construction of which was completed since 15 November 1967. (List only those projects for which you or your firm were the sole architects. Do not list projects in a state in which you were not personally registered.)

7.

Project and Location—City and State	Name and Address of Client	Approximate Cost
Dormitories, Tuskegee Institute, Ala	Tuskegee Institute	1,000,000

8. My practice as a principal has been on a full-time basis, and with the same firm as of 15 November 1967. Yes ☒ No ☐.

If no, explain

9. My status with the firm is the same as on 15 November 1967. Yes ☒ No ☐ If no, explain

The undersigned deposes and says that he is the architect named above and is the person making the foregoing statements and that they are made in good faith and are true in every respect.

Mr. David E. Epperson
Executive Director
Community Action Pittsburgh, Inc.
921 Penn Avenue
Pittsburgh, Pennsylvania 15222

Dear David:

Thank you very much for your letter of February 12, 1969. The check covering travel expenses is enclosed herewith.

We will be looking forward to receiving your response to the conference. In the meantime, would you indicate on the attached, your social security number and return it for the accountants records.

Thanking you very much, I am

Sincerely yours,

Moreland Griffith Smith
FAIA
Director, Urban Planning Project

Mr. Moreland Griffith Smith
Director, Urban Planning
Southern Regional Council, Inc.
5 Forsyth Street, N. W.
Atlanta, Georgia 30303

Dear Moreland:

I was very pleased to meet with you and Southern Regional Council Staff on January 31, 1969. It was also very enlightening to know just what is happening in the South as it relates to urban planning and to find the vigorious manner in which you are working in trying to fight the problems through various resources,

I will be sending you more information concerning my response to the conference shortly.

Enclosed you will find my expense statement for the conference.

Sincerely,

Dave

David E. Epperson

Mr. Moreland Smith
Southern Regional Council, Inc.
5 Forsyth Street, N. W.
Atlanta, Georgia 30303

Dear Moreland:

Following up our recent conversation regarding the possibility of a travel grant for a member of your staff, I wish to advise that this was discussed very carefully at the meeting of the Donations Committee of the Trust Company of Georgia Foundation. While we are very sympathetic with what you wish to do, we must decline as being outside of our area of interest. I wish that such scholarship funds were available and hope that you are able to find the necessary money to further Mr. Campbell's training.

Kindest regards.

Sincerely,

AB

Trust Company of Georgia
Atlanta, Georgia 30303

Dear A. B.:

Thank you very much for your letter of October 9th. We of course are disappointed that your committee could not see their way clear to fund Mr. Campbell's travel grant. We do, however, appreciate you giving this your detailed consideration.

Hoping to see you again soon, I am

Sincerely yours,

Moreland Griffith Smith, F.A.I.A.
Director, Housing and Planning Project

Panel Discussion - SRC Annual Meeting - November 6, 1969

DR. LUCIUS PITTS

I want to be my son. They say a child shall be father to man. I want to play Lucius. He's 20 years old with one of those things, and a beard. We rap every night.

I want to pick on the professor.

Lucius would say, "You said public accommodations, now, yeah, but right after Slavery public accommodations could be equally measured with the freedom of the black man to move from one place to the other without pass. You say health services. Now, Negro doctors can go to the hospitals where they want to go to, but, eh, you ain't got no Negro doctors, you won't let 'em in, the tests are too high. You talk about Negro cashiers. Now, eh, in certain places down in Louisiana there're Negro cashiers. Right after that, not only cashiers in good places, but cashiers in fun places, too, you know. So, you ain't sayin' nothin' to me. You talk about the school system, and what about Negro schools, and Negroes can go to white schools, but the Freedom -- what was that group called, the Freedmen's Association, the Rosenwald Fund, right after Slavery? They did that. That's nothin' new. And, you talk about integration or desegregation of schools, but the desegregation moves all one way. You're saying to me, as a young black man, that the only way you can make desegregation... that the only viable desegregation is to move black people into white schools. But, what about moving white people into Negro

schools? And, then, what happens to those Negro schools that are left when you take 14 or 15 kids out of the one school, and what you/re doing in the South is taking my best teachers out of Fairfield High School, where I just finished. And, you send all the best English teachers, and the best counselors, and the best Math teachers over to the white school. Now what we gonna do with these puny,little, scared white boys who come up here to teach, and they're scared of us black boys? So they ain't doing no good. You're talking about a Negro mayor, Negroes in political positions... well, my daddy said something about the legislators in South Carolina started public education, you know. You ain't saying nothin' man, really."

Now, let me talk a little bit like me.

I had a reaction to Mr. Chambers. I think he said almost what I wanted to say, but Lucius would have said: "Man, you don't talk like no, no, young black lawyer. You know, you too cool and sophisticated -- tell it like it is. You say we never completed the first Reconstruction. Agreed. We ain't had the first RE construction. That the white folks, all they did was right after Slavery was to give the black boy chance to fool himself and to cool him down so he wouldn't kill all the white folks on the plantations. That wasn't no Reconstruction! And, you say this administration didn't

bring in the second Reconstruction. Right! It ain't brought in nothin!"

Seriously, and I'm serious. I live with a thousand young black people. I say maybe no and yes. And I made a little chart here, but I won't go into the details of it. But, we may not be facing a second Reconstruction if the Southern Regional Council would do one thing that Mr. Youngdahl says, and that is, I believe you made a statement about massive and major re-evaluation. That, as far as I'm concerned is the only hope... that we don't face something worse than the Reconstruction. And, if Southern Regional Council -- and my son would have to play the second character -- he would say, "If Southern Regional Council is serious about this, then you're going to get some young people in here, and some purple people, the people, people -- at the very grassroots, who may not speak as articulate as somebody else. I'm not an educator, you know what I am. But, I think, unless this happens....

Now, let me finally say that I believe that the young black people in America think that they face something worse than a second Reconstruction. They verbalize as best they know how. But, I think I think, when I hear the young and what they verbalize, that they're saying what frightens me. What they're saying, you know, is "Let's cop out of this, there is no hope." And, my 20-year-old son, who is a college sophomore

argues with me night after night in a pleasant fashion has taught me more in the past eight months than I could have learned in twenty years in a university. The reason we haven't had a major disaster on Miles College Campus is that I argue with Lucius each night. In the midst of the arguments sometimes he lets slip what's about to happen. And, when he lets it slip, I keep on arguing with him but I put that one down, and when he goes back to his room I pick up the telephone and call the Dean of Students and say, "I want to meet these five people with you, tomorrow." This is sneaky. But, they are disenchanted with the system. And, they're disenchanted with due process, except when it concerns them. They want due process when they're involved. But, they don't believe in due process, Hollowell, otherwise. It's for the kids. And, Lucius says to me, "Daddy, what have you got to show for your 40 years of being an 'Uncle Tom?' Have you got any money? You have any prestige? Bull Connor is gone, but the power structure downtown in Birmingham, they don't recognize you." He said, "Don't you know you're co-chairman of a committee with the President of South Central .... ain't you got sense enough to know what the white folks doin' to you? They bought you off! And, they know if you get involved in dialogue that you're gonna stop rapping. And when you stop rapping, the back people in Birmingham they decide there's no hope."

Now, my final statement is I frankly think that we're facing something worse than the first Reconstruction or the second because there're no more "red necks," they talk like scholars — you know. They don't talk like, "Y'all oughta get this ready." No, you don't know whether he's from the South or North. He's sophisticated. And the genocide which young people, black young people, feel -- they're talking about physical genocide -- I'm not afraid of physical genocide. I'm afraid of the other kind of genocide -- the intellectual genocide. The genocide that takes not the blood and bone, but takes the mind and spirit of the black man.

If I were to tell Miles College students how painful I feel, and how frustrated. And, I make one instance. The Federal Government, corporations, and foundations say they're interested in equal opportunity for <u>people</u> and we cut back for poor people! Sometimes it 's good to see somebody poorer then you are. You know, I worked in North Carolina and went up in the mountains, up about Junaluska, and found these mountaineers who had never been out. And, frankly, I felt good. Now, that's evil, but I felt good ~~&&&~~ that here's somebody worse off than me. But, the Federal Government is joking about -- particularly when you're talking about the black man -- the Federal Government <u>really</u> does not intend....

I frankly think that what the power structure and this present administration have done, is to move into a sophisticated position. They articulate well. They plan programs. The massive amount of papers that you get to get one clean program in and funded for poor people, or for black people, takes months. And, when you get through and finally finish all the reports, you haven't got anything, and the poor people who are hungry, are still hungry. One instance. The Federal Government claims it's interested in equal opportunity and because I work in an educational situation in 1967, I believe it was, 100 institutions in America got 85% of all the federal money -- 100 -- and one black institution in that group. What was it? HOWARD! Now, this is a joke to me!

With "Tricky Dick" up there -- and I'm talking like Lucius now. With "Tricky Dick" up there, I'm glad I'm 54 years old. I could not contain my saneness. And, if I were black as I am, and knew what I know from 54 years, and had to be 18 years old now, I'd tear this place up!

HOUSING FOR THE 70's: THE IMPACT OF EXCLUSIONARY LAND-USE AND BUILDING CONTROLS

(A conference to examine the restrictive use of zoning ordinances, building codes, financing, taxation, and other policies and practices which impede development of an adequate housing supply.)

Co-sponsored by National Committee Against Discrimination in Housing (NCDH) and New Jersey Builders Association (NJBA)

Thursday, November 6, 1969
Somerville Inn, Route 22, Somerville, New Jersey

WORKSHOP #2

Impediments of Restrictive Laws and Codes to Development of Housing and Needed Technology

Some Suggested Questions for Discussion.

1. New Jersey's population increased by over one million between 1960 and 1968 (6,066,782 to 7,203,510) at an annual average increase of 142,000. It is estimated that over two million more will have been added by the end of the 1970's. In view of New Jersey's relatively limited land area (it is already the nation's most densely populated state), should the responsibility for providing living space for our increasing population be primarily at the state level or at the municipal level?

2. The State Department of Community Affairs has made a study which finds that we need to add 81,000 housing units annually to meet the needs of the State's growing number of households. We are

currently producing about 36,000 housing units per year, leaving a gap of about 45,000 units, resulting in an increasingly severe housing shortage. The stepped-up rate of family formations is just beginning, reflecting the increased birth rate of the late 1940's and early 1950's.

If problems of mortgage money and rates were solved, could the building industry more than double its production in New Jersey under present zoning, subdivision and building controls? In what way do these impede the building industry's ability to supply the State's housing needs?

3. Can impediments in local controls be removed by a campaign of public education directed at the elected officials and taxpayers in suburban communities? Or is it necessary to assert the rights of homeseekers to shelter by legislative reform of the enabling laws which grant land use and building controls to municipal governments?

4. What has changed since the early 1950's to preclude resumption of construction at volumes achieved then?

5. Can residential building take place in New Jersey at the scale, through the management forms, and by the mass production techniques proposed by Operation Breakthrough? What would have to be changed in land and building control procedures to enable Operation Breakthrough to work in New Jersey?

6. What influences can the Federal government bring to bear on local government to persuade it to cooperate with housing goals and programs established by Congress? Should Federal grants and

other assistance be withheld from non-cooperative communities? Should the State government do likewise with school, local road and other financial aid?

7. Should state enabling laws be revised to place an upper limit on (a) lot sizes or (b) the percentage of a municipality's land area that can be zoned for lots of more than 10,000 sq. ft.

8. Should state law make it mandatory for each municipality to zone a stated percentage of its land area for multi-family or town-houses?

9. Should Cluster Design and Planned Unit Development be mandatory for municipalities under State law, if they are within the density limitations established by local zoning?

10. To what are exclusionary land use practices mainly attributable? Status consciousness ("snob zoning")? Race consciousness (the effort to exclude Negroes by excluding housing for families with less than an average income)?

11. Would passage of the proposed new land planning law (S-803) reduce current misuse of local powers to control land development to exclude housing for families of low and moderate income?

NEW JERSEY BUILDING PERMITS ISSUED (1960 - 68):

Year:	Total:	Single Family: No.	Single Family: % of Total:	Multi-family: Private:	Multi-family: %	Multi-family: Public:	Multi-family: %
1960	41166	30690	74.6	9413	22.9	1063	2.6
1961	46936	29555	62.9	14042	29.9	3366	7.2
1962	46655	29025	62.2	17136	36.7	494	1.1
1963	54488	28685	52.6	25118	46.1	685	1.3
1964	68078	27673	40.6	39187	57.6	1218	1.8
1965	64933	30675	47.2	32546	50.1	1712	2.6
1966	50163	23868	47.6	23971	47.8	2324	4.6
1967	46958	24380	51.9	20842	44.4	1736	3.7
1968 **	43661	23781	54.5	17331	39.7	2549	5.8
Totals:	420,524	221,054	52.6	185,929	44.2	13,541	3.2

* "Private" includes 2-family, 3-4 family, 5 or more family.

** Adjusted to include only 1/2 of 1960 and 1/2 of 1968 to permit comparison with population increase of 1,136,718 between the U. S. Census (April, 1960) and the State's population estimate on July 1, 1968.

Building Codes As an Impediment to Housing and Needed Technology

Discussion notes for Workshop #2 prepared by Philip J. Cocuzza, Executive Vice President, New Jersey Builders Association

It has become abundantly clear that the foremost problem we face concerning building codes is the multiplicity of them authorized by the various communities throughout the state of New Jersey. Of the 567 municipalities in New Jersey, 90 use the BOCA code, 80 use the state code, 77 use the National code and the balance of 320 communities either have their own local code or in some half dozen cases no building code at all.

The multitude of codes becomes further compounded when a Multi-Family Project is to have FHA insurance. Such a project must then comply with the housing code of the FHA, the New Jersey Department of Community Affairs' rules and regulations, and the local municipality. This results in the need to meet three separate fees and approvals which often conflict with each other.

In addition to this superabundance of codes, matters are further complicated by the fact that, in the main, these codes are not kept up-to-date with the latest developments in technology. Thus, the residential building industry finds itself unable to keep up with housing demands even though new technology would be of great benefit in fulfilling this need. The new technology which does exist would not only assist in speedy production but would have the added major benefits of helping to reduce costs, improve the materials used, resulting in better homes at a savings for the buying public.

Many of the local building codes have requirements injected into them as the result of personal prejudices or biased vested interests. An example: One local code in New Jersey states that "minimum size floor beams for residential construction shall be 2" x 10" at 16" off center." This one statement adds $150.00 of unneeded cost to a small ranch house which could have used 2" x 8" floor beams. Not incidentally, the requirement of 2" x 8" floor beams was established by qualified code specialists and not just arbitrarily instituted.

These, in a very cursory way, are some of the major problems the building industry faces as a result of archaic, outmoded and restrictive building codes. One obvious answer to the problem would be the adoption of a state wide building code. A single state code could be administered by a qualified staff and kept current with technology as it develops. We feel also that such an administrative setup would be further removed from the possibility of political pressures than the system now in use.

With adoption of a single building code, a more rapid development of technology would be possible. Currently, manufacturers are loath to develop new products since they are aware of the battle that awaits them in trying to obtain approval of their new products. It seems patently obvious that with a more viable system for approval of new products, a greater incentive would be offered the manufacturer.

With the adoption of these recommendations, residents of New Jersey would find housing of a higher quality, at a lower cost, and more readily available. Of course, the other problems such as restrictive zoning and inability to obtain mortgage financing at reasonable rates must also be solved.

HOUSING FOR THE 70's: THE IMPACT OF EXCLUSIONARY LAND-USE AND BUILDING CONTROLS

WORKSHOP #3

Employment Location and Housing Choice

Some Suggested Questions for Discussion.

I. From the Employers' Point of View:

1. In considering applicants for employment, do employers favor local residents? Do employers establish, formally or informally, a maximum travel distance beyond which you do not consider applicants? Does this vary with skill level or executive position? Does distance of employee's residence from plant affect absenteeism and tardiness? Does it affect turnover?

2. Are some positions difficult to fill in offices or plants located away from core cities? What steps are usually taken to overcome such labor shortages? Busing from core city? Offering higher wages? Employing local housewives parttime?

3. In considering a suburban plant location likely to create housing problems for their work force, are employers prepared to

use your leverage with the local governing body, which solicits them for prospective ratables, to influence it to rezone (or do whatever else it can) to enable housing to be built to suit employees' needs?

4. Before locating in a new area, are employers in a position to provide builders and realtors with comprehensive information on employees' housing needs? Has this been done, to you knowledge, by plants prior to moving?

5. Are corporations moving to new locations prepared to offer loans to builders who agree to construct housing of the type and volume needed? Are corporations prepared to buy land suitable for housing and lease it to builders on long term? Are corporations prepared to lease newly-built apartments in quantity to sub-let to their employees? Are corporations prepared to underwrite mortgage loans of employees who encounter problems in securing financing?

6. Are employers prepared to join with builders and other groups in court action to challenge exclusionary practices by local government? Would they offer expert testimony on the effect of exclusionary practices upon labor markets and the development of the economy?

7. Are employers prepared to advise and counsel those of their employees who are discriminated against in securing housing on grounds of race? Are employers prepared to support such employees in making and pursuing complaints before State Boards and in the courts? Do employers prefer to avoid hiring those of ethnic minorities to avoid involvement in housing law enforcement

cases in communities that have never welcomed minority families previously?

II. From the Builders' Point of View:

1. If builders have advance information on employment location, is it feasible for them to build housing designed to meet salary and wage levels and number of units indicated?

2. Would builders value a close working relationship with large employers seeking office and plant sites in their territory?

3. Does "Operation Break-through" afford new opportunities for employer-builder collaboration in supplying housing for industrial growth areas?

4. Do builders who construct housing for moderate income families fear being blacklisted by municipalities whose approval they might need for future projects?

III. From the Real Estate Brokers' Point of View:

1. As part of the local community leadership in a suburban area, devoted to maintaining its patterns and practices, can broker be of service to an incoming plant which seeks help in expanding the supply of housing for blue collar workers, and minority employees generally?

2. As professionals in real estate do brokers advise local governing bodies and planning boards that it is not feasible, in the long run, to zone for industries if they consider industrial employees not to be welcome as local residents?

3. In view of the growing housing shortage and its depressing effect on real estate activity, what does the real estate

profession suggest to employers, builders and homeseekers as a plan of action to make a breakthrough to housing growth in suburban areas experiencing expanding employment opportunities?

IV. <u>From the Suburban Municipal Officials' Point View:</u>

1. What is the basis of opposition to moderate-cost housing in suburban communities? That tax-yield is not commensurate to costs of municipal services? That such housing is incompatible with the "character of the community?" That residents of such housing would be socially incompatible with present residents?

2. What is the minimum assessed value of a one-family house that "pays its own way" in an average suburban community?

3. What is basis of opposition to multi-family housing? To town-houses?

4. In municipalities whose zoning provides for multi-family housing, what is basis of objection to state-assisted middle income housing, Federal 221 (d)(3)s rent supplements, etc.?

5. Would you favor an amendment to the State's zoning enabling legislation which would place a limit of 100X100 on maximum lot size requirements in zoning ordinances? What would be the effect of such a limitation?

6. Would you favor an amendment to the State's zoning enabling legislation which would require that every municipality zone for a reasonable proporation of multi-family units based on need as demonstrated by local employment opportunities?

7. In view of the growing inability of municipalities to cope with rising budgets by manipulating land-use controls (i.e.

zoning for industrial ratables and zoning against housing for wage workers), would you favor having the state assume local school costs (up to $600 per pupil) in return for giving the county and state a voice in local zoning, subdivision and building codes?

V. <u>From the Employees' Point of View:</u>

1. Which does the employee look for first, the house or the job?

2. Does the lack of housing opportunity in suburban areas inhibit opportunities for employment in those areas? Or is travel to job from a core city merely an inconvenience?

3. Would employees buy or rent in a location where the job they have (or will hold) is for the only employer with whom they can hope to find accessible employment from such place of residence.

4. Do employees have objections to being dependent in any manner upon their employer for housing (i.e. a loan or underwriting of mortgage)?

5. Would employees consider those whom they find compatible as associates and fellow-employees at their place of work to be also compatible as neighbors and fellow-citizens of their communit.

WORKSHOP #4

Taxation and Housing Finance

Outline of Remarks by Thomas V. Seessel, Executive Director of the New Jersey Housing Finance Agency.

Two recent national studies - the Kaiser Report and the Douglas Report - have come to the same conclusion: we need to produce about 2.6 million new and rehabilitated housing units each year for the next decade if we are going to meet the need.

Included in this figure would be 500,000 to 600,000 new and rehabilitated housing units annually for moderate and low income families.

The first year of the decade projected in those reports has almost slipped away, and the sad reality is that instead of 2.6 million housing starts a year, the adjusted yearly rate for housing starts has fallen to about 1.3 million. Some have predicted that the annual rate may yet fall below the 1 million mark.

One reason for the growing housing shortage is the cost of money and its availability on the conventional market. Interest rates on conventional new home loans have reached an average of 8.25 per cent.

Other underlying factors include escalating construction costs, rapid up-zoning of land which puts it out of the moderate and lower income housing market, and high property taxes.

New Jersey is our most urbanized state, and it reflects in microcosm the situation in the Nation. Studies conducted by the New Jersey Department of Community Affairs show that there is an annual gap of 36,000 housing units between the 45,000 we are currently producing and the 81,000 we need.

This is where the New Jersey Housing Finance Agency (NJHFA) can come in. We were created in 1967 to provide construction and permanent mortgage financing for multi-family moderate income housing in all parts of New Jersey. The agency makes mortgage loans to non-profit and limited dividend housing sponsors for long terms.

We can lend money now in the neighborhood of 6%. This interest saving is passed on to eligible families in the form of lower rents for middle and moderate income families.

In addition, the Agency has obtained a large amount of federal rent reduction assistance funds which enable us to reach families with annual incomes of as little as $2,000 annually.

But there are problems to be faced even with our program. Apart from the fact that the rise in interest rates and land and construction costs affect our program, there is the problem of the local property tax.

Although communities in which the Agency finances housing must pass a "resolution of need for moderate income housing" before we can come in, there is no requirement that they grant tax abatement. Yet, in all cases to date, we have had to ask the communities where we build to grant such abatement, as a counterweight to rising costs. A subsidy is thus provided by the locality the level of government least able financially to provide subsidies. Ways must be found to shift this burden to state and federal governments, and off the backs of local property tax payers.

- -

Some Suggested Questions for Discussion.

1. To what extent have builders and developers utilized the New Jersey Housing Finance Agency Program? What shortcomings do builders contend hampers their use of this program?

2. Which income groups have been priced out of the market for one-family homes by the mortgage interest rate increase from around 6% to around 8%?

3. Are the construction limits under the 235 and 236 programs of the Housing Act of 1968 feasible in New Jersey? What proportion of housing needs can be satisfied by 221 (d) (3)?

4. Is increased multi-family construction an answer to the housing needs of those families priced out of ownership of single family homes? Does this argue for zoning of additional land for multi-family use?

5. Would adequate funding of the rent supplement program encourage multi-family construction, especially in the suburbs?

6. Should FHA approval of multi-family projects require that they be designed to rent at levels that correspond to local housing needs generally, rather than for the upper income families only.

7. Can better planning of land utilization be encouraged through revised tax policies? Should present ratios of assessment for land and improvements be altered?

8. Property taxes increased 9% in New Jersey between 1968 and 1969. If taxes continue to rise at the present rate, what will be its effect upon the ability of families with less than average income to continue to own homes (Mean income for New Jersey households in 1963 was $7,940.)?

LAND-USE LIMITATIONS - LEGAL ISSUES

WORKSHOP #1

Background

In English and American law there have been limitations on the manner in which an owner of real property can use his land from time immemorial. Examples of such limitations are the law of easements, the law of nuisance and the enforcement of restrictive covenants against certain uses which would prevent neighboring property owners from the full enjoyment of their property.

It was only in the beginning of the twentieth century that the legal doctrines, which supported the establishment of fire codes for buildings and health codes as aspects of exercises of the police power, were extended to sustain the right of local governing bodies to impose much broader limitations on the use of land through zoning and building code regulations. The Supreme Court's decision in 1926 in Village of Euclid v. Ambler Realty upheld regulation through zoning as a constitutional exercise of the police power.

Factual Background

The concept of zoning regulation upheld in the Euclid case, which supported the right of a local community to designate permissible land uses throughout its jurisdiction, has been utilized to build economic and racial walls of segregation. Thus, it is now the established pattern for local communities throughout the country to limit large areas of land for the exclusive construction of single-family detached homes, to specify minimum sizes for lots on which such single homes can be built, to require minimum space per occupant, minimum setbacks and minimum vacant land requirements in residential areas, and to impose a host of other requirements designed to increase construction costs and limit residential densities.

The clear effect of this pattern of zoning limitations has been to exclude the poor, a disproportionate percentage of whom are racial and ethnic minority group citizens, from suburban areas and to block alternatives to and remedies for ghetto residency. Exclusionary zoning techniques enable the barring of the black, the brown, and the poor from specific portions of towns, villages and cities, and from entire suburban communities and represent an effective alternative to outlawed racial zoning and racial restrictive covenants.

Queries for Discussion

1. May a local community through the use of zoning ordinances, building codes and other devices restricting land use establish a system which forces lower-income and minority group persons to reside in limited geographic sections of that community?

2. May a local community by using land-use techniques advantage itself at the expense of neighboring communities in terms of excluding poor persons from the community, thus imposing on neighboring communities the added tax costs implicit in the care and assistance of the poor?

3. To what extent may the delegation of police power embodied in the authority given local communities to establish zoning ordinances, planning codes, building codes, health codes and fire codes be used for the private advantage of some of the residents of the community?

4. To what extent is a state required, under state and Federal constitutional provisions, to prevent the misuse of delegated police powers in the areas of zoning and planning? Is a state's civil rights policy relevant?

5. May a state or community avoid its constitutional responsibility by making zoning decisions subject to a referendum vote?

6. Are current building code and zoning requirements consistent with the constitutional right to own and utilize property as protected by the due process clause of the Fourteenth Amendment?

HOUSING FOR THE 70's: THE IMPACT OF EXCLUSIONARY
LAND-USE AND BUILDING CONTROLS

CONFERENCE

Thursday, November 6, 1969
Somerville Inn, Route 22, Somerville, New Jersey

STATEMENT OF POLICY - NEW JERSEY BUILDERS ASSOCIATION

Home builders are engaged in an ancient calling in the provision of shelter. In essence, they provide housing - a way of life. It may be a single family residence, an apartment or a town house. Whatever its form, housing in urban surroundings is the key to patterns of environment which include within their scope all of the structures and amenities required for daily living.

Home building in New Jersey enters 1970 facing the greatest demand and need for housing in all history. Increased production is the essential ingredient in any formula for the solution of the housing problems of our state. Without this vastly increased production, the housing aspirations of many of our people will continue unrealized.

The problems which impede housing production are not new. Only in degree are they more acute. So severe are the policies of exclusionary land-use in New Jersey that in garden apartment construction 80 percent of new units are limited to one-bedroom with the remainder allocated to two-bedroom apartments. Four-bedroom apartments are not permitted.

Such selfish sovereignty by municipalities drastically reduces the effectiveness of programs to house thousands of low and moderate

income families now living in sub-standard dwellings. The emergent nature of this situation is starkly reflected in the fact in nine counties with urban centers there are close to 600,000 living units whose structures are older than thirty-years. Of this number, some 300,000 are either deteriorated or dilapidated.

If we are to implement our resolve to eliminate inadequate housing as a root cause of disunity and unrest, we must remove the long-standing obstacle of exclusionary zoning which continues to thwart the productive energies of the great New Jersey building industry.

The full strength, experience and resourcefulness of home building must be unshackled by appropriate land-use revisions. Uninhibited by obsolete rules and practices, the home builders of New Jersey can truly make of our environment a responsive setting in which the people of New Jersey can flourish to the fullest.

NBJA PRESIDENT
SAM HERZOG

NEWS FROM NCDH

NATIONAL COMMITTEE AGAINST DISCRIMINATION IN HOUSING, INC. 1865 BROADWAY, NEW YORK, N.Y. 10023 (212) 265-2781

STATEMENT OF JACK E. WOOD, JR., Executive Co-Director, NCDH at 9:30 a.m. Opening Session, Thursday, November 6, 1969 at the Conference Cosponsored by the National Committee Against Discrimination in Housing (NCDH) and the New Jersey Builders Association (NJBA) in Somerville, New Jersey

Local governments today have power to exclude subsidized moderate- and low-cost housing. They can manipulate zoning and other land-use and construction controls to exclude families on the basis of income and, in effect, because of race. So long as these local powers remain unchecked, an America of two nations--"one black, one white, separate and unequal" will be maintained and its divisions deepened.

Suburban power to block residency by low- and moderate-income families effectively bars for most minority families exercise of their legally guaranteed right to an open housing choice. Further, this power means the nation cannot meet its stated goal and essential need for majority and minority construction of 2.6 million homes a year for the next 10 years. Apart from other considerations, land costs and relocation demands make a housing and urban development strategy that is centered in the core city alone irrational and ultimately self-defeating.

NCDH with racial discrimination in housing declared unconstitutional everywhere by the Supreme Court, now is marshalling the resources it had committed to that struggle and those of its 51 national cooperating organizations to make a man's right to live where he wants to live a reality.

STATEMENT OF JACK E. WOOD, JR.
Somerville, New Jersey
November 6, 1969

NCDH is engaged in a major nationwide assault on exclusionary local zoning and other land-use and construction controls which effectively bar the vast majority of black, Mexican-American, Puerto Rican, Oriental, and Indian families from exercising their right to choose where they live...and to choose to live where they can share with white Americans in cleaner air, better schools, and a rapidly expanding job market.

At NCDH, even as we worked to provide technical assistance and legal resources for the struggle which finally resulted in the U.S. Supreme Court's outlawing racial discrimination in housing throughout the land, were concerned about the vital interrelationship of jobs and housing. In 1965, the new chairman of the new Federal Equal Employment Opportunity Commission addressed an NCDH National conference at which we explored the inseparability of open jobs and open housing.

Subsequently, NCDH conducted a preliminary study of "The Impact of Housing Patterns on Job Opportunities." That study resulted in a $480,000 research program in the tristate metropolitan New York-New Jersey-Connecticut area under a grant from the Carnegie Corporation of New York. Then NCDH received a $450,000 U.S. Department of Housing and Urban Development funding for an urban renewal demonstration project in the nine-county San Francisco Bay area.

Both research projects in these most important metropolitan areas focus on the housing choice and supply barriers which close large portions of the job market--the suburban and growing portions--to minority workers.

STATEMENT OF JACK E. WOOD, JR.
Somerville, New Jersey
November 6, 1969

From both projects will come recommendations for policies to be carried forward by government, by industry, by labor, by community and civil rights groups.

The San Francisco project has an action as well as research component and alternate recommendations for action by these segments of society will be tested for feasibility of their application in the Bay area and in other areas across the nation.

But pilot projects and research are not enough. Men, women, and children are being wrongfully denied the right to move, to enjoy quality education, to find better jobs, to participate in the growing suburban segment of America which is financed by billions of Federal tax dollars invested in products of suburban industry, construction of bridges, highways, sewers, and every other kind of large and small community facility.

As one participant said at a recent National Black Power Conference: "Control your own communities--but don't just stop there. You're not just citizens of the ghetto. Watch what the man is doing in national and regional economic affairs. Don't buy this line that just because you want some clean air and green grass for your kids that makes you an imitation white man...We should check out the action wherever it is. We don't all have to be in the ghetto just to be brothers. Calling a prison a communit don't make it so."

To open - in fact - all of American society to all Americans, NCDH is also pursuing an extensive and nationwide program of litigation challenging exclusionary zoning and related local laws and practices.

Three cases are presently in the courts.

STATEMENT OF JACK E. WOOD, JR.
Somerville, New Jersey
November 6, 1969

* A Montclair, N.J., zoning action is being tested in state court on grounds not only of the Thirteenth and Fourteenth Amendments but also on grounds that in posing a minimum cost provision and in failing to take into account the needs of the community's substantial Negro population, it violated the state law permitting zoning in order to promote the general welfare.
* In a Lawton, Okla., case, NCDH is defending in the Federal Circuit Court a lower court ruling overturning a city zoning decision because it was based on illegal racial considerations, in violation of the 14th Amendment.
* In the home state of the 1964 Proposition 14 referendum initiative effort to overturn open housing laws, we are challenging a referendum supporting Union City, California, action wiping out a zoning ruling which would have permitted low-income housing construction. In this case, we have recently been joined by the Mexican-American Legal Defense Fund.

The Montclair case involves a private developer while both the Oklahoma and California cases involve federally-subsidized housing for low- and moderate-income families.

In these and in other cases now being developed in cooperation with local community groups we are arguing that not only would racially biased motivation make a zoning or other land-use action illegal, but that its racially discriminatory and segregating effect is illegal as well under the 14th Amendment.

Further, we want the courts to hold, as we argue in the Montclair case, that the general welfare clause -- the declared purpose of state laws enabling zoning -- cover social implications and embraces the welfare of the entire community, not just its upper-income or white citizens.

Finally, our strategy challenging zoning as a racial barrier includes a public education program. Some 2000 local open housing, civil rights, and other community action groups receive regular information from NCDH. Our Trends in Housing, which is recognized as the national reporting service in the housing/civil rights field, is focussing on the zoning issue. Our Field Services and Planning Department is working with local agencies and groups, for example, a new open housing group in Dallas, with citizens in Akron, Ohio, and through a new field operation in the Raleigh, N.C., area, as well as in cooperation with the National Assn. of Housing and Redevelopment Officials in Connecticut, Florida, and Minnesota.

In planning our total strategy we brought together last May key government officials, planners, lawyers and others so that we could establish a continuing consultative relationship with these scholars and activitists.

Today we are meeting in the first of a projected series of state, regional and national conferences on exclusionary land-use and related controls to sharpen our strategy, share our knowledge of varied facets of the problems, and apprise local and state agencies and organizations of the problem, its dimensions and practical steps toward its solution.

STATEMENT OF JACK E. WOOD, JR.
Somerville, New Jersey
November 6, 1969

We see NCDH as resource, clearinghouse, and leader, but fully effective only as we involve more and more agencies, groups, and individuals locally, regionally and nationally. The task is vast and requires the best of all of us who would seek to make one nation--unified in diversity and fully equal.

MEMORANDUM

TO: NCDH Board and Friends

FROM: Edward Rutledge and Jack E. Wood, Jr.
Executive Co-Directors

RE: NCDH/NJBA Conference on Exclusionary Land-Use and Building Controls

On November 6, the first of a series of national and regional conferences on restrictive zoning and outmoded building controls was held in Somerville, New Jersey, under the joint sponsorship of NCDH and the New Jersey Builders Association. The meeting was designed as a work session for top-level policy makers and specialists in housing and related fields. It was attended by approximately 150 representatives of government, planning and homebuilding and allied industries and professions, major employers, labor, legal experts, urban research specialists, civil rights and other community organizations.

We are enclosing a copy of the conference program and a set of the workshop discussion guides. Also attached are reprints of news stories from The New York Times and The Bergen County (N.J.) Record. The meeting was widely covered by the New Jersey press. A detailed report on the conference proceedings and recommendations will be published in an upcoming issue of Trends in Housing.

We will keep you apprised of future developments in NCDH's expanding program to combat restrictive zoning and other exclusionary devices. At this time, we are pleased to report that the response to the New Jersey conference has been excellent.

Housing Conference

Towns Told They Ban Poor

By EDWARD J. FLYNN
Staff Writer

Restrictive zoning practices and building codes are adding to New Jersey's serious housing shortage.

They also cause racial polarization and economic bias, it was charged yesterday by the New Jersey Builders Association and the National Committee Against Discrimination in Housing (NCDH).

At an all-day conference in Somerville, the two groups began to mobilize a coalition to fight for more and better housing for low- and middle-income families.

They attacked zoning laws which ban apartment houses or which limit apartments to having only one bedroom units, and large minimum lot sizes which often place homes out of the price range of Negroes and Puerto Ricans.

New Jersey, the nation's most urban state, was selected as the state to hold for the first in a series of conferences designed to spark a national campaign against exclusionary land-use and building controls.

Both groups noted that New Jersey was also the setting for a meeting in 1962 of representatives of the NCDH, the National Association of Home Builders, and of President Kennedy to consider housing discrimination.

Those talks in Princeton laid the groundwork for President Kennedy's executive order in November 1962 that federal funds would no longer go to housing programs which perpetuate ghettos.

Housing Shortage

In the next 10 years, the nation will need 26-million new housing units, said Harold B. Finger, assistant secretary for research and development of the Department of Housing and Urban Development.

Finger, the conference's keynote speaker, said there is no question that restrictive practices in land-use and zoning are commonplace.

In the New York metropolitan area, he said, 99.2 per cent of the undeveloped land is zoned for one-family homes. Two-thirds of that vacant land is zoned for minimum half-acre plots.

"You can't put housing for low-income families on that land," he said.

Following a series of workshop sessions dealing with the impact of restrictive practices on the housing market, the more than 100 persons at the conference made the following recommendations:

- Continue court tests of restrictive zoning, especially when there are exclusionary patterns which extend beyond municipal boundaries. The NCDH currently has three legal challenges on restrictive zoning, including one in Montclair.
- Bring together builders, leaders, and civic groups together to offer proposals on the housing shortage.
- Reorganize the state's tax structure.
- Hold back federal and state funds from communities which have restrictive zoning laws.
- Offer special grants to communities which have planned adequate housing for all income groups.
- Create a state appelate review of local zoning and building codes.
- Adopt a unified state building and construction code.

Establish housing goals with the widest variety of choice in price and type.

Low-Income Housing Exclusions in U.S. Assailed

By RICHARD J. H. JOHNSTON
Special to The New York Times

SOMERVILLE, N. J., Nov. 6—Widespread municipal zoning laws that exclude decent low-income housing were attacked today by civil rights leaders and spokesmen for the home-building industry at a conference here on Housing for the 70's.

The 160 persons who attended the day long conference, held under the joint sponsorship of the New Jersey Builders Association and the National Committee Against Discrimination in Housing, Inc., heard municipal zoning restrictions that prevent the creation of adequate housing for low-income workers denounced as "selfish sovereignty."

Widespread prohibitions under zoning laws that prevent construction of low-rental multiple-family dwellings in these communities were especially identified as barricades against decent housing for the less affluent.

Home Rule Attackeed

Those attending the conference were urged to press through industries and manufacturers, through the ballot box and through Federal and state governments to force municipalities to wipe "exclusionary" zoning ordinances from their books so decent, low-cost housing could be built in areas away from the slums of the inner cities and near the source of jobs and income.

Stewart M. Hutt, counsel for the New Jersey Builders Association, declared that selfish and exclusionary zoning barriers were forcing the building industry to operate "in a horse and buggy manner."

"A way has got to be found," he declared, "to get away from the constrictive home-rule aspects of the legislation that supports and protects these restrictions."

Harold B. Finger, assistant secretary for research and technology of the United States Department of Housing and Urban Development, underlined the effects of restrictive zoning and "selfish" land use by pointing out that 99.2 per cent of all undeveloped land in the country earmarked for future dwelling purposes is restricted to single-family dwellings.

With forecasts of a national population that will double every 30 to 50 years into and beyond the foreseeable future, Mr. Finger said, dwelling places will have to be established not only for the "affluent" but for the "lower income groups" as well.

Mr. Finger added that in many communities far-sighted leaders and businessmen want to "find a way out" of the archaic protective and restrictive approach to zoning that has resulted in the creation of "great white belts around the cities" that hold the ethnic minorities in circles while the suburban community residents say "we want it this way," he said.

George E. Carter, assistant to the president of the Systems and Management Division, International Business Machine Corporation, told of the problems faced by industries that seek to establish in and near the settled and restrictive communities.

He said that while these communities were eager to accept the "ratables" and the "employment and subsequent prosperity" that go with the arrival and establishment of a new industry, the job of settling company employes in the community, particularly non-white workers, is a formidable task.

Many industries, Mr. Carter added, were willing to press the issue of decent housing for their minority group employes.

"A black engineer or mathematician," Mr. Carter said, "is the hottest item in American industry today."

Court Ruling Urged

Ralph Brown, representing the New Jersey Housing Finance Agency, discussed the problems of taxation and finance in the effort to provide housing for middle-income and lower-income families in established areas of the state outside the major cities.

"There is a need," Mr. Brown said, "for the United States Supreme Court to deal with the problem of discrimination through local exclusion in their zoning against lower income housing."

He noted that the Supreme Court had long since struck down discrimination in other fields but that discrimination based solely on economic strata remained untouched at the base of many municipal zoning regulations.

A series of workshop sessions in the conference at the Somervill Inn here followed presentation of the problems. They were involved in constitutional and legal issues growing out of land use in the United States. The relation of housing and employment opportunities and the impediments to providing adequate housing were discussed in the context of restrictive laws and codes.

Atlanta U Eyes School of Medicine

By CHRISTENA BLEDSOE

Atlanta University is studying the feasibility of building a four-year medical school, but, more immediately, beginning with a two-year school to provide the first half of a medical education.

Until the proposed four-year school at Atlanta University is ready, students after the first two years would transfer to Emory University School of Medicine, the AU announcement said.

Through a hoped-for cooperative arrangement between the two universities, the AU students would complete their medical education largely at Grady Memorial Hospital, the training ground for Emory students, and then would receive their degree from Emory, or another medical school if they chose to go elsewhere.

The American Medical Association requires that for a new medical school to be established, it must be in a city with adequate hospital facilities where there is already an established medical school and located on a campus with a graduate school. Atlanta, and AU meet these requirements, a spokesman noted.

THE ANNOUNCEMENT of plans to begin a feasibility study came from Dr. Thomas D. Jarrett, AU president, who said the backing of the AU faculty had been obtained and that the Atlanta Medical Society had reviewed and approved the plan.

Dr. Jarrett was out of town and could not be reached for further details.

The announcement of plans for the feasibility study came on the heels of a report from the state health department's comprehensive health planning division which called for a third medical school in Georgia.

The report said 1,700 more doctors are needed now in Georgia, and that within five years another 900 will be needed.

The same report also noted a particular need for more black doctors, saying there are only an estimated 70 or so in the state.

THE FEASIBILITY study would be conducted by an outside management survey company. Atlanta University is hoping that a private foundation in New York will finance the study, which probably would take three to four months.

The study would get accurate, detailed information that could be used to apply for private and public grants to help finance the starting of a new medical school, and most likely would also work out written agreements with Emory's board of trustees, since agreements now are unofficial.

According to Dr. Bernard Hallman, associate dean of the Emory medical school, who has worked with Dr. Jarrett on the idea, a new medical year would require about $35 million plus a large building. The first two years of medical school is the most expensive, he explained.

Dr. Hallman also said it probably would be at least three to four years before the AU school could open and that new medical schools generally start with about 30 students the first year, and increase in size as faculty is recruited.

Dear Moreland:

You probably have read the enclosed article that appeared in yesterdays Journal. It prompts me to write you because it may be of pivotal importance to our frustrating efforts.

It is saying the obvious to state that medical facilities for the black community will be built in the near future. We have many, though not enough, favorable advantages in efforts to obtain such commissions: (1) Your distinguished record not only professionally, but in dealing with the black community; (2) Joe Smith's excellent record as a designer and equally important, as participant in planning programs in our community; (3) You and I have done a lot of homework, a lot of groundwork for this kind of a project; (4) We have excellent communication lines with financing sources and (5) We both know many doctors that could put in a good word.

But we have to somehow, co-ordinate all these favorable aspects and probably add some. In short, now is the time to apply intensive thought to decide what moves to make. Wouldn't it be possible to determine who are the leaders in the black business community, who are members of the board of trustees - to contact them?

I'm planning to see Rev. Williams, to ask him point blank, to help. I also propose to write Dr. Stewart the enclosed letter with a touch of disappointment in the hopes of eliciting more action. — advise me on this

With best regards,

Jim P.

MEMO TO: SRC STAFF

FROM: NMorgan

RE: Office Procedures

Listed below are some procedures which, I believe, will prove beneficial to all of us as SRC staffers.

* * * *

Beginning May 1, 1970, a "STAFF ITINERARY INFORMATION BOOK" will be placed on the receptionist's desk. This will merely serve as a record and as a centrally located information source concerning employees' absence from the office.

Please inform receptionist of your absence from office, who in turn can inform necessary persons involved. Also, when leaving and returning from lunch, and leaving the office for the day, if prior to 5:00 p. m.

Other definite procedures will follow after the "SRC STAFF MANUAL" has been thoroughly discussed.

* * * *

We are in the process of staffing the mail room so that we will not need to pull different staffers in, and off their present jobs, to help get out mass mailings. But, until such time that we have completed this process, we are soliciting all personnel at different periods to help in our mass mailings. Please. Thanks.

* * * *

Out of consideration for other office staff, and visitors, please do not congregate at receptionist desk.

* * * *

I am asking your indulgence in the above procedures, and if you have any questions, either your department head, or I, will be happy to help. Thanks again.

From the desk of:-

MEMORANDUM

TO: SRC STAFF

FROM: ADMINISTRATIVE COMMITTEE MEMBERS

Attached is draft copy of proposed Office Manual for you to read and bring to a staff meeting that will take place within a week or two.

3/20/70

PROPOSED DRAFT
OF
SRC STAFF MANUAL
1970

HOURS OF WORK

The Council office is regularly open from 9:00 a.m. to 5:00 p.m. Monday through Friday.

SALARY PAYMENTS

The staff is paid by check on the fifteenth and the last day of the month. Whenever the fifteenth or the last day of the month falls on a Saturday, Sunday, or holiday, pay checks are written on the day preceding.

OVERTIME

The Council does not pay for overtime for professional personnel.

For other personnel, additional compensation at the individual's regular rate will be made at the next pay period. If the individual chooses, and if work schedules permit. Compensatory time may be taken in lieu of additional pay. In either case, a written record of the time worked and the preference of pay or compensatory time should be given to the Secretary-Treasurer immediately following overtime work.

EXPENSES

Travel

Staff will be reimbursed for travel and actual expenses in connection with field work for the Council. Per diem in lieu of hotels, meals, tips, taxicabs, and related costs may be authorized.
Members of the Council will also be reimbursed for travel and actual expenses when attending official meetings or carrying out other duties as requested by the Executive Director or the Executive Committee.

Incidental

If any member of the staff has to incur other expenses in connection with his or her official duties, the cost will be paid by the Council, if permission has been granted.

Moving

Where arranged beforehand, the Council may be responsible for moving expenses for furniture and household effects, but not personal transportation cost, for permanent employees one-way from point of origin to Atlanta. No moving expenses are paid by the Council on termination of employment. For temporary employees, by prior arrangement, the Council may be responsible for transportation expenses to and from point of origin at the beginning and end of employment, but not moving expenses for furniture and household effects.

HOLIDAYS

The office of the Council is closed on the following holidays:

1. New Year's Day
2. Martin Luther King's Day
3. Memorial Day
4. July 4th
5. Labor Day
6 & 7. Thanksgiving Day and the following Friday
8. Christmas Day and Christmas Eve whenever practical

Whenever a holiday falls on Sunday, the following Monday may be taken. Holidays falling on Saturday may be observed upon the Friday before the holiday. Other special religious holidays may be observed by persons upon authorization.

VACATION AND SICK LEAVE

Each employee of the Council who is serving in a permanent status earns both vacation and sick leave at the rate of one- and one-half work days for each full month of service. Vacation is not granted to temporary employees. However, temporary employees may earn one-half day a month sick leave. A temporary employee who subsequently is employed on a permanent basis will be credited with any accumulated vacation or sick leave he may have accrued from the date of first employment.

Records are kept in the office of the Executive Director of all absences. A form is provided for this purpose.

The individual employee is responsible for presenting written records of all absences on the first day of work following any absence. The person will turn these slips over to the secretary of their department or persons appointed by the executive assistant. The secretaries or appointed person will then turn these forms over to the secretary to the Executive Director to be filed in a permanent folder.

An employee who is absent from the office on official business, or who is taking pre-arranged compensatory time is not considered on leave.

Vacation.--Employees of the SRC may take vacations at any time that will least interfere with the efficient operating of the office. Request for leave of any duration should be made in writing in advance to the employee's immediate supervisor and if approved, should be forwarded to the secretary to the Executive Director.

Requests for leaves, if at all possible, be made in writing at least 10 days ahead, except in case of emergency. This will allow time for securing approval. Any day taken off must be either designated as vacation, sick leave or compensatory time.

If not taken, vacation may accumulate up to 24 work days and if an employee resigns or is asked to resign, he or she will be paid for his accumulated leave up to a maximum of 24 days at his or her current rate of pay.

An employee who has accrued 24 days leave may take vacation during any year for a number of days which does not exceed the days earned during his or her current year of employment, and the days over 24, he or she has accrued, whichever is lesser, without having these days deducted from his or her 24 day accrual.

No vacation time or salary to be earned following vacation is advanced under any circumstances.

If an employee is more than one-half hour late coming to work or coming from lunch, he or she should fill out a time slip for this, for this is considered part of the vacation or sick leave. The same if the employee leaves the office early.

If any employees fail to turn in leave slips for time used for sick or annual leave, it should be the responsibility of the appointed individual, such as the secretary of the department, to fill out the slips for the individual and turn them into the Executive Director's secretary. In view of this, it should also be the responsibility of each person to keep his immediate supervisor, the appointed individual, or the secretary informed of late arrivals, early departures, and lunch hours for accurate record-keeping.

When employment is terminated, if accurate and full records are not on file, no accrued leave will be paid.

SICK LEAVE with pay is allowed whenever an employee is incapacitated dure to sickness, injury, or when some member of his immediate family has a contagious disease, is seriously ill, or dies.

Notification of absence on account of sickness shall be given as soon as possible on the "Record of Leave" form provided.

Sick leave may accumulate up to a total of 66 work days. Untaken sick leave beyond this total is forfeited.

If an employee has a serious illness which keeps him away from the office for a period of time beyond the sick leave accrued to his credit, the Executive Director may approve either of the following plans:

(1) Leave without pay, after all accumulated sick leave and vacation are exhausted.

(2) Sick leave advanced, up to 20 work days, with the understanding that the employee will remain with the Council until sick leave has

Sick Leave (Cont'd.)

been earned, or that adjustment will be made in final salary.

When sickness occurs within a vacation period, the period of illness may, upon written authorization, be charged to sick leave, and the charge against the vacation reduced accordingly. Applications for substitution of sick leave for vacation shall be made immediately after the expiration of the vacation period.

When an employee leaves employment at SRC, all accrued sick leave is forfeited at that time.

MATERNITY LEAVE

In cases of maternity leave, the Executive Director may grant leave of absence without pay for a period not to exceed eight months after all accrued sick leave and vacation have been taken.

PROFESSIONAL STAFF - LEAVE

Members of the professional staff shall accumulate annual and sick leave at the rate of one and one-half days per month. All days of leave taken shall be reported in the same manner as required by other members of the staff. The limitation as to the number of annual leave days which can be accumulated (24) shall apply to all staff.

It is recognized that the professional staff frequently is called upon to put in extra hours of work through travel, weekend and evening assignments, writing, and telephoning. Usually, these working hours are not put in at the office. It is not the intention of the Council to provide compensatory time off for professional staff for hours worked beyond those recognized as normal office hours.

However, it is recognized that professional staff will from time to time have need to recover some of these extra hours for personal reasons. This practice is not discouraged within reasonable limits. When professional staff does take such time off it should be so reported and marked as "compensatory time off" for convenience of record keeping despite the above provision that generally "extra" hours are not subject to compensatory time off.

NOTICE WHEN AWAY FROM OFFICE

It is the responsibility of those who travel or are otherwise away from the office to keep the appropriate secretary informed as to dates, places, and how the individual may be reached while out of the office. It is recognized that on rare occasions such notification will be a practical impossibility.

DRAFT

SOUTHERN REGIONAL COUNCIL EXPENSE GUIDE

The following requirements and suggestions are given as a guide for SRC staff and others who incur expenses to be paid by the Council. The guide is not established to create severe restrictions or to curtail efficiency. Rather it is a reminder of our responsibility to use the funds available as effectively as possible.

TRAVEL:

Automobile: Reimbursed at the rate of $0.10 per mile. This amount includes all travel costs related to the use of the automobile except items as parking and tolls. Private automobiles should not be used unless common carriers would be more costly or not available or would not permit fulfillment of duties.

Air: Tourist accommodations whenever possible. Except in unavoidable circumstances, first class fares will not be paid between points where frequent tourist service is available.

Train: Coach accommodations on short and day trips. Minimum adequate Pullman accommodations for overnight travel.

Bus: For short trips, bus schedules should be checked. Frequently these schedules are as convenient, and no more time consuming, than available air schedules.

Airport Limousine: Should be used whenever it provides adequate transportation rather than taxicabs.

Auto Rentals: Should be used as little as possible. Except for those persons with SRC auto rental credit cards, this service should never be used without prior permission.

Hotels: Reservation requests should always stipulate, "minimum available rate." Generally, room service charges, laundry, and like expenses will not be honored.

Taxicabs: Please use this service as sparingly as possible. However, note that heavy use of taxicabs where necessary is often cheaper than car rental.

Meals: No set formula. Generally, $2.00 for breakfast, $2.50 for lunch, and $4.50 for dinner are considered maximum-adequate amounts. It is recognized that costs in, e.g., New York may be somewhat higher and those in a small southern town or city may be somewhat lower.

OTHER:

Travel costs or any portion thereof for spouses are not honored.

Hotel bills, tickets, and other available supporting data should always be submitted with expense accounts.

Requests for reimbursement of expenses should be made on the regular SRC expense form. If this is not convenient, the request should indicate the purpose, destination, and date(s) expenses were incurred and similar information. Where practical requests for expense reimbursement should be made immediately after the trip in which the expenses were incurred. In no case should such requests be accumulated over a long period of time except as worked out with the Secretary-Treasurer.

Travel advances are available on request to the Secretary-Treasurer.

The Council does not especially encourage entertainment expenses. Entertainment expenses incurred solely by a Council staff person(s), unrelated to travel or other official obligations will not be paid. Where a staff person incurs legitimate entertainment expenses, in and out of town, he shall report the names of other persons entertained.

The Council extends the privilege, as a matter of convenience, to staff members holding credit cards to use them to charge expenses which will be reimbursed by other persons or organizations where the amount involved is closely related to the Council's interests. In all such cases, the Council must be promptly reimbursed for all such expenses whether the payment from the outside agency is in the form of reimbursed expenses or honorarium in lieu of expenses.

NEW EMPLOYEES

A person is hired by the Executive Director, his assistant, or heads of departments.

After a person is hired, he is to report to the director, supervisor, or designated person in the department that he will work.

The director, supervisor, or assigned person explains as well as shows the new employee what he is supposed to do (explaining that duties are flexible). If at all possible, the new employee will work very closely with an assigned person for at least a week.

It is the responsibility of the appropriate director, supervisor, or assigned person to furnish each new employee with a copy of the staff manual. The new employee is to be informed that he will be working on probation for three months. After the three months have ended, the new employee and the staff member will go over an evaluation sheet (attached) then the assigned person will let the Executive Director or his assistant know the results. These probationary conditions do not apply to professional staff, whose conditions of employment are arranged between the Executive Director and the new staff member.

Grievance Procedure for the Employees of SRC
Adopted by Staff Meeting, September 23, 1969

STEP ONE

When a dispute involving working relations arises, the complaining employee may take his grievance to his immediate supervisor within three days of the employee's knowledge of the grievance. The grievance will be presented in writing. An answer shall be given the employee within three working days. The time limits may be extended where the press of travel or business may require. Such extension should not exceed 10 working days.

STEP TWO

If the reply at Step One is unsatisfactory, the complaining employee may submit a written statement of the grievance to the Executive Director within five working days of receiving the Step One answer. The Director shall get from the complaining employee's supervisor a written response to the grievance. An answer to the grievance shall be given in writing within five working days of its receipt unless travel schedules or the press of business requires a reasonable extension.

STEP THREE

If the grievance is not resolved employee will submit the grievance in writing to the Staff Grievance Committee within five working days. The Grievance Committee will be composed of three members of the staff elected by the staff by secret ballot.* (See below.) This Committee will have advisory powers only. The Committee will advise the Executive Director

*No more than one staff person of the program director level shall serve on the Committee. An alternate member of the Committee will be elected to serve in the place of a regular member in case that member is directly affected by the grievance.

who then will make a further determination in the case. A copy of the Committee's recommendation will be given to the complaining employee. The Committee's response to the Director shall be within five working days. The Director will give his answer in writing within five working days. The time limits in this step may be extended for a reasonable time by mutual agreement or if the press of travel or business may require it.

STEP FOUR

If the grievance is not resolved after Step Three it shall be forwarded by the Executive Director to the Personnel Committee of the Executive Committee for action at their next scheduled meeting. The employee's statement of the case, the Grievance Committee's response, and the final determination made by the Director shall be sent to the Personnel Committee. A written answer from the Personnel Committee shall be forwarded to the Director, the complaining employee and the Grievance Committee within a reasonable time after their meeting. The decision of the Personnel Committee shall be final and binding.

RECORDS

The complete written record of all grievances shall be maintained in the office of the Executive Director.

Notes

1. The initial Grievance Committee will serve for six months at which time its work and this procedure will be subject to review and a new Committee elected for such period of time as the staff may designate.

Grievance Procedure for the Employees of SRC - 3.
Adopted by Staff Meeting, September 23, 1969.

Notes (Continued)

2. An alternate member of the Grievance Committee shall be elected to serve when a regular member of the Committee is directly affected by the grievance.

3. Although a meeting on the grievance and a proposed settlement may be made by any two members when it is impossible for all three members to meet, the proposal shall become final only after the third member has considered it.

4. Written grievances should contain brief statements of the facts of the case, how the complaining employee thinks he was affected by those facts, and a statement ast to what settlement is sought.

JOB VACANCIES

All job vacancies (below the Executive Director), both permanent full-time and permanent part-time (not temporary) shall be posted with both job description and qualification.

Over-load work which cannot be handled by an employee whose responsibility it would normally be shall be distributed by the Executive Assistant, after clearing it through the immediate supervisor(s) involved.

4M—6-64 Form #M-018

PROGRESS REVIEW FORM

For Rating of Employee After Three Month's Service

Date_____

Employee's Name_____ Department_____

Job_____ Start Date_____ Starting Pay Rate_____

To Supervisor or Department Head: Please rate the employee indicated above on the points listed below. After rating him, make a decision in regard to discharge, referral to Personnel for possible reassignment, deferment of raise, normal raise, or above average raise. After approval of the raise (if a raise is recommended), call in the employee and discuss his progress on the job. Point out his strengths and weaknesses. Attempt to help him to understand how he can improve. Tell him of your decision in regard to a raise and how much. Return this completed form to the Personnel Department, along with a payroll change order if a raise is given.

Factor	Poor	Borderline	Average	Above Average	Good or Excellent
Grasp of Job Duties	Just doesn't understand	Having some difficulty	Reasonably good understanding	Quickly caught on to duties	Fully understands duties and their importance
Job Performance	Sloppy, Inadequate	Not up to Par	Average for others after 3 months	Good, steady performer	Better job than many after 6 months
Attitude	Negative "Griper"	Not fully cooperative in all elements	Willing to put forth reasonable effort	Goes beyond minimum requirements	Cooperative, willing to try anything
Relations with Others in Dept.	Withdrawn or aggravating	Some friction	Reasonably good relations	No conflict	Fits in well
Desire to Learn	None	Little	Desire to learn own job	Interested in entire department's operation	Wants to understand whole company operation
	(A)	(B)	(C)	(D)	(E)
Overall Rating	Inadequate, probably will never learn	Ultimate ability questionable, having difficulty	Making reasonable progress	Better than average progress	Virtually fully qualified already, still improving

Action decided on (check one)

_____ (A) Discharge or possible reassignment (call Personnel Department).

_____ (B) Deferment of raise three months.

_____ (C) (D) "Normal" raise of $_____ initiated (see merit increase schedule).

_____ (D) (E) "Above Average" raise of $_____ initiated (see merit increase schedule).

Employee's status and progress discussed with him on_____(date).

Note: If raise is given, complete a payroll change order to accompany this form.

Signature_____

Introduction

Over the course of the past ten years, there has been more change in the South than in any other part of the United States. Much of that change has resulted in positive and impressive accomplishments: extensive economic growth, rises in employment and income levels, broader guarantees of civil rights, improved human relations, wider participation in the political process, increased responsiveness and effectiveness in state and local government, strengthening of education at all levels. These encouraging new developments have generated a sense of anticipation and hopefulness, and many of the region's leaders--indeed, many of its citizens generally--have begun to envision the possibility that the South might surge further ahead to lead the nation, not only in the pace and quantity of its growth but also in the quality of life it offers to its people.

It is perhaps characteristic of rapid change in any society that the very change itself produces stresses and inequities as well as accomplishments and improvements. The sheer velicity of economic and social and political change in the South has had such an effect: in the process of ameliorating certain long-neglected conditions, it has also made some of the region's problems more visible and acute, and created some complex new difficulties that urgently need attention. Problems concerning transportation, the land and natural resources, and the management of growth are being addressed for the Commission by other technical committees at its service; the purpose of this report is to examine and analyze a range of concerns in the area of human resource development--in particular, problems of manpower and job creation, income maintenance and social services, housing, and health care.

There is abundant evidence that large-scale socioeconomic changes in the South, some of them dating back much more than a decade and all of them far beyond the power of any individual to control, have failed to help--and in some instances adversely affected--many of the region's citizens. There has been widespread displacement of Southerners from the traditional occupation of agriculture, and many thousands of farmers and farm workers, whites and blacks alike, have been driven from the land by economic conditions that make it impossible for them to earn a livelihood from farming. That has led, in turn, to a heavy migration of rural people into urban areas, and while many new jobs have been created in the towns and cities, too frequently they have been jobs for which the people from the rural areas have been unprepared to fill.

In these two major adjustments--from rural to urban living, and from an agricultural to an industrial-technical economy--the South must make every effort to assure that neither the benefits nor the burdens accrue in disproportionate degree to any segment of the population. The attainment of an equal quality of life for all may be an unrealistic ideal--and considering the virtues of human diversity, an undesirable goal as well--but it is clear that providing for the basic needs of all citizens contributes to the well-being of the whole society. The states of the region should work separately and jointly to insure that food, shelter, health, education and job-opportunity needs of all their citizens are met in a non-discriminatory way--not alone for reasons of fairness and justice, but also because meeting those fundamental needs serves the best interests of the states.

Properly undertaken, human resource development can be of great significance in bettering the lives of individuals, improving communities, increasing individual and collective productivity, and making a higher and more rational order of economic development possible. Failure to provide for the fullest possible

development of human resources will inevitably result in lost income, lower public revenues, a lower level of physical and mental health, a variety of social disorders, and pervasive community discontent. Of all the South's abundant resources, none has greater value or greater potential than its human resources--its people. Any vision of the region's future that does not highlight and emphasize the essential importance of adequate housing, health care, education, economic opportunity, and an overall sense of security and well-being for all its citizens is a flawed vision, one that cannot bring maturity and fulfillment to the region, no matter how successful it is in other areas of growth and development.

At the present time--in spite of notable improvements in recent years--the South still has a disproportionate share of the nation's poverty and ill health. Far too many of its people live in substandard housing. An unacceptably high percentage of them fall below minimum national standards of educational achievement. Altogether too many are under-skilled, under-employed, and under-paid. The economic and social history of the region provides a number of reasons for the existence of these conditions. It is not necessary to recite that history here, nor is it necessary to be preoccupied and immobilized by the negative [redacted] aspects of the region's past. On the contrary, the South's recent achievements suggest that it need be bound no longer [redacted] by the strictures of history, and that it could have within its reach and within its capacity the achievement of a full and satisfying life for all its people.

In preparing this report for the Commission, the Technical Committee on Human Resources has found it necessary to concentrate its attention in a few areas. The limitations of time do not permit examination of all the important issues that deserve consideration. The fact that no recommendations are presented on such subjects as mental health, recreation, the relationship between protecting

human values and protecting the environment, juvenile delinquency, law enforcement, the administration of justice, and the reform of correctional institutions is simply a consequence of time constraints and nothing more; whether or not the Commission is able to give its attention to such subjects, they do require serious consideration.

Likewise, the matters of education and taxes--two crucial areas affecting the development of human resources--are dealt with only briefly here. Emphasis is given to two problems: gross inequities in the financing of education, and inherent disparities in the regressive character of the overall tax structure in the Southern states.

It is the considered opinion of the drafters of this report that the multitude of problems and issues which fall within the broad area of human resource development can best be addressed by a detailed examination of poverty--its causes, its dimensions, and the means to eliminate it. To the extent that poverty is lessened in the South, the other problems that have been alluded to here--malnutrition, substandard housing, physical and mental illness, educational failure, limited employment opportunities, and all the others--will also be reduced. Almost by definition, the poor are those who benefit inadequately and inequitably from the normal workings of the economic and social order. There is potentially an enormous contribution they could make to the society if they had an opportunity to share more fully in its dividends--and conversely, the society would have more dividends to share among all its members if fewer of them were victimized by its inequities and in dire need of its aid.

There is within the South--and within the nation as a whole--a widespread antipathy toward programs designed to aid the poor. All too often, those of us who are affluent seem inclined to lay the blame for poverty on the individuals who suffer from it. That attitude seriously complicates and threatens to defeat all efforts to alleviate the condition. It is a form of discrimination which

adversely affects the full development of the region's human resources. The South has made progress in eliminating overt discrimination based on race, sex and low economic status, but subtle forms of bias persist, at times so deeply woven into the fabric of the society's institutions and structures that only the most determined effort will remove it.

It will take such an effort to lead [redacted] the South to an understanding of the causes of poverty and a determination to eradicate it. Recognizing this, the Technical Committee on Human Resources has attempted in this report to describe two comprehensive approaches that could reverse long-standing patterns of inequity and accellerate the positive changes that have [redacted] begun to take place in the region. The first has to do with full employment in productive jobs for all eligible members of the work force. The second concerns broad reforms in the nature and delivery of support services for those individuals and families who cannot work, for whatever reasons.

Throughout, the emphasis is focused on the trends, issues, and policy options affecting human resource development as it relates to health, housing, manpower and job creation, and income maintenance and social services. In the opinion of the members of the committee, these are matters of paramount importance in the future of the South.

File — Orin South

HUMAN SERVICES CAREER DEVELOPMENT PROGRAM

The Midwest Division offers a new career development program, designed for career professionals in emerging and established fields such as Social Planning, Social Management, Human Resources, Education, Community Development, Health Services, Voluntarism, Extension Services, and Religion. The program, which will be conducted in a number of midwestern metropolitan areas, will take approximately one or two years to complete.

The program is offered to cope with a major change confronting individuals and organizations in human services. Clients for their services now see systems as being responsible for some or all of the undesirable things happening to them. Those in need of medical care, for example, now look at health care delivery systems, and see their inadequacies; welfare recipients blame the system for placing and keeping them in poverty; and students complain of the oppressiveness of the educational system. Given these views, clients of human services organizations and institutions are much less passive than formerly, more likely to make demands on various systems, and more likely to feel that new sets of demands are justified.

Within the human services complex, career professionals have also begun to see that substantial changes cannot be made in the lives of their clients unless the systems their clients interact in and with can be changed. Instituting systems change, however, is difficult, since previous education and training have seldom fitted career professionals to take such a role. This problem of system change is made even more difficult when the organization the career professional works in itself needs changing, if it is to function effectively amidst these social changes.

To provide career professionals with the concepts and skills needed to begin developing new management systems, a two phase program has been developed in two program packages. The first phase requires approximately eight weekends, and the second approximately twelve weekends.

General objectives of the program are to help participants increase their ability to:

1) Recognize their own and others' learning style, the constraints to their own and others' learning, and the way in which self-directed, self-evaluated learning processes can be managed.

2) Establish sense of community in which members can be resources to each other, dependence on experts is decreased, and trust is increased.

3) Decrease fault-finding while increasing problem-finding, and sense of owning problems that exist.

4) Use group process knowledge and skills to eliminate or reduce the blocks and inhibitions to adaptive change in management structures, patterns of administration, and relationships.

5) Analyze organizational and community systems to find leverage points and motivations for change.

6) Develop and implement change strategies.

7) Relate organization and system choices to external environment.

The content and process flows in the two phases are shown in the diagrams below. The first phase focuses on the individual as learner, on developing group process skills, and on beginning organization problem-solving and analysis. The second builds on the first, focusing on structural and values changes in American society, development theory, organization development, systems analysis, and systems redesign. This phase calls for intensive application efforts in organizations and communities.

PHASE I

Beginning Organization Diagnosis: Identification

Of Different Types Of Learning Processes And Groups in Work Environment

PHASE II

Each phase will be supported by work books, exercises, and reading books selected or developed for this program. Participants will also be expected to do work outside the scheduled meeting dates on problem-solving, team development, organization analysis and/or community analysis. Certificates of completion will be given to those who complete both phases.

It should be emphasized again that this program is designed as an extended, structured professional development program. While some techniques usually associated with"personal growth" will be used, and it is expected that personal growth will take place, this is not the primary focus of the program.

This program is appropriate for individuals who are seeking career and professional enhancement and who have the ability to learn in the context indicated. Admission to the program will be based on a screening process which will seek to match individuals with the requirements of the program.

Enrollments will be accepted only for phases or program packages. Persons who have sufficient training experience may be admitted to Phase II without completing Phase I. Admission, however, will be contingent on a screening process and performance testing of group skills.

Program Costs: $650 for Phase I; $900 for Phase II. Due to the costs incurred in billing and bookkeeping, provision cannot be made for time payments. (Those who need to stretch their payments are requested to contact their local banks for loans.) The payment for each phase must be submitted upon acceptance of application.

The scheduling of meeting sites for each metropolitan location will be handled by metropolitan center directors. These directors, with their phone numbers, are given below:

Detroit and Flint,Michigan	Dr. Marilyn Harris 5198 Woodcliff Drive Flint, Michigan 48504	(313) 785-9765

Persons in Kansas City May also call the Midwest Division Office (816) 531-3136

In each of the metropolitan areas in which the program is offered, a meeting will be held in late March to explain the program in more detail, and to provide information about screening processes and registration. Those interested in learning more about the program, and in applying should call or write the center director nearest them. Programs may be offered in other metropolitan locations if there are as many as 20 to 24 persons interested in participating. Those who live in urban areas not mentioned, and who are interested in such a program, are asked to contact the Midwest Division Office.

Hunger

FBI ON THE TRAIL OF THE HUNGER-MONGERS

WHAT CHANGES NEED TO BE MADE TO PREVENT MILLIONS FROM SUFFERING MALNUTRITION ? ?

The poor and hungry may be bothered, but generally speaking there is no reason for them to bother the rest of us, particularly since we are the comfortable majority. Yet from time to time something won't let go of us: a war that isn't easily won; or at home, evidence that all those so-called poor are not just at the bottom of the ladder (someone has to be there) or at times in sore straits, but in significant numbers - that is, by the many thousands and all over the greatest nation of the 20th century - very sick and very hungry and at times literally with less food than most of our dogs get. So, we notice that the sky is indeed overcast. And then we read that a committee of the U. S. Senate had received reports that children, American children, are hungry, malnourished, badly sick, yet never seen by doctors. We read that even conservative Senators were shocked at what they saw and heard - in field trips and in hearings, during which not only testimony but photographs were offered.

On television we see a documentary like "Hunger In America," and then we read a report called Hunger, U.S.A., the result of months and months of study and public hearings - done by a group of leading American citizens, by us in fact: lawyers and clergymen and doctors and labor leaders and businessmen. Letters start going to Washington, to Senators and Congressmen, to the President, and to the Secretary of Agriculture, who in the past year has received hundreds and hundreds of them, and has had to have a form letter of "concern" printed up. And some people even begin to suggest changes, radical changes. Why not guarantee every child three square meals a day? Why not insist that no one has to drink polluted water, or live in a cabin that lacks electricity? Why not, if it has to come down to that, forsake the moon and missiles and supersonic bombers and transports - for food, for food that American children need?

How long, exactly how long can those questions, that kind of thinking, go on without, in the words of the Pentagon, a "response?" The answer, we fear, is: not very long.

FBI AND FCC INVESTIGATE THOSE WHO TALKED TO TV REPORTERS ABOUT HUNGER

Recently in San Antonio, one of us talked to a Catholic priest who had rather boldly and perhaps foolishly agreed to work with the Citizens Board of Inquiry into Hunger and Malnutrition in the U.S.A.; and rather naively agreed to point out instances of near starvation, to camermen from CBS News for its documentary on hunger. In the autumn of 1968, it did not take long for Washington to reply. The priest and others have been approached by agents of the FBI and the FCC and the Agriculture Appropriations Committee of the Congress - for what reason? Why, "to determine the real extent of hunger in the country," says Rep. Jamie L. Whitten, from Mississippi who heads that House committee.

But what the priest said to us and what he substantially repeated to the US Commission on Civil Rights at hearings held in Texas, was this:

"My name if Ralph Ruiz. I am a Catholic priest of the Archdiocese of San Antonio. I am Director of Inner City Apostolate on the near west side of San Antonio. I would like to believe that in our country of America, individual citizens have the right to petition their national government without fear of intimidation, harassment, or retaliation. That was to be one of our most basic civil rights.

"There have been federal investigators from Washington, FBI agents, who have been to San Antonio to find out - so they say - if anyone is hungry here. But I think the real reason they were here has been to discredit the many reports which say there are hungry people in San Antonio. Everyone knows that there are hungry people here - people who - in the words of the special survey by the Department of Health, Education, and Welfare, just completed in Texas - are suffering from 'malnutrition, anemia, retardation in the growth and development of children, and vitamin deficiencies.'

"The 1967 application submitted by the City of San Antonio for participation in the Model Neighborhood Program talked about two San Antonios:' 'In the city, 28 percent of the families (38,444) made less than $3,000 per year, and over six percent of the families had an income of less than $1,000. . . . Although the economic picture appears optimistic and growth seems to be certain, it is still true that San Antonio has more area of blight today than ever before. . . .

PRIEST TELLS HOW HE WAS QUESTIONED FOR TWO HOURS BY FBI AGENTS FROM WASHINGTON

"In the face of all that, I was interrogated for some two hours several weeks ago by two FBI agents from Washington on whether there were any hungry people here. These FBI agents say they are now working for the House Appropriations Committee, which has started an investigation into hunger in America.

"What do FBI agents know about hunger? What purpose can they have - except to frighten, intimidate, harass, and bother the poor and hungry who thought the government in Washington was their friend? I can take care of myself; these federal police do not frighten or intimidate me. But what of the poor families who are suddenly faced with two FBI agents asking questions about whether they are hungry, about how much money they make, about what do they eat, about why don't they eat better. What about the fact that those agents enter their homes, look into their kitchens, invade their private lives and private property. We know that this has happened to at least one family here in San Antonio who were visited by the 'two men with suits on.' . . .

"These people - poor and hungry though they may be - have their own dignity and their own worth as human beings. It is not their fault that they are hungry, that they are poor, that they must depend upon a paternalistic and inadequate system for their daily bread. It is very hard for these people to tell their story of deprivation and hunger. They have told it often here - to the Citizens' Board of Inquiry, to the CBS-TV crews and, therefore, to the nation, and to me and those who work here every day. They shouldn't be forced to tell it again to federal agents, to agents of the FBI."

Agents of the FBI and of Mr. Whitten's committee, such as Joseph Scully and Nicholas Wultich and Carl Bennett, have been all over, as have investigators from the Federal Communications Commission, like Mr. Merlin Smith. They have been to Loudoun County, Virginia and to Dr. Donald Gatch in South Carolina and to photographer Al Clayton in Nashville and to nurses and hospital administrators in San Antonio. They have tried twice to contact Dr. Raymond Wheeler, a white physician in Charlotte who is chairman of the executive committee of the Southern Regional Counil, and who was one of the six physicians who wrote "Hungry Children," a report on conditions in Mississippi issued by the Council. They asked a nurse in the Robert B. Green Hospital in San Antonio whether the CBS camerman "behaved themselves." They asked Dr. Gatch whether he actually saw hungry children as part of his practice. They wanted to know from Al Clayton "where my pictures were from." They closely examined Sister Mary Rachel, a nun who works with the poor in San Antonio - and afterward, in indignation, she wrote to Rep. George Mahon of Texas to "emphasize" that from "eleven to fifteen days out of every month . . . some people go hungry or are in need of some help because of low income or not enough welfare. . . ." She also insisted that the commodity food program was not "sufficiently varied," nor did it provide "enough to last for the time indicated or needed." As for the food stamp program, in rural areas many people can't get them "because of the distance" - away from county offices, which in Jamie Whitten's Mississippi or in parts of Texas or Appalachia are not notoriously friendly to poor blacks or poor Mexican-Americans or poor whites.

FEDERAL POVERTY WORKERS ARE QUESTIONED BY THE FBI

In addition, all sorts of people in the federal government were interrogated, people who might have a thing or two to do with poverty programs, with programs designed for children; and anonymously, anxiously, they talked to one of us about their fears. What does this mean, and worse, portend? Well, of course, their fears are groundless. In New Orleans on December 9th, almost the instant that Father Ruiz was telling his story to the Civil Rights Commission in San Antonio, our new Vice President told the poor that "trained professionals" would soon be, doctors to the poor, who are now to be considered patients. Yet, Mr. Agnew may find that he can't always rely upon some of those professionals, who ordinarily can be counted on to propose nothing very radical, who knows where the money for their food comes from, who clothe the most obvious common sense in all sorts of garish mumbo-jumbo talk.

One "professional," very well trained indeed, is Dr. Herbert Pollack, a nutritionist who works for the institute for Defense Analysis. On December 10th Dr. Pollack was to testify before officers of the Food and Drug Administration, which is holding hearings on the regulations that govern special dietary foods. Recently Dr. Pollack severly criticized the accuracy of the report, Hunger, U.S.A., and in the hearings a number of attorneys were prepared to question him about his views on hunger in America. As a beginning he was asked questions about his work - in 1934 he did a nutritional survey among the urban poor - and was requested to list some of the causes of malnutrition. No, he didn't want to do that. He asked for a recess. Then he angrily walked out of the hearing. Fifteen minutes later a government attorney announced that "this concludes the availability of Dr. Pollack." It is virtually unprecedented for a witness before such a hearing to behave like that - and the FDA Hearing Examiner, David Harris, remarked that, "If I had the power to hold Dr. Pollack in contempt, he might be held in contempt."

Yet, if some of Mr. Agnew's "trained professionals" turn and run under fire, others are far stronger. Mr. J. Edgar Hoover chooses former lawyers and accountants for his agents. All of us, Mr. Agnew and our malnourished poor included, can thus rest assured that if anyone is plotting to feed hungry American citizens, the heart of the conspiracy will be exposed by the well-trained and patriotic men who work for the Federal Bureau of Investigation.

U.S. COURT DEMANDS FOOD FOR HUNGRY CALIFORNIANS

U.S. District Judge Stanley Weigel has ordered federal and state officials to immediately provide a food stamp program for all needy Californians.

His order yesterday sets up a panel of three federal district judges to study constitutional questions involved in setting a precedent that may apply to all other states.

In a hearing December 23, attorneys for the California Rural Legal Assistance program argued 16 of the state's counties have no food stamp program.

FINDINGS

Judge Weigel's order was based on stipulated findings:

> There is substantial hunger in California counties not implementing federal food programs.
>
> Federally owned surplus food is available to feed the hungry in the state.
>
> The U.S. Department of Agriculture has a surplus of $300 million which can be used to feed the hungry throughout the United States.

Attorneys for the CRLA said Jude Weigel's order marks the first time such action concerning the food stamp program has been taken, although petitions have also been filed in 26 other states.

Thirty San Benito County farm workers and their families and others supporting the program took part in the local hearing.

EVIDENCE

According to the attorneys the evidence at the hearing showed there was "a substantial amount of hunger in California counties without federal food stamp programs."

One witness, Alejo Hernandez, a farm worker and father of nine testified he earns less than people on welfare receive and has less available for food for his children than is spent in the state annually for seeing-eye dogs.

Another witness, Mrs. Alta Hernandez, a widow and mother of five, said she spends 65.9 percent of the family's limited income for food, while the average middle class family spends only 20 percent of its income.

Judge Weigel's order set no date for the three-judge panel to meet, but his order was effective immediately.

ATTORNEYS

The CRLA attorneys petitioning the court are Robert Gnaizda, Martin Gliek and Don Kates, Jr.

Early this month, Agriculture Secretary Orville Freeman announced in Washington the food stamp program will be liberalized so the poor can buy more food for less cash.

He said that more than 500,000 persons would be affected and that the policy changes would cost an additional $14 million during the rest of the fiscal year ending June 30.

A family of four in the South, with a monthly income of under $30, now can buy $43 worth of food for $2 in stamps. This ranges up to $60 in food for $26 worth of stamps for a family in the $60-$70 monthly income category.

Beginning in February, the range will be increased from $58 worth of food for $24 in stamps to $62 worth of food for $24 in stamps.

THE NORTH

In the North, a four-person household with monthly income less than $20 now receives $52 worth of food for $2 in stamps, or $66 worth of food for $28 in stamps at the top of the range.

Under the liberalized plan, $2 in stamps will buy $60 worth of food for the poorest families. Those in "higher income" brackets of $60-$70 a month will be able to buy $66 worth of food for $26 in stamps.

In the past, the 16 counties without food programs have contended the decision on using federal food supplies rest with the county board of supervisors.

During the court argument, Judge Weigel said the tact of descrimination appeared obvious when federal food was supplied to a needy person in Santa Clara County but not to a similar person in San Benito County.

Hunger

GOING HUNGRY IN AMERICA

"I don't know, Orville," said Senator Robert Kennedy to the Secretary of Agriculture, "I'd just get the food down there. I can't believe that in this country we can't get some food down there." Others too will find it difficult to believe the facts revealed here about the failure of the Congress and the federal government to assure that millions of people in the richest, most bounteous land in the world are saved from malnutrition or starvation. This is the latest in a continuing observation of how government works -- or doesn't -- by the ATLANTIC'S Washington editor.

10 MILLION PEOPLE SUFFER FROM MALNUTRITION, SOME STARVE, BECAUSE OF POVERTY

From time to time during the past few years, there has come to public attention the jarring news that a great many Americans do not get enough to eat because they are too poor. The words "starvation," "hunger," and "malnutrition" have all been used to describe the phenomenon. Each of these conditions is difficult to isolate, or even describe, or to separate from related diseases, because there has been little scientific or official interest in the problem. Yet it is generally agreed, even among government circles, that, at a minimum, ten million Americans are malnourished, and some of these are chronically hungry, even starving, because they are poor.

In 1967, a group of doctors, including Robert Coles of Harvard University, Joseph Brenner of MIT, Alan Mermann and Milton J. E. Senn of Yale, and private practitioners from Yazoo City, Mississippi, and Charlotte, North Carolina, took a foundation-sponsored trip to Mississippi to investigate the problem and returned to tell the Senate Subcommittee on Poverty what they had seen:

> "In Delta counties . . . we saw children whose nutritional and medical condition we can only describe as shocking -- even to a group of physicians whose work involves daily confrontation with disease and suffering. In child after child we saw: evidence of vitamin and mineral deficiencies; serious untreated skin infestation and ulcerations; eye and ear diseases, also unattended bone diseases secondary to poor food intake; the prevalence of bacterial and parasitic disease, as well as severe anemia . . . in boys and girls in every county we visited, obvious evidence of severe malnutrition, with injury to the body's tissues -- its muscles, body , and skin as well as an associated psychological state of fatigue, listlessness, and exhaustion. . . . We saw children who don't get to drink milk, don't get to eat fruit, green vegetables, or meat. They live on starches -- grits, bread, Kool Aid . . . In sum, we saw children who are hungry and who are sick -- children for whom hunger is a daily fact of life and sickness, in many forms, an inevitability. We do not want to quibble over words, but "malnutrition" is not

---

quite what we found. . . . They are suffering from hunger and disease and directly or indirectly they are dying from them -- which is exactly what "starvation" means."

DOCTORS SEE CONNECTION BETWEEN MALNUTRITION AND BRAIN DAMAGE IN CHILDREN

There is developing, moreover, a disturbing body of scientific information that indicates a connection between malnutrition in children, in particular insufficient protein, and brain damage. Seventy-five percent of the mental retardation in this country is estimated to occur in areas of urban and rural poverty.

The situation in the Mississippi Delta has been particularly acute because of unemployment as a result of mechanization, and among other things, other government programs: controlled planting, and a new one-dollar-an-hour minimum wage, which led many plantation owners to lay workers off rather than pay it. Mississippi's welfare program pays an average of $50 a month to a family with four children, but payments are made only if the wage earner is old or disabled or blind or has left his family. Thus there are thousands of families in the Delta with no jobs and no income.

There are two basic government programs which are intended to improve the diet of the poor -- the sale of food stamps and the distribution of food. The local county chooses one or the other -- or neither. Government officials point out that for some time every county in Mississippi has had one of the programs. In response to the reports that people still were not getting enough to eat, the Secretary of Agriculture said to the same Senate subcommittee: "They got some food because they were obviously walking around. I don't know where they got it."

WHY ARE THE GOVERNMENT FOOD PROGRAMS SO SHOCKINGLY INADEQUATE ? ? ?

For some time, in fact, it has been known within the government that the food programs had serious shortcomings, in the number of people being reached and in the form of the assistance. In addition, over the past year and a half or so, domestic hunger has been the subject of a great deal of publicity. A solution would not be all that expensive: government studies have indicated that adequate food distribution for everyone who needed it would cost between $1.5 billion and $2 billion more than the roughly half billion being spent on stamps and commodities now. (No one has calculated, in terms of illness and wasted and dependent lives, what it costs not to provide everyone with an adequate diet.)

There were also short-range and less expensive actions that could have been taken to alleviate the most severe distress. While it would be inaccurate to say that nothing was done, the response was slow, piecemeal, and, it often seemed, reluctant. More thorough responses, including a national commitment to see that no one was denied an adequate diet because of low income, were considered, and at several points they were almost made. Because of the impact on the lives, every day, of several million people, the reasons why they were not are worth exploring.

The food programs are run by the Department of Agriculture because they were begun not so much to help the poor as to dispose of embarrassing agricultural surpluses. Food packages are distributed once a month to the poor who live in counties which happen to want the distribution and are willing to pay for it. (Only recently, the federal government began to pay for the packages in a few of the poorest counties.) "But," Orville Freeman, the Secretary of Agriculture, has testified to Congress, "That doesn't mean that every person gets it, because a poor person who lives miles away from the distributing point where 100 pounds of food is made available for a month may very well (a) not even know about the distribution; (b) not be able to get there; and (c) not be able to carry it away." (One congressman replied: "I know dead soldiers who didn't miss out because they lived 10 miles from a recruiting office."

The commodity packages have only recently approximated what even the Agriculture Department considers a "minimum adequate" diet, but the cheerful assumption is made that they are a "supplement" to a family's food supply. The commodity package has been periodically expanded, to the point where last summer, under public pressure, the Department announced that it would now contain some twenty-two items. The list is theoretical, however; whether the various items actually end up in the package depends on whether they are in sufficient supply and whether the local community elects to include them.

It takes tolerance for tedium and some culinary ingenuity to make edible meals of the surplus packages, which until last summer consisted mainly of such things as flour, cornmeal, rice, dried peas, dried beans, bulgur. Formerly they contained thirty ounces of meat for each person for an entire month; now the packages are supposed to contain more meat, dried eggs, evaporated milk, canned chicken, canned vegetables, and some others. The wrapping is to be prettier, and recipes are to be supplied, although many of the recipients can't read.

POOR ARE ASKED TO PAY AS MUCH AS 35 to 50% OF INCOME TO GET FOOD STAMPS

The food stamp program, in which participants buy stamps which are worth more than the purchase price and use them to buy groceries, is preferred by just about everyone, including the local grocers. Long part of the Democrats' agenda, food stamps were started on a pilot basis in 1961, and were finally authorized by Congress three years later. The stamps are actually a form of income supplement, but that is not the sort of thing that is said out loud, and thus a great emphasis is always placed on how this, too, is to supplement a family's "normal" expenditure for food.

It is difficult to divine just what was in the minds of the federal officials who worked out the details of how the food stamp program should work. Each month a family may purchase a given amount's worth of stamps, depending on their income, in exchange for a given amount of bonus. Somehow, although people in general pay about 18 percent of their income for food, the poor, under the food stamp plan, are sometimes required to pay as much as 35 to 50 percent in order to obtain any stamps at all. If they cannot afford that because of the other demands on their income, or if they do not happen to have enough cash on hand on the day that the stamps are sold, they get no help at all. For example, after eight counties in Mississippi switched from commodity distribution to food stamps, some 32,000 fewer people were receiving food aid one year later. In Arkansas, of the 54,531 households on welfare in counties with the food stamp program, only 9,700 buy the stamps. This is not

peculiar to these states; while some 6 million people are estimated to be receiving either commodities or food stamps now -- roughly 3 million under each program -- it is seldom mentioned that six years ago even more people were being helped, albeit the great part by the inferior commodities program.

Another quirk is that the bonuses go up as the income goes up, so that the higher-income poor end up with more food than those at the bottom of the scale. The Agriculture Department explains that this is because it would not be wise to give those who are accustomed to being worst off too much too soon. In order to be certified as eligible for the program, families must run the gauntlet of the welfare agencies, many of which are not known for their sympathy toward Negroes.

FOOD PROGRAMS SOMETIMES USED AS MEANS TO CONTROL CIVIL RIGHTS ACTIVISTS

The food programs are sometimes used as an instrument of control: people who participate in civil rights activities or who are needed when it is time for the crops to be picked find that the programs are suddenly unavailable. In many areas, food prices go up on the day the stamps are issued.

When the uproar over these failings developed in 1967, the Agriculture Department made a study of the situation in Washington County, Mississippi. It found, among other things, that more than half of those qualified to receive food stamps were not doing so. The investigators were not, however, greatly perturbed. "In general," they reported, "the study indicates that low-income households in this Mississippi Delta county accommodate themselves to a diet which low-income families elsewhere would reject. . . . It may be that low-income families place less value on food than we think."

The Department of Agriculture should not, in all fairness, be expected to demonstrate dazzling expertise in the needs and life-styles of the poor. Its essential mission is to nurture the agricultural economy; the poor are somebody else's department.

Nobody envies Orville Freeman his job, frequently described as "the worst one in town." Freeman's own official biography says it all: "He has been shot at not only by Congressmen, rural and urban, but also by consumers protesting food prices, farmers protesting farm prices, and dissidents of all job descriptions and all colors protesting food programs and poverty." Freeman is a liberal out of the Democratic-Farmer-Labor movement, where he was three-term boy-wonder governor.

"His tendency, in the early years, when the subject of hungry people came up, was to look embarrassed and change the subject." When it could no longer be ignored, Freeman behaved like a man in a trap. Moreover, he could, and frequently did, claim with justification that during his tenure, through initiating food stamps and expanding food packages, an unprecedented amount had been done toward feeding the poor. His injured pride and his combative nature served to deepen his troubles.

DEPARTMENT FUNDS DEPEND ON UNSYMPATHETIC MISSISSIPPI CONGRESSMAN

Jamie Whitten, a 58 year-old congressman from Charleston, Mississippi, chairman of the subcommittee which provides funds for the Agriculture Department's programs and

one of the most powerful members of the House of Representatives, does not believe that anybody in this country is unavoidably hungry, "except," he says, "when there has been parental neglect through drunkenness or mental illness. You're dealing with people who for some reason or other are in a condition of poverty. If they had the training and foresight of other people, they wouldn't be in poverty."

Whitten has installed a number of employees at the Agriculture Department, and there is little that Orville Freeman does that Jamie Whitten dosen't know about. Whitten expects Freeman to consult him before he makes any policy move, and Freeman has decided it is the better part of wisdom to do just that. The congressman is a skilled legislator, however, and knows better than to stand intransigently against the majority opinion of the House. He hasn't often, in fact, made significant cuts in the food stamp program's funds once the House has approved the program. Neither, if he doesn't like what Freeman is doing, is he likely to cut into crop-support funds of such importance to the farm bloc. Whitten had denied money for work in the general area of rural poverty; Freeman is also anxious not to annoy Whitten to the point where he might cut funds which the Department lends to rural areas to build ski slides and golf courses that Freeman feels are important community programs. After a while, the relationship between a Cabinet officer and his House appropriations subcommittee chairman blurs beyond a rational if-I-do-this-he-will-do-that situation. "He simply becomes part of your thinking," says one former Cabinet officer. "He is an automatic part of all your decisions."

The House Agriculture Committee, which sets the policies for which Whitten's group then provides the money, is, to state it gently, disinterested in the poor. The committee's concerns are sheep scrapie and hog cholera and agricultural subsidies. The members of most committees see to it that the benefits of programs they preside over reach their constituents in full measure, but it is no accident that the home districts of a number of the Agriculture Committee members do not have food stamp programs. "These programs are not desired by the power structures back home," says one close observer, "and that's what elects them. The recipients of these programs don't vote."

AGRICULTURE COMMITTEES DOMINATED BY REPRESENTATIVES OF BIG LANDHOLDERS

The situation is similar in the Senate. In all cases, the Agriculture committees are almost entirely populated by representatives of Southern and Midwestern farm districts, with, in a Democratic Congress, the representatives of Southern landholders in charge. Senator James O. Eastland, for example, is the third-ranking member of the Senate Agriculture Committee and its most important determiner of cotton policy. Last year, the Eastland family plantations in Sunflower County, Mississippi, received $211,364 in subsidies. Despite the slipping popularity of the farm programs, the increasing urban and suburban orientation of Congress, these men have enough seniority, and serve on enough other important committees, to make their influence felt. To the extent that the Agriculture Department budget is under attack, they try to keep the budget down by curbing the Department's noncrop programs.

"Freeman decided as a matter of policy," says one of his former colleagues, "that he was not going to antagonize these men. He checked out appointments with them and went to enormous lengths to cultivate them socially. When the food issue came

up and he got caught in his conspiracy with the Southerners on the Hill, his instinctive reaction was to deny that anything was wrong. After all, he was relying on memos from his staff, and they were defending themselves, too."

In April, 1967, the Senate Labor and Public Welfare Committee's Subcommittee on Employment, Manpower, and Poverty went to Mississippi. The subcommittee, headed by Senator Joseph S. Clark of Pennsylvania, was making a nationwide study of the poverty program, and since Senator Robert Kennedy was a member of the group, wherever it went, the press went too. At a hearing in Jackson, Mississippi, Marian Wright, an attractive, soft-spoken attorney for the NAACP's Legal Defense Fund, who had been working in Mississippi, talked about welfare, poverty, and the situation in the Delta. "They are starving," she concluded. "They are starving, and those who can get the bus fare to go north are trying to go north. But there is absolutely nothing for them to do. There is nowhere to go, and somebody must begin to respond to them."

SENATORS KENNEDY AND CLARK CALL ON PRESIDENT TO TAKE EMERGENCY ACTION

Senators Kennedy and Clark said they would take it to the Department of Agriculture when they returned to Washington. Senator George Murphy went them one better and said that the group should "notify the President of the United States that there is an emergency situation, and send investigators and help in immediately." On the following day, Clark and Kennedy toured the Delta. The cameras were not there when Robert Kennedy sat on the floor in one particularly fetid shack watching a listless child toy with a plate of rice, feeling the child's body, trying to get the child to respond, and trying to comprehend. Until then, the senators really had not known how bad it was.

After they returned to Washington, all nine members of the subcommittee signed a letter to the President describing the situation as "shocking" and constituting an "emergency," and calling for specific Administration action. "The White House, after trying not to receive it at all, bucked the letter to the Office of Economic Opportunity, which runs the poverty program, and OEO responded with a press release, its outlines dictated by the White House. The release said there was poverty in each of the senators' home states, too; that the crisis of poverty had been greater before Lyndon Johnson took office; that the Administration had started a lot of programs in Mississippi; that the Congress had cut funds for the poverty program; that "every recommendation in the letter by the Senators has the hearty concurrence of the administration," but there were some legal problems; and "we already know what needs to be done."

The senators' concern and the attendant publicity might, of coures, have been seen by the White House as an opportunity to make major moves to correct the problem, just as it had made it a point to get out in front on any number of issues, such as auto safety or home ownership for the poor, raised in Congress. But this time the President was in no mood to be pushed. Neither he nor Freeman believed that the problem was as serious as Clark and Kennedy said, and both saw "politics" in the whole affair. (Department officials say that Clark and Kennedy were taken on a "pre-arranged" tour by "professionals.") The President knew that neither senator had influence with, in fact they had highly angered, the Agriculture establishment on Capitol Hill, and to the White House these were important people not to anger.

When he did move, and it was not doubted that he would, it would be at a time and in a manner of his choosing.

SENATORS REQUEST FOR ACTION RESULTS IN BUREAUCRATIC FIGHT

The problem of malnutrition had, like most conceivable domestic problems, been put before a secret interagency task force by the White House the year before, as part of the preparations for the Administration's 1967 legislative program. The appointment of the task force, the task force was told, reflected the White House's deep conviction that every American should have an adequate nutritional diet. The task force, headed by Agriculture Department representatives, did not, in the view of the White House, provide sufficient information on either the dimensions of the problem or possible new approaches. Neither presidential aide Joseph Califano, who had hoped to be able to propose a food program, nor his new assistant, James Gaither, was familiar enough with the complexities of the food programs to ask the right questions. Therefore nothing of any consequence was proposed. Following the senators' letter, renewed efforts within the Administration to work something out devolved into angry disputes between OEO, particularly Director Sargent Shriver, who accused Agriculture of incapacity to deal with the problem, and Agriculture, particularly Freeman, who accused OEO of trying to damage their Department and take away the programs. It was a classic bureaucratic fight over turf.

There were two basic issues between the subcommittee and the Administration: (1) the price of the food stamps, and (2) the Secretary's authority to declare an amergency in the Delta and send in extra food. After several months of subcommittee pressure and after prodding by the White House and harassment by Shriver, the Agriculture Department did lower the price of food stamps for those with an income of less than $20 a month to 50 cents per person a month, with a maximum of $3 per family. (This buys $72 worth of food for a family of six, about half what the Department estimates such a family needs.) It also decided to charge all families only half the price in the first month. Prices could not be lowered generally until there was substantially more money for the program, a decision the President would have to make.

The Department resisted the argument that there were people with no income at all who should be charged nothing for their food stamps. For one thing, the Department thought that this was a problem in a small number of cases, and therefore not worthy of great concern. For another, the Secretary believed, as he told congressional committees on several occasions, that the poor could not be trusted with free stamps. "If you proceed, then, to have free stamps," he said, "and you give free stamps to everybody who wants them, what will happen to those stamps? Those stamps, I am afraid, in many cases will be bootlegged. That is what happended back in the 1940s and the 1930s, with the food stamp program. That destroyed the program. The food stamp programs was discredited because those stamps became common currency for all kinds of things, from a wild party, to a beer party, to legitimate uses, to buy shoes." Another view of what ended the earlier program was the almost full employment during World War II.

SENATORS ARGUE THAT SECRETARY HAS EMERGENCY POWERS TO SEND FOOD TO THE DELTA

The senators and others argued that the Secretary should have invoked his emergency power to send extra food to the Delta, using money from a special multipurpose fund

(known as Section 32 for its place in an agriculture law), as he had used it to begin the food stamp program and expand the commodity packages. The Department argued that it didn't really have the power (despite the precedents), that the money really hadn't been budgeted, that it would be bad precedent and administratively inefficient to distribute free food where there were already food stamps; and there was also that danger that if there were two programs the people might start bootlegging. There was also the problem that the Agriculture committees frown on such use of the money.

As the arguments tumbled forth at one private meeting, Kennedy looked at Freeman and shook his head. "I don't know, Orville," he said, "I'd just get the food down there. I can't believe that in this country we can't get some food down there."

Oddly, the one senator who took matters in his own hands and introduced a bill was John Stennis of Mississippi. The Stennis bill would have provided money for emergency food and medical programs, and required a government study of the true extent of malnutrition. (The government had made almost no studies of malnutrition in the United States; the Public Health Service had not seen that to be its concern. The Pentagon, wanting to know about the connection between malnutrition and defense preparedness of foreign contries, had sponsored several studies of nutrition overseas, and there were minor studies of the eating habits of Eskimos and Indian tribes in the United States.)

The Stennis bill went through the Senate quickly. But his shrewd move to cut off talk about his state was not appreciated by the House Agriculture Committee, which let the bill die. Through other congressional routes, OEO was given $10 million in emergency food money and the Department of Health, Education, and Welfare was ordered to study the extent of malnutrition.

POOR PEOPLE'S CAMPAIGN SUCCEEDS IN PUSHING FREEMAN TO EXPAND FOOD PROGRAMS

In September of 1967, in the only public statement on the issue he was to make for a long time, President Johnson said that "we want no American in this county to go hungry. We believe that we have the knowledge, the compassion, and the resources to banish hunger and to do away with malnutrition if we only apply those resources and those energies." He ordered the Department of Agriculture to see to it that, one way or the other, every one of the thousand poorest counties in the nation had a food program. The Department said that there were 331 of those counties that did not, and, to give it a little of the old pizzazz, it embarked on "Project 331."

As it turned out, it was a full year before each of the 331 was said to have a program, for the Department remained highly reluctant to fly in the face of tradition by using federal money and federal personnel to establish a program if the counties resisted. It was also oncerned about what it felt was a bad precedent of having the federal government pay the full costs. In May of the following year, with the Poor People's Campaign beating at his door, Freeman finally announced that this would be done.

Extending the programs to more counties had nothing to do with improving matters for recipients, as in Mississippi. Since greater amounts of money were not committed, it also meant that other less poor counties that were on the waiting list for the food

stamp program would have to continue to wait. Finally sometime after Project 331 was under way it was discovered that Agriculture defined a "poorest" county as one with the lowest average income, rather than one with the largest number of poor people. Therefore, poor people who had the misfourtune of living near too many rich people were out of luck. This covered more counties at less expense, and fewer people were helped.

TASK FORCE REPORTS THAT FOR ANOTHER $2 BILLION ALL AMERICANS COULD HAVE ADEQUATE DIET

The President's encouraging statement may have been prompted by the fact that by the fall of 1967 the White House had set up another secret task force, which once more reflected their deep conviction, they said, that every American should have an adequate nutritional diet. The task force, now headed by representatives of the Budget Bureau, reported that for another $1.5 to $2 billion and in relatively short time the government could provide that adequate diet to every American. Now, however, and for months to come, the Administration was locked in its fight to secure a 10 percent income surtax, from Congress, and Congress' demand that there be substantial cuts in government spending in return. "I don't think anyone realizes how paralyzed we became by that fight," says one Administration official. "I don't think even we realized it."

With the White House feeling under particular pressure to do something about the cities (the Detroit riot had just taken place), and with their own expertise tending in that direction, Califano's staff that fall concerned itself with devising new programs for jobs and housing. Whatever the limitations of these programs in terms of delayed spending, they at least represented a commitment and an effort at new approaches, which were not made on giving the poor sufficient food. Through it all, Mr. Johnson remained unconvinced that the problem was as serious as the critics said, reluctant to take the fight to the Hill, where he had enough problems, and annoyed that no one could tell him exactly how many people were going hungry. (No one knows exactly how many unemployed or how much substandard housing there is either.)

Moreover, there was now no great public pressure on the White House to act on hunger, as there was on behalf of the cities. During all of 1967 and 1968, only a small coterie made the issue a continuing preoccupation: Miss Wright; Peter Edelman of Kennedy's staff; William Smith of Clark's staff; and Robert Choate, a young businessman of some means who took a sabbatical to become a free-lance, largely behind the scenes, and highly effective crusader on the issue. Of the enormous Washington press corps, only Nick Kotz of the Des Moines Register saw the hunger issue as worthy of continuing coverage, whether or not it was "in the news." Of all the lobby organizations, only a few of the more liberal labor groups found the issue to be of even intermittent concern. The Citizens' Crusade Against Poverty, an organization with United Auto Workers backing, was the closet there was to a group with a full-time concern. Early in 1968, it had established a Citizens' Board of Inquiry, which published "Hunger, U.S.A.," a stinging indictment of the food programs.

SOME CONGRESSMEN ARE OUTRAGED BY CBS-TV DOCUMENTARY ON HUNGER IN AMERICA

Around the same time, a coalition of women's organizations published a study of the federal school lunch program which could help children of the poor secure a better meal at least while they were in school. The women's groups found that of the 18 million children receiving free or reduced-price lunches under the program, only 2 million were poor; another 4 million poor children were not being helped. The Johnson Administration had tried to get Congress to restructure this

so that less would go to the middle class and more to the poor, and Congress had adamantly refused. On May 21, CBS broadcast a powerful documentary called Hunger In America.

Several members of Congress reacted to all of this with outrage at the idea that anyone would charge that poeple in their areas were going hungry. Representative W. R. Poage of Texas, chairman of the House Agriculture Committee, wrote to county health officials, the very ones who would be most culpable, and asked if they personally knew of anyone in their county who was starving or seriously hungry. No, replied most of the health officers, and if the people were hungry it was mostly because they were lazy or ignorant. A few said the food programs were inadequate, but Poage did not emphasize that in his report to his collegues.

The response of the politicians was understandable. More puzzling, in light of his professed zeal to get more done, were Freeman's own persistent attacks on the reports. Finding factual errors in the small (they didn't mention that grandma had a pension of $82-a-month), he condemned them in the large. The CBS telecast, he said, was "a biased, one-sided dishonest presentation of a serious national problem."

POOR PEOPLE'S CAMPAIGN MAKES HUNGER THE CENTRAL ISSUE IN ITS APPEAL TO NATION

As the Poor People's Campaign, under the direction of the Southern Christian Leadership Conference, prepared for its March on Washington in the spring of 1968, strategists for both the SCLC and the federal government knew that, as always in these situations, there would have to be a governmental response which would enable the Campaign's leaders to make an honorable withdrawal from the city. First Attorney General Ramsey Clark, then the President himself asked the various government agencies to draw up a list of administrative actions -- which would not cost money -- which could alleviate some of the difficulties of the poor. A March on Washington by a grand coalition of white, black, brown, and red poor, who would encamp in the federal city, bringing their plight to the attention of the country, had been the idea of Martin Luther King. After Dr. King was assassinated, the leadership of the SCLC under Dr. Ralph Abernathy was in disarray. Goals and tactics became difficult to resolve. Miss Wright, who had moved to Washington, was placed in charge of the Campaign's dealings with the government agencies, and worked exhaustingly for weeks for a semblance of order and progress in the demands and responses. On the advice of Miss Wright and others, the Campaign leaders decided upon hunger as the central, most dramatic issue.

Now the issue was at its highest point of public attention. Most of the government agencies did what they could to respond to the marchers' demands. Agriculture, however, remained defensive. In the end, the Agricultrue response consisted of promising to get a food program into each of the thousand counties -- which the President had already done nine months earlier; making more commodities available for surplus distribution; regulations to improve the school lunch program; and improved food packages for infants and expectant mothers. Some Administration officials think the poor were not grateful enough.

As it happended, the major reason this response was so paltry was that the White House was preparing one on a grander scale for the President himself to present, probably in the form of a special message to Congress. It would have revised the entire food

stamp schedule and perhaps lowered the cost to the very poorest to either nothing or a token amount; it would have expanded the size of the food programs so that many more areas could receive them; and it would have carried a commitment to build the programs over time, to the point where every American had an adequate diet. The Budget Bureau squirreled away some money to go with the message. The thought was that it would be delivered around the time of "Solidarity Day," on June 19, when thousands of others were to come to Washington to join the poor in a climactic march.

PRESIDENT'S PROGRAM TO END HUNGER WAS NEVER PRESENTED: HHH TRIES TO INTERCEDE

A number of reasons have been offered for why the President's Solidarity Day Message was never delivered: the mail in the White House was overwhelmingly against the Poor People's Campaign, and Resurrection City was out of control; Abernathy's final speech was likely to carry a stinging denunciation of the war in Vietnam; and the House of Representatives was going to vote at last on the tax bill the following day, and any move at that point by the President to increase government spending might jeopardize the long-negotiated compromise. The most important reason, however, was that the President simply did not want to be in the position of appearing to "respond to pressure." More startling to many was that after the poor had left town and the tax bill had passed, he still declined to move. He was focusing on the budget cuts that had to be made, annoyed at Freeman for getting out in front of him on the issue, still concerned at appearing to respond to pressure, and convinced that now that some legislation was moving on the Hill, it would be unseemly for him, the President, to appear to be running to catch up.

By this time, things were most uncomfortable for Freeman, and he began to press hard at the White House for help -- belatedly, in the opinion of many. His friend Vice President Humphrey tried to help. First Humphrey offered his services as a mediator with the Poor People's Campaign, but the offer was rejected by the White House. Then the Vice President of the United States tried indirect means of communicating with the President. Humphrey wrote to Mrs. Arthur Krim, wife of the President's chief money raiser: "It is just intolerable to me that there is such a problem of malnutrition and undernourishment in the United States. . . . Through it all, there are ways the President could have helped -- in approving some of Orville Freeman's budget requests, in supporting legislation on the Hill, and suggesting administrative change -- but he has not. The thought came that you might be the person who could say a word or two to encourage him."

On Capitol Hill, a bill to expand the food stamp program was moving forward. Originally an Administration request to make a minimal expansion of $20 million (over the $225 million already authorized), under pressure from urban liberals, who threatened to retaliate against a farm bill that was also in the mill, the bill ultimately authorized the program to grow by $90 million in the first year and more after that. After endorsing a substantial increase in the program, Freeman was reprimanded by both Poage and the White House, but when an increase seemed probable, the White House joined in. More spending for the school lunch program was approved, and a special Senate committee was established to "study" the food problem, with a view to trying to maneuver the food programs away from Agriculture committees.

In the very last days of the congressional session, with the President about to make a routine request for additional funds for various agencies that had fallen short of funds,

the machinery around the government -- in the Agriculture Department, in the Budget Bureau, in his own staff -- geared up once more for a presidential request for more funds for food stamps and a major statement on the issue. Instead, he simply requested the $90 million and in the closing rush Congress gave him $55 million. Wait, it was said, for his farewell messages in 1969.

The failure of the Johnson Administration to make substantial progress toward feeding the poor is viewed by many as its most serious domestic failure. It is the cause of disappointment and even anguish on the part of many people within the government. Orville Freeman, for one, professes himself satisfied: "Everything I suggested from the beginning that should be in Lyndon Johnson's program, or damn near it, I have gotten. If he had gone up to Congress with a big feeding program like a bull in a china shop he'd have been under fire, and what would he have gotten? Some newpaper accolades and paudits in some liberal magazines, and trouble with Congress."

FOOD ISSUE POINTS UP THE DANGERS OF THE GROWING DEMAND FOR MORE LOCAL CONTROL

The food issue is an unhappy example of a great deal that can go wrong in Washington. It is also an example, however, of the dangers of the latest fad of "local control." The food programs are examples of programs that are subject to local control -- the local governments request, pay for, and run them -- with the result that those areas which are least responsive to the needs of the poor can also deny them federally proffered food.

The problem is not nearly so insoluble as the events of the past two years would suggest. First of all, given enough money and flexibility, it is generally agreed the food stamp program is not at all a bad device. Choate, for one, suggests that in addition the program be federalized and computerized, to work as automatically and without continual harassment for the recipient as social security. He and a number of others believe that ultimately the food programs ought to be recognized as income supplements and become part of an income maintenace system. That, however, seems a long way off. When asked by the space agency, the food companies have found ingenious ways to pack meals for astronauts in Tootsie-Roll-sized bars or toothpaste-sized tubes. The Pentagon seems to have no trouble keeping the troops in the field well nourished. There are problems of tastes and habits to meet, but if the food industry were less apprehensive about change, or did less cohabiting with the farm block in that great combine they call"agribusiness," a lot more could be done to feed the poor efficiently and inexpensively. The food companies have lately shown more interest in exploring this field -- with government subsidies, of course.

Yet so little was accomplished not because of mechanical or industrial failures, but because of what can happen to men in policy-making positions in Washington. When they stay in a difficult job too long, they can be overwhelmed by the complexity of it all, and they become overly defensive. Man's pride, particularly the pride of a man who can tell himself he has done some good, can overtake his intellectual honesty. Thus, not Southern politicians, not Orville Freeman, not Lyndon Johnson could face the fact when it was pointed out that many people were hungry, that they weren't wearing any clothes. In this they reflected a national trait: it has been easier to stir sustained national concern over hunger in Bihar or Biafra than places at home for which we are more directly responsible. The problems are looked at in terms of the workings of Washington, not in terms of the problems. Decent men could sit and discuss statistical reliability and administrative neatness and the importance of good precedents while people went hungry. The niceties of consensus politics were more important than the needs of some 10 million people. A new Congress and a new Administration ought to be able to improve on that kind of government.

WASHINGTON REPORT

By Ed Willingham

Poverty - Gen.

Hunger Fighters Winning

Tennessean 2-23-69

WASHINGTON—The warriors in the battle against U.S. hunger are weary and see few victories, but they are nevertheless winning some.

One of these warriors, Dr. Robert Coles, of Harvard University medical services, reminded the Senate's Nutrition committee last week that it had been almost two years since he and five colleagues told of extreme poverty, chronic hunger, and malnutrition they had seen in Mississippi.

He said the group had gone to the Agriculture Department and had been told that the department had to work with Rep. W. R. Poages, D-Texas, and Rep. Jamie L. Whitten, D-Miss., respectively, chairman of the Agriculture committee and chairman of the Agriculture appropriations sub-committee.

'Wasted Time'

He said the group had been told that to make an issue of what they had seen would be to waste their time. But they decided to waste it, nevertheless.

Last week, Coles saw little but wasted time as he told the committee that he had in the past few months made three trips to South Carolina and two to Mississippi. In Beauford and Jasper counties, South Carolina, he said he saw what he saw in Mississippi in 1967.

It was "very much what I regret to say I have seen countless times in 10 years of work in the South, in Appalachia, among migrant farmers and in the ghettoes of our cities.

". . . Why, two years later, must these children still go hungry, still be sick? Why must families essentially without money be asked to pay for food stamps with money they don't have? Why do American children get born without the help of a doctor, and never, never see a doctor in their lives? It is awful, it is humiliating for all of us that these questions still have to be asked in a nation like this . . ."

However, Coles could have taken some solace from the record of the past two years.

Last Tuesday, the Senate nutrition committee, now studying the problem and later to recommend what to do about it, fought on the Senate floor for $250,000 for its work. A $100,000 cut had been recommended.

The fact that the committee got the $250,000 may be less significant than the fact that the Senate decided not to have a record vote on the issue. And when the vote was taken, there were only a few weak "no's" to be heard.

Worm Infestation

On Wednesday, Coles, Dr. James P. Carter, of Vanderbilt and Meharry, and two University of South Carolina officials told of a study that found Negro children in the two South Carolina counties seriously malnourished. Almost 75% of them were infested with worms.

Dr. James Carter
Battles against hunger

"As far as hunger is concerned, you can ask them and they will tell you they are hungry," Dr. Carter testified.

But on Thursday, Secretary of Agriculture Clifford Hardin announced that the neediest of the poor in the two counties would receive free food stamps and that this would be a "pilot" project. This held out hope to those who have longed contended that, for at least some, the stamps should be free.

Secretary of Health, Education, and Welfare Robert Finch is talking about action on the hunger problem. And it has become possible that Agriculture, unless it bears fruit, will lose some of the vineyard it has presided over.

Encouragement also should come from the Agriculture budget for food programs—school lunch, special milk for school, commodity distribution, breakfast at school, and food stamps.

Agriculture Department obligations for these purposes have increased from $900 million in fiscal 1968 to $1.2 billion in the current fiscal year. And $1.4 billion is in the budget for fiscal 1970.

This is an increase of half a billion dollars in two years.

When Orville Freeman left as secretary of the Department of Agriculture he said an additional $1 billion was needed to do what should be done in the food field. Even this could come if the warriors faint not.

"PILOT PROGRAM" OF FOOD STAMPS IN BEAUFORT AND JASPER COUNTIES TO MEET CONDITIONS OF MALNUTRITION

PERSONS ELIGIBLE FOR FREE FOOD STAMPS: Families of 3 or less earning less than $20 monthly.

Families of 4 or more earning less than $30 monthly.

WHAT CHANGES DOES THE PILOT PROGRAM PROVIDE? Previously, families earning under $30 monthly paid 50¢ per person monthly - with a maximum of $3 for food stamps. Now those families earning less than $30 monthly will receive stamps free.

HOW MANY FAMILIES IN BEAUFORT COUNTY EARNING LESS THAN $30 A MONTH ARE ABLE TO PAY THE PRESENT MONTHLY CHARGE OF 50 CENTS EACH? The director of the Beaufort County Welfare Department stated on February 26 that 179 out of the 180 families certified in this income category are now obtaining their food stamps. Thus, the "pilot program" will enable one family to get stamps that was not using them before. Such a program cannot cure malnutrition in Beaufort County.

HOW DOES THE "PILOT PROGRAM HELP FAMILIES EARNING MORE THAN $30 monthly? Not at all.

WHAT PERCENTAGE OF THE TOTAL POPULATION DOES THIS GROUP REPRESENT? Of the 8,377 families in Beaufort (1960 census), 180 families represent 2 percent of the total population. 14 percent of the Beaufort County population earn less than $1,000 a year, another 13 percent earn less than $2,000, and a total of 41 percent earn below $3,000, the established amount denoting poverty.

The $30 monthly category entitled to free food stamps represent an annual income of $360.00- or one-tenth the poverty level income.

WHY SHOULD THE "PILOT PROGRAM" BE EXPANDED? 99.4 percent of the families to be covered by the pilot program are already participating; this group represents 20 percent of the families taking advantage of the program.

Families above the $30 monthly income are the ones who often cannot afford to buy food stamps, because so little of their minimal income would be left for electricity, fuel, school costs, clothing, and rent for some. Conditions of malnutrition cannot be dealt with through the program as presently set up.

HOW ADEQUATE IS THE AMOUNT OF FOOD STAMPS ISSUED PROVIDING A NUTRITIONAL DIET? Totally inadequate to correct problems of malnutrition.

WHAT IS THE AMOUNT OF FOOD STAMPS AVAILABLE UNDER THE PILOT PROGRAM?

FAMILY SIZE	TOTAL STAMPS ISSUED FOR MONTH	AMOUNT PER MONTH PER PERSON
1	$16	$16
3	44	14.67
5	66	13.20
7	80	11.45
9	90	10.00

HOW MUCH CONSTITUTES A NUTRITIONAL DIET? The S. C. Department of Welfare in its manual uses a chart based on the findings in 1948 by the Department of Agriculture and the S. C. Welfare Department entitled "Cost Of Minimum Food Budget According to Age"

Age		Amount Per Month
Child	1-3 years	$ 9.00
	7-9 years	14.00
Boy	13-18 years	19.00
Adult		16.50

The Agriculture Research Service of the Department of Agriculture gives food plans at three cost levels in September, 1968:

		Low Cost	Moderate Cost Plan	Liberal Cost Plan
Child	1-3 years	$18.20	22.80	$27.30
"	6-9 years	26.30	33.70	41.80
Boy	15-20 years	41.20	52.20	62.80
Man	20-35 years	35.50	45.20	56.20

WHAT DO SOME PEOPLE SAY WHO GET FOOD STAMPS? "My stamps run out about the third week" ---- "I can't afford to give my child milk on the food stamps"----"I can't get soap or toilet paper with food stamps, and nothing left I can use to buy them"

HOW MANY STAMPS SHOULD BE PROVIDED UNDER THE "PILOT PROGRAM?" Enough stamps to provide a nutritional diet in 1968 - an average of at least $30 per month per person.

WHAT MINIMUN PROVISION SHOULD A "PILOT PROGRAM" CONTAIN?

1. Free food stamps to families with an income of less than $40 per person; families earning more should pay no more than 20 percent of their income.

2. Enough food stamps to provide a nutritional diet.

3. Creation of an Advisory Committee to oversee the administration of the program; most members of the committee should come from persons receiving food stamps.

4. Additional staff be hired for the program, to come from low-income groups.

5. Food stamps should be available by mail on a weekly basis, if desired.

6. That transportation be provided in rural areas to food stores.

7. That a nutritional-educational program be instituted, staffed by people who can communicate with the poor.

8. That all persons with income less than $30 a month be placed on welfare immediately.

Hunger

S.C. Hunger Group Hits Free Food Stamp Rules

By Bruce Galphin
Washington Post Staff Writer

A group representing hungry people in two South Carolina counties vowed yesterday to send a busload of their number to Washington this weekend to protest rules of a new free food stamp program.

"We want people to see the importance of making the pilot program successful," said a spokesman of Welfare Rights chapters in Beaufort and Jasper Counties.

At meetings in the counties Wednesday night, about 150 members of the group vowed to boycott the stamp program —despite their need—to dramatize their demands.

When they reach Washington, they say they will seek "confrontations" with people who administer the food program, and with other officials like Sen. Ernest Hollings (D-S.C.) and James Farmer, Assistant Secretary of Health, Education and Welfare.

Meanwhile, another Deep South Senator joined Hollings in appealing for Federal food help. Sen. Herman E. Talmadge (D-Ga.) asked Agriculture Secretary Clifford M. Hardin whether free stamps can be provided for Georgia families "with grave hunger problems."

Talmadge, a member of the Senate Agriculture Committee, said he realized that under present law, it is not possible "to distribute free food stamps to every person who may be in need."

The Georgia Senator wrote Hardin at the request of William H. Burson, Georgia's welfare director.

Despite the protest about the rules, the Agriculture Department said yesterday that it will launch its pilot free stamp program next Monday.

In general, the Welfare Rights group wants liberalized allowances, participation of the poor in administering the program, and hiring of staffers to inform the hungry of the new program.

Thus far, only about 200 families have been certified eligible for free stamps on the basis that they have incomes of less than $30 a month. Hollings and Welfare Rights people estimate about 2500 people actually are eligible.

The Welfare Rights demands also included:

- $40 a month in food stamps for each eligible person. (The present sliding scale is much lower.)
- Placing all persons under the $30-a-month level on welfare immediately. To be eligible now, persons must be elderly, blind, disabled or a dependent child.
- Providing free transportation to grocery stores for persons on coastal islands and in other isolated areas.
- Establishing an education program on nutrition, taught by "those who can communicate with the poor."
- Making stamps available weekly instead of monthly, and mailing them when requested.
- Adding to the food stamp staff, and training poor people to fill the jobs.

file

***

Would it be possible to have someone do a "fact sheet" which could be sent out with the film "Hunger in America." There are a few specifications which probably need updating such as any changes in the extent of the Food Stamp Program, its cost to recipients, and any change in the Agriculture Department's willingness to use its emergency power and in such matters as changes in the Surplus Commodities program or the Agriculture Department's return of funds to the Treasury which might have been used for food distribution.

The briefer, the better. If whoever does it would like to see the film again this could be arranged. I would like such a person's comments also on what might be included in a discussion guide to go out with the film.

Let me know what the possibilities are and I can begin to work out arrangements with whoever you think should take this on.

Thanks.

Attack on Hunger

Administration Moves To Fight Malnutrition In Cities, Rural South

Food Stamp Plan Expansion Mulled; Pregnant Women, Children Get Special Aid

Enriched Soft Drink Studied

By BURT SCHORR
Staff Reporter of THE WALL STREET JOURNAL

NEWARK, N.J.—The Government's mounting concern about malnutrition is making itself felt in Northern slums as well as in the dirt-poor rural Southern communities that have been in the spotlight lately.

Even the traditionally farm-oriented Agriculture Department is active in the cities—as Mrs. Nanette Adams of this riot-scarred metropolis can attest.

Mrs. Adams is a welfare recipient, a mother of nine and a black activist who wears her hair Afro style. She's also a leader of Newark's "nutrition squad"—14 Negro and Puerto Rican women hired by the New Jersey Cooperative Extension Service under a new Agriculture Department "Outreach" program. Their mission is to boost participation in Federal food relief programs and teach the poor to prepare more nutritious meals.

Until now, state extension services have concentrated on serving middle-class, mostly white farm families. But the prime target area for Mrs. Adams and her co-workers is Newark's shabby Central and East Wards. In only a few weeks, they have persuaded scores of Negro and Puerto Rican families to enroll in the city's underutilized program for distributing free Federal commodities. One of those aided is a Spanish-speaking mother who had been pacifying her 10 children's hunger pangs with sugared water.

Bad Budgeting

By July 1, some 5,000 such nutrition aides in nearly 600 urban and rural areas nationwide are expected to be counseling 200,000 poor families through repeated home calls. Mrs. Adams, for one, has no illusions about the difficulty of the assignment. Many poor Newark parents fail to budget their limited incomes to provide children with milk, orange juice and other special food needs, she says.

Of special aid to ill-nourished city folk, too, may be an effort sponsored by the Office of Economic Opportunity to develop cheap but highly nutritious food products for the poor. P. Ballantine & Sons Inc., a Newark brewing company, hopes to begin test sales in June of a regular-priced soft drink laced with protein and vitamins. The Pillsbury Co. of Minneapolis is considering marketing a high-nutrition sandwich spread, candy bar or food stick.

Under a little-noticed program aiding city and country folk alike, the Agriculture Department is beginning to make available special rations of milk, meat and other nutritious foods to low-income expectant mothers and children six years old and under. At hundreds of clinics and health centers around the country, physicians and nurses soon will be able to prescribe the rations without regard to any Government food assistance that patients already may be getting. Spending on this program will reach nearly $6 million this year and more than five times that much in fiscal 1970, officials calculate.

Food Stamp Expansion

All these efforts could be eclipsed by more important moves now under consideration by the Nixon Administration. One is an expansion of the food stamp program, under which the poor buy stamps at less than their face value and cash them in for food at grocery stores.

Agriculture Department planners want stamp outlays boosted to around $500 million in the fiscal year beginning July 1. The Johnson Administration's budget for fiscal 1970 calls for spending $340 million, up from $280 million this year. Any upward revision would have to clear the Budget Bureau and the Urban Affairs Council. But there are strong hints that the Nixon Administration wants to broaden use of stamps dramatically and will ask Congress for the additional funds.

Even more significant may be a proposal for higher welfare payments to the extra-needy. Health, Education and Welfare officials are considering ways to boost cash relief in Southern states. A Federal contribution of $30 monthly in Mississippi would quadruple the state's average payment per person, making it easier for families on welfare to scrape up food stamp money and increase their food buying.

Resistance Likely

These costly and controversial plans may not materialize in full any time soon. They'll meet resistance, on budget and other grounds, both in the Administration and in Congress. Some Southerners insist the need for more aid to the undernourished has been exaggerated.

Senate liberals first turned national attention on how the poor eat with hearings that started in Mississippi nearly two years ago and are still continuing. Testimony from scores of witnesses before a special committee headed by South Dakota Sen. George McGovern has indicated that millions of poor families are ill fed.

The most compelling corroborative evidence came a few weeks ago with disclosure of preliminary findings from a nationwide Government nutrition survey. The initial sampling covered 12,000 persons in Texas, Louisiana, Kentucky and New York, most of them poor Negroes and Latin Americans. The studies showed that 15% to 20% of those surveyed were so deficient in essential nutrients that their growth had been stunted or they had been left highly vulnerable to disease.

Though the special Senate committee isn't empowered to draft legislation, it seems clear that testimony it has taken has begun to build support for more action against malnutrition. One sign: The overwhelming Senate vote last month to reject a proposed $100,000 cut in the committee's 1969 budget, providing instead the full $250,000 requested. Also notable was the confession by Democratic Sen. Ernest Hollings of South Carolina that some people in his state were hungry. Pressed by Sens. Hollings and McGovern, the Agriculture Department broke with Johnson Administration precedents and

Please Turn to Page 21, Column 1

Attack on Hunger: Administration Is Moving to Combat Malnutrition

Continued From Page One

began a test of free food stamps in Beaufort and Jasper counties, S.C.

The real test of Congressional sentiment probably won't occur until after President Nixon sends up his anticipated nutrition message. The proposals may be ready soon, however, perhaps in the next 10 days.

The President's specific recommendations can't yet be predicted. But Agriculture Secretary Clifford Hardin has declared that the Nixon Administration hopes to move with every possible resource . . . to remove malnutrition from our land," and department planners are taking this as their cue.

Cutting Food Stamp Costs

Their $500 million food stamp proposal might bring the total number of recipients to nearly five million persons by June 30, 1970, compared with the 3.6 million projected for June 30 this year. The expansion might come largely through lowering stamp costs for households whose monthly income totals over $70. (Recent liberalizations have benefited those below that level.)

Agriculture Department planners also want an expansion of the school lunch program. They figure it provides only three million of about seven million poverty-level students with free or reduced-price meals. Many of the remaining four million attend schools in older cities like Philadelphia or Detroit where the program doesn't operate in rundown core areas for lack of cafeteria facilities.

The supplemental feeding for mothers and small children has already been endorsed by the conservative Democratic chairmen of the agriculture appropriations subcommittees, Sen. Spessard Holland of Florida and Rep. Jamie Whitten of Mississippi. The program is due to serve some one million persons by mid-1970.

In Guilford County (Greensboro), N.C., a pilot project now in operation means public health nurses no longer need dig into their own purses to buy baby food for moneyless mothers being released from maternity wards. Instead, doctors write food prescriptions for redemption at the county commodity distribution center. (One month's ration for newborn infants: 30 cans of evaporated milk, 48 ounces of corn syrup, 28 ounces of farina and 46 ounces of canned fruit juice.)

Explaining Directions

Two nutrition aides trained by the North Carolina Extension Service make follow-up visits to the homes where food has been prescribed. "Many of our mothers can't read enough to learn from package directions how to mix dry milk or make a tasty meal from powdered scrambled eggs; that's where the aides come in," says Dr. Sarah T. Morrow, Guilford County health director.

Here in Newark, the nutrition aides play a similar role. Knocking on doors in a ramshackle apartment building is how one member of the city's nutrition squad, Mrs. Gladice Pagan, discovered the 10 children (ages eight months to 13 years) whose mother was feeding them sugared water.

The family ran out of food money after the father became too ill to work at his $98-a-week candy-factory job. Mrs. Eloise McClindon, the extension service nutritionist in charge here, contributed $4 of her own to make an immediate purchase of milk for the children. Then one aide helped the mother obtain her initial ration of free Federal commodities (shelling out $2 to have the foodstuffs delivered to the woman's home) while a second looked after her children. The aides have continued to visit the family every few days.

The Irony of Hunger in the Land of Plenty

It Exists, and Children Feel Its Effects the Rest of Their Lives

"They live on starches — grits, bread, flavored water."

— From Southern Regional Council Doctors' Report on Hunger.

NEWS photos in the daily press occasionally show starving Biafran children, innocent victims of the war between the African nations of Nigeria and Biafra. Their bellies are bloated and their hair is curiously blond.

They are suffering from kwashiorkor, a disease caused by severe protein and general nutritional deficiency.

Americans, who pride themselves on living in the best-fed nation on earth, would find it hard to believe that many cases of kwashiorkor exist in the United States.

In fact, hunger and malnutrition may be far more serious in this country than has been generally assumed, judging from reports of doctors conducting studies in poorer sections of Texas, Louisiana, Kentucky, New York, Mississippi, and other areas.

One such report was given recently by Dr. Arnold E. Schaefer, director of a National Nutritional Survey conducted for a senate committee headed by Sen. George McGovern (D., S.D.). It is the first complete study ever

nities showed that malnutrition was the same or in some cases higher than in six Central American countries. He told the committee seven cases of kwashiorkor were found thus far during the National Nutritional Survey.

"We did not expect to find such cases in the United States," he said. "It is important to bear in mind, and perhaps shocking to realize, that the problems in the poverty groups in the U.S. seem to be very similar to those we encountered in the developing countries."

Other doctors and scientists in the nutritional study group told the committee how malnutrition stunts millions of children even before they are born. It begins with the under-fed pregnant woman whose fetus fails to develop normally, causing a high rate of infant mortality.

Weak Bodies, Minds

Among infants who do survive there is a high rate of mental retardation. Further ill-feeding in the critical early childhood years, from birth to age 6, often means smaller and weaker bod-

pointed out that symptoms in individuals are apt to appear only after prolonged malnutrition.

Dr. Schaefer [illegible]

"We saw children whose nutritional and medical condition we can only describe as shocking — even to a group of phy-

nored. They are living under such primitive conditions that we found it hard to believe we were examining American chil-

tritional deficiency.

Americans, who pride themselves on living in the best-fed nation on earth, would find it hard to believe that many cases of kwashiorkor exist in the United States.

In fact, hunger and malnutrition may be far more serious in this country than has been generally assumed, judging from reports of doctors conducting studies in poorer sections of Texas, Louisiana, Kentucky, New York, Mississippi, and other areas.

One such report was given recently by Dr. Arnold E. Schaefer, director of a National Nutritional Survey conducted for a senate committee headed by Sen. George McGovern (D., S.D.). It is the first complete study ever to assess the nutritional health of the U.S.

Another report, published a few months ago, detailed findings of a blue ribbon group of physicians after a survey of Negro children in a six-county area of Mississippi.

Not Pleasant Reading

What both groups of doctors found does not make for pleasant reading. But bad conditions anywhere have a tendency to remain unchanged until they are exposed to the glare of public opinion. And there *are* solutions to the twin problems of hunger and malnutrition in the U.S.

From 1956 to 1968, Dr. Schaefer headed a study of nutritional conditions in 33 developing countries of the world. From the preliminary study, he reported, conditions in the U.S. are as bad, or worse, than the developing countries of Latin America, Asia and Africa.

He noted, for example, that his samplings in Texas commu-

in mind, and perhaps shocking to realize, that the problems in the poverty groups in the U.S. seem to be very similar to those we encountered in the developing countries."

Other doctors and scientists in the nutritional study group told the committee how malnutrition stunts millions of children even before they are born. It begins with the under-fed pregnant woman whose fetus fails to develop normally, causing a high rate of infant mortality.

Weak Bodies, Minds

Among infants who do survive there is a high rate of mental retardation. Further ill-feeding in the critical early childhood years, from birth to age 6, often means smaller and weaker bodies and impaired minds.

"Our studies to date clearly indicate that there is malnutrition," Schaefer said, "and in our opinion, it occurs in an unexpectedly large proportion of our sample population.

"Inadequate food, caloric and nutrient intake, if prolonged, results in weakness, fatigue, susceptibility to disease, and inability to carry out the simplest tasks, and as you know, in its extreme form leads to starvation and death."

The nutritional survey team eventually will study approximately 70,000 persons in ten states. To date, 12,000 have been studied, mostly in Texas. The majority of those studied have an annual family income of less than $3,000.

All Ages Under Study

Fifty-five percent of the sample were Negro, 25 percent were Spanish-Americans, and all age groups were studied. The report

"They live on starches — grits, bread, flavored water."

— From Southern Regional Council Doctors' Report on Hunger.

pointed out that symptoms in individuals are apt to appear only after prolonged malnutrition.

Dr. Schaefer reported finding cases of rickets among children, showing a vitamin D deficiency; winged scapula and pot-belly, which shows a protein and calorie deficiency; goiter, which indicates low iodine intake; anemia; and changes in hair, skin and lips.

The dental picture was even more marked. Eighteen percent of all subjects 10 years of age and over reported it was difficult and painful to bite or chew food. Ninety-six percent had an average of 10 teeth either decayed, filled or missing.

Malnutrition also has pronounced effects on growth of children. In the study thus far, children between ages 1 and 3 fell below the average height reported for U.S. children. It is estimated that 3½ percent of all children studied had retarded growth.

SOME of the physicians who made the Mississippi study also had done a medical study in Appalachia, as well as some other areas of the south. They reported a similarity of conditions in all areas they had observed.

The doctors pointed out the variety of medical services needed by children, in addition to food that has vitamins and minerals and an adequate balance of protein, carbohydrates and fats. They included vaccines, drugs, diagnostic evaluation and corrective surgery.

Condition 'Shocking'

"While all these facts are (or should be) obvious," their report stated, "we saw families who could not take food for granted, let alone any medical care."

"We saw children whose nutritional and medical condition we can only describe as shocking — even to a group of physicians whose work involves daily confrontation with disease and suffering," the report continued.

"In child after child we saw evidence of vitamin and mineral deficiencies; serious, untreated skin infections and ulcerations; eye and ear diseases, also unattended bone diseases secondary to poor food intake; the prevalence of bacterial and parasitic disease, as well as severe anemia, with resulting loss of energy and ability to live a normally active life . . . "

"In boys and girls in every county we visited, we saw obvious evidence of severe malnutrition, with injury to the body's tissues — its muscles, bones, and skin, as well as an associated psychological state of fatigue, listlessness and exhaustion."

The doctors reported they saw children afflicted with chronic diarrhea, chronic sores, chronic leg and arm (untreated) injuries and deformities.

Fed by Neighbors

"We saw homes with children who are lucky to eat one meal a day — and that one inadequate so far as vitamins, minerals or protein is concerned," they said. "We saw children who don't get to drink milk, don't get to eat fruit, green vegetables, or meat. They live on starches — grits, bread, flavored water.

"We saw children fed by neighbors who give scraps of food to children whose own parents have nothing to give them. Not only are these children receiving no food from the government, they are also getting no medical attention whatsoever.

"They are out of sight and ignored. They are living under such primitive conditions that we found it hard to believe we were examining American children of the 20th Century.

"We do not want to quibble over words, but 'malnutrition' is not quite what we found. The boys and girls we saw were hungry — weak, in pain, sick; their lives are being shortened; they are, in fact, visibly and predictably losing their health, their energy, their spirit.

"They are suffering from hunger and disease and directly or indirectly they are dying from them — which is exactly what 'starvation' means."

Free Food Stamps

The physicians pointed out that many families have no money coming in, but since the father is "able-bodied" they are ruled ineligible for welfare. The family does not have the money necessary to buy food stamps.

Their recommendation is that the food stamp program should be changed so that the rural poor can obtain food stamps free. Food distribution activities should be closely regulated and supervised so it ends up in the hands of those who need it.

They recommend that the government change its system of welfare support, so its funds directly reach those who need them, without political or racial bias, and in an amount adequate to their minimum needs for food, clothing and medical care.

Their conclusion expresses our feeling: "It is unbelievable to us that a nation as rich as ours, with all its technological and scientific resources, has to permit thousands and thousands of children to go hungry, go sick, and die grim and premature deaths."

"They are suffering from hunger and disease and directly or indirectly they are dying from them - - - which is exactly what 'starvation' means."

MARCH, 1969

HUNGER IN BEAUFORT

This southern tip of South Carolina has been much in the news lately in connection with revelations about the extent of hunger and malnutrition in Beaufort and Jasper Counties and the efforts being made to combat these serious problems.

Senator Ernest Hollings (D-S.C.) made a tour of Beaufort in late January, and gained headlines in February when he told a Senate Committee that "there is hunger in South Carolina. There is substantial hunger. I have seen it with my own eyes."

Hollings' tour came after many years of work by Dr. Donald Gatch, local physician, Penn Center, and others, to expose the conditions of hunger, malnutrition and intestinal parasitism in the area.

Beaufort and Jasper Counties have now been made the focal point of the federal government's pilot program to distribute free food stamps.

The feeling is very strong, however, among local welfare and food stamp recipients that the pilot program is a totally inadequate response to the pressing problems in the area. They point out that in order to qualify for free food stamps, a family must have a total income of less than $30. a month. The Welfare Department has certified that there are 180 families in Beaufort County with this income level. 179 of these have already been participating in the food stamp program. So in terms of drawing in new people who could not

(Continued on page 3)

COMMUNITY DEVELOPMENT PROGRAM

PENN is now in the midst of its fifth community development training program, with 8 participants from Louisiana and 6 from Beaufort County, South Carolina.

The program runs for 15 weeks, with the first 6 spent at Penn in classes covering conditions in the home state, community development as a discipline, and resources available to community development workers.

Then the participants return to their home communities for 7 weeks trying to make practical application of the things they have learned at Penn. At the end of that period they return to Penn for 2 weeks in a final session where they draw on both practical lessons and theoretical concepts of community development work.

The families of the participants are allotted a subsidy for the 15 weeks, so that those who would not otherwise be financially able can participate in the program.

Previous programs have had participants from South Carolina, Alabama, Mississippi and Georgia.

The program emphasizes education of all kinds, including education through action. Participants in the current session have worked actively with the local welfare rights organization (whose chairman Mrs. Hazel Frazier attended the last training program), and participated in the bus trip to Washington to discuss the inadequacies of the pilot food stamp program with the officials involved.

Food Stamp Move Faces Obstacles

WASHINGTON (AP) — Dr. Robert Coles recalls that two years ago he and five other physicians were told "we were wasting our time" when they sought to convince federal officials something should be done quickly about extreme hunger in the United States.

And when senators sought then to get the Johnson administration to distribute free food in areas of severe malnutrition, they ware rebuffed by federal officials who contended they were without authority to do this.

But last week, in just 90 minutes, two senators convinced Secretary of agriculture Clifford Hardin that he should move against hunger in rural South Carolina by authorizing free food stamps to the poorest of the poor in two counties.

"There's an unwritten rule in Washington that it takes two years for an idea to germinate," said Sen. George S. McGovern, D-S.D., one of the two senators and the chairman of a special Senate committee investigating the extent of hunger in affluent America.

Last week the idea germinated, and the fight to alert the nation it should move more aggressively against hunger at last achieved some measure of success.

These things happened:

—The Senate, rejecting a 40 per cent cut by its Rules Committee, authorized the full $250,000 budget for the committee's investigation. Support was so overwhelming opponents yielded without a roll call. McGovern said, "They were really making a commitment to end hunger in the United States."

—Sen. Ernest F. Hollings, D-S.C., leaped into the vanguard of the fight against hunger with a frank admission that, as governor, he deliberately covered up the problem of hunger and disease. "You don't catch industry with worms—maybe fish, but not industry," he said.

—Hollings' Republican state colleague, Sen. Strom Thurmond, muted his earlier opposition to the hunger probe and said "The main concern should be to find the most effective way to resolve these needs."

—Testimony during three days of hearings clearly established that, in at least two counties of rural South Carolina, hunger and disease are widespread and existing federal efforts are having limited impact.

One witness testified there is evidence that as many as one million persons in the Southeastern United States are afflicted with parasites, including intestinal worms up to 15 inches long

And Dr. Coles, a Harvard psychiatrist-physician, testified that conditions in many places "are a medical and moral emergency of incalculable proportions."

—Sen. Allen Ellender, D-La., a committee member who had sought throughout to defend the Agriculture Department and blame ineptitude at the local level, learned to his surprise parasites exist in his state.

And when one witness described the difficulty people have in existing on meager food and funds, Ellender agreed that "I can't see how these families can live with such a small income."

—Hardin, reversing the policies of Secretary Orville L. Freeman under the Johnson administration, launched what he said is an experiment and what the department termed an unprecedented action in authorizing the first distribution of food stamps without any charge to the recipients. Hopefully, distribution may begin within a week.

"I think it was a real breakthrough," McGovern told a reporter after he and Hollings met with Hardin Wednesday night.

And as the committee concluded the South Carolina phase of its hearings Thursday, the South Dakota Democrat said:

"If we can get the concept established that the poorest people ought to get fed for free, we're well on the way to eliminating malnutrition in the United States."

McGovern said he is pleased at the evidence of changed attitudes in Congress and the executive branch and said. "I think the climate is much better than it was two years ago."

But these significant problems remain:

—Lack of funds. Hardin is using a $45-million fund established by Congress last year for child feeding and other food distribution, but this is a relatively small amount. Aid in South Carolina will only go to a small number of desperately poor, not even to many of those whose plight was described to the Senate committee.

—Health. Testimony to the committee indicated that nothing short of a massive education, sanitation and disease eradication program will improve conditions in such areas since most youngsters who receive one-shot treatment are quickly reinfected when they return home.

—Public apathy. As Sen. Philip A. Hart, D-Mich., put it, "I get a lot more mail expressing outrage at people dying in Biafra than on people starving in Detroit. And they probably passed it (the starvation) going in on the freeway to mail the letter."

—Local resistance. Hardin made certain state and local officials were willing before he announced the South Carolina pilot program. But witnesses told the committee that administration of various food and welfare programs has been hampered by the attitudes on the state and local levels.

—"The political facts"—to use Hollings' term. He said, "Politically, hunger cannot be seen through the eyes of any but the neighbor. The quickest way to cut off help to the hungry is for an outsider to head the program."

—Congressional resistance. While strong support for increased federal food programs has been evident in the Senate for some time, some key House members have succeeded in balking most efforts. Hardin is well aware that congressional committees hold the key to how much money he gets for any new or expanded food programs.

And despite the path blazed this week by Hollings, there still is a tendency among officeholders to become defensive when conditions in their states are criticized.

Thus, Sen. Spessard L. Holland, D-Fla., responded to a newspaper story last week about poor living conditions among migrant workers in Florida's Collier County by saying that when he was there at Christmas he saw some migrants on the streets "and they were apparently well fed, healthy, laughing and happy."

McGovern's committee, however, will go to the scene to find out. Its next hearings will be in Collier County on March 10 and 11.

(continued from page 1)
previously afford to participate, it has added only one family to the rolls of food stamp recipients.

The program does nothing to help families with an income of more than $30. a month, though they are still far below the poverty level.

Press reports say that the entire pilot program is costing the government only $250-500 a month, hardly indicative of a serious commitment to eradicate hunger in the two counties, much less in the whole country.

These points, along with a number of recommendations for strengthening the program, were made directly to the legislators and Agriculture Department officials responsible for the program by a busload of local people, participants in the program, who traveled to Washington in early March.

Since this is a pilot program, designed to be copied throughout the country, people here feel that it should be as adequate as possible. The final word in the battle against hunger has not yet been heard.

BLACK OFFICIALS MEET

PENN was the site of a mid-March Leadership Training Conference for black elected officials and community leaders from Beaufort and Jasper Counties, sponsored by the Scholarship, Education and Defense Fund For Racial Equality (SEDFRE).

The keynote speaker was Mr. Lucius Amerson, sheriff of Macon County, Alabama--the first black man to hold that office in the Deep South in this century.

Among those who issued the call for the conference were Mrs. Frieda Mitchell, secretary at Penn and a member of the Beaufort County School Board, and Mr. Leroy Browne, Penn's maintenance supervisor, who has served for many years on the Beaufort County Board of Directors.

CONFERENCE FACILITIES IN ACTIVE USE

PENN'S conference facilities have been in active use during the past year by civil rights, educational, and church groups.

The Southern Christian Leadership Conference (SCLC), founded by the late Dr. Martin Luther King, held a staff retreat at Penn in January, 1969. Two meetings of the SCLC Citizenship Education Program were held at Penn in 1968, as well as the staff retreat where much of the planning for the Poor Peoples' Campaign was done.

The conference center has also been used in recent months by the World Press Institute, the Southern Education Foundation, the American Friends Service Committee, the United Christian Missionary Society and others.

Penn began making its facilities available for conferences in 1955, and was for many years one of the few places in the South where interracial groups could meet.

PEACE CORPS TRAINING AT PENN

Over 40 Peace Corps trainees spent several months at Penn in the fall of 1968, preparing for their work in Botswana, in Southern Africa.

The trainees were given instruction in Setswana by national language teachers, and trained in teaching, cooperative-auditing, and construction as practical skills for their two years abroad.

This was the third Peace Corps training session held at Penn. The first took place in 1967 for trainees going to Gabon, in Central Africa.

Project director for the Botswana session was Joseph McDomick, Jr., who spent two years as a Peace Corps volunteer in Brazil before joining the Penn staff in 1964.

MEANY (cont'd)

He said that AFL-CIO unions have sponsored and operated Job Corps camps and therefore have "ample evidence" that the program is helping poor youths become "productive citizens employed at decent jobs with decent pay."

"To take away this option for a better life," he added, "would be a cruel blow directed at a group who have already known more than their share of failure and disappointment at the hands of the larger society."

Pres. Hunter P. Wharton of the Operating Engineers, which has helped provide training for equipment operators at Job Corps camps in Tennessee and Montana, wrote all members of Congress urging them to resist the proposed cut.

He attached copies of several of the many letters received by staffs at these camps from graduates of the training centers "who have gone to work to become taxpayers instead of tax eaters."

Wharton emphasized that many of the young persons who come into the Job Corps actually must be trained in reading to remove them from the "functionally illiterate" category.

"Where will they go? Our society cannot afford to carry them forever and they are not capable of caring for themselves," he said.

The Carpenters also assailed the planned cutback. Four of seven Job Corps centers in which the union is training slum youths in carpenter skills are among those slated for closing.

Charging that the cutback was "false economy," Carpenters Treas. Peter Terzick said the centers are "doing a wonderful job" in converting untrained youth into skilled craftsmen.

Among other developments in the aftermath of the Administration's action:

- The House Education & Labor Committee became a center of the fight in Congress against the cutbacks. It heard the first of what promised to be scores of witnesses opposed to the shutdown of the 59 centers.
- The committee's staff estimated that the cut in the Job Corps actually would cost $102 million—$2 million more than it is supposed to save—through losses on equipment, construction, renovation, contracts and termination of services.
- Republican and Democratic congressmen alike were angered over the lack of advance notice of centers to be closed. An aide of Rep. John P. Saylor (R-Pa.) said the oversight was typical of the Administration's "non-working relationship with the Hill."
- Youths at the Kilmer Job Corps Center, where 1,700 are being trained in job skills, conducted a peaceful march to demonstrate their opposition to the center's scheduled closing. They issued a statement asking, "If the Job Corps is closed down, where will we get our chance?"

Next Guarantee: Right to Be Fed

By DAVID HAWKINS
Editorial Staff Writer

THE RIGHT to be fed has not yet acquired any constitutional guarantees. But lawyers for the War on Poverty are heading that way by arguing that selective relief of hunger denies equal protection of the laws to the needy.

The U.S. Department of Agriculture (they're arguing in federal district court here) can't feed one family and not feed another just because Needy Family No. 2 lives in a Texas county that has no federal food distribution program. The Fourteenth Amendment won't stand for it. Everybody eats under equal protection of the laws.

It's a good starting argument. The Fourteenth Amendment lays duties and restraints on the states and their subdivisions—and on nobody else. A state can't take any action to abrogate a federal law, and neither can the counties—106 of which in this state have declined to set up federal food distribution programs.

BUT, AS THE Justice Department—now on the other side of the argument—points out, it depends on what kind of federal law you're talking about. Some laws bear in their bosoms permissive phraseology.

Such a law is the Commodity Distribution Program—which doesn't direct but only enables counties to take part in the food distribution program. The U.S. Department of Agriculture can propose, sure enough, but the county can dispose, and its word is final. The law provides for a federal government-county agreement. The law doesn't tell the county, do this: It says, do this if you've a mind to.

No civil-rights law ever takes that tack—which is pretty good evidence that the Commodity Distribution Program doesn't qualify as such and that the right to be fed doesn't as yet rank with the right to vote or the right to accommodations such as food or lodgings or the right to buy property even if the owner doesn't want to sell. But the right to be fed seems all the same on its way to becoming a substantive right—via the Fourteenth Amendment, which the poverty people have so widely chosen as a vehicle.

That amendment enshrines—if that's the word—the civil guarantees that the Reconstruction Congresses decided minorities in the conquered Southern states needed to have against state oppression.

"No state shall deny" is the key to the outlook of the framers who gave "due process of law" and "equal protection of the laws"—things that the states in question were then habitually denying—special mention.

CIVIL-RIGHTS LAWS of recent years have, in the minds of some, made good what the amendment only promised a century ago. If any civil right has been left unguarded, nobody spoke up for it—probably because people were busy thinking up new ones. And the latter habit led to a new view of the Fourteenth Amendment—the one that the poverty people are pushing today.

The Fourteenth became, in effect the inspirational fount for even newer guarantees—economic ones.

The change hasn't been all that recent. Martin Luther King, for one, helped blur the old distinctions. He saw as dismal a pattern of white oppression in hunger and joblessness as in what he had earlier denounced as civil wrongs. The country, he said, owed the minorities both bread and the ballot.

The War on Poverty grew out of the gradual identification of the two as one in political oratory.

Ruling Democrats, in short, realized that the political appeal of civil-rights laws was not only used up but dangerous to the public peace. Registering Negroes in Mississippi gave way to promissory bribes to ghetto rioters. The general evil of poverty took first rank in the new liberal demonology.

CONGRESS HAS YET to codify, the Supreme Court has yet to discover any such prescriptive right as that of being fed or of receiving free food.

But a free food program—a revision of the old share-the-cost Food Stamp program—has been put into effect. Hunger hunters, scouring the country, especially the South, for evidence of malnutrition, not unexpectedly found plenty of it. They got the ball rolling.

What's more, the U.S. Public Health Service then declared malnutrition to be a "reportable disease."

With so much going for this evolving right, it's little wonder that the poverty war lawyers have asked federal district court to order the U.S. Department of Agriculture to override all laws and political boundaries with its warrant to relieve hunger wherever it's found. It appears now that the USDA has already been doing just that—on the sly—in several of those 106 Texas counties.

The USDA has no such commission or warrant. The Commodity Distribution Program gives it no such warrant. But never mind—the Fourteenth Amendment, whose eye is on the sparrow, makes no heartless distinction between civil and economic rights. All hungry people are one in its sight.

This is as near to asserting a right to be fed as the poverty people can come at present—but they may have picked a bad law as the vehicle of the new doctrine.

The federal government is divided on the question—not just out of legal differences, either, but because the counties help pay for the food program, and if the USDA rides in and pays for a program in some of these counties out of its own pocket, the participating counties will expect to have their tabs picked up, too. The bill can run into hundreds of thousands of dollars in Texas alone.

THE JUSTICE Department dwells less on that, though, than on the fact that the CDP law is meant to uphold farm prices rather than relieve the hungry. The back door to the surplus food warehouses is opened for relief purposes only because the USDA can't otherwise get everything it amasses in the way of price-support purchases in through the front door.

COE - - - School With Paychecks

Copied

By Ferdinand Bigard

"I hope to stay on the job after graduation," says Thomas Case, a student of Rabouin Vocational High. He's talking about the Cooperative Office Education program. Tom, the son of Mr. and Mrs. Austin Case, 1718 Prytania, works for John E. Koerner & Company, Inc. His expressed hope is the same as most COE students.

The Cooperative Office Education program is designed to give business-minded pupils like Tom experience in actual jobs, as well as business courses to supplement the job experience. New Orleans businessmen find they benefit from hiring COE students. The teens easily fill the many office jobs which require little or no previous job experience. The young men and women in the COE program are selected through careful screening by counselors, principals and COE coordinators to make sure they possess good attitudes—as well as marketable skills in stenography, bookkeeping and other clerical work.

Heading up this unusual educational program in the Orleans Parish school system is Miss Mary J. Madden, supervisor of business education. She supervises several educators who promote the hiring of COE students and oversee their training in: typewriting, shorthand, bookkeeping, operation of office machines, telephone techniques, filing and business dress and behavior. On-the-job training for COE students begins in mid-September and ends in May, a period of 8½ months.

"The program is beneficial to anyone going into business," says Cynthia Wilson of Carver Senior High School. Cynthia, the daughter of Mr. and Mrs. Ernest Wilson, 3407 Benefit, works the usual COE schedule (1 p. m.-5 p. m.) Monday through Friday, at the Humble Gas Transmission Company where she's a clerk typist. Her clerical duties also include operating such office equipment as the microflim camera.

"I enjoy meeting people, and that's what this COE job provides," says Carol Lebioda, a relief receptionist at the Bank of New Orleans. Carol, the daughter of Mr. and Mrs. E. A. Lebioda, 4850 Michoud blvd., admits the extra money's nice, too. "I've only done volunteer work," she says. The attractive, long-haired brownette is a student at Kennedy Senior High.

Basically, the COE program is for seniors who have already shown aptitude for a career in business. On completion of their work experience and correlated school study, COE students earn two units of credit toward the high school diploma.

Henry Richardson, a COE student of Fortier High School, has been offered an opportunity to continue working after graduation and, in his words, "stay on the job and go to college at night." Henry, the son of Mr. and Mrs. Raymond L. Richardson Sr., 1139 Ninth, plans to do this through a program at Gulf & South American Steamship Company, Inc., where he does payroll auditing. He hopes to become an accountant. Henry's been working with paymaster Joe Leto and says, "I'm being trained to take his place during his summer vacation."

Another COE student who plans to stay on with her company, "if they'll have me," as she puts it, is Deborah Stewart of L. B. Landry Senior High School. Like some of her COE co-workers, Deborah found out about the COE program from her typing teacher. Deborah's clerical duties have been expanded to learning operation of several of the sophisticated machines at the office of her employer, Peoples Life Insurance Company. One minute she might be pulling and updating files; another minute, she'll be running an accounting machine. Deborah's the daughter of Mr. and Mrs. Oliver Stewart, 1307 Pacific.

MISS Mary J. Madden explained how "COE students from 10 New Orleans public high schools receive on-the-job experience in both large and small business firms. In COE, every range of the city's activity is represented: attorneys, accountants, banks, insurance agencies, shipping companies, public utilities, hotels, hospitals, oil and gas companies, even city and federal agencies. COE students are paid a minimum wage for 15-20 hours per week work experience.

"Close to 40 percent of the 87 firms presently training COE students have been doing so for five years or more. Some firms, such as Auto-Lec Stores Inc. and the Chamber of Commerce, are rounding out a decade of COE participation; while others, such as Maison Blanche, Lykes Brothers Steamship Company Inc., the Bank of Orleans, Pan-American Life Insurance Company and the Tulane University School of Medicine are well into their second decade of COE participation."

Some statistics from COE's 1967-68 school session include: 143 student employes earning $129,587.85, an average salary of $906. This year, 167 COE students are getting on-the-job experience, as the program continues to grow and expand.

Business firms are not obligated to keep COE students after the initial training period has been completed, but after graduation, many students remain in the employ of the company which trained them.

"Peoples Life Insurance Company has trained two students a year during its five-year association with the COE program," says Blaine Dejoie, personnel director of the company. "We hired six of the ten trainees; four of these are still with the company. We would have hired other COEs if they hadn't decided to continue their education."

Of a new trainee, Dejoie says, "We try to get him on a skilled level where, if we can't hire him he will still be qualified to get a job elsewhere. If in eight or nine months we can't train him, then something's wrong."

LIKE most employers who use COE students, Dejoie feels a responsibility for the program. He says, "The idea is to treat these students just like regular employes. Any company that takes these students on for cheap labor and doesn't give the training and explanations hurts itself and the students too."

He also maintains that teens are capable of adapting to such business environment. "Our company might just be lucky, but I doubt it. The students we've had seemed to come with a built-in sense of office decorum. If I were advising other companies, I'd say those who hadn't come into the COE program were definitely missing the boat."

Dejoie's only regret is that his company's not large enough to hire more COE students.

"I talk COE up to every business associate I have," says Sidney De Leon Jr., supervisor of employe salary and benefits administration at Lykes Brothers Steamship Company Inc.

He adds, "I think New Orleans' businesses are really fortunate to have a fine program like this available. I can honestly say that since 1956, there has been only one COE student we could not hire after the training period because she just didn't make the grade."

Lykes has employed three COE students each year for the past 15 years. "Of that number," says De Leon, "I'd say over 90 percent have stayed with us. We're proud of the fact that several of our former COE students are now executive secretaries to some of our vice-presidents."

De Leon interviews his company's COE students and places them primarily in the auditing and treasury departments, marine or insurance and claims divisions. He says, "I try to move the COE trainees around a bit—to give them experience in several departments."

A recent change in the COE program which De Leon views as a definite aid to the employer is "the August workshop. Students meet several weeks before school begins to review skills and get indoctrinated in COE principles, so that they're ready for job placement by mid-September."

Dear Emory:

I am enclosing two copies of some new materials on hunger, including the Wall Street Journal article which I spoke to you about.

You can bill the Mississippi State AFL-CIO for two showings of the film "Hunger In America" at $7.50 each. These should be paid by the two local unions that booked the film from us and would have paid the rental to us if we had shipped the film.

Sincerely yours,

George

Attack on Hunger

Administration Moves To Fight Malnutrition In Cities, Rural South

Food Stamp Plan Expansion Mulled; Pregnant Women, Children Get Special Aid

Enriched Soft Drink Studied

By BURT SCHORR
Staff Reporter of THE WALL STREET JOURNAL

NEWARK, N.J.—The Government's mounting concern about malnutrition is making itself felt in Northern slums as well as in the dirt-poor rural Southern communities that have been in the spotlight lately.

Even the traditionally farm-oriented Agriculture Department is active in the cities—as Mrs. Nanette Adams of this riot-scarred metropolis can attest.

Mrs. Adams is a welfare recipient, a mother of nine and a black activist who wears her hair Afro style. She's also a leader of Newark's "nutrition squad"—14 Negro and Puerto Rican women hired by the New Jersey Cooperative Extension Service under a new Agriculture Department "Outreach" program. Their mission is to boost participation in Federal food relief programs and teach the poor to prepare more nutritious meals.

Until now, state extension services have concentrated on serving middle-class, mostly white farm families. But the prime target area for Mrs. Adams and her co-workers is Newark's shabby Central and East Wards. In only a few weeks, they have persuaded scores of Negro and Puerto Rican families to enroll in the city's underutilized program for distributing free Federal commodities. One of those aided is a Spanish-speaking mother who had been pacifying her 10 children's hunger pangs with sugared water.

Bad Budgeting

By July 1, some 5,000 such nutrition aides in nearly 600 urban and rural areas nationwide are expected to be counseling 200,000 poor families through repeated home calls. Mrs. Adams, for one, has no illusions about the difficulty of the assignment. Many poor Newark parents fail to budget their limited incomes to provide children with milk, orange juice and other special food needs, she says.

Of special aid to ill-nourished city folk, too, may be an effort sponsored by the Office of Economic Opportunity to develop cheap but highly nutritious food products for the poor. P. Ballantine & Sons Inc., a Newark brewing company, hopes to begin test sales in June of a regular-priced soft drink laced with protein and vitamins. The Pillsbury Co. of Minneapolis is considering marketing a high-nutrition sandwich spread, candy bar or food stick.

Under a little-noticed program aiding city and country folk alike, the Agriculture Department is beginning to make available special rations of milk, meat and other nutritious foods to low-income expectant mothers and children six years old and under. At hundreds of clinics and health centers around the country, physicians and nurses soon will be able to prescribe the rations without regard to any Government food assistance that patients already may be getting. Spending on this program will reach nearly $6 million this year and more than five times that much in fiscal 1970, officials calculate.

Food Stamp Expansion

All these efforts could be eclipsed by more important moves now under consideration by the Nixon Administration. One is an expansion of the food stamp program, under which the poor buy stamps at less than their face value and cash them in for food at grocery stores.

Agriculture Department planners want stamp outlays boosted to around $500 million in the fiscal year beginning July 1. The Johnson Administration's budget for fiscal 1970 calls for spending $340 million, up from $280 million this year. Any upward revision would have to clear the Budget Bureau and the Urban Affairs Council. But there are strong hints that the Nixon Administration wants to broaden use of stamps dramatically and will ask Congress for the additional funds.

Even more significant may be a proposal for higher welfare payments to the extra-needy. Health, Education and Welfare officials are considering ways to boost cash relief in Southern states. A Federal contribution of $30 monthly in Mississippi would quadruple the state's average payment per person, making it easier for families on welfare to scrape up food stamp money and increase their food buying.

Resistance Likely

These costly and controversial plans may not materialize in full any time soon. They'll meet resistance, on budget and other grounds, both in the Administration and in Congress. Some Southerners insist the need for more aid to the undernourished has been exaggerated.

Senate liberals first turned national attention on how the poor eat with hearings that started in Mississippi nearly two years ago and are still continuing. Testimony from scores of witnesses before a special committee headed by South Dakota Sen. George McGovern has indicated that millions of poor families are ill fed.

The most compelling corroborative evidence came a few weeks ago with disclosure of preliminary findings from a nationwide Government nutrition survey. The initial sampling covered 12,000 persons in Texas, Louisiana, Kentucky and New York, most of them poor Negroes and Latin Americans. The studies showed that 15% to 20% of those surveyed were so deficient in essential nutrients that their growth had been stunted or they had been left highly vulnerable to disease.

Though the special Senate committee isn't empowered to draft legislation, it seems clear that testimony it has taken has begun to build support for more action against malnutrition. One sign: The overwhelming Senate vote last month to reject a proposed $100,000 cut in the committee's 1969 budget, providing instead the full $250,000 requested. Also notable was the confession by Democratic Sen. Ernest Hollings of South Carolina that some people in his state were hungry. Pressed by Sens. Hollings and McGovern, the Agriculture Department broke with Johnson Administration precedents and began a test of free food stamps in Beaufort and Jasper counties, S.C.

The real test of Congressional sentiment probably won't occur until after President Nixon sends up his anticipated nutrition message. The proposals may be ready soon, however, perhaps in the next 10 days.

The President's specific recommendations can't yet be predicted. But Agriculture Secretary Clifford Hardin has declared that the Nixon Administration hopes to move with every possible resource . . . to remove malnutrition from our land," and department planners are taking this as their cue.

Cutting Food Stamp Costs

Their $500 million food stamp proposal might bring the total number of recipients to nearly five million persons by June 30, 1970, compared with the 3.6 million projected for June 30 this year. The expansion might come largely through lowering stamp costs for households whose monthly income totals over $70. (Recent liberalizations have benefited those below that level.)

Agriculture Department planners also want an expansion of the school lunch program. They figure it provides only three million of about seven million poverty-level students with free or reduced-price meals. Many of the remaining four million attend schools in older cities like Philadelphia or Detroit where the program doesn't operate in rundown core areas for lack of cafeteria facilities.

The supplemental feeding for mothers and small children has already been endorsed by the conservative Democratic chairmen of the agriculture appropriations subcommittees, Sen. Spessard Holland of Florida and Rep. Jamie Whitten of Mississippi. The program is due to serve some one million persons by mid-1970.

In Guilford County (Greensboro), N.C., a pilot project now in operation means public health nurses no longer need dig into their own purses to buy baby food for moneyless mothers being released from maternity wards. Instead, doctors write food prescriptions for redemption at the county commodity distribution center. (One month's ration for newborn infants: 30 cans of evaporated milk, 48 ounces of corn syrup, 28 ounces of farina and 46 ounces of canned fruit juice.)

Explaining Directions

Two nutrition aides trained by the North Carolina Extension Service make follow-up visits to the homes where food has been prescribed. "Many of our mothers can't read enough to learn from package directions how to mix dry milk or make a tasty meal from powdered scrambled eggs; that's where the aides come in," says Dr. Sarah T. Morrow, Guilford County health director.

Here in Newark, the nutrition aides play a similar role. Knocking on doors in a ramshackle apartment building is how one member of the city's nutrition squad, Mrs. Gladice Pagan, discovered the 10 children (ages eight months to 13 years) whose mother was feeding them sugared water.

The family ran out of food money after the father became too ill to work at his $98-a-week candy-factory job. Mrs. Eloise McClindon, the extension service nutritionist in charge here, contributed $4 of her own to make an immediate purchase of milk for the children. Then one aide helped the mother obtain her initial ration of free Federal commodities (shelling out $2 to have the foodstuffs delivered to the woman's home) while a second looked after her children. The aides have continued to visit the family every few days.

THE WALL STREET JOURNAL,

McGovern Asks Major Expansion of Food-Stamp Program for the Needy

By MARJORIE HUNTER
Special to The New York Times

WASHINGTON, March 22—Senator George S. McGovern, Democrat of South Dakota, called today for an immediate $1.5-billion expansion of the food stamp program for the needy.

This would be nearly a fourfold increase above the $340-million that the ougoing Johnson Administration had proposed for food stamps in the fiscal year starting July 1.

Senator McGovern is chairman of a special Senate committee on nutrition and human needs. The committee spent two days interviewing the poor in two Florida counties earlier this month and will make similar trips elsewhere in the country in the months ahead.

In a speech prepared for delivery to the Senate Monday but made available today, Senator McGovern observed that President Nexon was now reported to be considering a $1-billion increase in Government food programs over the next four years, with a possible first-year expenditure of $100-million.

Terming this inadequate, Senator McGovern said $100-million would buy a year's supply of food for just 610,000 of "our 10 million chronically hungry citizens.

"That is precisely the sort of half-hearted tinkering with the needs of our poor that we have seen time and again in recent years—underfinanced poverty programs, underfinanced food programs, all with the decimal point in the wrong place.

"I agree with the observation of one Administration official who said: 'This is what you call our thin system for nutrition."

Senator McGovern is a principal Congressional critic of the soo-called "thin" antiballistic missile system that President Nixon called for last week.

"Our president wants to lavish $7-billion to protect two missile systems with dubious military hardware," Senator McGovern said. "We can purchase with half that an end to hunger in America."

The Senator said he would propose that Congress amend the current Food Stamp Act so that "the poorest of the poor" would be given free food stamps.

The present law bars general distribution of free food stamps.

Under the present law, recipients of food stamps—redeemable for purchase of food at stores—must pay a minimum of 50 cents a month per person. Many have to pay far more.

For instance, one family in South Carolina pays $56 a month for stamps redeemable for $80 worth of food. The price and redemption value varies widely, according to family size and income.

While the law prevents distribution of free stamps, the Department of Agriculture just a few weeks ago set up a pilot program of free stamps for the neediest in two coastal South Carolina counties. This is being financed under another program that permits the spending of $50-million this year on various feeding programs.

Hunger

THIS NEW BOOK shows graphically why America must move rapidly to remove the blight of hunger

Hunger in our land haunts every American

By BARBARA COLEMAN

Pressure for increased aid to hungry Americans is developing as Congress and the Nixon Administration begin reacting to a Senate committee investigation of hunger.

In Congress, major changes in the nation's food programs are being proposed. Critics of the programs say they fail to reach most of the poor.

(Continued on page 2)

"There are still children in this country who wake up hungry, who spend their days hungry, and who go to bed hungry. There are still children in this country who are born in broken-down cabins rather than in hospitals, and who grow up without ever seeing a physician or a dentist. Put differently, there are still children who feel pain and get no relief for it; who fall sick and get no medicine; who suffer accidents or injuries and learn to clench their fists and grit their teeth or cry long and hard—all to no avail. And there are still children, thousands of them, who simply do not know what orange juice is, who cannot take a piece of meat for granted, who look upon milk as a very special treat. In other words, for thousands of American citizens, both black and white, young and old, survival itself can never be taken for granted."—*SENATOR EDWARD M. KENNEDY, in the introduction to "Still Hungry In America."*

5-31-1969

Hunger

More Funds Urged To Conquer Hunger

The AFL-CIO asked Congress to provide more funds for the food stamp program than the Nixon Administration is asking in order to wipe out hunger and malnutrition in America.

The Administration has proposed a $270 million increase in the food stamp budget for the coming fiscal year—to a total of $610 million.

That's "a step in the right direction" but not a big enough step. Julius F. Rothman, associate director of the AFL-CIO Dept. of Urban Affairs, said.

"When measured against the need, this sum is completely inadequate," Rothman told the Senate Agriculture Committee.

He said feeding the nation's hungry through the food stamp program "will require at least $1 billion" during the coming year "and a proportionate increase the following year."

Besides more money, there is a need for "substantial" reforms in the Administration of the program, Rothman testified.

Food stamps are sold at discounts based on family income and size to poor people in most, but not all, sections of the country. The intent is to enable families to buy the variety of food they need for an adequate diet at a cost they can afford.

Rothman advanced these AFL-CIO proposals to improve the food stamp program:

(Continued on Page 11)

AFL-CIO

NEWS, WASHINGTON, D. C., MAY 31, 1969

HUNGER IN AMERICA can be ended by an improved food stamp program, Julius F. Rothman, right, associate director of the AFL-CIO Dept. of Urban Affairs, testified at Senate Agricultural Committee hearings. Listening are Sen. Spessard L. Holland (D-Fla.), foreground, and Committee Chairman Allen J. Ellender (D-La.).

More Funds Urged To Conquer Hunger

(Continued from Page 1)

- Less restrictive eligibility requirements, with federal standards, "so that a broader spectrum of the poor will be eligible" for the food stamps.
- Free food stamps for the lowest income groups, including households with monthly incomes of $60 or less.
- Authority for the federal government to administer food stamp programs if local agencies are unwilling to cooperate or to finance the administrative costs if local funds are not available.
- Simpler procedures with less red tape in certifying eligible families and issuing the food stamps.
- Permission for families to pay for food stamps on an installment plan or just pay part of the monthly allotment "to facilitate purchasing by families whose paydays do not coincide with stamp issuance periods."

Rothman acknowledged the importance of providing education in nutrition to poor families so that the goal of a healthful diet can be achieved.

But he suggested that this might best be done by hiring and training persons from the poverty group who would be better able to work with food stamp recipients than professional home economists who "have been notably unsuccessful in reaching the poor."

A major expansion and reform of the food stamp program was urged also in testimony by the Meat Cutters.

The union's legislative representative, Arnold Mayer, said the campaign to end hunger and malnutrition "should have top priority." Hunger in the world's richest nation "is incredible and shameful," he stressed.

A group of prominent southerners urged that food stamps be given free to those who cannot afford to buy them. Brooks Hays, former congressman who heads the Southern Committee on Political Ethics, said the food stamp program should be administered by a committee of citizens in any county where elected public officials will not permit the program to operate.

Hunger

Vol. 1, #18 June 15, 1969

A SHORT COURSE FOR CHURCHMEN CONSIDERING PUBLIC RESPONSE TO THE PROBLEM OF HUNGER IN THE UNITED STATES

Ten Million Hungry Americans

by JIM LAWRENCE

The extent of hunger and malnutrition in the United States has now been well publicized. Many Americans have been made aware for the first time that there are some 10-12 million people in this country who are constantly hungry and malnourished. The recent hearings of the Senate Select Committee on Nutrition and Human Needs have made hunger a front page issue. Politicians have even found it expedient to express their indignation about "this deplorable situation," and the new administration has (tacitly, at least) declared its own "war on hunger."

Some government officials have cautiously noted that hunger is a problem that might actually be *solved!* One cynic noted that the Nixon administration might willingly adopt the elimination of hunger and malnutrition as its humanitarian project, because it is *possible!*

President Johnson's controversial "war on poverty" was less than satisfactory for many reasons–one of which is the sheer complexity of the task at hand. To eliminate poverty in this country will take a long term commitment–a commitment that transcends party loyalty and political pragmatism. Unfortunately, the way is paved with pit-falls and countless difficulties, as the OEO workers and VISTA volunteers know only too well.

On the other hand, it is actually possible to deal with the problem of hunger–at least on one level. We have the capacity and the ability to feed every hungry person in this country. Though the problems of hunger and malnutrition may not be completely eliminated until all aspects of poverty are taken care of, there are far-reaching and significant steps that can be taken now to insure that not one of our citizens goes without the proper food and nourishment.

What follows is a short course on the problem of hunger in the United States. The information contained therein is meant to provide a working knowledge of the subject for concerned churchmen who are seriously asking themselves: what can we do? This is no step-by-step solution to the problems of hunger and malnutrition; it is merely a brief resource summary for those who want to know why there are so many hungry people in our affluent society.

Background

On April 16, 1968, The Committee on School Lunch Participation issued a report entitled *Their Daily Bread.* This discussion of the National School Lunch Program pointed out some of the failures of the school lunch program, indicating that fewer than two million of the six million school-age children from families at the bottom of the poverty scale were able to get a free or reduced-price lunch at school. Inadequate funding, lack of uniform requirements, and cases of local discrimination were discovered by the committee–in spite of the declared intention that "no hungry child shall go without lunch."

On April 22, 1968, the Citizens Board of Inquiry into Hunger and Malnutrition in the United States published *Hunger: USA,* a disturbing report on the extent of hunger in America. This twenty-five-member board spent nine months looking into the cases of hunger and malnutrition found in various parts of the country–especially in Mississippi. The board was formed in summer, 1967, and was supported by Walter Reuther and the United Auto Workers. This was in response to the findings of a Senate Subcommittee that toured Mississippi in the spring of that year and found many cases of severe malnutrition.

PAGINATION INCORRECT

The extent of hunger and malnutrition in this country was brought home to Americans on May 21, 1968, when CBS-TV broadcast a documentary on *Hunger in America.* This program reviewed hunger problems in general, and criticized existing food programs operated by the federal government. Then Secretary of Agriculture, Orville Freeman, reacted indignantly to the network's criticism, implying that "it's not as bad as all that."

Unfortunately, too many Americans had the same reaction. It simply can't be that bad–not in our country! Even when the Poor People's Campaign released a list of demands on government agencies and Congress, too few people actually believed the extent of their grievances.

On July 30, 1968, the Senate established a Select Committee on Nutrition and Human Needs, headed by George McGovern (D-SD), to investigate the problems of hunger and malnutrition in America. This marked the first official intent on the part of the Congress to actually learn the *facts* about hunger in this country.

Since that time the Select Committee has held hearings in December 1968 and January, February, and March 1969. Of these, the dramatic hearings on hunger in South Carolina, which revealed the extent of intestinal parasite infection in Beaufort and Jasper Counties, and the field hearings in Immokalee, Florida, which indicated the lack of concern on the part of local officials in dealing with the plight of the migrant workers, were probably the most shocking to the public.

At present there is underway a National Nutrition Survey in several states, including Kentucky, Louisiana, and New York, to discover the statistical details of hunger in America. The first state to complete its survey was Texas. An 88 member team of clinicians, dentists, nutritionists, biochemists, biostatisticians, and supporting skilled technicians, under the guidance of Dr. William McGanity of the University of Texas Medical School, discovered an alarming amount of anemia, goiter, vitamin deficiency, and other results of prolonged malnutrition in the sample they studied. (See *engage,* March 15, 1969, "Hunger in America").

Government Food Programs

The *Agriculture Act of 1946* provided for the distribution of *surplus food commodities* "among persons in low income groups as determined by the Secretary of Agriculture." This provision, known as *Section 32* funds (US Code 612c, Title 7), is the basis for the government commodity distribution program. *Section 416* (the Agriculture Marketing Act) and *Section 6* (a government purchasing supply program) also provide foods for commodity distribution.

Though the cost of food stamps is considerably less than the actual cost of the food, many of the poorest families cannot even afford the token payment.

The US Department of Agriculture gives the surplus food to state welfare agencies to distribute–state and local communities choose whether or not to take part in the program. The state sets the standards for deciding who may get the food; the local community administers these standards. Technically, there are twenty-two different commodities distributed under this program–however, the USDA points out that "local foul-ups" sometimes prevent the recipients from receiving all twenty-two.

The *Food Stamp Program* was initiated as a pilot project in 1961. In 1963 President Kennedy asked for legislation making it permanent. The purpose of the program is to help poor families buy more and better food of their own choosing. People on public assistance, and others whose income is low enough to qualify them for public assistance are eligible to purchase food stamps. Though the cost of the stamps is considerably less than the actual cost of the food, many of the poorest families cannot afford even the token cost of the stamps.

The recent hearings of the Select Committee also discovered that there is often a discriminatory or condescending attitude on the part of the local officials who administer the Food Stamp program. Also, transportation is a trememdous problem to many who would participate in the program but simply find it impossible to go to the stamp redemption centers.

The *National School Lunch Act* was originally passed in 1946 with the intention of providing low-cost, nutritional food for school children. It is administered by the Department of Agriculture through the Consumer and Marketing Service, School Lunch Division. In each state it is administered by the state educational agency. In order to receive any assistance from the federal government, a school must agree to provide food free to all children who cannot afford to buy their meals. However, as several studies have already shown, there are far too many poor children who are still unable to obtain free or reduced-price lunches.

The *Child Nutrition Act of 1966* provided for

Hunger

White House Talks on Food and Health in Trouble

Only a Quarter of $1-Million Expected Cost Raised

By JAMES M. NAUGHTON
Special to The New York Times

WASHINGTON, Sept. 13 — The Nixon Administration may have averted a boycott by the poor and consumer groups of its conference on food, nutrition and health by deciding to continue the food stamp program for welfare families.

But the highlevel conference — the first major conference held by the White House, appears beset with serious problems.

Some 2,500 experts and laymen are to take part in the program Dec. 2 to 4. But with barely two and a half months to go, it has been assured of only a fourth of the $1-million sought to produce it. Two Democrats have been dismissed from one of its 30 panels amid reports of political screening of participants.

And the make-up of the panels is the subject of intense lobbying, with the food industry and the poor tugging from opposite sides to seek dominant roles.

Sources close to Dr. Jean Mayer, the nutritionist serving as a special consultant to President Nixon to set up the conference, say he was fearful it would have turned into a disaster had not the Administration shifted gears on food stamp policy.

Plan Expected Soon

Mr. Nixon's welfare reform proposal, which he is expected to submit in detail to Congress this week, is now said to include assurance of $1,200 worth of food stamps in addition to a basic allowance of $1,600 a year for a family of four.

Initially the Administration had said that welfare families would no longer need food stamps because they would receive the $1,600 benefit and state aid. But an outcry from liberals — and some scurrying by Dr. Mayer — apparently caused the Administration to change its position.

Even so, the nutrition conference seems headed for trouble and the pressures on Dr. Mayer are increasing. At issue is whether the tone of the conference's recommendations for reform of the Nation's food policies will be set by the food industry, by academicians or by consumers.

The problem of funding the conference is a key one because some of the funds would be used to pay transportation costs and provide research assistance and other help for poor persons among the participants.

A variety of sources within and outside the Administration say that Dr. Mayer believed he had assurance of funding from the Office of Economic Opportunity but has not gotten the money. Donald Rumsfeld, new director of the agency, reportedly urged Dr. Mayer to limit Negro participants in the conference to "doctors, nurses, and lawyers" and, when Dr. Mayer refused, did not provide the financial assistance.

A Second Rejection

The sources said that Dr. Mayer had then sought funds from the Department of Agriculture, which is responsible for most of the food programs involved in conference consideration. But the department reportedly said it could provide money only if the conference was under its control, a condition Dr. Mayer could not accept.

A commitment of $250,000 was then made by the Department of Health, Education, and Welfare. The National Council on Hunger and Malnutrition, a private group Dr. Mayer founded and headed before taking on the White House assignment, maintains that that amount is not enough to assure meaningful participation by the poor.

Further, the hunger council has charged that Dr. Mayer's

The New York Times

Dr. Jean Mayer, who is setting up December session.

slim budget will not provide staff help for any of the panels or permit him to commission outside studies by experts. Both those factors contribute, the council believes. To the likelihood that food industry representatives and academicians—some of whom serve as consultants to the industry—will dominate the conference.

Representation of Poor

Robert Choate, an aide to Dr. Mayer, said the conference planners were "doing our damndest" to assure that consumer groups and the poor would be represented. He said each technical panel would have at least one layman on it and that the recommendations of the panels would be screened in November by social action panels, which will have even wider participation by laymen.

But Mr. Choate conceded, "I don't think we're out of the woods with $250,000" as an over-all budget. Such a sum could limit the amount of assistance available to keep an eye out for the intreests of the poor, he said.

The key panel will be that on delivery systems of food and of money for food. This panel will consider Government programs including food stamps, commodity distribution, school lunch programs and monitoring of such efforts to assure they are more effective in achieving a balanced diet among the impoverished.

White House screening of participants appears, at least in the case of this panel, to have gone beyond considerations of security. Two Democrats invited to take part by the panel's chairman, Dr. Stanley Gershoff, associate professor of nutrition at Harvard University, attended two meetings and were then informed they could no longer participate.

One, Rodney E. Leonard, who was director of consumer and marketing services for the Agriculture Department in the Johnson Administration, had been selected as panel vice chairman. But shortly after Mr. Leonard stopped at the department to discuss its programs with Richard E. Lyng, assistant secretary for consumer and marketing services, he was cut from the panel.

At the same time, William C. Smith, staff director of the Senate Select Committee on Nutrition and Human Needs, was dropped. The select committee, headed by Senator George McGovern, Democrat of South Dakota, has been holding hearings on hunger that have produced criticism of the Agriculture Department.

Dr. Gershoff's panel has not held a third meeting and there are reports he has been ordered by the White House not to schedule another session until the panel's make-up is changed.

Among its members now are Jean Fairfax, legal information and community service director of the N.A.A.C.P. Legal Defense and Educational Fund, Inc.; Marian Wright Edelman, whose

Politics and Lobbying Playing Role in December Plans

work with the Southern Christian Leadership Conference helped make hunger a national issue, and Negro antipoverty workers from Washington.

Friends of Dr. Mayer said that he, Dr. Gershoff and Miss Fairfax became concerned that the Agriculture Department would attempt to install its own representatives on the panel, so they maneuvered to block Agriculture by winning approval of a resolution banning all Government officials from membership on the conference panels. The resolution was adopted at a meeting of conference chairmen and vice chairmen.

Food industry representatives are said to be pressuring Dr. Mayer to grant them a larger voice in the conference, even though announced committee chairmen or vice chairmen include 18 industry representatives as against three consumer group leaders. One lobbyist for a Western meat producers group reportedly warned Dr. Mayer that "we have 25 Senators in our pockets."

The Administration is preparing to complete this week the naming of members of the panels, which will leave only nine weeks for submission of their reports to the full conference.

There is open skepticism among consumer groups that the conference will amount to much. As one Washington consumer representative stated it, "I can't believe there will be a heart-rending concern demonstrated for the nutrition needs of the poor."

And, as the National Council on Hunger and Malnutrition, Dr. Mayer's group of former associates, said in its August "action report," it appears likely "the poor may be seen and even heard, but not too loudly or with any power to control the direction of the conference that would not have taken place but for them."

Tow Truck Found "Unsafe"

BRANTFORD, Ontario (Canadian Press)—An automobile was checked by the police here, declared unsafe, and ordered off the road. A tow truck, called to remove the car, was also declared unsafe. A second tow truck was called to haul away both vehicles.

Meatless 'Meats'

Several Firms Develop Soybean-Based Copies Of Beef, Pork, Chicken

Some Now on Market Mixed With Real Thing; Low Cost, High-Protein Food Is Aim

Questions About Taste, Labels

By JOHN A. PRESTBO
Staff Reporter of THE WALL STREET JOURNAL

DECATUR, Ill.—Lunch was a feast.

First came an array of hors d'oeuvres, including little ham-and-cheese cubes with colored toothpicks stuck in them. The main courses were sweet-and-sour pork on rice, quiche Lorraine (a French-style ham pie with egg custard filling) and a loaf of corned beef hash. Lime sherbet and candy were the dessert.

It was delicious — though there wasn't a morsel of pork or beef in anything that was served, and even the almonds in the candy weren't real nuts.

The "meat" and "nuts" actually were processed soybeans, flavored and textured to taste and chew like the real thing. They were made by the luncheon host, Archer-Daniels-Midland Co., one of a half-dozen companies that are extruding or spinning soybean protein into close imitations of chicken, turkey, beef, port and scallops and other seafood.

Soybean "meats"—called analogs because they're supposed to be analagous to real meat —have long been touted as "the food of the future." Considerable research and development is still needed to perfect them and to move them into mass production, but they're already showing up in a variety of food products.

Fine Print

Americans are eating more of them, in fact, than they may realize. Soup mixes, canned stews and chili, frozen ravioli and prepared, frozen hamburger patties are among a growing number of grocery store staples that now contain relatively small amounts of flavored, textured soybean "meats" along with real meat. In many instances, the only mention of the analogs on the labels of these convenience foods is in the fine-print list of ingredients.

Analogs also are being tested in restaurants, factory cafeterias and institutions. Howard Johnson's test kitchens in New York are trying meatless meats in several recipes, though the chain doesn't plan to put them on its menus any time soon. "Some of them taste pretty good," says Pierre Franey, executive chef, "and with good sauces and gravies, they

Meatless 'Meats': Firms Develop Soybean Versions of Beef, Pork

Continued From First Page

direct route from harvest to consumer, bypassing the slow, costly step of first being fed to livestock, which, in turn, must be fattened, slaughtered and shipped great distances before reaching the supermarkets.

At present, soy "meats" extruded from a vat of concentrated vegetable protein, the type made by Archer-Daniels-Midland and Swift & Co., sell at wholesale for an average of 35 cents a pound on a dehydrated basis. Extruded soy "meats" can effectively imitate the texture of ground meat or of small pieces of red meat, poultry or fish.

Analogs made from tiny soybean fibers that are spun much like rayon or nylon are more expensive, ranging from 45 cents to 80 cents a pound. The small fibers can be arranged to closely simulate the fibrous texture of slices of chicken or beef.

Spun soy analogs could well become less costly as output moves out of the pilot plant stage into large-scale production. General Mills, one of the companies making spun soy (the other two are Worthington Foods Inc. and Ralston Purina Co.), is building its first analog plant in Cedar Rapids, Iowa. A year after it opens next spring, says Carson J. Morris, general manager of protein operations, "we'll have our arms around the technology in terms of mass production and price-per-pound should come down."

Working on Steaks

Looking further ahead, a food technologist says: "In 10 years, I'll have a plant that will turn out mile-long analog 'beefsteaks.' Machines will stamp them out, wrap them and freeze them." Analog researchers say they can't simulate a juicy steak yet, but they're working on it.

Even at today's prices, some meatless meats are still a bargain, since real meat shrinks when cooked and analogs don't. Sixteen ounces of real bacon, for example, are reduced to about four after frying.

Not so with Stripples, which Worthington Foods advertises as "the meatless 'bacon' that never said oink." A half-pound carton of Stripples ends up, baked or fried, at eight ounces. Stripples are being test-marketed in Ft. Wayne and South Bend, Ind., for 79 cents a half-pound package.

Worthington is wooing the growing weight-watching market by claiming that each Stripple contains 16 calories and about 11% fat, compared with 49 calories and about 70% fat in each slice of bacon. Worthington also is developing meatless breakfast sausages with similar characteristics which it plans to call Sizzles.

Other food makers are trying different approaches to using analogs. Nalley's Fine Foods division of W. R. Grace & Co. is test-marketing Meat Mate, a package containing dehydrated, textured soy particles. When mixed with a pound or more of ground meat and some water, the particles expand, extending the meat weight by up to 50%.

The Labeling Issue

Different types of Meat Mate contain various spices and other ingredients so that the extended meat can be served as hickory smoke-flavored hamburgers, Salisbury steak or meat loaf. Unlike extenders such as breadcrumbs or cereal, Meat Mate adds protein, flavor and texture to the real meat.

One question facing Government regulators is how meatless meats should be labeled. In 1966, the Food and Drug Administration filed suit against General Mills, charging that its Bac-Os (simulated "bacon" bits for use in salads and soups) should be prominently labeled as "imitation bacon." But studies are now under way by the agency and others to determine what policies on such products should be, and meanwhile the Government isn't pushing the suit.

The Agriculture Department, which shares some jurisdiction over food labeling with the FDA, is currently developing rules on the use of analogs in processed foods containing real meat. In general, the department is taking the position that if a product is "significantly different from the real thing," it should carry a completely different name.

That reasoning suits the livestock industry, which objects to thinly disguised meatless meat names such as Wham (for a soy-simulated ham), Bac-Os or Bac'n. "They're capitalizing on the reputation that meat has built up and apparently trying to fool some people who don't read labels too closely," contends Don Magdanz, executive secretary of the National Livestock Feeders Association. And no matter what the name, the trade group also objects to shaping and coloring analogs to look like cuts of real meat.

The meatless meat makers are miffed at what they consider the livestock industry's unfriendly attitude. "If they had their way, we'd have to color our stuff green," grumps one executive.

showing up in a variety of food products.

Fine Print

Americans are eating more of them, in fact, than they may realize. Soup mixes, canned stews and chili, frozen ravioli and prepared, frozen hamburger patties are among a growing number of grocery store staples that now contain relatively small amounts of flavored, textured soybean "meats" along with real meat. In many instances, the only mention of the analogs on the labels of these convenience foods is in the fine-print list of ingredients.

Analogs also are being tested in restaurants, factory cafeterias and institutions. Howard Johnson's test kitchens in New York are trying meatless meats in several recipes, though the chain doesn't plan to put them on its menus any time soon. "Some of them taste pretty good," says Pierre Franey, executive chef, "and with good sauces and gravies, they can be made even better."

Since last year, the New York State Department of Mental Hygiene has been adding General Mills Inc.'s meatless crumbled "beef" and diced "ham" and "chicken" to meals for its 90,275 patients in 49 institutions. The department plans to continue and perhaps expand its use of analogs, says Jack Bellick, director of nutrition services.

Waiting in the wings, either in test markets or in the laboratory, are an abundance of new products due to gain national distribution in the next two to three years. Among them are a variety of simulated lunch "meats" such as smoked "beef" or "ham" and a meatless "turkey" roast that comes with a plastic wish bone.

Worried Farmers

Analog sales are still small, but they're growing fast. Volume this year is estimated at $10 million, which is a fraction of 1% of total meat volume but up from about $3 million five years ago. One study conducted by a West Coast research firm forecasts sales of $1.5 billion to $2 billion for the products by 1980, which would equal 5% to 6% of the meat and poultry market now projected for that year.

Such predictions disturb livestock raisers, though some have ambivalent attitudes toward their new competition because they also grow soybeans. Analogs are causing problems in Washington, too, where Federal regulators are trying to devise standards by which to gauge nutritional and other qualities of meatless meats.

Some fake meats still leave much to be desired, especially in taste. "The flavor tasted like it was painted on," says a young Chicago housewife who warmed up some "fried chicken style" analogs for lunch recently. "Underneath was that soybean taste."

A Fort Wayne, Ind., matron says she served a meatless bacon one morning for breakfast, "and after a couple of bites my husband and I looked at each other and wrinkled our noses. Then I got up and threw the rest of the package out."

Startled Cattlemen

One of the first products to use analogs, Skippy Peanut Butter with Smoky Crisps (simulated "bacon" bits), was dropped last year after little more than a year in test markets. "There wasn't any question of quality, but it just didn't catch the fancy of the market," says a spokesman for CPC International Inc.

"Those damn phony bacon pieces kept sticking in my teeth," says a Chicago man who tried it.

Still, technology has advanced far enough so that many analogs closely resemble the meats they imitate. Last year a cattlemen's convention innocently devoured a banquet entree of "meat loaf," only to be jolted later by a speaker who told them they had eaten soybeans, not beef. "When you use them in a recipe with other ingredients, these soybean things are pretty good," says a housewife in Indianapolis, a test market for some of the new products.

Soybean "meats" can be made just as nutritious as their animal counterparts, makers say. The "corned beef hash" served by Archer-Daniels-Midland, for example, was approximately 15% protein, about the same as hash made from real beef. Researchers say they can build any desired level of vitamins, minerals and other nutrients into analogs.

Right now, most meat analogs retail for as much or more than the real meat they imitate. But eventually analogs' biggest attraction is expected to be low cost—roughly half that of trimmed, boned and cooked real meat.

The theory is that analogs should be much cheaper than real meat for much the same reason that margarine is cheaper than butter. In meatless meats, high-protein soybeans take a

Please Turn to Page 21, Column 3

ple contains 16 calories and about 11% fat, compared with 49 calories and about 70% fat in each slice of bacon. Worthington also is developing meatless breakfast sausages with similar characteristics which it plans to call Sizzles.

Other food makers are trying different approaches to using analogs. Nalley's Fine Foods division of W. R. Food for Hungry Americans?

White House Conference

President Nixon apparently hoped that the White House Conference on Food, Nutrition and Health, held December 2 through 4 in Washington, would be a quiet and controlled gathering of food industry people, some communtiy people, and experts in food assistance programs. But it was dominated by people who the President himself adknowledged knew more about the realities of hunger and malnutrition than any other group of Americans. They said it is time to stop making promises to the Nation's hungry people, and commit cash and energy to make the food plans work.

And although President Nixon opened the Conference with a general statement about how the moment was historic, and how important it was to establish national priorities, his rhetoric exceeded the realities of his Administration's activities. The Conference was closed with a call for action from the participants. Five serious demands were put forth:

- that the Administration declare a *NATIONAL HUNGER EMERGENCY*, by invoking Section 11 of the Disaster Relief Act of 1969 (and similar statutes) in order to get food to hungry people immediately, and to actively support immediate passage of the McGovern Bill and other appropriate hunger legislation;

- that a *GUARANTEED ANNUAL INCOME OF AT LEAST $5,500 FOR A FAMILY OF FOUR* be established;

- that the *EXISTING FOOD ASSISTANCE PROGRAMS BE REFORMED AND EXPANDED* to provide an adequate diet to those in need in all parts of the U.S., and that free food stamps be given to families with incomes less than $100 a month (for a family of four), and that the food stamp price schedule be revised so that no recipient would pay more than 20% of his income for food stamps. In addition, conferees called for national eligibility standards and self-certification procedures;

- that a program be established that would provide all school children with a *FREE AND NUTRITIOUS BREAKFAST AND LUNCH;*

- and that the food programs no longer be administered by the Department of Agriculture, but by HEW.

Dr. Jean Mayer, the President's special consultant on food and nutrition, responded that the President "is very interested in following up on the White House Conference, both in the short term and long term, by action."

The Administration's Response

On declaring a *NATIONAL HUNGER EMERGENCY*, the President has done nothing.

Hunger

Why Can't We Just Give Them Food?

By ROBERT SHERRILL

WASHINGTON.

"WHEN they know there's a need," Mrs. Richard Nixon said not long ago, "people step right in and help." If by "people" she means all or even most politicians and bureaucrats, why, bless her heart, that is a remark of unusual innocence.

There is still, for example, the matter of hunger in the United States. Every literate American must know about it by now: not hunger of a scope that can be controlled by baskets of food from church circles, which perhaps is the kind of need the First Lady had in mind, but hunger that is so widespread and perpetual—affecting the health and welfare of at least 20 million people—that it almost seems to demand its own loyalty and flag and folklore.

For three years, ever since the spring of 1967 when the late Senator Robert Kennedy and former Senator Joseph Clark led a troop of investigators through the backbush areas of the South and discovered it, hunger has been a favorite political topic. Of course, millions of Americans had already discovered hunger by experiencing it in varying degrees on a day-by-day basis, but since such information seeps down slowly to the political recluses of Washington, the 1967 tour was of great importance: two United States Senators had actually seen hunger and had officially taken note of it.

Others pounced on the discovery and expanded it. Since 1968 Senators George McGovern, chairman, and Jacob Javits, ranking Republican, have been running an exciting bipartisan bit of hunger muckraking

WASHINGTON POST JAN 9

Doubled Spending On Hunger Urged

By Stuart Auerbach
Washington Post Staff Writer

Agriculture Secretary Orville L. Freeman estimated yesterday that it will take $1 billion more a year—on top of the $1.1 billion now being spent—to eradicate hunger in America.

The outgoing secretary, accused last summer of failing to do enough to provide food for the hungry, threw the gauntlet to Congress during testimony before a select Senate committee investigating hunger and malnutrition.

He told the committee there is a problem of hunger and malnutrition despite the fact that there is more than enough food to feed everybody, a system that with "minor modifications" can supply food to everyone, and a consensus that no one in America should go hungry.

"The question that remains is whether we will dedicate the resources—money and manpower—which this task requires," Freeman concluded after his 19-page statement.

"The Congress will give the final answer to that question. I leave it in your hands."

Freeman told the committee he was forced to cut back a planned extension of the food stamp program this year because Congress appropriated $280 million instead of the $315 million that was authorized.

And, he added, up to this year "Congress has provided only token funding" for the school lunch program.

After the hearing, Chariman George McGovern (D-S.D.) said he thought the additional $1 billion to fight hunger was a realistic figure. But he said he doubted that the conservatively oriented Appropriation and Agriculture Committees in Congress would spend that much.

Before Freeman testified, Sen. Jacob Javits (R-N.Y.), the ranking minority member, complained about the "repeated inability of the Executive Department to strip away the red tape" in fighting hunger.

"Now I hope that with a new team at the helm, we will see needed actions taken. I will be among the first to keep the new Administration's feet to the fire on this issue."

Freeman offered no apologies for his Department's performance n feedng America's poor. Nor did he believe that this program conflicted with farm price support policies.

He did, however, say that there is a "gap between the good intentions we express and our ability to carry them out."

As he testified, packages of dry milk, lard, flour, rice and cornmeal—the $2.20 worth of surplus foods that were passed out each month to some 3.7 million Americans when he took office eight years ago—sat on the table beside him.

On the other side of the table were packages containing the 22 commodities, worth $12.70, that are now offered.

Under questioning later, he acknowledged that only 20 per cent of the 1419 Government units in the Nation that are part of the program include all 22 commodities in their program. A program is not adequate, Freeman told reporters, unless it includes all 22 commodities.

He recommended that the commodity program be phased out in favor of food stamps, which increase the poor's purchasing power in their local markets.

He said the cost of the stamps should be reduced and the bonus level should be increased. "All it will take to do this are appropriations by the Congress," he said.

He said 4 million children now get free lunches at school, compared to 2.2 million last year. But, he added, there are still 2.5 million who should get free lunches but do not.

Freeman announced a program to allow schools in inner city ghettos or remote urban areas to hire catering services to provide hot lunches. This will allow the government to spend money on food "rather than stainless steel kitchens," he said.

In another effort to help the city poor, Freeman revealed that the Federal Extension Service—which usually serves farmers—will start an urban nutritional education program.

He said 4000 poor people will teach about 140,000 of their neighbors what foods to buy and how to cook them to get maximum benefits.

NEW YORK TIMES JAN 9

Teachers Adopting a

Teacher militancy in 1968 became a powerful force everywhere, but in the drama of urban conflict it found itself face-to-face with militant minority groups.

In the battle for the more traditional bread-and-butter goals, marked by strikes or threats of strikes, the climax had been building up for a long time. In an affluent society, teachers' spokesmen insist that the national average of $7,500 in salaries for male teachers is still too low to be fully competitive, even though pay scales in many communities now reach $14,000 or more.

But it is in the cities especially that the competition between teachers and other municipal workers has grown hot, and the success of civil service employes in gaining their objectives through strikes has encouraged teachers to try to reap the fruits of militancy.

Eighty per cent of the estimated man-days lost in teacher strikes and work stoppages in the United States since 1940 were lost in the single school year of 1967-68. In what the National Education Association calls "a veritable explosion," there were 114 strikes. By contrast, only five or fewer teachers' strikes were reported annually between 1960 and 1964.

Survey Made

A survey showed that the proportion of teachers who believed in the strike as a weapon rose from 53.3 per cent in 1965 to 68.2 per cent last year.

The very fact that the N.E.A. appears to cite the record of new militancy with pride is significant. Until three years ago, the giant organization—it has more than a million members—disapproved of strikes. Only the 165,000-member American Federation of Teachers considered the strike a legitimate weapon in the teacher's arsenal.

When David Selden was elected president of the A.F.T., he called for a merger of the two organizations to make teacher power total. The association, still insisting on its dislike of labor-affiliation, declined.

Although the two groups are competing nationally for the allegiance of the nonwhite community, in New York (and in other big cities) the federation—because it is involved in the labor movement—found itself at odds last year with Negroes and other minorities.

It was in New York that the union, through its flagship local, the United Federation of Teachers (membership 50,000), aroused the hostility of many Negro groups and spokesmen. The battle reached its climax in three citywide strikes—each closely following its predecessor—over the community-control experiment in the Ocean Hill-Brownsville section of Brooklyn.

The Brooklyn trouble arose largely because disaffected Negro parents blamed the urban school system for their children's failures. Although many teachers, and the union itself, had often in the past been critical of the "system," many Negro and Puerto Rican parents believed that, in the crunch, the union would side with the system to protect its own and its members' interests.

In September, 1967, when the teachers' power to suspend disruptive children became an issue in a teacher's strike, Negro parents charged that "disruptive" had become a code word for nonwhite. Albert Shanker, president of the union, denied this, saying his record on civil rights was spotless. But the black community opposed the strike.

The rift deepened when Mr. Shanker actively lobbied to defeat last year's decentralization proposals in the Legislature while many Negro spokesmen were calling for community control.

Even before militant teachers and militant Negroes faced each other across the picket lines in New York, the question of the teachers' stand on community control of the schools had been raised at the parent federation's annual convention.

A New Caucus, led by Edward Simpkins, the Negro vice president of the Detroit local, had urged the union to join the community in its drive for control—not, he said, to split the union or create a separatist force, but to help close a growing "gap between white and black trade unionists."

While the federation hedged on the issue—it plans to take it up again at a meeting in Washington later this year—the National Education Association, through its first Negro president, Mrs. Elizabeth D. Koontz, pronounced support of community control, as long as teachers were part of it and their rights were protected. (The N.E.A. thus had come a long way from the days, right up to the present decade, when chapters throughout the South were segregated.)

ADVISORY COMMITTEE FOR HUNGRY AMERICANS

If you care to make a contribution to help feed the hungry and poor of this nation, The Southern Regional Council, Inc., has agreed to accept and disburse all such contributions. The contributions will be used to purchase food for hungry Americans. An Advisory Committee for Hungry Americans has been established by The Southern Regional Council to advise it as to what organizations will receive contributions. Contributions (including checks made payable to The Southern Regional Council, Inc.) may be mailed to:

The Southern Regional Council, Inc.
5 Forsyth Street, N. W.
Atlanta, Georgia 30303

Attention:
Advisory Committee for Hungry Americans

Members of the Advisory Committee include:

PAUL ANTHONY, Executive Director, Southern Regional Council, Atlanta, Georgia.

WENDELL CHINO, President, National Congress of American Indians and the Tribal Council of Mescalero Apaches, Mescalero, New Mexico.

AL CLAYTON, Photographer, Nashville, Tennessee.

ROBERT COLES, Research Psychiatrist, Harvard University Health Services, Cambridge, Massachusetts.

MRS. LEWIS G. COWAN, Chairman, NCNW Workshops in Mississippi, New York, New York.

CONSTANCE CURRY, American Friends Service Committee, Atlanta, Georgia.

KENNETH L. DEAN, Executive Director, Mississippi Council on Human Relations, Jackson, Mississippi.

FRED DUTTON, Executive Director, The Robert F. Kennedy Memorial, Washington, D.C.

MRS. MARIAN WRIGHT EDELMAN, Washington Research Project, Washington, D.C.

DOROTHY I. HEIGHT, National President, National Council of Negro Women, Inc., New York, New York.

VIVIAN HENDERSON, President, Clark College, Atlanta, Georgia.

HARRY HUGE, Washington Research Project, Washington, D.C.

JOHN LEWIS, Director of Community Organization Projects, Southern Regional Council, Atlanta, Georgia.

PAUL MATHIAS, Executive Director, South Carolina Council on Human Relations, Columbia, South Carolina.

CHARLES PREJEAN, Executive Director, Federation of Southern Cooperatives, Atlanta, Georgia.

THE REVEREND RALPH RUIZ, Inner City Apostolate, San Antonio, Texas.

DAVID WALLS, Executive Director, Appalachian Volunteers, Inc., Prestonsburg, Kentucky.

PETERSON ZAH, Navaho Indian Reservation, Window Rock, Arizona.

The Southern Regional Council has been advised by legal counsel that all of the contributions received by it will be tax deductible by the donor. Funds received will be administered and dispensed according to the sole discretion of the Southern Regional Council, with the Advisory Committee acting in an advisory capacity only.

The Advisory Committee for Hungry Americans will make contributions to various recognized charitable organizations in both the rural and the urban areas of the United States. Funds to purchase food will be given to recognized charitable organizations that have been working with the hungry and the poor. It is expected that the following organizations, and organizations of a similar type, will receive funds that are contributed to The Southern Regional Council:

Appalachian Volunteers, Inc.
The National Council of Negro Women, Inc., for its hunger cooperatives in Sunflower and Bolivar counties, Mississippi, and other similar projects.
Operation Breadbasket, Chicago, Illinois.
South Carolina Council on Human Relations.
Mississippi Council on Human Relations.
The Inner City Apostolate, San Antonio, Texas.
The National Congress of American Indians.

The Robert F. Kennedy Memorial and The American Friends Service Committee have also agreed to work closely with The Southern Regional Council and its Advisory Committee for Hungry Americans to recommend various recognized charitable organizations to which funds to purchase food will be distributed.

We have set forth some figures below in order to give some idea of what one dollar contributed to The Southern Regional Council will mean to this nation's hungry. Based on statistics and estimates from the Department of Agriculture and the Office of Economic Development, The Southern Regional Council has estimated that the following sums will purchase the following meals:

$1 will provide a child with 3 meals per day, and an adult almost 3 meals a day.

$5 will feed a family of four for 1 day and will provide a child with 3 meals a day for almost a week, and an adult almost 3 meals a day for about a week.

$10 will provide a child with 3 meals a day for at least 10 days, and an adult with almost 3 meals a day for about 10 days.

Emory,

How does this rough draft grab you?

Susan

Hunger

RECENT DEVELOPMENTS AFFECTING FEDERAL FOOD ASSISTANCE PROGRAMS

Department of Agriculture

Food Stamp Bonus - The National Council on Hunger and Malnutrition reports that the USDA announced in December an expansion of food stamp benefits for approximately 500,000 persons in four-person households with monthly net incomes of less than $70. The revised program schedule would couple a decrease in the down payment each family must make with an increase in the bonus stamps issued and would cost an estimated $14 million in fiscal 1969. While the changes would enable the poorest families - those with incomes less than $20 a month - to buy more food ($60 worth for an outlay of $2 in the North as compared with $52 currently, $58 for $2 in the South instead of $48), the $2 minimum payment would be retained, effectively denying participation to those with no income. Most low income families would still be forced to spend one-third or more of their income on food, an exceedingly disproportionate slice of their limited budgets, considering the normal American family's food expenditures of 17 to 18% of income. The new schedule also continues the practice of providing a smaller amount of total stamps for families in the lowest income brackets, even though the nutritional needs of a family do not increase with income. For example, a family in the North with net income under $20 can obtain only $60 worth of stamps, whereas a family earning $70 can can get $66 dollars in stamps. Neither of these sums amounts to more than 62% of the $107 a family of four must spend monthly to secure a minimum adequate diet according to ex-Secretary Freeman.

Areas Without Food Programs - The Council also reports that approximately 470 counties and independent cities still have no food program, although USDA now confronts law suits in 26 states seeking to require it to put a federal food program in effect in every county. 235 additional areas were designated for food stamps on November 18, including 94 counties that had no previous federal food aid.

School Lunch Guidelines - On the national school lunch program the Council reports that as of February 1, all schools and service institutions participating in the school lunch program had to announce publically and put into effect their policies and procedures for determining the eligibility of children for free or reduced price meals as well as to operate food service programs in such a way that children receiving free or reduced price meals could not be identified. Schools which do not comply cannot continue to receive federal school lunch funds after July 1, 1969, or come into the program from now on. The

Committee on School Lunch Participation, Suite 2030, 10 Columbus Circle, New York, N.Y. 10019 (212) 586-8397, is collecting school district policy statements and sponsering a nationwide monitoring of adherence to USDA regulations embodying these requirements.

Nutrition Aid~~s~~ - The Council reports that under the nutrition aide program conducted by the USDA's Federal Extension Service with Section 32 funds, aides are being given an average of three weeks training by professional home agents with materials developed by the Serviceand sent into the field supervised (one professional for every 15 aides). Approximately 4,500 aides are scheduled to be ready to work by the end of the month and will be expected to handle caseloads of between 35 and 50 families by June.

Congress

McGovern Committee

In July of 1968 the Senate established the Select Committee on Nutrition and Human Needs to study the extent of malnutrition in the United States and recommend more effective methods of administering federal food programs. Until the testimony of Dr. Arnold Schaefer of the U. S. Public Health Service in January, no federal official or politician (What! Hunger in my state!) would admit that hunger even existed. On the basis of a 1967 preliminary study, Dr. Schaefer testified to the existance of a shocking incidence of "malnutrition" and "hidden hunger" as well as the prevelance of ~~such diseases as~~ a number of nutritional diseases thought to have been eradicated in this country. Dr. Schaefer reported that conditions in the United States were as serious and in some cases more serious than ~~in~~ those in a number of the world's underdeveloped countries. When asked by a reporter after the hearing why Mississippi had not been included in those states examined in the study, Dr. Schaefer indicated that certain political leaders from that state prefered that Mississippi not be included and also mentioned that FBI agents attached to the House Agriculture Appropriations Subcommittee headed by Rep. Jamie Whitten (Dem.-Miss.) ~~had~~ had questioned him about his "motives" for conducting the survey. These FBI agents ~~are~~ also questioned many of the poor people who testified before the U.S. Commission on Civil Rights when that body held hearings in Alabama last year.

After Dr. Schaefer's testimony, the McGovern committee faced an attempt by the Senate Rules Committee to cut its request for a $250,000 operating budget by $100,000. (The Senate Rules Committee gave no explanation for the attempted

reduction but did approve $450,000 for the Internal Security Subcommittee which filed no reports and presented no legislation but received $800,000 last year). McGovern's efforts to restore the cut funds were successful primarily because of the testimony of Sen. Ernest Hollings (Dem.-S.C.) who publically admitted to covering up the hunger problem in ~~his~~ South Carolina when he was governor of that state in order to attract industry. ~~to~~ Holling's testimony led to the establishment of a pilot program for Beaufort and Jasper counties, South Carolina, which allows families of four with less than $30 a month income to obtain free food stamps. McGovern's mixed reaction over the too little,too late attitude of the USDA prompted him to comment "The residents of Beaufort and Jasper counties are justifiably upset that more than 1,700 families with incomes of less than $100 a month will still have to pay 30 to 50 per cent of their income for stamps.".
The McGovern committee's success in focusing national attention on the problem of hunger should continue with a number of planned field "inspection" trips to hunger areas. The committee visited a Florida migrant labor camp ~~in Florida~~ in March and plans more field trips to ascertain the effect (or lack of effect) of present food programs and draw attention to the existance of hunger in the richest nation in the world.

Budget - The National Council on Hunger and Malnutrition reports that the USDA's Consumer and Marketing Service budget estimates for the fiscal year from July 1, 1969 ~~to~~ through June 30, 1970 reflect expenditures of approximately $644 million for child feeding programs (up $21 million from fiscal year 1969), $725 million for family feeding programs (an $177 million increase), $63 million in direct distribution to institutions (a decline of $1 million), and $15 million for nutritional aides and education ($5 million more) for a grand total of $1.45 billion for food assistance. In order to put the $1.45 billion slated for all food programs in the forthcoming fiscal year in some perspective, it is appropriate to note that the Bureau of the Budget estimates that this country will spend between $75 and $80 billion for defense with approximately one-third of that amount going towards Viet Nam; the United States will spend over $6 billion in the 1969 space program; president Nixon has proposed spending $7 billion on the controversial antiballistic missile system; on March 26, the Senate Appropriations Committee handily approved and extra $1 billion for the Commodity Credit Corporation to carry on farm price support programs .
All family feeding programs represented less than 3.5 per cent of total USDA expenditures and were equivalent to 6.7 per cent of the direct payments made to farmers in 1967; $111 million of 1969 Section 32 funds (section 32 monies constitute a permanent appropriation of 30% of annual customs

receipts) will be wasted by this July unless the USDA decides to spend them.;the traditional $300 million carryover balance to cover emergencies remains unobligated; most estimates of the amount of money the government must spend to eradicate hunger range from $1 to$2 billion in addition to the $1.2 billion presently being spent.

Alternatives

A national commitment, human and monetary, is necessary to successfully eradicate hunger in the United States. The lack of such a commitment is ~~necessary~~ obvious in the unrealistic manner food assistance programs are funded and the inflexible manner these programs are administered. A number of methods have been suggested to improve the effectiveness and administration of these programs:

- Remove the food assistance programs fron the production oriented Agriculture Department and place them under the direction ofa national non-profit committee or group whose prime concern would be to deal with the problem of hunger.
- Increase federal controls over the administration of food programs. Present policy allows local, almost autonomous control creating widely varying standards for such basics as qualifications for entry into food stamp and commodities programs. (Southern welfare officials, as an example, are not notorious for their willingness to help black folks). If present programs are to be expanded, the expansion should be accompanied by more federal control.
- The National Council on Hunger and Malnutrition reports that Sen. McGovern has suggested eight steps that could be immediately taken without awaiting new programs or ~~lege~~ legislation. The first was"a declaration of national policy and urgency that no citizen of this nation will be permitted to go hungry or malnourished" to be supported by action by the USDA Secretary "to institute emergency food distribution programs in food stamp counties and counties without food assistance where there is a clearly recognized problem of hunger." Additional remedies for the malnutrition crisis suggested by McGovern for prompt implementation by USDA and other concerned agencies included making all 22 commodities available in every distribution locale; adding CSM pasta (a product containing a mixture of cornmeal, soybean flour, and dried milk, 3/4th of a pound of which provides all the daily individual requirements of proteins, vitamins and minerals) as the 23rd commodity for nationwide distribution; charging poor people who buy food stamps only what they normally spend for food; starting to provide free breakfasts and lunches for the needy in every rural and urban ghetto school; commiting funds to complete the National Nutrition Survey in a minimum of 20 states; and agency monitoring of the food that actually gets d delivered at the local level.

MEMO FROM THE DESK OF:

Emory F. Via

Dear Dale:

Pardon the informality, but my secretary is sick.

Here is a revised version of the speech. Consider yourself tongue-lashed for sending a verbatim transcript to me. Greater troubles hath no man than to see his words one for me. It would make Ike look good.

I have revised, hoping for clarity, reducing redundancy, but yet maintaining the informality of the spoken word. I do not know what

MEMO FROM THE DESK OF:

Emory F. Via

your space and propriety needs are, but you, of course, may edit further.

I hope this helps.

You will note the absence of a title.

Good luck. Thanks.

Anheuser-Busch Buys Virginia Tract for Plant, Residential Community

By a WALL STREET JOURNAL *Staff Reporter*

ST. LOUIS—Anheuser-Busch Inc. purchased approximately 4,000 acres in James City County, Va., near Williamsburg for a planned industrial-residential community. Included will be a two-million-barrel brewery and a Busch Gardens-type recreational attraction.

Construction of the brewery, to cost about $40 million, will begin in 60 days. It will employ about 300 persons.

The project will be the concern's first entry into real estate development. It will ultimately contain an industrial area, low- and medium-density housing areas, recreational areas such as golf courses and marinas, tourist and convention accommodation areas, and a Busch Gardens amusement park attraction. Anheuser-Busch officials said the company "has been actively studying the land development business for the past 12 months as a part of its long-range diversification program."

Anheuser-Busch has under construction a plant at Merrimack, N.H.

If finding skilled labor is a problem in your state, you're in a sad state.

Come to South Carolina. And be in a happy state.

Because we have over 175,000 skilled workers. Their median age is 23.4 years. Their work stoppage record is the lowest in the country (0.3% of time lost in 10 years).

And they're ready, willing and able to work for you. Which makes it a great state to find yourself in.

For more information send for our free booklet "South Carolina: resource for industry." Write to: J. D. Little, Jr., Director, State Development Board, Dept. 56A, P.O. Box 927, Columbia, S.C. 29202.

Company Chaplain Becomes a Fixture In World of Mammon

Wall Street Jnl 12/29/69

More Concerns Hire Ministers For Prayer and Counseling; Some Clergymen Are Critical

By PAUL BERNISH
Staff Reporter of THE WALL STREET JOURNAL

MEMPHIS—At Holiday Inns Inc., few employes carry a broader responsibility than W. A. Nance. His job: Help "bring God into the profit picture."

That assignment comes from Wallace Johnson, chairman of the big motel chain headquartered here. Mr. Johnson, who is a deacon in the Baptist church, is deadly serious about blending God and profits, although he says "a lot of folks think maybe it's not right." "I think God belongs in every part of our lives," he explains in a reprinted speech the company proudly distributes.

Mr. Nance, who is an ordained Methodist minister, sees to that at Holiday Inns. He's one of a growing breed, the company chaplain.

Every Wednesday morning the Rev. Mr. Nance leads Holiday Inns executives in a 7:30 prayer breakfast. He and his assistant, the Rev. Charles Woodall, are full-time Holiday Inns employes, and they dedicate every new motel, counsel some of the concern's 90,000 employes on personal problems and see to it that other corporate activities reflect the religious concern of top management.

Mr. Nance insists that his work is "separate from the idea that religion can be used for business." But William B. Walton, Holiday Inns president, seems to see it differently. "The chaplains' program and other similar programs we have are the difference between success and failure" for the company, he says.

Swelling Ranks

Other companies might not go that far, but many are hiring chaplains. "There may be as many as 100 industrial chaplains in the U.S.," says George Cummins, a chaplain director for the Southern Baptist Convention. "Since the end of World War II, there's no doubt the number of such chaplains has doubled—and maybe even tripled."

International Telephone & Telegraph Co., for example, has four chaplains working north of the Arctic Circle, where about 1,000 employes help man a radar net. The four include two Protestants, a Catholic priest and a rabbi. One is the Rev. Paul Maurer of the United Church of Christ, a 70-year-old, tobacco-chewing Nebraskan who has logged more than one million miles in company aircraft.

The trend toward corporate chaplains is particularly strong here in the South. Henry Nading, owner of the largest shopping center in Winston-Salem, N.C., hired one to counsel unhappy employes and even shoppers there.

Often, concerns expect their chaplains to boost profits by bolstering employe morale—an expectation that annoys some men of the cloth. "If a company has to measure the success of a chaplain's program by the amount of worker efficiency, it's not ready for the program," says Rev. Rodney Brown, a young Methodist chaplain at R. J. Reynolds Tobacco Co.

Besides, says Mr. Brown, "anyone who says we help the company's balance sheet is talking a lot of blooey."

Seeing "Mr. Pete"

In theory, a chaplain is there to solve problems, but it doesn't always work out that way. The Rev. J. Gordon Peterson, who doubles as chaplain and personnel director at Texas Aluminum Co. in Rockwall, Tex., complains that "I interview lots of job applicants, and sometimes when they find out I'm also a chaplain I don't see them again."

Mr. Peterson, a Baptist minister, say he's attacking that problem "by avoiding the 'Reverend' or 'Brother' handle." He encourages new employes to call him "Mr. Pete."

Some critics assert that company chaplains undermine loyalty to local churches and substitute a bland, therapeutic religion for church worship. But chaplains reply that they have no intention of supplanting local ministers and say much of their work is fruitful. "We're just trying to help everyone, from management down to the floor sweepers," says the Rev. Mr. Brown of R. J. Reynolds, whose training includes work at the Menninger Foundation, the Kansas psychiatric clinic.

Some of the problems chaplains solve are relatively trivial. Mr. Woodall, the Holiday Inns employe and a minister of the Christian Church (Disciples of Christ), once had to settle an argument between an employe and her supervisor. The employe insisted on placing Bibles in the women's rest rooms at Holiday Inns headquarters; the supervisor was opposed. Mr. Woodall persuaded the employe to drop her plan.

But there are serious problems, too. A Holiday Inns secretary says Mr. Nance was "a wealth of comfort and help" after her husband died recently. Another employe here praises the "good, practical advice" Mr. Nance gave him during two weeks of every-night counseling when bracing for the impact of an impending divorce.

MEMPHIS
backs up your business

One of the country's largest cobalt machines for radiotherapy is at St. Jude Children's Research Hospital in Memphis.

with the South's largest medical center

The Memphis Medical Center is a lot more than hospitals. It's a whole complex of institutions dedicated to keeping the Mid-South healthy. It includes a major medical school (University of Tennessee) as well as research laboratories and nationally acclaimed specialized clinics, making it the largest, fastest-growing medical center in the South.

When you're looking for a plant location, remember the Memphis basics: good sites, vocational training facilities, excellent distribution, and pure artesian water. But consider the Memphis extras, too—like the first-class health care your people can get in the Memphis Medical Center, and the progressive attitude of the city that created such a center.

For the whole Memphis story, write Dan Dale, Director of Industrial Development, Memphis Light, Gas & Water Division, Box 388 AA, or Ralph U. Thomas, Manager Economic Development Dept., Memphis Area Chamber of Commerce, Box 224 AA, Memphis, Tennessee 38101.

Vol. 3, No. 7 September, 1970

Beware of faddist issues: The national chairman's message....

Those who watch our actions--whether their vantage point is from within or without the program--are observing a unified Project Equality increasing in strength at almost all levels. More local offices are doing more compliance reviews with greater efficacy. The several levels of the program understand better their respective relationships to the whole and because of that, relate better to the whole, and each other. The national support and coordinating staff, living within its known income, is lean, and efficient, operating with imagination under the leadership of Bob Hoppe.

But against this vista of continued progress, I can sense, if not see, an under-current eroding the base of support that we have come to expect and did receive during the latter part of the 1960's. Specifically, I am concerned about the increasing evidence that those persons who, in the past, found our purpose, project and program worthwhile (i.e.--worthy of financial support) have had their attention shifted to areas more "in" for the moment, a shift of attention unfortunately carrying with it their energies and monies.

Accompanying this shift is the implicit assumption that the problems that caught their attention and received their support and energies in the 60's have all been solved, and that they must now move on to the "new" problems of the 70's.

An example. I recently attended a meeting held at the "council of churches" building in a major metropolitan area. Its several display areas were totally devoted to recitation of the problems of our environment and ecology, identifying them as the great challenge of the 70's.

My general concern is that many white liberals have a marked tendency to be "faddist" in their interest--they leap from cause to cause, never devoting sufficient time and effort to any one problem to progress toward a solution of it before their interest is caught by a more "in" cause. Their staying power is short.

A more specific concern is that many causes, ecology being one, are "neutral" and afford the supporter thereof a refuge from truly facing up to his own relationship to other human beings--a relationship manyfold more critical than his relationship to his environment or it to him.

Our religious institutions should be particularly concerned with man's relationship to man, and supportive of programs purposed to improve it. But beware of the dissipation of their support toward programs and causes requiring less-personal, deep-conscience commitment. It is at this level that the PE program must be on guard.

John K. Cannon
National Chairman

WE REPRODUCE HERE THE FIRST ISSUE OF "ACTION REPORT" ISSUED BY THE KANSAS WESTERN MISSOURI

PROJECT EQUALITY®

ACTION REPORT

PROJECT EQUALITY OF KANSAS-MISSOURI, 2416 Swope Parkway, Kansas City, Missouri 64130

NEW FIRMS LISTED

FRANK BANGS CO., INC., Wichita, Kansas

CEDAR ROOF & METAL SPECIALISTS, Wichita, Kansas

COMMERCIAL NATIONAL BANK Kansas City, Kansas

DOUGLASS STATE BANK Kansas City, Kansas

HARMON OFFICE SUPPLY, INC. Wichita, Kansas

MILGRAM FOOD STORES (40 stores in Kansas City area)

SMITH PAPER SUPPLY CO., Lawrence, Kansas

STEFFEN DAIRY FOODS CO., INC., Wichita, Kansas (Includes Peter Pan Ice Cream Stores in Kansas)

AVIS RENT-A-CAR (national listing)

HOTEL CORPORATION OF AMERICA (national listing)

SHERATON HOTELS (national listing)

Check your Buyers Guide for all listings. The firms noted above are newly listed firms which have recently filed their report of employment statistics with Project Equality.

FOCUS ON BAKERIES

The following bakeries are listed with Project Equality:

AMERICAN BAKERIES (Taystee Bread, Cookbook Cakes)

ITT CONTINENTAL BAKING COMPANY (Wonder Bread, Hostess Cake)

MANOR BAKING COMPANY (Manor Bread)

CAKE BOX BAKERS, Kansas City

* * * * * * * * * *

SUN OIL COMPANY . . . . .

is the only major oil company listed in the PE Buyers' Guide. DX and Sunoco service stations are the retail outlets of this firm. PE plans to do a national review of this firm this year. Do you have a DX or Sunoco credit card? If not, apply for one — noting that their participation in Project Equality promoted your action.

LEE WILLIAMS APPOINTED

Effective September 1, Mr. Lee A. Williams, 28, of Wichita, Kansas, joins the staff of Project Equality of Kansas-Missouri. He has been employed as a "Merit Employment Specialist" and will be based in Wichita, Kansas. His primary responsibility will be to conduct merit employment reviews with major employers of participating religious bodies sponsoring PE and business firms enrolled and listed in the Buyers' Guide.

Williams comes from the position of Associate Director for Economic Development and Employment with the Wichita Urban League. He recently provided assistance to 14 Wichita banks in setting up a training program for minority group persons to move into skilled positions in banking. He has also been providing counseling and placement services for minority group persons seeking employment.

In his new post, he will be assisting employers in evaluation of the systems which are used in hiring and upgrading employees and their impact on opportunities for minority group persons. In addition, he will also serve as a resource to major institutions and religious bodies in Central and Western Kansas to assist them in utilizing PE to validate vendors supplying them with goods and services.

Williams is a graduate of Sterling College and is presently enrolled at Wichita State University in a Master's Degree program in Personnel and Guidance. He is married and has five children.

NEW ADDITIONAL SPONSOR:

Missouri District of the Lutheran Church-Missouri Synod

A NEW MINORITY ENTERPRISE

A new firm in Kansas City developed with the assistance of the Black Economic Union, Henry Wurst, Inc., Swope Parkway National Bank, and the Small Business Administration is LITHON COLOR PRESS, INC. The firm has the capability of four-color printing and specializes in large runs of 10,000 to 10 million or more copies. Located at 4344 Clary Blvd. in Kansas City, Mo. (64130), the company is headed by Mr. Don Holt, President, and has eleven additional employees. Lithon is listed in the PE Buyers' Guide to be distributed in October and has received the contract to print the Buyers' Guide. Why not give Lithon a chance to bid on large quantity orders of brochures, leaflets, or booklets?

OFFICE AS A FURTHER EXAMPLE OF THE INITIATIVE IN COMMUNICATIONS BEING UNDERTAKEN LOCALLY

MERIT EMPLOYMENT REVIEWS

Companies which are listed in the PE Buyers' Guide have agreed to "cooperate with PE, if requested, in a discussion of our policies, practices, and the make-up of our total labor force with respect to ethnic groups, race, and job category." It might be best described as a *diagnostic evaluation* of the employment system utilized by the firm. The PE staff member who conducts the review has received training on how to assist firms to improve the utilization of minority group persons.

The review process essentially does two things:

1. It validates the EEO practices of firms reporting to PE.
2. It provides technical assistance to the employer to remedy methods or procedures causing under-utilization of minority group persons.

To be scheduled for and to undergo a review *is not* an indictment of that firm – but rather it is simply a part of the routine validation and assistance provided by PE to employers.

One illustration of results from this process was contained in a letter from Mr. Thomas Johnson, Asst. Personnel Mgr. of Concordia Publishing House in St. Louis. He noted that since the review had been conducted four months previously, "we have added ten minority individuals to the rolls of our permanent personnel. This includes positions in Composing, Retail Customer Service, Personnel, Building Service, Letterpress, General Office, Purchasing, Stock-Shipping, and Data-Processing areas which before had no blacks." Concordia is the publishing house of the Lutheran Church-Missouri Synod.

Within the last year, reviews have also been conducted of the Christian Board of Publication, Eden Publishing House (St. Louis) and six facilities and headquarters of the Methodist Publishing House in Nashville, Tennessee.

During the last couple of months, for instance, reviews have been conducted by Kansas-Missouri PE with the following firms:

Luzier, Inc. (a cosmetics manufacturer in K.C. and a subsidiary of Bristol-Meyers Company)

Frozen Foods Division of Standard Brands

American Bakeries (one of 28 facilities reviewed by national and local PE staff)

Fairmont Country Club Dairy, Kansas City

Kitty Clover Potato Chip Co., Wichita (both firms were part of a review of Fairmont Foods)

Commercial National Bank, K.C., Kansas

Jensen-Salsbery Labs Division of Richardson-Merrell, Inc.

Foley Heating and Plumbing Co., Kansas City, Mo.

Kansas National Bank, Shawnee Mission, Kansas

Bill Fagan, Inc., Kansas City, Kansas

EXECUTIVE DIRECTOR'S NOTE

This is the first of regular "Action Reports" to participants and sponsoring religious bodies in Kansas and Missouri. The purpose is to supplement the Buyers' Guide by providing up-dated information on new firms listed, information on companies of certain types of industries or business which are listed (note the focus on bakeries and oil companies in this issue). In addition, we will be reporting significant results which are occurring, and what local action groups within the two-state area are doing.

Project Equality today is the largest non-profit organization in the nation providing this service to employers and to religious bodies and their institutions. Our review process is seen by many firms as a management consultant service providing technical assistance in this important area of personnel work. Perhaps this is best described in a memo of one large firm notifying its local facilities that reviews were being scheduled by Project Equality. The memo said in part:

"Project Equality is a non-governmental, privately sponsored program designed to be of service and assistance in helping to accomplish a mutually shared goal – affirmative action for equal employment opportunity . . . While its aim is somewhat similar to that of the federal government . . . it professes to accomplish these purposes through methods which are far more positive in emphasis. Project Equality places a heavy emphasis on working toward the resolution of EEO problems with sound and practical suggestions that should be capable of achievement, as contrasted with merely identifying problem areas . . ."

You will note that we report those firms which are reporting to and working with Project Equality to achieve equal employment opportunity (EEO). PE emphasizes the positive by providing a way to support with your purchasing those firms which are actively working to offset the effects of historic discrimination which still plague our society.

2220 Central Avenue

Election of Board: Reports on Program

Speaker: Joseph Kredens
National Compliance Supervisor, Chicago

New directors named in Seattle and Wilmington...

Derek M. Mills was appointed to head a new expanded operation in Seattle that will be known as PE of the Pacific Northwest, incorporating neighboring states to Washington.

Mills, 28, was formerly assistant professor in the Martin Luther King School of Social Change, Crozer Theological Seminary, in Philadelphia. Before that he was director of training of the Center for War/Peace studies in Seattle.

A founding board member of the Washington Democratic Council, Mills is married and the father of one child.

Named executive director of the Delmarva program in Wilmington was Leon A. Brinkley Jr., formerly director of the Delaware Regional Office of the National Conference of Christians and Jews.

Brinkley, 35, replaces Clyde Bishop, who has undertaken an advanced academic program as announced here last month. He was previously in the Philadelphia office of NCCJ as program director, was a training director in police-community relations and a teacher with the board of education in Philadelphia. He, too, is married with one child.

Waidmann to national compliance staff...

Joining the national office of PE as a compliance specialist is Arthur L. Waidmann, 34, who was previously the merit-employment compliance director of PE of Northeast Ohio, based in a suburb of Cleveland. He is a graduate of Eden Theological Seminary in St. Louis and ordained in the United Church of Christ.

In addition to several pastorates, he has worked in church-related social service agencies, ecumenical and antipoverty agencies in various Ohio cities. Married and the father of two children, he will work directly with Joseph Kredens, national compliance director.

Atlanta, Ga. 30303

Dear Sirs:

I am currently a VISTA serving with the Horry-Georgetown, E.O.C., a CAP agency here in South Carolina. While in training I came in contact with a booklet that had your Council's name associated with it. As it was one of the best summations of organizing I have found, I am most interested in obtaining a copy of it. The booklet is called, Handbook for Community Organization, and was printed in October, 1969. If you can assist me at all in obtaining a copy of this I would be most appreciative.

Sincerely,
James C. Dumm
(VISTA)

P.S. Any other information or material you think may aid me, I would appreciate hearing from you concerning it.

Dear Sir:

The Handbook for Community Organization is currently out of print. However, we do recommend a publication by Mr. Si Kahn entitled, How People Get Power: Organizing Oppressed Communities for Action.

This book is available from McGraw-Hill Book Company, 330 West 42nd Street, New York, New York 10036.

Sincerely,

Gwendolyn M. Sapp, Secretary
Resources Development Center

June 8, 1971

Mr. Mike H. Lawler
#139 Pleasant Street
Arlington, Massachusetts

Dear Mr. Lawler:

Attached is a list of persons whom I think would be useful for your students to visit on their southern tour or whom you might be able to use in the orientation program.

Under separate cover I will be sending some publications. The list of them is also attached.

The March, 1968 MONTHLY LABOR REVIEW was a special issue entitled "Labor in the South". Several of these articles might be useful for your group. I would especially recommend the one by Ray Marshall. A copy of my own article in the MLR will be included in the materials I am sending you.

Regarding strip mining, the publication of the Council of the Southern Mountains, MOUNTAIN LIFE AND WORK, has run several articles recently. A major article has appeared in ENVIRONMENTAL ACTION. The TVA magazine has recently run an

article on strip mining providing a rationale as to how it can be done with minimal destructive side effects. I will attempt to locate the exact citation for these and include them on the list of publications.

The Retail, Wholesale, Department Store Union, Local 1199 (located in New York City) (which organized the hospitals in Charleston has produced a film about the strike. It would be well worth viewing during your orientation session. I think it would be available from the local or from the Education Department of the AFL-CIO in Washington.

There are a number of good labor and labor related people in the states you intend to visit. In Virginia I would especially recommend Brewster Snow and also Julian Carper. Earl Davis, when he is home, is in Richomond and a black worker on the staff of C.O.P.E.

In North Carolina Wilbur Hobby would be an excellent resource. Aside from his present position, he has been an area C.O.P.E. director and a local union official. Scott Hoyman is not only a regional director but a vice president of the Textiles Workers Union. Jim Pierce is a past regional director for the Industrial Union Department, AFL-CIO. Dan Pollitt would be particularly knowledgeable about the interaction between labor law and southern union progress. In West Virginia you will note that I am suggesting Miles Stanley and two persons connected with labor education activities at West Virginia University (Humphreys and Tapper).

In Tennessee Matt Lynch is the State AFL-CIO President and Dan Powell is the area C.O.P.E. Director (working in several southern States).

Three other people might be of use to you, depending on what your schedule and budget will allow. If you are stopping in Washington, I would suggest using George Guernsey who has had a long time association through labor education activities with a large number of southern union leaders. He would be especially skilled, I think, with young workers groups. In the Economics Department at MIT Mike Peore has developed some expertise about the relation of unions, seniority questions, and discrimination. I dm not think he would profess to be a southern labor expert, but he is very well informed on those issues with whichhe has dealt. Vera Rony would be an excellent person to use in your orientation session if your' budget allows. She has worked with both southern labor groups and with civil rights and student activists. Articles by her will be included in the materials mailed. As a general rule, any articles by Marshall will prove to be "meaty."

I trust these suggestions, attachments, and materials will prove to be useful.

Sincerely,

Emory F. Via, Director
Resources Development Center

Dear Emory:

In going through some materials on the contractors project today, I remembered that you were interested in the evaluation of the apprenticeship outreach programs which I ran across in the Atlanta OFCC. Unfortunately, OFCC failed to send me a copy of it as I requested. I suppose they considered it "in-house" information.

In case you have any good sources from which to obtain it, the reference is as follows:

> Boise Cascade Center for Community Development, "Report of An Evaluation of the Apprenticeship Outreach Program," prepared for the Manpower Administration, U.S. Department of Labor (March, 1970).

Secondly, I would very much like to obtain a copy of a paper on Atlanta which you showed me from your file when I last visited the SRC. As I recall, it was a mimeographed paper by Vernon Jordan et al. for Better Schools Atlanta entitled "Education in Atlanta." If you can dig this up and Xerox a copy for me, I would much appreciate it. Please bill me for the Xerox costs.

Best personal regards.

Sincerely,

Robert W Glover

MEMORANDUM

TO: Robert W. Glover
FROM: Gwendolyn Sapp, Secretary, Resources Development Center
DATE: October 26, 1971
RE: INFORMATION REQUEST

After some research I have found one copy of a publication compiled under the auspices of the Council which related to Atlanta Schools. It is entitled "Desegregation of Atlanta Schools--A Review of Legal and Community Action Events 1942 to Present (1966)." This was a joint effort of Vernon Jordan and Marvin Wall. This report contains 63 pages.

The second publication was "Student Achievement in Atlanta Public Schools." This report was prepared under the auspices of Better Schools-Atlanta. This report is in excess of 50 pages.

I am enclosing the contents sheets from each of these publications. I hope from these sheets you will be able to decide which publication will prove to be most beneficial. Our xerox rate is five cents per copy.

If you will inform me as to which publication you would prefer, I will get it in the mail as soon as possible.

ADVISORY COMMISSION ON INTERGOVERNMENTAL RELATIONS

WASHINGTON, D.C. 20575

ANNOUNCING

ACIR INTERNSHIPS IN INTERGOVERNMENTAL RELATIONS 1971-72

The Advisory Commission on Intergovernmental Relations announces its internship program in intergovernmental relations for the 1971-72 fiscal year. The program provides internship appointments of up to one year for a limited number of young people. It offers a unique opportunity for them to participate actively in the work of the Commission and to acquire first-hand familiarity with the field of intergovernmental relations, an increasingly significant and complex dimension of American federalism.

The Advisory Commission on Intergovernmental Relations was established by Federal law in 1959. It is a permanent, 26-member bipartisan body charged with giving continuing study to relationships among the local, State and National levels of government, analyzing emerging intergovernmental problems and devising ways of easing tensions and resolving conflicts. The Commission represents the executive and legislative branches of all three levels of government; its membership includes nine members who represent the National Government (three from each House of Congress, and three from the Executive Branch); 14 members who are elected officials representing State and local governments (four Governors, three State legislators, four mayors, and three county officials); and three members representing the public at large.

The Commission's staff conducts the research that serves as a basis for the Commission's findings and policy recommendations, translates Commission proposals for action into draft legislation or other appropriate form for implementation at the Federal, State and local levels and serves as a clearinghouse and source of authoritative information on intergovernmental matters.

GENERAL INFORMATION

Number and duration of internship appointments. As many as three applicants may be offered internship appointments for part or all of the 1971-72 fiscal period.

Work assignemnts. Each intern selected will be assigned to one of the three Commission staff sections (Government Structure and Function, Taxation and Finance, or Program Implementation) and will work on one or more research or implementation projects during the period of his appointment. The interns may attend staff meetings and Commission meetings, as well as conferences and other meetings that the Commission convenes from time to time. Interns also will have an opportunity to become familiar with the major public interest groups that maintain Washington offices – including the National Governors Conference, the Council of State Governments, the National League of Cities, the U. S. Conference of Mayors, the National Association of Counties, and the International City Management Association – and to observe National meetings that these organizations hold in Washington.

Compensation. Junior professional level interns are eligible for compensation at the annual rate for GS-9 Step 1 (presently $10,470). They are entitled to annual and sick leave accumulation at the rate of approximately one day per month and are eligible for government employee life and health insurance. Moving expenses cannot be paid.

(Over)

BASIC REQUIREMENTS

Citizenship. Only citizens of the United States will be considered for appointment.

Education. To qualify, an applicant must have at least a baccalaureate degree from an accredited college or university.

Age. Preference will be given to candidates under 30 years of age.

Field of interest. In the selection of interns consideration will be given to the applicant's special field of interest, his demonstrated capacity and his career goals. Special preference will be given to applicants whose backgrounds and interests indicate that they can make a contribution to the Commission's current and prospective research and implementation programs. The Commission's Twelfth Annual Report which outlines the Commission's present activities and areas of interest are available in Federal depository and other libraries. Copies of the report are available to prospective applicants upon request.

APPLICATION PROCEDURE

Persons interested in applying for internship appointments should send letters of application and detailed resumes to:

ACIR Internship Program
Advisory Commission
on Intergovernmental Relations
726 Jackson Place, N. W.
Washington, D. C. 20575

In his letter of application, the candidate should outline his general and specific areas of professional interest and his long range public service career goals.

Applications for appointment at the beginning of the 1971-72 fiscal year (July 1, 1971) must be received no later than May 1, 1971. Applications received after that date will be considered for subsequent internship vacancies.

After initial screening a limited number of applicants will be invited to come to Washington at Commission expense for personal interviews.

GSA DC 71-11284

file: Job Opportunities

HOW TO PREPARE A RÉSUMÉ

A résumé is one of the most important tools in jobhunting. It is the brief, factual, written record of who you are and what you have done. It tells the prospective employer what he needs to know about your education and experience and helps you during an interview to recall dates and other information which may suddenly vanish from memory in a face-to-face interview. Try to condense this summary to no more than two pages.

Your résumé may be used in several ways: to enclose with a letter of application; to take to an employment office when you apply in person for a job; to take, or send in advance, to an employer when you go for an interview; to leave on file at the personnel office in the firm you would like to work for where now there is no opening suitable for you. Therefore a number of copies will be needed. It is not good form to send carbon copies of a résumé. Copies reproduced by Mimeograph, Multigraph, offset, or Xerox are perfectly acceptable. If you decide to actively seek more than one type of job, you should make a résumé for each, tailored for the distinct qualifications required by the individual job. Résumés are of two types: the general and the functional.

The General Résumé

The most commonly used form, especially for those with previous paid work experience and for submitting to employment agencies, is the "general résumé." The usual outline is as follows:

1. In upper left corner list your name, address, and telephone number.
2. In upper right side indicate the type of job you desire.
3. Then under the heading WORK EXPERIENCE list your last three or four jobs in reverse order, beginning with your last job. State name and address of the company, dates of employment, name and title of your supervisor, and the

How President Uses A Family Foundation To Donate to Charity

* * *

Johnsons' Fund Gives to Health Groups, Negro College Drive, Church; Assets Hit $317,330

BY LOUIS M. KOHLMEIER
Staff Reporter of THE WALL STREET JOURNAL

JOHNSON CITY, Texas—Eight years ago a local man and his wife started a charitable foundation here with a contribution of $100. At the latest public report the value of the foundation's assets had climbed to $317,330.

It's not this growth, however, that gives the foundation its distinction. Rather, it's the identity of the founders. For they are the President of the United States and his wife.

The foundation was originally called the Lyndon B. Johnson Foundation. Its name was changed to the Johnson City Foundation in 1961, after Mr. Johnson became Vice President. In its first full year—the fiscal year ended June 30, 1957—the foundation gave away $2,945. The foundation's most generous year was fiscal 1961, when it dispensed $17,712. In the 1963 fiscal year its gifts totaled $7,821. Beneficiaries have ranged from St. David's Episcopal Church in Austin and the American Cancer Society to educational television and the United Negro College Fund.

Responding to Requests

Only limited information is available about the Johnsons' philanthropic activities, and it's not known whether all the family's contributions are channeled through the foundation. It seems likely, however, that the foundation here was set up in part at least to provide a convenient means for the Johnsons to respond to the many requests for donations they receive. Similar motives have impelled many other prominent, wealthy families to establish foundations. The files of the Foundation Library Center, an independent agency in New York City that gathers information on foundations, now list about 15,000 foundations; new ones are being formed at a rate of well over 1,000 a year.

Nothing is quite the same, however, when the President is involved. The Johnson foundation gives rise to the delicate situation in which a Federal agency has jurisdiction over a President's private interests. A foundation's tax-exempt status is always subject to scrutiny and possible revocation by the Internal Revenue Service. The Johnson foundation was granted its tax-exemption in 1957, when Mr. Johnson was Senate Majority Leader.

The IRS isn't the only Federal agency that finds itself in a position to affect the Johnsons' personal affairs. The Federal Communications Commission has had to make a series of decisions involving Mrs. Johnson's television company, Texas Broadcasting Corp.—known as the LBJ Co. from 1956 until after Mr. Johnson entered the White House. The TV enterprise has enabled the Johnsons to build a personal fortune estimated to total anywhere from $7 million to $20 million.

Rep. Patman's View

The Johnsons' foundation appears to put them at odds with a well-known fellow Texas Democrat, Rep. Wright Patman. For years Rep. Patman has been conducting a broad assault on foundations, charging that in many cases they are used "as business devices and for tax avoidance" and that many foundations are accumulating income rather than using their funds to carry out their stated philanthropic purposes. Mr. Patman has gone so far as to urge that the Government declare a moratorium on the granting of tax exemptions for foundations until the "mess" is "cleaned up."

A Patman report which called for reforms studied 534 foundations from 1951 through 1960, but not the Lyndon B. Johnson Foundation. Mr. Patman will issue "several" more critical reports and then open public hearings on foundations, possibly before the end of the year, according to his aides. A searching look at foundations also is in the offing in the Senate. The Senate Finance Committee has asked Treasury Secretary Dillon for his views on foundations before the end of the year.

The indenture setting up the Johnson foundation pledged it to "promote the well-being of mankind" while safely skirting any "propaganda" activities and refraining from participation in "any political campaign."

Says lawyer A. W. Moursund, the President's long-time partner in Texas business dealings and now a trustee of the foundation as well as one of two trustees for Mrs. Johnson's Texas Broadcasting Co. stock: "We've got a little foundation here we're proud of. It looks to me like a laudable little enterprise."

The original board of the foundation consisted of Mr. and Mrs. Johnson, Mr. Moursund, J. C. Kellam, president of the broadcasting company, and Donald Thomas, one of Mr. Johnson's Austin attorneys who is also a director of Texas Broadcasting. The Johnsons have since been replaced by M. C. Winters, a Johnson City contractor, and R. E. Stubbs, a Johnson City banker.

Unless foundations choose to disclose de-

Continued From First Page

tails of their operations, the data available on their fiscal affairs is limited largely to portions of their yearly tax returns that are matters of public record. These public portions give a foundation's total assets, including a breakdown showing the amounts of money in general categories of holdings, such as stocks, bonds and cash. They also disclose total contributions and total income received during the year, plus a list of benefactions.

But the public sections of the returns do not reveal the sources of contributions, nor do they give specifics on investments, except in cases where a foundation holds more than 10% of the stock in a corporation. Some information about the Johnson foundation's contributors and investments can be turned up elsewhere, however.

The first contributions to the foundation, in addition to the $100 given by Lyndon and Lady Bird, came from close business and political associates. Mr. Moursund gave $25, as did Mr. Kellam and Walter Jenkins, who for years served simultaneously as Mr. Johnson's administrative aide and corporate secretary of the television station.

Big Contributors

Not surprisingly, the Johnsons appear to have been the heaviest contributors in the subsequent rapid build-up of their foundation. When it sought tax-exempt status from the IRS in 1957, the application showed that all but $225 of the approximately $40,000 contributed to the fund in its first 15 months came from the LBJ Co. Almost all the $86,618 contributed to the foundation in fiscal 1963 is known to have come from the Johnsons and the family television station.

A detailed picture of the way the Johnson foundation invests its money can't be obtained. Despite his pride in the "laudable little enterprise" which he serves as a trustee, Mr. Moursund says he has no intention of revealing just what its holdings are. For any information on the foundation beyond what is in the public records, he refers inquirers to Abe Fortas, the Washington lawyer who has emerged as Mr. Johnson's chief spokesman concerning the Johnson family's business interests.

Mr. Fortas does give out, in response to specific questions, certain limited information concerning the foundation's activities. From Mr. Fortas and information on file elsewhere, the following details of the foundation's operations can be gleaned:

The Johnson City Foundation owned stock in four Austin banks as of last Dec. 31, according to bank records filed at the Travis County Courthouse in Austin. Mr. Fortas says the same number of shares is still held in the banks today. Their market value: About $137,000.

Investing in a Chili Canner

Another investment on the public record dates back to 1956, when the foundation put $8,000 into 100 shares of the Austex Chili Co. of Austin, a maker of canned chili, tamales and other Mexican dishes. The firm has since been merged into Frito-Lay Co. of Dallas. The foundation has since increased its stake in Frito-Lay, until today its stock in the company is valued at $59,700, according to Mr. Fortas.

In general, the Johnson foundation appears to be an aggressive investor. At the close of fiscal 1963, its tax return shows, the foundation had only $3,459 of its $317,330 of assets in cash. During the year it had increased its investment in stocks from about $130,000 to $191,923. Its 1963 IRS return also showed "royalty interest" investments of $95,617; it had first ventured into this field three years earlier with a cautious $11,000 investment.

Mr. Fortas says the royalty interest item covered oil royalties the foundation holds in three counties near Houston—Waller, Brazoria and Matagorda.

The foundation also reported to the IRS that last year it took in about $1,000 in interest from about $26,000 it had out in "notes and accounts receivable." Mr. Fortas says the bulk of the money loaned by the foundation is represented "by small loans to students."

The Johnson City Foundation gives money to a wide variety of recipients. Last year its major contribution was $5,000 to the Southwest Texas Educational Television Council. Among 19 other gifts last year: $25 to the American Cancer Society; $50 to the American Heart Association; $600 to St. David's Episcopal Church; $100 to the United Negro College Fund; $75 to the Austin Symphony Orchestra; and $100 to the National Conference of Christians and Jews.

In all, the foundation gave away $7,821 last year. This was about 70% of the fund's earned income in dividends, interest and royalties. A charitable foundation does not have to distribute all its income. It may retain some of it and thus increase capital. Tax law only prohibits "unreasonable" accumulation of income. A foundation may also grow, of course, through contributions which add to its capital.

Mr. Moursund has a ready explanation of why the foundation has been hanging on to some of its income and all its contributions. "We've tried to build the foundation up so it's not just a pipeline from the donor to those receiving help," he says. "We want it to amount to something. To do that, it's got to grow to the point where it will have substantial income. Then it can do substantial good."

Lyndon's Pals

His Hometown Coterie Wheels and Deals in Land and Broadcasting

They Buy Into Austin Banks, Trade Property With LBJ And Play Some Politics Too

Direct Line to the White House

JOHNSON CITY, Texas—His visitors had almost given up hope of seeing A. W. Moursund, "The Judge."

But then a bronze-tinted Lincoln blazed into this hamlet at high speed. Its driver pulled to a stop, strode into his office in the trim, one-story tan brick building. His dignity of figure and face, accentuated by rimless spectacles, was soon relieved by some salty language brushing aside curiosity about his career. Nobody could be interested, Judge Moursund insisted. "I was born and raised here . . . I'm just a country lawyer."

In a law office of the nearest city, Austin, the strangers heard similar words from a stocky fellow in slacks and a blue jacket. Said Don Thomas: "I'm just a poor boy, born and raised in East Texas, trying to make an honest buck."

In Austin they listened to a third lawyer, Ed Clark. He has been hailed by the East Texas Chamber of Commerce for wrapping "his 200-pound-plus frame in loud checked suits, coats that would put Joseph's to shame, and rainbow-hued shirts." He once moved a local newspaper to marvel that "his piny woods drawl under duress is a cross between a caterwaul and Rochester practicing one of his more troublesome scenes." But Mr. Clark, too, spoke to the outlanders with humility: "Spell my name right—I need the business."

Such men are bound to be interesting, as authentic human products of the Texas hill country—this semi-arid, undulating terrain sprinkled with mesquite, scrub oak and occasional cactus, which stretches out to the west of the state capital. Though lots of it must look much as it did in 1864, it catches the eye today because this is Lyndon's land. Here is the original base of President Johnson's vast political power. Here is the soil which nurtured the Johnson family's multi-million-dollar economic interests. By now thousands of acres, literally and legally, are Lyndon's land.

Wall Street Journal reporters Louis M. Kohlmeier, Ray Shaw and Ed Cony collaborated in the reporting for this article.

Still, these three—Ed, Don and "The Judge"—are even more interesting because they are not quite what they say they are.

Edward Clark does not need to scratch for business; he heads the thriving law firm of Clark, Thomas, Harris, Denius and Winters, patronized by giant national corporations. One testament to his success is his status as board chairman of Capital National Bank, a proud Austin institution in which he holds more than $1 million of stock.

Donald Thomas is not a poor boy; he is a law partner of Mr. Clark and among other things he put up $150,000 five years ago to take over Brazos-Tenth Street Corp. Though the rocketing rise of this Austin enterprise has centered on ranch land and urban real estate, Brazos-Tenth has likewise picked up more than $1 million of bank stock, scattered in half a dozen institutions of three towns.

A Phone to the White House

Judge Moursund is not "just" a country lawyer; he is land baron, insurance man, banker—and currently reigns as regent over a major broadcasting empire. More than that, he is the only country lawyer in the nation who is linked by private telephone circuit to the LBJ Ranch and the White House. He can pick up his phone and almost instantaneously talk with the President.

Which brings up the most interesting point of all. Don, Ed and "The Judge" are not merely poor boys who've become well-heeled Texans—there are plenty of those—but are in a special inner circle orbiting around Lyndon Johnson.

Associates of any President can be intriguing, for they offer clues to the kind of man the Chief Executive may be. Yet except for John Connally, the Governor of Texas who was wounded by the Kennedy assassin, the men who've spun in this Johnsonian circle are not well known nationally—maybe simply because the nation has not been paying proper attention. Any effort to paint the group portrait they deserve should perhaps begin by sketching a few generalizations:

This coterie operates with an intimacy which more than makes up for its informality. Membership requires long-rooted Johnsonian friendship but is open only to friends of razor-sharp competence. These men agree, as Ed Clark puts it, that Lyndon "is always trying to do more for everybody than they can do for him," yet they compete in doing things for Lyndon and for each other. They differ from the President's Washington allies in that business deals build their bonds; nevertheless their own magnetic motion creates political as well as economic power.

The Presidential Personality

Students of the Presidential personality may even see a certain significance in the mystery or confusion which surrounds certain aspects of this inner circle's operations. At one moment a circle member may appear as a Johnson partner, or serve as a Johnson agent. At another time he may be operating independently, or be on the opposing side of a transaction which involves Johnson business interests, or even appear as an active Johnson competitor. Often it is not obvious which role is being played. In detail, the clues are sometimes as murky or downright misleading as those of a good detective yarn.

For example, records in the Llano County courthouse seem to show plainly that Donald Thomas bought the 2,785-acre Nicholson ranch last year for $373,000, and still holds it. But the 44-year-old Mr. Thomas himself declines to define this big tract as a definite part of his own current possessions. He limits himself to a single enigmatic comment: "You're get-

Johnson

Lyndon's Pals: They Wheel and Deal In Real Estate and Broadcasting

Continued From First Page

ting into LBJ Co. business there."

The LBJ Co., of course, is the Johnson family's TV and radio concern, which changed its name to Texas Broadcasting Corp. when Lyndon became President and Lady Bird put her controlling stock under the trusteeship of Judge Moursund.

The studio, offices and executive suites of the Johnson broadcasting company occupy fully a windowless modern edifice at the corner of Tenth and Brazos Streets in downtown Austin. The popular impression that this belongs to the Johnsons is seemingly supported by friends' testimony that Lady Bird personally chose its buff and turquoise bricks and designed its penthouse and roof garden. Mrs. Johnson herself is on record as calling this "a building of our own," contrasting it with the "rented" quarters her broadcasting firm occupied prior to 1960. Yet legal files show the property is owned by the burgeoning Brazos-Tenth Street Corp., whose name comes from the address. And Don Thomas declares the Johnsons own not a single share of Brazos-Tenth stock.

"A lot of people here think I'm just a front man for Lyndon Johnson—and I'm not," Mr. Thomas has complained. "There are no facts to suggest the company (Brazos-Tenth) is owned by anyone but me; I'd make that statement on a soapbox."

Thus by his own account Mr. Thomas is operating in this instance as the hard-headed landlord dealing at arms-length with some tenants named Johnson. When Mr. Thomas enters the building, he need not always come in this chilly role, however, for he also has two warm positions within the Johnson broadcasting firm, as its corporate secretary and as a director. And besides that, he is a trustee of the LBJ Co. Profit-Sharing and Incentive Plan, which rewards loyal executives and employes of the Johnson broadcasting concern. And he's a trustee of the Johnson's charitable foundation. And over the years he has been both a friend and a personal attorney for Lyndon. So assuredly he is not just a front man for the Johnsons. He has got them surrounded from every direction.

Declaration of Independence

Though Mr. Thomas' Brazos-Tenth firm can assert its independence of both Mr. Johnson and the Johnson broadcasting enterprise, it often gets associated with them, sometimes in deals of dizzying velocity. Consider what happened on Feb. 1, 1962. Courthouse records show on that date the LBJ Co. sold a parcel of Austin real estate, with the signature of Donald Thomas appearing on the sales document as its corporate secretary. The purchaser was Brazos-Tenth, so of course Mr. Thomas was even more firmly established on the buying side of this transaction. Then, on the very same day, Brazos-Tenth resold the property to a Thomas Friend — Lyndon B. Johnson.

At the same time, records show, Brazos-Tenth bought more than 40 other lots and three tracts, in Travis and Llano Counties, from the LBJ Co. and before the day was out sold most of this real estate to the then Vice President. What belonged to Mrs. Johnson's company at daybreak was Mr. Johnson's by nightfall, at undisclosed prices, but only after the Thomas company served as middleman. Mr. Thomas declines to discuss the reasons for all this, saying merely: "As far as I'm concerned, they were perfectly legitimate deals. My affairs are my own business."

A New York real estate man does offer a possible explanation as to why a woman would sell her husband property through a third person: "There's a tax reason basically. If Mrs. Jones bought the property at $1,000 a lot, six months or more ago, and it is now worth $2,000 a lot, she may want to sell it to get a capital gains. If she should sell it directly to her husband, the tax people wouldn't allow her to take the lower capital gains tax on it, because it would not be an arm's length transaction. But if you can get a third party involved, then you get two legitimate deals in the eyes of the tax people. In the trade we call it a 'conduit agency.' "

Keeping It in the Family

Why would a woman choose to sell at a profit to her husband instead of to an outsider? The New York real estate man says this happens when the lady wants to realize an immediate profit, but at the same time figures the lot will appreciate further in value as time goes by. So she sells it to her husband, takes the immediate profit and still keeps it in the family for possible future profits.

A closer look at another one of the lots involved in the set of sales on Feb. 1, 1962 shows how circular Mr. Thomas' business can be.

Donald Thomas in 1958 sold a residential lot in Travis County (which includes Austin) to the LBJ Co. In February of 1962 the triple-play carried it, of course, from the LBJ Co. to Brazos-Tenth to Lyndon. Then somehow it quickly returned to LBJ Co. hands, for the next recorded document shows the broadcasting company selling it on June 1, 1962, to Mary Margaret Wiley, who was Mr. Johnson's personable personal secretary and who later became Mrs. Jack Valenti, wife of the White House aide. Finally, in February of this year (1964), the Valentis sold the lot—to Donald Thomas, who had owned it back in 1958 when the circle began.

(3) Wall Street Journal Tuesday August 11, 1964 Page 1
LBJ Johnson

"I'm a person with speculative investments," observes Don Thomas, sitting in his elegant office with bright red wall-to-wall carpeting, 12 stories above the streets of Austin. "The only way a poor boy can make it is to go for broke." In the last few months his Brazos-Tenth concern has acquired 25 pieces of property in the Austin area—two from Lyndon and 23 from the Johnson broadcasting company.

"Look at My Liabilities"

Ask Mr. Thomas about the rapid rise of his firm and he replies: "You can't just look at the left-hand side of the balance sheet; you've got to look at my liabilities, too." Where has the borrowed money come from? Some of it from banks in which members of the Johnson inner circle have an interest and a voice, by his own account. But Mr. Thomas is not disclosing all his sources of financial strength.

Another major investor and trader in land is Judge Moursund. (His title dates back to a term on the Blanco County bench in the '50s.) In 1961, for instance, he put a quarter-million dollars into purchase of a half interest in a 4,561-acre ranch bordering Granite Shoals Lake. The urban land boom of Austin in recent years has extended up into this sparsely settled "Lake Country" as water backed up behind Federally-built dams intended to tame floods and produce hydroelectric power. The man chiefly responsible for the Government dam-building, by his own boast and the acknowledgement of his biographers, was Congressman Lyndon Johnson.

When Judge Moursund bought into this particular ranch, the LBJ Co. picked up the other 50% interest. Within a week, though, he had a new partner: Lyndon Johnson. Mr. Moursund explains this was the intention from the beginning, but the then Vice President was "over in Laos or one of those places" at the time the sale was closed so the LBJ Co. stepped in temporarily just as a convenience. It is from the shores of this ranch that the President now goes boating on his new cruiser.

Lyndon and the Judge

The partnership principle has since been applied by Lyndon and Judge Moursund to other properties. In 1962 they bought 45 lots in a Llano County subdivision called Lakewood Forest. But in addition, since Mr. Johnson entered the White House, Judge Moursund has managed the bulk of Lyndon's land as trustee. Just how much of what sort of acreage the President owns has been somewhat obscured. Mr. Johnson himself told his April 16 press conference that "I own a little Ranch land, something in excess of 2,000 acres."

Donald Thomas says Mr. Johnson owns about 5,000 acres. Most of this can be described as "ranch land," he agrees, but 27 acres purchased back in the 'thirties for about $300 per acre now are worth about $20,000 per acre, for they stand in an upper-crust Austin residential section.

Serving also as a trustee of broadcasting company stock owned by Lady Bird, Lynda Bird and Luci Baines Johnson, and as a trustee of the Johnson charitable foundation, the 45-year-old Mr. Moursund unquestionably devotes much of his vigor to representing the interests of the family who so often enjoy his company. (Says he: "It's not at all tough for me to do what I'm supposed to do—which is to see to it the Johnsons don't know what is going on.")

No one has doubted, either, that Mr. Moursund represented the President when he served as temporary chairman of the recent Democratic state convention in Houston, nor that he will go down the line for Johnsonian desires as a delegate to the national convention in Atlantic City.

Nevertheless Judge Moursund is as heated as Don Thomas in declaring that certain business operations are entirely independent of any Johnson interest—and never mind confusing "clues" to the contrary. Witness the case of the Moore State Bank.

"One Fine Day"

One fine spring day last year President Johnson and Judge Moursund dropped into Llano and visited the offices of this bank, just off the town square. A couple of months later control of the institution changed hands, and now prominent local folk like to suggest the President of the U.S. has a stake in the town's only bank. Even Tom Moore, who stayed on as bank president, just says vaguely: "I don't know. There's no stock in his name."

A check at the courthouse confirms that no Johnson shows as a stockholder. Control was purchased by Mr. Moursund, his mother and his law partner, and by Donald Thomas individually and through Brazos-Tenth. Altogether, they put up more than $800,000. The five-man board of directors is now dominated by Mr. Thomas, Mr. Moursund and the Judge's law partner, Thomas Ferguson, former Texas insurance commissioner.

Mr. Moursund stoutly insists that Lyndon Johnson has no concealed interest in the bank. Which is perhaps just as well, if the Chief Executive values his popularity among some minority stockholders of the institution. Their complaint is that dividends which had been paid twice yearly for more than three decades were abruptly cut off when the new group took control, with the explanation that the bank should build up its capital—yet at the same time the new directors decided the bank could afford to pay Judge Moursund a $1,000 monthly retainer fee as attorney.

The new group offered to buy out any minority stockholders displeased with the cut-off in dividends, which had been running $10 per share per year. "But they only offered to give us book value for our stock," laments one. In contrast, the $600 a share which had been paid for the controlling stock was almost twice book value.

"If any stockholders are unhappy, I don't know about it," comments Mr. Moursund. "They have no cause to be unhappy." As for his retainer, he says: "I make a living practicing law, and I give full value for the dollar." Has he financed any of his other ventures by borrowing from the bank? His reply: "That's no one's business but my own."

Growing Appetite

Many businessmen in and around Austin are aware of the Johnson circle's growing appetite for bank stocks—and some even seem a little nervous about it. Lyndon's associates own or manage stock in all eight of Austin's banks. Here in Johnson City, at about the time Lyndon Johnson was being inaugurated as Vice President, Brazos-Tenth acquired four-fifths of the stock of the town's only bank, Citizens State (resources: about $3 million). On the board sit Mr. Thomas, Mr. Moursund and another key member of the inner circle, Jesse Kellam, president of the Johnson broadcasting company.

Jesse is publicity-shy nowadays, but as a youth at Southwest Texas State College he was the extrovert leader of the White Stars, mostly athletes like himself, who controlled campus politics. A schoolmate, Lyndon Johnson, organized the Black Stars and tried to take over; when the groups made peace the two became buddies.

Jesse later helped Lyndon win a seat in Congress, whereupon he succeeded Mr. Johnson as state director of the National Youth Administration. During later years he has been top resident executive of the Johnson broadcasting enterprises. Though his personal investments in four Austin banks are modest, this year he became a director of one of the big three, Capital National Bank.

But the big man at Capital National (resources: $122 million) is its board chairman, 58-year-old Ed Clark. A former Texas secretary of state, Mr. Clark has loyally devoted his legal talents to defending the interests of friend Lyndon Johnson. When Congressman Johnson sought a Senate seat in 1948 it looked as if he had lost narrowly to Gov. Coke Stevenson; then discovery of 202 "overlooked" ballots in Jim Wells County put him over the top by 87 votes. It was Ed Clark who fought the ensuing bitter court battle over the validity of this victory.

Again, in 1960, it was Mr. Clark who went to court to obtain for Lyndon the right to run simultaneously for the Senate and the Vice Presidency. He has also represented the Johnson broadcasting company. He spent years as an efficient lobbyist for utility, insurance and other interests in the state capital, but remarks that more recently he has lacked time for lobbying because of his other activities, "particularly banking."

Mr. Clark's Bank Stock

As of last December 31, Mr. Clark personally owned 14,405 shares of Capital National stock, worth about $1.1 million at current prices. In addition, his law firm, which of course has other members, including Mr. Thomas, was listed as owner of 4,348 shares, currently worth some $335,000. According to experts of the American Bar Association it is unusual for law firms to invest substantially in bank stocks, but perfectly legitimate. Mr. Thomas' Brazos-Tenth shows up as another stockholder of this bank, as it does of three others in Austin.

At another of the Big Three banks, American National (resources: $117 million), Judge Moursund appeared on the board early this year. Among its stockholders are two peripheral Johnson institutions. One is the LBJ Co. Profit-Sharing Plan, of which Messrs. Thomas and Kellam are trustees; it holds American National stock worth about $67,000, and a few shares also in one other Austin bank. The other is the Johnson philanthropic foundation, whose trustees are the Messrs. Thomas, Kellam and Moursund plus two other Johnson friends, Melvin Winters and R. E. Stubbs Jr.—all of whom happen to be directors of the Citizens State Bank which Brazos-Tenth took over in Johnson City. The Johnson foundation also has holdings in three other Austin banks; its total of bank stock comes to roughly $137,000.

The two satellite Johnson institutions, it should be noted, are gaining a measure of financial power not only by buying bank stock but by making direct loans or investments. The 1956 trust agreement setting up the profit-sharing plan spelled out this capacity, including "expressly the power to invest in producing or non-producing oil, gas or other mineral properties."

The charitable foundation established in the same year has been accumulating far more funds than it gives away; in fiscal '63, for instance, its philanthropic distributions came to less than $8,000 while its income from investments totaled $11,000 and its assets increased by some $89,000. One of the few known investments of the foundation was an early purchase of stock in Austex Chili Co., an Austin food canner. Presumably one assurance of the soundness of this investment was the presence of Ed Clark on the Austex board; this concern has since been merged into Frito-Lay, Inc., of Dallas.

A Certain Uneasiness

Some of the area's businessmen feel a certain uneasiness about the growing financial strength of the Johnson circle; a few have admitted privately that they were opening accounts in banks where the Johnson group's influence has been least noticeable, to assure they'll retain ready access to borrowing sources. "Lyndon has a lot of friends here, but he has made a lot of enemies, too," comments a prominent Austin businessman.

Actually, of course, the circle seems far from having a stranglehold on area lending power, even if it should conceivably wish one. Bank investments do perhaps bolster the group's own borrowing capacity. Mr. Thomas, for instance, remarks that he has obtained financing from both Capital National and American National. Mr. Moursund emphasizes that his own bank-stock purchases have been with the simple idea that they were sound investments.

Until this year, the biggest bank in the area, Austin National (resources: $131 million), had remained entirely outside the circle's orbit. When Brazos-Tenth bought stock recently, it constituted only about a $3,000 toehold—yet was considered perhaps a significant first step. According to one responsible banking source, Mr. Johnson himself—before becoming President—had asked for an opportunity to buy stock in the bank.

The concept that the Johnson circle somehow seeks "monopoly" power may have fed upon the circumstance that the Johnson company has in fact been Austin's solitary television broadcaster. But if one turns attention instead to radio broadcasting it is easy to argue the opposite concept: That the Johnsons have shown astonishing eagerness to foster competition.

It's an old but little known story, so is worth telling, and it can be entitled The Crowded House at 1901 Dillman Street.

The Congressman Buys It

Lyndon bought this corner Dillman Street duplex in Austin's pleasant west-side residential section in 1943, when he was a young Congressman. It was in the same year that Lady Bird bought radio station KTBC. One of Mrs. Johnson's biographers relates that the family lived in the upstairs unit when they were not in Washington, and it was there and in the yard outside that Lady Bird "did much of her radio . . . station work"—making much use of "a telephone attached to a tree."

The Federal Communications Commission knew from its files that this was the address of broadcaster Lady Bird, yet there is no record that the agency was taken aback when in 1945 an application to create another radio station, KVET, arrived listing 1901 Dillman as corporate headquarters. In early filings this was likewise listed as the home address of four men who got the KVET station under way: John Connally, his brother Merrill, Walter Jenkins and Willard Deason.

If the FCC noticed the coincidence at all, it could not have assumed that the Johnsons were trying to obtain a second Austin radio outlet, for it was and is illegal for the owner of an AM station to own even a minority share in a second one in the same town. Mr. Deason confirms the Johnsons never did invest money in KVET; what they did was give "moral support." And that was stretched pretty far. For no fewer than five of the KVET stockholders who created this new station were simultaneously on Mrs. Johnson's payroll at KTBC. Construction of KVET was begun in February and completed in September 1946; Mrs. Johnson, in a routine application for renewal of her license, listed the five among her KTBC station personnel as of March 11, 1946.

A Lady Bird Employe

President of the new outfit was John Connally, who at the same time headed Lady Bird's official list of employes, as "owner's representative" in charge of KTBC "policies on personnel and programming." This is the Mr. Connally, of course, who had been pre-war secretary to Representative Johnson, who was to serve in 1949 as secretary to Senator Johnson, who was to be manager of the Presidential bid of Candidate Johnson in 1960 and who now, as governor of Lyndon's home state, will be co-nominator of Mr. Johnson for the Presidency at the Atlantic City convention. He started out subscribing to half of the new station's stock, for $25,000—all of it borrowed from Capital National Bank, where Ed Clark was a stockholder even then. Mr. Clark, as it happened, became another KVET founder himself.

Another who lived in Lyndon's house and worked as sales representative for Lady Bird's radio station while he set out to give the Johnsons competition was Willard Deason. He had been Lyndon's college room-mate. He started as a stockholder and director of the new station, then at the end of 1948 he quit as Lady Bird's KTBC sales manager to devote full time to KVET as general manager.

That other college chum, Jesse Kellam, served as a KVET director during its crucial first year and as stockholder for two more years, at a time when he was general manager of Lady Bird's competing KTBC.

Two more KVET founders and directors were KTBC employes: Continuity director W. E. Syers and sales representative "Jake" Pickle. The latter now sits in Lyndon's old seat in Congress.

Mr. Jenkins Also Served

Another resident of 1901 Dillman, Walter Jenkins, veteran administrative aide to Lyndon on Capitol Hill and in the White House, was an early stockholder in KVET and in 1949 served briefly as secretary-treasurer; it was not until 1953 that he became Lady Bird's corporate treasurer and director, posts which he relinquished after Mr. Johnson became President.

Among others who helped found or build the radio station which was to compete with the Johnson broadcasting company were: Melvin Winters, the Johnson City contractor who now serves as trustee of the Johnson charitable foundation, and Robert L. Phinney, another old friend, who later secured a position as Austin's postmaster. Nowadays, as Internal Revenue Service Director for the South Texas District, Mr. Phinney is charged with keeping an eagle eye on such matters as the Johnson foundation's tax-exempt status.

As they got going, this group cleared seemingly high hurdles with ease. When they first applied to the FCC to broadcast on the 1300 kilocycle wave length, the agency had already awarded this to a station in San Antonio, 70 miles to the southwest. But rapidly the FCC induced the reluctant rival to accept "voluntarily" another wave length, clearing 1300 for KVET. Then the Civil Aeronautics Administration complained erection of the 210-foot broadcasting tower would "present an undue hazard for the safe operation of aircraft." But two weeks later it changed its mind.

Another Network Outlet

KVET, like Lady Bird's KTBC, had no trouble getting network affiliation, signing up with Mutual. To this day these two remain the only network outlets in Austin, though the city now has seven radio stations.

Lyndon Johnson owned stock in neither his wife's KTBC nor its competitor, KVET, yet there were those who assumed he was interested in the welfare of at least the latter. At any rate, Leonard Marks, the Washington lawyer who for years has handled FCC matters for both stations, took care to mark a carbon for "Lyndon Johnson" when he wrote the agency in 1947 to inquire about FCC approval of the transfer of KVET stock to John Connally, who had begun buying out some of his colleagues.

John Connally may have had grateful memories of 1901 Dillman street. In 1950 he enlarged that property by selling the Senator two adjoining lots, and the tax stamps indicated a price of $500. He had bought them five years earlier, at an indicated cost of $3,000.

In 1955, having launched another career as attorney for Fort Worth oilman Sid Richardson, Mr. Connally gave up his presidency of KVET and sold control to Willard Deason, who now is listed as sole owner.

Those who drop in to visit station president Deason nowadays can hear his cheerful view of competing with the Johnsons and his cozy recollections of how it all came about. They can see two pictures adorning his office. One is a brown-tone photo taken in 1932, of schoolmate Lyndon. The other is a large autographed portrait of the President of the United States.

The Johnson Balance Sheet

Detailed Audit to Public Puts 'Capital' at $3,484,098, On Original-Cost Basis; Current Value Is Likely Higher

By LOUIS M. KOHLMEIER
Staff Reporter of THE WALL STREET JOURNAL

WASHINGTON — President Johnson acknowledged that the private wealth his family has acquired during his years in public office will be a campaign issue, by making public what appeared to be an unprecedentedly detailed accounting of assets and liabilities.

But the President's heeding of growing pressure—particularly significant just five days before the Democratic National Convention opens—is hardly likely to make the Johnson multimillions disappear as a GOP electioneering target. The official-looking nine-page financial statement, bound in blue and produced by the national accounting firm of Haskins & Sells, New York, might even have the opposite effect. It confirms the impression that the Johnsons have grown exceedingly prosperous, yet really casts little light on how it all happened. Furthermore, by employing a number of technically acceptable accounting devices, it projects a grossly understated idea of the current dimensions of the Johnson fortune.

The document released by the White House declares the Johnson "capital" to be $3,484,098. But Lady Bird's broadcasting stock, Lyndon's ranchlands and the family's other properties are essentially figured on the basis, of original cost rather than current market value.

"Accepted Accounting Principles"

Depreciation is deducted in calculating property figures, whereas those familiar with the Johnson enterprises declare they have appreciated enormously in value. Haskins & Sells, declaring that the financial statements are "in conformity with generally accepted accounting principles," nevertheless took care to say:

"The amounts . . . are not intended to indicate the values that might be realized if the investments were sold."

To see what a difference this makes, glance at the TV and radio empire that was formerly known as LBJ Co. and currently is called Texas Broadcasting Corp. Industry experts estimate this company's broadcasting holdings alone (not counting extensive real estate investments) would be worth some $7 million on the open market nowadays, which would place the Johnson family's 84% stock interest at nearly $6 million. But the White House document, even when including the real estate, states the family's interest in the company to be $2,445,830.

This is done by starting with the original $24,850 cost of broadcasting stock, required by Lady Bird in the '40s. To that is added more than $3 million in retained corporate earnings. But then the accountants subtract more than $815,000 in capital gains tax which the Johnsons would on this increment if they sold out —though this is of course a tax that hasn't been paid, and isn't likely to be paid soon, since there is no indication that a stock sale is in prospect.

The financial declaration mentions, but assigns zero valuation to, the broadcasting company's 50% stock option in an Austin community TV cable system. Some experts figure this option is likely to be worth $5 million when exercised—but the bookkeeping is defensible because the Johnson company acquired the valuable option without putting up a cent.

Recent Calculation Undercut

By including calculations of potential taxes and by other means, the White House document even managed to undercut a recent statement of the family's financial position issued by Judge A. W. Moursund, the old family friend who has served as trustee for most of the Johnsons' holdings since Lyndon became President. Here is a comparison of his "net worth" declarations for each member of the family with the Haskins & Sells calculations of their "capital":

	Moursund	H&S
Lyndon	under $400,000	$378,081
Lady Bird	slightly over $2,500,000	2,126,081
Lynda Bird	630,000	490,141
Luci Baines	630,000	489,578
Total	about $4,160,000	$3,484,098

What the actual worth of the family holdings would prove to be on the open market can only be estimated, of course. Some intimates back home in Austin calculate it would be in the neighborhood of $20 million.

The Haskins & Sells report deals not at all with the circumstances of the Johnson millions that have made them so much more controversial than the wealth of almost any earlier President. Nearly all of the Johnson wealth was accumulated while Mr. Johnson served as a Congressman, Senator, Vice President and President. The mainstay of the family fortune is the broadcasting company, which has repeatedly benefited from rulings of the Federal Communications Commission—whose seven members must look to the President and the Senate for reappointment, whose chairman serves at the pleasure of the President.

Another area untouched by Haskins & Sells involves real estate—the sometimes furiously swift and deeply mysterious manner in which acreage changed hands among Johnson intimates before landing at least temporarily on Lyndon's balance sheet.

Sen. Goldwater, campaigning for the Republican ticket in 1960, latched onto the most obvious element of the Johnson wealth, the Austin broadcast properties which by FCC edict include the city's only television transmitting station. The issue grew fatter with the Bobby Baker scandal. Bobby, secretary to the Democratic majority when Lyndon was Senate Majority Leader, declined to tell investigating Senators whether he ever urged "certain national advertisers" to buy time on the Johnson TV station.

Musty Courthouse Records

Newsmen who've visited Texas to learn about the Johnson wealth and how it grew have found much information in musty county courthouses—records of the swirling land deals and the like. But there was a lot too that reporters couldn't learn—mainly because some Johnson associates, such as Jesse Kellam, president of the broadcasting company, wouldn't talk at all while others such as Judge Moursund gave out scanty information.

Clearly, President Johnson was able to convince both company head Kellam and trustee Moursund that they should do some talking, through Haskins & Sells.

The accountants' report is addressed "Dear Mr. President." A covering letter begins: "Pursuant to your instructions, issued to us on July 7, 1964, we have made an audit . . ." and it concludes: "During the course of our services we received the utmost cooperation from your family, your trustees, and officials of Texas Broadcasting Corp." (The text of the accountants' report is on page 6.)

Just what prompted Mr. Johnson to ask for it on July 7 isn't clear. It could have been on the advice of Abe Fortas, the Washington lawyer who as the President's personal counsel has been fielding some questions that reporters haven't been able to get answered in Austin. It was Mr. Fortas who approached Haskins & Sells.

Among the nuggets of Johnson wealth data that can be dug out of the Haskins & Sells report are these:

Lady Bird outranked her husband as family breadwinner, at least in the past decade. Her annual salary, as president and then board chairman of the broadcasting company, averaged $57,085 over the decade. Lyndon's salary and expense allowance from the Government averaged $40,973 annually over the same period.

The Johnsons have channeled much of their charitable giving to a foundation they founded in 1956 as the Lyndon B. Johnson Foundation, currently called the Johnson City Foundation. Haskins & Sells reported the Johnson family over the past decade contributed $178,578 to religious, charitable and educational organizations. Over $164,000 of this giving went to the family foundation, which has been retaining a lot more of its income than it has been paying out. The foundation's growing pile of assets, which stood at $317,000 at the end of its 1963 fiscal year, is being invested mainly in oil properties and corporate stocks, including Texas bank stocks.

Profit-Sharing Role

Interestingly, the report suggests that Mrs. Johnson could retain an interest, at least indirectly, in the broadcasting stations even if the family bowed to pressures to divest the Texas Broadcasting Corp. stock. It shows that Mrs. Johnson, while she was an officer of the company, accumulated an $85,000 interest in the company's profit-sharing and retirement plan. The trust agreement with which the Johnsons attempted, according to their counsel, to draw an iron curtain between them and the stations, gives the trustees "absolute discretion" to sell the stations but says that, if they do, they're to give the profit-sharing plan first crack at buying control.

Haskins & Sells didn't purport to tell in figures the entire story of the growth of the Johnson wealth, which began in 1943 when Mrs. Johnson bought Austin radio station KIBC with some of her modest inheritance. Haskins & Sells starts at Jan. 1, 1954, a year after then Senator Johnson had been elected Majority Leader, and takes the tale to July 31, 1964.

Even figured on a cost basis, the Johnson assets clearly rose steadily to ever higher ground. Mrs. Johnson in 1943 told the FCC her total net worth was $64,332. By the start of 1954, according to Haskins & Sells, the family's net worth had grown to $737,730. And that figure, largely because of the gain in the broadcasting company's retained earnings, grew to nearly $3,500,000 by mid-1964.

Over the 10 years covered by Haskins & Sells, Lyndon's income from the Government amounted to nearly $410,000 and Lady Bird and the two Johnson daughters received from the broadcasting company $849,000, in the form of salaries and dividends, rents on real estate used by the company, and interest on debentures and loans made to the company.

The report drops some hints about how Texas Broadcasting is operated, though Haskins & Sells didn't disclose the company's profit-and-loss statement. The radio and TV stations are obviously lucrative but only a small part of the earnings is paid out as dividends.

Haskins & Sells shows that Texas Broadcasting's accumulated earnings applicable to the Johnsons' 84% stock interest amounted to $3,200,000 as of July 31 this year. It shows, too, that over the past decade the Johnsons' stock has collected a total of $74,550 in dividends.

The report doesn't say precisely what the company is doing with its undistributed earnings, but hints that it's doing quite a bit of investing on the side. The hint comes in Haskins & Sells' statement that in the five years ended June 30, 1964, the company realized capital gains totaling $992,748, after taxes, "from the sale of television and radio properties, and from the sale of securities." The figure is almost as big as the company's earnings from its Austin radio and TV operations, which the accountants indicated were $937,835 over the same five years.

Nothing is disclosed about what securities the Johnson company held. Sales of radio and TV properties must be cleared by the FCC. It is known that in 1961 the company sold for $1,400,000 the radio and TV stations in Weslaco, Texas, which it had acquired for a reported $600,000.

Johnson's Course

If Elected Tuesday, LBJ Likely Would Try to Build Broad Base of Support With a Managed Prosperity

By Henry Gemmill

WASHINGTON — With this election won, by a squeak or with a roar, Lyndon Johnson would immediately aim for a landslide re-election in 1968.

If that premise can be accepted—and it seems consistent with the LBJ psyche—the consequences could prove pervasive and perhaps profound.

Though harsh language has been heard in the closing heat of campaigning, Mr. Johnson can be credited with a triumph of tact and tactics in stretching out for nearly a year the honeymoon which any new President normally enjoys. But to stretch it for five years, keeping tycoons in the bedstead beside labor bosses, millions of conservatives curled alongside the great liberal voting blocs, would demand a sweep of strategy.

Political wizardry could play its part. For instance, it is not difficult to imagine a President continuing to deplore—beyond November—the capture of the opposition party by "extremists" of the right, yet simultaneously doing everything he can to sustain their control of the GOP. With ambassadorships and Cabinet posts, he could give his Administration the aspect of a coalition government manned by bipartisan personnel, luring into his own camp a fair number of the "moderate" Republican leaders who might otherwise be fighting for reconversion of their party.

Still, as Douglas Dillon discovered, a Republican who enters a Democratic Administration soon takes on the coloration of his Presidential environment. And, as John Kennedy discovered, an Administration does not appear to the public to be markedly less Democratic, nor less liberal, just because it has hired some Republicans. If Lyndon Johnson is to draw votes right and left it is he himself who must win them, even as in '64. And he must calculate that by 1968 his reverence for God, the travels of Lady Bird and the amplifying powers of a bullhorn will not in themselves be sufficient to sustain the impression that he soars above party and spans the liberal-conservative chasm. He will have to run on his record.

What Kind of Record?

So what kind of a record could possibly produce a Johnson landslide four years from now? There is reason to suspect it might have to be one that looks different from any of recent vintage. Sensing that LBJ's approach to his job diverges from that of President Kennedy or candidate Stevenson or President Truman—none of whom ever won overwhelming broad support for their programs—some folk suggest his model is Franklin Roosevelt.

The idea should be respectfully dismissed. FDR rode a shock wave of potential revolution; its epicenter was the Great Depression. He championed the "forgotten man" against the "economic royalist." He triumphed as the plainly labeled liberal—the conservatives called him radical — whose electoral sweeps and economic reforms swept along on the crest of popular passion.

There is hardly a shred of evidence that President Johnson intends to imitate this. He can see it was Truman, Stevenson and Kennedy who tried to follow the FDR model —or seemed to, despite stabs at restyling. Their very slogans, from Fair Deal to New Frontier, stole a word apiece from the New Deal banner.

It didn't work well, and can't—because the tidal wave subsided during World War II. The American left wing is still large, but not a seething majority, not a towering crest to ride. A President who nowadays becomes clearly identified as liberal can not long command even an overwhelmingly Democratic Congress; he can not construct a record of massive innovation; he can not be elected once again by a landslide. At least, he can't count on it.

If Lyndon is secretly intrigued by any past Presidency, one supposes it might actually be the last Republican one, with its mild progressive-conservatism adjusted close to the fulcrum of a land whose heavily opposing conservative and liberal weights were near even balance. Seeking no great alteration in the nation, Ike could suffer no grave frustration—and most of the nation could never get thoroughly fed up with him.

The Eisenhower Model

On paper, the Eisenhower model could produce even better political results for Johnson. During the next four years, do just a little; do it slow; leave conservatives relatively undisturbed; leave Republicans no sales pitch. Labor people, Negroes and others of the liberal voting bloc would turn impatient, but with a Democrat in office they would have no place else to go.

This may be logic, yet it is less than persuasive. It might fit Mr. Johnson's intellect, but not his glands nor his ego. One suspects the Ike formula could be kept in reserve as a possible line of retreat, but it is not the LBJ battle plan. In short, it's likely Lyndon has really set out to act as that great President who activates the U.S. into the Great Society.

This raises the problem of propulsion. Lacking the agonized energy of domestic disaster which was tapped by FDR, how can LBJ propel his land?

(D) Wall Street Journal
Friday October 30, 1964
Page 8
EFV
Johnson

One venerable method of moving a nation, of course, is to turn abroad—either facing up to foreign foe or achieving peace in our time. In the end Roosevelt himself went down this road, taking the first of its two opposing lanes. Mr. Johnson has been visibly though cautiously excited by prospects of the second. If a try at living more comfortably with the Communists comes off, the political dividends could be rewarding even though the economic consequences in terms of tapering arms production and swelling East-West trade might be mixed.

Too obviously, however, all this depends on what an untested new Russian leadership may have in mind, not to mention a maelstrom of Chinamen, Poles, Hungarians and Vietnamese. So Lyndon can't count, either, on global coziness. It must be assumed that LBJ's search for the answer to the problem of national propulsion will turn homeward.

And there is reason to believe he thinks he already has sighted it—that its essentials are quite simple. The Johnsonian analysis may run something like this:

The relative immobility of the American political mass during the last couple of decades has not been due to absence of energy. Quite the contrary. It is caused by two strong but approximately equal forces pushing in opposite directions. Turn one of the two around, so both will shove the same way. Then the LBJ Administration's record can ride a rocket.

One energy packet has been known since Roosevelt's day as liberalism—but the reality behind the word is still mainly just a lot of people, mostly the less prosperous, who want Government to do more and more for them. (Plus a sympathetic fringe which calls itself intellectual but is mainly linked by heartstrings.) While de-emphasizing the emotion-laden liberal label, LBJ would leave all these pointed in roughly their present direction—pushing for big Government.

The other energy packet has been called conservatism, though Mr. Johnson would also let that label fade. It is another lot of people, mostly the more prosperous, who have feared Government will take more and more away from them. (Plus another fringe who espouse individual independence and an unguided economy from principle or habit.) Mr. Johnson believes a good share of these can be turned around, so the energy of this group will combine with that of the first—shoving likewise toward lustier Government.

Describing the LBJ expectation thus, it may seem surrealist. Foes of big Government will be fond of big Government? Conservatives will be liberals? It sounds absurd in the abstract—and in practice it may indeed prove impossible.

Yet the immediate question is not so much what may finally be possible as what the political eyes of Mr. Johnson view as feasible. And consider how the evidence looks at this moment from Washington:

Moneyed folk are unalterably eager for less Government? No, because if so then why did the intimation of a Goldwater nomination shake the stock market? No, because if they are then why are so few businessmen bankrolling Barry's campaign and so many signing ads for LBJ?

It is not likely such gentlemen have been conned into thinking Lyndon balanced the budget when he flicked off some light switches. Not at all—they are practical men who are simply not going to work up a real sweat over deficits when the longest boom in history is giving them their largest profits. So long as big Government works, these prosperous people are not going to kick it.

In the non-Euclidian logic of politics, the nub of the matter may be this: People are people. Prosperous ones are not much different from poor ones. Give them their share of the gravy; they'll go for Government.

And the comfortable thing is that such a turnabout can apparently be accomplished without any embarrassing open abandonment of conservatism. Instead, as a new generation assumes leadership of the business-oriented voting bloc, the old vocabulary imperceptibly undergoes a semantic shift.

A "pro-business" President, to friends of Henry Ford the elder, no doubt was one who would keep hands off the economy. But from the White House it looks as if the Henry Ford II age-group would gladly settle for an opposite sort of "pro-business" Administration: One which assigns to industry a highly profitable role within a Government-managed growth economy.

This conversion of the conservatives, far from complete, can be accelerated. LBJ can see that remaining fears of an increasingly dominant Government can be soothed merely by easing the minor irritants of Government—and leave him looking like a liberator. To start with, businessmen hate to be called names. Mr. Johnson won't campaign against "Wall Street"; he won't make ferocious use of TV to denounce steel prices; he will hold more White House dinner parties.

In addition, perhaps trust-busters should be tamed a bit, and a few zealots—the sort who seize shredded wheat—weeded out of the regulatory agencies. Lyndon, having seen his own family business prosper under benign Federal regulation never insistent upon rough competition, can have sympathy for that.

Cut Taxes, Spend and Elect

Taxation is another fertile field. The FDR formula—tax, spend and elect—lured the poor but alienated the prosperous. The adjusted LBJ formula—cut taxes, spend and elect—has total appeal. Next step: Make a host of businesses and plump-purse consumers happy by trimming "luxury" excises. And season the corporate tax pot with administrative rulings to taste.

There's even room to honor states' rights. Show how LBJ abhors centralizing all Government in Washington; toss more Federal funds over to the statehouses—as increased grants-in-aid, or even without strings. This conservative-style gesture will be in quiet tune with keep-the-money-spinning economics, and as legislatures are forced into reapportionment it will finance liberal-style social programs. And don't forget most state governors are Democrats, so the money will build electoral muscle.

Behind and above all this the two big objectives are: To keep Washington in control of forced-draft economic expansion, outlawing the business cycle. To set the nation working on a series of great projects, in a manner tempting the mighty and well-to-do along with the common man. Cut business in on the deal, that's vital.

The principles of the proposition are clear enough, especially if one looks rather than listens. Mr Johnson loudly ridicules Mr. Goldwater for attacking TVA, and that's safe because the private electric power enterprise so bloodily liquidated by this New Deal venture is long buried. But note that he takes care not to repeat the pattern nowadays. In Appalachia, and other regional projects which may follow, the idea is to subsidize industry instead—training its labor force, financing its roads and waterways and enlisting the power companies in the regional renaissance with the prospect of profit.

Partnership With Business

Washington has observed that businessmen who have grabbed NASA contracts do not shout against the multi-billion-dollar space program as "big Government." It suspects salesman LBJ can have the same sort of luck with contracts for building great metropolitan transit systems—or for building whole new cities. That's what he was explaining to the Liberal Party in Madison Square Garden—a coming "cooperation" of Government and industry. . . . "The same sort of cooperation that has built our national defense and allowed us to explore the stars."

Very likely Mr. Johnson himself has no rigid concept of how this approach will work out, in detail. But suppose he calculates, for instance, that one reason John Kennedy couldn't sell Federal medicare to Congress was that the program cut insurance companies out of the deal. Then perhaps Lyndon's line will cut them in.

The President is aware some of the well-to-do would still rather spend money on the moon than on expanding the poverty program; that some of the whites still don't want Government giving a hand to blacks. But he sees the steam of opposition leaking out of these people; he has reason to expect they will turn around to the Great Society as they see its offerings extended to include them. Lyndon has his task forces out, figuring how to spruce up the suburbs along with the slums.

So Lyndon can count on his '68 landslide? Well, not quite. The future has ways of frustrating humanity, even Presidents. One might advise Mr. Johnson to look out for inflation, beware the balance-of-payments, but most of all to prepare himself for the unpredictable. And who knows? Maybe, even if LBJ does succeed in giving America his Great Society, Americans won't think it's so great.

The President's Problems

* * * * * *

His Own Makeup, Relations With People May Be Pitfalls

By ALAN L. OTTEN

WASHINGTON — Despite his landslide election victory, President Lyndon B. Johnson will face some urgently pressing problems in the near future. And not the least of these may be of his own making, the product of his own larger-than-life personality—his tireless energy, his driving ambition, his towering ego.

The President clearly will have to address himself in the coming months to election-delayed foreign policy decisions: In Vietnam, Europe, Latin America. And the home front will need tending to, also.

Steel companies may confront Mr. Johnson with vexing price increases. Critical budget decisions must be made, and the far-reaching and frequently utopian recommendations of a host of Presidential task forces must be winnowed out.

Liberal supporters in Congress will be urging the President to endorse a purge of disloyal Southerners. Even with a top-heavy Congressional majority, he may still have difficulty passing one or two of his more cherished legislative projects, such as the medicare bill. Negro groups, self-muzzled during the long campaign, will push new demands.

Almost all of these problems grow out of external situations: International developments, decisions by private citizens or groups not directly subject to Presidential control, political movements with an existence and impetus of their own.

Equally crucial for Mr. Johnson as he begins a full four-year term—and perhaps even more difficult for him to handle—will be the problems that grow out of his own makeup, his own working habits, his relations with people around him. It's possible that his big win and awesome opportunities and responsibilities will, as he was suggesting in private pre-election conversations, humble him, impelling him to reshape basic personality traits. But certainly there are worrisome indicators that this may not be the case.

Pushing Presidential Power

For one thing, Mr. Johnson may have difficulty controlling himself from abusing the huge power he has now won. The knowledge that he was to some degree custodian for John F. Kennedy and perhaps to an even larger extent the awareness that he would have to face the voters within a few short months served as at least a mild restraint on his normal power drives during the past year. Even so, he pushed Presidential power in some rather dubious directions; for example, the exploitation of Federal Bureau of Investigation prestige to help him out of such campaign tight spots as the Walter Jenkins affair, and the use of Federal agencies to release favorable economic reports in ways best calculated to aid the Democratic campaign effort.

Now elected in his own right by almost incredible totals, there will be a great temptation for the President to throw his weight around even more freely. There will be more than the usual opportunity to apply the full force of executive authority to bend lawmakers, businessmen or other holdouts to his will—using Federal "pork" projects, patronage, Government contracts, tax and antitrust prosecutions, and a vast variety of other Federal prerogatives as rewards for the pliant and punishment for the recalcitrant.

There can be little question that Mr. Johnson is an abnormally egotistical man, raw to even the mildest criticism. His intellect can understand and even appreciate critical comment, but his emotions not only resent but resist it. Occasionally, this resistance even forces him into bravado actions that contradict his own good judgment. For example, Mr. Johnson clearly appreciated the personal dangers of a President pushing deep into crowds or standing up silhouetted against the night atop his limousine. Yet editorial warnings seemed merely to impel him into ever more frantic personal contact with the voters. Translated to matters of state, his compulsiveness could pose large risks.

Moreover, the President has a disturbing tendency to nurture and brood over criticism; his unhappiness roils within him until it bursts out, not always in a way helpful to his cause.

Even though his intellect warned that it would be bad politics for him to answer Republican criticism of his relations with Billie Sol Estes and Bobby Baker, he repeatedly seemed on the point of doing so anyhow, and political lieutenants dissuaded him with only the greatest effort. The GOP handling of the Jenkins affair annoyed him so deeply that he began talking in private conversations with reporters about the homosexual officials in previous Administrations; finally, late one campaign night in San Diego, he blasted the charge out into the open in answer to a TV reporter's questions. It was not, Johnson aides abashedly

Johnson

admitted, one of the President's finest moments.

The President intellectually knows his public speeches tend to be too long, but he repeatedly finds himself unable to stop speaking and then insists his audience was enraptured — even though some listeners walked out on him. He can't discuss personalities, even those he admires, without jibing or jabbing at some small point. Often he publicly blames an aide for some failing even when he knows full well the fault was his own.

In many ways a naturally dignified man, some showman's impulse frequently forces him to cornball; he can broaden or narrow his Texas twang at will. He wants to be liked, but often his efforts to win admiration and affection are so overwhelming as to smother rather than captivate.

Rebuilding of Staff

Partly because of his personality and partly because of other factors, Mr. Johnson almost surely will have to undertake soon a major rebuilding of his personal White House staff. Most of his Cabinet will probably stay, at least for a while, and, when vacancies do occur, there usually is no great difficulty attracting good people for such prestigious posts. Replacements will be needed rather quickly at sub-Cabinet levels, but again, the attractions of the jobs plus the assurance of distance from the White House should insure an adequate supply of personnel. The President's chief chore will be to find people to work intimately with him at the White House.

Himself a tireless worker, Mr. Johnson drives his personal staff hard and long. While he can be sweet and sympathetic to an assistant beset with health, financial or other trouble, he can also be tough and dictatorial. Some of his aides—men such as the now-departed Mr. Jenkins or press secretary George Reedy—remained devoted for many years, but many others left after appropriate service and maintained an arm's-length distance from their former boss.

"The most good that could have come from the Walter Jenkins affair," says one White House aide, "would have been if the President had realized that he just can't push his men the way he does. But there's no sign he's learned that lesson."

Many of the original Kennedy White House staff will now be leaving; party loyalty kept them at their posts through the election. Ralph Dungan, who specialized in foreign aid problems and in hunting talent to fill key Federal posts, has been named ambassador to Chile. Top political operatives Kenneth O'Donnell and Larry O'Brien want to write a book about the Kennedy years, and then plan to find other work.

Mr. Johnson replaced Mr. Jenkins with a man already on his staff and already overloaded — Bill Moyers. The President's personal confidant, Jack Valenti, talks of wanting to return to his Houston business but can probably be persuaded to stay on; however, he, too, is already doing the work of several men. Other recent Johnson additions to the White House staff already complain of working too hard, and too long.

Attitude of the Press

Still another problem for the President, particularly in view of his sensitivity to criticism, is a possible change of attitude toward him on the part of the press. Except for a few favored columnists, Mr. Johnson does not enjoy great personal affection or respect from many editors and Washington correspondents.

Many resent his vanity, his corniness, the tendency of the President and his aides to slant or even twist facts. During the campaign, criticism of the President was to some degree muffled because so many of these editors and publishers were preoccupied with concern over Republican Presidential candidate Barry Goldwater—worried over his foreign and domestic policies, offended by many of his supporters.

With the Goldwater threat now removed, it's likely that large parts of the press will now flip-flop and became highly critical of Mr. Johnson. His proposals and activities will be perhaps scrutinized even more closely than usual, particularly by normally Republican papers slightly embarrassed over their pre-election support of a Democrat.

This new or enlarged volume of criticism could, moreover, find quick response in the nation. The GOP campaign, however unsuccessful at the ballot box, did sow widespread distrust and suspicion of the President, even among many voters who voted for him as a lesser evil than Mr. Goldwater. These citizens, in the years ahead, could come to believe the worst of Mr. Johnson.

The President is shrewd and intelligent enough to know his problems and handicaps. Influential friends and advisers will constantly seek to moderate his tendency to personal excess. The mark of the new Johnson Administration may depend on how well they succeed.

Texas Friend of President Gets License, Loan for Small Business Investment Firm

Wall Street Journal
Wednesday

E. V.

Johnson

By a WALL STREET JOURNAL *Staff Reporter*

WASHINGTON — The Small Business Administration disclosed it licensed a small business investment company in Johnson City, Texas, headed by A. W. Moursund, a longtime associate of President Johnson, and has authorized a $150,000 Government loan to help put the company in business.

The new company, Highland Lakes Capital Corp., plans to invest its $300,000 starting capital in various Texas small business ventures, particularly those in the Highland Lakes area west of Austin, according to SBA spokesmen.

Mr. Moursund himself is listed as president; his mother, Mrs. Mary F. Moursund, as vice president; R. E. Stubbs, Jr., who is vice president and cashier of Citizens State Bank of Johnson City, as treasurer, and Thomas C. Ferguson, Mr. Moursund's law partner, as secretary.

Small business investment companies are private concerns licensed by the Government to provide long-term loans and equity capital for small businesses needing funds to modernize or expand their operations, or develop and market new products. The Government, while regulating their operations through the SBA, provides them with loans at 5% interest and with certain tax advantages such as an exemption for dividends received from their investments.

The total $300,000 starting capital is the minimum for SBA licensing, under rules in effect when the application was processed. If Highland Lakes Capital increases its private capitalization above $150,000, it will be eligible for additional matching loans up to a maximum Federal share of $700,000. The Government normally receives subordinated debentures from the investment company in exchange for the loans.

Aside from these loans, the new investment company can borrow "operating funds" from the Government as well. The limit on these is one-half an investment company's paid-in capital and surplus, up to a maximum Federal loan of $4 million. Some of the more than 700 investment companies licensed by SBA use only private capital, however.

Pre-Freeze Application

SBA disclosed the licensing of Mr. Moursund's investment company in a routine press release that announced licensing of a total of 13 new concerns. All had applied before the agency slapped a three-month freeze on licensing last summer while it reviewed the standards it had been using to judge the merits of such applications.

SBA ended the freeze in October when it announced new, stiffer standards, including a minimum of $300,000 in private starting capital in most cases. But these measures weren't applied retroactively to the petitions of Highland Lakes Capital and the 12 other concerns.

The Highland Lakes Capital Corp. application was filed Nov. 14, 1963, according to SBA officials. Under normal procedures the agency, after looking over such applications, notifies the applicants to proceed with whatever steps are necessary to comply with state laws and collect the private capital. The applicants can ask the SBA for more time to accomplish such steps when necessary.

The license for the Moursund concern was actually approved last Aug. 6, according to an SBA spokesman. In explaining the delayed announcement, this official said that at the time the freeze was begun last July 25 investment company applications were pending or, in a couple of cases, just approved. It was decided to wait until all had been approved or dropped and then make one general announcement: "We didn't want to dribble these things out one by one." Only last week, he reported, the last of the 25 application cases was wound up, and this led to the announcement of the 13 new licenses, which had been approved at various times since last June.

"No member of the House, no member of the Senate, and no member of the White House ever contacted SBA regarding the Highland Lakes application for a license," the agency spokesman stated.

Diversified Policy Planned

Highland Lakes Capital Corp. is owned by its four officers in equal shares, according to SBA records. While it plans a diversified investment policy, according to agency officials, the company has said it may focus from time to time on real estate and construction enterprises and small manufacturers.

Mr. Moursund, a former county jurist who's widely known as "judge," and his partner Mr. Ferguson couldn't be reached for questions. Mr. Stubbs seemed reluctant to discuss any details about the company's investment plans, its ownership or the sources of its private capital, and said questions should be directed to Mr. Moursund. These three men are listed as the investment company's directors, according to the SBA.

After President Johnson took office in November 1963, Mr. Moursund became trustee for much of his land holdings as well as a trustee for the Texas Broadcasting Co. (formerly LBJ Co.) stock owned by Mrs. Johnson. He is also a trustee for the Johnson City Foundation, a charitable foundation started by Mr. and Mrs. Johnson eight years ago.

Mr. Moursund, aside from these responsibilities, is also a landowner himself, an insurance man and a banker. He and Mr. Johnson became partners in certain real estate investments before Mr. Johnson became President.

Mr. Stubbs is also a trustee of the charitable foundation. "No connection, though," he said.

SBA officials said they couldn't be certain whether the new Johnson City concern had yet begun investing its capital. While the Government has various regulations covering these investments, such as one rule generally limiting investment in any one small business to 25% of the licensee's capital, individual investment transactions of a routine nature don't require its prior approval. The licensees must file semiannual and annual reports, however, and the SBA reviews these. The annual reports are audited by public accountants. In addition, agency field examiners occasionally check up on licensed companies.

LBJ

EV LBJ

JOHNSON DELAYS announcement of resignations until he can unveil replacements. Sample case: Federal Communications Commissioner Ford, who just quit. But some officials grow impatient, reveal their own departures anyway. Included: Emergency planner McDermott, Navy Under Secretary Fay.

LBJ'S PASSION for controlling the news stretches to extraordinary lengths.

He strives in some cases to manipulate public opinion by attempted secrecy. Johnson misleads the press on his intentions. He even tries to keep his own bureaucracy in the dark, to prevent leaks. Offenders face harsh action; a Presidential aide was pushed out for spilling a memo on Vietnam. The White House called in copies of cables from Ambassador Taylor after contents of some came out.

The President broke up a "multi-lateral force" planning group on grounds of overzealous propagandizing without permission, though it favored his avowed aims. Published speculation about a plan under White House study can be enough to provoke Presidential veto of it. Health, Education officials sent policy proposals to the White House, but never heard decisions till some were publicly announced.

Johnson carefully planted reports that he planned a sub-Cabinet shakeup, then objected to resulting news stories.

MINOR MEMOS: The Federal Trade Commission puts out a pamphlet loudly titled Fight Back! The Ungentle Art of Self-Defense; it's an anti-gypping guide for consumers. . . . Agency officials predict Johnson's budget will rely on complicated new devices to hold down spending; "I don't even understand some of them myself," confesses one Budget Bureau officer. . . . The sedate Federal Register celebrates the new year by bursting forth in an illustrated cover; the picture is quite in character—a drawing of the stately Archives Building.

Thinking Things Over

BY VERMONT ROYSTER

The Lyndon Touch

For a fleeting moment while watching TV the other evening the thought flitted across the mind that Lyndon Johnson was the first President to realize that times have changed since 1936.

But by the time he had finished there was also the thought that, as the French proverb has it, the more things change the more they remain the same.

Or, in American political terms, the more change the more the habit grows to treat hundred-million-dollar packets like small change. The President even managed to toss out a billion and a half dollars as casually as you might flip a quarter to a baggage porter.

It's true that, like all his predecessors, Mr. Johnson seemed to be throwing everything into the stew, and his catalogue of ingredients for the Great Society was long enough to keep Congress sweating over the stove for a long, hot summer. Ever mindful of a modern President's manifold responsibilities, he even prescribed a substitute for the Ev and Charlie show which will disappear now from the TV lists. Although Brezhnev and Kosygin haven't agreed to fill the gap, it was a good try.

But Mr. Johnson, unlike his predecessors, was content to toss into the pot only those left-over ingredients that happened to be lying around the kitchen. The newness, if any, was in the mixture not in the offering of new experiments of his own design.

As a matter of fact, of all the items on his list only Medicare asks the country to try something unprecedented, and this one has long been brewing. Go down the rest of the list—urban renewal, highway building, the programs aimed to promote education and medical research or to combat juvenile delinquency; however different in size, however varying in common sense, all are familiar ingredients in Government programs.

* * *

Besides the absence of bold new devices, there was another difference in this State of the Union message. Missing were the attacks on "special interests," the touches of rancor against political foes, at home or abroad. Gaullists and Russians were treated as gently as Republicans. The closest he came to a biting remark was about the Chinese Communists.

In all this President Johnson seemed to be recognizing that the country is in a different political mood. From Truman through Kennedy—including Eisenhower to some degree—our Presidents have felt a necessity to emulate FDR with political innovation, preferably a sweeping one, as a sort of memorial to their Administration.

But the country isn't the same, and hasn't been for a long time. It isn't in the slough of depression. It doesn't need something bold and new to get it moving again; there is vast difference between a poor country and a rich one with some pockets of poverty.

If business ever needed to be manhandled by the Government, it certainly doesn't now; times have made ridiculous those speeches about enfeebled labor unions oppressed by wicked managers. There are no Okies fleeing westward from the Middle West. There is no longer, either, a war devastated world calling for Marshall Plans; the dollar gap has vanished.

This being so, the people aren't in the mood for "bold, new schemes," and Lyndon Johnson has shrewdly recognized this. Events are likely to prove that, for all the posthumous adulation of President Kennedy, the quiet man is more in tune with his times.

Yet this lack of innovation, while striking, can be deceptive. Go back over that list of "I propose" items Mr. Johnson handed the Congress. Do you want to go to college? The Federal Government will take care of it. Do we need beauty? The Federal Government will provide it. Does your community have some distresses? The Federal Government will correct them. Are you sick? The Federal Government will nurse you. Is there delinquency among our children? The Federal Government will step in loco parentis.

It would be hard to find a political speech that in total added up to a more complete prospectus of paternalistic government. Not this time with a host of new upsetting laws for new schemes and new programs. This time it's just going to be done with money.

Had Mr. Johnson proposed a Federal agency to control the whole educational system, with power to decide who "merits" a college education, he would have started a devil of a row. So he would too if he had proposed nationalizing medicine, or a Federal law to define beauty or a Commission to select State-approved art and music.

As it was, the Johnson catalogue drew only a few vague rumblings, although if you put enough quantity of money into any program you change it qualitatively, because where the Government pays the piper it decides what tunes merit playing.

* * *

This shows again how shrewdly he's in tune with the times. The bare truth is that, despite the few who grumble, no political issue worries people less than a budget deficit, and when you get one by decreasing taxes while increasing spending you can't find enough objectors to populate a small city.

Statisticians may debate the devaluation of the dollar in purchasing power. It's clearly been devalued as a thing to take seriously, whether by the politician, the businessman, the householder, the wage earner or the teenager on an allowance. Of course everybody would like to have more dollars, but not by their own efforts or by their own husbanding. If it's easy go, it's also easy come. The Government will just print up some new ones and spread them around.

The moral implications of this must be left to philosophers. The fact follows a simple economic law: That which is plentiful and easily garnered—like the air—is but little valued. The political corollary is that dollars are the one thing a politician can toss around without an uproar.

You can't credit Lyndon Johnson with this discovery. Where he's bested his teachers is in recognizing that's all you need. People can grow weary of endless laws, even angry at abrupt or radical changes; but of spending, never. After all, it's only money.

Thinking Things Over

By Vermont Royster

Texas Diplomacy

In barely more than a year in office President Johnson seems to have acquired a legendary reputation as a master practitioner of courthouse politics on the national level. The political pundits, awe struck in either admiration or alarm, are almost unanimous that in his cornpone way he's going to get more out of Congress than his illustrious predecessor.

But there's almost an equal unanimity that foreign policy is a different kettle of catfish. The thought is that you can't treat a struggle for power in Europe in the same way you would a fight over who's going to be Democratic boss in upstate New York.

Well, perhaps not. But several recent developments offer some clues to President Johnson's approach to foreign policy, and the substance of it seems to be the application of West Texas politics to the tricky terrain of international diplomacy. The techniques are familiar—a judicious balance of back-patting and arm-twisting, the swapping of tit for tat, the sly undercutting of the opposition's power base and the building of power by the careful use of patronage.

A case in point is the way President Johnson has been juggling the proposal for an MLF in NATO. This is an important matter because it involves a major U.S. foreign policy. But the manner of its handling is intriguing because it suggests Mr. Johnson is tackling General de Gaulle with much the same tactics he used on Senator Goldwater.

* * *

The multilateral force, as you'll recall, would be a fleet of warships manned by mixed crews from all the NATO nations under NATO command. It differs from the more traditional combined military operation in that the force would be totally integrated, no longer identifiable as belonging to one nation or another.

The idea was first put forward during the Eisenhower Administration by Secretary of State Herter. President Kennedy had been only a few months in office when he picked it up and made it a part of his own policy for NATO, broadening it to include submarines as well as surface ships. The program—that is, the advocacy of it—carried over into the Johnson Administration; the new President himself endorsed it several times.

So here was a policy examined and thought well of by three Administrations. As a military idea it was dreadful; as a political idea it did have a certain appeal. Its threefold object was to counterbalance Soviet ballistic missiles in the European area, recreate the lost sense of unity in the European alliance by involving everybody in a common team, and discourage European nations from developing their own nuclear systems.

There was, however, one little catch. In Europe, practically nobody liked it. The West Germans were willing to humor us in the hope that MLF might get them a foot in the nuclear door, but they weren't enthusiastic. The British, to put it mildly, were lukewarm. The French threw a fit.

Before long it was tangled up in all sorts of other problems: The French determination to build their own nuclear power; Franco-U.S. rivalry for German support; Franco-British arguments over the Common Market; European fears of German military power; the general desire of all the West European countries to diminish, not increase, the American role in Europe. From the political standpoint it was plainly a dud.

Nonetheless, it was pushed hard. In part our stubbornness may have been just pride in our baby. But it was also logical to a certain type of mind—if the plan was good for the Europeans, didn't the responsibliiites of world leadership require us to force it on the Europeans whether they liked it or not?

Thus matters stood until President Johnson's political sense grasped a simple thing that had escaped practically everybody else. If the policy so aroused the Europeans it was bad politics. And if in arousing the Europeans it defeated one of its main purposes—the achievement of unity—then no matter how good it was in the abstract it was also bad policy.

* * *

Any good politician knows what to do in this kind of situation, and Mr. Johnson did it. He let it be known he wouldn't jam MLF down anybody's throat.

Of course in the immemorial way of politicians the shifting tracks are being scuffed over. Mr. Johnson is still for MLF, you understand, and said so again last week. This keeps his advisers happy, the record consistent and his freedom of future maneuver intact. But in downgrading MLF from its "must" status he has widened his room for present maneuver. He's made it possible, without losing face, to bury MLF in an unmarked grave.

This simple move has already accomplished much. General de Gaulle has the satisfaction of winning a point, but he has lost an issue that was highly useful to him in stirring dissatisfaction against the U.S. The effect was the same as when Mr. Johnson undercut the Republican economy issue by turning out the lights at the White House.

It could accomplish more, not because it will automatically win over European countries on other things but simply because U.S diplomacy can now operate on these matters without that irritant. The politician's instinct may prove good statesmanship indeed.

This isn't the only example of Mr. Johnson's use of the arts of Texas politics in international affairs. In the Panama controversy he's put on his Congressional demeanor of "let us reason together." But the mixture, you note, also includes some hinted promises (to build Panama another canal) if the Panamanians are reasonable and some not-so-veiled threats (to build the new canal elsewhere) if they aren't.

The President doubtless had the same mixture in mind when he did the heretofore unthinkable with foreign aid, letting the idea get about that he expects some quid for the quo when the U.S. dispenses money.

All this is exactly the way he handled the Southern delegates at Atlantic City—quite successfully, too—and that's what makes it so fascinating.

Roosevelt conducted his foreign policy by charm, Truman by big doses of U.S. power and money, Eisenhower by calmly walking brinks and Kennedy by making speeches. Lyndon Johnson conducts his as if Paris, London and Moscow were extensions of a Texas courthouse or the Senate cloakroom. And who can be sure it won't work?

Lyndon's Lobbying

By Courting Congress Assiduously, Johnson Furthers His Program

He Neutralizes Some Foes At White House Briefings, But Congresswoman Balks

Phone Calls & Photographs

By ALAN L. OTTEN
Staff Reporter of THE WALL STREET JOURNAL

WASHINGTON — A new picture is being prominently displayed in Congressional offices all over Capitol Hill.

A handsomely mounted eight-by-ten-inch color shot, it shows the particular Senator or Representative and his wife impressively posed with the President and First Lady in the White House Green Room. Handwritten across the bottom is the legend: "To the blanks, with best wishes," and the signatures, "Lyndon B. Johnson—Lady Bird Johnson."

The photos, snapped on an assembly-line basis as the lawmakers dropped by the White House recently for evening briefings and buffet dining with the President, are hardly likely in themselves to change any votes in Congress. But they're symptomatic of the special attention President Johnson is paying to Congressional relations, even in the midst of Vietnam and racial crises.

The pride with which the pictures are displayed by Republican as well as Democrat shows the President's shrewd judgment of what can win friends and neutralize enemies in Congress. Together with dozens of other similar touches, this personal consideration can on occasion make a vital difference in the progress of the President's legislative program.

"Flattered and Impressed"

"No matter how sophisticated a guy is, he's flattered and impressed by attention from the President of the United States," says a very sophisticated Senate Democrat. "There's no politician in either party who doesn't like to tell his friends and his constituents what the President said to him the other night and what he said to the President. As a man who was on the Hill over 30 years, Johnson knows that and is shrewd enough to take advantage of it."

Consider a few other random examples. LBJ drops by unexpectedly to josh with House members dedicating a new gymnasium. Top Democrats and Republicans on the Senate Finance and House Ways and Means Committees are asked to the White House to comment on possible choices for Treasury Secretary; though the President has almost surely made up his mind already, the lawmakers feel their views truly matter.

Florida Democratic Rep. Bennett breaks his leg and receives a Presidential bouquet. Democratic Sen. Randolph of West Virginia and Rep. Jones of Alabama manage the Appalachia bill to successful passage and receive Presidential thank-you phone calls within minutes afterward. New Jersey Republican Sen. Case gets a thank-you call for his nice comments about the President's voting rights plan, and GOP Sen. Scott of Pennsylvania is asked up to the Johnson living quarters for a night-cap and talkfest after a White House briefing.

Freshman Rep. Hungate of Missouri worries that if he stays late on a Friday to vote on the Administration's school bill, he won't be able to keep a long-standing commitment to address a Democratic breakfast session in Springfield Saturday morning; to keep Mr. Hungate on hand for the vote without angering the folks back home, the President wires the breakfasters his regrets for holding "this outstanding young Congressman" in Washington, plus assurances that Mr. Hungate is showing his "patriotic commitment to the great goals in the pathbreaking education bill now on the floor."

Improving on Kennedy

There's no question Mr. Johnson pays more heed to Congressional relations than any President in recent history, though predecessor John Kennedy also worked hard at the task. Mr. Kennedy upgraded White House Congressional liaison with a six-man staff headed by his long-time political lieutenant Lawrence O'Brien. He and Mr. O'Brien strove to get outside groups such as the AFL-CIO or Farmers Union to team up with Administration lobbyists on individual bills. He sent congratulatory birthday notes to Senators and Congressmen, included them in prestigious state dinners, invited large groups to witness bill-signing ceremonies and receive pens used in the signing, and asked legislators to ride with him on the Presidential jet.

But Mr. Johnson goes at it harder, day and night, weekday and weekend. He wants to pass his "Great Society" bills for what they can accomplish for the country and for his own image in the history books. Not as eloquent as Mr. Kennedy in outlining his point of view, he is a master manipulator who almost intuitively knows how to advance his aims best, detecting where legislative roadblocks may develop, who can be pressured or flattered, and how best to do it.

Characteristically LBJ takes pains to clear his proposals in advance with private interest groups, as well as influential lawmakers, to minimize the opposition; he met once publicly and twice privately with groups from the National Education Association to put down rebellions in that important organization against the school bill provisions permitting aid to parochial schools.

Not only has Mr. Johnson refined and expanded the Kennedy techniques but he's added some of his own. The groups he invites to the White House bill-signing ceremonies are larger. He sends out birthday notes and, on occasion, also phones congratulations.

Briefings and Buffets

Mr. Kennedy used to ask members in for informal coffee hours; Mr. Johnson has invited all 535 Senators and Congressmen and their wives this year to evening briefings and buffets. Over 500 actually came, in groups of about 50 couples, twice a week, on Tuesday and Thursday evenings for five weeks in February and March.

They would arrive at the White House

Please Turn to Page 16, Column 1

Lyndon the Lobbyist: His Courting Of Congress Helps Push Program

(2) The Wall Street Journal
Friday
April 9, 1965
Page 1

Continued From First Page

around 6:30 p.m., have a drink, then stroll into the Green Room for the picture-taking. Next, Mrs. Johnson would take the ladies on a tour of the family living quarters and a film on the White House, while Mr. Johnson would take the lawmakers into the Blue Room for a briefing of two hours or more on Vietnam, the budget and other national and international topics.

Secretary of State Rusk, Defense Chief McNamara, Budget Director Gordon and Vice President Humphrey were the official briefers. But always, at some point, the President himself would jump in for 30 to 45 minutes, ending with the reminder that if any member ever wanted to talk to him, "I'm just as close as your telephone." The lawmakers could, and did, question the President and other officials at any point. With the briefing over, they rejoined the ladies for a buffet supper that lasted until 10:30 or 11 p.m.

Even the most conservative Republicans give grudging good marks to the meetings, and most Democrats are ecstatic about them. The President talks of the sessions as the nearest thing to the questioning of Britain's Prime Minister and Cabinet in the House of Commons, and plans to stage more from time to time. Even lawmakers who doubt they found out much that couldn't be learned in a close reading of the daily papers did welcome the intimate, first-hand impressions of the President's mood and goals.

"He neutralized in those briefings a lot of the resentment from his plans to close the veterans' hospitals and the agriculture research stations," a Senator asserts.

38 Extra Democrats Help

Of course, it's easy to overstate the importance of Lyndon's personal lobbying. Actually, many key lawmakers argue, Mr. Kennedy had his program pretty well on the track when he was assassinated and would have wound up the 1964 session with a record not very different from Mr. Johnson's. This year, the main secret of LBJ's legislative success is simply the extra 38 House Democrats elected last fall.

"The reason we're passing bills that were stalled last year is that we've got the horses now," says a House Democratic leader. Adds an Administration lobbyist: "I'd rather have those 38 votes than all the Presidential telephoning in the world."

Mr. Johnson's public support helps his legislative record, anyway, quite apart from any specific pressures he applies. Members want to be sure of Presidential aid in their re-election campaigns in 1966 and 1968. The goodwill LBJ has won in the business community has minimized the pressures felt in Congress against new welfare schemes and made it easier for many legislators to go along.

It must be noted, too, that reports of Mr. Johnson's lobbying activities, prodigious as they are, tend to be exaggerated. He does less phoning now than in his first lonely days in the White House; nowadays the calls go chiefly to Senate and House leaders, committee chairmen and old friends, or to someone who's done a particularly good job for the Administration. On a crucial vote, he may call 10 or 12 members seeking support, but there are lots of lawmakers who have never had a Presidential call.

Far From Infallible

Moreover, White House liaison with Congress, despite Mr. Johnson's reputation for legislative legerdemain, is far from infallible. The Administration decision to close a number of veterans' hospitals produced such an explosive capitol reaction that it has prompted Presidential reconsiderations.

Another apparent failure: Some weeks ago, the White House heard rumblings that fiery Rep. Edith Green of Oregon, a key Democrat on school legislation, would probably fight important sections of the Administration's education bill. Presidential aide Douglass Cater invited her to a White House lunch, then took her in for a chat with Mr. Johnson. Mrs. Johnson invited her to a domestic Peace Corps ceremony in Florida. But the Congresswoman still fought two key provisions of the bill, forcing a major outpouring of Administration effort to defeat her on the House floor.

There's no question that from time to time the President and his lieutenants do twist Congressional arms with threats of retribution (Administration opposition to a pet bill or project or loss of patronage) or promises of reward (a better committee assignment or extra re-election help). But such instances, Mr. O'Brien insists, are far rarer than rumor has it.

The great bulk of White House legislative liaison work is far more routine. It consists largely of offering smaller favors, to create a generally friendly attitude on the part of lawmakers—"where he'll want to go your way unless there's some compelling reason back home against it," Mr. O'Brien puts it. Among the favors are invitations to the White House, advance news on awards of Government contracts and assurances that agency bureaucrats will carefully consider a member's suggestion. A large part of the job, too, is making sure the legislators have the facts and arguments for any pending bill, keeping the pressure on committee chairmen to push ahead with hearings, mobilizing outside support, and making sure Administration supporters are actually on hand for the voting.

In many ways, Mr. Johnson has tried to underline his belief in good Congressional relations. For example, he's set Mr. O'Brien's pay $1,500 a year above that of any other White House assistant. (Mr. O'Brien hopes to leave within a few months, but insists this is because four years on a job is enough and not because the President's wide-ranging role diminishes Mr. O'Brien's.)

Humphrey Used More

Mr. Johnson gets almost everyone on his team into the lobbying act. He is using Vice President Humphrey far more for legislative aid than Mr. Kennedy used Vice President Johnson—to take soundings, suggest Congressional strategy and influence individual members, particularly Democratic liberals. Mr. Humphrey asked a number of House liberals to his office to quiet doubts they had on the parochial school aid made possible by the Administration's education bill.

Everyone on the White House staff is expected to help the O'Brien shop. "What are you doing down here when my bill's up on the floor up there?" LBJ may demand of staff members. Among others, Special Presidential Assistant Jack Valenti is spending more and more time talking with Senators and Congressmen. At one point during House consideration of the school bill, there were two members of Mr. O'Brien's liaison staff outside the House chamber, plus White House aides Marvin Watson, Douglass Cater and Bill Moyers, an official of the Democratic National Committee and three representatives of the Department of Health, Education and Welfare—in addition to Administration-coordinated lobbyists from the National Education Association and other private groups.

Parting shots from Johnson

Final batch of reports left for Nixon and Congress takes aim at wide social ills

Former first family leaves for Texas after President Nixon's inauguration.

As the Nixon Administration and Congress settled down to work this week, they found among the unfinished business left behind by the Johnson team a bundle of reports directed at some urgent U. S. problems: race and the urban crisis, antitrust trends, college education for all, housing, and the placement of more defense contracts in ghetto plants.

It remains to be seen how much impact the lame-duck proposals will have. But some of them are already under lively discussion.

Secretary Robert Finch of Health Education & Welfare, for instance, will soon hear from the Senate Labor Committee on a proposed three-man council of social advisers for the White House. The idea of such a council, paralleling the long-established Council of Economic Advisers, is not brand-new: Senate hearings on the proposal were held a couple of years ago. A staff of experts would report to the President and Congress on social trends that contribute to urban blight and social and racial unrest—just as the economic advisers take readings on the state of the economy and warn of potential dangers ahead.

A new twist. But at this year's hearing, Finch will be confronted with information and recommendations from a 205-page study completed just before Wilbur J. Cohen left office. Cohen's parting gift is titled Toward a Social Report—a first step, he hopes, toward an annual report on a "comprehensive set of statistics reflecting social progress or retrogression."

The goal is to provide hard data that would help measure such things as opportunities for advancement by Negroes, air and water pollution, the impact of rising national income on the poor, and health problems.

Do we have copy?

Cohen's report backs up a stand also taken by Daniel Patrick Moynihan, Nixon's new adviser on urban affairs, who strongly favored the creation of such a council during the earlier Senate hearings.

Education. Another report from Cohen asks that every able student get a chance for a college education, regardless of his means, and that the federal government support research and educational programs at graduate schools. He would triple the federal funds for higher education, boosting the total to $11-billion annually by 1976.

HEW's report focuses on the loss to the nation of the talent of youngsters whose circumstances bar them from college. But, significantly, it doesn't neglect middle-class and even upper-class families who have been moaning about the high cost of higher education. Among its recommendations:

- Major expansion of educational opportunity grants to all needy full-time students. With grants scaled to family income, it's estimated that almost half of all undergraduates would be eligible for some financial help ($200 to $1,500 annually). Supplementary cost-of-education grants keyed to the amount of federal aid garnered by students would go directly to the colleges to be spent as they see fit.
- The creation of a national student loan bank, open to all students regardless of need, with flexible repayment terms extending up to 30 years. Loans would cover all or part of tuition, fees, and living expenses for up to five years of graduate or undergraduate study.
- A substantial increase in federally sponsored graduate fellowships and graduate school support programs.

HEW's proposals also include programs to improve undergraduate teaching and encourage efficient resource utilization by colleges. But the report stresses that of the $6.3-billion increase in federal aid to the campus that it envisages by 1976, $4-billion would be connected to aid for needy students—"the highest priority in our recommendations."

Merger watchers. Another report, this one from the staff of former President Johnson's Cabinet Committee on Price Stability, is being sniffed eagerly by the Congressional antitrust hounds. It spotlights "profound changes" in the structure of the U. S. economy, led by "an enormous merger movement" that is still under way.

The report—released on the last day of Johnson's term—takes the old-fashioned trustbuster's view of the sharp increase in mergers last year (about 2,300 separate acquisitions in 1968, compared with about 1,500 in 1967 and 1,000 in 1965) and worries because large companies are especially active in this regard.

It calls on the antitrust enforcement agencies to step up their attack on conglomerate mergers and for a "thorough and expeditious study" of how the law can be strengthened to get at them. It supports the Securities & Exchange Commission's proposal that conglomerates should break down their financial reports by product lines. But it says that the SEC's proposals do not go far enough and instead of breaking down all products that contribute 10% to sales or income, the figure should be 5%.

The Cabinet committee, estab-

PAGINATION INCORRECT

lished early in 1968 by Johnson, is in limbo right now and may be abandoned by Nixon. Some of the committee's ideas, however, have support in Congress and its report is likely to get attention there. This may cause Nixon and his men to come up with their own group to study problems of the economy in specific sectors or industries.

The Kaiser report. One major report—in the works 18 months—made its impact long before it was published. That's the just-issued Kaiser report (named for Chairman Edgar F. Kaiser) of the President's Committee on Urban Housing. Many of its conclusions and recommendations became law in the Housing Act of 1968 after Kaiser and other members gave the gist of their findings and conclusions to Congressional committees.

Congress adopted the committee's goal of 6-million federally assisted units for low-income and middle-income families over a 10-year period, its recommendations for interest rate subsidies; and the proposal for a national housing partnership—a new institution designed to allow large corporations to invest in city housing with tax incentives.

In addition, the Kaiser committee recommended that the federal government be empowered to preempt local exclusionary zoning ordinances and state usury and foreclosure laws on federally insured or guaranteed housing mortgages, and to acquire land to lease for subsidized housing; that the Federal Home Loan Bank Board be allowed to lend S&Ls up to $2-billion in years of severe credit shortage; and that taxes be forgiven on sale of Federal Housing Administration multi-family subsidy projects (to boost yields to the point where building the projects becomes attractive).

Clifford's last acts. A number of last-minute orders were handed down by departed Defense Secretary Clark Clifford as a result of studies made for him since he called for a commitment by the Defense Dept. to help alleviate serious domestic problems. Among other things, Clifford estimated that an additional $45-million of contracts would be placed with ghetto companies. Small businesses would qualify if they perform 25% of their contracts in or near a labor surplus area. Up to now, the level required was 30%.

Also, Clifford directed that RAND, Mitre Corp., and other Defense-supported think-tanks be urged to take on more projects for solving urban problems of housing, mass transit, and the like.

IBM girds for battle

The government's antitrust action, plus two private suits, may take years to resolve. By then the issue may be defused simply because of rapid changes in computer industry

The antitrust case that the computer industry had long expected finally materialized last week. Attorney General Ramsey Clark and his antitrust chief, Edwin M. Zimmerman, on their last full day in office filed a major antitrust action against International Business Machines Corp.

Actually, the suit was being stitched together before either man got his job. Attorneys in the Justice Dept.'s Antitrust Div. began sifting files on the industry back in 1965, and they had been itching to get into action against IBM for the past two years. They say that the civil complaint is a "classic monopoly case," the first big one to be filed since the United Shoe Machinery suit of 1947 (right).

Ironically, the investigations began when the Attorney General was Nicholas deB. Katzenbach, who was just named IBM vice-president and general counsel. Prosecution now shifts to President Nixon's new Attorney General, John N. Mitchell, and his antitrust chief, Richard W. McLaren (below).

Long wrangle. If the IBM suit was a long time in coming, its resolution probably will take even longer. This week, IBM ran defensive double page advertisements in most large metropolitan daily papers under the headline "Has IBM spoiled the computer

Nixon's antitrust chief vows firmness

The job of Assistant Attorney General in charge of the Antitrust Div. this week went to Richard W. McLaren, a Chicago lawyer with a long record of defending big companies in antitrust cases.

President Nixon's appointment of McLaren touched off speculation that the new Administration might take a soft line on antitrust policy. But McLaren, in his first public statement, said bluntly: "Republican Administrations are characterized by vigorous antitrust enforcement. The Nixon Administration will be no exception."

McLaren favors quicker resolution of antitrust cases. He feels that cases too often are bogged down by procedural details, and that judges should bring lawyers together to find an area of agreement before going to trial. If McLaren puts this philosophy to work, it could lead to settlement of more government antitrust challenges by consent decrees.

On conglomerate marriages. McLaren is expected to continue recent Justice Dept. studies of the trend toward conglomerate mergers. He says he is "very much interested" in this phase of antitrust law, where legal experts differ over whether existing laws are adequate.

The new antitrust chief has long been active in the antitrust section of the American Bar Assn., serving as its chairman last year. He worked closely with his two immediate predecessors, Edwin M. Zimmerman and Donald F. Turner, when they headed the division and also when Turner was a law professor at Harvard and Zimmerman was at Stanford.

As a partner in the Chicago firm of Chadwell, Keck, Kayser, Ruggles & McLaren, the new antitrust chief has tangled with the government on many occasions. Most recently, he argued both the Sealy Mattress and National Dairy antitrust cases before the Supreme Court, and lost both. His firm also has handled, among others, cases for 3M Co., Kraft Foods Div., and General Electric (in treble-damage suits stemming from the price-fixing case).

PAUL ANTHONY,
EXECUTIVE DIRECTOR

A Council to attain the ideals and practices of equal opportunity for all peoples in the South

MEMORANDUM

October 12, 1960

TO: PROFESSIONAL STAFF

FROM: JOHN O. BOONE

Request that you review the attached material which will be mailed to the Advisory Committee of the Project on Penal Reform and Criminal Rehabilitation. The Rapporteurs' Summaries will not be discussed at the Advisory Committee Meeting but hopefully, will provide the broad frame of reference that planners for a reform project need.

I would appreciate it if you would join us in a discussion of the project proposals for a short period this afternoon, before we make bold to present them to the Advisory Committee.

Thank you.

ADMINISTRATION OF CRIMINAL JUSTICE

Examination of the functional structures of correctional systems in the United States is analogous to a trip through Europe where, in traveling relatively short distances, one may encounter many different languages, types of government, patterns of culture and artifacts. In the Southern Region one finds penal systems which range from the enlightened to the reactionary, from the progressive to the mediaeval, from the humane to the brutal. Even within a single state one may observe, on one level, trends toward a system in accordance with the most progressive correctional philosophy, while, on another level, one finds hangovers from the days of degrading stripes and chains. In the same way, law enforcement agencies and the judicial process will invoke, selectively, both primitive and modern practices, the choice of treatment reflecting, in the main, the social characteristics of the community officals and/or the economic resources of the offender.

Project on Penal Reform & Criminal Rehabilitation

It is particularly fortunate that, in an area which is almost exclusively the domain of public policy and administration, the Ford Foundation has provided an opportunity for a private agency to intervene and, perhaps, make a contribution toward advancing these crucial processes. Law enforcement agencies and correctional systems, as government agencies controlled by relatively rigid public policies, are understandably sensitive to the opinions of community groups. This tendency has often been demonstrated in the wake of exposed corruption and public disorder. As responsible arms of public policy, the systems are able to innovate only within the limits imposed by laws which govern their operations. A private agency that is not bound by official restrictions and the burden of tradition can offer assistance to correctional administrators and interested groups of citizens who desire to implement reforms, conduct pertinent research and institute programs designed to bring about constructive change in governmental systems and new approaches to dealing with crime and delinquency.

Advisory Committee

In order to develop a creditable three year program, reconciling philosophy and feasability as much as possible, we have convened a group of knowledgeable persons broadly representative of society's institutions, who are acutely interested in the social task of coping with the problems presented by violations of societal mores.

The following propositions are submitted primarily to stimulate your thinking and give some direction to our meeting. They are not meant to imply that we are committed to carrying out any particular proposal, except for the initial survey that is already underway.

A. Southern Regional Council Special Report: The Prevention of Crime and Treatment of Offenders in the Southern Region (to be published this year.)

This will be a state-by-state survey report describing the current situation of crime prevention and corrections in the South. Dr. Vernon Fox and associates at Florida State University's Department of Criminology and Corrections and SRC staff members are assisting us in this publication. The report will describe: racial integration; philosophy of corrections; manpower utilization and needs; comparative financial resources and expenditures; physical plants and facilities, including farms and industrial operations; treatment programs, both community and institutional; classification systems; parole policies and practices; facilities for post-release assistance and community treatment centers; institutional populations and patterns of recidivism; nature of professional staffs. Similar analyses will be made of law enforcement agencies and courts, to a limited extent, to determine any new developments stemming from recent legislation and court decisions. The survey will be based on official reports and inquiries, other publications, and observations of authorities in the field.

The survey will provide both a vehicle for public education and a basis for the project's programs.

B. Research Conference: While no one can be certain that any particular research project will produce practically useful results, we would like to be sure, at least, that our projects will be pertinent to the problems of the Southern Region. One means of providing this assurance would be to bring together a small group of academicians of the region, under the leadership of a nationally known social scientist, for the purpose of presenting papers and designing research that we could practically pursue. Such a conference would have the added advantage of providing a needed forum for ideas of regional rather than national interest. Such ideas are often neglected at more broadly based meetings. Another approach would be to select research without formally weighing its value relative to regional concerns, and some suggestions are proposed in this outline.

C. Other Research:

1. A study to determine whether underdeveloped correctional systems consistently make for a higher rate of recidivism than systems considered more progressive.

2. Up-date comparative sentencing study done by SRC in 1954 - referring to both the Garfinkle and Foley studies. Each of these studies pointed to significant disparities between the nature of sentences for Negroes and white persons. Have these practices changed during the period since 1954 - the year of the Supreme Court decision relative to school desegregation?

3. A candid review of industry's attitudes toward the employment of persons with records of crime and delinquency. Is there a need for a more concerted public or private project to encourage industry to use this manpower more appropriately, somewhat in the manner of the "Hire the Handicapped" program.

4. Study how Negroes use correctional services. (Could be part of study of underdeveloped systems.)

5. Study effectiveness of the North Carolina Plan (such a study may already be underway.)

6. Demonstration Project in an urban area, focused on crime and delinquency, and utilizing multi-method techniques involving public and private agencies and graduate schools. Such a project would be accompanied by a research and evaluation instrument.

7. Report on institutional visiting (prisons, jails, training schools, etc.) by small teams of women - utilizing a modified John Howard approach.

D. Public Education:

1. Supportive work with human relations groups and The Fellowship of the Concerned, throughout the southern region, as they demonstrate interest in the administration of criminal justice.

2. Prepare legislative handbook, summarizing the codes under which corrections operates, state by state, pointing out apparent weaknesses, making use of accepted standards by the National Council on Crime and Delinquency or the American Correctional Association. The book will be distributed to public and private agencies, legislators, and interested groups.

3. Prepare booklet on the administration of criminal justice for use in public schools, in order to encourage wider acceptance of this process as a normal function of social welfare. It has been proposed that this be done in cooperation with the Joint Commission on Correctional Manpower. (The approach would be to influence attitudes toward corrections as a career and as a helping agency, mainly through the creative presentation of case materials.)

E. Direct Action:

1. Consultation Service. Secure a panel of knowledgeable professional correctional workers and facilitate its use by systems in the region. Organizations and groups could secure our support through regional conferences and their own action groups. This program would provide for fees and expenses for consultants and technical advisors.

2. Technical Advice. As far as possible, the project staff would provide technical advice concerning correctional procedures, training, and new programs and policies.

3. Would a Regional Conference on Racial Integration in Prisons provide significant support for state efforts in this area? While a policy of racial integration would require the repeal of restrictive statutes in many states, a conference on the problems and processes of integration which are peculiar to correctional systems might serve to alleviate the anxiety of administrators concerning the effects of desegregation in their prisons. Would a sharing of experiences by those who have already effectuated integration be helpful? Another idea would involve an even larger conference, co-sponsored, perhaps, by such organizations as NCCD and ACA, for all interested managers without considering regional limitations.

4. Provision of resource material to public and private agencies, groups and individuals. For example, some Human Relations Councils will receive copies of Ferguson vs. Buchanan (which resulted in desegregation of the Dade County Jail). This will be used as the Councils urge officials to begin to desegregate. Also, films and other learning aids would be used in this program.

5. Cross-fertilization of ideas and programs. This program would facilitate an exchange of top-level and middle-management administrators of criminal justice in the region. Pro-

perly implemented, such a program could encourage the spread of progressive correctional principles in day-to-day operations.

6. Recruitment of Negroes for Correctional work. Studies reveal that very few Negroes are employed in correctional administration. (This could be an area for significant research). Would schools and agencies be benefited by a private recruitment service?

7. Training for correctional work. How could a private agency assist in this endeavor?

8. The procedures by which society deals with delinquent or criminal behavior are often themselves causative factors in later offenses. A study of the background and characteristics of men who have histories of Dyer Act violation (Interstate Transportation of a Stolen Motor Vehicle) should throw some light on this hypothesis.

General Observations

Preliminary observations through travel and correspondence would seem to indicate that, while there are many serious problems - including the continued commission of atrocities in some penal systems - the situation is somewhat more encouraging than anticipated.

Florida has integrated all of its institutions and has invited us to visit the system. Whether this alleged integration, however, is token or real, remains to be seen.

There has been some integration in North Carolina, South Carolina and Georgia (the Girls" Training School in Atlanta), and some degree of integration must be assumed in all institutions which have accepted Federal grants (including Draper Prison in Alabama.)

Personnel changes in the Arkansas Correctional System in the wake of the recent lashing publicity, while sadly belated and totally inadequate, nevertheless represents some small improvement.

Many top-level correctional administrators in the region privately reveal an unexpectedly progressive orientation. This leaves room for hope that state correctional systems will be willing to accept help and at least entertain suggestions for specific changes.

In sum, there is considerable reason to believe that this project, through the judicious extension of grants and technical assistance for specific projects; initiation and support of basic research in neglected areas; organization and encouragement of groups working for the passage of sound reform bills in state legislatures, and the wide dissemination of information about corrections and the processes of criminal law at meetings and through the mass communications media, can make a substantial contribution to the upgrading and increased humanization of all of the processes in which the criminal offender is involved, before, during and after imprisonment.

STATEMENT OF JOHN O. BOONE, DIRECTOR
PROJECT ON THE ADMINISTRATION OF JUSTICE
SOUTHERN REGIONAL COUNCIL

before the

SENATE SUB-COMMITTEE TO INVESTIGATE JUVENILE DELINQUENCY
July 9, 1969

Mr. Chairman, it is a pleasure to appear before the Sub-committee. Let me open my testimony by stating that the public does not know what is going on in its prisons. This public ignorance and indifference has made corrections, and particularly the institutional setting, a prime source of corruption, political intrigue, and human degradation.

Furthermore, let me stress that the poor administration of criminal justice itself is more responsible for disrespect for the law in this nation than any other single social system. I believe it is more devastating than the home and the family that are usually blamed.

Mr. Chairman, men in prison are a sophisticated lot and they grow more sophisticated as they continue to be confined in these institutions of higher learning in crime and deviance in general. Most of these men have been aware of injustices and corrupt practices from childhood. They do not believe that fair play exists -- they are fearful, suspicious, and generally anxious. These attitudes have been transmitted to them in no uncertain terms through their personal environments and experiences. These men have learned that

Chapter 2

STATEMENT BY GOVERNOR ROCKEFELLER
August 18, 1969

On Friday, August 15, 1969, at approximately 5:30 p.m., I met with Rev. Cato Brooks and the Rev. J. F. Cooley in Forrest City. At that time, Rev. Brooks handed me three separate documents captioned as follows: (1) "Demands"; (2) "Recommendations"; and (3) "To the Governor of Arkansas". Copies of these documents are attached.

Dr. John Peterson and I looked through these documents at the time they were presented. It immediately became apparent that it would be impossible to properly and adequately analyze the various demands and suggestions on the spot. Therefore, as soon as I returned to Little Rock late Friday evening, I made arrangements to have these documents reviewed and analyzed by department heads and specialists in the various subject-matter areas referred to in the three documents.

On Saturday, each of these department heads and specialists were contacted, and each was asked to review the documents and provide me with a short statement setting forth the facts and current developments in order that I might be fully informed and, in turn, might accurately answer the various demands and recommendations submitted by Rev. Brooks. Representatives not only of State government but also of certain departments of the Federal government were contacted.

On Sunday afternoon, August 17, 1969, these persons prepared and submitted statements covering their areas of responsibility and concern. Attached hereto will be found copies of those statements, which, taken together, will provide Rev. Brooks, Rev. Cooley, and all other interested persons with useful and helpful information not only on the status of present programs in each area, but also with respect to future action contemplated in each area. These include statements by Mr. Arch Ford, Commissioner of Education; Mr. Len Blaylock, Commissioner of Public Welfare; Col. Ralph Scott, Director of the Arkansas State Police; Mr. John Hickey, Director of the Commission on Crime and Law Enforcement; Mr. Jodie Anderson, as the representative of Mr. Robert L. Hankins, State Director of the Farmers Home Administration (a Federal agency); Dr. Clyde Hart, State Office of Economic Opportunity Director; Mr. Earl D. Wells, as the representative of Mr. C. W. Ferguson, Regional Director of the Small Business Administration (a Federal agency); Dr. John Peterson, Administrator of the Employment Security Division;

Dr. Winston Beard, Executive Director of the Arkansas Planning Commission; Col. Herbert Reinhardt of the State Revenue Department and Mr. Ward Goodman, Director of the State Highway Department.

Many other individuals were contacted informally for additional information, and I wish to thank all of them for their willingness to assist me over the weekend in our effort to provide Rev. Brooks, Rev. Cooley, and all other concerned citizens with as much information as possible. Further inquiries have been made, and will be made, to Federal, State and local authorities for the purpose of providing even more information in the near future.

The information contained in the attached statements, and in the summary below, will, I believe, convince all fair-minded persons that an honest and good-faith effort is being made to meet and deal with the serious problems referred to in the three documents handed to me Friday afternoon. There is, however, no room for complacency. I believe the citizens of Arkansas, black and white, have the right to expect much greater progress in many of these areas in the months ahead.

# # #

An effort has been made to review and comment upon each separate subject mentioned in the three documents. I believe it may be of some assistance if I summarize by first quoting from the various documents and then providing such facts and comments as I think might be helpful.

SUMMARY

1. "We regret, however, that your office does not have a program of action by which to change your good faith into action". (First paragraph, "To the Governor of Arkansas").

Comment: It is not my intention in this statement to review my efforts, and those of my administration, to achieve equality and justice for all citizens of our State, black and white. At this point, it is enough to recognize, and to state publicly, that not enough progress has been made. So, rather than to dwell upon past accomplishments--and there have been many--it is better at this time to seek ways and means to make more progress--urgently needed progress--in the immediate future.

2. "We also regret that the legislature has not seen fit to establish a political and social system which is truly democratic and just".

Comment: The last session of the General Assembly did repeal the blood labeling law, and it did enact a rather limited "Jury Wheel" statute. It failed to give a statutory basis for the Governor's Council on Human Resources, and it failed to pass a Public Defender's act, as recommended by the Arkansas Bar Association. I am convinced, however, that the members of the General Assembly are becoming more aware of their responsibility in these critical areas.

3. "Our goal in St. Francis County for now is for 57 per cent of the good housing, good jobs and political representation on the local, county and state levels".

Comment: Most of the relief which can be obtained in the housing area involves cooperation between the federal government and instrumentalities of local government. Forrest City has a program in effect that will make it eligible for federal assistance in housing. It has a housing authority. This housing authority has

an application for 200 units of public housing already approved, one-half of which will be for the elderly, and one-half for rental-supplement. These units should be completed within 10 to 12 months. One hundred fifty turnkey public housing units have been approved and will be constructed by the housing authority within that same period. Ninety-four units of FHA sponsored housing are being planned by a local developer and the FHA has given tentative approval of the program. Twenty of these will be rental-supplemental. I draw your attention to the attached memorandum prepared by the Arkansas Planning Commission and particularly the comments under "701 Comprehensive Planning".

With respect to state jobs, I draw your attention to the attached statements by various government agencies.

In my opinion, significant, but inadequate, progress has been made in the employment of blacks in state government. In our fragmented state government, much of the responsibility for progress is under the control of independent commissions and agencies. The Governor's office has on several occasions called together the heads of all of these departments, commissions and agencies in an effort to convince them of the need for progress in this area.

In Forrest City there has been progress in the private employment area. For many years, manufacturers there have operated on an integrated basis, providing many good-paying jobs. In recent months, there has also been some success in the employment of blacks in many small retail and service establishments. Unfortunately, displaced farm workers from rural areas are being attracted to Forrest City faster than new jobs are being created. The local ESD office has committed itself to make every effort to place Negroes in jobs whenever possible.

With respect to "political representation", I can only say that this will come through political action, educational programs, reform legislation, and voter registration drives. It may also depend, in measure, upon the success of efforts to reform our State Constitution. I am thinking particularly of the need for single-member legislative districts, such as has been recommended by the Constitutional Convention which is presently meeting in Little Rock.

4. "Total integration in all schools; fairness to all students in grading; participation in school activities;"

Comment: I draw your attention to the exhibit attached to Mr. Arch Ford's report, showing the "Desegregation Status, Arkansas School Districts, August 1, 1969". The responsibility here lies with the individual school boards in the nearly 400 school districts in Arkansas. However, it is incumbent upon the Department of Education to give leadership in this area. The federal government, through its control of federal funds, can, and should, also exercise such leadership.

5. ". . .abolition of discriminatory arrests and charging procedures and practices by police officers; abolition of unfair bail bond procedures; state provided counsel for indigents in all criminal offenses; fair trials by fair judges;"

Comment: I draw your attention to the report of Col. Ralph Scott, which is attached hereto. I am pleased with his statement that "discriminatory arrests and charging procedures by the Arkansas State Police will not be tolerated". It is the responsibility of our county sheriffs and our municipal police to adopt and enforce rigid standards in this connection. Training programs such as those mentioned in the attached report, "Commission on Crime and Law Enforcement", will do much to improve the situation. Nevertheless, I am convinced that this is an area where serious abuses still occur. It is my hope that the Judicial Council of the State of Arkansas and the state and local Bar Associations will join with local and county officials in abolishing all discriminatory practices in the area of law enforcement. We will not have "law and order" until we have just and fair law enforcement.

Unfair bail bond procedures must be done away with promptly if our citizens are to have respect for the law. The bail bond requirements fall unfairly upon the poor and, in most cases, are not needed to insure court appearances. An effort has been made in Pulaski County to provide for release on recognizance without the necessity for bonds in misdemeanor cases. The Bar Association should take the leadership in the effort to reform our state laws in connection with bonding procedures.

Our federal constitution requires that counsel for indigents be provided in all serious criminal cases. In my judgment, this

responsibility should be met through a Public Defenders system such as that proposed to the last General Assembly by the Bar Association. If a special session of the legislature is called, I shall give serious consideration to including this item in the call. Some of our legislators attended the Public Defenders Conference in Washington, D. C., earlier this year. They will, I trust, provide leadership when this matter comes up again.

With respect to "fair trials by fair judges", I can only say that this is the responsibility of the judicial branch of our government.

I believe that we can count on the judges of our Supreme Court, and of our circuit and chancery courts, to carefully review all complaints relating to unfair trials. I also believe that they will exercise the needed leadership to insure that proper demeanor is maintained in the courtrooms of our state and that all persons before the bar of justice will be treated with dignity and respect.

6. "We strongly suggest that the State OEO Office work with the Committee for Peaceful Co-existence to develop experimental economic programs that will be controlled by the Forrest City organization and not the State OEO." ("Demands")

Comment: The state Office of Economic Opportunity would welcome consultation with the Committee for Peaceful Co-existence with the objective of developing experimental economic programs. The Nixon administration has recently announced its intention to concentrate on experimental programs. I have requested the director of the state OEO to determine what new programs might be initiated in Eastern Arkansas within the next 12 months.

As pointed out in the statement of Dr. Clyde Hart, which is attached hereto, the local Community Action agencies have the option of sponsoring all OEO funded programs in the area. The CAP organization in the Forrest City area is headed by Mr. John Clark, a Negro, and there is minority representation on the board.

In fiscal year 1969-70 the East-Central Arkansas Economic Opportunity Agency will receive in excess of one million dollars.

A planning development program, in line with the new position taken by President Nixon, was initiated by the state OEO on August 1.

It is designed to develop a way of involving the poor in planning for the utilization of economic and human resources in the state.

I would like to point out that seven members of the 16-man OEO state staff are black. Four of these seven earn in excess of $10,000 per year.

7. "We strongly suggest that the St. Francis County Employment Security Division director be replaced by a young black man who is sensitive to the needs of the black community and not controlled by any political group."

Comment: In meeting with the state employees in Forrest City last Friday I admonished them to be more sensitive to the needs and dignity of black individuals they are serving. In the following meeting with the Committee for Peaceful Co-existence I indicated that individuals employed under the merit system could not be fired without testimony and factual evidence being presented to substantiate serious wrongdoing. However, I said that I would consider transfers in borderline cases. At the present time, however, I have received no specific charges indicating actions against particular individuals are needed.

8. "We strongly suggest that the St. Francis County Employment Security Division director be replaced because of his policy of discriminating against black applicants and that his replacement be a young black man or woman who understands the needs and problems of poor people."

Comment: While there undoubtedly has been a long history of discrimination against Negroes in employment, the situation is rapidly improving. The ESD reports that during the first half of 1969 Negroes represented 52 per cent of all job applicants at the Forrest City local office and received 48 per cent of actual placements on jobs.

While the Forrest City local office at present has only one Negro among its 11 employees, other ESD programs in the city are hiring five other Negroes. Since our talks in Forrest City, the ESD has made arrangements to promote and transfer two additional Negroes to the local office.

9. "We strongly suggest that a comprehensive job training program be set up to train blacks in the Eastern Arkansas Black Belt area and that this program must not be politically controlled as is the Concentrated Employment Program (C.E.P.)."

Comment: The ESD already is operating a concentrated employment program (C.E.P.) in 14 counties of Eastern Arkansas. Their statement concerning this program suggests that they recognize certain mistakes in its first year of operation. The attempt of a subcontractor to train workers for certain local government jobs may have given some basis for the implied criticism. However, the emphasis since July has been more in the direction of private industry jobs.

In response to the suggestions in points seven and eight above, the ESD will now place a Negro in charge of the C.E.P. program in the Forrest City area. Additional Negroes will be hired in that program, and the personnel in the C.E.P. program in other cities in Eastern Arkansas will now be reviewed.

I would like to point out that these changes are being made under the condition of normal merit system procedures, and the individual being given promotions and assignments meeting the appropriate qualification standards.

10. "We strongly suggest that all State Agencies that operate in Eastern Arkansas begin to immediately hire blacks in white collar jobs and high paying jobs until at least 50 per cent of those employed in these positions are black."

Comment: The statements of various state agencies operating in Eastern Arkansas indicate that they already are making every effort to hire blacks in white collar jobs wherever they meet the professional qualifications or merit system requirements. I would like to point out that progress in this area must be measured in terms of the proportions of new employees hired rather than in terms of the proportions of total employees already employed. We have a long history to correct and the proportion changes slowly when the turnover is small.

For example, the ESD reports a total of 51 Negroes among their 634 employees statewide. Yet, only 11 of these 51 Negroes had started their employment prior to my administration in 1967. A number of these Negroes have been promoted to higher grades, including the third highest grade in ESD. New entry level jobs have been defined by ESD so that more Negroes can qualify.

Likewise, the State Revenue Department reports that only 31 of its employees are Negroes. But this represents 5.3 per cent of employees, compared to two and one-half per cent at the end of 1966. Half of the Negro employees are in clerical jobs, and one is a supervisor. Lack of qualified applicants hinders the hiring of more Negroes, and recently a reduction in total jobs in the Revenue Department resulted from reduced funding by the General Assembly.

A study is being made of merit system examinations and recruiting procedures to see if unnecessary barriers can be removed. Also, I recently appointed a Negro as one of the members of the Merit System Council.

11. "We strongly suggest that the Governor show his good faith by raising funds to organize a black-owned industry which will train and employ the displaced farm workers of St. Francis County."

Comment: I already have expressed my personal interest in the organization of black-owned industry. I pointed out to you that a new insurance company was started in Little Rock last week that has a mixed black and white ownership and I have suggested that you might contact Mr. Sam Sparks regarding some of the opportunities and problems in establishing black industry. Also, I am asking the Arkansas Industrial Development Commission and the University of Arkansas Industrial Research and Extension Center to provide you any advice and assistance possible.

12. "We strongly suggest that the Small Business Administration, Farmers Home Administration and other programs of the Department of Agriculture make loans available to the low income community of St. Francis County. We also strongly suggest that this be done with a minimum of red tape."

Comment: I have contacted both the Small Business Administration and the Farmers Home Administration regarding the availability of loans for low income groups in St. Francis County. The state offices of those two federal agencies responded this weekend with special statements regarding their programs, and I refer you to those statements.

13. "We strongly suggest that the Welfare Director of the St. Francis County Welfare Office be fired for her improper treatment of black applicants and recipients. We also demand that those county social investigators in the Welfare Office who have been accused of humiliating black people also be fired and replaced by black workers."

Comment: I will be happy to discuss with Mr. Blaylock any specific charges against any welfare employee anywhere. I know that no citizen would expect me to fire any state employee on the basis of general and undocumented charges. I am advised by Mr. Blaylock that Mr. Calvin Stackhouse, the present welfare director for St. Francis County, is new, and his office has not yet been fully staffed. Mr. Blaylock has further advised me that he will bring to the attention of all Welfare Department employees the possible consequences of failing to comply with the Department's published orders, which require employees to treat all welfare clients with dignity and respect.

14. "We strongly suggest that until the food stamp program is replaced by cash grants, the welfare office make the food stamps available free to any family of four with an income of less than $200 per month."

Comment: There is no authority under present circumstances for the Welfare Department to comply with this suggestion. There are no state funds available for the purchase of food stamps. The state funds which were provided were to cover the cost of the administration. It is important to note that the U. S. Department of Agriculture controls the food stamp programs. The Welfare Department merely certifies eligibility and sells the stamps.

As noted in the attached memorandum on "Welfare", Mr. Len Blaylock agrees that there are many deficiencies in the food stamp program. His recommendations for reform have been brought to the attention of the U. S. Senate.

I would like to call your attention to President Nixon's recent speech proposing reforms in the current welfare programs. Everyone recognizes that there are major deficiencies in the welfare system that leave many poor people ineligible for assistance and provide no incentives for poor people to seek reemployment. President Nixon has suggested that a basic family assistance payment be federally funded for all low-income people and that training opportunities be provided for those who are capable of working. Of course, the program is complicated and the President's proposals will be much debated in the near future; so I am making available to you a copy of the President's proposals for your careful study.

15. "We strongly suggest that the St. Francis County Welfare Office stop discriminating against the black community in the size of welfare grants. We strongly suggest that the grants be made on the basis of need and that the Welfare Office stop cutting off welfare assistance on the basis of heresay information."

Comment: I am informed that the Welfare Department will not tolerate such abuses as those mentioned above. If there is such discrimination, it is contrary to the laws, policies, and orders of the Welfare Department. If evidence is brought to the attention of the Director of the State Welfare Department of such offenses, they will be thoroughly investigated and appropriate action promptly taken. Here again, no action can be taken in the absence of specific charges and concrete evidence.

16. "We strongly suggest that the State Police hire more black state troopers and station at least 25 in Eastern Arkansas."

Comment: Col. Ralph Scott, Director of the Arkansas State Police, states in the attached memorandum that additional black troopers will be hired pursuant to the provisions of Act 616 of 1969. That act limits the Arkansas State Police to 268 troopers. Although there are very few vacancies, the Arkansas State Police is soliciting applications from black candidates who are willing to serve in East Arkansas.

17. "We strongly suggest that black veterans returning from Viet Nam be hired as state troopers and that tests and qualifications and standards be set aside if the veterans have military police experience in the Armed Services."

Comment: The Arkansas State Police gives preference to veterans of the Vietnam war, black and white. Black veterans are encouraged to submit applications. Where they do not meet present standards, an effort will be made to qualify them through training programs.

18. "We strongly suggest that city governments in Eastern Arkansas hire black policemen who are sensitive to the problems and needs of the community and that these policemen be given the same responsibilities, duties and salary as the white policemen."

Comment: The Governor's office and the Arkansas State Police will make every effort to encourage all municipalities, not only in Eastern Arkansas, but throughout the state, to hire black policemen. There is a growing awareness among the leadership in our municipalities of

the need for black officers. The key to this employment opportunity is to be found in education and training programs. I shall explore with the Director of Education and with the Arkansas Law Enforcement Training Academy the possibility of initiating programs which will qualify candidates for such employment.

19. "We strongly suggest that the offices of county, city, and regional prosecuting attorneys recruit and hire black attorneys throughout the counties of Eastern Arkansas."

Comment: The competition for black law school graduates is very intense throughout the nation. Still, many of these black attorneys will sacrifice greater economic possibilities in favor of public service in the offices of our prosecuting attorneys throughout the state. I urge the Prosecuting Attorneys Association and all individual prosecutors to engage in an active recruitment program in an effort to attract black attorneys and black law school students to this type of service. I personally will make an effort to place any qualified black lawyer if his availability for such service is brought to my attention.

20. "We strongly suggest that the courts of Arkansas provide justice for Arkansas black citizens."

21. "We specifically demand that the courts of St. Francis County and Forrest City provide equal justice for her black residents."

Comment: As stated above, I will attempt to enlist the support and leadership of the Bench and Bar of the State of Arkansas to the end that we will have true justice for all, black and white, in Arkansas. As it should be, the judicial branch of our government is completely independent of the executive branch. I am confident that the Judicial Council and the Bar Association are now aware of this problem and are willing and able to face up to their responsibility.

22. "We strongly suggest that Arkansas stop playing politics with the development of economic and social programs that are introduced into the state."

Comment: In order to deal with problems of this type, it is essential that we have specific information.

23. "We strongly suggest that the Federal Government and State of Arkansas work with the counties and cities of Arkansas as well as the citizens of these areas to develop housing programs that are responsive to the needs of the community."

Comment: See discussion above.

24. "We strongly suggest that the elementary schools, junior high schools, high schools and colleges in Arkansas develop comprehensive black history and black culture curriculum for use in all of her institutions and schools."

Comment: I am advised that our universities and colleges are exploring the introduction of black history and black culture courses into their curricula. The University of Arkansas has moved well along into planning for such programs. I draw your attention to the comments of Commissioner Arch Ford in the memorandum attached hereto with respect to the offering of such courses in the areas of elementary and secondary education. Local school districts control curricula at the junior and high school levels. The state is powerless to require any specific course. Commissioner Ford suggests that a better approach would be to include black history and black culture in existing courses through the use of related materials in the various fields having to do with ethnic groups. To this end, the State Department of Education has completed a bibliography which is being made available to all school districts.

25. "We strongly suggest that the school districts of Arkansas stop firing black teachers when schools are consolidated."

26. "We strongly suggest that the state Department of Education take action to prevent the firing or displacement of black teachers."

Comment: Salaries of Negro teachers have been equalized for almost every school district of the state. Commissioner Ford states that he agrees fully with those who object to the discharge of any teacher because of race. School consolidation has resulted in the elimination of both black and white teachers. I am encouraging the Department of Education to make a special study of this problem and to report to me its findings.

27. "At the present time the county judge and the juvenile court judge are the same persons. Recommendations--that these administrative offices should be separate and distinct with a skilled specialist on juvenile psychology as well as some one who is well grounded in law to serve as the juvenile judge."

Comment: I could not agree more that the juvenile judge should be a licensed attorney and a person with a background and knowledge to administer our juvenile laws with a fair and impartial hand. The juvenile court was established by legislation in 1911 and, with only two minor exceptions, has not been changed since that time. I can assure you that I will work toward the establishment of professionalism in the juvenile courts as you have suggested. This matter is being considered by the Constitutional Convention, which is now in session. If a proper solution is not suggested by the Convention, then I will consider drawing legislation that will make the needed change.

28. "We recommend that those families made $3,000 or less be given the privilege of having food stamps without cost to them, or to the members of their families, in as much as this is a sub-standard living level and $3,000 is almost in the midst of poverty."

Comment: The food stamp programs were discussed above.

29. "We request that money be appropriated by the business community of not only Forrest City, but the entire state for the development of black businesses with in every community in the state. This is encouraged and justified simply because in most of the cases where there are now thriving well-to-do, or wealthy persons, they in effect, remain aloft from the problem of race relations and civil rights. These persons have made their money through the exploitations and the efforts of the black man, and we are not merely asking for a handout, but for a partial payment for the blood, sweat, and tears that the black man has put into the state and that the so called system of justice be restructured such that a random selection of jurors be instituted. This is justified simply because the epitome of the ideal of justice is: that representation of any segment of any community would be proportionate to the number of persons living within that community as compared to those that live within the total community. It should be mandatory that all policemen meet

psychological specifications regarding temperament, attitude toward law-breakers and that they understand the concept that they are enforcers of the law and not makers of the law. We should like to add that we realize that training can not be instituted tomorrow, therefore, we call for a complete purge of all police departments of racists and red necks. And that black policemen be hired and given the same pay and responsibilities of the white policemen."

Comment: This recommendation covers the areas of black businesses and economic activities; random selection of jurors; qualifications and employment opportunities of law enforcement officers.

I am thoroughly convinced that black entrepreneurs will have no difficulty in finding resources for attractive business opportunities. I am encouraged by the developments in Pulaski County. Although I do not agree with the "reparation" or "indemnity" theory, I am certain, businessmen being businessmen, that feasible and well-thought-out programs will attract the necessary capital, not because of any moral obligation based on past injustices, but because of the potential and merit of the proposal.

I have already commented on the Jury Wheel above, and I have discussed the opportunity for employment by our state and local law enforcement agencies.

As pointed out by Col. Ralph Scott, the above recommendation in regard to the psychological qualifications for police service simply points up the need for complete professionalism in this area. To attract many more fully qualified persons will require higher salaries and better training. The process can be aided by legislation establishing minimum standards for police officers.

30. "We recommend housing be provided in communities across the state that have a number of people who make $3,000 or less and that this housing be provided in such a way that it serves to bring the total community together should be situated in strategic places that will be accessible to both whites and blacks in order that the proper climate of communication can be established and that the full integration of an open society can be more approximately achieved, that the construction of schools and the implementation of the 1954 decision regarding segregation in public school be made a reality. In terms of construction we would require that schools be situated like new housing units in the middle or in the center of both black and white communities such that they remain accessible to both communities thereby promoting the elimination of the dual system rather

than perpetuating the old separate but equal order. We will also encourage that the results of achievements of black students be brought in line and in level with the results and achievements of white students."

Comment: The housing problem has been discussed above. The problem of fully integrated housing is one of national concern. It is probably the most difficult of all to solve over the short term. The programs of the federal government are most likely to be effective in this area. The problem is best attacked indirectly by equal job and employment opportunities. When blacks and whites share equally in the fruits of our economy, the problem of integrated housing will be much easier to deal with.

31. "We highly urge that single member districts be formed for the election of all public officials to public bodies. This goes not only for those in the state legislature but those persons who are elected to represent constituencies in local government and that these constituencies become a part and a singular expression of the one man one boat principle."

Comment: I am in favor of single-member legislative districts. I note that the Constitutional Convention has also gone on record in favor of this plan. Last week, that same Convention adopted a provision which would require that a majority of board members or aldermen in cities with populations in excess of 10,000 be elected from districts. These decisions reflect an awareness of the need for a more participatory democracy. When such officials are elected at large, the effect frequently is to deny minority groups any direct representation. I agree with the merits of this recommendation.

32. "We recommend that all state employees, especially the Arkansas Highway Department employees, have a percentage of minority group representation more in line with the population in porporation according to the 1960 Arkansas census. We want to reiterate that qualifications is no excuse, any system where eight white people pass the test and only three negroes pass the test is an invalid system because it automatically assumes that black people are inferior."

Comment: I do not agree that the hiring of state employees should be based precisely upon racial percentages. On the other hand, where employment is not roughly reflected in the make-up of our society,

the employment practices are subject to question. I have discussed the employment of blacks in state government above. I would like to point out that the Arkansas State Highway Department is, under our present constitution, a completely independent agency within the executive department. It is not under the control of the Governor's office. Nevertheless, I have brought these problems to the attention of the Arkansas State Highway Commission. Mr. Ward Goodman, the Director, has prepared a memorandum which is attached to this summary. I note his statement that, "Recruiting efforts in this regard will be increased with special emphasis being given to employment of minority groups". Mr. Goodman has further pointed out that the need for additional employees for the Highway Department is seasonable. It will decline through the next few months and pick up again in the spring of 1970.

33. "As a part of our system to insure that all men are innocent until proven guilty, we recommend that bail be eliminated for persons commiting misdemeanors. In addition, we strongly urge that significant studies be made by qualified individuals, and when we say qualified individuals, we mean individuals who have the ability to preceive what the system has to offer. We urge that studies be made to determine whether or not bail can be eliminated for some felonies."

Comment: I have already discussed this provision above. I agree with this recommendation and I urge that the suggested studies be made by the Bar Association and the Judicial Council to the end that significant reform be made in this area.

TO THE GOVERNOR OF ARKANSAS

When we last met, I agreed to set out to you in writing the position of our organization about the Conditions in Forrest City which we complained about and sought to change. I also agreed to let you know about some of our specific demands. Since that time our organization has decided that in meeting with us, you are acting in good faith as the Governor of all the people. We regret, however, that your office does not have a program of action by which to change your good faith into action. We also regret that the legislature has not seen fit to establish a political and social system which is truly democratic and just. Their silence in the wake of the turmoil and injustices around us is a sign to us that they are committed to maintaining the status quo - at all costs - and thus to keep the "East Arkansas Niggers" in their place.

Our emphasis today is equality in all areas of human life for us blacks, and poor whites as well, although they do not appear to realize that they are no better off than us blacks when it comes to sharing equally in the fruits of our so-called democracy. We therefore, submit our goals but can not be specific and narrow, but rather broad and general. (1) Our goal in St. Franci County for now is 57% of the good housing (2) good jobs and (3) political representation on the local, County and State levels; Total integration in all schools; fairness to students in grading; participation in school activities, etc.; abolition of discriminatory arrest and charging procedures and practices by police officers; abolition of unfair bail bond procedures; state provided counsel for indigents in all criminal offenses; fair trials by fair judges; good housing at reasonable cost for low income people which is capable of being purchased by such people and which is dispersed throughout the total community; legislation requiring direct election on a population basis of school board and city government officials, and the removal of veto power from the hands of white people over the representatives of black people, etc. Our goals listed above are not a complete listing but rather suggest the approach we shall follow for a short time to gain justice and equality.

By way of demands, we make no specific ones at this time, rather we strongly suggest the following in the expectation, that some of them will be promptly accepted and implemented as evidence of the states good faith and intentions to eliminate racial and economic discrimination and poverty. We shall wait one more time, but not for years or for a year or for a half year.

R E C O M M E N D A T I O N S

1. At the present time the county judge and the juvenile court judge are the same persons. Recommendations --- that these administrative offices should be separate and distinct with a skilled specialist on juvenile psychology as well as some one who is well grounded in Law to serve as the juvenile judge.

2. We recommend that those families made $3,000 or less be given the privilege of having food stamps without cost to them, or to the members of their families, in as much as this is a sub-standard living level and $3,000 is almost in the midst of poverty.

3. We request that money be appropriated by the business community of not only Forrest City, but the entire state for the development of Black businesses with in every community in the state. This is encouraged and justified simply because in most of the cases where there are now thriving well-to-do, or wealthy persons, they in effect, remain aloft from the problem of race relations and civil rights. These persons have made their money through the exploitations and the efforts of the black man, and we are not merely asking for a handout, but for a partial payment fc the blood, sweat, and tears that the black man has put into the state ar that the so called system of justice be restructured such that a random selection of jurors be instituted. This is justified simply because the epitome of the ideal of justice is: that representation of any segment of any community would be proportionate to the number of persons living within that community as compared to those that live within the total community. It should be mandatory that all policemen meet psychological

specifications regarding temperament, attitude toward law-breakers and that they understand the concept that they are enforcers of the law and not makers of the law. We should like to add that we realize that training can not be instituted tomorrow, therefore, we call for a complete purge of all police departments of racists and red necks. And that black policemen be hired and given the same pay and responsibilities of the white policemen.

4. We recommend housing be provided in communities across the state that have a number of people who make $3,000 or less and that this housing be provided in such a way that it serves to bring the total community together should be situated in strategic places that will be accessible to both whites and blacks in order that the proper climate of communication can be established and that the full integration of an open society can be more approximately achieved that the construction of schools and the implementation of the 1954 decision regarding segregation in public schools be made a reality. In terms of construction we would require that schools be situated like new housing units in the middle or in the center of both black and white communities such that they remain accessible to both communities thereby promoting the elimination of the dual system rather than perpetuating the old separate but equal order. We will also encourage that the results of achievements of black students be brought in line and in level with the results and achievements of white students.

5. We highly urge that single member districts be formed for the election of all public officials to public bodies. This goes not only for those in the state legislature but those persons who are elected to represent

constituencies in local government and that these constituencies become a part and a singular expression of the one man one vote principle.

6. We recommend that all state employees, especially the Arkansas Highway Department employees, have a percentage of minority group representatic more in line with the population in proportion according to the 1960 Arkansas census. We want to reiterate that qualifications is no excuse, any system where eight white people pass the test and only three negroes pass the test is an invalid system because it automatically assumes that black people are inferior.

7. As a part of our system to insure that all men are innocent until proven guilty, we recommend that bail be eliminated for persons commiting misdemeanors. In addition, we strongly urge that significant studies be made by qualified individuals, and when we say qualified individuals, we mean individuals who have the ability to perceive what the system has to offer. We urge that studies be made to determine whether or not bail can be eliminated for some felonies.

D E M A N D S

The black residents of Forrest City, Eastern Arkansas and the entire state of Arkansas have been exploited, oppressed, degraded and humiliated for too many years. This situation must change now. It is for this reason that we are marching to Little Rock and making these demands.

Economics and Employment

1. We strongly suggest that the State OEO Office work with the Committee for Peaceful Coexistence to develop experimental economic programs that will be controlled by the Forrest City organization and not the state OEO.

2. We strongly suggest that the St. Francis County Employment Security Division director be replaced by a young black man who is sensitive to the needs of the black community and not controlled by any political group.

3. We strongly suggest that the St. Francis County Employment Security Division director be replaced because of his policy of discriminating against black applicants and that his replacement be a young black man or woman who understands the needs and problems of poor people.

4. We strongly suggest that the Governor show his good faith by raising funds to organize a black owned industry which will train and employ the displaced farm workers of St. Francis County.

5. We strongly suggest that the Small Business Administration, Farmers Home Administration and other programs of the Department of Agriculture make loans available to the low income community of St. Francis County. We also strongly suggest that this be done with a minimum of red tape.

6. We strongly suggest that a comprehensive job training program be set up to train blacks in the Eastern Arkansas Black Belt area and that this program must not be politically controlled as is the Concentrated Employment Program (C.E.P.).

7. We strongly suggest that all State Agencies that operate in Eastern Arkansas begin to immediately hire blacks in white collar jobs and high paying jobs until at least fifty percent of those employed in these positions are black.

Welfare

We strongly suggest that the Welfare Director of the St. Francis County welfare office be fired for her improper treatment of black applicants and recipients. We also demand that those county Social Investigators in the Welfare Office who have been accused of humiliating black people also be fired and replaced by black workers.

Food Programs

1. We strongly suggest that until the food stamp program is replaced by cash grants the welfare office make the food stamps available free to an family of four with an income of less than $200. per month.

2. We strongly suggest that displaced farm workers be employed by the Welfare Office to work throughout St. Francis County to encourage the participation of other poor people in the revised food stamp program.

3. We strongly suggest that the St. Francis County Welfare Office stop discriminating against the black community in the size of welfare grants. We strongly suggest that the grants be made on the basis of need and that the Welfare Office stop cutting off welfare assistance on the basis of heresay information.

Police Protection

1. We strongly suggest that the State Police hire more black State Troopers and station at least twenty-five in Eastern Arkansas.

2. We strongly suggest that black veterans returning from Viet Nam be hired as State Troopers and that tests and qualifications and standards be set aside if the veterans have military police experience in the Armed Services.

3. We strongly suggest that city governments in Eastern Arkansas hire black policemen who are sensitive to the problems and needs of the community and that these policemen be given the same responsibilities, duties and salary as the white policemen.

Courts

1. We strongly suggest that the offices of county, city, and regional prosecuting attorneys recruit and hire black attorneys throughout the counties of Eastern Arkansas.

2. We strongly suggest that the courts of Arkansas provide justice for Arkansas Black citizens.

3. We specifically demand that the courts of St. Francis County and Forrest City provide equal justice for her black residents.

Development

We strongly suggest that Arkansas stop playing politics with the development of economic and social programs that are introduced into the state.

Housing

We strongly suggest that the Federal Government and State of Arkansas, work with the counties and cities of Arkansas as well as the citizens of these areas to develop housing programs that are responsive to the needs of the community.

Education

1. We strongly suggest that the elementary schools, junior high schools, high schools and colleges in Arkansas develop comprehensive black history and black culture curriculum for use in all of her institutions and schools.

2. We strongly suggest that the school districts of Arkansas stop firing black teachers when schools are consolidated.

3. We strongly suggest that the State Department of Education take action to prevent the firing or displacement of black teachers.

EDUCATION DEPARTMENT

Arch Ford

1. The suggestion, as it applies to institutions of higher learning, has merit. Elementary schools use text books which are on the approved state adoption lists, and the inclusion of a specific type course as suggested would, in my opinion, be inappropriate. Black history and Black culture should be integrated in the teaching of social studies. This is also true of Indian culture and Indian history as well as other ethnic groups. Local school districts control curricula offered at the junior high and high school levels (above 8th grade) and the state would, under present law, be powerless to superimpose a specific type course as suggested in the high schools of the state. Moreover, a better approach would be to include Black history and Black culture in the existing courses through the use of related materials in the various fields having to do with ethnic groups. The State Department of Education can and should encourage this development in every practical way.

The State Department of Education has completed an annotated bibliography of materials which deal with Black history and culture, Indian history, oriental history and Mexican history and culture. We have had a special committee to prepare a listing of such materials and it will be sent to local school districts in mimeograph form prior to September 10. We regard this material as important, and it has been prepared as a part of our professional leadership responsibilities. It is not the result of any suggestion from any pressure group. Competent librarians at all educational levels, including the colleges, participated in the preparation of these materials.

It is my thinking that each and every school at all grade levels should purchase some of the above-mentioned materials, and the Department will make every effort, through our field supervisors and the Commissioner's Office to see that this is done. This should result in an enriched program of social studies on an integrated basis.

May I repeat that it is my judgment that colleges and Universities should offer comprehensive courses in the history and culture of ethnic groups, including the largest group, the Negro. Elementary and secondary schools should enrich and improve their programs of social studies through an enlightened program with the use of the best materials available to implement

the materials usually covered by most teachers. I concur that the social studies' need a better approach, but I regard a separate course in Black history and Black cluture at the public school level as questionable.

2. The State Department of Education has for many years worked for equal salaries, and equal opportunities for Negro teachers. Fortunately, we have succeeded so far as salaries are concerned with only a very few districts which remain adamant on this point. Moreover, the Department has recommended the retention of as many teachers as possible when schools have been consolidated. As a matter of fact a good many schools in Arkansas are over-staffed-with both White and Negro teachers. There are a number of reasons for this condition, not the least of which is the desire to retain a Class A or North Central Association school.

Mr. Earl Willis, Consultant to local Boards of Education for the Department of Education, has prepared some data for the information of Governor Rockefeller. I am sure you will note that about 30 Negro teachers have been separated from employment as a result of integration. You will also note that perhaps more than 30 white teachers have lost their jobs as a result of integration or consolidation. The fact is that when two small districts integrate or consolidate, it is seldom that all employed teachers are really needed. In many instances, teachers have been retained, white and black, who were not really needed as far as the school's program was concerned, but local boards felt an obligation.

I agree fully with those who object to the discharge of any teacher because of his race. I have made this statement publicly many times and I now repeat it.

3. I believe my comments to number two above indicates my attitude on this suggestion. The state Department of Education has only such authority as is granted it by the General Assembly. The control of local school districts, including employment and termination policy and actions, are under the exclusive jurisdiction of the local board. The Civil Rights Act of 1964 prohibits discrimination and local boards are subject to this law. Enforcement of the Civil Rights Act is now in the hands of the Justice Department, and neither the Governor, State Board of Education, nor the State Department of Education has any influence other than that which can be exercised as a leadership function.

I agree with the sentiments expressed to the effect that no teacher should be fired bacause of his race. We have exercised influence in this area and shall continue to do so. I want to emphasize, however, that our function is in exercising leadership and is not a result of any legal authority we have regarding employment or termination of teachers.

CONCLUSION:

The State Department of Education has a planned program for employing Negro personnel. We have more Negroes employed at professional level salaries than any other regular state agency, and perhaps more than all other state agencies combined other than A M & N College at Pine Bluff. We are not only willing to employ Negroes, but actively recruit Negro applicants at both the non-professional and professional level. The State Board of Education mandated a planned approach on this problem about six months ago. We are making real progress though we have not reached our goal in all divisions. Some of our divisions have as many as 20% of our employees from the Negro race. This is unusual in any State Department of Education in the North, East and West as well as the South.

We are striving to secure greater enrollment of the Negro in the Vocational-Technical schools. Some progress is being made though it is not as rapid as we had hoped for. We also employ Negro teachers in the schools. One of the things we have not solved is that some Negroes believe that white employers would hesitate to employ them after they are trained and this discourages some from enrolling. But we are working on the problem and I believe making significant progress.

DESEGREGATION STATUS, ARKANSAS SCHOOL DISTRICTS, AUG. I, 1969

I. Racial Identification of Districts Totaling 391
   A. All white districts----------172
   B. All Negro districts---------- 5
   C. Bi-racial districts----------214

II. Total students in Arkansas 1968-69 (average number belonging)
   A. 172 all white districts --------91,210---------- 21%
   B. 5 all Negro districts---------- 1,174---------- .3%
   C. 214 bi-racial districts--229,708 white, 111,179 Negro-78.7%

III. Desegregation of bi-racial districts:

	1968-69	1969-70	1970-71
Unified* districts	103	132	154
Districts negotiating with HEW		29	
Districts against whom HEW has initiated proceedings to terminate funds		9	
Districts awaiting final court order		12	
Districts whose federal funds have been terminated		10	
Districts who have plans approved for 1970-71		22	
Negro students in desegregated classrooms	30,935	52,033**	67,749**
Negro students in all Negro schools	80,244	**	**

* Unified describes a bi-racial school district in which there are no recognizable Negro schools.

**These figures are not complete, since there are several districts who do not yet have approved plans for 1969-70 or 1970-71 but who will have such plans within the next two or three weeks.

IV. Desegregation of teaching personnel

In 1968-69 there were 3461 Negro teachers in bi-racial districts. 647 taught in desegregated classrooms. 1458 are presently assigned to desegregated classrooms in 1969-70. Some 30 Negro teachers have been dismissed as a result of Unifying bi-racial school districts. That many or more white teachers have also been dismissed. The unification of two schools within a small or medium sized district requires less teachers and results in some dismissal of teachers.

V. Related facts as to Location of Negro Students

   A. 41,915 or 37% of the Negro students in Arkansas live in 10 districts.
   B. 87,000 or 77% live in only 61 districts.
   C. 61 of the bi-racial districts have only 2%.

WELFARE

I. Food Programs

The Administration agrees that there are deficiencies in both the commodity and food stamp programs. St. Francis and most East Arkansas counties are served by the food stamp program. We recognize this program has the following deficiencies:

(a) There is far too much administration red tape in the program. The U.S. Department of Agriculture controls the program--makes and enforces all the rules. The Welfare Department certifies eligible people and sells the stamps. This means that the persons needing food are subject to the whims of not one but several federal agencies.

(b) Some people are eligible for such a small amount of stamps that their car fare costs them more than the bonus stamps. This discourages participation.

(c) The food stamp assistance offered is not realistic. A family of 4, making $201 per month is not eligible for any help even though they certainly would have to be considered below the poverty level.

Solutions:

The Administration recommends:

(a) That the food stamp program be administered by the Department of Health, Education and Welfare;

(b) that after eligibility is determined, the recipient be allowed to buy bonus stamps by mail;

(c) that recipients be allowed to buy soaps and cleaning materials as well as food;

(d) that the eligibility rules be relaxed to allow more low-income families to quality.

The Welfare Commissioner has already testified before the Senate on food and hunger that mailing out stamps would be more effective and that minimum purchase requirements are so strict that many poor people are not able to participate. Our recommendations will be restated in messages to the President, the appropriate cabinet secretaries and members of the entire Arkansas congressional delegation.

II. Welfare

(a) Personnel--This Administration has tripled the number of Negro employees in the Welfare Department. There are presently four vacancies in the St. Francis County office and we are seeking to fill them with qualified persons of any race. The federal government, which pays most of the welfare salaries, requires a college degree for welfare case workers and we do not feel that a lowering of qualifications would help the Black community.

(b) The present St. Francis County Director, Mr. Calvin Stackhouse, is relatively new. He has not had a chance to work effectively because the office under his supervision has never been fully staffed. Mr. Stackhouse was selected as director because we felt he would administer the welfare policies fairly and without prejudice because of race or political association. As of this Friday, we know of no specific reason to question Mr. Stackhouse's capabilities.

(c) Although we have published orders to all welfare workers to treat all welfare recipients with dignity and respect, we know we have not had 100 per cent effectiveness. We will reiterate through direct orders and specific training to all our workers the potential gravity of failures to treat each client with total respect. We are asking that any person who feels that they have been mistreated by a member of the Welfare staff write a personal letter to the Commissioner of Public Welfare, State Capitol, Little Rock, Arkansas. We cannot, in all fairness, dismiss any employee without specific cause.

During the past year, the Welfare Department has initiated a legal service program in order to provide free legal assistance to welfare recipients and persons of very low income. This assistance has been withheld from St. Francis County at the request of the St. Francis Bar Association. The Welfare Department will seek a reconsideration from the Bar Association in order to open St. Francis County for this needed free legal assistance.

August 17, 1969

DEMANDS

POLICE PROTECTION

Within the provisions of Act 616 of 1969 the ASP will hire additional black troopers as it is able to. Act 616 limited the ASP to 268 troopers and it has been at or near full compliment for several months. One black applicant is on the eligible list at this time and one is under investigation. Black troopers in the ASP are assigned to their post of preference, a policy applicable to all personnel. The ASP will gladly accept and earnestly solicit applications from black candidates who are willing to serve in East Arkansas.

****

Veterans of the Viet Nam war, black and white, are given first consideration by the ASP. Black veterans will be encouraged to submit applications, but rather than lowering the standards to accommodate them steps will be taken to qualify them under existing standards. This might be accomplished by a cadet program which is under consideration or devising a curriculum to be utilized at the Arkansas Law Enforcement Training Academy. The possibility of obtaining a grant for this purpose will be explored.

****

Every effort will be made to encourage all municipalities to hire black policemen. It is recognized that they are badly needed by almost all departments and the prestige of the office of the governor will be used to meet this problem. To this end immediate studies will be made to determine whether it will be possible to offer courses in basic police science at some of our vocational schools. If trained policemen are available I am sure they will be hired regardless of whether they are black or white, and this seems to be the most logical solution to the problem of more black policemen. Whether it is done in the vocational schools or the Arkansas Law Enforcement Training Academy or both, we will find ways to qualify the candidates for employment.

RECOMMENDATIONS

The recommendation in regard to psychological specifications and temperament goes to the very heart of the need for complete professionalism in law enforcement. This is a process, as is recognized, which will require time. It can be speeded up by the enactment of legislation establishing minimum standards for police officers and I will continue to press for such legislation. Standards relating to attitudes and temperament are desirable and will receive prime consideration. This is a goal we must all work for.

GOALS

Discriminatory arrests and charging procedures by the Arkansas State Police will not be tolerated. It is the policy of this department to enforce the law fairly and impartially and when there are exceptions investigation is always conducted. All serious complaints are referred to the FBI for impartial investigation. Relatively few complaints are being received against ASP personnel at this time and it is believed that progress is being made. This problem is related directly to professionalism and I will insist that the Arkansas State Police set the proper example. I will also lend my support to the implementation of recommendations in the recent study entitled "Courts in Arkansas Trying Traffic Cases" recognizing that the judge can do much to discourage improper arrests and charges. I will also ask the cooperation of the Arkansas Bar Association in meeting this problem, noting that it is interested in codes of conduct for law enforcement officers.

Colonel Scott
August 17, 1969

COMMISSION ON CRIME AND LAW ENFORCEMENT

To date the Commission has made 50 grants totaling $210,311 under the provisions of the Omnibus Crime Control and Safe Streets Act of 1968 and in accordance with the priorities established by Arkansas' First Year Plan to improve all phases of criminal justice and reduce the incidence of crime.

These grants were made to provide better training for police officers, training for municipal judge and probation officers, investigative equipment to assist officers in better investigations, specialized training for selected officers not available in Arkansas, better communications by replacing old outdated equipment and riot control equipment.

Surveys are presently under way to determine the feasibility of a central computer system into which information concerning all crime committed and all warrants as well as criminal history will be stored and immediately available to all law enforcement, prosecuting attorneys, probation and parole officers, judges and correction personnel.

A survey is also contemplated concerning the feasibility of a micro-wave system throughout the state to tie together all criminal justice agencies and the central information system which would provide a more efficient criminal justice system in Arkansas.

Other areas being explored are minimum standards for police officers, advanced training courses to be offered by our colleges and universities, updating of police salaries and incentives for securing advanced training, police-public relations programs, improvement of our parole and probation systems, as well as our corrections system.

The Commission was designated in June 1969 to handle the Juvenile Delinquency Program. Since the Commission has not been funded under this program no Federal planning money is available. However, direct grants have been made to four agencies in Arkansas dealing with youth.

The Commission is ready to assist any department, agency or institution in developing plans for improvement of our criminal justice system and the handling of our juvenile delinquency problem.

STATEMENT BY DR. CLYDE HART
State OEO Director

The State Office of Economic Opportunity welcomes the opportunity to work with the Forrest City Committee on Peaceful Co-existance or with any organization or group in the state in developing programs for the poor, providing the organization and programs qualify under Federal OEO guidelines. The guidelines are spelled out in the 1964 Economic Opportunity Act as amended. All OEO programs are designed to help the poor help themselves without regard to race, color, creed or national origin.

Since local community action agencies have the option of sponsoring all OEO funded programs, the East Central Arkansas Economic Opportunity Council, the community action agency in the Forrest City area, is the sponsor of all OEO programs now operating in the area. The East Central Arkansas Economic Opportunity Council basically covers St. Francis and Cross counties with limited coverage in Crittenden, Lee and Woodruff counties.

Of approximately $10 million in OEO funds coming into Arkansas in fiscal year 1969-70 designated for community action agencies, the East Central Arkansas Economic Opportunity Agency will receive in excess of $1 million. (See attached list of programs and funds).

These funds and programs are controlled by a board of directors elected by local people. Since OEO guidelines require that one-third of the board members be elected by the poor, the poor have a voice in determining how these funds are used.

The staff of the state OEO compares favorably with any state OEO staff in the nation in finesse, expertise, dedication and sensitivity to the needs of the poor of all races.

The state OEO maintains an excellent racial balance in staff personnel. Seven of the 16 staff members are black. Of these seven four earn in excess of $10,000 annually.

The Arkansas OEO is already active in fulfilling the new role of OEO recently announced by President Nixon. A Planning Development Program was initiated by the state OEO August 1. This program is designed to explore ways to involve the poor in planning for the utilization of economic and human resources in the state and to establish priority needs at the grass roots level.

Also, an experimental child care program designed to bring about the involvement of private business and the industrial sector in the War on Poverty is under way in the eight county area served by the Arkansas River Valley Action Committee.

Another pilot project, the Health and Nutrition program, is now in operation in six Eastern Arkansas counties including St. Francis. The program, which may call for expenditures in excess of $1 million, is designed to serve as a model for similar programs in other states.

ARKANSAS EMPLOYMENT SECURITY DIVISION

John M. Peterson
Administrator

The ESD is responsible for providing employment services as well as paying unemployment insurance claims through its 26 regular local offices located throughout the state. It also administers certain training programs for the U. S. Department of Labor.

Employment Service--Local Office

Since the local offices have no jobs of their own to offer, services to job applicants depends upon the job orders voluntarily placed by employers. By law, the local offices cannot accept job orders that have discriminatory requirements as to race or sex; and employers have been notified that discriminatory orders will lead to withdrawal of referral services. In the last two years the ESD has been very concerned with the large number of youth, women and Negroes available for work, while some employers complain of a shortage of qualified workers to fill job vacancies. Employers are being contacted to acquaint them with the available labor force and to encourage them to adjust their job requirements to hire more of the available types of workers. They also are encouraged to upgrade and promote from within to make jobs available at the beginning level. In addition, the federal government has been financing new programs to be of greater service to the unskilled and disadvantaged workers. About four years ago ESD began adding counselors to spend more time helping these workers. The ESD is responsible for referring workers to federally-funded training programs.

In carrying out these functions, the ESD local offices follow detailed federal regulations. They are visited periodically by evaluation teams, and statistics on their operations are checked. A minority representative visits all offices regularly and contacts community leaders.

The staff of the ESD are hired under strict rules of the Merit System; and changes in the minority representation can take place only as vacancies occur and as minority members pass exams and appear on the merit registers. However, considerable progress has been made in the past two years.

As of July 16, 1969, there were 51 Negroes among the 634 employees of ESD. Only 11 Negroes had started their employment prior to 1967. In the past two years several Negroes have been promoted to upper grades in ESD, including one who became an assistant director. In addition, ESD has created some new types of positions that more Negores can qualify for at the entry levels; and several have been promoted later as they gained skills with job experience.

Governor Rockefeller recently appointed a Negro as one of three members of the Merit System Council. And ESD has initiated a study of the examination questions and recruting procedures of the system to see if unnecessary barriers can be removed.

The Forrest City local office at present has 11 employees of whom one is a Negro. However, other ESD programs in the city also hired five Negroes and others are in the process of being recruited.

During the first half of 1969, Negroes represented 52% of all job applicants at the Forrest City local office. They received 72% of counseling interviews and 66% of tests. Of all job referrals, 59% were Negroes, and 48% of all actual placements on jobs were Negroes.

For a number of years, manufacturers in Forrest City have operated on an integrated basis and have provided many good paying job opportunities for Negroes. In recent months, progress also has been achieved in hiring Negroes in many smaller retail and service establishments. Unfortunately, displaced farm workers from rural areas are being attracted into Forrest City faster than new jobs are being created. But the ESD local office will make every effort to place Negroes wherever there are possible opportunities.

Training Programs--Rural CEP

The ESD administers federal funds for several training programs. The oldest is the M.D.T.A. which unfortunately consists of a number of separate classes arranged for at different places in the state and times of the year. Some O.J.T. (on-the-job training) is arranged with specific employers. The Nixon Administration is proposing to combine this type of training, along with some programs under the O.E.O., into a comprehensive manpower program. Each state governor will be asked to take a lead in preparing plans for the State, and then a block grant of funds will be provided to administer a state program.

The ESD has just initiated in July the Work Incentive (WIN) program, whereby welfare recipients are given training and referred to jobs. Offices to process welfare clients in this WIN program are being opened at Little Rock, Pine Bluff and Jonesboro.

The ESD is in the second year of its Rural CEP program--the Rural Concentrated Employment Program. This is a special training program for a 14-county area in east and southeast Arkansas. It is administered through 6 local offices and through 5 CEP offices (for intake and orientation training). Job training and basic education training is subcontracted to other agencies that provide the instruction.

During the first year (ending July 31), Rural CEP served 1,225 disadvantaged individuals, among the many poor in East Arkansas, and 1,022 of these were Negroes. Of the latter, 296 have been placed on jobs. Another 232 dropped out (many having left the area, and some may have obtained employment). There were 198 terminated for administrative reasons, often because of barriers of age or health that restricted any possibility of employment. The others are still being processed.

Many of the job placements were in industry in such jobs as production machine operator, tile setter helpers, lathe operators, machine helpers, foundry workers, employment agents, chassis assemblers, electricians, shipping clerks, maintenance carpenters, arc welders, etc. Others were placed in public and private jobs as clerical and sales workers.

As an experimental program, the Rural CEP suffered from some mistakes in the first year, and changes now are being made. Suggestions for further changes are welcomed.

One of the first year weaknesses was in the design of training slots under the sub-contractors. Some of the training did not produce skills that would lead to steady employment. Some of the training was for jobs in local government and hsopitals. Efforts are now being made to redirect training more toward private industry and for better paying jobs. A recent survey of employers indicates 3,600 workers will be needed in the next six months; and it is anticipated that at least 650 CEP trainees can be placed in these jobs.

This year, also, financial aid for moving some workers to jobs in Little Rock will be made available.

The staff of Rural CEP was initially 48 but has been expanded now to 69. One third, or 23 of these now are Negroes. While many of the experienced professionals had to be transferred into this program from ESD local offices, many new opportunities were created for Negroes in this program. More still are in the process of being hired in this program and in the WIN program.

An Action Response to Demands

While the ESD has been making much progress in hiring Negroes, it is willing to receive suggestions on ways of making greater progress while maintaining its high standards. After meeting with Negro leaders in Forrest City, the Administrator has reviewed personnel in that community and is initiating the following specific actions:

1. A Negro, Mrs. Jo Ann Daniel, will be placed in charge of all Rural CEP operations in Forrest City, and 13 employees will be consolidated under her supervision at the Christ Episcopal Church School location.

2. Four more Negores will be hired in the Rural CEP program at Forrest City as soon as possible--making a total of 8 Negroes among the 13 in this program.

3. In the Forrest City local office two Negroes will be transferred in (and promoted) to the position of interviewers.

4. A review also will be made of opportunities for hiring Negroes in the Rural CEP offices of other cities in East Arkansas. It is noted that a Negro, Tommy Davis, already is in charge of the new office at Marion.

SMALL BUSINESS ADMINISTRATION
377 POST OFFICE AND COURTHOUSE BUILDING
600 WEST CAPITOL AVENUE
LITTLE ROCK, ARKANSAS 72201

Mr. C. W. Ferguson, Regional Director of the Small Business Administration, advises that the Little Rock Office will be pleased to work with the minority groups in Forrest City and make available all loan programs administered by this agency. Representatives of the Little Rock Office make frequent trips to Forrest City and upon request would be available for special interviews. In addition, those interested in loans can always write, call or personally contact the Little Rock Office at 377 Post Office and Courthouse Building, Little Rock, Ark.

Mr. Ferguson also stated SBA is emphasizing a special program "Operation Mainstream" whose purpose is to assure ethnic minorities and other socially and economically disadvantaged individuals opportunities to qualify for loans under a relaxed eligibility criteria. The maximum loan under this program is $ 350,000 with bank participation. SBA has another program "Economic Opportunity Loans". This program is designed to assist low income individuals or persons who have been socially or economically disadvantaged. Maximum under this program is $ 25,000 and can be made direct by SBA.

In addition to the above and regular loan programs, the agency offers free management counseling, training and publications. A group of retired executives (SCORE) has been set up to advise and help less experienced small business people in all phases of the operation of their business. These services can also be obtained by contacting the Little Rock Small Business Administration.

Since the beginning of these special programs, we have made approximately 50 loans to Negro businesses in the dollar amount of $ 924,000. It is hoped that these figures will be greatly increased in the next few months.

SMALL BUSINESS ADMINISTRATION
377 POST OFFICE AND COURTHOUSE BUILDING
600 WEST CAPITOL AVENUE
LITTLE ROCK, ARKANSAS 72201

In an attempt to acquaint minority business owners and prospective business owners with "Operation Mainstream" and other SBA programs, we have contacted Community Action Program Directors, including the CAP Director in Forrest City to explain the program and to seek their help in getting in touch with interested minority representatives. A few days ago we met with the Vista workers of eastern Arkansas to explain all of the SBA programs and to ask their cooperation in acquainting minority members with SBA services. SBA has set up a special Minority Advisory Council, made up of Negro business leaders, some of which travel throughout the state, to help us to reach minority business owners and to work with minority business men in the solution of their management problems.

This month we have made contact with the Vocational-Technical School at Forrest City to set up an educational program there for the benefit of business owners, particularly those receiving loans under the "Economic Opportunity Program" and "Operation Mainstream".

Earl D. Wells
Chief of Financial
Assistance Division

F A C T S H E E T

ECONOMIC OPPORTUNITY LOAN PROGRAM

Title IV of the Economic Opportunity Act of 1964 authorizes the making, participation in, or guaranteeing of loans to assist in the establishment, preservation, strengthening of eligible small business, and improve the management skills of employees in such enterprises with special attention to small business concerns (1) located in urban or rural areas with high proportions of unemployed or low-income individuals, and (2) owned by low-income individuals.

WHO MAY BORROW: The applicant, as head of household, must be a low-income individual whose total family income from all sources (other than Welfare) is not sufficient to satisfy basis needs of family, or a person who, due to social or economic disadvantages, has been denied the opportunity to acquire adequate business financing through normal lending channels on reasonable terms. Business in almost all cases will be primary source of income.

AMOUNT: $25,000.

TERMS: 15 years maximum; normally, working capital or inventory loans will be for a shorter period of time. Interest 5-5/8% Direct.

REQUIREMENTS: Good character and credit record are basic necessitites for an Economic Opportunity Loan, and in addition:

1. There must be reasonable assurance of repayment of the loan.
2. Financial assistance is not otherwise available on reasonable terms.
3. The amount of loan together with other available funds is adequate to assure completion of the project.
4. Borrower must agree not to discriminate on the grounds of race, color, creed, or national origin.

The loan may not be used to relocate establishments from one community or local area to another.

SMALL BUSINESS ADMINISTRATION
377 Post Office & Courthouse Building
Little Rock, Arkansas 72201

F A C T S H E E T

Operation Mainstream

7(a) LENDING UNDER "~~PROJECT OPEN~~"

Special criteria are hereby established for loans under the regular 7(a) program for certain businesses which normally will be located in urban or rural areas with high proportions of unemployed or low-income individuals. These loans may be made to existing or new businesses--the greatest possible commitment to be made assisting minority groups.

AMOUNT: Not to exceed $350,000 Bank Guaranty, $150,000 Immediate Participation ~~and $100,000 Direct~~.

TERMS: 15 years maximum. Normally working capital loans will be for a shorter term.

REQUIREMENTS:

(1) No restriction on change of ownership.

(2) "Matching dollar" equity policy for new business. The applicant must have a reasonable amount at stake in the business so that with the financial assistance it will be possible to operate on a sound basis. Normally a minimum of 15% will be required.

(3) Acceptable debt-net worth ratio for existing business. Provided that the prospective cash flow, considering replacement of fixed assets that might be required in the future, is adequate to meet fixed obligations, a disproportionate debt-net worth ratio may be disregarded.

(4) Collateral. Inadequate collateral will not preclude loan approval if prospective future operations reasonably assure that the loan can be repaid from the profits of the business. The applicant must pledge whatever worthwhile collateral is available, including fixed assets purchased with loan proceeds. Personal guaranties may be required if appropriate.

SMALL BUSINESS ADMINISTRATION
377 Post Office & Courthouse Building
Little Rock, Arkansas 72201

August 17, 1969

To: The Honorable Winthrop Rockefeller
Governor of Arkansas

From: Robert Hankins
State Director, Farmers Home Administration

Robert L. Hankins, State Director, Farmers Home Administration, who is out of the city, authorized me by telephone this morning to give you this statement about the Farmers Home Administration services that are and will be made available to Negroes in St. Francis County and other counties in Arkansas.

First, let me say the agency has 6 full-time employees in our office in Forrest City, 3 of whom are Negroes, and 3 white employees. In addition, the Farmers Home Administration County Committee, composed of 3 people, has 1 Negro who is a regular employee of the Committee.

In recognition of the need of improved living conditions, St. Francis County is one of the few counties having the services of a Negro Home Economist who works closely with low-income families in rural areas.

Mr. Hankins informed me that he asked a member of his staff to make an equal opportunity check last week regarding loan activities in St. Francis County. This report shows that approximately 50% of all FHA loans to individuals are presently being made to Negroes. This is one of 16 counties in Arkansas where Negroes received over 50% of all rural housing loans made in the County during the 1969 fiscal year. Negroes in this County actually received 60% of all rural housing loans made in the County last year.

We have recognized the need for improved housing in this area. The Farmers Home Administration has a relatively new authorization in connection with our rural housing programs whereby the benefit of interest credit is available to low-income families who cannot afford to pay the regular amount of interest. The interest charged may be as low as 1% and never more than 6¼%. We are now making specia plans to make this service available to all low-income families. This will make it possible to help a much larger number of Negro

families than we have in the past. In addition, funds provided nationally are such that we should be able to help from 2½ to 3 times as many families to obtain improved housing as compared to a year ago. We expect to place special emphasis on this program in St. Francis County immediately. Self-help housing will also be encouraged for low-income families who can contribute their labor on a cooperative basis in building their homes.

All other type loans such as operating, real estate, and economic opportunity will continue to be available to all eligible families, regardless of race, creed, or color. First priority on the use of funds will be to low-income families.

The State Director recently spent a full day in St. Francis County meeting with low-income families, most of whom were Negroes, to better acquaint himself of their needs and to find methods to provide better services to these families.

You may expect full cooperation from all County, District and State office personnel.

MEMORANDUM

August 17, 1969

TO: Public Relations

FROM: Arkansas Planning Commission

The attached comments are submitted in response to the memorandum which the Governor received from representatives of the black communities in eastern Arkansas. The contents reflect what is essentially the past and present involvement of the Arkansas Planning Commission in dealing with the state's social and economic problems.

Attachment

Commissioners: • Paul L. Giuffre, Fort Smith • R. A. Eilbott, Jr., Pine Bluf
Abbott F. Kinney, Dermott • Martin Borchert, Little Rock • Vance Scurlock, Jonesbor
Mauritz E. Friberg, Berryville • J. F. O'Kelley, Conway

701 Comprehensive Planning

A community plan for Forrest City was completed by the University of Arkansas City Planning Division in May, 1959. The following planning elements were included in this program:

1. Base maps,
2. Major street plan,
3. Land use plan, and
4. Subdivision and zoning regulations.

Since this plan does not cover all elements and is ten years old, a complete 701 Comprehensive Planning Program should be encouraged.

Forrest City has a workable program in effect that will make them eligible for Federal assistance in housing.

Forrest City has a Housing Authority.

The Housing Authority has an application for 200 units of public housing approved, one-half of which will be for the elderly, one-half for rent-supplement. These units should be completed within 10 to 12 months.

One hundred and fifty turnkey public housing units have been approved and will be constructed by the Housing Authority within the next 10 to 12 months.

Ninety-four units of FHA sponsored housing are being planned by a local developer, Mr. Merrill. FHA has given tentative approval of the program. Twenty of these units will be rent-supplemental.

FHA has indicated that the 344 approved units meet the housing demands and no more housing can be supported by them until the present housing program has

been completed and evaluated. This points up the need for an independent housing survey by the local Housing Authority.

The state is in the process of developing an initial housing element under a Department of Housing and Urban Development grant. This is to provide a comprehensive plan for the state's role in the housing program.

The Economic Development Districts will also, in most cases, be preparing plans for housing in their districts.

Many cities throughout the state, as part of their comprehensive planning program, will be making housing studies.

These housing studies will form the basis for physical housing development and are geared to a three to five-year program. Control will be exercised through a yearly review of the programmed housing activities.

The Arkansas Planning Commission is encouraging and assisting communities to maintain a workable program so they will be eligible for Federal assistance, and if they do not have a workable program, they should initiate action to start one. A short course was recently held to train local personnel in this program. Representatives from 61 cities attended. More short courses will be conducted in the near future.

Recreation

Although recreation was not emphasized in the memorandum to the Governor, it is an area of activity of some importance to black and white citizens alike. The Arkansas Planning Commission administers the grant program of the Bureau of Outdoor Recreation, U. S. Department of Interior, in Arkansas. Projects amounting to about $3 million have been approved since the program began in 1965. Four state parks, one county park, and over a dozen cities have had projects approved to date.

These funds are available for the acquisition of land and the development of outdoor recreation facilities on a 50-50 matching basis. This means that the local community, or county, must come up with one-half the total cost of the project, either acquisition or development. The lack of local matching funds has prevented many Arkansas communities from taking advantage of this program.

Forrest City is one of the towns that has not made application for assistance under this program. If the local citizens, the community leaders, and the elected officials would like to provide more and better outdoor recreation facilities in Forrest City, the staff of the Arkansas Planning Commission will provide whatever assistance it can give at any time.

Facilities acquired or developed under the Bureau of Outdoor Recreation program must be accessible to people of all races. Before any grant is approved, the local officials must sign a statement agreeing to this provision. To our knowledge, it has worked well on every project supported by this program in Arkansas to date.

The following comments pinpoint specific programs which have been proposed by the Chief Executive with the express purpose of solving, or at least ameliorating, the problem areas identified by the black residents in eastern Arkansas.

Economics and Employment

Demand No. 1. The Arkansas Planning Commission has recently become explicitly involved in the OEO sponsored "Planning Development Program". The goal of this program is to devise and implement a process through which the poor in Arkansas can meaningfully contribute input into the human and economic resource planning for the state. This program will strive to make all Federal, state, and local agencies explicitly aware of the needs of the poor people. Two people from the Planning Commission will assist Mr. York Williams, the "planner-in-charge", in an advisory capacity.

Demand No. 4. The Governor's 1969-70 program included provisions for two programs which would indirectly deal with the stated problem. The Municipal Industrial Development Loan Fund program would provide for the establishment of a revolving loan fund from which the state's municipalities could borrow seed money for inducing expansion of existing firms or location of new firms. Another proposal, creation of a new division within the AIDC, would assist and promote the development of agricultural and forestry oriented industry. Emphasis would be placed on the development or expansion, both vertically and horizontally, of agriculturally oriented firms.

Demand No. 6. The Governor's 1969-70 program included a number of training innovations that would relate to the employment problem in eastern Arkansas even through the programs were conceived on a statewide basis. Approximately

$2.0 Million was recommended for a Mobile Plant-Site Training Program. This new concept for providing job training would allow small and/or isolated communities as well as areas surrounding vocational-technical schools to expand existing or attract new industries. Training would be conducted at the location of the firm and would rely on the resident population for trainees. The Governor recommended a $2.6 million increase over the 1969-71 biennium for expansion of Human Resource Development programs. Most of the effort was centered around the improvement and expansion of vocational training and education. Specifically, proposals were made to: provide additional vocational education aids and equipment; upgrade vocational education instruction; generally improve the quality of area vo-tech schools.

Welfare

Welfare Demand No. 2. The 1969-71 Executive Budget Recommendations included the following provisions: To train potentially employable welfare recipients under a Work-Incentive-Program. The Governor recommended approximately $600,000 for 1970 for this purpose and $1,000,000 in 1971. The program would include St. Francis County and is to be a statewide effort.

Although not specifically for St. Francis County, the Administration recommended a $10 per month increase in Aid-to-Families-with-Dependent-Children grants. This would aid a large number of low income families, both black and white.

Police Protection

Demand No. 1. The 1969-71 Executive budget recommendations included a provision to add 127 additional uniformed personnel and related equipment to improve the quality of law enforcement in Arkansas. An additional $2.7

million was requested for both years of the biennium for this purpose.

Demand No. 2. The 1969-71 Executive budget recommendations included an additional $225,000 in 1970 and $144,000 in 1971 to expand the scope and quality of the training courses provided by the Arkansas Law Enforcement Training Academy. Such an expenditure would provide for improved standards of law enforcement for the black community as well as for the white community.

With respect to hiring black Vietnam veterans with military police experience, the Legislature has to provide positions before they can be filled. Such positions were requested by the Executive Branch.

Development

The Arkansas Planning Commission, in cooperation with the Ozarks Regional Commission, has developed minimum and coordinated standards which must be fulfilled by all Economic Development Districts in order to receive funding. Such standards are designed to remove undue political influence and caprice from the economic development programs of the state. (Grants money of $240,000 for each year of the biennium was requested to aid state economic development programs.)

Education

The Executive budget recommendations included the following provisions:

1. To support a pilot demonstration project in early childhood development ($300,000 in 1970 and $300,000 in 1971).

2. To support a pilot demonstration project in training school administrators and school board members ($200,000 in 1970 and $200,000 in 1971).

Both of these provisions were designed to produce an educational system that is more responsive to the needs of local areas and be more adept in handling special problems.

ARKANSAS STATE HIGHWAY COMMISSION

Statement of Ward Goodman
Director of Highways

Re: Recommendations #6
Demands #7
Economic and Employment

The Arkansas State Highway Department has executed an agreement with the Federal Government as an Equal Employment Opportunity agency. In addition, the provisions for EEO employment by contractors has been included in all construction contracts. As a part of this program the Arkansas Associated General Contractors have instigated a federally approved job training program for minority groups. For employment in the agency the department has advertised as an EEO employment agency in the Wynne, Forrest City, West Memphis and Memphis newspapers. Recruiting efforts in this regard will be increased with special emphasis being given to employment of minority groups.

Although the number of so called white collared jobs in the department are quite limited, there are no racial restrictions in recruiting or promotions to these positions. It is further considered that all highway department jobs are positions of dignity and that the pay scale compares favorably with those of industry and no difference is made because of the color of the employee.

Most of the department's positions in East Arkansas are in the maintenance division. Although these jobs may not be considered "white collared" they are jobs from which advancement is not limited and the pay is adequate. The only qualifications for initial employmen are that the applicants be 18 years of age and able to perform

the prescribed duties. The next most numerous positions are in the construction division and for most such positions the minimum requirement is high school graduation or a GED certificate. We have attempted for a long time to recruit black employees in this group.

In general the need for additional employees for the highway department is seasonal. At this period employment is at a peak and depending upon weather conditions will tend to decline in the fall.

The department is determined by highway commission policy and by federal agreements to increase the percentage of minority groups employees.

Respectfully submitted:

Ward Goodman

ARKANSAS REVENUE DEPARTMENT
Bob Scott

In 1965 the Revenue Department had five Negro employees, representing less than one per cent of its total labor force, all of which were holding positions of porter. In the latter part of 1966, an additional eleven Negroes were hired, again in porter positions, increasing the percentage of Negro employees to 2.6 per cent.

For the past two and a half years the Revenue Department has made a bona fide effort to hire without regard to race. As a result of this policy, the ratio of minority employment has increased to in excess of five per cent. The Department now has thirty-one minority employees, of which fifteen are classified as maintenance, fifteen are classified as clerical and one is classified as supervisory.

We recognize this does not nearly equal the minority population ratio. However, our failure to employ from minority ranks stems from lack of qualified minority applicants rather than any discriminatory employment policy on the part of the Revenue Department. We cannot and will not ignore qualifications of applicants for employment in the Revenue Department.

The total labor force of the Revenue Department has been reduced to 591 as a result in the reduction of funding by the Legislature. The thirty-one minority employees represents 5.3 per cent of our total labor force.

We shall continue to hire replacements without regard to race, giving priority to minority applicants with comparable qualifications. Even though this policy has not been publicized in the past, we would be willing for it to be made public if it should be deemed beneficial or essential to the negotiations in resolving the Forrest City problem.

Adm. Justice Southern Justice

DUAL JUSTICE IN THE COURTS--
UNCONCERNED COMMUNITY

Justice is turned back,
and righteousness stands afar off;
for truth has fallen in the public squares,
and uprightness cannot enter . . .
The Lord saw it, and it displeased Him
that there was no justice. Isaiah 59:15-15

"Dual justice takes many forms, some merely disgusting and others so quietly terrifying that they balk the scrutiny of rational men."

The answer — A concerned community
The ultimate responsibility is with the people.

THE FELLOWSHIP OF THE CONCERNED
THE SOUTHERN REGIONAL COUNCIL
5 FORSYTH STREET, N. W.
ATLANTA, GEORGIA

From the discussion groups of the 1965 workshop of the Fellowship of the Concerned, came an urgent request that the Fellowship of the Concerned launch a campaign of women visiting the courts -- showing their interest and concern in what is happening.

What has been done thus far:

1. The Executive Committee of the Southern Regional Council gave the program their hearty approval.

2. The State Councils on Human Relations will be partners with us in this program.

3. A call went out to the presidents of national women's organizations asking them to come to Atlanta for two day's of discussion. The response was most gratifying.

The morning session of the first day was spent listening to a group of lawyers discussing for us the problems we had to meet and answering their questions. The remainder of the time was in the hands of these national women who divided themselves into several committees.

Mrs. Stuart Sinclair, President, United Church Women, National Council of Churches

Miss Dorothy Height, President, National Council of Negro Women

Mrs. Max Goldstein, National Board, National Council of Jewish Women

Mrs. George Gunning, National Board, National Council of Catholic Women

Mrs. A. L. Cram, Jr., Vice President, National Board Y.W.C.A.

Mrs. Michael Shapiro, First Vice President, B'nai B'rith Women

Mrs. George E. Kimball, Vice President, Unitarian Universalist Women's Federation

Mrs. Benjamin Mays, Representing Woman's Missionary Council, Christian Methodist Episcopal Church

Mrs. O. Ivan Cole, President, International Christian Women's Fellowship, Disciples of Christ

Mrs. Rose Anna Nelson, First Vice President, Woman's Home and Foreign Missionary Society, African Methodist Episcopal Zion Church

Miss Evelyn Green, Executive Secretary, Board of Woman's Work, The Presbyterian Church in the U. S.

Mrs. Niles C. Clark, Representing Woman's Society of Christian Service, Board of Missions, The Methodist Church

Mrs. Edward M. Brown, Representing Council of Lay Life and Work, United Church of Christ.

The following is their report:

A. Issued the following statement.

> "We, as members of national women's organizations, believe that the freedom, dignity, and security of the individual are basic to American democracy.
>
> "Since it is the nature of women to be a civilizing influence we are particularly concerned about the treatment of people in our democracy today.
>
> "As women citizens of this nation we feel a moral responsibility for the administration of justice in the courts.
>
> "This requires knowledge, personal commitment, and united action."

B. Directed the Southern Regional Council to prepare material on the discrimination in jury selection and the dual justice in the courts -- one for Negroes, one for whites.

C. Asked that workshops on the courts be held in each of our eleven Southern States -- and that visits to the courts be made beforehand in preparation for the state workshops. (One of the lawyers who spoke to the group said, "If women would visit the courts regularly it would revolutionize the courts.")

(Please study the attached "Observer Guidelines" prepared for us by Mrs. William Wood, First Vice President, League of Women Voters of the United States.)

WORKSHOP ON COURTS

Prepared by Mrs. Wm. Wood, Vice President,
League of Women Voters of the United States

Observers Program

Some selective process should be used in recruiting observers. Personal appearance and demeanor are important. Those willing to participate should --

1) Conduct themselves in a polite, well-mannered way.

2) Be willing to sit through proceedings and refrain from making remarks or engaging in conversation with those nearby while the Court is in session.

3) Act like a fair-minded person.

It is wise for observers to work in teams of two. This makes it possible to check with one another when any report is written.

When observing in the Courts the following should be kept in mind:

1) Trials are open. However, any judge has power to exclude the public and to have part of the hearing in private.

2) Know the procedures in the Court to be visited. Attorneys can be helpful in briefings on this.

3) Know the Court schedule -- what cases are coming up, the time the Court opens, etc.

4) Many Courtrooms have limited space. Get there in time to get a seat near the front so you can hear. Do not expect special favors in having a seat saved. If offered, do not accept a Judge's invitation to sit on the bench.

5) Areas of interest:
   a. Judge's demeanor toward the person before the Court.
   b. Bail
   c. Legal Counsel.
   d. Jury selection.
   e. Sentencing, fines, etc.

6) Observe several times with the same judge presiding.

7) Observe procedures under more than one judge.

SOUTHERN JUSTICE:

THE PROBLEM

Much has been written on the South's dual system of justice -- one brand for the white man -- yet another for the Negro. Legislation is even now being debated which hopefully will bring about change. But it will take more than new laws to rectify the abuses of generations. The vigilance of dedicated citizens willing to spend time and patience sitting in courtrooms and observing, willing to inquire, to ask the hard questions about long established procedures can be quietly effective. A coalition of women's organizations acting on local levels can fill this need. When lynch law was prevalent in the South, the Association of Southern Women for the Prevention of Lynching was formed and over the years contributed hugely toward eliminating mob rule in the South. The same spirit of that earlier organization is now needed as the South faces up to the new challenge of Jim Crow justice.

Let's look just briefly at the overall situation, for basic to any meaningful action is an understanding of the directions one is trying to move.

The double standard of justice in the South is most obvious in the record on civil rights cases.

From 1960 through mid-1965 at least twenty-six Negroes and white civil rights workers were slain. Only one assailant was sentenced -- to ten years in prison.

Toward the end of 1965, however, the three men accused of murdering Mrs. Viola Liuzzo were convicted of "conspiracy to violate her civil rights" and were sentenced. This was after one of them had been acquitted of the charge of murder. The next day Damon Strange was convicted of manslaughter in a night-rider slaying in Anniston, Alabama.

If the double standard of justice were limited to civil rights cases, one might find reason for optimism -- however slight -- in these recent convictions. But the problem goes much deeper.

The double standard of justice looms constantly over the daily life of every Negro in the South. In ordinary contacts with police, in traffic courts, in civil procedures, and in criminal cases the dual standard is a standing abuse to all Negroes.

Capital Cases

Despite the fact that more than half of all convicted rapists are white, 87 per cent of all the persons executed for rape between 1930 and 1963 were Negroes convicted and sentenced by southern courts.

Between 1930 and 1961, 34 people were executed for the capital offense of night-time burglary. Twenty-nine of them were Negroes and all but one were put to death in a southern or border state.

Studies have shown that a Negro murderer is likely to get the maximum penalty if his victim is a white person, while

southern courts are inclined to be lenient if the victim is another Negro. A white person is more likely to receive the maximum penalty for killing another white person than for killing a Negro.

Minor Offenses

Negroes suffer from what has been described as "cash register justice." Suppose a judge gives two men, one a Negro and one white, the same sentence for drunk driving: $150 fine or twelve months in jail. If the Negro is a laborer at $1.25 per hour (when he can find work) and the white man earns $250 a week, the sentence is not really the same because a fine of three days' pay for the white man is an impossible sum for the Negro.

To be sure, "cash register justice" victimizes the poor of both races, but the Negro, being poorest, suffers most frequently. In a 12-month period ending in June of 1962, 2,341 persons served terms in Georgia's state prison system for their inability to pay small fines. Seventy-five per cent of these were Negroes.

The same result is obtained in the setting of bail: the impoverished sometimes must await trial in jail because they cannot raise the amount which allows the well-off offender to be free.

Experts in criminal correction have long argued that an effort should be made to determine the offender's ability to

pay before imposing the penalty. So far the argument has had little effect in the South.

Legal Counsel

An indigent Negro accused of a major crime often must accept a court-appointed white attorney who has little enthusiasm for his case. But even if they have money, Negroes may find it difficult to get an attorney, and in the Deep South, white attorneys are reluctant to accept controversial cases. To do so can cost an attorney his practice and may even result in ostracism by his community. There have been several examples of this in recent years.

Jury Selection

A southern Negro charged with a crime has little chance of being tried by "a jury of his peers." Actually, methods of jury selection work against poor whites as much as against Negroes, and they are unjust in other parts of the United States as in the South. But the record of southern juries in racial cases is a striking and depressing result of the pre-judicial systems of jury selection which prevail.

All-White Justice

Exclusion from juries is not the only way in which Negroes are denied participation in the administration of justice. Only recently have southern cities and states hired a token number of Negro police officers; often their duties are almost entirely confined to Negro neighborhoods.

Very few officers of the southern courts are Negroes. This is as true of southern federal courts as of state and municipal courts. A recent report of the Southern Regional Council included the following statistics:

RACIAL DISTRIBUTION OF OFFICERS AND PERSONNEL
IN SOUTHERN FEDERAL COURTS

	TOTAL	WHITE	NEGRO
Circuit Court Judges	12*	12	0
District Court Judges	65	65	0
Referees in Bankruptcy	55	55	0
U. S. Commissioners	253	253	0
U. S. Clerks	28	28	0
Deputy U.S. Clerks	321	321	0
U. S. Attorneys	29	29	0
Assistant U.S. Attorneys	158	153	5
Jury Commissioners	109	109	0
U. S. Marshals	29	29	0
Deputy U. S. Marshals	165	156	9
Secretarial and Clerical	364	**	**

*This is the number of judges of southern residence now serving on the Fourth, Fifth, Sixth, and Eighth Circuits. The numbers respectively are three, seven, one, and one.

**Exact number of Negroes not ascertainable. The number from observation is quite small.

SOUTHERN JUSTICE

Jury Selection

In a suit attacking the jury system of Jefferson County, Alabama, Charles Morgan, attorney-at-law, noted that selection techniques "differ from state to state and within states from court to court. The federal system differs from state systems. Qualifications differ from state to state. Federal qualifications differ from state qualifications." Some jury commissioners, Morgan pointed out, compile jury lists from telephone books; others use city directories, voter registration lists, the rolls of the Junior Chamber of Commerce, church membership lists, lists of school teachers, automobile owners, American Legion members, property tax payers. The result of such methods is that no real balance of the population is achieved. Jury lists become heavily laden with middle and upper class citizens. The poor, both Negro and white, are automatically excluded and since residential segregation is a fact of life in the South, jury commissioners can even effectively screen out middle class Negroes by close scrunity of their addresses.

The first step in a program of reform should be for local groups to determine how jury panels are chosen in their particular localities. But it isn't enough simply to pressure for change. An alternative should be presented. How can a true cross-section of the population be achieved, as called for in the proposed Civil Rights Act of 1966? Mr. Morgan advances a surer means than is

currently in practice. This is the so-called Kraft method and is, in effect, the methods of opinion research analysts. (John F. Kraft, from whom the name is taken, is president of an opinion and market research firm. He has worked for many years both in the Elmo Roper firm and in the Lou Harris firm.) To select jury panels under this system would be a simple matter of choosing at random a specified number of residential blocks in a given city and from every fifth household making a random selection of citizens eligible to serve on juries -- men and women over 21, upper income and lower income people, white and Negroes. The whole focus of the approach, Mr. Kraft explains, "would be to remove human discretion from scientific sampling, to remove the possibility of bias in selecting the sample."

SOUTHERN JUSTICE

Courtroom Practice -- What Can Be Done

The county courthouse in the South is the last remaining stronghold of publicly sanctioned segregation. Not even the federal government has yet penetrated it. Beyond calling for elimination of discriminatory jury selection methods in state courts, the proposed Civil Rights Bill will not greatly affect accepted practices and procedures at the county courthouse. It will, apparently, be only through local citizen action that change can be brought about. This could be a long and frustrating process. The South has demonstrated its unwillingness to abandon segregation voluntarily and those who take upon themselves the task of reform should be prepared to face a good deal of resistance -- as well as local hostility directed against them. Yet the effort must be made. And it may well be that church women can here be more effective than the more direct action groups. Courts are peculiarly sensitive to any act that might remotely be interpreted as contemptuous. The authority of county judges in contempt cases is very broad. However, local women's organizations, sitting quietly in a courtroom, observing what goes on and later working for reform through community action could hardly be felonious.

Points that observers should be alert for are, of course, evidences of segregation. Such evidence probably won't be hard to find. Negroes may, as a matter of course, automatically sit

on the back row or in the gallery or they may be directed to sit in segregated seats by the court. Water fountains in some county courthouses may still be segregated as may restrooms.

Negroes in southern courts traditionally have been denied normal courtesy titles. Few southern judges or lawyers address Negro witnesses by any other than first names. Listings of witnesses in records of trial sometimes do not include "Mr." or "Mrs." titles for Negroes. Negro attorneys are frequently addressed as "Colonel," "Captain," "Preacher," by the court to avoid the use of "Mister."

Another project of the group could be analysis of cases where a Negro and a white man are accused of comparable crimes. The group could sit in on the entire proceedings first of one and then the other. Notes could be kept on how both proceedings were handled, with special attention to the court's attitude toward the defendant, the comparative energies of white defense attorneys on their client's behalf, interrogation of Negro and white witnesses -- and jury panel selection. If both defendants were convicted, a comparison could also be made of the sentences given; follow-through could be made of jail and prison conditions.

SOUTHERN JUSTICE

The Various Courts

Normally one thinks of only two types of courts -- state and federal. While this is, of course, basically the case, state courts are broken down into many categories.

Descriptive names vary from state to state but basically a state court system works this way. Superior courts (or district courts, circuit courts -- depending on the title used within the states) normally will have original and concurrent jurisdiction in all civil and criminal causes -- with the exception of administration of estates which would be under the jurisdiction of probate or ordinary courts. In some states superior courts also have jurisdiction in equity cases (those where injunctive relief is sought) while other states have separate equity (or chancery) courts. Divorce cases and cases involving titles to real estate will also normally fall under the jurisdiction of superior courts -- though some states again have separate court divisions for handling such cases.

Subordinate to the superior courts are the various municipal and county courts which have been created to take the heavy burden of minor civil and criminal cases from the higher court. Some of these include: police or recorder's courts used primarily for the disposition of minor offenses -- such as traffic violations -- and the binding over of greater offenders to higher courts; criminal courts which will handle misdemeanors; county civil courts which will have jurisdiction over civil cases where the sum involved is comparatively small. This sum may vary from state to state, but rarely is over $500.

SOUTHERN JUSTICE

The Rights of Individuals in the Hands of Police

Negro distrust of white policemen is widespread both in rural areas and in the cities; both North and South. Such suspicion is not unjustified. For too long the white policeman has been the secular arm of segregation and racial discrimination and his methods have been no credit to his community or to his profession. Despite efforts of progressive city and county administrations in recent years to eliminate not only police brutality but police violation of individual and human rights, a great deal more effort needs to be made. Citizens groups thus should familiarize themselves with the rights of individuals in the hands of police. The following is a summation of those rights: (Source: Criminal Law and Punishment, P. J. FitzGerald, Oxford University Press, 1962; pp. 175-180.)

1. Search and entry -- no one must submit to being searched unless he is a suspect who has been arrested.
2. Arrest -- police cannot detain a subject for questioning without a warrant;
   Police cannot make an arrest without a warrant unless he reasonably suspects a felony having been committed;
   Arresting officer must bring an accused person (if arrested without a warrant) before a judge as soon as possible. Superior officer in charge must inquire into case and may release the accused on bail if the case is not serious. He must release him if accused does not come before a judge within 24 hours;
   When brought before a judge, the prisoner has

the right to demand bail; if refused, he can appeal to higher court. Bail must not be excessive;

The remedy for a person wrongfully detained is to apply for a writ of Habeus Corpus to a judge, requiring accuser and accused to go before a judge where cause of arrest is to be stated. If court is not satisfied that a valid reason exists for detaining the accused, the prisoner is to be instantly released.

A decision of the U. S. Supreme Court handed down June 13, 1966, directly affects the rights of individuals in the hands of police. The ruling holds:

1) that an individual must be warned prior to questioning that he has the right to remain silent;
2) that he must be warned that any statement he makes may be used against him in court;
3) that officials must inform him of his right to have legal counsel present at the time he is questioned;
4) that he must be told by authorities that if he does not have money enough to employ an attorney, he has the right to have one appointed by the court to represent him; to consult with him before making any statement; and to have him present while he is making a statement;
5) that if an accused person requests legal representation no questions will be asked him until an attorney is present.

TITLE I - FEDERAL JURIES

From the proposed

"Civil Rights Act of 1966"

The present statutes reflect the will of Congress that federal juries be composed of a cross-section of the community. But these laws do not provide sufficient guidance to jury commissions across the nation as to how they shall carry out this Congressional purpose. The result has been the use of varying sources of names of prospective jurors, differing systems of selection and diverse tests of qualification. While this uncertain system appears not to have operated unconstitutionally, in some districts Negro representation on juries has been substantially less than the proportion of Negroes in the community, and other classes have sometimes been inadequately represented on juries. In any event, the system used in many districts is an imperfect means of insuring that the will of Congress is carried out, and carried out uniformly.

Title I of the "Civil Rights Act of 1966" is drawn to eliminate uncertainty and make clear beyond dispute that each judicial district or division is fulfilling its constitutional and statutory obligations in selection and assignment of jurors. It sets forth the sources from which potential jurors are to be drawn and the procedures to be followed in selecting jurors and testing their qualifications.

Title I declares it to be the policy of the United States that all qualified persons shall have the opportunity to serve on grand and petit juries in federal courts and shall have an obligation to serve when summoned. It prohibits discrimination in the selection of federal jurors on account of race, color, religion, sex, national origin, or economic status.

The bill requires that the names of prospective jurors be taken at random from the voter registration rolls, which are defined to include lists of eligible voters prepared by federal examiners under the Voting Rights Act of 1965. The voter rolls are considered to be the best universally available source of names substantially reflecting a full and fair cross-section of the community. Where, however, the judicial council of the circuit determines that use of the voter rolls as the exclusive source of names would not be consistent with the prohibition of discriminatory selection, the council would be required to prescribe other sources of names in addition to the voter rolls. It is anticipated that it will be necessary to prescribe additional sources of names for use in some districts where Negroes are at present not fairly represented on the voting rolls.

The qualifications for jury service prescribed by existing law are retained, but it is provided that all persons found in accordance with objective criteria to possess such qualifications are to be

deemed qualified as jurors. Under the present law, the statutory qualifications may have been regarded as establishing the minimum to be required, leaving the courts and jury commissions free to impose more stringent qualifications. The bill makes clear that the qualifications set a ceiling, that requirments beyond those listed may not be imposed.

Title I also provides a ready means for challenging jury selection in criminal and civil cases on grounds that the procedures established by the bill have not been followed. This challenge procedure is made available prospectively, and should be a major guarantee of the equal rights which are the objective of the legislation.

TITLE II - STATE JURIES

Title II of the "Civil Rights Act of 1966" is based on the power of Congress to enforce the Fourteenth Amendment by "appropriate legislation" and is designed to eliminate unconstitutional discrimination in the selection of grand and petit juries in State courts. This title provides that no persons shall be denied the right to serve on State juries on account of race, color, religion, sex, national origin, or economic status. In areas in which such discrimination is not practiced, existing jury selection procedures would not be upset. Where discrimination still exists, this title provides the means to eliminate it.

Title II has two principal features. First, it authorizes the Attorney General to bring civil actions in the federal courts for injunctive relief against discriminatory practices in State court jury selection. Under existing law, the Attorney General has no authority to initiate jury discrimination suits but may only intervene (under Title IX of the Civil Rights Act of 1964) in private suits. The authority vested in him by this title would be similar to the authority the Attorney General now has to seek injunctions against discrimination in voting, public accommodations and employment and, under Title III of this bill, against discrimination in public schools and facilities.

Upon a finding of discrimination, the court is expressly authorized to grant specified kinds of effective relief, including a decree which would, (1) prohibit the use of any qualification or ground of exclusion, exemption or excuse which has been administered in a discriminatory manner or which lends itself to such abuse; (2) require the use of objective criteria in determining qualifications, exclusion, exemptions, or excuses; (3) require maintenance of such records as may be necessary to show, in the future, whether discrimination is being practiced; and (4) appoint a master to perform the duties of the State jury officials. In addition, the court may grant other appropriate relief under general equitable principles.

The second principal feature of this title deals with the need for disclosure and development of information relevant to the question whether discrimination results from the system for selecting jurors. This objective is accomplished by a challenge procedure which may be used by the Attorney General in a suit under this title, private litigants residing in the area who seek to enforce the prohibition against discrimination by a civil action under 42 U.S.C. 1983, or a defendant in a criminal case or convicted person attacking collaterally a criminal conviction.

Upon the filing of an allegation of discrimination, appropriate State officials are required to furnish a "written statement of jury selection information." This statement is to describe in detail the procedures followed by the State jury officials in selecting jurors--including the sources of names of prospective jurors, the criteria used in determining qualifications for jury service, and the methods used for summoning jurors and assigning them to jury panels. The complaining party may cross-examine jury officials and introduce any other relevant evidence that may be available in support of the challenge. If, at that point, there is some evidence of discrimination, the complaining party is given access to any other relevant records of jury selection which are not otherwise publicly available and these may be introduced in support of the challenge. If the court then determines that there is probable cause to believe that discrimination has occurred, it is the responsibility of the State to produce additional evidence demonstrating that the alleged discrimination did not occur.

This provision meets twin considerations. It affords interested parties and the court access to the relevant records of jury selection needed to permit a fair determination whether discrimination has occurred or may occur. In addition, it assures that records may be kept confidential except as necessary to the court proceeding. Use of this challenge procedure in collateral attacks upon criminal convictions is available only with respect to judgments of conviction entered after the effective date of the title.

COMMUNITY ORGANIZATION METHODS BUILDS ABSOLUTE TEAMWORK

INTRODUCTION

The deep hostility between the police and the ghetto community is a primary cause of some of the disorders which have taken place in the State of Arkansas. The policeman is only a symbol of the authority which has responded to the cries of violence and turmoil created by a rebellious community unwilling to submit to an unjust law enforcement system or to a system that appears to be unjust. The police is also a symbol of a society which many minority groups feel is repressive.

In the State of Arkansas there is a need for a program designed to bring about harmony between the police and the community. A survey of the needs reveals that there are four problems.

1. The lack of adequate information by the citizens regarding the responsibilities and objectives of law enforcement.

2. Lack of respect for law enforcement caused by law enforcement officers who misuse their powers.

3. Lack of understanding by the policemen of the needs of minorities and other ethnic groups.

4. Prejudice and the historical problems of racism.

The project proposed herein is designed to improve the attitudes of citizens regarding law enforcement and law enforcement officials, and to improve the relationship and understanding between the

police and the community.

BACKGROUND AND HISTORY

The "COMBAT" (Community Organization Methods Builds Absolute Teamwork) was organized in January 1970 as a non-profit corporation under the laws of the State of Arkansas. The basic purpose of this corporation is to improve the health, education, welfare, economic and social well-being of disadvantaged people in the State of Arkansas.

The leadership of "COMBAT" is an outgrowth of the Committee for Peaceful Co-existence which was organized in March 1969 during the Forrest City crisis. The leadership of "COMBAT" has worked with Governmental Agencies, as well as private non-profit groups in order to eliminate problems which plagued the poor and the disadvantaged.

"COMBAT" has worked with the following organizations:

1. Arkansas Council on Human Relations
2. The New Economic Conference
3. The Governor's Office
4. AFL-CIO
5. Shorter College
6. Arkansas Chamber of Commerce
7. Arkansas Industrial Development Commission
8. Governor's Council on Human Resources
9. Little Rock Urban League

10. Various Municipalities throughout the State

WORK PROGRAM

The general approach for solving some of the problems which exist between the police and citizens of various communities of the State of Arkansas will combine the efforts of the local police department in an attempt to improve the amount of understanding regarding law enforcement procedures and powers. A total of twelve communities throughout the State of Arkansas will be selected as target communities in which a program of police and community relations will be implemented. The basic thrust of the Work Program will involve the following elements:

1. The organization of a local citizens police task force involving citizens and policemen.

2. The development and dissemination of materials explaining the responsibilities and authority of law enforcement officials.

3. The development of a program designed to enhance the understanding of the police regarding cultural and ethnic differences of minorities.

4. The development of a program designed to improve the recruitment opportunities for minorities in the law enforcement profession.

The success of this approach will depend upon the cooperation of citizens of each community and the leadership and guidance of the local law enforcement department. The participants in this program will include both county and city officials.

The above suggested program will be implemented in the order

that the tasks are presently listed. The staff of "COMBAT" will be responsible for bringing together the elements in the law enforcement system and in the community that will enable the Work Program to be implemented. In addition to the regular responsibility for organizing and implementing the police and community relations program, the "COMBAT" staff will work as a primary recruiter for State, County, and City law enforcement positions and encourage minorities to enter the profession with the hope of improving the present law enforcement system and expanding opportunities for the employment of minorities.

The implementation of the entire Work Program will be supervised by the Board of Directors of "COMBAT" working jointly with an Advisory Board of law enforcement officials and citizens at large selected and appointed by the Board of Directors of "COMBAT". This program is designed to basically improve the procedures used by citizens in obeying the law and to facilitate understanding between the communities and the law enforcement system.

"COMBAT" is funded by contributions from private foundations and individuals. The present budget is approximately $70,000.00 a year.

COMMUNITY ORGANIZATION METHODS BUILD ABSOLUTE TEAMWORK

Because there are people who are ignorant to politics in almost every community in the state of Arkansas, COMBAT has decided to focus most of its attention in a Political Education Program. The poor people all over Arkansas are unaware of the part they can play in determing their destinies. Many poor people still think they are not suppose to become involved in the political activities in their communities. It is the purpose of COMBAT to make sure that these people become aware of their civic duties. To further show how important this kind of program will be, there are several communities in our state where the people are not aware that they have mayors and aldermen. They merely think that if you are white and own a business you are suppose to run the town. This kind of thinking is prevalent in Strong, Arkansas (Union County). We would like to show step by step how COMBAT plans to eliminate this problem in the state of Arkansas.

1. First, we must come up with non-political issues to motivate people to the point where they want to make a change.

2. The community must become involved in all of the activities in their area.

3. We must not dwell on racial issues in a way where they will split the community but use those same racial issues to arouse the black community to the point where they are ready for the changes. We must then use the same issues to arouse the consciensics of the white communities so they will be willing to work hand and hand with the black communities to bring about this change.

4. Since we have local organizations already established in most of the communities, we work through these for voter registration, education and participation.

5. We must convince poor people to run for public offices as we are doing in several communities.

6. COMBAT feels in order for Arkansas to change, we must change the political system in this state and this has to be done town by town and county by county. In Arkansas every county judge has more power than the governor of Arkansas.

our local affairs

7. COMBAT feels the small towns are where most of the hard core racism is and this is where we will work to organize first.

8. COMBAT feels it must make people aware of the problems that can be changed.

PART II

Part II of our Community Organization Program is Economic Development. We are going to encourage every community to get involved to the point where we will have community owned industries. We will encourage churchos, civic clubs or any organization to involve themselves in this program. Let's see why we have chosen this route. In the state of Arkansas we still have the white masters with plantations who keeps the poor white man and poor black man completely ignorant and divided. We believe the ultimate answer is industry and to organize the workers in labor unions, where they will be struggling and sharing each others problems and will forget one is black and the other is white. We must make a change in our state and in our country, or our nation is doomed. Ignorance breeds poverty, filty, hate, racism and this can destroy any nation. We feel that before

expertise

Could get Univ of Ark help (promised?)

Part II can be effective, part I must be worked to perfection.

In Arkansas there are families who live on Five Hundred Dollars, (500.00) or less a year, on plantations in houses that are not fit to stand and are surely not liveable.

Working hand and hand with organized labor we feel we can upgrade the standard of living for most of these people. This is why we feel getting poor people involved in their own problems will inspire them to want to elect public officials who are interested in the problems of the poor and who are not interested in getting richer by making the poor poorer.

COMBAT believes that Economic Development is the foundation America is built on. Every aspect of our life is affected by our economic system. Black people have been denied the opportunity to pursue this part of American life. COMBAT knows that ownership of money and property with the ability to supply or withhold labor makes it almost impossible to live for those people who are victims of this kind of economic pressure. Therefore our efforts will not only be directed toward starting industry and training for those people who are without, or are not earning a living wage on jobs they have, but efforts will be made to increase black memberships in labor unions who have had their doors closed in the black man's face. This is a program that should be in full swing in three to five years.

This is what COMBAT IS ABOUT. This is where we get our name COMMUNITY ORGANIZATION METHODS BUILD ABSOLUTE TEAMWORK. We plan to live by this or die trying.

FOR RELEASE 11 AM, WEDNESDAY, SEPTEMBER 24, 1969

KATZENBACH CREDITS URBAN COALITION FOR PROPOSED REFORMS BY CITIES IN CRIMINAL JUSTICE

Nicholas deB. Katzenbach said today that more than a dozen cities from Newark, N. J. to Riverside, Calif. have launched significant programs to reform their systems of criminal justice because of impetus generated this year by the Urban Coalition.

Katzenbach, former U. S. Attorney General and Chairman of the Urban Coalition's Law and Government Task Force, said the programs range from reform of bail abuses, to job training for young offenders, to improvement of police-community relations.

At a news conference in Washington, he touched on these local programs:

In Newark, the Newark Urban Coalition is sponsoring a community-run project based on the Manhattan Court Employment Project, which provides training and jobs instead of trial and jail for some young offenders.

The local coalition in Detroit, the New Detroit Committee, at Mayor Cavanaugh's request, has undertaken a broad scale evaluation of the city's police-community relations program to recommend ways of improving and restructuring it.

(more)

The Riverside coalition works with the local correction agencies to provide vocational training for offenders about to return to the community.

The police departments of New Orleans and Detroit have announced they will set up detoxification centers modeled after the Manhattan Bowery Project, which views alcoholism as a disease and aims at rehabilitation instead of the hopeless treadmill of repeated detention and release.

The Denver coalition is designing a project to reform bail procedures.

Members of the Los Angeles coalition's task force monitored the Watts Summer Festival in an effort to reduce tensions between police and the people attending the Festival.

In Bridgeport, Connecticut the coalition has devised a program to improve police relations with Bridgeport youth.

Much of the impetus for these and other similar programs, Katzenbach said, came from an Urban Coalition conference of 70 municipal and local coalition leaders in New York in April. He released a report of that meeting at the news conference along with a statement submitted by him for the Urban Coalition earlier in the day to Congressman Claude Pepper's House Select Committee on Crime.

Delegates to the New York conference viewed some of the programs of the Vera Institute of Justice, a private organization known nationally for its pioneering work to reform abuses in the

(more)

criminal justice system, and the Criminal Justice Coordinating Council (CJCC), a public agency established in 1967.

"The excitement that the delegates felt was evident in their comments throughout the meeting," the report said. "But what was even more significant was the prompt action they took when they left. Within a few days after returning home, most of the delegates held press conferences to announce their plans for revamping their cities' criminal justice systems.

"In several cities, such as Cleveland, Ohio...the New York meeting spurred officials from the mayor's office to set up both a Criminal Justice Coordinating Council and an organization like Vera."

A number of local programs, including the detoxification clinics and the bail reform project in Denver, were modeled on the Vera-CJCC successes in New York.

On the heels of the New York conference, the Urban Coalition issued a report in June showing widespread deficiencies in state planning under the Safe Streets Act.

Most states in a 12-state survey, the report showed, were failing to include local, community and business leaders in their planning and failing to develop sound plans for reform of the criminal justice system.

Katzenbach said he was hopeful that the local program reforms he outlined, all of which involve citizen participation, would promote broader representation in the state planning process as well as spotlight for planners workable models for

(more)

reform of criminal justice systems. Both broad representation in planning and sound planning for reform are required by the Safe Streets Act for Federal grants-in-aid, which may amount to as much as $1 billion in years to come.

In today's statement to the Pepper Committee, Katzenbach said, "The range of projects which coalitions have developed or initiated for criminal justice agencies is growing every day.

"Some have involved the development of citizen complaint mechanisms; one has established, with the consent of the local police department, a panel of concerned citizens to monitor police activities (St. Paul); several have undertaken efforts to extend the availability of legal services to low-income people (including Minneapolis).

"When working with the criminal justice system -- whether it be with the police, the courts or correctional institutions -- our role has not been to supplant the operations of existing agencies but to stimulate them to more effective performance. In a few instances, where this approach has not seemed adequate, we have initiated small demonstration programs with the expectation that once they have proven themselves, they will be taken over by the system.

"In selecting programs for coalition involvement, we have sought to maximize the unique resources which we as an organization possess. Translated into action, this has meant that many local coalitions have served as mechanisms through which broken

communications lines between community residents and police can be restored. Since each of our coalitions include inner-city residents as well as leaders from other segments of city population -- including city hall -- this has been a natural function for us to perform."

The local programs, he said, "are evidence of an impressive grass roots attack on inequities and waste in criminal justice systems. They are helping break down hostilities between law enforcement officers and the communities they serve; they are recognizing and taking action to correct abuses; they are making criminal justice systems more just, more manageable and more efficient."

CON·TACT

The Official Publication of
The United States Jaycees
Correctional Programming
Office of The Coordinator
P.O. Box1826
Lincoln, Neb,68501.
Vol. VII No.9
August–September 1969.

AN HONEST APPROACH
If you can believe an editorial . . .

"Jails are rotten" . . . "The screws who work in this joint ain't worth a damn" . . . "Corrections aren't doing the job" . . . "No real programs exist in this institution" . . .

These are just a few of the comments tossed about by inmates and the so-called concerned public every day. I've probably been in more joints (Correctional institutions if you prefer) than any of you even knew existed. I can also point to the faults and the problems. I agree with the revolving door theory which says a man goes into prison, out of prison, and back into prison because of a lack of proper programing, trained personnel, individual help, etc. However, I cannot let myself off the hook by claiming that it is the fault of the system or "man" (Warden). It's like saying that crime is on the rise because of poorly trained police. Obviously, both the approach to corrections and to crime leave out the real failure – you and me. If we look hard at the correctional administrators we will find that almost every progressive move has come from within the system – work release, furlough, parole, group therapy, etc.

As a matter of fact, it was the professionals in the National Prison Association Congress of 1870 who included among their declaration of principles the following:

II. The treatment of criminals by society is for the protection of society. But since such treatment is directed to the criminal rather than to the crime, it's great object should be his moral regeneration. Hence the supreme aim of prison discipline is the reformation of criminals, not the infliction of vindictive suffering.

IV. Since hope is a more potent agent than fear, it should be made an ever-present force in the minds of prisoners, by a well-devised and skilfully-applied system of rewards for good conduct, industry and attention to learning. Rewards, more than punishments, are essential to every good prison system.

V. The prisoner's destiny should be placed, measurable, in his own hands; he must be put into circumstances where he will be able, through his own exertions, to continually better his own condition. A regulated self-interest must be brought into play, and made constantly operative.

VI. The two master forces opposed to the reform of the prison systems of our several states are political appointments, and a consequent instability of administration. Until both are eliminated, the needed reforms are impossible.

XIV The prisoner's self-respect should be cultivated to the utmost, and every effort made to give back to him his manhood. There is no greater mistake in the whole compass of penal discipline, than its studied imposition of degradation as a part of punishment. Such imposition destroys every better impulse and aspiration. It crushes the weak, irritates the strong, and indisposes all to submission and reform. It is trampling where we ought to raise, and is therefore as unchristian in priniciple as it is unwise in policy.

XXII More systematic and comprehensive methods should be adopted to save discharged prisoners, by providing them with work and encouraging them to redeem their character and regain their lost position in society. The state has not discharged its whole duty to the criminal when it has punished him, nor even when it has reformed him. Having raised him up, it has the further duty to aid in holding him up. And to this end it is desirable that state societies be formed, which shall co-operate with each other in this work.

XXVI While this congress would not shield the convicted criminal from the just responsibility of his misdeeds, it arraigns society itself as in no slight degree accountable for the invasion of its rights and the warfare upon its interests, practiced by the criminal classes. Does society take all the steps which it easily might, to change, or at least to improve, the circumstances in our social state that lead to crime; or, when crime has been committed, to cure the proclivity to it generated by these circumstances? It cannot be pretended. Let society, then, lay the case earnestly to its conscience, and strive to mend in both particulars. Offenses, we are told by a high authority, must come; but a special woe is denounced against those through whom they come. Let us take heed that woe fall not upon our head.

You've heard it before? Matter of fact, you're saying it now! FORGET IT . . . It's been said for OVER 100 YEARS – by the people you criticize. No, I don't think all administrators are great and all systems have no faults . . . but I do think that if You and I had joined the Professionals 100 years ago, we might just have many of the improvements we want today.

Next time, before you criticize someone else for the lack of progress, first look at the local, and state legislation or financing that has failed in your area. Undoubtedly, it failed because you and your buddies were too busy to support that legislation. Remember, the administrators do what the legislators allow or force them to do; and the legislators do what you allow or force them to do. So get off your soap box, quit talking, start doing.

Find out what laws that would have helped corrections have been defeated in the last five years in your area and start a campaign to get those laws passed. After you get the laws passed, don't forget to make sure the lawmakers fund them.

Remember, when a major television network, local paper, or an individual blasts the Incompetent Correctional System for failing to correct, they are really not giving us a window to look through at the faults of professionals — rather they are holding up a mirror so we can see the reflection of the real reason no progress has been made — us and our apathy.

SEND SLIDES, PICTURES, ARTICLES, ETC., SHOWING HOW PUBLIC INVOLVEMENT HAS HELPED (OR HURT) CORRECTIONS IN YOUR AREA . . . BE SPECIFIC AND FACTUAL . . . NO FLOWERY GENERALIZATIONS!!!

FROM THE GOVERNOR'S COMMITTEE ON CRIMINAL OFFENDERS

THE CORRECTION SIDELIGHTS of the City of New York Department of Correction . . .

Governor Rockefeller's Special Committee on Criminal Offenders recommended sweeping revisions in the State's procedures for dealing with criminal offenders and juvenile delinquents in a preliminary report submitted recently.

According to the Committee, the New York State system is one of the finest to be found anywhere, and the various agencies are performing their assigned functions as well as possible. However, what is needed, the Committee asserts, is an entirely new system to meet modern demands. It has been pointed out that the Committee's recommendations would be equally applicable to most jurisdictions in the country.

New York State must reorganize its offender treatment system, the Committee stated, so that treatment can be administered as a continuous process from conviction to final discharge. The fragmentation of the existing treatment system into probation, correction and parole agencies bars effective rehabilitative efforts, the Committee continued. With these points as keynotes, the Committee recommended:

Establishment of a single State agency — a Department of Rehabilitative Services — to provide treatment for all criminals and delinquents.

Adoption of a revolutionary new system for exploring the causes of recidivism and for linking treatment methods to specific treatment needs.

Creation of a new system for handling diagnosis and treatment through the use of interdisciplinary diagnostic panels and treatment teams.

Establishment of regional centers throughout the State for diagnosis, for preparation of pre-sentence and pre-disposition reports, and for certain treatment functions.

Establishment of three central control boards, one for children, one for youth and one for adults that would set program standards, supervise diagnosis, and make decisions as to who should be under supervision and who should be kept in institutions.

Complete revision of the youthful offender procedure.

In addition, the Committee recommended the establishment of a new Department of Rehabilitative Services. Under the plan recommended by the Committee, the new Department would:

Absorb most functions of county-operated probation departments.

Assume treatment of persons presently sentenced to county jails and penitentiaries, including possible State takeover of New York City's Rikers Island institutions.

Absorb the training schools and after-care services presently within the Department of Social Services.

Absorb the facilities and after-care programs presently within the State Division for Youth.

Assume all functions of the State Department of Correction.

Assume all functions of the State Board and Division of Parole.

Absorb certain functions of the recently established Narcotic Addiction Control Commission.

Other recommendations of the Special Committee include:

Transfer of many treatment decisions from the courts to the new Department.

Creation of unified treatment information files.

Creation of several new sentencing innovations.

Elimination of the State Probation Commission.

Dissolution of the State Board of Parole as a separate body.

Narrowing the functions of the State Commission of Correction, the State Board of Social Welfare and the State Judicial Conference.

The Committee added that the present system is severely handicapped by ancient procedures and restrictions that cause: overlapping functions; confusion of agency objectives; gaps in agency services; tangled channels for transfer, communication and research; a jungle of legal statuses; fragmentation of operations; lack of flexibility; and obscure justifications for prolonging treatment. The Committee also pointed out that at present a multiple offender may be dealt with by as many as thirty or forty different State and local agencies during his lifetime.

Co-chaired by Paul D. McGinnis, State Commissioner of Correction, and Russell G. Oswald, Chairman of the State Board of Parole, the Governor's Special Committee has been working for more than two years to find better ways of keeping offenders from returning to crime. Its preliminary report, consisting of 328 printed pages, covers all aspects of the offender treatment system from point of conviction to ultimate discharge from supervision.

The report is now being studied by a 43-member Citizen's Advisory Committee appointed by the Governor. After receiving the reactions of its Citizen's Advisory Committee, the Governor's Committee will hold public hearings. Specific recommendations for implementation will await the completion of a final report by the Governor's Committee.

CRIME PREVENTION

from the WALL STREET AMBASSADOR, North Dakota . . .

Know where your children are at all times! This common sense rule is broken all too often. Its violation is the cause for many a heartbreaking situation. Infants and young children at home should be within eye-shot of the parent. Take your children along to school. Arrange to meet them when school is out. DO NOT ALLOW your young children to roam the streets by themselves. Teach your children not to go to strangers, and to report suspicious persons to you, teachers or policemen. Teach your children that a policeman is their greatest friend outside the home. Instruct your children against loitering in public places. Do not allow them out after dark by themselves. Also, a high percentage of child molestations are caused by friends and blood relatives. As distasteful as this may sound, it is a hard fact of life. Be sure you know the character of people who might keep your children overnight, for a visit or on a trip. When you need a baby-sitter, take great care in the selection. Remember, that sitter is now in YOUR place as a guardian of your precious children. Insist that the sitter take the same precautions as you do. Take her on a security tour of the house; instruct her on not admitting strangers; give her the phone number where you can be reached. Explain how to reach the police. In short, educate your baby-sitter so that she will be able to handle a potential problem in the same way as you would. Concerning your teenage children, you should know when your daughter or son is dating. Don't let them go out with people who are complete strangers to you. Insist on getting to know those they date. Today's teenage girls have their own special problems. Following is a **no-nonsense code** of ten good rules we have formulated to help young girls steer clear of danger.

1. If any stranger — or even a slight acquaintance — makes improper advances, tell your parents immediately. Too often young people dislike the idea of getting someone into trouble. Just remember that if you don't report him, he probably will get into worse trouble later on — to say nothing of the harm he may cause.

2. If you know of any pornographic literature being passed around, notify your parents immediately. Collecting obscene material is a favorite habit of degenerates. If the authorities can run down the source, they may be able to rid the community of danger before it starts.

3. Know your date! Don't go out on blind dates.

4. Stay out of lovers' lane. They're favorite haunts of sex criminals. And after all, these are not places where understanding, moral teenagers — who know the deep responsibility of dating, sex and marriage — ought to be anyway.

5. Don't wander away alone from the crowd at picnics and outings.

6. Don't ask for trouble — DRESS SENSIBLY!

7. Be civil to strangers who ask directions, but never go part way with them.

8. Be careful about accepting work from a stranger. This is another insidious dodge. Always make sure that the person offering employment is a respectable businessman.

9. Don't go around the house half-dressed. It's an invitation to "peeping toms" or worse.

10. Never hitchhike! And never pick up a hitchhiker.

Parents should get to know their children. Do more things at home with them. The more they are in the sanctity and protection of the home, the less the chance for some disaster to strike. Follow these common sense rules! If you do, your chances and your loved ones' chances of being a crime victim will be greatly reduced.

THE MINNEAPOLIS STAR Mon., Oct. 6, 1969

Prison training project in doubt

By EDWARD SCHAEFER
Minneapolis Star Staff Writer

A manpower - training project is hanging by a slender thread for lack of federal financing at Minnesota State Prison.

The project, just a year old, would have been shut down early this month except that teacher-salary economies were worked out to ensure continuation of the inmate training until Dec. 2.

A request has been made for $350,000 to finance an expanded program, including a truck body building and repair section. There has been no action on the request.

The project was one of the items in the list of 19 "grievances" presented by prison inmates after a disturbance Sept. 4. Some of the inmates said vocational instruction had not been "beefed up enough."

A current Department of Corrections publication, in an article on the disturbance, lists "request for better academic and vocational education program" as third among the most significant grievances.

Few openings

Some inmates have circulated mimeographed sheets showing few openings in vocational training for the more than 900 inmates of the prison. One sheet, for instance, showed two openings for welding instruction and seven vacancies in offset- and duplicating - printing instruction.

The mimeographed sheets date from last October, when the project was just beginning.

Currently, 33 inmates are receiving or have completed training in welding, said Al Maresh, manpower development and training project director and a vocational - education expert from the Minnesota Department of Education.

Twenty-five inmates are receiving machine-shop instruction.

Twenty-three are taking drafting, 21 are in electronics classes and 26 are in the printing division, training principally as duplicating-machine operators.

The courses are set up with the intention of having 25 persons in each class except for 20 in drafting. The class terms and enrollment are flexible, however, with some students absorbing the training more readily than others and some needing more basic instruction, such as in reading.

At last count, 63 had completed the instruction. All but about a dozen of those men had been paroled, with the dozen awaiting release.

Counseling

In addition to the basic education and the vocational training, the "graduating" inmates get special employment-service counseling, according to Joseph Wennes of the Minnesota Employment Security Department's human resources development section, with offices in St. Paul.

Wennes said 40 percent of the released prisoners are working in jobs related to their vocational training. Two are taking further training, including one who is paying his own way through a private electronics school.

The prison says the parole-violation rate among vocational-training graduates is considerably lower than the rate among other released inmates.

Only two inmates getting vocational training were involved in the Sept. 4 disturbance.

Some of the inmates criticized the program because the training is open only to inmates who have a reasonable expectation of being released in the following six months or at most 12 months.

The project directors said there would be little value in putting an inmate with many years still to serve through a course. He likely would not retain enough of the instruction to qualify for placement after his release.

Maresh said that so far as he knows no one who has indicated an interest in one of the courses has been rejected. There was limited acceptance of the project by the inmates a year ago, Maresh said, but skepticism has faded during the year.

Now some custodial officers are "recruiting" for the program, Maresh said, largely because the vocational trainees give less trouble to the custodial officers.

Inmates accepted for a course get up to $10 a week allowance, with $4 in pay and $6 in a retained fund.

All instruction is by "outside" professional teachers. Maresh said the project cost comes to 90 cents to $1.20 per student per hour of training.

The first year of operations was financed by a $312,000 federal grant, including allowance for inmate equipment. The program was tagged as a model for prisons interested in such programs.

PRISONERS BECOME FACTORY WORKERS

First British Effort at Inmate Industries Is Called Initial Success

TO INVOLVE 300 MEN

Eventually There Will Be a 40-Hour Week While Serving Sentence

By Clive Borrell
(Dispatch of the Times, London)

Coldingley, Surrey—James Callaghan, home secretary, has forecast the introduction of shop stewards in prisons.

Opening Britain's first industrialized prison here, where eventually 300 men will work a 40-hour week while serving their sentences, he said:

"This is an experimental prison and after seeing the workshops I am convinced that in many ways the conditions are better than in some normal factories. If we make this one a success, and also make money, it will give us great encouragement for other prisons to be built—and God knows we need them."

Impressed With Success

Callaghan, who spent more than two hours touring the prison, was impressed with the realism and obvious initial success of the venture. Three workshops have been equipped for industrial use: A laundry, an engineering and machine shop, and a road signmaking department.

The laundry, when in full production, will take 200,000 items from local hospitals, wash and press them, and should net a weekly income of more than $7,-200.

The engineer and machine shop will make steel shelves and cabinets for government offices. The sign-making department will supply the ministry of transport and local councils with road signs.

But Coldingley is more than just a factory employing cheap labor—top wages are only $3.96 a week, although in outside industry the men could expect to earn about $4,000 a year for the same work. It is a brave esperiment.

As Callaghan said after his tour yesterday, "We want to encourage the impression—and, indeed, some of the inmates have indicated to me—that they have a job worth doing, and are not just rotting away."

Plans for Other Sites

At least 12 prisons—nine sites already chosen—are to be built in the next five years, based on similar lines.

"The Building Trade union, the Transport and General Workers and the Engineering and Foundry Workers unions have signed an agreement accepting former detainees at Coldingley when they leave prison as card-carrying members.

The factory atmosphere has begun to take effect at the prison, where more than 100 men are detained. Regular tea breaks and smoking periods have been instituted and men can be hired and fired.

Those who fail to abide by the put on more menial tasks and those who show willingness and spirit of the experiment will be aptitude will take their places. Those who are demoted will lose money and those who are upgraded will earn more.

RELIEF AIM
(Continued)

to the already swollen welfare rolls, Mr. Ullman said: "It seems to me way it's never been opened up."

Under the President's pan, families of four would be assured a mnimum ncome of $1,-600 a year, but employable adults would be required to accept jobs or undergo job training.

The plan further calls for extensive day-care centers for chdren of working parents and expanded job training programs.

Such a program, Mr. Ullman complained, could lead to untold drains on the Treasury. "It is so completely open-ended it can ony lead to disaster," he said.

Secretary Finch, promosing to return next week for further questioning, said that Mr. Ullman's "laundry list is valid and lengthy."

"You've given me homework for my return," he said.

Personal Income Showed Slim Gain For September

Agency Posts Slightest Rise In 17 Months, Sharp Drop From August's Advance

Lag Cited as Slowdown Sign

By a WALL STREET JOURNAL *Staff Reporter*

WASHINGTON — The advance in personal income slowed sharply last month, producing the slimmest gain in 17 months, the Commerce Department reported.

Last month's $2.3 billion annual rate of increase, the smallest since the $2.1 billion gain of April 1968, brought personal income to a record seasonally adjusted $759.8 billion annual pace. The September gain was far less than the $5.3 billion August advance and less than half the $4.9 billion average rate of increase in the first nine months this year. In September 1968 personal income rose at a $5.1 billion pace.

Although Administration analysts cited the slowdown as another sign of economic cooling, they noted the close relationship between personal income and unemployment—which jumped to 4% of the nation's labor force in September from 3.5% in August. "This (September personal income) confirms other indications of a slowdown, but since the unemployment rate could decline some this month, the rise in personal income may go up again," said one analyst. Other analysts questioned whether the decline in the rate of personal income growth was as great as reported; Government analysts had voiced this same skepticism about the size of the reported gain in September unemployment.

The smaller advance in personal income last month was centered in wage and salary disbursements, which was expected in view of the decline in September employment. A $1.2 billion overall increase in wage and salary payouts contrasted to a $5.1 billion gain in August.

In manufacturing, personal income rose only $100 million in September, compared to a $2.1 billion advance a month earlier. The report said that "a longer workweek and higher hourly pay rates were offset by decreased employment, virtually all in transportation equipment."

But some analysts questioned the validity of the seasonal adjustment for the automotive industry during the model change-over periods of August and September and thus reasoned that last month's decline in the transportation-equipment area perhaps wasn't as large as reported.

Private nonmanufacturing payrolls "recorded very small changes" in September, the report said, except in the service industries where they advanced $700 million following an $800 million gain in August. The department said construction payrolls were unchanged for the second consecutive month and disbursements in wholesale and retail industries also were unchanged following a "substantial" $1 billion August increase.

Government wages and salaries climbed $400 million in September, compared to a $900 million advance a month earlier. State and local governments accounted for the September increase, the report said, as Federal government disbursements were unchanged, following July and August pay raises.

Dividend income climbed $300 million in September to a $25.1 billion annual rate, and personal income from interest advanced $400 million to a $60.2 billion annual pace. Income from business proprietorships, farm income and rents all were unchanged from a month earlier.

Through the first nine months of 1969, the report said, personal income averaged 9% ahead of the year-earlier period.

NEW YORK TIMES
OCT 16 1969

DEMOCRATS SCORE NIXON RELIEF AIM

Say He Raids Treasury for Poor and Slights Elderly

By MARJORIE HUNTER
Special to The New York Times

WASHINGTON, Oct. 15—Democrats accused the Nixon Administration today of seeking to raid the Treasury for the poor while shortchanging the nation's elderly.

The sharp accusations were leveled as Secretary Robert H. Finch of the Department of Health, Education and Welfare opened the Administration's drive in Congress for large welfare reforms and a 10 per cent increase in Social Security benefits.

Within moments after taking the witness seat in the House Ways and Means Committee's lofty hearing room, Mr. Finch encountered a volley af Democratic criticism.

Protesting that the Nixon welfare reforms "are nothing more than a hodgepodge," Representative Al Ullman, Democrat of Oregon, said:

"I am shocked, frankly, almost to the point of being speechless, by the recommendations you have made . . . This is pure political pie in the sky."

The President has proposed a $4.4-billion program setting a minimum annual Federal payment of $1,00 for needy families, including the "working poor" as well as those with no income.

Mr. Finch and his aides were also accused of seeking to delay Social Security increases to coincide with the 1970 election year.

"Why does this Administration expect old people to go through the cold months of winter and wait until next spring to get their Social Security increase?" Representative James A. Burke, Democrat of Massachusetts, asked angrily.

Testimony Challenged

Told by Social Security Commissioner Robert M. Ball that it would take at least four months of complex computer programing before benefit increases could be made to the nation's 25 million elderly persons, Mr. Burke retorted:

"I doubt that very much. If it takes over 30 days, we'd better get some new people down there [in the Social Security Administration office.]"

Obviously angry, the usually mild-mannered Mr. Ball said: "Mr. Burke, I resent the implicaton tha I have told you something I don't believe."

"Oh, I know what restrictions there are on you and others in this Administration," Mr. Burke replied.

Mr. Finch said quietly: "I resent the implication there are any restrictions on Mr. Ball."

The Nixon Administration has proposed an across-the-board Social Security benefit increase of 10 per cent, effective with checks mailed out next April 1.

House Democrats, at a caucus last week, called for a 15 per cent benefit increase, effective Dec. 1 of this year.

While Wilbur D. Mills, chairman of the Ways and Means Committee, has not publicly committed himself to either figure, there were indications today that he might be leaning toward something higher than 10 per cent.

While the Administration has tied together the welfare reforms and Social Security increases, it is likely that Congress will enact separate Social Security bill before acting on welfare.

Reforms Face Fight

Some indication of the rough going in store for the welfare reforms was given bv Mr. Ullman, the third-ranking Democrat on the committee.

He said that he would not have been shocked if the Administration has proposed a negative income tax, a plan under which families with allowable tax deductions and exemptions in excess of their taxable income would receive cash payments from the Government.

Noting that r. Nixon's plan would add 10 million persons

TENNESSEE TRAINING PROJECT MOVES UNSKILLES INTO SKILLED JOBS

WASHINGTON -- Unskilled, jobless disadvantaged persons can become skilled industrial workers in less than a year.

This is being proven in a demonstration project in Tennessee financed jointly by the U. S. Department of Labor and the Atomic Energy Commission over the last three years.

At the Oak Ridge atomic installation, nearly 1,000 unskilled persons -- jobless, underemployed, and otherwise disadvantaged -- from the surrounding community have been trained and placed in highly skilled jobs.

Training was conducted within the gates of the AEC's Y-12 plant, an industrial complex devoted to the most advanced chemical and metallurgical technology.

The trainees included a high percentage of Negroes.

Data collected on the first 700 shows that they averaged three offers of employment each, and some received as many as seven job offers.

More than 99 percent of the graduates were placed in jobs.

Their annual earnings increased by an average of almost $4,000, from poverty levels to more than $6,000 a year.

It has been estimated that the increase in Federal income taxes paid by the graduates will return their training and subsistence allowance costs to the Government in five years.

(More)

All those selected for training were persons who lacked any specialized skill which would qualify them for jobs in skilled or technical areas.

Recruitment was a function of the Tennessee Department of Employment Security. The public employment service, along with the Tennessee Division of Vocational-Technical Education, also helped with coordination and review of the program.

The program has demonstrated that:

. . . there are methods of upgrading underutilized persons in less than one year to enter skilled industrial jobs;

. . . skilled and technical workers are in critical demand by industry;

. . . there exists a new capacity for advanced skill and technical training within industry; and

. . . there are industrial, educational, and other training resources that can be more fully utilized for manpower development.

The Labor Department's participation in the project is through the Manpower Administration.

DEPARTMENT OF LABOR PRISON PROJECTS
OFFER TRAINING FOR 4,144 INMATES

WASHINGTON -- Helping inmates of Federal, State, and county correctional institutions to become responsible citizens is the goal of a U.S. Department of Labor experiment.

The demonstration, called the Section 251 Prison Training Program, is an attempt to supply inmates with needed job skills so they would be employable when released. It is now operating in 40 institutions in 24 States.

Already 4,144 men and women inmates are in training or scheduled for training for a wide variety of job skills, the Labor Department has reported.

Agreements have been made with some State departments of probation and parole to release trainees upon completion of their courses so they can be placed in jobs in industry.

The 40 projects now under way are being supported with $5.242 million in Manpower Development and Training Act funds.

Thirty-six of the participating correctional institutions are State operated; three are county operated (Shelby County, Memphis, Tenn,; Tarrant County, Dallas, Texas; and Cook County, Chicago, Illinois); and one, at Sandstone, Minn., is a Federal institution.

Preparatory training, including basic education, eighth grade level education, high school equivalency, and prerelease job preparation, is provided when needed.

Entry training is available in a wide variety of vocations, including such modern type jobs as computer programer, electronics mechanic, and keypunch operator.

Women may learn to be a cosmetologist, seamstress, or nurse's aide, or

(MORE)

to do clerical office work.

Men are being taught the skills of shop and mechanical jobs, such as a auto mechanic, diesel mechanic, auto body repairmen, carpenter, electrician, bricklayer, operating engineer, sheetmetal installer, welder, machine set-up, machine operator, foundry worker, and inspector.

Others are being trained as cooks or bakers, or in building maintenance; as repairmen for electric motors, sewing machines, television sets, farm equipment, and all types of appliances; and as draftsmen, painters, upholsterers, pressmen, lithographers, and loggers.

In most of the institutions such job training and other rehabilitation services did not previously exist.

President Nixon, Chief Justice Burger and others have recently expressed their concern over the rise of crime, the high rate of recidivism, and the state of correctional institutions in general.

One-third of the 100,000 inmates released each year from State and Federal prisons return to crime and a new cycle of imprisonment.

Section 251 projects aim to find ways to meet these problems through new methods of counseling and vocational training for inmates. Cross-programming with other agencies is encouraged. Some projects arrange for the State Vocational Rehabilitation Agency to supply medical, psychological, and counseling services for trainees.

In Section 251 of the Manpower Development and Training Act, for which the program is named, the Congress directed the Secretary of Labor to "develop and carry out experimental and demonstration programs of training and education for persons in correctional institutions who are in need thereof to obtain employment upon release."

(MORE)

Section 251 provided that "programs under this part may include vocational education; special job development and placement activities; prevocational, basic, and secondary education, and counseling, where appropriate; supportive and followup services and such other assistance as is deemed necessary."

The Section 251 projects, under the Manpower Administration, are administered by State employment security and vocational education agencies, although they may subcontract with another public or private agency for special services.

Institutions with Project 251 demonstrations are:

Alabama: Draper Correctional Center, Elmore; Warden, John C. Watkins

Arizona: Arizona State Prison, Florence; Warden, Frank E. Eyman

California: Sierra Correctional Institution, Jamestown; Warden, Howard M. Comstock

Florida: Apalachee Correctional Institute, Chattahoochee; (Supt.) Gearrie Curlee

Georgia: The Georgia State Prisons; Warden, Lamont Smith

Idaho: Idaho State Penitentiary, Boise; (Director) Raymond W. May

Illinois: Vienna State Penitentiary, Vienna; Warden, Vernon Housewright -
Cook County Jail, Chicago; Superintendent, Winston E. Moore

Indiana: Indiana Reformatory, Pendleton; (Supt.) George Phend

Kansas: Kansas Industrial Reformatory, Hutchinson; (Supt.) Joseph B. Noble

Kentucky: Kentucky Village, Lexington; (Supt.) Robert L. Good

Maine: Maine State Prison, Thomaston; Warden, Allan L. Robbins

Michigan: Michigan State Prison, Stillwater; State Prison of Southern,
Michigan; Warden, George A. Krotp

Jackson: State House of Correction, Marquette; Warden, Raymond J. Buchkoe

Minnesota: Minnesota State Prison, Stillwater; Warden, Jack G. Young
Federal Prison, Sandstone, (Federal Correctional Institute) John J. Norton

Missouri: Training Center for Men, Moberly; Warden, Edward E. Haynes

Nevada: Nevada State Prison, Carson City; Warden, Carl G. Hocker

(MORE)

New Hampshire: New Hampshire State Prison, Concord; Warden, Parker L. Hancock

Oregon: Oregon State Penitentiary for Women, Salem; Warden, Hoyt C. Cupp

Pennsylvania: State Correctional Institute, Dallas; Warden, Frank C. Johnston

South Carolina: South Carolina Central Correctional Institution Columbia; (Act'g Warden) J. W. Strickland

Tennessee: Shelby County Penal Farm, Memphis; (Supt.) Mark Luttrell

Texas: Huntsville Correctional Institution; Warden, Sidney Lanier
Tarrant County Jail, Forth Worth; Warden, Rook Ramsey

Utah: Utah State Prison, Draper; Warden, John W. Turner

Washington: Washington State Reformatory, Monroe; (Supt.) Roger F. Maxwell

Wyoming: State Penitentiary, Rawlins, Warden, Lenard F. Meacham

E WALL STREET JOURNAL, THURSDAY, OCTOBER 30, 1969

Bail Reform: Two Law-and-Order Views

* * *

By JOHN N. MITCHELL

This Administration is firmly committed to a vigorous and comprehensive action program to combat crime in America, particularly street crime.

As you know, the present law—the Bail Reform Act of 1966—was passed as part of a nationwide movement to eliminate the financial inequities in the money bail system. It was premised on the supposition that the financial condition of a criminal suspect should not be a consideration in the application of criminal justice. I fully support this policy. I believe that the indigent defendant and the rich defendant must be given equal treatment if our system of justice under law is to have any relevance in today's society.

The Bail Reform Act of 1966 modified the historic money bail system by permitting release on personal recognizance of any suspect whose character and community ties would reasonably assure that he would remain subject to the jurisdiction of the court and would not flee. We now have had three years of experience with the Bail Reform Act and we have come to the conclusion that there is sufficient evidence to warrant substantial modification.

The amendments we propose will apply to all Federal jurisdictions, but their primary impact will be in Washington. No other Federal judicial district faces the high volume of street crime that we face here in Washington and, although there are bail reform experiments in more than 125 cities, in no other city is the risk of flight used in practice as the *sole* criterion for release of suspected robbers, muggers, rapists, narcotics addicts and other street criminals. There is no doubt at all that a significant number of serious crimes are being committed by those released on bail although the exact number of these offenders is subject to wide divergence of opinion, depending on the studies undertaken.

In view of (the) enormous increase in reported crime, the limitation of pre-trial detention to capital offenses makes no sense at all. The addict-robber, the professional burglar, the confirmed rapist are all far more dangerous to the community than the husband charged with first degree murder of his wife. Though precise statistics on crime committed on bail are not available because of the very low arrest rate for violent crimes (under 10% of all crime) many law enforcement experts —judges, prosecutors and police investigators —believe that crime on bail is a major factor in all street crimes.

In light of all available evidence, I believe that the pre-trial release of potentially dangerous defendants constitutes one of the most serious factors in the present crime wave. I believe that danger to the community must be made a significant consideration in the ultimate decision to release a suspect. I believe that we need a more flexible approach which will offer a range of possibilities—pre-trial release without close supervision; pre-trial release with close supervision, and other conditions such as employment; and no pre-trial release at all for those suspects who clearly present a potential for committing another serious crime.

Under the proposal no one will be held in pre-trial detention unless (1) he comes within one of a group of carefully chosen categories of defendants who may pose a danger to society, (2) the judge finds that he cannot be released on any condition that would assure another charge of a crime of violence when arrested or have been convicted of such an offense within the last 10 years.

Narcotic addicts charged with a crime of violence comprise the third category. Probably no act is more predictable than the commission of a crime by an addict driven by his habit.

The final category covers those persons who, irrespective of the offense charged, obstruct justice by threatening witnesses or jurors.

Only when the defendant fits into one of these categories may a motion for a pre-trial detention hearing be made by the U.S. Attorney. At this hearing the judicial officer has to find, on the basis of information available on the defendant and the facts of the offense charged, that there are no conditions for release which will reasonably assure the safety of the community.

Some have said that this finding makes the judge into a prognosticator of future behavior and that this is unprecedented and unreliable. The short answer to this is that our system has always called on the trial judge to make numerous predictions of future behavior from the first appearance after arrest until final sentencing. No one, for instance, has objected to the judge's predicting, under the Bail Reform Act, the likelihood of flight. When a capital offense is charged, the very same judge is directed by the Bail Reform Act to take danger to the community into consideration and thus predict whether the defendant will present a danger to the community if released.

Moreover, every time a judge imposes or suspends a sentence or grants or denies probation he makes a prediction of future behavior and the possibility of rehabilitation. If a judge can predict with some reliability without Constitutional prohibition in these areas he can also predict the dangerousness of a defendant before him.

The proposal also contains a number of strong procedural protections to safeguard the rights of the defendant. He will be entitled to an expedited trial and will not be held in pre-trial detention for more than 60 days unless the trial has started or he is delaying his trial.

The proposal I have outlined would thus

* * *

The ringing adage that a man is innocent until proven guilty underlies the practice of letting a person accused of a non-capital crime go free until his trial. But legal adages seem to have diminished appeal to crime-ridden society living in fear; high principles of the law become "technicalities" that let criminals run loose to strike again.

The difficulty of reconciling ancient concepts and modern dangers is typified by the Nixon Administration's proposal for pre-trial jailing of defendants deemed dangerous to society. The arguments pro and con don't necessarily pit get-tough types against bleeding hearts. Two law-and-order conservatives expressed conflicting views in recent testimony before the House Judiciary Committee, with Attorney General John Mitchell supporting the "preventive detention" proposal and Democrat Sen. Sam Ervin of North Carolina opposing it. Excerpts show the quandary confronting men wanting to do the right thing.

* * *

By SAM D. ERVIN JR.

Initially, I want to make it clear that I am deeply concerned about the crime problem in this country and about the safety of our law-abiding citizens. The increasing rate of criminal activity in our land is appalling. I am especially disturbed by the crime problems besetting us each day here in the District of Columbia. The existence of these problems, however, should not prompt Congress towards enacting unconstitutional and unwise and deceptively appealing legislation. Rather, it should provide us with the opportunity to make those difficult legislative decisions which are essential if our court and corrective systems are to cope with the demands of modern society.

I believe our search for a solution to the problem of crime on bail should begin with an acknowledgement of three facts. First, crime on bail, though the exact extent is uncertain, represents but a small part of the overall crime problem. Second, the problem, irrespective of its precise magnitude, could be substantially eradicated if trials were conducted between 30 and 60 days following arrest and release. Third, the Bail Reform Act of 1966 has been inaccurately and unfairly cited as the villain responsible for crime on bail.

The Eighth Amendment prohibits excessive bail. Clearly, if bail is set at a higher level than necessary to insure appearance, it is excessive and is serving a function not consonant with its historical purpose. The result of excessive bail is pre-trial detention violative of the Eighth Amendment. In my judgment, the Eighth Amendment implicitly guarantees a right to bail in all non-capital cases. I am personally satisfied that preventive detention prostitutes the purpose of bail and runs afoul of the Eighth Amendment.

Fundamental to due process of law is the tenet that a man is presumed innocent until proven guilty beyond a reasonable doubt. Under our system of justice the Government cannot deprive a man of his liberty on the basis of a mere accusation or assumption that he has committed a crime or is likely to do so. In practical effect, preventive detention legislation convicts individuals of "probable" guilt and "dangerousness" and sentences them to 60 days' imprisonment without trial and conviction of a crime. Such flagrant violation of due process smacks of a police state rather than a democracy under law. It is reminiscent of similar devices in other countries which have proved all too useful as tools of political repression.

Preventive detention rests on an untested theory of predictability. A judicial officer must be able to pick out with precision the suspect who will commit new crimes while on bail. Yet there are no standards for determining dangerousness and no statistical guidelines on which to base the prediction which must be made under the proposed law. We should remember that only a small percentage and number of suspects actually commit crimes while on bail. When that fact is ou

believe that danger to the community must be made a significant consideration in the ultimate decision to release a suspect. I believe that we need a more flexible approach which will offer a range of possibilities—pre-trial release without close supervision; pre-trial release with close supervision, and other conditions such as employment; and no pre-trial release at all for those suspects who clearly present a potential for committing another serious crime.

Under the proposal no one will be held in pre-trial detention unless (1) he comes within one of a group of carefully chosen categories of defendants who may pose a danger to society, (2) the judge finds that he cannot be released on any condition that would assure community safety, and (3) there is a substantial probability of his ultimate conviction.

There are four categories of detainable defendants in the bill. The first category covers certain dangerous crimes—robbery, burglary, rape, arson and drug sales. These are crimes of grave dangerousness, or, like drug sales, they are crimes that serve as breeding grounds for other and more violent crimes.

The second category covers the entire range of crimes of violence. The mere charge of a violent crime is, however, insufficient. In addition, the defendant must be out on bail on sent a danger to the community if released.

Moreover, every time a judge imposes or suspends a sentence or grants or denies probation he makes a prediction of future behavior and the possibility of rehabilitation. If a judge can predict with some reliability without Constitutional prohibition in these areas he can also predict the dangerousness of a defendant before him.

The proposal also contains a number of strong procedural protections to safeguard the rights of the defendant. He will be entitled to an expedited trial and will not be held in pre-trial detention for more than 60 days unless the trial has started or he is delaying his trial.

The proposal I have outlined would thus amend the Bail Reform Act to establish selected pre-trial detention on a limited basis with strong safeguards against abuse. The bill will hold for pre-trial detention only those persons who appear to be so dangerous that their release pending trial would probably result in the commission of other crimes. It will provide our courts with a number of indispensable weapons and procedures to combat the scourge of crime in our streets. Crime on bail does exist and those who are faced with it on a day to day basis know that it is a major factor in the rising crime rate.

rather than a democracy under law. It is reminiscent of similar devices in other countries which have proved all too useful as tools of political repression.

Preventive detention rests on an untested theory of predictability. A judicial officer must be able to pick out with precision the suspect who will commit new crimes while on bail. Yet there are no standards for determining dangerousness and no statistical guidelines on which to base the prediction which must be made under the proposed law. We should remember that only a small percentage and number of suspects actually commit crimes while on bail. When that fact is coupled with the fact that judges have nothing to guide them other than some enigmatic power of prophecy, the law will most assuredly result in the imprisonment without trial of many persons who are not dangerous and who are innocent of the charges. If the preventive detention law is judged by its susceptibility to abuse, plainly it is an evil law.

The proposed solution would impose heavy additional administrative burdens on the already heavily backlogged courts. (It) would, in many instances, take as much time as would actual trial of the principal case. Court congestion would get worse. Delays in criminal trials, now running 10 to 12 months, would increase. The suspect will be in the streets 8 to 10 months awaiting trial after his 60-day detention period is over. Thus we have the curious situation where our failure to give defendants and the public their Constitutional right to speedy trial has spawned legislation which will further burden the judges, and make speedy trials even less likely than at present. Yet the professed goal of protecting the public will still remain unrealized.

We should examine the impact upon the individual with the utmost care. It is obvious that 60 days' preventive detention will cost the detained individual his job. Loss of employment plus physical absence from his home will unquestionably have a detrimental effect upon his family. Probably the most serious blows to be dealt the individual will stem from his subjection to the physical and psychological deprivations and degradations of prison life. Criminal suspects in the District of Columbia will bear the brunt of the preventive detention law. The jails of this city are already a national disgrace. Yet the advocates of preventive detention would inject untold additional individuals, many of them innocent, into our problem-ridden, overcrowded prison system.

A period of 60 days or more of preventive detention in such a system is not likely to improve an individual's reputation. It will make securing employment difficult. It will, in all probability, exacerbate rather than reduce any existing criminal tendencies. And it will sharply detract from the defendant's ability to secure a fair trial, or a probationary or suspended sentence in the event of conviction.

In my judgment, the real answer to the immediate problem of crime committed by persons on bail, and, indeed, the solution to the general problem of crime, lies not in the preventive detention of individuals presumed innocent but in the speedy trial of the accused and the swift and sure punishment of the guilty. To attain that objective we must bring major improvements, long overdue, into our system of criminal justice. We must have more judges with adequate staffs and facilities, more prosecutors with sufficient supporting personnel, a more efficient system of defense for suspects financially unable to obtain counsel, and a more enlightened approach to penal reform.

Given the choice between a course of action fraught with Constitutional perils and one clearly Constitutional, let us choose the latter. Let us reject this facile and desperate detention device which repudiates our traditional concepts of liberty and pursue instead the goal of speedy trial of criminal suspects. That objective does not depend upon Constitutional affront but rather plainly preserves and enhances the rights of us all under the Constitution.

Jobs Offer Ray of Hope on Crime

* * * * * * * * *

By ROGER B. MAY

NEW YORK—Robert D. had little going for him when he appeared in Manhattan Criminal Court. An 18-year-old tenth grade dropout struggling to support his two motherless children through a dead-end job as a messenger, Robert was faced with the added burden of a police record for possessing stolen goods.

But Robert's chances have improved considerably since then. He has a better-paying job with an opportunity for advancement. And when his case is finally decided in court, chances are good the charges will be wiped from his record completely.

Such a switch in fortunes isn't at all uncommon in the Manhattan court these days. Each week, a dozen or so defendants in cases involving a variety of crimes are offered similar opportunities to get a break with the law. All they have to do, like Robert, is agree to participate in the Manhattan Court Employment Project.

A Joint Effort

The project is a three-year experiment which was launched with the aid of a Labor Department grant, in February 1968, by the Vera Institute of Justice, a private organization originally set up in 1961 to seek ways to improve the bail-bond system in the courts. Concerned over the fact that well over half of those who are arrested once will be arrested at least once again, Vera officials came up with a plan for putting offenders back on the right track by helping them get decent jobs.

"The idea isn't based on the Puritan ethic that work is the saving grace," says Henry M. Aronson, director of the project. "But if people have the chance to engage in honest work they enjoy doing, they'll probably opt for that opportunity, thereby creating a stake they wouldn't want to blow with another run-in with the law."

As an incentive for defendants in criminal cases to go into the project, its officials promise that they will recommend to the District Attorney's office that the pending charges be dropped or the sentence suspended provided the defendant shows promise in his new job over a period of at least three months. Both the District Attorney's office and the Manhattan court have agreed to cooperate.

MCEP boasts that on the average, it places a new arrival in the project in a job by the ninth day after he's accepted. But that's only the start. Since most everyone in the project hasn't had much experience working for any length of time, "we go on the idea a guy is going to blow his first job," says Ennis Olgiati, associate director in charge of career development.

Actually the court defendants are placed with MCEP's help in an average of three jobs each before they find one where they feel confident enough to stick it out. In some instances, say MCEP officials, they've put people in as many as eight jobs.

MCEP job developers give those in the project another break by asking cooperating employers to stretch their usual rules a bit and, for example, put up with some tardiness from MCEP project members. Some concerns like one big New York finance company have gone so far as to pay the people it has taken on a weekly basis rather than twice a month like other employes. "They can accumulate money a littie faster," says its personnel director. In addition, he says, paying the MCEP employes once a week, "gives us a chance to chat with them every Friday and help them along with their problems."

Counseling of those in the project is handled by staff members of MCEP. "The idea of giving jobs without supportive services is ludicrous," says Mr. Olgiati. MCEP insists that project participants show up regularly for counseling sessions including weekly group sessions run by its counselors, or "reps" as they are known.

The MCEP project presently has eight reps, unique in the fact that they're all nonprofessionals and all are ex-offenders themselves, having served prison terms anywhere from three months to 17 years. "The traditional idea of the counselor just didn't wash in this project," explains Mr. Aronson.

MCEP staff members claim their non-professional reps are able to establish relationships quickly with defendants who share similar backgrounds and who would likely be suspicious of professional counselors. "What's more," says one MCEP staff member, "with these reps there's real communication rather than sociological jargon."

Participants in the project generally agree the counseling helps, particularly the group sessions. "You sit there and talk, and you find other people have the same problems," says a 20-year-old merchant seaman who got into the project several months ago after being arrested for disorderly conduct. "Just hearing that people have the same problems makes you feel better," he says.

MCEP officials say the combination of jobs and counseling has had encouraging results. In nearly 20 months of screening some 1,000 defendants passing through the Manhattan court each week, the project has accepted a total of 859, mostly young high-school dropouts. So far charges against 258 have been dropped because of their good record in the project. Another 157 are still participants. With a few exceptions, the remainder have been returned to normal court processes, usually because they simply didn't respond to the MCEP program.

Lately, as it has gained experience, MCEP has been improving on its record. "In the early days, we were seeking dismissals in only 25% of our cases," says Mr. Aronson. "Now we're recommending dismissals in 50%." What's more, their experience so far has convinced MCEP officials that they can tackle tougher cases.

At first, young college students employed to screen court defendants for project candidates were carefully instructed not to consider anyone accused of a crime more serious than a misdemeanor, which carries a maximum penalty of one year in jail. Since then restrictions have been eased considerably. "Forty per cent of the defendants now coming into the project are persons who have been arrested on a felony," says Mr. Aronson.

Not All Clear Sailing

MCEP officials admit it hasn't been all clear sailing, though. Of the 859 participants, 111 have been re-arrested, though often for minor offenses. This rate of recidivism is "pretty low," however, in the opinion of one expert, Dr. Daniel Glaser, associate commissioner of research for the State Narcotics Addiction Control Commission. He notes that most of the offenders taken into the program so far had originally been charged with misdemeanors, and says, "Petty offenders usually have the highest relapse rates."

More disturbing to the project officials has been the high percentage of drug users turning up despite intensive efforts to weed them out in the initial screening. "The cold, hard reality is that 23% of the people in the program are addicts," says Mr. Aronson. "We just can't respond to them."

Despite such problems, the project is winning growing support for its efforts. "There was honest skepticism from the bench when we started," says Mr. Aronson. "Now we're getting increasing calls from judges asking if we can take people we hadn't considered for the project." What's more, he says, on occasion arresting officers have brought in defendants themselves to see if they could be accepted.

The number of people in the program is small, of course, compared to the huge Manhattan court loads. "The program is just a tiny acorn, but in the long run it has very great promise," says Kenneth Conboy, chief of the criminal courts branch in the Manhattan District Attorney's office.

Criminal Court Judge Joseph Stone, who until last May was an assistant district attorney and liaison man with the court project, says. "Even if the project is successful in only 258 cases and these people don't come back again, it has accomplished a great deal."

Poverty War Lawyers Stir Ire by Challenges Of State, Local Actions

Efforts in California Cause Sen. Murphy to Ask Curb; Renewal Project Halted

Tackling Civil Rights Cases

By JAMES E. BYLIN
Staff Reporter of THE WALL STREET JOURNAL

SAN FRANCISCO—When an impoverished family of Mexican-American migrant workers moved into central California last September, they hoped to find better work. Instead, they found a new problem: School administrators placed two of their eight children in classes for the mentally retarded.

Although upset by what they feel is an incorrect decision, the parents could hardly afford a legal protest; they're living on about $3,000 a year. But today lawyers are fighting their battle anyway. It isn't costing the family a cent, and if their case goes to court, it could bring into question class-assignment procedures in hundreds of other California districts.

The lawyers are part of California Rural Legal Assistance (CRLA), one of 270 such agencies now providing free—and controversial—legal aid under the war on poverty. The California case, while still in its early stages, typifies the dual role of such programs: They not only represent the poor in routine matters but sometimes also challenge public agencies or the existing law itself.

Challenging the System

Lawyers for the California family are armed with studies that show twice as many Mexican-American children as white children enrolled in this state's classes for the mentally retarded. They suspect that school tests that fail to take the language barrier into account may be the reason, and they're considering a class action suit that would attack the entire system of testing and assignment.

Through such tactics the Federally paid lawyers have overturned laws and challenged bureaucrats in many states. But in the process they have made some powerful enemies, including politicians who don't relish their brand of activism. And now, the Federal lawyers fear, their enemies may soon strike back.

This week in Washington the House is expected to begin debate on the "Murphy Amendment," already pushed through the Senate last October by a coalition of Republicans and Southern Democrats. California's senior Senator, Republican George Murphy, is the prime backer of the provision, despite opposition by the Nixon Administration's Office of Economic Opportunity.

The amendment would give governors the power to eliminate all or any part of any OEO legal service program in their states. Under present law, a governor has only the choice of

Activist Attorneys: Poverty War Lawyers Stir Wide Antagonism

Continued From First Page

staff from a Spartan suite of offices decorated with photographs of rural poor, Mexican prints, children's drawings and, in the back rooms, posters opposing the Vietnam war and backing the prolonged California grape strike.

CRLA was incorporated by a group of young lawyers as a private law firm in anticipation of an OEO grant (OEO provided an initial $1.3 million in 1966). Since then, its lawyers have handled some 35,000 cases—the majority of them for Mexican-Americans, who make up about two-thirds of California's rural poor.

Most of its cases have hardly been noticed. They have involved routine claims against merchants, employers, landlords or spouses. The controversy has been generated by CRLA's class actions—suits filed on behalf of all persons affected by a law or situation that CRLA argues is illegal. These cases have been few in number—only 63 of 15,000 cases handled in the fiscal year ended last June 30 were class actions—but they have by far the greatest impact.

A Canceled Operation

CRLA's first major dispute came in 1967, when it butted heads with Gov. Reagan. The governor had backed budget cuts in a California medical program that supplements Medicare. CRLA, representing a farm worker whose scheduled back operation had been canceled because of the budget cuts, filed a class action on the ground that the cuts had reduced services below the minimum prescribed by state law. A court upheld CRLA, the funds were restored and Gov. Reagan—elected in 1966 on an economy pledge—seethed.

Meanwhile, CRLA was becoming embroiled with Sen. Murphy and California farmers. In 1967, it filed suit against the U.S. Labor Department's enforcing of its own policy covering the importation of low-paid braceros (temporary Mexican workers) into the state; the end result of negotiations after the filing of the suit was a departmental policy eliminating bracero traffic completely. The cutoff angered the growers as well as Sen. Murphy, who supported the use of braceros in his successful 1964 campaign.

Growers were hit more directly in the pocketbook by another successful CRLA suit. When a California state agency boosted the minimum farm wage for women to $1.65 an hour from $1.30, growers won a court injunction against the increase. CRLA won a suit forcing growers to start paying at the higher rate and also to pay some $800,000 in back wages to about 20,000 women workers.

When CRLA discovered last year that 16 of the state's 58 counties weren't participating in the Federal food stamp program for the poor, it obtained a Federal court order requiring the Department of Agriculture to extend the program to those counties. The OEO lawyers also are arguing that the state law requiring two-thirds approval for local bond issues violates the "one-man, one-vote" doctrine of the Supreme Court. The case is still before the courts.

Lost Battles

The antipoverty lawyers don't always win, of course. They failed, for example, when they asked a court to declare unconstitutional the practice of the Internal Revenue Service of attaching 100% of a person's income as payment for delinquent taxes. They also failed in a suit asking that the state formula for aid to local school districts be declared unconstitutional on the ground that it discriminates against poorer districts.

The growers and other political opponents of CRLA are strongly supporting Sen. Murphy's

only represent the poor in routine matters but sometimes also challenge public agencies or the existing law itself.

Challenging the System

Lawyers for the California family are armed with studies that show twice as many Mexican-American children as white children enrolled in this state's classes for the mentally retarded. They suspect that school tests that fail to take the language barrier into account may be the reason, and they're considering a class action suit that would attack the entire system of testing and assignment.

Through such tactics the Federally paid lawyers have overturned laws and challenged bureaucrats in many states. But in the process they have made some powerful enemies, including politicians who don't relish their brand of activism. And now, the Federal lawyers fear, their enemies may soon strike back.

This week in Washington the House is expected to begin debate on the "Murphy Amendment," already pushed through the Senate last October by a coalition of Republicans and Southern Democrats. California's senior Senator, Republican George Murphy, is the prime backer of the provision, despite opposition by the Nixon Administration's Office of Economic Opportunity.

The amendment would give governors the power to eliminate all or any part of any OEO legal service program in their states. Under present law, a governor has only the choice of vetoing or accepting the program as a whole, and the OEO may override his veto.

If the amendment becomes law, poverty lawyers fear some governors will slash programs that have been suing governmental agencies, stirring up controversy and overturning laws. Clearly, that prospect wouldn't disturb Sen. Murphy.

Sen. Murphy's View

"The program was not to set up a bank of lawyers to enjoin the California state legislature, or the Secretary of Labor, or the governor of the state, or to come in and try to attempt to write complete legal reform," he argued before the Senate. The intent, he said, was "to provide individual legal services for some poor fellow who could not afford a lawyer."

Opponents of the Murphy amendment include the American Bar Association, the United States Judicial Conference (the policy arm of the Federal judiciary) and other legal groups. Another opponent, Terry F. Lenzner, director of the OEO legal services program, argues that the amendment would intimidate the Federal lawyers and place "in serious jeopardy" their ability to "effectively represent poor people."

The legal services program, written into the antipoverty law in 1965, was designed to complement the existing public defender system and other legal aid programs. The poverty lawyers weren't authorized to handle criminal cases, only civil ones. But despite that restriction they have made themselves felt.

In New York, the lawyers have upset residential requirements for welfare receipients in a case that has reverberated nationally. In the South, they have tackled unpopular civil rights cases. In Minnesota, they have helped make divorce proceedings cheaper for the poor, and here in San Francisco they have sued to stop a $50 million urban renewal project. Every state except North Dakota has at least one legal services program, and together the programs employ about 1,800 lawyers.

Angering the Governor

Some programs are large, others small. The Tulare County program in California's Central Valley operates with only two lawyers and pretty well fits Sen. Murphy's concept of what a program should be. Its lawyers are completely tied up with individual clients, about 20 a day, who have disputes with other individuals. About 60% of its cases involve consumer frauds.

But CRLA is something else. It is statewide in scope, the biggest and most aggressive legal services program in the state—and also the main factor behind Sen. Murphy's proposed amendment. Since its inception in 1966, CRLA has been in conflict with farmers, the Senator and Republican Gov. Ronald Reagan. In fact, an irate Gov. Reagan threatened in 1968 to veto the program but backed off when Sargent Shriver, then the OEO director, indicated he would override the veto.

Within the OEO, however, CRLA is considerd the prototype of exactly what an activist legal services program should be. It has been praised by an OEO advisory committee, and it already has inspired similar programs in Colorado, Southern Florida and Texas.

CRLA's 40 lawyers man nine branch offices scattered throughout California's farm country. At the main headquarters here, Cruz Reynoso, CRLA's 38-year-old director, directs his

Please Turn to Page 14, Column 2

ported the use of braceros in his successful 1964 campaign.

Growers were hit more directly in the pocketbook by another successful CRLA suit. When a California state agency boosted the minimum farm wage for women to $1.65 an hour from $1.30, growers won a court injunction against the increase. CRLA won a suit forcing growers to start paying at the higher rate and also to pay some $800,000 in back wages to about 20,000 women workers.

When CRLA discovered last year that 16 of the state's 58 counties weren't participating in the Federal food stamp program for the poor, it obtained a Federal court order requiring the Department of Agriculture to extend the program to those counties. The OEO lawyers also are arguing that the state law requiring two-thirds approval for local bond issues violates the "one-man, one-vote" doctrine of the Supreme Court. The case is still before the courts.

Lost Battles

The antipoverty lawyers don't always win, of course. They failed, for example, when they asked a court to declare unconstitutional the practice of the Internal Revenue Service of attaching 100% of a person's income as payment for delinquent taxes. They also failed in a suit asking that the state formula for aid to local school districts be declared unconstitutional on the ground that it discriminates against poorer districts.

The growers and other political opponents of CRLA are strongly supporting Sen. Murphy's efforts to amend the OEO law. Les Hubbard, assistant director of the Council of California Growers, calls Sen. Murphy's amendment "a gem."

Mr. Hubbard charges CRLA with bringing "nuisance suits" against growers; among other things, CRLA has charged many growers with knowingly hiring illegal Mexican "wetbacks" or violating state sanitation requirements in the fields. He cities the case of one small grower who couldn't afford the $500 retainer attorneys demanded when he sought help in one such suit.

"There was no legal aid for him," says Mr. Hubbard. "I think it's unfair when they start using a guy's own tax money to put him out of business."

Union Link Charged

Growers also complain that CRLA is a "'Government-paid lawyer" for the AFL-CIO United Farm Workers Organizing Committee; the committee is headed by Cesar Chavez and its main effort currently is to unionize grape pickers. (Mr. Chavez served on CRLA's board of trustees until six months ago; his principal assistant still sits on the board. Mr. Reynoso of CRLA says his lawyers have represented union members as individuals, but never the union itself.)

OEO officials fear that if Sen. Murphy's amendment passes, it will be much harder to recruit and retain aggressive young lawyers. "They want a program where they can be creative and innovative," says Mr. Lenzner, the head of the OEO legal services program. Many of the OEO lawyers are recruited directly out of law school.

The 40 CRLA lawyers average less than 30 years of age, and their director, Mr. Reynoso, is a self-styled "old man" at 38. Salaries begin at $10,000 a year; Mr. Reynoso earns $20,500.

"Being a poverty lawyer is a tough racket," Mr. Reynoso says. "On one side we have Murphy and Reagan saying we're doing too much. At times I only wish that was even half true. Because on the other side, the poor people get very impatient with us. They're suspicious of attorneys anyway, and they think it takes forever to get things through the courts."

SCHEDULE of ACTIVITIES

SUNDAY - February 15

REGISTRATION - 4:00 to 6:00 p.m.
–Conference lounge

BANQUET - 6:30 p.m.
--Banquet area

Presiding: Mr. James P. Morgan, Jr., Administrator, Police Science Division, University of Georgia

Invocation – The Reverend A. Wilson Cheek, Executive Director, NCCJ

Fraternal Welcome – Chief E. E. Hardy, Athens Police Department

Welcome – Dr. M. W. H. Collins, Jr., Director, Institute of Government, University of Georgia

Keynote Address: Chief Laurie Pritchett, High Point, North Carolina

SOCIAL - 8:30 p.m.
–Downtowner Motor Inn

MONDAY - February 16

Law and Order

MORNING SESSION - 9:00 a.m. to Noon

Historical Development – Dr. Frank K. Gibson, Political Science Department, University of Georgia

A Policeman's View – Sheriff Mel Bailey, Jefferson County, Alabama

A Citizen's View – The Reverend J. C. Ward, Pastor, Hunter Hills Baptist Church, Atlanta

AFTERNOON SESSION - 1:00 - 5:00 p.m.

Panel Discussion of Problem Areas
Panelists: Lieutenant Colonel Richard Korstad, Fort Gordon, Georgia; Sheriff Bailey; Dr. Gibson; and the Reverend Ward

TUESDAY - February 17

Systematic Approaches to Problem-Solving

MORNING SESSION - 9:00 a.m. to Noon

Four-step Approach to Problem-Solving – Dr. Morton Cotlar, Department of Management, College of Business Administration, University of Georgia

1. Analyzing problems
2. Formalizing approaches
3. Selecting effective solutions
4. Measuring efficiency of solution

AFTERNOON SESSION - 1:00 to 5:00 p.m.

Community Relations Through Communication – Dr. Richard Huseman, Department of Speech, University of Georgia

1. Communication in situations of stress
2. Understanding and disspelling prejudice

SOCIAL - 7:30 p.m.
–Maddox Center

WEDNESDAY - February 18

Behind the Mask. . .

MORNING SESSION - 9:00 a.m. - Noon

Panel Discussion
Moderator: Dr. Robert A. Lorinskas, East Tennessee University
Panelists: Mr. James McGovern, Executive Director, Metropol, Atlanta, and the Reverend Harkey Klinefelter, United Church of Christ, Atlanta

AFTERNOON SESSION - 1:00 to 5:00 p.m.

Individual Officers' Responsibility – Captain Howard Baugh, Atlanta Police Department

Film: "Not All Cops, Not All Kids" – Mr. Robert L. Evans, Coordinator, Law Enforcement Training, University of Georgia

Stimulating Public Interest – Chief Paul Dumas, University of Georgia Police Department

Developing Community Relations Programs – Captain Sidney H. Cates, III, President, National Association of Police Community Relations Officers

THURSDAY - February 19

Positive Programs

MORNING SESSION - 9:00 a.m. to Noon

Speakers:
–Chief John Conroy, Charleston, South Carolina
–Vincent K. Antle, Department of Public Safety, Dade County, Florida
–Captain Sidney H. Cates, III, New Orleans, Louisiana

LUNCH - 12:00 noon

Speaker: Mr. Kenneth Rosemond, Head Basketball Coach, University of Georgia

Developing a Community Relations Unit

WORK GROUPS - 1:00 to 5:00 p.m.

Advisors: Chief Conroy, Mr. Antle, Captain Cates, Mr. Paul Estaver, Civil Disorders Control Program, LEAA, and Professor P. Kreutzer Garman, DeKalb College

BARBECUE DINNER - 7:00 p.m.
–Pinecrest lodge

FRIDAY - February 20

Around the Corner

MORNING SESSION - 9:00 a.m. to Noon

Inter-personal Communications – Dr. Jack Blakeman, Department of Counselor Education, College of Education University of Georgia

Imaginative Approaches – Mr. Lee McGehee, Education Associate, Police Science Division, University of Georgia

Evaluation – Mr. Robert L. Evans

Presentation of Certificates

Adjournment (approximately 1:00 p.m. after lunch)

General sessions – Room B
Meals: Breakfast, 7:30 a.m.; Lunch 12:00 noon; Dinner, 6:00 p.m.
–in Banquet area
Refreshment breaks - Lobby lounge

APPLICATION FOR ADMISSION

Mr.
Mrs.
Miss _____
(name - please print or type)

_____
(street address)

_____
(city) (state) (zip)

_____
(department and position)

Please complete for the Center statistical record:
Education completed: high school ( ); college ( ); graduate work ( ); other_____

Age group: under 22 ( ); 22-35 ( ); 36-55 ( ); over 55 ( )

REGISTRATION: (make check payable to University of Georgia)

( ) $99 per person
Includes tuition, meals beginning with Sunday evening dinner through Friday lunch, lodging (double occupancy) Sunday through Thursday nights, and all instructional costs and materials.

HOUSING:
A block of rooms will be held at the Georgia Center for this group for a limited time. Rooms not reserved in advance may be released for use of other conference groups.

_____
(Dates you wish housing reserved)

Arriving_____
(date and approximate time)

Departing_____
(date and approximate time)

THIS FORM MAY BE DUPLICATED FOR ADDITIONAL PARTICIPANTS

RETURN TO
LAW ENFORCEMENT TRAINING
Center for Continuing Education - Room 231
University of Georgia
Athens, Georgia 30601

PLAN of the WORKSHOP

Objectives. . .

The program is designed to stimulate development of police-community relations programs and to improve existing programs through evaluation and use of current management techniques.

Instructional staff. . .

Authorities selected from law enforcement and educational communities.

General information. . .

Participants should be assigned or designated in the community relations field. Applications will be accepted on a "first come-first served" basis. Registration in advance is required.

The fee is $99 per person and includes all instructional costs and materials; double occupancy housing Sunday through Thursday nights and meals from Sunday evening dinner through Friday lunch. "Out of pocket" expenses will be travel and personal expenses.

Participants are requested to bring clothing and equipment for leisure time and athletic activities. Also, please bring copies of any materials presently in use by your department in the field of community relations.

A limited number of scholarships are available through the National Conference of Christians and Jews, and application should be made through NCCJ Regional Offices.

Manpower Training Seen As Weapon In War Against Crime

The Labor Department's vast manpower experience is being used as a weapon in the war against crime, according to Jerome E. Rosow, Assistant Secretary of Labor for Policy, Evaluation, and Research.

Speaking at the recent First National Workshop on Prison Inmate Training in Washington, D.C., Rosow emphasized the increasing interest that the Department is taking in the broad field of offender rehabilitation.

He said the Labor Department has experimented with several successful approaches in assistance for offenders through in-prison training, pre-trial manpower services, job placement, and bonding for post-prison jobs.

Rosow suggested an effort to engage the full energies of private employers, and of the manpower system in an effort to link the inmate offender with the labor market and reasonable employment opportunity.

He said the key element for each individual could be a personally-tailored plan for employment and job development.

"The Department of Labor," he declared, "has had considerable experience working with private employers on behalf of the disadvantaged — as in our JOBS program with the National Alliance of Businessmen. We are prepared to bring this experience to bear on the problems of offenders."

Rosow said there is "substantial reason to believe" that a comprehensive approach to the employment and training problems of the offender can produce signficant results.

"The Department of Labor can and and should play a significant role in the development of a government-wide approach to the problems with which the criminal justice system now seeks to deal," he said.

"In large part this is because the significant relationship between unemployment and crime represents a key intervention point in the life style of the offender."

Rosow said the Department is now carefully reviewing all of its present and past activities in this area — research, experimental and demonstration projects, a pilot bonding program, and the inmate training program.

"We also are examining new ideas for programs as well as ways and means of creating additional knowledge that may contribute to the development of effective policies," he said.

WHO GUARDS AGAINST THE GUARD?

The tragic turn of events at Kent State focused nationwide attention on the National Guard—its training, its leadership and the guidelines under which it operates when it goes into action to quell civil disturbances. Ultimately, the affair raised the question of whether guard units are capable of coping with domestic unrest at a time when the solution can be more ominous than the problem.

National Guard units are really militias under the command of the governors in each of the nation's 50 states. The units can, of course, be "federalized" by the President during times of national emergency. And even under state control, they rely on training standards set up by the Pentagon for the regular Army. These standards, which were updated by Lyndon Johnson after poorly trained, trigger-happy National Guard units killed scores of people, many of them innocent bystanders, during racial riots in the summer of 1967, provide that each soldier undergo a basic 33-hour course in riot control, to be supplemented by a sixteen-hour refresher course every year.

According to sources in the Ohio guard, the militiamen on duty at Kent State had all undergone riot training. "It was fairly good," said one official. "But there are some things you can't simulate —like people throwing rocks and hitting people." In addition, the Kent contingent had had a good deal of on-the-job riot experience, including stints in Cleveland's Hough district during racial trouble there and an assignment quelling unrest at a state prison in Mansfield last year.

Training: On the record, at least, the formal training is designed to instill the guardsmen with discipline and restraint. To accomplish this, the troops are indoctrinated with the "rules of engagement," drawn up by the Pentagon and designed to cope with civil disturbances in a manner that does not inflame them. These rules specify that an individual guardsman will not load or fire his weapon "except when authorized by an officer in person, when authorized in advance by an officer under specific conditions or when required to save my life." Full fire power, the rules go on, should be used only on order of the senior commander and then only as a last resort when "the consequences of failure to completely subdue the riot would be the imminent overthrow of the government, continued mass casualties or similar grievous conditions." If a soldier is forced to fire, the rules continue, he should "aim low to disable rather than to kill." "Snipers," the Pentagon rules add emphatically, "should be engaged only on order and by a single selected marksman or firing team. Laying down a 'barrage' accomplishes nothing constructive and endangers the lives of innocent bystanders."

The Valley Daily News, Tarentum, Pa.

Kent State: Accusing the guard

The problem with the guidelines is that they are not binding on guardsmen who are under state jurisdiction. The Ohio contingents involved in the Kent shooting were operating under their own set of rules. The Ohio rules of engagement, which give guardsmen more leeway, hold in part: "At riot scene and just before he is committed to the street, individual guardsmen will load and lock [insert round in chamber] upon authorization of a responsible officer. Weapon is fired when authorized by a responsible officer unless individual is fired upon or when his life is otherwise endangered."

Whether they are operating under the more stringent Pentagon guidelines or the less restrictive state guidelines, the 385,000 National Guardsmen in the United States tend to be tough on students when their units are mobilized for campus duty. The great majority of guardsmen, like most of the men on duty at Kent, are blue-collar workers who tend to hold a conservative point of view. With the exception of some guardsmen at Kent who were themselves students at the university, most of the militiamen on the campus seemed to feel, even after the shooting incident, that the students had asked for trouble. Patrolling the campus after the shooting, guardsmen still had bullets in their rifle chambers—and fingers on triggers. "We don't go nowhere without being loaded," said one captain. "We've never moved into a crowd confrontation without a round in the chamber and locked."

NEWS WEEK 5-18-70

HONG KONG: NEWS WEEK

Creative Restraint

5-18-70

Justice

5-18-70

Police officials in Hong Kong were baffled by the reports they received last week on the riots in the United States. "I just don't understand all the blood and gore on American campuses," said one of them. "That a man should decide on his own when it is necessary to fire into a crowd is unheard of. If you do fire without orders, then the blood is on your hands." Few people have a better right to criticize, for police experts rate the British colony's 13,000-man force as one of the best in the business. When Hong Kong Communists attempted to import the Great Proletarian Cultural Revolution from the mainland in 1967, they showered the police with bricks, bottles, building tiles, flower pots and scrap iron. Yet hardly a shot was fired as the police smoothly restored order.

It wasn't always like that. More than 60 people were killed during one riot in 1956, and in the outcry that followed, Hong Kong's governor admitted that police shortcomings were partly responsible. As a result, riot training was given top priority. Every policeman, even the predominantly British officers, must spend almost nine months undergoing a tough course in riot control. Among other things they repeatedly confront mock demonstrators, who try to provoke them with the Chinese version of a universal epithet: "Yellow running dog working with the white-skinned pigs!" Says one instructor: "Some of these chaps can be hot-headed, but all the drilling tends to keep them calm."

It doesn't always work, of course. A few years ago, one police contingent stood its ground patiently while a mob of taunting Communists brandished little red books and chanted "Mao! Mao! Mao!" Finally, the police could stand it no longer. They reached into their starched khaki pockets, pulled out their blue notebooks and chanted "Tyrer! Tyrer! Tyrer!" Edward Tyrer, who was Hong Kong's Police Commissioner at the time, was not amused.

Hong Kong police are under strict orders to avoid any such confrontations. Indeed, their whole strategy for dealing with an unruly mob is to give its members every chance to escape a violent clash. This means always leaving an escape route open. "We don't care where they go," says one officer, "so long as they go." When a mob ignores an order to disperse, the police use the least possible force to get them moving. "We operate slowly and deliberately," says one policeman, "so the crowd has ample time to see exactly what the platoon is going to do." The front rank of the anti-riot formation is manned by police with helmets, wicker shields and 18-inch batons. A rear rank unleashes a barrage of tear gas and hard teakwood pegs that inflict stinging bruises. Only then do the batonmen charge, swinging for shoulders or backs, instead of breaking heads.

Hong Kong Star

Slow and deliberate: Hong Kong riot police load up with tear gas

Orders: Guns are used only as a last resort, and then by just one marksman. "You are not allowed to shoot except under order," says a commander. "You are not even allowed to load unless ordered." And such orders are not given until the crowd is warned that firearms will be used. Next, a banner is unfurled repeating the warning in Chinese and English. Then the commander signals the marksman to load by placing a hand on his shoulder. A panicky patrolman who once ignored this procedure and fired an unauthorized warning shot in the air was disarmed and later court-martialed.

Hong Kong's policemen do not claim to hold the patent on quelling riots bloodlessly. But their brand of creative restraint could turn out to be another successful Oriental export. Already, Chicago's rough-and-tumble police are experimenting with one of Hong Kong's trademarks—the useful little wicker shield.

Crime: The Neglected Battlegrounds

Adm. Justice

W-S-J. 8/20/70

Politics *and* People

By ALAN L. OTTEN

WASHINGTON—The nation's newspapers one day last week featured two seemingly unrelated stories in adjoining columns. Chief Justice Warren Burger had made an urgent plea for top-to-bottom improvements in the nation's court system, and prisoners were rioting against dreadful conditions in New York City's Tombs prison.

The two stories complemented each other perfectly, though, for the courts and correctional system remain vastly neglected battlegrounds in the war against crime. Moreover, until a great deal of thought, effort, and, unfortunately, money are devoted to these two battlegrounds, there won't be too much progress in that war.

This message is hardly a new one. Justice Burger, making his plea at the American Bar Association convention, recalled that Harvard Law School Dean Roscoe Pound had similarly called for court reform in a speech to the ABA exactly 64 years earlier. As for corrections, the Presidential-appointed Wickersham Commission in 1931 deplored archaic prison conditions as crime-inducing rather than crime-correcting, in language almost word for word like that used by President Johnson's crime commission in 1967.

It's not difficult, of course, to recognize just why so little action has occurred in these two areas over the intervening decades. For many years, the nation simply wasn't very concerned about crime. Then, when crime did become a top concern, it was almost inevitable that officials would try to deal with it by tough new anti-crime laws and by beefing up police departments. Police were, after all, the visible frontline troops in the anti-crime fight, the men to give the most bang for the buck, the ones who had been complaining most vocally of public neglect.

And so the great bulk of anti-crime thought went into new police methods and approaches, and the great bulk of recently rising anti-crime outlays went for more cops, higher pay, special training, new and sophisticated equipment. Corrections and courts got only stray thoughts and odd dollars.

Outdated Prisons

Certainly the neglect is not for want of knowing the problem. Quite clearly, the nation's prison system is hopelessly out of date, both physically and philosophically. Sixty-one of the larger prisons were opened before 1900, and 25 of these are more than 100 years old. Jails and prisons are incredibly overcrowded. Young prisoners and first offenders are often confined with hardened criminals, to be attacked and molested, to be taught more sophisticated crime. Prison staffs are small, poorly paid, inadequately trained. Guidance and counseling are notably inadequate. Vocational training is either non-existent or obsolete, training prisoners for types of jobs no longer there.

In short, instead of rehabilitating criminals, the jails and prisons breed tougher ones. Two-thirds of all released prisoners will commit another crime, usually a more serious one.

Asking Attorney General Mitchell last November to look into 13 specific ways to improve the Federal correctional system, President Nixon noted that repeater rates are even higher for persons under 20 than those over 20, and declared that "there is evidence that our institutions actually compound crime problems by bringing young delinquents into contact with experienced criminals." Asserts Rep. Abner Mikva, a Chicago Democrat deeply interested in the problem, "The way jails today corrupt rather than correct, I'm not sure we wouldn't make more progress against crime by doing away with them completely."

Other correctional activities today are no better. Work-release and school-release programs, group homes, halfway houses and similar efforts are still far too scarce. The Washington Star last week reported that 95 District of Columbia convicts were in jail, even though judges had officially assigned them to halfway houses, because there were no houses to take them. Probation and parole systems are similarly spotty across the nation. Caseworkers are ridiculously overloaded, unable to exercise any real supervision over their charges; a brief interview once or twice a month is the best most of them can manage.

The court system is similarly antiquated. Judges are overworked, the job of the good ones made infinitely harder by elderly colleagues who won't retire but don't carry their share of the load. They are buried under mountains of paperwork, the product of administrative procedures still back in the 19th century and of a dreadful dearth of trained court administrators. More significantly, the number of cases steadily soars as drug offenses and other law violations increase, as more cops arrest more people, as new legal aid efforts contest charges.

Dockets become ever more jammed, and the time between arrest and trial and sentencing steadily lengthens. Bail procedures are crazily complex. Rarely does a judge have any pre-trial background information on the accused. Plea bargaining is increasingly common—the prosecutor and defense attorney negotiating on the plea to be entered and the sentence to be passed, with the judge a more or less passive onlooker. New York Mayor John Lindsay told the ABA convention last week that of 18,000 prisoners in his city's jails, 8,000 were awaiting trial; twenty new criminal judges, a 30% increase, had made no appreciable dent in calendar delays.

And with the courts and correctional institutions in such a mess, it's practically inevitable that almost everyone involved with them quickly loses respect for the whole criminal justice system, seriously aggravating the already huge crime problem.

Need for New Facilities

If the problems are relatively clear, so are many of the answers. Federal, state and local governments must engage in a massive construction program of new correctional institutions—up-to-date and specialized facilities, local and regional, for juveniles, alcoholics, drug addicts and other special types of offenders. These new facilities must have first-rate diagnostic services, excellent treatment programs and counseling, relevant job training.

Far more effort must be made to keep prisoners closer to home, to develop open-prison and work-release programs, to operate halfway houses and other highly-supervised alternatives to prison. New efforts are needed to help suspects between arrest and trial—pre-trial counseling, programs for conditional work release without trial. Special attention must be devoted to juvenile offenders, with large specially trained staffs, with the use of foster homes or group homes to remove youths from unfavorable family or neighborhood situations, with community treatment of juveniles and other special rehabilitation programs.

Far more and better trained professionals are needed at every level—from prison guard to prison psychologist to parole worker—and more use of paraprofessionals and volunteers. Better research is needed in dozens of areas.

As Justice Burger said, the courts need more judges, more businesslike procedures, specially trained personnel to handle the administrative load. They need more prosecutors and more defense lawyers to get earlier and speedier trials, perhaps night and Saturday sessions.

Judges need other kinds of help, too—to provide detailed information on prisoners coming up for trial, to study sentencing practices in other jurisdictions, to give other helpful background data. Perhaps most importantly, several major types of cases should be completely removed from the criminal courts, switched to administrative or other non-judicial bodies: Routine drunkenness cases (one-third of all arrests are for drunkenness), drug addiction, prostitution, gambling.

Happily, there are finally a few small signs of progress. Mr. Nixon's November directive to his Attorney General, ordering

only stray thoughts and odd dollars.

Outdated Prisons

Certainly the neglect is not for want of knowing the problem. Quite clearly, the nation's prison system is hopelessly out of date, both physically and philosophically. Sixty-one of the larger prisons were opened before 1900, and 25 of these are more than 100 years old. Jails and prisons are incredibly overcrowded. Young prisoners and first offenders are often confined with hardened criminals, to be attacked and molested, to be taught more so-

once or twice a month is the best most of them can manage.

The court system is similarly antiquated. Judges are overworked, the job of the good ones made infinitely harder by elderly colleagues who won't retire but don't carry their share of the load. They are buried under mountains of paperwork, the product of administrative procedures still back in the 19th century and of a dreadful dearth of trained court administrators. More significantly, the number of cases steadily soars as drug offenses and other law violations increase, as more

foster homes or group homes to remove youths from unfavorable family or neighborhood situations, with community treatment of juveniles and other special rehabilitation programs.

Far more and better trained professionals are needed at every level—from prison guard to prison psychologist to parole worker—and more use of paraprofessionals and volunteers. Better research is needed in dozens of areas.

As Justice Burger said, the courts need more judges, more businesslike procedures, specially trained personnel to handle the administrative load. They need more prosecutors and more defense lawyers to get earlier and speedier trials, perhaps night and Saturday sessions.

Judges need other kinds of help, too—to provide detailed information on prisoners coming up for trial, to study sentencing practices in other jurisdictions, to give other helpful background data. Perhaps most importantly, several major types of cases should be completely removed from the criminal courts, switched to administrative or other non-judicial bodies: Routine drunkenness cases (one-third of all arrests are for drunkenness), drug addiction, prostitution, gambling.

Happily, there are finally a few small signs of progress. Mr. Nixon's November directive to his Attorney General, ordering work in 13 specific correctional areas, is one bit of evidence. The American Bar Association, in response to a speech last year by Justice Burger, has set up a special commission to enlist public support for improvements in local correctional systems.

While Federal funds under the so-called Safe Streets Act are still going preponderantly into police work, there has been a significant increase in spending on corrections, both in actual dollars and in the percentage of the total funds—up from 14% in the year ending in June 1969 to about 27% in the year ending June 1970. A recently passed House bill to extend the act would require at least one-fourth of all future outlays to go for correctional facilities and probation work, and would increase to three-fourths from one-half the Federal share of the cost of new facilities.

A number of state and local governments are increasing their own spending on corrections and the courts, and some are carrying on interesting experiments with detoxification centers, special drug treatment programs, pre-trial release without bail, job training for young offenders between arrest and trial, broader community involvement in rehabilitation programs. A new court management institute in Denver will train people to ease the administrative load on judges. There seems to be an initial open-minded reception for Justice Burger's proposal for a special Judicial Council that would study ways to use the courts better, including ideas for removing types of cases from court jurisdiction.

Frightening Costs

Progress still comes far too slowly, though. The costs involved frighten many away from any action at all. A Prisons Bureau study headed for Mr. Nixon's desk, for example, proposes 166 new Federal correctional institutions, at a cost of $700 million, while needed state and local institutions would require billions more. The cost of training thousands of more correctional workers, of more court help, of better-paid prison guards, are all substantial.

Governments at all levels still find it politically more appealing to put scarce tax dollars into more dramatic anti-crime work, such as more cops or fancier equipment. Mr. Nixon, for instance, asked Mr. Mitchell for a progress report on the 13-point program by mid-May; the report still hasn't appeared. The Justice Department has been conspicuously unenthusiastic about the House provision reserving one-fourth of Federal funds for corrections. Any specific proposals to remove certain types of cases from the criminal courts are sure to be highly controversial.

Yet continued delay in dealing with all these problems not only raises questions about likely progress in the entire war against crime but means that even greater outlays of money and far more drastic solutions will likely be needed whenever the nation does finally turn its attention to them. Construction costs rise steadily for prisons or halfway houses just as they do for homes or office buildings. The shortage of trained workers will grow steadily more acute. The research and experimentation questions will multiply.

It should be painfully apparent that arresting more and more people will do little good if they are then committed to an excruciatingly jammed judicial system and a dismally debasing correctional system. The nation cannot be truly considered serious about fighting crime until it devotes dramatically more imagination, effort and dollars to these two neglected battlegrounds.

Re: Re-regionalization of control of legal aid

Legal aid-CAP conflict background

When the legal aid program of OEO was originally established in 1965, it was administratively a delegate agency of the Community Action Programs. This meant that Legal Services Offices (LSO) were under the control of Regional OEO offices whose directors were not lawyers, often had difficulty in grasping the philosophy of legal aid as it applied to law reform and affirmative advocacy on behalf of the poor, and were in the position of poising problems of professional ethics for lawyers especially in the area of lawyer-client relationships.

This situation produced a history of conflict between LSO and CAP personel. This must be seen as a result of the above factors as well as the bureaucratic jealousies which resulted when a program receiving only 5-7% of the total OEO appropriation (LSO) was praised as the "crown jewel of the war on poverty" while the CAP programs received 95% of the appropriation but seemed, at best, less than effective. It was not unnatural that the Regional Directors (who were CAP people) would be less than sympathetic toward LSO.

Shortly after the Nixon Administration entered office (I'll check the specific date and statement) and appointed Terry Lenzner as director of LSO in Washington, the President announced that control over LSO would be removed from the Regional OEO offices and placed in the national LSO office in Washington. In effect, this meant that LSO would now control its own affairs and programs, free from control by CAP and responsible only to Rumsfield, OEO Director Administratively, this meant that responsibility for evaluation, funding, expansion, or cancellation of LSO programs now rested in Washington since the OEO Regional office could not "sign-off", i.e. make a decision, on legal aid programs without the approval of LSO headquarters Politically this meant that the national headquarters could, if necessary, mobilize national support from the ABA, client groups, friends in Congress, the press, etc., to resist pressures against its programs which might have been crippling or fatal if they had been focused against LSO at the regional level without some way of venting them to Washington.

Political Background

The first important political attack on legal aid came in 1967 when Sen. Murphy (R.-Calif.) introduced an amendment to the Economic Opportunity Act which would have prevented LSO lawyers from filing suits against agencies of governments (eg. welfare

departments). This was defeated.

In the latter part of 1969 Murphy introduced another amendment to the EOA which would give the governors of the respective states a line-item veto over the OEO programs in their state without it being subject to the veto-override power of the OEO Director in Washington. This amendment was widely reported to have resulted from a running dispute between Governor Reagan and California Rural Legal Aid which had filed successful suits challenging cuts in the California Medicaid program and the importation of Mexican farm workers to work in California.

The amendment was adopted but later defeated in the Senate and was never introduced in the House as a result of belated opposition by OEO Director Rumsfield and the consistently strong opposition of the ABA. The ABA labeled the measure an "oppressive interference with the freedom of the lawyer and the citizen".

At about the same time, the Quie-Green amendment to the EOA was introduced in the House. This measure would have turned complete control of OEO programs, including legal aid, over to the states through the State Economic Opportunity Offices operating under the office of the Governor. This amendment was defeated with the help of a lot of carryover support generated by the Murphy struggle. At the time, Congressman Perkins admonished OEO not to try to do administratively what they had been prevented legislatively from doing by statute.

In the time which has passed after the defeat of Murphy there has been a great politization of the atmosphere surrounding legal aid as a result of its continued effectiveness and aggressiveness (eg. there are now over 100 suits pending against the federal government alone). This is not to say the atmosphere was not political before but rather that political pressures have greatly increased within the last year.

For example, William D. Ruckelshaus, Assistant Attorney General in charge of the Civil Division of the Justice Department has said, "the objection I have to some of the suits they (legal aid groups) have filed is that they are politically motivated." This seems to reflect the low regard in which the Administration holds the consideration of professional ethics in the political evaluation of legal aid (this statement drew a condemnation from the President of the ABA as being an unethical challenge to the motive of an attorney in filing litigation) but also the desire to rein in legal aid activity in politically sensitive areas.

This Administration attitude is further shown by the statement attributed to Rumsfield that the relationship of an attorney to his client is determined by who is paying the bill. In other words, a lawyer who represents a client who can pay owes his sole loyalty to that client but a legal aid lawyer should owe his greatest loyalty to the government which is paying his bill. The implication of this line of reasoning for legal ethics is plain; more importantly for the poor, this curious logic could deprive them of legal

assistance when litigation is in order involving government programs. The adverse affect of this should not be underestimated.

Despite the warning of Congressman Perkins in 1969, Rumsfield has administratively accomplished the effect of Quie-Green in Oklahoma by instituting the "Oklahoma Plan". This supposedly experimental plan gives control of OEO programs, except legal aid, to the Oklahoma SEOO. Legal aid was not included, apparently through an oversight, but there is no guaranteethat its exclusion will continue. If it should be included in the future, the effect of the Murphy amendment of 1969 will be accomplished.

The Immediate Problem

The immediate crisis facing LSO is the quiet, almost clandestine, attempt by the Administration to shift responsibility for legal aid back to the Regional OEO offices. This would re-establish the pre-Nixon control situation vis CAP-LSO but given the political deterioration in the past year, it would magnify the harmful effects on LSO. The Regional offices are now for the most part being treated as Republican patronage positions at the Director level so that the Directors can be expected to be even less sympathetic than in the past.

This effort at "re-regionalization" would expose LSO to political pressures at the regional level which could previously often be de-fused in Washington. If this succeeds, ABA support will effectively be boxed out in any crisis, less sympathetic press coverage will result, and the level of visibility will become so low that thses local political pressures will effectively direct the course of legal aid.

Frank Duggan of LSO in Washington has said that at least some of the attorneys there intend to fight this by making it a public issue and attempting to enlist ABA support, etc., before they are faced with a fait accompli. He expects that many may loose their jobs as a result but that many would resign anyway if re-regionalization is successful. These expectations plus the restrictive personel approval policies of the Administration would be a cruel blow to the quality of the advocacy the poor could expect to receive.

Recommendations

1. In conjunction with sympathetic people at the national and regional levels of LSO, SRC should design a strategy to make "re-regionalization" a national issue.
   a. SRC could consider breaking the story to the media itself and thus drain some of the pressure from LSO people which they will receive if they are forced to break the story themselves through petitions, resignations, etc.
   b. SRC could work in conjunction with the ABA nationally and with such groups as the State Human Relations Councils regionally tobring telephone/telegraph/ letter pressure to bear against such people as Rumsfield and Bob Brown, the Director

of OEO and the President's Counsel on Minority Affairs, respectively, and the President to reverse this decision.

1. Duggan recommends that in view of the Administration's sensitivity to charges of being anti-Negro, the racial implications of the effects of this step should be emphasized in mobilizing opposition.

2. Any steps SRC may decide to take should be initiated with all possible speed in view of the fait accompli problem.

3. Whether this effort at re-regionalization succeeds or not, SRC should begin to think of what steps it could take or support to increase the autonomy of legal aid and thereby its effectiveness.

a. What are the possible implications of the Ash Report?
b. What are the possibilities of a semi-private arrangement for legal aid?

Unequal Justice

A Growing Disparity In Criminal Sentences Troubles Legal Experts

Penalties Vary From Judge To Judge; Bitterness Said To Hinder Rehabilitation

A Tip: Wear a Tie in Court

9/9/70

By GLYNN MAPES
Staff Reporter of THE WALL STREET JOURNAL

In 1923 a fresh-faced farm boy and an older ex-convict attempted to rob a grocery store in Mooresville, Ind. The youth bungled his role, and police soon captured the pair.

The youth, a first offender, pleaded guilty in court on the advice of his father. He was sentenced to 10 to 20 years in jail. His more experienced associate, who had planned the robbery, was luckier: He went before a different judge and got only two to 10 years.

While in prison, the youth smoldered with resentment over his clearly inequitable sentence. He began to speak of getting even for the "raw deal" he had gotten from the judge. After nine years he was paroled, an embittered man. He formed a gang that in a few short months looted Midwestern banks of $300,000 and killed 15 men. FBI agents shot him to death outside a Chicago theater on July 22, 1934. His name was John Dillinger.

Impact of Prejudices

A system of justice that would exact a far stiffer penalty on a young first offender than on a veteran criminal helped turn Dillinger into a killer, in the view of penal authorities who have studied the case. That was tragedy enough. But even more disturbing, legal experts say, this country's system of sentencing criminals hasn't improved at all since Dillinger's day—and in some ways, it has grown worse.

"Disparity in sentences is an extremely serious nationwide problem," says Theodore Levin, chief judge of the Federal court for Michigan's eastern district. Judge Levin worries about the "increasing impact of an individual judge's background, personality and prejudices on the sentences he pronounces."

Legal authorities say the trouble caused by inconsistent sentencing is immense. It adds greatly to the logjam in criminal courts, for one thing, because lawyers stall for time until their clients come before a lenient judge—a widely used technique known as "judge shopping."

Sentence disparities also frustrate efforts to rehabilitate lawbreakers. James V. Bennett, an eminent penologist and former director of the Federal Bureau of Prisons, recalls that not long ago two convicted embezzlers arrived at Federal penitentiary in Atlanta. Both were family men with previously clean records. One, who had embezzled $24,000 from a credit union, was sentenced to 117 days. The other, who had embezzled a slightly larger amount from a bank, got 20 years.

"This occurs all too often, and each time we're in trouble," says Mr. Bennett. "Unjusti-

Unequal Justice: Legal Experts Troubled by Sentence Disparities

Continued From First Page

was "superficial" because it was based on only 787 cases.

However, an earlier, more extensive survey of the same court found that one judge imposed prison terms on 75% to 90% of the defendants while another judge, more liberal in imposing fines and probation, sentenced only 35% of his cases to jail terms. The toughest judge in the court consistently imposed prison sentences twice as long as those of the most lenient judge.

White collar crime is rife with sentence disparity. Indeed, when the affluent are convicted of crimes, the punishment is often lenient compared with sentences imposed on poor people for everyday offenses.

Last year in Federal court in Manhattan, for example, a partner in a stock brokerage firm pleaded guilty to an indictment charging him with $20 million in illegal trading with Swiss banks. He hired himself a prestigious lawyer, who described the offense in court as comparable to breaking a traffic law. Judge Irving Cooper gave the stockbroker a tongue lashing, a $30,000 fine and a suspended sentence.

A few days later the same judge heard the case of an unemployed Negro shipping clerk who pleaded guilty to stealing a television set worth $100 from an interstate shipment in a bus terminal. Judge Cooper sentenced him to one year in jail.

In fact, some judges don't think of white collar criminals as criminals, legal experts say. A prime example is the famous electrical equipment price rigging case of 1961. The defendants, including several vice presidents of General Electric and Westinghouse Electric, had committed flagrant criminal offenses in conspiring to fix prices. They even employed secret codes. General Electric alone set aside $225 million to settle damage claims that resulted from the conspiracy.

Outraged Attorneys

In court, the company officials pleaded no contest. They were fined and sentenced to 30 days in jail. Even that short prison term provoked outrage from the defense attorneys. One said he couldn't understand how his client could be put "behind bars with common criminals who have been convicted of embezzlement and other serious crimes."

Children of the well-heeled also seem to fare quite well in court. A 1966 Federal study in California found that 5.3% of juveniles arrested in the state were sentenced to some form of institutional detention. But in the upper-middle-class community of Lafayette, Calif., only 1.3% of the youths arrested were institutionalized. (Also, a far greater percentage of youths in Lafayette were released by police before they even got to court.)

"A middle-class white juvenile delinquent—even if caught red-handed—almost never goes to jail," asserts Mrs. Lois Forer, a Philadelphia attorney who specializes in representing juveniles. "But for a poor kid, it's another story."

One big reason for this disparity is that affluent parents can call on the services of psychiatrists and special schools for "hard-to-manage" children. This often convinces judges to release the youths in their parents' custody.

"I have represented many white middle-class girls caught shoplifting, and almost none of them went to prison," says Mrs. Forer. "This isn't due to my talents, but to the system. I'd say to the court, 'Your honor, this girl wants to go to college, and her family is sending her to a psychiatrist.' Then I'd put Momma on the stand, have her mention the psychiatrist's name—and that's all it would take."

Since the early 1900s most penal codes have been liberalized to give judges greater discretion in sentencing. This trend was considered a humanitarian move: Judges could make the punishment fit the criminal, as well as the crime, and thus could be more lenient on lawbreakers who showed promise of mending their ways.

But it hasn't always worked that way. Some jurists are using this added flexibility to bear down harder on defendants, and this has greatly widened the sentence disparities, legal authorities say.

The net result: Prison sentences have been growing steadily longer in this country—in direct contrast to what's happening in almost every other country in the world. From 1967 to 1968, for example, Federally imposed jail terms climbed from an average of 39 months to 45 months. During one recent year in the U.S. no fewer than 15,000 offenders were sentenced to five years or more; in England the number was 150.

What's the solution to the sentencing muddle? Judges believe the answer rests not in making sentences equal but in making sentencing philosophies agree—which is no easy task.

Since 1958 most Federal judges and some state judges have been attending what are known as sentencing institutes, day-long sessions in which jurists talk about sentencing objectives and swap ideas. Sample cases are presented to the judges, each of whom gets identical pre-sentence reports on the hypothetical defendants. When this technique was used at one Federal institute, the recommended sentences in a mail fraud case ranged from 18 months in prison to 15 years.

Reaching a Consensus

State courts in New York and California and in three Federal districts have set up sentencing councils to tackle the problem more directly. The councils, which are really panels of judges, meet regularly to review every trial judge's recommended sentence before it's imposed. Council members study reports of probation officers who have examined the defendant's personal life. Then the trial judge defends his decision, and his associates present their recommendations. The trial judge isn't bound to accept the judgment of his peers, but in practice a compromise frequently results, representing the consensus of all the judges on the panel.

Judge Levin, the Federal judge in Michigan, pioneered the concept of the sentencing council. However, he, like a small but growing number of other jurists, feels that a more basic reform of sentencing is needed: Judges should be shorn of the sentencing task altogether.

"Sentencing is too awesome a responsibility. Many judges simply aren't qualified to handle it," Judge Levin asserts. "A judge should have only the authority to conduct the trial." Sentencing, he believes should be handled by a board of experts trained in criminology and empowered to investigate the background of each offender before passing sentence. The board would include probation and parole officers, social workers, psychologists and psychiatrists.

A few states are already moving toward limiting the sentencing power of judges. Not long ago California and Washington revised their laws so that judges imprison offenders only for an indeterminate sentence. The actual time served is determined by correctional authorities, up to the maximum set by law for the particular offense.

Similarly, a revision of Michigan's penal code currently under consideration sets maximum terms for all offenses at five years, 10 years or 20 years depending upon the dangerousness of the crime (maximum of life imprisonment is set for murderers). Parole authorities would determine the release date. Judges wouldn't have any say on the length of the sentence, and they couldn't set a minimum term, as they can now. A recent poll in Michigan found that a large majority of the state's judges favor the proposed revision.

Indeed, at least some judges have long been uneasy about the frightening responsibility of passing judgment on their fellow man. The eminent Federal jurist Learned Hand once observed in contemplating his sentencing duties: "Here I am an old man in a long nightgown making muffled noises at people who may be no worse than I am."

Michigan's eastern district. Judge Levin worries about the "increasing impact of an individual judge's background, personality and prejudices on the sentences he pronounces."

Legal authorities say the trouble caused by inconsistent sentencing is immense. It adds greatly to the logjam in criminal courts, for one thing, because lawyers stall for time until their clients come before a lenient judge—a widely used technique known as "judge shopping."

Sentence disparities also frustrate efforts to rehabilitate lawbreakers. James V. Bennett, an eminent penologist and former director of the Federal Bureau of Prisons, recalls that not long ago two convicted embezzlers arrived at Federal penitentiary in Atlanta. Both were family men with previously clean records. One, who had embezzled $24,000 from a credit union, was sentenced to 117 days. The other, who had embezzled a slightly larger amount from a bank, got 20 years.

"This occurs all too often, and each time we're in trouble," says Mr. Bennett. "Unjustified disparity so completely discourages a man that he won't participate in any rehabilitation program. He has no motivation, no goal—plus he's usually a discipline problem."

Drawing by Von Riegen

"Don't worry about it. One day you're feeling down and you dish out 20 years to some poor devil. The next day you feel great and everybody gets a suspended sentence. It all evens out in the end."

What happened in Atlanta wasn't a fluke. In 1968, for example, violators of Federal forgery laws received an average jail term of 22 months in New York's southern district. But in central California the same offense drew an average sentence of 45 months, and in Kansas the average was 70 months. For narcotics offenses Federal court in Connecticut handed down sentences that averaged 44 months; in southern Texas the average term was 90 months.

Blacks are often the victims of wide disparity in punishment, critics say. One highly respected study of 2,600 rape cases in 11 Southern states found that convicted Negro rapists had a 50% chance of getting the death penalty for attacking white women compared with only a 14% chance if they raped a member of their own race.

Clothes Count

Disparity is wide even among judges sitting in the same court. A study early this year of misdemeanor cases in Detroit's Recorder's Court found that black defendants, even when represented by a lawyer, drew jail terms twice as often as whites. It also found that defendants—white or black—who appeared in court in work clothes stood a much greater chance of going to jail than did defendants wearing sports clothes or coats and ties. The charges of discrimination were hotly denied by one of the Recorder's Court judges, who said the study

Crime

Urban Insurance Woes

Federal Pressure Is Mounting on Insurers To Make Crime Policies Available in Cities

By CAROL H. FALK
Staff Reporter of THE WALL STREET JOURNAL

WASHINGTON—Like many city folk these days, Rep. Barrett (D., Pa.) got some bad news from his insurance company a few weeks back.

The company said it was considering canceling the insurance policies on his Philadelphia home and office, though he has never filed a claim in 50 years. The only apparent reason is that both are located in a poor, working-class neighborhood not far from a public-housing project that was the scene of recent racial confrontations.

But unlike his neighbors, Rep. Barrett is in a position to tackle the problem. As the second-ranking Democrat on the House Banking Committee, the Philadelphia Congressman heads a subcommittee that, at the time the word came from his insurance company, just happened to be considering a bill that would put the Federal Government in the property-insurance business.

"I was very much for the bill all along," says Rep. Barrett. "Many places where I live have gone out of business." However, he says his personal experience was a good way to bring the extent of the problem home to his colleagues. The bill won subcommittee approval for inclusion in a broad package of housing legislation.

While the measure is still a long way from law, its growing popularity reflects mounting pressure on the insurance industry to do something about the availability of crime insurance in urban areas.

Amid dire predictions that the urban businessman can't survive much longer without burglary and theft insurance at prices he can afford, not only Congress but the Nixon Administration and some segments of the insurance industry itself have begun to talk about possible solutions. The hitch is that no one likes anyone else's idea. As things stand now:

—The industry is violently opposed to the bill under consideration by Congress, and the Nixon Administration regards it as an extreme solution.

—Federal Insurance Administrator George Bernstein has come up with a proposal, but many Congressmen and industry representatives don't think it will work.

—The insurance companies that sell most of the crime insurance prefer still another solution, but other insurance companies, the Federal Insurance Administrator and state insurance regulators don't like it.

In the meantime, urban residents and small businessmen have almost despaired of a way out of the problem, which assumed serious proportions following the urban riots of the late 1960s. In January 1968 a Presidential panel studying riot-affected areas of Boston, Cleveland, Detroit, Newark, Oakland and St. Louis reported that 40% of the business establishments and institutions responding were having significant burglary and theft-insurance problems.

And the situation continues to deteriorate. An official of the New York Insurance Brokers Council told Mr. Bernstein last May that "in most areas in New York City it is impossible to get" burglary and theft insurance.

Residents Also Affected

In a July report on crime insurance availability released by the Department of Housing and Urban Development, Mr. Bernstein added that while the storekeeper who can't remain in business without crime coverage may present the overriding social problem, the urban resident faces similar difficulties. "Few knowledgeable persons would claim," he said, "that a single working girl residing in an apartment in New York City can obtain burglary coverage, or that a middle-class family in Chicago can readily insure their personal property against theft."

In urging Congressional action on the problem, Sen. Tydings (D., Md.), who, along with Rep. Annunzio (D., Ill.) sponsored the bill Rep. Barrett's subcommittee approved, observes that it doesn't take an outright cancelation to make insurance unavailable to many people. He notes that some premiums have been raised 300% or more, "well out of the reach of the average city dweller."

The Insurance Administrator's study points up the rate increases. A survey found that in Los Angeles County a $3,000 burglary insurance policy that cost $113 in 1962 cost $236 by 1969. Over the same period, annual premiums soared to $1,028 from $395 for $15,000 burglary coverage on a furniture store in the District of Columbia.

In 1968 a Federally sponsored plan offered relief in the area of fire insurance. Legislation passed that year set up a Federal reinsurance program to be available to companies if they agreed to participate in state pooling arrangements (called Fair Access to Insurance Requirements or FAIR plans). The plans were set up to absorb the inner-city fire insurance business rejected by individual companies, but burglary and theft insurance weren't included and vandalism and malicious mischief are just being added.

One insurance man concedes that the industry, for practical purposes, isn't writing urban burglary and theft insurance at all. He describes the risks that insurers are willing to accept as about on a par with the traditional definition of a good fire insurance risk: "Pig iron under water."

And the insurance industry, which agrees on very little else, pleads helplessness, maintaining that it can't be expected to bear the entire cost of high crime losses in the inner city.

Rep. Annunzio and Sen. Tydings believe that the industry might be persuaded to bear a bit more of the burden, however, if the Federal Government entered the field not only as a regulator but as a potential competitor. The real goal of their measure, according to Congressional sources, is largely to pressure private industry into providing more crime insurance at reasonable prices.

The complex bill essentially would require the inclusion of crime insurance, as well as fire, in the companies' state insurance pools and would provide for direct Federal writing of all property insurance if excessive private or pool rates (defined as those equal to 175% of the minimum for the category) couldn't be justified by state regulators to the satisfaction of Federal authorities.

"The idea," explains a Capitol Hill source, "is to give the Federal Insurance Administrator some clout in dealing with the industry and with state regulatory bodies. He'll be able to say, 'If you don't straighten out, the Federal [illegible] insurance directly.'

property insurers in states with crime insurance problems to participate in pools through which applicants refused insurance by individual companies could obtain burglary and theft coverage. Mr. Bernstein calculates that, unlike the FAIR plans for fire insurance, crime insurance pools are certain to have losses so high that people couldn't afford the premiums. Therefore he suggests that states consider a subsidy paid for by a tax on premiums on all other property insurance sold in the state—a tax he estimates could range from 0.2% in a state like California to 2.2% in the District of Columbia.

A Hard Plan to Sell

The main criticism of this plan is that it's going to be hard to sell in state legislatures. Congressional critics and insurance people alike note that state legislators aren't going to be eager to tax their rural and suburban constituents to subsidize crime insurance for the central city.

A little legislative arm-twisting to make the Bernstein proposal work, however, is being considered by a subcommittee of the Senate Banking Committee, which isn't as warm to the Annunzio-Tydings bill as is its House counterpart. The Senate group has reached a "tentative policy decision" favoring a program for direct Federal writing of crime insurance to be implemented in those states that fail to deal with the problem by the end of the next legislative session. Committee sources say details of the plan and just what conditions would trigger Federal insurance in a given area will probably differ from those in the Annunzio-Tydings

Please Turn to Page 21, Column 3

Bernstein has come up with a proposal, but many Congressmen and industry representatives don't think it will work.

—The insurance companies that sell most of the crime insurance prefer still another solution, but other insurance companies, the Federal Insurance Administrator and state insurance regulators don't like it.

In the meantime, urban residents and small businessmen have almost despaired of a way out of the problem, which assumed serious proportions following the urban riots of the late 1960s. Tydings believe that the industry might be persuaded to bear a bit more of the burden, however, if the Federal Government entered the field not only as a regulator but as a potential competitor. The real goal of their measure, according to Congressional sources, is largely to pressure private industry into providing more crime insurance at reasonable prices.

The complex bill essentially would require the inclusion of crime insurance, as well as fire, in the companies' state insurance pools and would provide for direct Federal writing of all property insurance if excessive private or pool rates (defined as those equal to 175% of the minimum for the category) couldn't be justified by state regulators to the satisfaction of Federal authorities.

"The idea," explains a Capitol Hill source, "is to give the Federal Insurance Administrator some clout in dealing with the industry and with state regulatory bodies. He'll be able to say, 'If you don't straighten out, the Federal Government will write the insurance directly.' It would put the burden on the states to prove that the rates weren't unreasonable. If there's anything this industry doesn't want, it's a Federal yardstick."

A Noticeable Panic

Indeed, there was noticeable panic among industry lobbyists when the Annunzio-Tydings proposal was approved by Rep. Barrett's subcommittee. Although the bill has to surmount some opposition in the full committee, get through the House Rules Committee and a floor vote, as well as the House-Senate conference on the housing legislation, "The industry is still running around like ants after the initial shock," says one Congressional observer.

The industry is becoming aware of the proposal's considerable political appeal, especially for Congressmen facing tough reelection campaigns in urban areas.

"We're just a little more scared than we were before," a spokesman for the National Association of Independent Insurers concedes. Whether the industry is scared enough to offer a viable alternative is yet to be seen; "The Annunzio thing is strictly a lead pipe being bounced off our skulls to get us to agree on something," complains an American Insurance Association spokesman.

The American Mutual Insurance Alliance calls the bill "simplistic." A spokesman says, "This doesn't solve the problem of crime, though it does bring some indemnification back to the victim." Arguing that assurance of indemnification might actually encourage businessmen to neglect protective measures and localities to be lax about law enforcement, he asserts that "in a way, crime insurance is subsidizing crime."

Andre Maisonpierre, vice president of the alliance, argues that another beneficiary of what he calls "an artificial barrier on premium charges" would be the slum landlord.

The alliance has had a committee studying the crime insurance problem for two years, but hasn't come up with any action proposals other than to "eliminate crime." The group maintains that the matter "is a social problem with some insurance aspects—not an insurance problem."

The AIA says direct Federal writing of insurance is unrealistic and unnecessary. It contends that for the Government to become an insurance company, "thousands of people" would be needed to staff the operation.

Federal Insurance Administrator Bernstein, while showing some relish for the additional clout the proposed bill would give him, warns: "Once the Federal Government is in the insurance business, it will expand." Before he resorts to any Federal solution, he says, he wants to give the states and private enterprise a chance to solve the problem. And to persuade them to take this responsibility he's using the power that the Annunzio-Tydings proposal gives him by its very existence.

Mr. Bernstein is offering the industry a buffer against the dreaded Federal solution awaiting it on Capitol Hill. His alternative is a state plan proposed in the report that HUD released in July. This plan would require all

Pressure Is Mounting On Urban Availability Of Crime Insurance

Continued From Page 32

bill. The panel resumes its deliberations tomorrow.

At present, the only leverage Mr. Bernstein has to get states to accept his plan is a threat to withdraw the so-called Federal riot reinsurance covering fire insurance, if states with critical problems fail to take action by the end of the next full legislative session. "We have no direct power over the states," admits Mr. Bernstein. "They can thumb their noses at us."

The fact is that after several summers without major riot losses, many insurance companies are losing some of their enthusiasm for the Federal riot reinsurance fund, which has collected $64 million in premiums from the companies and paid out only $2.8 million in claims since 1968. "There's no incentive for the insurance companies to push for this plan," says one industry representative. "Their premiums are high enough anyway."

Because Mr. Bernstein's plan gives the states till the end of their next legislative session to comply—and a few state legislatures don't even meet until 1972—critics fear all it will do is delay a real solution another two years. But Mr. Bernstein insists that the key states will have made their decision by mid-1971.

Mr. Bernstein is talking tough at this point to line up support. "We're asking the states to put their money where their mouth is," he says. "Our philosophy is to leave insurance regulation with the states, but we're not about to let them botch it in the burglary field."

The only firm promise of support he has received thus far is from the National Association of Independent Insurers, which had proposed a plan identical to his except that the industry group, whose members sell a good deal of homeowner-type property insurance but very little specialized burglary and theft coverage, would apply the tax only to burglary and theft policies. Despite this difference, the NAII, whose chief goal is "to keep the Government out of this area as much as possible," says it is willing to lobby for Mr. Bernstein's plan in the state legislatures.

The American Insurance Association, the trade group whose members write over 80% of the crime insurance in the U.S., is less dedicated to a state solution and more skeptical about its prospects. The AIA says that though it's against the Government writing insurance directly, it would be willing to accept some Federal supervision in return for a Federal subsidy.

A spokesman explains that the association's preference is for early activation of a program under which the private insurers would act as fiscal intermediaries, receiving full reimbursement from the Government from all losses and expenses not covered by premiums collected.

The rest of the industry—larger than the AIA in terms of number of companies—as well as state regulators, tends to regard as heresy any such plan that would detract from the traditional state supervision of insurance companies.

And Mr. Bernstein makes clear that if there's to be a Federal solution he much prefers something like the Annunzio-Tydings plan to the AIA's suggestion of a Federal subsidy. He says that if the Federal Government is going to foot the bill he isn't about to let the industry run the program.

And if the industry doesn't line up fairly soon behind a solution that he considers more responsible than the AIA one (namely, his own proposal), Mr. Bernstein says he believes the Annunzio-Tydings bill might well pass Congress this session.

While he originally testified before the House subcommittee that the bill was "premature," now that his own plan is on the table he warns that "unless the state regulators and the industry take a firm position pretty quick . . . we will have to do a little rethinking." He stops short of promising outright Administration support for the pending bill but does say flatly that if the key states haven't produced workable crime insurance plans by mid-1971 "I'll be very quick to advise Congress we guessed wrong." He adds: "This Administration is committed to a solution. If that requires a Federal approach, we'll support it."

THE BROOKINGS Bulletin

Volume 7, Number 4: Summer-Fall 1970

Steps to Better Law Enforcement

BY 1968 CRIME had reached the top of the list of domestic problems troubling the American people. A Gallup poll taken in that year found that three persons in ten—four in ten for women and residents of large cities—admitted fear of going out alone at night in their own neighborhoods. Federal Bureau of Investigation statistics showed that the incidence of reported crime was increasing almost nine times as fast as the population.

In 1967, the President's Commission on Law Enforcement and Administration of Justice offered a series of recommendations for combating the rise in crime, most of which dealt with improving the quality of the police. The commission found that existing selection standards and levels of education are totally inadequate, and that police departments throughout the country face a growing recruitment problem. In *Upgrading the American Police,* Charles B. Saunders, Jr., examines the public policy issues raised by these recommendations, discusses ways to recruit more qualified personnel, outlines the kinds of education and training needed, and emphasizes the crucial role of the federal government.

Upgrading the American Police: Education and Training for Better Law Enforcement, by Charles B. Saunders, Jr. Published May 1970, 182 pages, $5.95 cloth.

Many Americans still hold the nineteenth-century view that "a strong back and a weak mind" are the major criteria for police recruitment. Yet a University of Chicago study conducted in 1968 concluded that, in addition to possessing courage, physical skill, and personal integrity, a police patrolman should be able to:

—endure long periods of monotony in routine patrol, yet react quickly in emergencies;

—act effectively in extremely divergent situations that may call for friendliness and persuasion, or firmness and force;

—be objective in dealing with special interest groups ranging from relatives of offenders to members of the press;

—take charge of situations without unduly alienating the participants or bystanders;

—tolerate stress in widely varying emergencies.

At present the nearly 40,000 separate governmental units employing full-time policemen do not have enough officers with these qualities. The problem begins with inadequate standards of selection and probation. No reliable indicators of aptitude for police work (other than for physical fitness) have yet been developed, and standards vary widely throughout the country. Few departments, for instance, have adequate procedures for weeding out applicants with serious personality defects; the small number of departments that give IQ tests have a significant percentage of personnel scoring below the recommended minimum of 110 to 120. Even with these inadequate standards, 77.7 percent of all police applicants are rejected.

Inadequacies persist after recruitment. Approximately 65 percent of all recruits eventually receive some inservice training, but many programs are ineffective and sporadic. Poor selection and training in turn create still other problems; because most police forces have long resisted lateral entry, commanding officers are drawn almost exclusively from the recruits of several decades ago. Paradoxically, those departments that have raised their standards have had an increase in the number of qualified applicants. The Baltimore police force, on the other hand, lowered the minimum educational requirement to the eighth grade level in 1952 and received a declining number of applications thereafter.

Unions Take Lead For Safer Cities

NINE union bodies, including AFSCME, are among the 44 national and regional organizations that have combined to form the National Alliance on Shaping Safer Cities. Other unions include:

Amalgamated Clothing Workers of America; American Federation of Labor and Congress of Industrial Organizations; American Newspaper Guild; International Union of Electrical, Radio and Machine Workers; Oil, Chemical and Atomic Workers International Union; Retail Clerks International Union; Transport Workers Union; United Auto Workers

They have joined together to take the crime issue away from both the ultra-right that calls for repression and the ultra-left that calls for violent confrontation.

The Alliance plans to do this by involving citizens at all levels in determining how the streets are to be policed and how justice is to be meted out in humane, constructive ways.

ALLIANCE members realize that the present criminal justice system is a "non-system" that does not deter, does not detect, does not convict, does not correct, and will not improve without substantial public understanding and activity.

They believe that we need an informed citizenry demanding change based on knowledge rather than emotion, so that the many recommendations of experts, results of research and successes of pilot projects, can be introduced into the total system.

Since the Alliance was founded last May, there has been dramatic evidence of the need for activity against both growing crime and increasing polarization in our cities:

- **Crime due to drug abuse and addiction has risen alarmingly.**
- **The FBI reports that crime rose more than 10% last year and 148% in the decade.**
- **Many riots have occurred against intolerable prison conditions.**
- **U.S. Supreme Court Chief Justice Warren Burger has called for massive court reform to counteract the breakdown in speedy and fair justice.**
- **There have been renewed accusations of unequal law enforcement.**
- **There has been a wave of bombings by black and white terrorists plus repeated ambushes and sniping against police.**
- **Police raids against Black Panthers and other militants have increased.**
- **The public is beginning to panic, with legislators offering what some call unconstitutional and repressive legislation.**

THE National Alliance has been approached by the mass media for help in raising the level of public understanding about crime problems and is cooperating in the production of radio and TV programs. In addition, a number of local Alliances on Shaping Safer Cities have been formed, and requests for help in organizing new local Alliances have come in from many cities.

"Most Americans are deathly afraid of crime in the streets," said Harry Fleischman, director of the Alliance and race relations coordinator of the American Jewish Committee. "In massive numbers we have come to fear and distrust strangers in public places, partly for good reasons and partly for myths about crime."

EXISTING parts of the "criminal justice system" —police, courts and prisons—cannot themselves initiate broad changes, noted many Alliance members. Influence must be felt from outside, from the public as a whole.

A major emphasis of the Alliance will be to combine the mass base of many socially concerned organizations with the technical and professional expertise of criminal justice groups. Expanded contact between these groups is needed both to increase awareness on a large scale and to restore the confidence of the public in its law enforcement personnel.

AN example of the need for a better-informed public, noted Margery Gross, secretary-treasurer of the Alliance, was shown by the recent "riots" in New York City's prisons.

"Only after days of inmate disruptions," she said, "did the public begin to understand that (1) low-income *suspects*, who had not been convicted, had to serve in jail, waiting as long as two years for trial, and (2) men accused of such non-violent crimes as gambling, possession of marijuana, or loitering were a substantial cause of the overcrowding which led to violence."

Other members of the Alliance are:

A. Philip Randolph Institute, American Association of University Women, American Civil Liberties Union, American Jewish Committee, American Jewish Congress, Americans for Democratic Action, American Social Health Association, Anti-Defamation League of B'nai B'rith, B'nai B'rith, Camp Fire Girls, The Community Resources Institute, Jewish Labor Committee, The Lemberg Center for the Study of Violence, National Association for the Advancement of Colored People, National Association of Social Workers, Inc., National Catholic Conference for Interracial Justice, National Conference of Christians and Jews, National Council on Crime and Delinquency, National Council of Negro Women, National Council of Puerto Rican Volunteers, National Federation of Temple Sisterhoods, National Institute of Municipal Law Officers, National Urban League, Omega Psi Phi Fraternity, Scholarship, Education and Defense Fund for Racial Equality, Southern Regional Council, Southwest Council of La Raza, Union of American Hebrew Congregations, United Methodist Church Board of Christian Social Concerns, Ukrainian Institute of America, Dept. of Church & Society of the United Presbyterian Church, U.S.A., Vera Institute, Volunteers in Probation, Workers Defense League, and The Workmen's Circle.

REPORT

of the

Police Community Relations Project Committee

JUNE 1970

DETROIT, MICHIGAN

Trainee Comments: "... most of all they cared ..."

Mountain Manpower's pilot pre-vocational project at the Craggy prison subsidiary at Asheville generated the following response from a participant who has since been granted conditional parole to take a job developed for him by MMI in the Asheville area.

* * *

"During the time I've been incarcerated I've not been granted the opportunity to speak freely. But while I've attended the Mountain Manpower (sessions) at Craggy, I've been able to speak freely, to express my ideas no matter how they are accepted. To give my honest opinion of what I think, and to stand to be corrected.

This program formed a closer friendship relation between each inmate in the class. We have established group unity . . . giving our ideas on how to apply for employment, and (we have been) given a better insight on our ideas. . .

To obtain employment was hard for me until this program. Now I feel within that I can apply for employment with any company and be successful in obtaining a job. . .

These men (the instruction team) has placed hope into lifes that were at one time hopeless. Together they have opened the door that society had closed. With their help, and just caring about what happens to a man after imprisonment has enlighten the lifes of inmates . . . These men will always be something special in my experience . . . Without these men I would have failed in applying for employment, but they have listened, corrected, offered opinion. But most of all they showed they were for real and that they honestly cared."

Training led him from Craggy Prison to a job with a future.

INSTITUTE FOR

POLICE TRAINING OFFICERS

April 11-16, 1971

The University of Georgia Center for Continuing Education—Athens

General Information

The workshop is designed to . . .

. . . educate in the basic precepts of organizing, conducting, and evaluating a police training program.

. . . give special emphasis to innovative concepts in teaching techniques.

Presentations will be by noted authorities in the field of police training and will include a variety of problem-solving experiences emphasizing the reasons for and techniques of creating a more effective police training program.

Attendance will be limited to 50 participants, and applications will be processed in order of receipt. Reservation form is attached for your convenience.

Inquiries may be directed to:

Richard J. Korstad
Coordinator, Law Enforcement Training
University of Georgia
Center for Continuing Education
Athens, Georgia 30601

Please return to:

Taking the Stand

Rising Courtroom Use Of Expert Witnesses Creates Controversy

Authorities Found Valuable, But Some Confuse Juries, Cloud Truth, Critics Say

Ethel Kennedy and the Horse

4/20/71

By JOHN E. COONEY
Staff Reporter of THE WALL STREET JOURNAL

PHILADELPHIA—Six years ago, Graeme Murdoch drove his car onto an exit from the Schuykill Expressway here, struck a metal pole and smashed into a chain link fence. Ever since, the young lawyer has been partially paralyzed. He will probably require medical care the rest of his life.

In a negligence suit involving the disaster, an independent traffic engineer named Leslie Williams last January testified that the abruptness of the exit and the placement of the metal pole near the side of the road were exceedingly dangerous. Mr. Williams charged about $2,000 for this testimony: $250 a day for four days in court, plus research and consulting work at $30 an hour.

But partly as a result of the Williams testimony, a jury in federal district court awarded the crippled lawyer $3 million in damages. (The city of Philadelphia, named negligent in the case, has appealed the verdict.)

$1,500 a Day to Talk

The use of expert witnesses like Mr. Williams is growing fast. "More and more people are relying on experts as part of the development of new courtroom tactics," says Edward German, chairman of the American Bar Association's committee on trial techniques. Several organizations that specialize in providing expert witnesses have sprung up around the country. They have found that testifying can be a lucrative business: fees commonly range from $150 to $1,500 a day.

But this type of testimony is generating a heated controversy. "Courts are too easy on expert witnesses," says William J. Curran, professor of legal medicine at Harvard Medical School. "There should be qualifications adopted. Under the present system, there is serious question whether we get the whole truth."

Medical testimony presents special problems. Physicians are generally wary about becoming witnesses. They dislike taking time from their practices. Like most witnesses, they also resent being cross-examined. And they are particularly reluctant to contradict another doctor's testimony. This creates what is known in the legal-medical world as the "conspiracy of silence."

"The result is that a small percentage of doctors represent the entire profession in court, and this percentage contains some of the worst doctors," asserts Dr. Jonas Robitscher, a Bryn Mawr, Pa., psychiatrist who is also a lawyer.

Experts on Bewitching

The use of doctors and other experts in court is far from new. Indeed, four centuries ago English courts called on physicians to help determine whether a defendant was "bewitched."

But technological advances and other factors have prompted courts to call on a wider range of experts than ever. By legal definition, an "expert" is almost anybody who can reasonably be expected to know more about a given subject than the average person. Thus a prosecuting attorney in Houston recently subpoenaed a burglar from the state penitentiary. The prosecutor wanted to prove that an apparent theft was in fact a cover-up for an insurance swindle. The burglar—clearly an expert in the field—testified that no real burglar worth his salt would have broken into the house in the manner the home-owner described. (The burglar's testimony helped the prosecutor win the case.)

Sometimes the expert witness can be a lawyer. A Philadelphia lawyer who had defended several youths accused of desecrating the flag was recently called to Florida to testify on what legally constitutes such desecration. The case involved a youth who had sewn a flag to the seat of his pants. (The youth got a 30-day sentence.)

Mrs. Kennedy Swipes a Horse

At first glance, the choice of witnesses may seem bizarre. Take the meteorologist who helped resolve a celebrated horse-swiping case involving Mrs. Ethel Kennedy, widow of Sen. Robert Kennedy. Several years ago, a neighbor accused Mrs. Kennedy of snitching his horse and sued for $30,000. Mrs. Kennedy contended that the horse-napping was the result of her concern for the animal. She asserted in Fairfax County, Va., Circuit Court that the horse had been treated cruelly and looked like a "bag of bones."

Seeking to prove his horse was no bag of bones, the neighbor promptly produced a photograph of a healthy horse; the photo allegedly was taken shortly before the horse heist. Then Mrs. Kennedy's attorneys called to the stand Leo Alpert, a meteorologist. He testified that the angles of shadows in the photo indicated the picture had been snapped two to four months before the theft. The defense concluded there was plenty of time in the interim for the horse's condition to have deteriorated. Mrs. Kennedy won the case.

With such varied demands, organizations that supply experts say their business is booming. Expertise Institute, Miami, says it had 1,000 cases to choose from last year, up from 750 a year earlier. But the unusual organization can handle only 250 cases annually, says Harold Tuthill, director. He keeps on tap 400 experts in 26 different areas ranging from neurology to metallurgy. Most have other full-time jobs but are available for assignments.

"Lawyers often call me up and say, 'Here's my problem. What kind of experts do I need?' " Mr. Tuthill says. To approach a problem from more than one angle, he frequently assigns teams of experts to a case. One such case involves a 17-year-old Philadelphia youth killed when his motorcycle rammed a telephone pole. "We checked every nut and bolt on the cycle and there was nothing wrong with it," says Mr. Tuthill. "Finally one of the engineers suggested the pole may have been too close to the shoulder of the road. The lawyer in the case thinks we may have come up with

Please Turn to Page 31, Column 3

Apr 20, 1971

Taking the Stand: Courtroom Use Of Experts Grows, Stirs Debate

Continued From First Page

something," he adds. Before pursuing this angle, the lawyer is currently waiting to see if the mother wants to press a lawsuit.

Among other groups in the expert business is Associated Appraisers of Earning Capacity, a Berkeley, Calif., group of economists who estimate the financial value of a man's life. Meteorologists of Weather Surveys, Inc., Pleasantville, N.Y., often appear in accident cases involving snow and ice. And Technical Advisory Services for Attorneys, Ft. Washington, Pa., consists of experts on where attorneys can find experts.

While expert witnesses are in strong demand, having one on the team doesn't always produce the results desired. In the recent court martial of Lt. William Calley Jr., Dr. Albert A. LaVerne, a New York psychiatrist and a defense witness, testified that the accused officer had suffered a "virtual paralysis of will" during the My Lai massacre and had been "acting as a robot."

During cross-examination of the testimony, the prosecution gave Dr. LaVerne permission to consult some notes. But the alleged notes turned out to be a synopsis of the Army Sanity Board's report on Lt. Calley. Dr. LaVerne later said he couldn't remember anything that Lt. Calley had told him earlier. The doctor said he himself was operating under extreme stress and fatigue. The military judge accepted a defense motion to excuse the physician and then questioned the truth of his testimony.

Dispute Among Experts

Some legal authorities also complain that expert witnesses may sometimes confuse juries. In the California murder trial of Sirhan Sirhan, four defense psychologists and psychiatrists said Sirhan was a paranoid schizophrenic who wasn't fully responsible for his actions when he shot Sen. Robert Kennedy. But prosecution psychiatrists and psychologists said he was.

Even the key defense witness, California psychiatrist Bernard L. Diamond, conceded the jury might have trouble believing his testimony that Sirhan killed Kennedy while in a self-induced hypnotic trance. Dr. Diamond admitted his testimony seemed an "absurd, preposterous story, unlikely and incredible." Psychiatrists testifying on both sides admitted that their conflicting statements must have sounded "incredible" to the jury. (In the end, Sirhan was convicted and sentenced to death. His case is currently being appealed.)

Critics attack other than psychiatrists. Joel H. Lichtenstein, vice president of Professional Insurance Co., a New York concern that handles medical malpractice insurance, contends many doctors hurt their profession by testifying in cases unrelated to their specialty. Some appear successively in lawsuits involving, say, obstetrics, orthopedics and anesthesiology, he reports.

Witness for Both Sides

Many also criticize the admittedly commercial instincts of some expert witnesses. Edward Heitzman, a Princeton, N.J., auto expert who says he receives $300 a day for taking the stand, often testifies on both sides of an issue and makes no bones about it. Indeed, he once appeared at a seminar of consumer advocates who were trying to build a case that Volkswagens weren't safe. Then he dismayed the group by appearing in court several weeks later testifying for Volkswagen in another case.

Mr. Heitzman says he doesn't see any conflict in such activities. If there is any lack of integrity in the use of expert witnesses, it is often the result of attorneys using such witnesses to bluff their way through a case, he says. Mr. Heitzman says lawyers handling auto injury cases often want him to testify that something was wrong with the car even though the fault was unrelated to the accident and the person's injuries. "They're looking for a theory—any theory—and they don't give a damn if it has to do with the accident," he says.

Other critics cite the high cost of getting expert testimony. "Here again—because they can't afford experts in court—the poor are discriminated against," says Lois Forer, a Philadelphia lawyer. A spokesman for the Sierra Club, a conservation group that operates on a slender budget, says: "We often decide not to go into suits because we can't afford expert testimony."

In Chesapeake

April 30, 1971

Brutality To Police

THE VIRGINIA OBSERVER, Friday, April 30, 19

The members of the Chesapeake City Council had better take a long and hard look into the leadership that directs its all-important Police Department.

If they do, they are going to find serious faults that must be immediately corrected.

The average member of the Chesapeake Police Department, as in most local law enforcement agencies are honest, dedicated and efficient. The problem among the police is not the courts or its rulings — but among the persons who direct the policemen.

In Chesapeake patrolmen cannot rise to the top pay scale even though the rules say that after a certain number of years service the pay will be $8,100 per year. No patrolman in Chesapeake earns that salary. . . even if he had been on the force for 100 years.

Instead of utilizing the full force of its manpower to fight crime — policemen are forced to spy on their fellow officers. A ridiculous case in point was the recent case where a policeman hid in the trunk of a squad car to see if the officer driving was going to ask a girl for a date while he was on duty.

Police duties are also wasted when officers are assigned as part-time cooks for faternal lodges during their regular working hours.

A former officer, who was "allowed to resign" — was recently rehired as "public safety officer" — with a salary 5 percent higher than the average policeman earns.

Chesapeake policemen have no civil service protection. They have been directed, and they will admit, to close in on Negro bootleg establishments (which should be closed) but are not overly encouraged to close in on gambling establishments operated by non-blacks (which should also be closed).

Add it all up; lack of longivity pay, no civil service protection, rewarding resigned incompetents with re-hiring at higher pay, switching of rules even in murder cases . . . . . and the sum total is brutality to the police by

BRUTALITY (Continued from Page 4)

police officials.

The Chesapeake City Council should immediately create a sub-committee among its members to correct and investigate these conditions.

This committee should be armed with the right to take testimony under oath, thus preventing any chance of perjury. It should not be assisted, in any way, by appointed officials, but rater be conducted entirely by elected officials answerable to the people.

These are very serious charges made by this newspaper — and they must be immediately corrected.

This newspaper believes that the Chesapeake City Council will act.

Howdy!

Sorry for the informality of the mimeographed letter but even though there were relatively few of us at Wingspread, it was either go to this form or have my secretary rebel. Since she runs my office, I went to the mimeographed letter.

Many things were discussed at the Seminar and from the standpoint of resource people, we all had a chance to associate with some real 'heavies'.

My function in the area of crime and corrections is basically that of a referral service. I personally am an expert in nothing except who the experts are. So, if in your work within your local community, state or national organization, you need information on such diverse things as halfway houses, legislation, etc., all you need do is drop me a line.

I have taken the liberty of enclosing several back issues of CONtact, which is a monthly publication we put out covering various aspects of crime and corrections. If you would like to be on the mailing list, again all you need do is write. Of course, there is no charge.

At the same time, if you have information you think can be useful to me in referring others, please place me on your mailing list.

A final note, now that you are back in your local community (whether you are a resource in a big government agency or, like me, a small cog in a local area) please take the time to do a couple of things. One, check with your local, county and state officials to see if there is anything in your laws which prohibits an ex-felon from holding any particular type of state employment; because if the government will not accept a man in a certain position, then how can we expect other employers to. Also, you might check with the trade associations and organizations to see if they restrict a man who has once been convicted and sentenced for a crime.

Also, you might take a few minutes to visit youy local jail, whether you are in a very large or a very small city, and find out if a man placed in that jail is separated from employment so he usually loses his job and has to go through another type of program after serving his sentence in order to be gainfully employed again. Or, if you have misdemeanant work release. If you wish information on this type of program, please let me know.

Finally, especially in the larger cities, you might take a second to sit in on the small claims court to find out if the procedure is such that the people are losing furniture, houses and other property in such a manner as is both unfair and leaves little recourse which consequently turns them off to utilizing our courts or financial institutions as a way of getting ahead in business and in establishing personal financial security.

I've taken enough of your time. But if you're interested in sharing more information, please let me know.

I look forward to having the privilege of serving you in some capacity and am deeply grateful I was able to share a few days with you at Wingspread.

Very sincerely yours,

Gary Hill, Consultant
Crime and Corrections

Re: Mississippi State Penitentiary

Dear Mr. Boone:

I have read with interest your Special Report on the Delta Prisons.

I am enclosing a copy of a Complaint filed against the Mississippi State Penitentiary. As you can see we are attacking the whole system.

I am hoping that your investigation may have turned up information we could use in preparing this lawsuit. If you think that you have such information and are willing to share it with us, please contact me at your earliest convenience.

Thanking you for your cooperation, I remain,

Very truly yours,

CIVIL ACTION No. GC 71-16-K

THOMAS D. COOK, SUPERINTENDENT of the MISSISSIPPI STATE PENITENTIARY, also known as PARCHMAN PRISON, MISSISSIPPI PENITENTIARY BOARD, J.D. DENOVILLE, ST. TURNER ARANT, SEBE DALE, JR. ROBERT D. ROBINSON and H. L. ROBERTS, members of the MISSISSIPPI STATE PENITENTIARY BOARD, and JOHN BELL WILLIAMS, GOVERNOR of the STATE OF MISSISSIPPI, and their Successors,

Defendants

---X

COMPLAINT

1. Jurisdiction of this Court is invoked pursuant to 28 U.S.C.A. §§ 1331, 1343 and 2201. This action arises under the Eighth and Thirteenth Amendments and the due process and equal protection clauses of the Fourteenth Amendment of the United States Constitution and is a suit in equity authorized by 42 U.S.C.A. § 1981, § 1983, § 1985, and § 1994 for a preliminary and permanent injunction to redress the deprivations, under color of state statute, ordinance, regulation, custom or usage, of rights, privileges and immunities secured under the aforementioned Amendments to the Constitution and statutes of the United States. This is also a proceeding for a declaratory judgment as to plaintiffs' rights to be free from such deprivation by the defendants acting under color of state law.

BEST COPY AVAILABLE

2. This is an action for a preliminary and permanent injunction and for a declaratory judgment (1) in the First Cause of Action, to enjoin the defendants from maintaining the Parchman Prison in its present condition which constitutes cruel and inhuman treatment of the members of the plaintiff class; and (2) as to the Second Cause of Action, to enjoin the defendants from depriving Negro members of this sub-class of their equal right to protection of the laws by virtue of the segregated facilities at the Prison, all in violation of the rights of the plaintiffs as set forth in ¶"(1)" above.

AS AND FOR A FIRST CAUSE OF ACTION

3. The plaintiffs, Nazareth Gates, Willie Lee Holmes, Hal Zachary and Mathew Winters are all inmates of the Mississippi State Penitentiary System located at Parchman Prison, Parchman, Mississippi. Each plaintiff brings this action on his own behalf and on behalf of all inmates of Parchman Prison and on behalf of all persons who in the future will be committed to the custody of the defendants for incarceration at Parchman and subject to the jurisdiction of the defendants, pursuant to Rule 23 of the Federal Rules of Civil Procedure. The prerequisites of Rule 23 (a), (b)(1), and (b)(2) are satisfied. The members of the class (present inmates and future inmates of Parchman Prison) are so numerous as to make it impracticable to bring them all before this Court. There are questions of law and fact common to all members of the class. The claims of the plaintiffs are typical of the claims of the class, and the relief sought is common to all members of the class. Plaintiffs will fairly and adequately represent and protect the interests of the class. The prosecution of separate actions by individual members of the class would create a risk of:

(a) inconsistent or varying adjudications with respect to individual members of the class which would establish incompatable standards of conduct for the party opposing the class, or

(b) adjudications with respect to individual members of the class which would as a practical matter be dispositive of the interests of the other members not parties to the adjudications or substantially impair or impede their ability to protect their interests. Defendants have acted and refused to act on grounds generally applicable to the class, thereby making appropriate final injunctive relief and corresponding declaratory relief with respect to the class as a whole.

4. Defendant Thomas D. Cook is the Superintendent of the Parchman Prison and as such is charged with the exclusive management and control of the prison system of the State of Mississippi pursuant to §§7930 of the Mississippi Code Annotated of 1942, Supp., 1964 (hereinafter, Miss. Code). He is sued in his individual and official capacity.

The Mississippi State Penitentiary Board is charged with the overall policy making authority for the prison system of the State of Mississippi pursuant to §§ 7951 Miss. Code.

Defendants J. Q. DeNoville, Thomas D. Cook, Turner Arant, Sebe Dale, Jr., Robert D. Robinson and H. L. Roberts, Sr. are all duly appointed members of the Penitentiary Board and as such their duties and responsibilities are set forth in §§7951 Miss. Code. They are sued in their individual and official capacities.

Defendant John Bell Williams is the Governor and chief executive of the State of Mississippi and Ex-Officio Member of the Penitentiary Board of the State of Mississippi. Pursuant to §7942 of the Miss. Code., defendant Williams as Governor of the State is responsible for appointing the members of the Penitentiary Board. He is sued in his individual and official capacity.

FACTS

5. Defendants are charged with the duty to the inmates that they "shall have humane treatment, and be given opportunity, encouragement and training in the matter of reformation." (§§7922 Mississippi Code)

Defendant's have failed and refused to provide humane treatment to the inmates of Parchman Prison thereby depriving them of their rights, privileges and immunities set forth in Paragraph (1) above as follows:

(a) Practically all of the camps wherein the inmates are housed are in dire need of plastering and painting. They are infested with maggots, roaches and other insects and rats.

(b) The sanitary conditions throughout the prison are in deplorable condition. The water is dirty, rusty and often contains insects.

(c) The beds and mattress are substandard and often infested with insects.

(d) There are insufficient and unsanitary bathroom facilities in the camps to supply the number of inmates housed therein. Windows in the bathrooms are broken out.

(e) The sewage disposal system is inadequate and dangerous to the health and safety of the inmates. In some cases, human and food wastes are discharged directly into open ditches adjacent or near to the camps with no chemical treatment. Such areas become infested with flys and mosquitoes in the summer months, breeding germs and disease. In one case, such a condition exists only several feet from the kitchen causing a direct or potential health hazard to the food served to the inmates.

(f) Solid wastes are dumped in open pits breeding rats.

(g) Electric wires are exposed in areas of the camps which create a fire hazard and cause electric shock to the inmates

(h) The camps have inadequate heating facilities to keep the inmates warm in the winter months.

(i) In the event of a fire at one of the camps, the only method of fighting it presently is to use one outmoded fire wagon and hand methods that are inadequate to protect the inmates from injury or death. Several buildings have already burned down.

(j) The inmates are inadequately fed, especially for the arduous work they are required to perform.

(k) The hospital building is in a terrible state of disrepair. There is plaster falling off of the walls. The heating is inadequate. The water system is inadequate. Many of the machines used in the hospital are outdated and break down.

(l) Although there is authorization for a full time doctor, the prison has not had one on any permanent basis. In sum, the medical and psychiatric facilities at the prison are inadequate to serve the most basic needs of the inmates.

(m) The cemetaries at the prison are in deplorable condition. In many instances there are no headstones or markers to indicate the deceased's name.

(n) The defendants have failed to provide the inmates with adequate clothing to protect them from the weather.

6. Most of the inmates are required to work in the fields. Said work is without compensation. The inmates are often made to work until they drop from fatigue and or heat or sun stroke. They are required to work as long as 15 hours per day in the summer, sometimes seven days each week. The inmates are not provided adequate clothing to work in the fields and are forced to work in the cold and rain without proper clothing.

7. The barracks type of housing fails to protect inmates from assaults, murder, rape and homosexual activities

by other inmates. Despite their knowledge of these conditions, the defendants have failed and refused to protect the inmates from these acts of violence. The inmates are in constant fear for their safety and lives as a result of this disregard for their most basic welfare and protection.

(8) Defendants have employed a system of guarding the prisoners by other prisoners known as the "trusty" system (§§7095 Mississippi Code). This system has deprived the inmates of their rights as set forth in Paragraph (1) as follows:

(a) Many of the trusty inmates have been convicted of the worst crimes against man including rape and murder.

(b) These same trusties have almost complete life and death control over the rest of the inmates at the prison.

(c) Most of these trusties are armed with rifles and shotguns.

(d) The trusties have inflicted the most barbaric punishment on other inmates including forceable rape, murder and torture, beating inmates with such weapons as rubber hoses, axe-handles, chaines and straps. These sadistic beatings have taken place with the knowledge and consent of the defendants herein and onoccassion in front of the "free world" security guards.

(e) These same trusties are assigned the responsibility of keeping prison records with regard to prison good time and disciplinary information.

(f) These trusties have used their power to extort money from other prisoners and in concert with "free world" guards, share in the profits and force said inmates to commit crimes within the prison and subject them to unnatural sexual acts.

(g) Access to medical and dental facilities by the inmates is through these trusties who have little or no regard

for the welfare of their fellow inmates.

(h) These trusties have almost complete authority over the Maximum Security unit of the prison and treat the inmates in Maximum Security in the most barbaric and sadistic way. The aforementioned activity occurs with the knowledge and consent of the defendent.

(9) There is a complete lack of security facilities at the prison to protect prisoners from each other and from the trusties. There is an insufficient number of guards to guard and protect the inmates. Those presently employed at the prison are not properly trained in prison security and treat the inmates in a cruel and inhuman manner, subjecting them to the same treatment as described in paragraph (8).

(10) Mail sent by inmates to their attorneys and family and friends is censored and or opened by prison officials with the knowledge and consent of the defendants.

(11) Inmates are not informed as to the standards of conduct that is required of them which may subject them to corporal punishment and in most instances the subjective determination of the trusties prevail and is taken at face value by the prison officials. Inmates are subjected to solitary confinement in Maximum Security Unit as punishment without due process and at the hands of the trusties as set forth in Paragraph (8) above.

(12) There are virtually no recreational facilities for the prisoners when they are not in the fields or locked in the camps.

(13) Despite the obligation to give "opportunity, encourgement and training in the matter of reformation (§ 7921 Miss. Code) the defendants have not provided the inmates with basic adult education program. Although there is a Vocational Training program, only a small percentage of the inmates are afforded an opportunity for the same. The defendants have failed and refused to provide the inmates with a basic educational training program.

(14) The aforementioned actions of the defendants have deprived the members of the plaintiff class of rights, privileges and immunities secured to them by the Eighth and Thirteenth Amendments and the due process and equal protection clauses of the Fourteenth Amendment of the Constitution of the United States and the laws and statutes of the United States as set forth more fully in paragraph (1) above.

SECOND CAUSE OF ACTION

(15) Plaintiffs repeat and reallege each and every allegation contained in paragraphs marked "(1)", "(3)", and "(4)" herein on behalf of all Negro and future Negro inmates of the Parchman State Penitentiary with the same force and effect as if more fully set forth herein.

(16) The plaintiffs herein are all members of the Negro race and as a sub-class seek to represent all Negro and future Negro inmates subject to the jurisdiction of the defendants, pursuant to Rule 23 of the Federal Rules of Civil Procedure. The prerequisites of Rule 23 (a), (b)(1), and (b)(2) are satisfied. The members of the sub-class (present and future Negro inmates of Parchman Prison) are so numerous as to make it impracticable to bring them all before this court. There are questions of law and fact common to all members of the class. The claims of the plaintiffs are typical of the claims of the class and the relief sought is common to all members of the class. Plaintiffs will fairly and adequately represent and protect the interest of the class. The prosecution of separate actions by individual members of the class would create a risk of:

(a) inconsistent or varying adjudications with respect to individual members of the class which would establish incompatable standards of conduct for the party opposing the class, or

(b) adjudications with respect to individual members of the class which would as a practical matter be dispositive of the interests of the other members not parties to the adjudications or substantially impair or impede their ability to protect their interests. Defendants have acted and refused to act on grounds generally applicable to the class, thereby making appropriate final injunctive relief and corresponding declaratory

relief with respect to the class as a whole.

(17) Plaintiff Negro members of the sub-class have been deprived of their rights and privileges as set forth in paragraph (1) above in that they have been classified, designated, segregated and discriminated against on the basis of their race as follows:

(a) All of the camps at the prison are segregated by race, save one.

(b) The dining facilities are segregated by race.

(c) The prison hospital has a White and Negro ward for the inmate patients.

(d) Negro inmates are required to do the most arduous tasks at the prison. White inmates are given easier tasks.

(e) The food provided in the Negro camps is inferior to that which is provided in the white camps.

(f) All of the conditions described in paragraph (5) above, exists in a more deplorable condition in the Negro camps then in the white camps.

(g) Negro prisoners are subjected to barbaric treatment at the hands of "free world" white guards.

(18) Plaintiffs are informed and believe that the Negro population of the State is 36.8 per cent, the defendant, Governor John Bell Williams has failed and refused to appoint any Negro to the Penitentiary Board; no members of the Negro race are employed as office and clerical workers, or as "free world" guards, and in any other positions at the Parchman Prison.

(19) That the defendants willful classification and segregation and discrimination as set forth in paragraphs (17) and (18) was and is purposeful and systematic and based solely upon race in violation of the rights and privileges contained in the Due Process and Equal Protection clauses of the Fourteenth Amendment to the Constitution of the United States and the statutes and laws of the United States as set more fully forth in ¶(1) above.

WHEREFORE, plaintiffs pray that the court enter judgment granting plaintiffs;

(1) As to the First Cause of Action:

(a) a declaratory judgment that defendants' Acts complained of herein violate plaintiffs' rights secured by the Eight and Thirteenth Amendments and due process and equal protection clauses of the Fourteenth Amendment of the Constitution of the United States and is cruel and inhuman treatment.

(b) A preliminary and permanent injunction enjoining the defendants from maintaining or retaining custody of the plaintiffs under the conditions set forth in this complaint.

(c) A preliminary and permanent injunction ordering the defendants to;

(i) immediately discontinue the use of the "trusty" guard system,

(ii) to immediately provide adequate medical care, housing, clothing, food, heat hospital facilities and other services presently denied to the plaintiffs as set forth more fully herein,

(iii) to provide plaintiffs with programs of rehabilitation and education,

(iv) to hire trained guards to protect the safety and well being of the plaintiffs.

(v) to refrain from requiring plaintiffs to work without pay in a manner that constitutes cruel and inhumane treatment,

(vi) to provide adequate procedural safeguards in the imposition of discipline,

BEST COPY AVAILABLE

(vii) to refrain from inflicting any corporal punishment on the plaintiffs, and

(viii) to otherwise refrain from inflicting cruel and inhumane treatment on the plaintiffs.

(2) As to the Second Cause of Action:

(a) A preliminary and permanent injunction enjoining the defendants from maintaining and retaining Negro plaintiffs in their custody until such time as the defendants integrate the facilities at the Parchman Prison.

(b) A preliminary and permanent injunction ordering the defendants to integrate the facilities at the Parchman prison: ordering the defendants to hire Negro employees and guards; and order the defendant John Bell Williams to submit a plan to provide Negro representation on the State Penitentiary Board, and to otherwise refrain from discriminating against plaintiffs solely because of their race.

(3) Allow plaintiffs their costs in this action, including a reasonable attorneys' fee;

(4) Grant to plaintiffs such other and further relief as to the court seems just and proper.

Dated: February 8, 1971

REVENGE OR RESULTS?

In the United States, drug addiction is treated as a crime, not a sickness. We spend millions of dollars in law enforcement money to put addicts in prison. Does this process work? We now have from 100,000 to 250,000 heroin addicts in the country. A study by the Small Business Chamber of Commerce calculates that thefts in Harlem alone to support the narcotic habit have reached $1.8 billion. Police in Washington, D.C. blame up to 80 per cent of serious property crime on drug users. In city after city, large numbers of innocent people are terrorized while nine out of ten American drug addicts are without any medical help at all.

What's more, the addict released from jail remains an addict and has to steal again to feed his habit. He is not reformed; on the contrary, he becomes embittered and further criminalized. In addition, as many police chiefs and judges have pointed out, banning dope drives up its price, creates a rich market for underworld operators, and provides an important source of police corruption.

Whenever Britain's experience in providing drugs for addicts is mentioned, newspapers and government officials say "it's a big flop." Well, is it? An important article by Edgar May, "Drugs Without Crime," in the July 1971 Harper's Magazine, challenges that claim. He insists that Britain's program has been a tremendous success.

A few years ago, heroin addiction was increasing so rapidly in Britain that drug-control officials felt it had reached epidemic proportions, even though they had less than 3,000 heroin addicts. In 1967 the system was changed so that addicts had to go to specially licensed clinics, rather than physicians' offices. In 1969, May reveals, there were only 99 additional heroin and other narcotic addicts, and the 1970 report is expected to show a drop -- the first since their heroin crisis began in the Sixties.

The most significant contrast with America's drug problem is that in England there is no direct connection between addiction and crime. How come? One clue is that 100 heroin tablets in Britain (available only to clinic-confirmed addicts) cost $2.16 while on New York's streets, the retail price can run to $1,000 or more. Very few of America's addicts can earn - without stealing - the $300 to $500 a week it takes to support a full-blown heroin habit. As Edgar May points out, "In England, their equivalents have a luxurious option; they don't have to steal. Even if the British National Health Service insisted that they dig into their own pockets, it would make little difference. Pure British-made heroin costs the government no more than a daily tin of aspirin for each addict."

-more-

One and two column mats available upon request. The column may be used with or without a credit line

The British have not been able to eliminate drug addiction, but some doctors are cautiously optimistic. "Much to my surprise," said Dr. Margaret Tripp, who directs an East London clinic, "they're not dead and they are better. Their drug use has gone down, they work longer, and they are less of a nuisance to everybody."

At three London centers, the number of addicts holding jobs almost doubled over two years. In yet another survey, there were fewer arrests a year after addicts were with a clinic than before.

But Britain is different from the United States. Is its experience relevant to us? Canada treats drug abuse much the same as the United States. A study of 25 Canadian addicts who moved to Britain in the early Sixties disclosed some startling findings:

*In Canada, they spent a combined total of 141 addicted years in prison; in England, two years and 5 months.

*At home, they committed 88 robberies and burglaries; in Britain, 8.

*In Canada, only one claimed to have worked steadily while addicted. In England, 13 worked full-time and four part-time.

"For once we could work and live like humans," the addicts said repeatedly. "There is no need to steal."

Wouldn't America be better off if our drug addicts "had no need to steal?" Wouldn't we feel safer on the streets? What do you think?

REAL COMPASSION

I believe people should help themselves. If you give poor people food, they will eat for a few days. But if you give us tools, we will produce our own food.

-- Fannie Lou Hamer, black anti-poverty leader in Miss.

SENSE AND NONSENSE

When I got a book inscribed "To Harry Fleischman from a different Fleishman," naturally my curiosity was aroused. But when the paperback, Sense and Nonsense - A Study in Human Communication, by Alfred Fleishman (International Society for General Semantics, San Francisco, $2.00) turned out to be witty and meaningful, I enjoyed it thoroughly.

"Everybody wants to feel like somebody," is the message of Mr. Fleishman, a public relations leader in St. Louis. Whenever we make someone feel disliked or unimportant, communication breaks down and trouble starts. The book, addressed primarily to management leaders, will also be of great value to unionists, educators and the clergy -- in fact, to all people concerned with perserving human dignity.

When tension between police and blacks in St. Louis was growing rapidly, Mr. Fleishman's firm equipped police with wireless microphones "so we could find out how [blacks] were being approached."

Police would stop cars with obvious violations like burned-out headlights or tail lights, gruffly order occupants out of the cars and demand to see drivers' licenses, with little or no explanation.

Fleishman convinced the police it would be better to say something like "Would you mind stepping back here, your light seems to be burned out." The police were amazed at the difference. Instead of getting angry, the drivers would respond with "I didn't realize my light was out. I'll get that fixed right away."

Best of all, people were communicating again and avoiding confrontation.

BOOZE OR BIAS?

The Madison, Wisconsin Moose Lodge is faced with an embarrassing choice -- giving up booze or bias. The City Council has denied the Moose renewal of a liquor license because of their "whites-only" membership clause, which violated an ordinance denying liquor-selling permits to discriminatory groups. The lodge earlier told the Council that enforcement of the ordinance might cause the lodge to go under financially.

FRIENDSHIP

During World War II, when the Nazis ordered all Jews to wear the Star of David, the King of Denmark walked the streets proudly wearing a Jewish star. Thousands of Danes risked their lives trying to smuggle most of their Jewish citizens out of Nazi-occupied Denmark.

The Danish-Jewish friendship continues today, reports Lou Lerman. At the dedication of the Denmark Comprehensive High School in Jerusalem, 130 Danish school children were present along with Danish educators. They gave the school a grand piano and a collection of modern Danish paintings. The Danish children then went on a tour of Israel with Israeli school children.

ARE YOU SAFE FROM BURGLARS?

The best gift for the man who has everything, runs an old joke, is a burglar alarm. Now a new book, Are You Safe From Burglars?, by Robert Barnes, prisoner 33321 (Doubleday, $5.95) tells us that the alarm will help, but not enough.

Barnes, who burglarized 3,000 homes, businesses and apartments in 20 years, stole millions of dollars in cash, furs, jewels and other valuables. Yet, since he started stealing at the age of eleven, he has spent all but a few years of his life in reformatories, jails and federal penitentiaries. His story was first serialized in the Washington Evening Star.

His book reveals the common errors that people commit which invite burglars to their homes. While stressing that no system is "burglar-proof" against determined professionals, he offers hints of the basic precautions which will discourage burglars from picking on you.

Among his suggestions:

1. Use dead-bolt locks, which cannot be sprung, jimmied or celluloided by a burglar.

2. Use key chain door locks on exterior doors, instead of easily-opened old-style chain and catch, which can be opened with a small piece of wire.

3. Keep apartments well-lit, with a radio playing.

4. Attach a $4 battery-operated alarm to your front door. Burglars hate noise that points to them.

5. Push for strong prosecution of "fences," who make burglary profitable.

For business firms, Barnes recommends many devices, including an Ultrasonic Burglar Alarm, which saturates rooms with crisscross patterns of high frequency sound waves, inaudible to the human ear. Since the presence of anyone sets off a silent alarm, this system even protects against burglars who hide inside business establishments.

Barnes, when he gets out of prison this time, hopes to make a new career on the other side of the law - entering the protective-device system business. His book is a good commercial for him.

MUTUAL

Race is used to divide the have-nots. The name of the game, as I see it now, is that we must convince whites that ours is a mutual affliction. A man with a broken foot should have sympathy for a man with a broken leg.

-- Maynard H. Jackson, black Vice-Mayor of Atlanta, Georgia

INFORMATION I NEVER KNEW I NEEDED TO KNOW

My friend Paul Steiner is always coming up with incidental bits of trivia that I find fascinating. For instance:

*Parrotfish thrive on a diet of dogfood.

*The homemaker of the 1890's used as much energy to do the laundry each week as it would take to climb a ladder over six miles high, or to swim 20 miles, or to play five quarters of football.

*The City Council of Stamford, England ruled that no Chinese restaurant may put up a sign until the Council has a certified translation of what the sign says.

*Wyoming law permits state residents to shoot both bull and cow elk. Out-of-state hunters may shoot only bull elk.

*J. Paul Getty, supposedly the world's richest man, refuses to accept any postage-due mail.

FACES IN THE WINDOWS

A West German apartment house was changed dramatically last winter when a photographer displayed larger-than-life photos of each tenant in each person's window. The process of doing the project transformed the cold impersonal nature of life in a modern apartment building into warm, friendly relations.

SHAPING SAFER CITIES

* "Operation Identification" in Southern California is helping to reduce burglaries. It is also increasing chances of returning stolen property to its owners, say the Los Angeles Times. Eight years ago, Monterey Park Police Chief Everett F. Holladay persuaded volunteers to tour neighborhoods and etch all items of value with the owner's driver's license number. Homes were identified with window stickers front and rear reading: "We have joined Operation Identification. All items of value on the premises have been marked for ready identification by law enforcement agencies." In the last seven years, Holladay claims that only six of the 4,000 participating households have been burglarized -- and in only two cases were identified items stolen. In the remaining 6,000 homes in Monterey Park there have been nearly 1,000 burglaries in the last three years alone.

* Score one for women's lib. Women are gaining rapidly, reports the New York Times, in at least one "traditional area of male supremacy -- crime." FBI figures show that from 1960 to 1969, male arrests for major crimes rose 61.3 per cent, while arrests of women ballooned 156.2 per cent. Crimes by women gained most heavily in larceny, embezzlement and narcotics violations; but women are also committing more robberies and assaults. Sheriff Peter Pitchess of Los Angeles County suggests one reason for this phenomenon: "As women emerge from their traditional roles as housewife and mother, entering the political and business fields previously dominated by males, there is no reason to believe that women will not also approach equality with men in the criminal activity field."

ALONG FREEDOM ROAD

* Hollywood Musicians Union Local 47 deposited $100,000 in four minority banks and savings and loan institutions in the Los Angeles area.

* Mrs. Claire Harvey of Jackson, Miss., is the first black president of Church Women United, a multi-denominational ecumenical group with millions of members.

* A bio-physics major at the University of Alabama in Birmingham, Bracie Watson, is the first black to be elected president of the Student Government at the predominantly-white College of General Studies.

* The Lummi Indians of Bellingham, Washington are starting a new business of "farming" the sea. It's called "aquaculture". They will mass produce oysters, rear salt-water trout, and harvest seaweed. The seaweed, which is actually algae, reports the National Business League, is used to produce carrageen, a substance used in ice cream, toothpaste and many other products.

* Four million young people throughout the world hiked up to thirty miles each to raise funds for domestic and international anti-poverty programs and to focus attention on the world's poor. Sponsored by adults from a few cents to $10.00 a mile, the hikers raised millions of dollars for day-care centers, the Farm Workers Union and a host of self-help programs.

* Minority hiring on U.S. daily papers is being boosted by the Newspaper Guild, which has called for a "minority skills bank" as a central recruitment source for newspapers. Thus far, only 2.3 per cent of reporters on 573 newspapers reporting for 1969 were members of minority groups. Of the 104,557 white-collar workers involved, 4.4 per cent were minorities. But blacks in white-collar jobs on Washington's three daily papers rose from 8.2 per cent

in 1966 to 14.9 per cent in 1969.

* The Teamsters and Cement Mason unions and management in San Diego joined together to build an Indian Cultural Center at the Pala Reservation in northern San Diego County. Several volunteers are descendants of various Indian tribes. The center will be used for classes in the Cupa dialect and heritage, and contains a library, museum and classrooms.

* More than $500,000 has been invested in an integrated bank in Hempstead, Long Island - a bank primarily controlled by blacks. The Vanguard National Bank will operate a training center for small businessmen, to insure that when it lends money to start small businesses, the recipients will have the know-how needed to succeed.

* Twenty-five black and brown workers are in the second year of a unique program to prepare minority group union members for active leadership in their unions and communities. The program at the University of California in Berkeley graduated 23 unionists in its first year. Two graduates already have full-time union jobs, three have been nominated for union office and five are labor council delegates. The course includes six months of full-time study of skills and knowledge needed by labor leaders to confront issues and problems arising out of the urban crisis, plus a six-month follow up and evaluation period.

* A Federal Judge ruled in May that a construction union in New York City, Wood Wire and Metal Lathers Local 46, must give compensatory pay to Negroes deprived of work because of the union's alleged discriminatory practices.

E WALL STREET JOURNAL, FRIDAY, AUGUST 20, 1971

In Philadelphia, a Legal Ethics Fuss

By THOMAS J. BRAY

"The legal profession cannot claim total exemption from the historic proposition that those having a monopoly on the performance of vital public services should be strictly regulated to protect the public interest. A profession ought to be able to regulate itself, but the truth is that the legal profession has not done so. I suggest that the time may come when, if the legal profession wants to avoid regulation from outside, it must surely regulate itself from within."

—Remarks by Chief Justice Warren E. Burger to the American Bar Association, New York, July 5, 1971.

In many parts of the country, the term "Philadelphia lawyer" has come to mean a legal nitpicker or a devious practitioner. Go-go New York and Washington lawyers tend to view the Philadelphia lawyer as little more than a stuffy blueblood who spends most of his time churning out bank trust agreements and attending horse shows.

Not surprisingly, Philadelphia lawyers tend to take a different view of things. They say the term "Philadelphia lawyer" dates back to 1735, when printer Peter Zenger was hauled into a New York court on sedition charges. To a man, New York attorneys refused to take Zenger's unpopular case. Into the breach stepped Philadelphia attorney Andrew Hamilton, who won acquittal for Zenger in a landmark decision on freedom of the press. It became a watchword that in order to win a tough courtroom battle, one had to hire a Philadelphia lawyer.

The Philadelphia version of the legend has been badly battered in recent months, however. Ostensibly at issue has been a lengthy inside report charging widespread corruption and unethical solicitation by more than 100 plaintiff's attorneys who specialize in representing accident victims. The lawyers allegedly stood at the center of an ambulance chasing ring of doctors, car tow services, police, union shop stewards and others who conspired to wring fat fees and insurance settlements from the miseries, real or pretended, of hundreds of individuals involved in auto or industrial accidents.

In some cases, the accident victims were still in a state of shock when approached by a lawyer dangling the prospect of huge claims before their eyes—in return for an equally huge fee, of course. It's known that in one case, for example, the mother of a nine-year-old boy run over by a car was enticed into signing a contingency fee agreement with a lawyer only hours later, while her son lay near death in the hospital. "Now you know that she didn't go downtown looking for a lawyer with her son in that kind of shape," says a source close to the investigation.

As shocking as the contents of the report were, however, many onlookers found the story behind the report even more alarming. For although the ambulance chasing probe was commissioned by the Bar Association itself nearly a year and a half ago, it has been charged that influential elements within the Bar succeeded in cutting short the investiga- [illegible] stifling the im- that the ambulance chasing probe was launched well before no-fault insurance was an issue in Pennsylvania and accuse plaintiff's lawyers of casting a red herring into the controversy. Some establishment lawyers also hint darkly that certain plaintiff's lawyers tried to pressure the Bar leadership into dropping the probe in return for votes at the upcoming Bar Association election. "Special interests have wormed their way into control of the Bar," says one influential old-line lawyer.

One man who takes a plague-on-all-their-houses attitude is Morton S. Jaffe, a former Army lawyer who retired to Philadelphia after 26 years of military service, during which time he was both a prosecutor and a judge. In late 1969, Col. Jaffe was approached by Bar Association officials to undertake a proposed investigation into unethical solicitation practices. Col. Jaffee initially refused—"I said I didn't know Philadelphia well enough to handle it," he recalls. But when the Bar officials came around a second time in early 1970, saying nobody else would take the job, he agreed.

For a year, Col. Jaffe and a team of investigators gumshoed around Philadelphia acquainting themselves with the seamier side of the legal profession. As the evidence mounted, however, so did the pressure. Col. Jaffe and Bar Association officials were subjected to a barrage of harassing phone calls, and there were even hints that Col. Jaffe might be harmed physically, though rumors to that effect were never substantiated.

A number of plaintiff's lawyers, it should be noted, felt they had some legitimate grievances. Col. Jaffe and his investigators were brow-beating witnesses and spreading innuendoes about individuals they suspected of wrongdoing, it was said. Others asserted that the probe was a witch-hunt with anti-Semitic overtones. Why limit the investigation to lawyers of personal injury victims? Why not go after the establishment lawyers who wangle trust business from their banker friends over cocktails at the Union League, or the bankruptcy specialists who "arrange" to be hired by creditor committees?

Col. Jaffe and Bar Association officials agree that unethical practices probably exist throughout the Bar, but they say they concentrated on the plaintiff's lawyers because it was there that solicitation appeared most prevalent and clear-cut. Also, they say, no anti-Semitism was intended; it merely happens that a large portion of plaintiff's lawyers in Philadelphia are Jewish. And most insiders agree that though there may still be remnants of bigotry among the Philadelphia Bar's movers and shakers, it's scarcely noticeable on professional matters. Indeed, many of the Bar's leaders in recent years have been Jewish.

The charges of improper investigative practices were harder to deal with. Although Col. Jaffe insists that he told his investigators "never to press" witnesses and potential defendants, even those who backed the probe felt there was need for tighter control of the Jaffe group. Accordingly, Col. Jaffe, who had been promised a free hand, found himself

If the Bar leadership thought it was buying peace, however, it was mistaken. Col. Jaffe, a tenacious, slightly square type who flies the American flag in his front yard and likes to lecture visitors about "an ethical hiatus" in U.S. culture, had become deeply absorbed in his project and wasn't about to let himself become an instrument of Bar politics. Two months later, he publicly announced his resignation—and the Bar Association quickly found itself besieged on all sides for an explanation.

The pressure mounted when it was learned that Col. Jaffe had submitted a two-part report on his findings; one section was a statistical abstract clearly designed for general consumption. As a matter of principle, the Committee of Censors refused to release either section of the report, but copies began circulating among the District Attorney and various state and federal officials, and it wasn't long before a copy had been leaked to the Evening Bulletin. In a carefully worded series of articles, the Bulletin identified many of the firms and lawyers allegedly involved in unethical solicitation. Most of those named either denied the charges or declined comment.

Both before and after publication of the report, plaintiff's lawyers and others tried to cast doubt on its reliability. Some called it "unlawyerlike" for its rhetoric. Others noted errors of fact and conclusion in the text. Even today, Bar Association leaders tend to pooh-pooh the whole affair as blown out of proportion; of the 128 individuals mentioned in the report, Col. Jaffe had hard evidence on only a few, insiders say.

Even if the allegations are true—the redoubtable Col. Jaffe admits only to the rhetoric, saying "I wanted to sound the alarm"—many onlookers wonder if they don't miss the point. If there were inaccuracies or shortcomings in the report, why wasn't a new investigator hired and the probe continued until more definite conclusions could be drawn? It wasn't for lack of money: Although the cost of the Jaffe investigation was more than double the usual budget of the Committee of Censors, the Bar Association still has uncommitted reserves of about $300,000.

And it wasn't for lack of ammunition. Ambulance chasing is a growing problem in most major cities, and it's known that insurance investigators have launched their own probe in Philadelphia. Yesterday the Philadelphia courts indicated that they plan to take the matter out of the Bar's hands and start their own investigation, although many onlookers worry that many of the cases have already gone "cold."

Only Human?

Like most human organizations, the Philadelphia Bar Association simply found it easier to keep the peace than face up to a tough issue. Few would question the good faith and integrity of the Philadelphia Bar's leadership. Over the years it has been a pioneering force in American legal circles, helping break new ground on matters ranging from storefront legal services for the poor to more humane divorce procedures. Philadelphia's Bernard G. Segal was last year's highly respected president of the ABA.

ever. Ostensibly at issue has been a lengthy inside report charging widespread corruption and unethical solicitation by more than 100 plaintiff's attorneys who specialize in representing accident victims. The lawyers allegedly stood at the center of an ambulance chasing ring of doctors, car tow services, police, union shop stewards and others who conspired to wring fat fees and insurance settlements from the miseries, real or pretended, of hundreds of individuals involved in auto or industrial accidents.

In some cases, the accident victims were still in a state of shock when approached by a lawyer dangling the prospect of huge claims before their eyes—in return for an equally huge fee, of course. It's known that in one case, for example, the mother of a nine-year-old boy run over by a car was enticed into signing a contingency fee agreement with a lawyer only hours later, while her son lay near death in the hospital. "Now you know that she didn't go downtown looking for a lawyer with her son in that kind of shape," says a source close to the investigation.

As shocking as the contents of the report were, however, many onlookers found the story behind the report even more alarming. For although the ambulance chasing probe was commissioned by the Bar Association itself nearly a year and a half ago, it has been charged that influential elements within the Bar succeeded in cutting short the investigation and, for a time, anyway, muffling the impact of what had already been discovered.

'We've Got to Clean House'

The results of the investigation began leaking out last February but its full scope didn't become generally known until several weeks ago, when the Philadelphia Evening Bulletin obtained and published large segments of the report. The impact was substantial: There were calls for a grand jury investigation and a blue-ribbon probe by the courts, as well as sharp criticism from within the Bar itself. "We've got to clean house," charges one old-line attorney who was named to head up an ad hoc committee pushing for a renewed probe of unethical solicitation.

Philadelphia Bar Association officials vehemently deny a white-wash. They note that the Bar's disciplinary process traditionally operates in strict secrecy to safeguard individual rights. Court dockets indicate that at least two individuals named in the report already are facing possible disbarment or suspension, and the report itself was long ago turned over to the District Attorney for possible criminal action.

But a number of observers — including many lawyers—wonder if the Philadelphia legal establishment has been less than zealous in rooting out unethical conduct. Of the 600 or so cases that have come before the Bar's Committee of Censors in the last three years, only two have resulted in disbarment. Five attorneys have been censured or suspended by the courts, and the committee itself has handed out formal reprimands or censures in only 11 cases.

It may be, of course, that lawyers are simply more ethical than most people. It's certainly a fact that the legal profession has been more conscientious in policing itself than most other groups; most local and state Bar Associations have set up elaborate machinery for that purpose, and the American Bar Association recently promulgated a revised and updated code of ethics that runs 52 pages of small type. But many critics wonder if the Philadelphia ambulance chasing probe and its aftermath don't suggest that even more attention needs to be devoted to the age-old conundrum of "who shall watch the watchdog?"

At the very least, the Philadelphia tiff provides an intriguing glimpse into Bar Association politics. The Bar isn't simply an agglomeration of do-gooders and joiners. It consists of groups of lawyers—big firm types, individual practitioners, plaintiff's attorneys, trial lawyers, attorneys who represent insurance companies, and so on—all with their own special interests and all intent on keeping leadership of the Bar in safe hands. With its power to screen judges, enforce the canons and speak authoritatively on political issues, the Bar is a prestigious and powerful organization.

The ambulance chasing report comes at a time when the Pennsylvania Legislature is considering a form of no-fault insurance. Most plaintiff's lawyers who specialize in personal injury cases adamantly oppose no-fault insurance, and many believe the Bar Association probe is a deliberate effort to embarrass them.

A telephone call to one self-appointed spokesman for the plaintiff's lawyers elicits, in quick order, a heated attack on the press, a charge that "a bunch of goddam fools are trying to ruin us," and a warning that the interviewer can't use the quote for attribution, "because you don't even know for sure who you're talking to." Besides, he adds suspiciously, "how do I know you aren't an agent for some insurance company?"

Big firm lawyers, on the other hand, note brow-beating witnesses and spreading innuendoes about individuals they suspected of wrongdoing, it was said. Others asserted that the probe was a witch-hunt with anti-Semitic overtones. Why limit the investigation to lawyers of personal injury victims? Why not go after the establishment lawyers who wangle trust business from their banker friends over cocktails at the Union League, or the bankruptcy specialists who "arrange" to be hired by creditor committees?

Col. Jaffe and Bar Association officials agree that unethical practices probably exist throughout the Bar, but they say they concentrated on the plaintiff's lawyers because it was there that solicitation appeared most prevalent and clear-cut. Also, they say, no anti-Semitism was intended; it merely happens that a large portion of plaintiff's lawyers in Philadelphia are Jewish. And most insiders agree that though there may still be remnants of bigotry among the Philadelphia Bar's movers and shakers, it's scarcely noticeable on professional matters. Indeed, many of the Bar's leaders in recent years have been Jewish.

The charges of improper investigative practices were harder to deal with. Although Col. Jaffe insists that he told his investigators "never to press" witnesses and potential defendants, even those who backed the probe felt there was need for tighter control of the Jaffe group. Accordingly, Col. Jaffe, who had been promised a free hand, found himself having to develop elaborate survey forms, periodic reports and a procedure for notifying lawyers in advance that they were under investigation. "I nearly quit over this," says Col. Jaffe.

Col. Jaffe's Request

The affair began to build to a head in December, nine months after the investigation had begun. The original assignment had been for a one-year investigation with a budget of $118,000. Col. Jaffe now requested that the probe be continued indefinitely. "We had turned up a voluminous amount of corruption," he says, "but unethical solicitation is a matter of conspiracy, and it's tough to pin down that sort of thing."

The Committee of Censors was reported mildly favorable to extending the investigation, but as the proposal made the rounds of the Bar it met with increasing opposition. One plaintiff's attorney even threatened to call a special meeting of the general membership to air his protest. Chastened by the prospect of an all-out fight that would inevitably become a public spectacle, the leadership decided on a face-saving maneuver: Col. Jaffe would be given $8,000 and three months to wind up his investigation.

ofic, saying "I wanted to sound the alarm" — many onlookers wonder if they don't miss the point. If there were inaccuracies or shortcomings in the report, why wasn't a new investigator hired and the probe continued until more definite conclusions could be drawn? It wasn't for lack of money: Although the cost of the Jaffe investigation was more than double the usual budget of the Committee of Censors, the Bar Association still has uncommitted reserves of about $300,000.

And it wasn't for lack of ammunition. Ambulance chasing is a growing problem in most major cities, and it's known that insurance investigators have launched their own probe in Philadelphia. Yesterday the Philadelphia courts indicated that they plan to take the matter out of the Bar's hands and start their own investigation, although many onlookers worry that many of the cases have already gone "cold."

Only Human?

Like most human organizations, the Philadelphia Bar Association simply found it easier to keep the peace than face up to a tough issue. Few would question the good faith and integrity of the Philadelphia Bar's leadership. Over the years it has been a pioneering force in American legal circles, helping break new ground on matters ranging from storefront legal services for the poor to more humane divorce procedures. Philadelphia's Bernard G. Segal was last year's highly respected president of the ABA.

But men can always find good reasons to sidestep unpleasant problems. A volunteer disciplinary system—Philadelphia's censors serve without pay and spend up to 20 hours a week wrestling with ethical problems—is easily overwhelmed when the stakes are big. And bringing in an outsider like Col. Jaffe to handle an investigation is fine in theory, but an outsider is also easier to disavow when the political chips start flying.

Some observers suggest that a statewide disciplinary system that has been proposed for Pennsylvania may provide the answers to some of these problems. The Philadelphia Bar's leadership is also known to be considering the addition of "public" figures to key committees. Then there is Col. Jaffe's assessment: "If the legal profession wants to discipline itself, it's got to be willing to pay the price. Passing the buck to the state or federal level won't solve anything. Lawyers are supposed to be the exemplars of an ordered society, and if they won't behave themselves, then how can you expect the poor black ghetto kid to do so?"

Mr. Bray is chief of the Journal's Philadelphia bureau.

AUGUST-SEPTEMBER 1971

"GOOD OLD DAYS" ARE HERE AGAIN!

George Daitsman of the Teamsters Labor Institute in Miami sent me this ad from an employment agency which appeared in a recent issue of Business Week:

> "Times Couldn't Be Better...
> ... for getting the most likeable, capable, qualified people for any job openings you may have. Secretarial. Clerical. Sales. Administrative. Technical. You name it."

OUTWHITING THE WHITES

When George Kobayashi got his first job 19 years ago, he lasted one day. "When the owner found out I was Japanese," he recalls, "he fired me. So I started my own business. I outwhited the whites, and five years later I was so successful they asked me to come back."

Kobayashi refused the offer and now runs a thriving appliance store, Koby's, in Gardena, Calif. and lives comfortably in a new split-level house with his wife and three children.

Kobayashi's story, says Newsweek, is typical of America's 600,000 Japanese-Americans. More than 15 per cent of Japanese-Americans now hold professional jobs. In Los Angeles County, school authorities report that children of Japanese descent outstrip all others in IQ. In addition, these children can expect to live six to seven years longer than a white child, ten to eleven years longer than a black. While arrest rates for white, black and American Indian adults have soared during the last three decades, the already low rate for Japanese-Americans has decreased sharply. And this despite the infamous World War II detention camps for Japanese-Americans!

VICTIMLESS CRIME

The San Francisco Committee on Crime reports that more than 50 per cent of the arrests in the city in 1969 were for nonviolent crimes without victims or crimes whose "victims" were consenting adults. The total included 16,500 arrests for drunkenness, 4,900 for drug offenses in which no other charges were involved, 3,200 for prostitution, and 593 for private gambling. More than 40 per cent of the inmates in county jail, said the committee, are there as a result of drunk arrests, and nearly a third of the jury trial demands in municipal court are in prostitution cases.

One and two column mats available upon request. The column may be used with or without a credit line

As the New Republic points out, "Imprisonment rarely cures alcoholics or drug addicts and never turns prostitutes into virgins or homosexuals into heterosexuals. It often has opposite effects, exposing basically decent citizens to hard-core criminals, fostering homosexuality, and making prostitutes more indebted to pimps for legal defense. Enforcement of laws against self-indulgence also tends to fall most heavily upon young people and minority groups, adding to the growing distrust of police."

Some cities, such as St. Louis and New York, have begun decriminalizing alcoholism and are promoting detoxification and rehabilitation; and off-beat sexual activities between consenting adults are tolerated in a growing number of cities.

Urging the police to put a priority on controlling crimes of violence, the San Francisco Crime Committee warned that "if a breakdown in the system of law enforcement is to be avoided, it is necessary to stop loading upon the system of criminal law tasks that are unnecessary or for which it is not well fitted."

WHY WE NEED FULL EMPLOYMENT

Gunnar Myrdal, the Swedish economist who wrote The American Dilemma, a historic study of U.S. race problems, quotes an old Swedish proverb to explain why we won't solve the race problem without full employment:

"When the feed-box is empty, the horses will bite each other."

ALONG FREEDOM ROAD

* A study of New York City's school paraprofessionals has found "overwhelming evidence" of its success. Some 85 per cent of elementary school pupils said they enjoyed coming to school now more than before they had paraprofessionals in class. And 75 per cent of junior high students said the schools were doing a better teaching job since the aides came.

* A two-week teachers' strike in San Francisco blocked cutbacks in a number of educational programs and won a 9 per cent wage and fringe benefit increase for paraprofessionals.

* North Carolina is the first Southern state to have an equal employment opportunity law. The law, passed unanimously both in the House and Senate, requires state departments, agencies, county and municipal governments to consider job applicants without regard to religion, race or sex. It was introduced by Rep. Joy J. Johnson, one of two nonwhites in the 1971 general assembly.

* The American Federation of Musicians yanked the charter of black Musicians' Local 274 in Philadelphia when the local refused to merge with a nearby all-white local. Members of the black local voted against the merger while the all-white local voted in favor of the move. Federal Judge Edward R. Becker upheld the charter revocation, pointing out that Philadelphia was the last of 37 cities to end musicians' dual unionism based on race. The merger plan provided that the two locals would enjoy equal rights, benefits and privileges in the merged union.

-more-

* Attracted by a new, relatively low-cost housing development, whites are now integrating Clinton Township, Mount Clemens, Mich., whose population has been predominantly non-white for decades. Whites began moving into the development in March, drawn in by monthly rents ranging from $108 to $251, and rent supplements, available for 20 per cent of the units, with rates as low as $33 for single persons earning $5,100 or less annually. Of the 88 families moved in by July, some 65 are white. Plans call for a total of 200 units in the project.

* Wichita, Kansas passed a new fair housing ordinance, banning discrimination in the sale, rental, advertising, and financing of housing accomodations on the basis of "race, color, religion, sex, national origin or ancestry." Violators are subject to a fine up to $500, six months in jail -- or both.

* The American Foundation for Negro Affairs has launched a program to prepare more Negroes to pass the highly competitive tests for admission to schools of medicine, dentistry and other health sciences. Previous attempts by some black groups, which simply demanded that medical schools admit more black students, foundered when many of those admitted flunked out. Medical schools in New York City are now enrolling more black students than before (there were only 7 out of a total of 894 in 1968 while there are currently 86 out of a total of 916 in 1971) but are giving them intensive summer programs to prepare them for medical school.

* The "New Careers" program in New York, developing job advancement systems for poor people, is a big success. The city's Manpower and Career Development Agency reports that training costs had been recouped in two or three years by tax yields and welfare savings. A study of 236 former relief recipients trained as case aides, who started work at $4,800 a year and now earn up to $6,000, showed the combined tax contributions and relief savings of the group was $443,000 a year.

RAGA AND ROCK

The sad plight of millions of East Pakistan refugees linked the two cultures of raga and rock. Ravi Shanker, the sitar player who comes from the Bengal area, joined George Harrison and Ringo Starr of the Beatles and the folk composer, Bob Dylan, in two benefit concerts before more than 40,000 people at New York's Madison Square Garden. The concerts raised $250,000 for refugee relief. Unlike the screeching Beatles fans of old, said the New York Times, the overflow crowds were "quiet and almost reverent" during the musical numbers themselves.

SCHOOL DISCIPLINE

"If you can't reach a child through his mind, I don't know how in the hell we're gonna reach him through his behind."

-- Edith Holsinger, Dayton, Ohio teachers

OPENING THE GATES

* Two West Coast states -- California and Washington -- are successfully using a new approach to corrections reform: paying counties to keep offenders out of state institutions. The program, reports the Criminal Justice

Newsletter, is not only more effective than traditional approaches, it saves money. The California plan started five years ago with projections of how many offenders each county would commit to state institutions without a subsidy program. A county receives up to $4,000 for each person not committed who would have been according to the projection. The money must go for special supervision programs: low caseloads, treatment programs; individual, placement and family counseling; special foster homes; use of volunteers and staff training. The voluntary program has enrolled 46 of the state's 58 counties. There have been 10,806 fewer commitments than projections indicated without the program, and the subsidies have risen from $1.6 million the first year to $15 million.

* A Charlotte, N. C. man convicted of manslaughter has had his 12-year prison sentence suspended on condition that he pay a $13,000, five-year fine -- payable to the family of his stabbing victim, Herschel Liner, in $50 a week instalments. Judge William McLean of Mecklenburg Superior Court in Charlotte imposed this sentence upon Daniel Green because the victim's father was disabled and unable to work.

* Many states have continued the trend toward easing penalties for possessing marijuana while shifting the emphasis to curbing the pusher. Nebraska softened its statute, the nation's most liberal, which called for a mandatory seven-day jail sentence for possession of less than a pound of marijuana, to permit a judge to set a fine of as little as $1 for the same violation. Minnesota, West Virginia, Colorado, Missouri, Florida, South Carolina, North Dakota, Nevada, Indiana and Oklahoma reclassified first-time possession from a felony to the less-serious misdemeanor category or eased the penalties in other ways.

NEW YORK, NEW YORK

Friend Paul Steiner has come up with a batch of unusual New York rules and regulations which intrigued me. Here they are:

* Box-office personnel, including the treasurer, need no longer wear hippie gear and beads, but they must never wear a white shirt or a necktie, even a wide mod tie. -- Management, New York's Biltmore Theater, where the rock-musical, HAIR, is playing.

* The use of photos of matrimonial applicants will be discontinued because experience has shown that when actually introduced, most men and women do not recognize each other from such photos. -- Irving Field, New York marriage broker.

* Hearses will be used to transport the cast of the gangster film, "The Gang That Couldn't Shoot Straight," to location sites around New York City. -- MGM film producers.

INDIAN REAR ADMIRAL

At a social affair in London, a British Member of Parliament, Dr. Maurice Miller, walked over to a Rear Admiral in the Indian Navy to express his

admiration for Prime Minister Mrs. Indira Gandhi. He added, "I would, however, admire her even more if she discarded her fear of Moslem reaction and established diplomatic relations with Israel." The Rear Admiral, Benjamin Samson, then surprised his new acquaintance with the announcement that his son was even then studying architecture at the Technion in Haifa, that his brother settled in Israel in 1948, and that "I myself am very proud to be a Jew." A career sailor, the 55-year-old seaman was in England to inspect ships now being built at Clyde for the Indian Navy. He told the Jewish Chronicle that the fact that he was Jewish had never proved an obstacle to his career.

CRIME QUIZ #2

So many of you have asked for more crime quiz material that here we go with a new batch of questions:

1. During 1960-68, 475 policemen were killed. Guns were the murder weapon in _____ per cent of the cases.

   a) 10
   b) 54
   c) 78
   d) 96

2. Most people in jail today are convicted criminals

   a) true
   b) false

3. If an ex-convict gets a job in a supermarket in New York state, he must be fired if the store sells beer.

   a) true
   b) false

4. Arrests for public drunkenness account for _____per cent of commitments to jail in the nation.

   a) 10
   b) 33
   c) 50

5. In the United States, drug addicts steal over $2 billion a year to feed their habits, while in Britain drug addicts receive drugs without having to steal.

   a) true
   b) false

6. Murders by gun are responsible for more deaths than drunken driving.

   a) true
   b) false

ANSWERS TO CRIME QUIZ

1. (d) 96

2. (b) false The jail census by the Law Enforcement Assistance Administration of the Department of Justice revealed that 52 per cent of the 426,000 inmates in jails across the nation have not been convicted of any crime. Four out of five are eligible for bail but cannot raise the cash.

3. (a) true An ex-convict in New York State cannot work on any premises where alcohol is sold.

4. (b) 33

5. (a) true In Britain, addicts are treated as sick rather than as criminals.

6. (b) false The National Traffic Safety Bureau attributes 25,000 highway deaths to drunken driving while gun murders in 1968 were 8,870.

Convicts on Campus

NewGate Plan Gives Prisoners Opportunity To Get College Degree

Let Out for Schooling, Most Inmates Do Well; Tensions Take Their Toll, However

A Killer in Graduate School

10/4/71

By JOANN S. LUBLIN
Staff Reporter of THE WALL STREET JOURNAL

EUGENE, Ore. — ~~Bill, a 23-year-old~~ sophomore at the University of Oregon, leads a tougher life than most students.

Bill isn't allowed to take a drink. Driving a car would land him behind bars. On a date, he has to make hasty excuses to get back to his residence hall by 10 p.m. on weekdays or 11 p.m. on weekends. During the day, he must visit his counselor at the residence hall once every four hours.

That kind of life would be anathema to most of his classmates, but Bill isn't complaining. If he weren't in college, he'd still be in prison, serving the last months of a five-year sentence for armed robbery under conditions much more restrictive than those he must bear on the campus.

Bill got his break in the Oregon State Penitentiary, a maximum security prison in Salem, where he competed successfully for a place in federally funded Project NewGate. That permitted him to start college courses when he still was behind bars and, this past summer, to leave prison for the relative freedom of the Oregon campus on what is termed "school release."

Signs of Success

Project NewGate already shows signs of success in transforming hundreds of convicted felons into hard-working collegians. If its early promise is fulfilled, it will be a significant victory for prison reform; for many convicts, prison serves as little more than a school for advanced education in crime.

The project was started four and a half years ago by Thomas Gaddis, a psychologist and the author of "Birdman of Alcatraz," to give bright inmates a chance to earn a college degree while serving their sentences. The Federal Office of Economic Opportunity so far has spent $3.6 million on NewGate projects in six states: Oregon, Colorado, Kentucky, Minnesota, New Mexico and Pennsylvania. More than 600 convicts have taken part in the program.

Oregon's is the only NewGate project that permits prisoners to leave the penitentiary to live on campus before parole or discharge. The other states confine course work to classrooms behind the walls, although some finance on-campus study for parolees.

It took a while for Oregon prison authorities to buy the idea of turning loose men convicted of crimes as serious as armed robbery and murder. But only 31 or 20% of the 153 convicts in the program who have been released since 1967 have gone back to the penitentiary. Of those 31, only seven returned for committing new crimes; the rest were parole violators. About two-thirds of all prisoners released in the U.S. land in jail again for parole violations or new crimes.

A Killer Goes to Graduate School

NewGate projects in other states also report good results. In New Mexico and Kentucky, inmates have been paroled to college campuses since January 1969. Of 88 such parolees in Kentucky, only three have been charged with fresh offenses, and New Mexico's parolees have a perfect record; none of the 35 NewGates paroled from the Santa Fe Penitentiary to Eastern New Mexico University have gone back to prison even for parole violations.

The project in Oregon boasts some academic success, too. Ten NewGate students have earned bachelor's degrees from the University of Oregon and three other colleges, University of Portland, Oregon State University and the Oregon College of Education. One graduate's murder conviction was commuted by Oregon Gov. Tom McCall so he could use a $6,000 graduate-school fellowship in the East.

NewGate's costs are high, nearly $6,000 a year for tuition, room and board and other expenses for each campus resident. A frequent critic of the program, Democratic Congresswoman Edith Green of Oregon, has argued that the cost is "a very considerable expenditure for a limited number of people."

Mr. Gaddis, the program's founder, argues that the cost of not rehabilitating a convict is even greater; processing one felon from the time of his arrest to the expiration of his prison sentence may cost as much as $25,000, he says. V. Lee Layman, director of the Oregon project, says that "we're dealing with 100% failures. So if we win any, we're doing something."

$40 a Month

Inside the prison, competition for the nearly 100 places in the program is intense; 20 prisoners apply for every opening. Applicants must be eligible for parole within three to five years. The program requires a transitional period ranging from six months to two years, during which the inmate takes courses behind bars and gets intensive counseling before he is allowed to leave prison and live on campus.

Some inmates view NewGate as one way to leave prison sooner, and to earn more money ($40 a month) than they're paid for washing uniforms in the prison laundry or sanding chair arms in the factory. But to Mike, a convicted embezzler who joined NewGate to "get out fast," the program now is "more than just a way out of here." With 130 college-credit hours for study in prison, Mike hopes for release to the Oregon campus soon to major in forestry.

Both inmates and program officials say the key to NewGate's apparent success lies more in individual counseling and group therapy than in the educational aspect alone. A clinical psychologist conducts therapy groups for the 50 or so NewGate students inside the penitentiary and for the 24 students on campus. The 1,100 regular inmates of the Oregon penitentiary share the services of a single psychologist.

Despite courses and therapy inside the prison, many NewGaters released to the campus find simple chores at first difficult—such as buying a pair of pants or finding the right bus route; many of them have been in institutions for years. A 23-year-old NewGater called

Please Turn to Page 17, Column 3

Convicts on Campus: Project Gives Inmates Shot at College Degree

Continued From First Page

Roger had no opportunity to live on his own as an adult until he joined the program; he had been in and out of correctional institutions since he was 12.

Roger set fire to his family's home, and two sisters and a brother died. His last seven years in the penitentiary were served for a second-degree murder conviction. When the stocky, dark-haird young man arrived in Eugene last March, he felt lost in a clothing store, bewildered by a restaurant menu and completely baffled by the array of dials on an automobile radio.

Sam, a 26-year-old NewGater, was surprised to find bell-bottoms the current vogue in trousers. Few people wore them three years ago when he entered prison for armed robbery. "If you don't wear them now, you're a 'narc' (narcotics agent)," he says. Though he does wear them now, he still gets mistaken for an undercover agent because of his out-of-style ducktail haircut.

NewGate officials concede that the transition from prison to campus life is abrupt. Nonetheless, the one-time burglars, robbers and check-forgers who make up a large part of the NewGate enrollment turn out to be surprisingly good students, because of their maturity and motivation. They're not in college simply "because their mothers told them to go," says Barre Toelken, an associate English professor who has been impressed by several NewGate students in his folklore classes.

The convicts have to budget closely to stretch their $40 monthly stipend to cover entertainment expenses, including dates. And NewGaters complain about their early curfew on dates. "All of a sudden, at the magic hour, you're a convict again," one says sourly.

Most Saturday evenings, parked cars crowd the shady street around "Aldergate," a residence that houses eight NewGaters (16 others live in a dormitory annex). Women drive to the houses for their dates because the convicts cannot drive or own a car. "I thought it was funny at first, going to pick up your date, when I was used to a guy coming for me," says Barbara, the 21-year-old bride of a NewGate burglar now on parole.

Barbara's husband, Ken, told her when they first met last January that he was a convict. She says that didn't disturb her. "This guy did this (burglary) before he met me," she says. "And, if he does it again, then it will hurt me. But right now it doesn't matter."

Still, many NewGaters have problems getting dates readily, and tension builds up over money and the pressure for good grades. "After six weeks, I was ready to go back," says Dick, a convict who once spent two years on Death Row. "I was scared to death (of women)," he says, and he was convinced that "everyone stares at you" in the student union cafeteria "because you're an ex-con."

The tensions have encouraged some NewGaters to run away from campus; eight, all together, have escaped. "All of those who left had very heavy personal hangups which they couldn't admit or deal with," says Steve Perry, a counselor.

Freedom—at a Price

Bail Bondsmen Wield Surprising Power, Stir Growing Controversy

Al Farb Can Determine Who Stays in Jail, Who Leaves; But System Is Changing

'Nice Present' for a Lawyer

By JONATHAN R. LAING
Staff Reporter of THE WALL STREET JOURNAL

INDIANAPOLIS—The burly, bearded youth accused of selling marijuana appears at the Marion County Municipal Court here. In minutes the judge sets his bail at $2,700. As the youth is led back to the lockup, he nods at his wife, who is dressed in an American flag print minidress.

Al Farb has never met the youth or his wife. But he watches the whole scene intently through the sunglasses he frequently wears indoors and out. Al is a commercial bail bondsman. The day before, the youth's lawyer had asked Al to bail out his client, who had just been arrested.

After the hearing, Al—that's what nearly everybody calls him—confides to a visitor that he has decided against bailing out the youth. "I don't like the dress his wife was wearing," he explains. "It was disrespectful of the flag.

Of course, Al and other bondsmen usually make decisions on less subjective grounds. But Al's snap decision — consigning the youth to remain in jail, points up the often surprising power of bondsmen over millions of Americans.

"Bail bondsmen in effect hold the keys to freedom for a sizable percentage of the approximately seven million Americans arrested annually," observers Richard Veldey, associate administrator of the Law Enforcement Assistance Administration, an arm of the Justice Department that assists state and local police and penal agencies.

In recent years, bondsmen like Al—and indeed, the whole bail system—have increasingly come under attack. For one thing, critics charge that bail discriminates against the poor. "Bail is in reality a system of preventive detention for the poor," insists Hans W. Mattick, University of Chicago criminologist and a former deputy jail warden. "The indigent defendant often languishes in jail for months unable to contribute to his own defense while the more affluent defendant, professional criminal and syndicate figure can usually find a bail bondsman."

Indeed, a government survey last year showed that over half of the more than 160,000 Americans in jail were in either the pretrial or preconviction stage. With the exception of a small percentage held without bail on capital charges, these thousands of unconvicted prisoners could well have been out on bail.

Some Blamed for Bribes

Moreover, critics charge that the bondsmen, who are central to the system, often bribe lawyers, policemen and jail guards to steer clients to them. In some instances, bondsmen have bribed judges to rig the setting of bail. A 1964 New York City Bar Association report on bail branded bondsmen as the single most corrupting factor in the administration of criminal justice.

Yet, unknown to most people, these same bondsmen have powers of arrest and interstate retrieval of defendants that exceed those of law officers. In retrieving bail jumpers, bondsmen can use force with little accountability.

With criticism of the bail system mounting, courts are making it easier for defendants to obtain bail. Increasingly, defendants are released without bail altogether. As one result, many believe bail bondsmen are a dying breed. In Illinois, they have practically disappeared. And in such large cities as New York and Washington, their number has declined sharply in the last five years. But bondsmen still play a crucial role in most areas.

Such is the case here in Indianapolis, where Al Farb and about two dozen other bondsmen still operate from shabby storefronts near the city's police headquarters. A look at Al's operation reveals a good deal about the little-known but important world of the bondsman.

Planned to Be a Lawyer

At 66, Al has been a bondsman since 1927 when his father's death forced him to drop out of college and take over the family bail bond business. "I'd planned on being a lawyer, but with my mother and a younger brother and sister to support, I had to quit school," he says. Al's father, Sam, was an immigrant who started selling tamales and frankfurters from a stand near the old courthouse here.

Al's routine has changed little since 1927. By 8:30 each morning, Al and other bondsmen crowd the hallway of the city's municipal court where people arrested the previous day come up for bail hearings. Though the court session doesn't begin until a half-hour later, the bondsmen are already busily buttonholing lawyers and huddling with relatives of the prisoners to line up new business.

The origin of Al's power and business, of course, is that many defendants don't have the money or connections to raise bail money. Bail, which traces its origins to medieval England, is a form of financial guarantee designed to insure a defendant's appearance at trial. It can vary from as little as $15 for a minor traffic offense to more than $500,000 for serious crimes when the risk of flight is great.

In return for a "premium" or fee (in most states, 10% of the bail), bondsmen like Al agree to accept liability for the full amount of the bail if the defendant fails to appear for trial. Like most bondsmen, Al acts as an agent of a bonding and surety company that underwrites construction and performance bonds in addition to bail bonds.

Al's company, Indiana Bonding and Surety Co., headquartered here, has about 30 bail bond agents and total bail bond liability of

Continued From First Page

more than $3 million. In exchange for the company's backing, Al pays Indiana Bonding half of the 10% fee he charges on bail bonds. He is also liable to the company for any forfeitures of bonds he writes.

The industry has its financial risks. For instance, earlier this year, United Bonding Insurance Co., a large national bonding company headquartered in Indianapolis, went into receivership—in part because of a number of bail bond forfeitures. In addition, many states have loose financial requirements for bonding concerns, so failures among surety companies aren't unusual.

But Al has few bail forfeitures because he is careful to avoid defendants whom he considers to be "bad risks." Al considers screening of risks the bondsman's most critical and difficult task.

By securing releases without bail for many of the "good risks" who once would have used bondsmen, Indianapolis's year-old bail commission has made screening tougher. "The commission has really made us scuffle for business," Al says.

Al's standards for judging criminals may seem strange. The bondsman cares little about the seriousness of the charge and is mainly concerned with the likelihood of flight. Over the years, Al has gladly made bond for dozens of murderers, rapists, professional criminals and narcotics dealers.

In fact, Al prefers the real professional criminal. "They know the rules of the game and usually don't jump bond," he says. The ordinary citizen may dread the Mafia, but Al says defendants with Mafia connections are among the most gilt-edged risks and he has bailed out many over the years. "The syndicate boys from Chicago mostly call me to make bond on their gamblers," he says. "I've always found that a gambler's word is better than a banker's."

Al carefully considers factors like a defendant's employment record and length of residence in the area. "I try to determine a guy's ties to the community and the odds of his not appearing," he says.

Shuns Panthers, Hippies

But some of Al's decisions are emotional too. The bondsman refuses to bail out Black Panthers and other black militants because he considers them "subversive." He shies away from "hippies" ("I don't like their philosophy"). Bail critics have long argued that such summary rejections on the grounds of creed or life style are common and illustrate a major defect of the bail system.

On large bonds, Al usually demands collateral. He required a pledge of $100,000 worth of real estate as security on a $75,000 bond he once posted for a local physician charged with an abortion death. (This was Al's record bond.) But as most of his clients are poor, Al can obtain collateral on fewer than one-third of his bonds.

In most cases the short, slightly-built bondsman must rely simply on his instinct. In one typical interview in the Marion County Jail, a prisoner in his early 20s tearfully begs Al to guarantee his $5,000 bail on a check forgery charge. Under Al's insistent questioning, the youth admits passing the forged checks for spending money but says he wants to settle down, find a job and make restitution for the checks.

At the same time, the youth concedes he has never held a full-time job because of laziness. He also says he came from a broken home, made several runaway attempts as a teen-ager and has an older brother in a mental institution.

Despite the prisoner's vows to settle down, Al decides against guaranteeing his bail. "with no job or strong family ties, the kid is a poor risk," he explains. "You can't afford to get sentimental in this business."

Though he scrutinizes clients carefully, Al is always eager for new business. For this he needs connections. For one thing, bondsmen depend on criminal lawyers for nearly all their referrals. For another, close ties with the police often prove invaluable in obtaining information and aid in tracking down bond jumpers.

So Al eagerly courts people who can help him. Recently a sheriff's policeman stopped him in a corridor of the county jail and casually mentioned a coming police benefit. Al quickly bought two tickets. Later Al dropped by the chambers of a criminal court judge to hobnob with the judge about the stock market. He never fails to send "a nice present" when a criminal lawyer or a member of a lawyer's family marries. "You've got to do right by people if you expect them to do right by you," he explains.

The toughest part of the business is tracking down bond jumpers. Al has traveled all over the United States hunting fugitives. "A bondsman can't afford to get the reputation of being soft or pretty soon all his defendants will start skipping bail," he explains. "My clients know that I'll go to any length to bring them in."

Since 1960, only five fugitives have evaded his capture, though dozens have tried, Al claims. In many cases, relatives or friends of bond jumpers reveal the fugitives' whereabouts—especially if they have furnished collateral on the bond. "Understandably, relatives are more helpful when I have a lien on their homes," Al says.

Effective "Feelers"

In tough cases, Al routinely pulls strings to get federal authorities here to issue federal flight warrants for the fugitives. The warrant brings the FBI into the search and also results in national circulation of the fugitive's picture and description. Al also "puts out feelers" to numerous contacts in many fields, including the underworld. This personal network sometimes proves surprisingly effective.

For instance, a tip from an Indianapolis mail inspector helped Al track down a man charged with a knife assault who had jumped a $5,000 bail bond. Several weeks after the man's disappearance, the inspector told Al that the post office had received a request to forward the fugitive's mail to a post office box in Los Angeles. The next day, Al flew to Los Angeles and staked out the box with an off-duty Los Angeles policeman he had hired. "It was only a matter of a couple of hours before the guy showed up," Al said. "He was so amazed to see me that he surrendered as meekly as a lamb."

Al claims that he avoids strong-arm tactics in capturing bond jumpers. Though he owns two pistols, he says he last fired a gun in 1955 when a bond jumper tried to speed away from Al on a deserted Indianapolis street. "I hit his rear-view mirror and the guy got so scared that he crashed his car into a Chinese restaurant," Al recalls with a chuckle. "A policeman who happened to be driving around the corner then nabbed him," the bondsman added.

Power to Strong-Arm

But bondsmen have wide powers to use strong-arm tactics if they choose. Contracts with clients are open-ended on this count. For instance, Al's clients "waive extradition proceedings" and "consent to the application of such force as may be necessary to effect their return" if they jump bond and leave Indiana. "By virtue of their private contract with bailed defendants, bondsmen have greater powers than even law officers," observes John J. Murphy, University of Cincinnati law professor.

While state law officers are subject to criminal prosecution unless they fire in self-defense, bondsmen can use deadly force even on persons charged with misdemeanors. The reason is that there are no state laws governing bondsmen's power of arrest.

Bondsmen arrests are sometimes bloody. Last May, two bondsmen shot a Cincinnati bond jumper to death as the fugitive's eight-year-old son looked on. One of the bondsmen also died in the shootout. The fugitive had jumped bond after losing an appeal of a 13-month sentence for attacking a policeman during a racial disturbance.

Though the bail business can involve truly grim incidents, Al says it provides him a "nice living." In an average year, he writes about 1,500 bonds or about 30 a week. Out of this income, he pays his 72-year-old brother-in-law and another assistant to man the office.

Many bondsmen fear that their whole industry may soon be part of the past, too. The 1966 Federal Bail Reform Act gave federal courts discretion to allow criminal defendants to post only 10% of their bail bond with the court rather than the full amount. If the defendant skips bail, he is liable for the full amount. But unlike a bondsman's fee, the 10% deposit is returned following disposition of the case when the defendant appears on schedule. Some states have also passed laws encouraging similar—or more liberal—practices.

Moreover, New York, Washington, D.C., Des Moines, Indianapolis and a number of other cities have established special bail commissions to interview newly arrested defendants and recommend release without bail for those deemed "good risks."

"The bail bondsman is an anachronism and is slowly passing from the scene," says the University of Cincinnati's Prof. Murphy. But in most areas, he adds, they still play a "crucial role."

Judges Across the U.S. Campaign for Reforms In the Nation's Prisons

11/3/71

Some Systems Are Declared Unconstitutional; a Result: More Probation Ordered

'Filthy, Oppressive, Shocking'

By PAMELA G. HOLLIE
Staff Reporter of THE WALL STREET JOURNAL

PHILADELPHIA — Holmesburg County Prison here is much like California's San Quentin and Soledad, New York State's Attica and many other overcrowded and strife-torn penal institutions across the nation. Black prisoners rioted at Holmesburg on July 4, 1970. Hard drugs are said to be in plentiful supply within its walls. Homosexual assaults by older prisoners on younger inmates are commonplace.

But Holmesburg has one distinction shared by only a few other prisons: Its penal system has been declared unconstitutional.

After reviewing conditions at Holmesburg last year, a three-judge panel of the Philadelphia Court of Common Pleas declared that sentencing anyone to the institution would violate the eighth amendment to the U.S. Constitution, which prohibits "cruel and unusual punishment." The judges' decision was upheld last month by the Pennsylvania Supreme Court, one of whose members stated that "many of the prisons today are filthy, unhealthy, oppressive and often shocking, and for various reasons, the safety and security of many inmates are sometimes in jeopardy."

"Prisons aren't supposed to be torture chambers," says Judge Robert N. C. Nix Jr., presiding judge in the lower court decision. "The separation from society is supposed to be punishment enough."

Bread and Water

The Pennsylvania jurists weren't the first to reach such a conclusion. In 1969, Arkansas Judge J. Smith Henley declared the entire penal system of his state unconstitutional. Subsequently, judges in Florida, West Virginia, California and Illinois have also ruled that various institutions in their states were meting out cruel and unusual punishment.

Only last weekend, U.S. District Court Judge Robert R. Merhige Jr. ruled the Virginia state penal system was in violation of "the most common notions of due process and humane treatment." The ruling was issued in response to a class-action complaint filed a year ago by five inmates of a state prison in Richmond.

Virginia's 5,700 inmates had been subject to bread-and-water diets and such punishments as being chained, handcuffed or taped to their cell bars, Judge Merhige says. Other methods of punishment, including nudity and solitary confinement, "have been a consistent course of conduct by prison administrators and those beneath them," the judge said in his opinion. Judge Merhige ordered the cruel and unusual punishment practices to stop immediately and further ordered hearings on prisoner complaints to be heard within 30 days.

It isn't yet clear whether such decisions will hasten widespread reform. No prison declared unconstitutional has yet shut its doors. In fact, state boards of corrections in many cases continue to assign convicts to these institutions because the states are without funds to build new facilities. So far, no judge has acted to ensure widespread enforcement of his order. And while two Holmesburg inmates were transferred to other institutions following the unconstitutionality ruling, few other Holmesburg prisoners have sought similar moves. One reason: A distant prison would be more difficult for visitors to reach.

Growing Use of Probation

But outcries from the bench have brought some positive results. Judge Henley's threat to close down the Arkansas penal system "unless conditions at the penitentiary farms were brought up to a level of constitutional tolerability" did result in the elimination of the "trusty" system and the hiring of better trained guards. The trusties—prisoners entrusted with the duty of guarding their fellow inmates—had been accused of beating prisoners, distributing and profiting from liquor and drugs, and shirking their duties.

Perhaps the most striking judicial change prompted by prison conditions has been the growing use of probation as an alternative to prison sentences. In fact, judges throughout the country are refusing to sentence convicted criminals to prisons where they feel conditions would hamper or preclude rehabilitation. In one illustrative case, a Chicago judge recently placed an 18-year-old convicted robber on probation because he feared the man might become a homosexual if sent to prison.

Judges have traditionally placed first offenders on probation; however, they are now extending this privilege to some recidivists. "Judges recognize that throwing men into holes often compounds the problem and simply isn't a legitimate means of punishment," says Leo Catsonis, the West Virginia attorney whose legal victory resulted in the state penitentiary being declared unconstitutional.

Judge Robert Evans of the Recorders Court in Detroit says, "Sometimes I look into the defendant's eyes and I think what a sentence in prison will really mean." As a result, he says he often opts for probation. And Judge Robert Drew of the municipal court of San Francisco says, "I view a prison sentence as a last resort."

From a statistical standpoint, the Philadelphia Department of Probation says judicial disenchantment with the penal system is largely responsible for a 38% increase over the past year in the number of people on probation. Last year, Philadelphia judges granted probation to 44% of the defendants they found guilty. Furthermore, the rate in some cities is as high as 50% or more.

Whether it be increasingly lenient attitudes toward probation or not, the prisoner population has markedly declined over the past few years in some states. New York's Department of Correctional Facilities says its prisoner population has dropped to 12,800 this year from 19,213 in 1960. In California, the number of prisoners has fallen to 21,502 from 28,000 in just two years.

Many legal authorities contend, however,

Please Turn to Page 18, Column 4

Legal Action: U.S. Judges Campaign For Prison Reforms

Continued From First Page

that these declining figures in most cases haven't resulted in better conditions for those who still are in prison. Some prisons have simply closed off older wings, perpetuating overcrowded conditions in the rest of the facility. And declining prisoner numbers in other institutions have been more than offset by huge numbers of detentioners (untried persons who are awaiting trial but can't raise bail). At Holmesburg, for example, about 800 of the prison's 1,300 inmates are detentioners.

Few deny that most prisons are dangerously overcrowded. Nevertheless, judicially inspired reform in this and other areas of the penal system is viewed with alarm by many police officials and prosecutors. Relaxed stances toward probation, they say, often mean that dangerous criminals escape punishment.

Here in Philadelphia, Assistant District Attorney Paul Michel complains that a man with nine prior arrests for assault, robbery and rape was recently placed on probation after a conviction for armed robbery—although the crime is supposed to carry a mandatory prison sentence. "The judge felt that incarceration wasn't therapeutically helpful to the man," Mr. Michel says.

"Judges think it's fashionable to be lenient and liberal," complains Winston Moore, director of the Cook County, Ill., correctional department. "If judges keep putting everyone on probation we'll soon be out of business."

In fact, such decisions do mark a significant departure from the traditional closed-mouth approach of judges in the discussion of penal affairs. "Courts, as a rule, are like Victorian children—they speak only when spoken to," observes Judge Edmund B. Spaeth of Philadelphia's Common Pleas Court. Today, however, some of the loudest calls for penal reform are coming from the judges themselves.

Judge Israel Augustine of the New Orleans District Court, for example, feels so strongly about the need for penal reform that he has publicly threatened to resign unless prison conditions in his area are improved. "The system is medieval and archaic," Judge Augustine says. "I can't under my oath of office tolerate the situation as it is."

An Experiment in 'Prisoners' Rights'

W-SJ 4/6/72

By ALAN L. OTTEN

Politics *and* People

WASHINGTON—The guards at the youth prison here were supposed to search mail only for contraband. The young prisoners were convinced, however, that the guards were reading much of the mail too, and even destroying some of it.

So they complained to the Center for Correctional Justice, and the center negotiated an agreement with the prison officials: There would be no more search of outgoing mail, and incoming mail would be examined only in the presence of an inmate representative.

The center, a half-dozen dedicated lawyers and other professionals plus another half-dozen equally dedicated law students, has for almost a year now been carrying on a unique and widely watched experiment here: Trained outsiders listen to the legal problems of youthful offenders, and then negotiate solutions directly with prison authorities.

The Only Hope?

"We are trying to develop some mechanism to resolve grievances and change the correctional system without extensive litigation and without violence," declares Linda Singer, the dynamic young lawyer who heads the project. It's still too early to assess results with certainty, but she believes the project is making good headway, and at least a few District of Columbia government officials agree. "This approach may even be the only hope of working our way out of the prison mess," asserts one Singer partisan.

In a way, the center's team, which includes a former offender who has proven particularly valuable in understanding prisoner attitudes and winning prisoner confidence, fills the role of the ombudsman or inspector, which a number of foreign countries have long provided their prisoners. The idea is just beginning to be tested in U.S. prisons, however, and the district experiment is the only one where outsiders do the job. Some 20 states and cities have written or sent officials for more information about its operations, and a couple are in the process of setting up programs modeled on the D.C. pattern.

"When we went to the Office of Economic Opportunity a year ago for money to finance this, it was a revolutionary idea," says Mrs. Singer, who with law partner Ronald Goldfarb spent three years researching a forthcoming book on American prisons. "It's amazing how much attitudes have changed in a year—even before Attica, but especially since." She cites Chief Justice Warren Burger on the need for "a simple and workable procedure by which every person in confinement who has, or thinks he has, a grievance or complaint can be heard promptly, fairly and fully."

Right now, there's little law or administrative practice governing prisoner rights, and while the volume of individual prisoner suits and class actions is rising rapidly, these are still a frustratingly slow and often expensive remedy. Even when judges do order some very specific changes, there's frequently little follow-through. Prisoners are understandably loath to complain when these orders are ignored, and judges are understandably loath to order sanctions against prison officials.

The center, a non-profit organization set up specifically to carry on this experiment, won cooperation from the District Youth Services Division to work with the young (18 to 26) offenders in the local prison system, about 1,100 in all. The team, both full-timers and law student aides, go through intensive preparation, including (for the men) a day and a night as "prisoners" in each facility they will cover.

So far, they have handled more than 500 cases, and the workload trend is steadily increasing. The young law students, who do most of the initial interviewing and screening, have set office hours for listening to complaints in each prison, halfway house or parole office, and inmates can also phone the center for help. Still other cases are referred by parole officers or prisoners' relatives or friends.

Basically, the program offers three types of legal services. Prisoners may feel they were tried or sentenced unfairly; if the interviewer agrees, he refers them to the district-supported Public Defender's Service for action. Or prisoners need help with some civil problem—to win or contest a divorce, protect property from repossession, check on custody arrangements for children. Here the center's law students refer valid cases to the government-supported Neighborhood Legal Services for help.

The most novel part of the program, however, deals with individual or group complaints about prison conditions. Here the project team investigates and tries to work problems out directly with prison officials. Though the program provides for outside mediation

or binding arbitration if needed, these haven't yet been used.

Most individual prisoner complaints are handled by the law students and the ex-offender, with supervision from the full-time center staff. A prisoner wants to transfer to another institution, or he doesn't want to be transferred. Another isn't getting out when he thinks he was supposed to, or wants more information than he has been given about his parole conditions. In one case, a student arranged a long, therapeutic talk session between an inmate and an official who the inmate thought was persecuting him.

Group complaints are normally handled by Mrs. Singer and one or two colleagues, meeting with a committee of prison officials and selected inmate representatives. Written agreements have actually been negotiated in a dozen different areas—allowing Black Muslims to hold religious services, extending visiting hours at the youth facilities, lengthening hours for sick call and guaranteeing more direct access to doctors in emergency cases, getting soft drink and candy vending machines in visiting areas.

Getting Results

"We have to produce results rapidly enough to convince the prisoners it's to their advantage to work with the system," Mrs. Singer notes, "but we also have to show the prison authorities that the kind of changes that are made are ones they can live with."

She gives high marks to most of the officials who have worked with the project, "because it's never comfortable or easy to have outsiders come in and tell you what you're doing wrong." One basic argument she uses to win their cooperation is that change is coming anyhow—that courts will force it on them if they don't do it themselves.

She also contends that negotiations will greatly reduce the number of suits that prison officials would otherwise have to take time and effort to defend. "Absolutely because of us," she proudly proclaims, Youth Services is the only part of the district prison system that hasn't yet been hit with a prisoner class action to change disciplinary procedures.

Another argument that she employs only occasionally and obliquely may, however, be even more persuasive with the authorities: Intercession of this sort can provide a vital safety valve to prevent explosion and violence. "Correctional officials all over the country are terribly nervous about riots," she declares, "and would be willing to cooperate with any means we can figure out to get outside help to prisoners and to create legal alternatives to what we have seen."

Relations with officials haven't been uniformly easy. "The staff would clearly prefer that we spend more time on prisoners' personal legal problems, and less on administrative complaints," Mrs. Singer concedes. Most D.C. government officials shy from discussing the project, an admittedly controversial subject among many prison personnel, but one high-ranking official gives it top marks. "Linda has handled things pretty well," he says. "The great appeal is that this helps with inmate tranquility and it helps keep things out of the courts. Those aren't bad helps."

As for project relations with the prisoners, Mrs. Singer believes "they realize we will find some of their complaints unjustified, and that sometimes we won't be able to do anything even about some of those we find justified. But they also realize we're getting quite a bit done." And, she contends, "it's giving people who have only seen law as an enemy a chance to use it for their own benefit."

More will be known soon, when the project takes a detailed poll of prisoner attitudes, and does other evaluation of first-year results. Of one thing Mrs. Singer is already sure, however: The ombudsman role must be carried on by outsiders. "No group that works for the prison system is going to have any credibility with the prisoners," she flatly asserts.

Can the ombudsman approach work equally well with adult prisoners? Perhaps even better, Mrs. Singer suggests. Older men not only are more sophisticated and better used to bargaining and negotiation, but they have far more at stake. Young offenders are in here for an average of only nine months, and may fear that complaining will jeopardize chances for early departure. Most older men are serving substantially longer terms, and thus are usually more interested in trying to improve their conditions.

New Legislation Needed

New legislation may be needed to clarify the access rights of outsiders, Mrs. Singer is inclined to believe. The local project, she says, operates in one of the country's better prison systems; "the greatest need is obviously in the worst systems, and that's probably exactly where they'll be most resistant to letting in outsiders."

Can the ombudsman-outsiders remain neutral, or will they inevitably become automatic advocates for the prisoners, and thus build resistance among the prison personnel? One theory is that they might become increasingly impartial as the worst conditions are gradually remedied, and the prisoner complaints move into grayer areas. So far, though, the project's experience has been the reverse, Mrs. Singer says; the law students and other project members resolved to be impartial, but often have become more and more partisan "as they don't see enough happening fast enough."

"This is the crucial question we must answer before we're through," Mrs. Singer observes. And she honestly adds: "I don't think we've really answered that ourselves yet."

Mr. Otten is chief of the Journal's Washington bureau.

Adm. Justice

Is LEAA a Flop?

W-S-J 5/16/72

Democratic members of a House subcommittee last week endorsed a report that pronounces the Nixon anti-crime program a failure, finding it shot through with waste, inefficiency, and corruption. The report catalogues questionable disbursement practices of the Law Enforcement Assistance Administration (LEAA), an arm of the Justice Department, as well as dubious spending practices by state and local law-enforcement agencies.

Well, one might say, it's an election year. The Democrats could not be expected to pronounce LEAA a model of efficiency even if it were, which it isn't. Even so, there is more here than meets the eye, more at issue than simply presidential politics. What is developing is a classic struggle between Democrats and Republicans over the strength of the central government, a struggle that has taken various forms throughout the republic's history and now focuses on the President's decentralization program. A bit of recent history explains why.

In 1968, with Republicans vowing to make "Crime in the Streets" a principal issue, Lyndon Johnson rushed forth with a plan to spend several hundred millions a year to aid local law enforcement. His proposal would have required state and local police, court, prison, and parole agencies to apply directly to the Justice Department for funds to pay for specific, approved projects. House Republicans (backed by Southern Democrats) insisted the effort be decentralized through the "block grant" concept. Under this system, each state would submit an overall plan on how it would spend its share of the total in the federal kitty. It would not be necessary to set up another giant federal bureaucracy to oversee the program. The states would be chiefly responsible for setting priorities and spending the funds wisely.

The liberal Democrats were aghast at the prospect of turning all this political power over to the states, and predicted waste, inefficiency, and corruption unless the federal government maintained direct control. Among those in the forefront arguing this line was Rep. John Monagan, Democrat of Connecticut. He lost, and LEAA was set up along the lines designed by the House Republicans. Mr. Monagan, chairman of the subcommittee whose Democratic members last week pronounced LEAA a failure, wants to replay the 1968 debate and this time get that political power back from the states.

That's fair enough. But the campaign is getting a bit nasty. Early last month, Mr. Monagan's staff leaked its hypercritical report on LEAA to Mike Wallace and the CBS television program "Sixty Minutes." Mr. Wallace accepted the report as gospel and took his cameras around the country to illustrate the flaws in LEAA. Republicans charged that the program was carefully edited to eliminate any evidence that did not jibe with the theme of the Monagan report. They turned up one Florida police chief who spent 2½ hours being interviewed by CBS and "had nothing but praise for LEAA," yet who didn't make the show at all.

Nonetheless, the question is a valid one: "Is LEAA a flop?" And if so, has the block grant concept been so discredited that one might as well forget all the Nixon ideas about decentralizing government—including revenue sharing? Can it be that state and local agencies just cannot be trusted to spend money wisely unless, every step of the way, the federal government is dictating directions?

So far as we can tell, having watched LEAA's development with a curious eye on the block-grant experiment, the results are mixed but hopeful. Undeniably, considerable money was hastily spent in the first two years of the program, undoubtedly much of it wasted.

The biggest mistake the Republican administrators made at the outset lay in trying to prove too earnestly that Big Brother wasn't needed at all. For its first two years, LEAA's staff included but five auditors, wholly inadequate for an effort that has thus far dealt out $1.4 billion. Fortunately, after the initial experience, LEAA was reorganized under director Jerris Leonard, and the auditing staff of 50 is having more success in making sure the funds are being spent for reasonable purposes. It's now clear the program is operating far better than the Monagan report would indicate.

Even before the reorganization, the experiment showed promise. The process by which the criminal justice community sets priorities and divides up the money fairly seethes with contentiousness and compromise, signs of real decision-making at the local level. A social engineer in Washington would likely allocate the money differently. But past experience suggests more money is wasted by this method than by having local professionals decide and be held accountable.

Thus, while we can agree that LEAA had a shaky start, we think it's altogether incorrect to pronounce it a failure. Indeed, the preponderant weight of testimony from the criminal-justice and law-enforcement community indicates the Monagan view is a minority view.

High Court, 5-4, Deems Unanimous Juries Unneeded in Most State Criminal Cases

5/22/72

By LOUIS M. KOHLMEIER
Staff Reporter of THE WALL STREET JOURNAL

WASHINGTON — President Nixon's determined effort to turn the Supreme Court toward what he has termed "a conservative judicial philosophy" is beginning to pay off.

The court, in a five-to-four decision, held that the Constitution doesn't require unanimity of jurors for conviction in most criminal cases in state courts. The majority thus threw out the unwritten but ancient unanimity requirement that the court noted was established in common law long before the Bill of Rights was adopted.

Moreover, the jury issue drew from Justice Lewis Powell, one of President Nixon's appointees to the high court, a separate opinion that seemed to reopen the question of the extent to which the Supreme Court should apply the Bill of Rights to the states. The high court for several decades has been enlarging the application of the first 10 amendments to the states, and therefore restricting state criminal prosecutions and enraging judicial conservatives.

Court watchers agreed that yesterday's decision rejecting the unanimous-jury requirement in state criminal cases is one of the most important, if not the most important, high court decision concerning criminal rights since Mr. Nixon became President.

They further agreed that it will increase significantly the number of convictions in state courts. At present, only four states—Louisiana, Oklahoma, Montana and Oregon—are known to have laws permitting less than unanimous juries to convict criminal defendants, and officials here said these states retain the unanimity requirement in capital cases.

States' Expected Reaction

The experts expect, however, that many additional states will revise their statutes to allow convictions by nonunanimous juries in most criminal actions.

"Law and order," of course, was a major theme of Mr. Nixon's 1968 presidential campaign, and during that campaign and since he repeatedly has spoken out against Supreme Court decisions, handed down principally when Earl Warren sat as Chief Justice, enlarging defendants' rights in criminal cases. Mr. Nixon insisted that such decisions contributed to lawlessness by "handcuffing" police and what he termed "the peace forces."

The President sought to use his power of nomination to change the court and, after a series of bitter fights with the Senate, succeeded in naming four new members: Chief Justice Warren Burger and Justices Powell, Harry Blackmun and William Rehnquist.

All four, plus incumbent Justice Byron White, held that unanimous jury verdicts in state criminal cases aren't required by the Constitution. The decision philosophically is in keeping with, but will have far wider practical consequences than, the high court's 1970 ruling that juries constitutionally may be composed of fewer than the historic number of 12.

The majority opinion, by Justice White, didn't specify how many jurors' votes are required for conviction, nor did it say to what types of criminal offenses the decision applies. It merely upheld the constitutionality of Louisiana Law, under which major criminal cases, excluding capital cases, are tried by a jury of 12, nine of whom must concur to render a verdict. In capital cases, all 12 must concur.

In a companion case, also decided five to four, the majority opinion by Justice White upheld Oregon law requiring 10 votes of a 12-member jury for a verdict in a noncapital case.

The Sixth Amendment

The Sixth Amendment guarantees a right to jury trial in criminal cases, and other parts of the Bill of Rights provide other protections such as the right against self-incrimination. The Constitution doesn't say that jury verdicts shall be unanimous, but Justice White noted that the unanimity rule was "settled" in English law by the 15th Century as a means of insuring fair trials.

Despite the ancient history, the White opinion rejected the rule in a relatively brief opinion that simply held there isn't any good evidence that unanimity is essential to a fair trial. Therefore, the White opinion upheld the Louisiana statute, which justifies nonunanimous verdicts to "facilitate, expedite and reduce expense" in criminal trials.

Each of the four dissenters wrote a separate opinion.

Potter Stewart, frequently classed as a conservative, wrote the shortest and most sharply worded dissent. "The court has never been so impervious to reality," he declared, insisting that "only a unanimous jury can serve to minimize the potential bigotry of those who might convict on inadequate evidence or acquit when evidence of guilt was clear."

Thurgood Marshall's dissent said: "Today the court cuts the heart out of two of the most important and inseparable safeguards the Bill of Rights offers a criminal defendant: the right to a jury and the right to proof beyond a reasonable doubt."

William O. Douglas' dissent, after declaring that the majority had "discarded two centuries of American history," also insisted that abandonment of the unanimity rule will make it easier for prosecutors to establish proof beyond a jury's reasonable doubt. He said that "nonunanimous juries needn't debate and deliberate as fully as must unanimous juries," and unconvinced jurors can be ignored at whatever point in a jury's deliberations the necessary majority reaches a conclusion.

Federal Parole Board:

THE CAPRICE OF PUNISHMENT

By WILLARD GAYLIN

(Eds. Note: A federal prisoner has recently written us drawing to our attention the gross injustices of the Federal Parole Board. At present, Congressman Kastenmeier's Judiciary Subcommittee is conducting congressional hearings into the matter. We are fortunate to reprint portions of Dr. Willard Gaylin's research on this appalling situation.)

The United States Board of Parole is one of the great enigmas of our judicial process. Like certain passive but potent animal forms, it pursues its ends eschewing attack or defense, protected by the vagueness and lack of definition that permit it to rest safely concealed in a shadowy recess of the federal bureaucracy. Official boredom, public ignorance, and judicial apathy form its protective coloration.

In 1930 a central parole board located in Washington was created by Congress. At that time it was part of the Bureau of Prisons. In 1945 the parole board was ordered to report directly to the Attorney General, thus making it an independent agency in the Department of Justice. The board is both a policy-making and administrative body with jurisdiction over all federal prisoners. It consists of only eight full-time members appointed by the President for six-year overlapping terms.

This group of men, with the assistance of a small group of examiners, is called upon to make some *twenty thousand* separate decisions on applications for parole in a year. Since decisions require a concurrence of two, three, or more members, there are well over *forty thousand* individual "member judgments." These few men travel across the entire United States to examine the individual records, read the petitions, interview the parole applicants, presumably deliberate, set the date, and decide the terms of the parole.

All of which represents only one

(Continued on page 8)

The Caprice of Punishment

(Continued from page 1)

function to the parole board. In addition to considering applications for parole, the board administers parole for deportation; issues warrants for parole violators; conducts revocation hearings; promulgates rules and regulations for the supervision, discharge from supervision, or recommitment of parole prisoners. Further, only five members can devote themselves full-time to adult matters because three members of the parole board are assigned to juvenile crimes under the Federal Youth Corrections Act.

A prisoner generally becomes eligible for parole when he has served one-third of his sentence. a condition controlled by law and the sentencing judge. The remaining two-thirds of his time falls within the jurisdiction of the parole board. In terms of length of punishment, therefore, the board wields more power than the entire federal judiciary.

Both Carrot and Stick

The parole board will usually respect the intentions of the sentencing judge. The judge, being aware of this and of other standard parole procedures, will set sentence accordingly. The board, however, is not *legally* bound to attend the judge's wishes. When the political interests of the Attorney General's office demand it, the board will ignore both judge and precedent.

The uniform denial of parole to war resisters in 1966-67 is one flagrant example. The most extreme case could be seen in the treatment of the young conscientious objectors sentenced under the Youth Corrections Act. Under this act youthful offenders are given a long indeterminate sentence—from sixty days to six years (referred to by prisoners as "zip-six"). The intention of the act is to imprison a very young man for a minimal time, while imposing a long parole period. He thus quickly returns to society but remains under strict supervision. At the end of the parole he is rewarded by having his record expunged. Traditionally this procedure is routinely observed with cooperative prisoners. In all the cases of the imprisoned COs, however, a punitive parole board extracted a higher price under the Youth Corrections Act than if straight sentences had been given.

In at least one case a young CO was given this "zip-six" sentence by a judge who was sentencing older offenders to two-year terms. The CO was told that if he were "a good boy" he would be out in less than six months. He ended up serving double the time of his older colleagues—since he served at the discretion of the board.

In an interview with George J. Reed, chairman of the federal parole board, I asked why, with these "political" prisoners, the intention of the judge was ignored. I was told bluntly that after 120 days the judge loses jurisdiction over a case. Indeed, that is technically true, but normally his intention is not so readily disregarded. The parole board, while part of our judicial procedure, is nonetheless an arm of a political executive branch, and, as such, can use the scales of justice to balance political debts.

Why Parole?

The punitive aspect of our current judicial procedure is a tripartite phenomenon. The range of punishment is set by statute; when a law is passed, it defines what will be considered a violation of that law and indicates the range of permissible punishments. Thus, from the beginning, the implication is that the determining of punishment requires an understanding not only of the statute violated but of the nature of the violator and the conditions surrounding the violation. The range of sentencing, then, gives the judge a latitude in the second phase of the punishment procedure. The judge has discretion to decide each individual case and to allow for special considerations.

The parole procedure obviously is an attempt to extend justice beyond the point of trial. Its sole purpose would seem to be not law enforcement—which could be handled by alternating either the statutory penalty of the law or the sentence assigned—but rehabilitation. It gives the government an opportunity to evaluate the changed attitudes of a prisoner during the course of his incarceration. It allows for reward of "virtue" and punishment of "evil." Presumably, while it serves justice in the individual case, it also facilitates management of the imprisoned man by being a potent force of discipline. It is both carrot and stick. To accomplish this purpose, however, the parole board must define what is "evil" and what is "good." One would expect the board clearly and explicitly to state what is expected of all prisoners, and its basis for granting or denying parole in every individual case. Without rules it becomes difficult, arbitrary, and capricious to punish men for their violations.

Caprice

But, on questioning, members of the parole board deny even the existence of a general policy. They insist that each case is handled and adjudicated on an individual basis. Yet they refuse to indicate what it is they "individually" seek. The only published guidelines state that the decisions are made in such a way that they, "one, protect the public; two, conform to the law; and, three, provide fair treatment to the offenders."

But the very absence of standards violates fair treatment.

That this might be the case became evident to me during the course of research I conducted between 1967 and 1970 on imprisoned war resisters. I early became aware of the fact that all Jehovah's Witnesses in prison for violation of the Selective Service Act were routinely granted parole at fifteen to seventeen months. This was certainly reasonable, since they adequately satisfied the stated conditions for parole. But what was not understandable was that at the same period other Selective Service violators were routinely denied parole.

In an interview with an employee of the parole board, who demanded anonymity, this was conceded to be true. He stated that it was "the policy of the board" to grant parole only to Jehovah's Witnesses because they alone were considered to be "true COs."

When I asked Mr. Reed about board policy on these matters, he informed me that there was no such thing as "board policy" on any matter, that members function as individuals. This was astonishing. I pointed out that the statistics showed that Jehovah's Witnesses were granted parole while others were not, independent of which individual member of the parole board heard the case. He readily agreed to the facts but insisted that it was not "a matter of policy"—there was no such thing.

Of course there is such a thing as policy. Shortly after his appointment as chairman, Mr. Reed announced, in a dispatch reported in **The New York Times**, a new toughening-up policy. He proudly stated that since he had taken office, he had reduced the paroles granted from 45.2 per cent to 39 per cent.

The only conceivable reason for the board's failure to publish guidelines, for insisting, contrary to known facts, that it has no general policies, must be self-protection. As long as there are no rules, the board cannot be accused of violating them. If there are no precedents, there are no violations of precedent. The absence of rules provides an effective defense against accusations of bias or malice. Each man is sui generis, and the multiplicity of factors involved in the psychological judgments about the rehabilitation of any one man cannot be compared with any other.

This could offer a base for an equitable, if complex, system. It would demand the most detailed exploration of each individual case with some analytic finesse. But the board's procedure is no more equitable than its policy—or lack of it. Each man must be visited at his prison by one of the five members of the adult parole board, or by someone from the group of examiners shared with the youth division. No brief is presented, either by the institution or by the prisoner.

This is in itself disturbing, because prison files are not consistent or accurate records. I have seen black men listed as white, and Harvard graduates listed with borderline IQs. Knowing how difficult and time-consuming it

is to evaluate a man even from an accurate record, I was particularly dismayed when I was advised by an examiner that each man's record could be adequately appraised in five minutes. I required more than an hour for each individual record; on the other hand, I had to allow for their greater experience.

When I came to the interview it was another matter. I had already heard from a number of prisoners that the length of time varied from two to five minutes (and a board member stated the interview generally required less than ten minutes).

After the five- to ten-minute interview, which is referred to as the "hearing," the interviewing board member will then call Washington, where a colleague has presumably reviewed the record. If the colleague concurs, parole is granted or denied, and the matter ends there. Only if there is a disagreement will a third member be consulted. This is what is referred to as a majority decision.

The documents produced in the parole process are incredibly sloppy, often pencil-written, with erasures and misspellings. Opinions and justifications are rarely offered in any detail. What is presented is often capricious or even unconstitutional, such as listing under "liabilities" that a man has "not regularly attended Sunday church services." These are official, potentially legal, documents, and the worst I have ever seen in Washington.

There is, of course, no research division to review the board's methods. The board, unlike the Bureau of Prisons, sees no need for it. With such awesome responsibility, peace of mind alone would seem to demand it—but here self-confidence reigns supreme.

Nor is the composition of the board any assurance of diversity or independence. While it talks "multidiscipline," it appoints "penologists," and over the years the majority of board members have come up from the penal systems.

Prisoners without Voices

Parole board injustices are visited upon a group of people that have no representation. It is the problem with the prison system in general. Usually someone who goes to jail does not know anybody who "counts."

In addition, his very status as a prisoner works against his using the pitifully small resources available to him. It is possible for a prisoner to sue the parole board if he is denied parole unfairly. But given the fact that the same board will be reevaluating him later at another hearing, it is unlikely that he will bring suit.

If sufficient cases were to be taken to the courts, there is good legal opinion that the courts might act. Professor Davis, in his book, **Discretionary Justice**, offers one of the possible grounds for such action:

Because no one ever knows the reason for any decision of the board, no prisoner is ever told why the board has denied parole. . . . If he asks why, he is told that the board never gives reasons. If he presses far enough he may learn that the board itself does not know the reason . . .

The failure to state reasons has additional consequences. Even the most flagrant abuse of discretion is likely to go uncorrected if a board member is in such a hurry to get to his golf game that he votes in sixteen cases without looking inside the files; no one under the board system can ever know the difference, even though the personal liberty of sixteen men may be at stake. How could a board member have less incentive to avoid prejudice or undue haste than by a system in which his decision can never be reviewed and in which no one, not even his colleagues, can ever know why he voted as he did? Even complete irrationality of a vote can never be discovered. Should any men, even good men, be unnecessarily trusted with such uncontrolled discretionary power?

He concludes with the opinion that the board's failure to state reasons for its decisions constitutes a clear violation of the Administrative Procedure Act.

Perhaps the most encouraging recent development is a decision handed down last May by the United States District Court in Manhattan. Sitting in the case was Judge Marvin E. Frankel, who has earned enormous respect in the federal judiciary in a very short time. His decisions invariably show intelligence, care, open-mindedness, and, above all, a refined rationality. In the case of *Sobell v. Reed* (which challenged a parole board ruling denying Morton Sobell permission to travel to Los Angeles to give a speech to a Communist party group), the judge held that the parole board is, indeed, subject to review under the Administrative Procedure Act.

Judge Frankel found that the Board of Parole had violated the First Amendment rights of the plaintiff.

It will take more than one man's opinion to change the parole board. It will require a public awareness that crime and violence are not controlled by putting more and more people into prison for longer and longer periods of time; that you do not serve due process by mocking it; that men are not trained to value justice by being treated unjustly; that arrogance does not breed respect, nor humiliation pride; and that hope betrayed leads through despair to desperation.

The parole board will not change until the public becomes aware that the board is its servant, the prisoner its trust, and that justice is every man's comfort.

Reforming Reform

Massachusetts Official Turns to the Soft Cell In Fight on Delinquency

Training Schools Phased Out For 100 Halfway Houses; Critics Say Plan Coddles

Double Solitaire and a Scar

6/12/72

By LIZ ROMAN GALLESE
Staff Reporter of THE WALL STREET JOURNAL

SHIRLEY, Mass. — It was a dark, rainy night last December when 10 young men approached an isolated cottage at Shirley Industrial School, once reputed to be the state's toughest reform school. Armed with sledgehammers, they crashed through the front door, clattered up the wooden stairs and headed for the cells at the end of the long corridor.

The young men, once deemed incorrigible delinquents, had come to destroy the solitary-confinement cells where they had each spent up to several months as punishment.

When Jerome Miller, Massachusetts' 40-year-old Commissioner of Youth Services, gave the signal, they smashed the walls, the iron bars on the tiny windows and the entrance that once held a heavy steel door. "I worked myself to a sweat," says 19-year-old Mike. "I was kicking the walls from the inside, hammering them from the outside." Exhausted and relieved, the young men left the old cells a shambles.

The incident was symbolic of the closing of Shirley Industrial School that day. It was symbolic, too, of Mr. Miller's controversial plan, now almost completed, to close all Massachusetts "training schools," or reform schools, and to turn to small, unlocked homes, or halfway houses, each accommodating six to 20 youths.

Other States Experiment

Massachusetts pioneered in the use of reform schools more than 100 years ago, and most states now use them as the core of their programs of youth correction. But today a number of states are trying out new programs.

Florida is putting many delinquents in halfway houses rather than state schools. California is paying counties to parole lesser offenders and give them top-notch care. "Movement away from large prison-like institutions for youthful offenders is the current trend throughout the country," says Robert J. Gemignani, Commissioner of the Youth Development and Delinquency Prevention Administration of the U.S. Department of Health, Education and Welfare.

Here in Massachusetts, Mr. Miller's plan took hold in September 1970 with the closing of the Institute for Juvenile Guidance, at Bridgewater. (Mr. Miller has had a lock from an isolation cell there mounted on wood and placed on his desk.) Since then, Mr. Miller has closed the reform school at Shirley, the Residential Treatment Unit at Oakdale and the Lyman Training School. The only remaining reform school, the Lancaster Industrial School for Girls, is due to be closed this month.

For the bulk of the 1,200 to 1,500 juvenile offenders who are committed each year, Mr. Miller is relying on halfway houses in population centers around the state. The old reform schools were far from population centers.

Parole for Lesser Offenders

For 200 lesser offenders, Mr. Miller has started an intensive parole program. And for violent youths—the rapist, the arsonist, the murderer, the potential suicide—he is providing private psychiatric care in the setting of a group home. So far there is one such home, in Boston. It houses 20 youths. The home is kept locked. A resident's room is also locked if he has been acting violently. At the halfway house, on the other hand, there are no locks or barriers to fleeing.

An offender from a given community is commonly placed in a halfway house in that community. Generally, offenders are kept only three months, then are sent back to their family homes if the homes are considered stable. But youths will be kept longer than three months if they still need help or if there is no one at home who will care for them.

Mr. Miller's revolution against reform schools has touched off a storm of criticism. Lawmakers and politicians feared they would have fewer patronage appointments to make. And many sincerely doubt the wisdom of Mr. Miller's ideas. State Representative Robert J. McGinn declares, "Mr. Miller is moving much too fast in closing the schools. He isn't properly screening the children or the halfway houses. Conditions at some detention centers are unfit for human habitation."

Other opposition has come from community leaders who balk when "juvenile delinquent" homes are placed in their towns. Mr. Miller himself has been booed at town meetings and attacked repeatedly in the Boston press and by other critics on the ground that he is coddling criminals and hence is encouraging crime.

The Way It Was

Mr. Miller, a 10-year Air Force veteran who has a Ph. D. in social work from Catholic University in Washington, is a former associate professor of social work at Ohio State University. He took over as commissioner here in October 1969. Before then, the Massachusetts system exemplified the classic method of using only discipline and punishment to deal with delinquents. Mike, the 19-year-old who helped destroy the cells at Shirley, tells this story about that system:

At 15, Mike had been sent to Shirley for pushing heroin. Because the offense was a major one, he wasn't allowed to go home for Christmas, even after months of good behavior. So he ran away a few days before the holiday. He was soon found driving a stolen car and was taken back to the discipline cottage at Shirley. He was searched, hit, yelled at, stripped and thrown naked into a six-by-nine-foot solitary cell for being "unmanageable."

In the cell, which was equipped with one mattress on the floor, one sheet, and one blanket full of holes, Mike wasn't allowed to read, write letters, listen to a radio or even talk with inmates in the three other cells.

Mike spent several more weeks in the disci-

Please Turn to Page 23, Column 1

Reforming Reform: A State Official Tries Soft Cell in Delinquency Fight

Continued From First Page

pline cottage after his release from the cell. There, boys cleaned the kitchen in the morning and scrubbed cottage floors with toothbrushes. They spent the rest of the day sitting silently around card tables in groups of four, reading or playing cards.

At least once, Mike disregarded the no-talking rule. "I was playing double solitaire with another kid, and he cheated. I was so mad that I forgot I wasn't supposed to talk, and I exploded at him," Mike says. An irate guard immediately threw a chair at Mike, ripping the boy's upper lip. The wound left a scar.

That is Mike's version of life at Shirley in the days before Mr. Miller took office. But his life was changed dramatically one day, he says. One morning when the boys were sitting silently around the tables, he says, a new staff member entered the room, smiled and shouted, "I want everyone to start talking, screaming, clapping and running around." The new regime had arrived. (Today Mike is working full time for Mr. Miller's department. He's on the staff of the center that deals with violent youths.)

It's too early to gauge the results of the Massachusetts program. But Mr. Miller claims the rate of recidivism—lapsing again into criminal behavior—will be far less than the state's prior record of 60% to 80% for juvenile offenders. Mr. Miller says he hopes to drive the rate down to 30%. The national recidivism rate for juveniles ranges from 50% to 80%.

Qualitatively, Mr. Miller says, community-based homes have the advantage of providing on-the-spot counseling. He stresses that a relationship built by youngsters and counselors in such homes can be continued, informally and through parole programs, when homes are situated in the youngster's community.

He also cites cost advantages. According to the state, Massachusetts spends an average of $11,600 a year for each youngster placed in a reform school whereas the state's annual cost for each youngster placed in one of the small homes is $8,000 to $9,000.

The main hope of the new regime is the halfway houses, which are situated in about 75 communities. There are about 100 of them, run primarily by such groups as church and social action organizations, and most accept youths from sources other than the state. Given names like "Genesis II," "Acid" and "I Belong," and cheerfully decorated with home-made posters, candles and wall murals, they aim at rehabilitation without harassment. Some residents even attend school outside the home each day.

The Routines Vary

The daily routine in the halfway houses varies for each youth. In a home for 10 girls, 16-year-old June, a car thief and housebreaker, plays checkers with her counselor in the morning. The game is a form of therapy because June, a high-strung girl who insists on always being right, may learn from the game how to accept failure.

June spends the rest of the morning makeing paper flowers for a friend in the hospital and attends a private counseling session with her boyfriend after lunch. (She is pregnant, and the couple must decide, with help, whether to keep their baby.) A private tutor then brings June 11th-grade school work.

What keeps someone like June in line? The heart of many halfway house programs is a group meeting at which the residents pressure their peers into nondelinquent behavior. The group discusses daily behavioral problems, some as insignificant as a girl's forgetting to put out her cigaret. Residents are granted privileges in the house—the right to smoke, to be alone, to go outside—on the basis of their behavior.

The group-meeting technique teaches youngsters responsibility by first focusing on lesser examples of their own irresponsibility and then on more important ones, such as drug abuse. This therapy assures wary residents that someone cares about what they do, the theory has it.

Work Clothes and Status

At Hyde Park house, a Boston-based drug home, three boys and their counselor talk about a problem involving a new resident. A former heroin addict, 16-year-old Jimmy had himself committed after a pusher put a gun to his temple and demanded payments owed for drugs.

The evening session begins with Joe, the senior resident, accusing Jimmy of not asking for permission to change into his work clothes that day. As a new resident, Jimmy must ask permission for anything he wants to do. "You upset me! You haven't earned the right to do what you want yet!" screams Joe.

The counselor steps in. "You know you had to ask, and you didn't, Jimmy, and you're not feeling bad about it," he says. "What do you hope to achieve here?"

"Not to be afraid. To be honest with myself," says Jimmy, quietly.

"I don't believe a word of it," the counselor shouts. "What do you really miss the most here? Status? Because the truth is you can't take orders from anyone."

"Yes, I miss status," Jimmy says, grudgingly.

"But you've got to earn the status you want here," says the counselor. "Stop holding status as an image and concentrate on what you have to do to get it in fact."

Students Help Lesser Offenders

Mr. Miller's program for nearly 200 lesser offenders—the runaways, the truants, in-based

Massachusetts program. But Mr. Miller [illegible] the rate of recidivism—lapsing again into criminal behavior—will be far less than the state's prior record of 60% to 80% for juvenile offenders. Mr. Miller says he hopes to drive the rate down to 30%. The national recidivism rate for juveniles ranges from 50% to 80%.

Qualitatively, Mr. Miller says, community-based homes have the advantage of providing on-the-spot counseling. He stresses that a relationship built by youngsters and counselors in such homes can be continued, informally and through parole programs, when homes are situated in the youngster's community.

He also cites cost advantages. According to the state, Massachusetts spends an average of $11,600 a year for each youngster placed in a reform school whereas the state's annual cost for each youngster placed in one of the small homes is $8,000 to $9,000.

The main hope of the new regime is the [illegible]

What keeps someone like June in line? The heart of many halfway house programs is a group meeting at which the residents pressure their peers into nondelinquent behavior. The group discusses daily behavioral problems, some as insignificant as a girl's forgetting to put out her cigaret. Residents are granted privileges in the house—the right to smoke, to be alone, to go outside—on the basis of their behavior.

The group-meeting technique teaches youngsters responsibility by first focusing on lesser examples of their own irresponsibility and then on more important ones, such as drug abuse. This therapy assures wary residents that someone cares about what they do, the theory has it.

Work Clothes and Status

At Hyde Park house, a Boston-based drug home, three boys and their counselor talk about a problem involving a new resident. A former heroin addict, 16-year-old Jimmy had himself committed after a pusher put a gun to his temple and demanded payments owed for drugs.

The evening session begins with Joe, the senior resident, accusing Jimmy of not asking for permission to change into his work clothes that day. As a new resident, Jimmy must ask permission for anything he wants to do. "You upset me! You haven't earned the right to do what you want yet!" screams Joe.

The counselor steps in. "You know you had to ask, and you didn't, Jimmy, and you're not feeling bad about it," he says. "What do you hope to achieve here?"

"Not to be afraid. To be honest with myself," says Jimmy, quietly.

"I don't believe a word of it," the counselor shouts. "What do you really miss the most here? Status? Because the truth is you can't take orders from anyone."

"Yes, I miss status," Jimmy says, grudgingly.

"But you've got to earn the status you want here," says the counselor. "Stop holding status as an image and concentrate on what you have to do to get it in fact."

Students Help Lesser Offenders

Mr. Miller's program for nearly 200 lesser offenders—the runaways, the truants—is based chiefly on parole. Youngsters are entrusted to volunteers, largely college students. A volunteer accompanies a youngster to court, gets him any needed medical care, enrolls him in school, finds him a job. The program, started in the Boston area, is being extended throughout the state.

Not everything in Mr. Miller's program has gone according to plan. A co-ed halfway house in Topsfield evoked some of the criticism of Mr. Miller. The program was successful for a while, then suddenly failed. An observer says two violent boys, and the staff's failure to cope with this type of offender, did much to destroy the program. "Hard-core kids can really screw up a program that's just beginning," the observer says.

Within weeks after the house opened, the observer reports, the two violent boys persuaded some of the 16 other youngsters to be their allies. This small but forceful group refused to cooperate and threatened to attack anyone who confronted them at the meetings. "Staff members wouldn't back up kids who pointed the finger at them," says 16-year-old Micki.

Finally, Micki says, some youngsters brought drugs into the house; others raided a locked medicine cabinet; frequent fights broke out. "It got so bad that two girls began having sex with the guys on the living room floor," says Micki. The program folded in six weeks. Mr. Miller closed it himself.

Mr. Miller, who tends to pooh-pooh criticism, concedes that some drugs were brought into the Topsfield house but says that that wasn't a major problem. He concedes that fights broke out but says that that wasn't a big problem either. He explains the failure mainly in terms of "staff problems."

"There was trouble getting the staff together," he says. "Though dedicated, they were inexperienced in handling the problems that came up. They had a savior complex."

He says that after the program was closed for a week, another program, with different staff members, was opened and is still operating today.

Mr. Miller is quick to say that his ideas don't constitute an instant panacea for delinquency. But he insists that his way holds out hope whereas the old system doesn't. He says the reform schools nurtured many of today's adult prisoners. "The system is sick," he says. "It creates psychopaths."

Death Penalties Unconstitutional, High Court Rules

Immediate Effect Is to Void Death Sentences of About 600 Waiting for Ruling

Four Nixon Choices Dissent

6/30/72

By LOUIS M. KOHLMEIER
Staff Reporter of THE WALL STREET JOURNAL

WASHINGTON – The Supreme Court decided the ultimate "law and order" question by holding that capital punishment is unconstitutionally cruel and unusual punishment.

Over the dissents of all four of President Nixon's appointees, the five justices who were appointed by earlier Presidents joined in voiding the death penalty, as it historically has been applied under state and federal laws in murder, rape, treason and other capital offenses.

The issue produced nine separate opinions, leaving the precise meanings of the decision unclear in its application to all state and federal statutes and all capital crimes.

But there wasn't any doubt that the immediate effect was to void the death sentences of all of the approximately 600 defendants who have been sentenced to death in recent years and have been in death-row cells awaiting the Supreme Court's ruling. There haven't been any executions in the U.S. since 1967, and the death sentences of those who have been waiting presumably will be commuted to life imprisonment.

There was speculation in several of the dissenting opinions that state and federal governments might be able to write new, narrower death-penalty statutes that would win the approval of a high court majority. The speculators assumed that any such majority would consist of yesterday's four dissenters plus one or two of those who voted to void the death penalty, as it exists.

But the speculation is "difficult," one dissenter conceded, and, thus, yesterday's majority vote appears likely to abolish capital punishment entirely, at least until and unless President Nixon names a fifth justice or the present majority is overruled by a constitutional amendment.

A constitutional amendment appears unlikely at present, and would be strongly opposed by religious groups, political liberals and others who urged the Supreme Court to hold capital punishment unconstitutional. But the court's decision without question will be roundly condemned by many law-enforcement officials and political conservatives, who long have viewed the death penalty as the most fundamental deterrent to individuals who are potentially capable of committing murder and other heinous crimes.

Political Sentiment Growing

Moreover, political sentiment in favor of retaining the death penalty seems to have been growing in recent years, after a long period when the abolitionists were slowly gaining ground in state legislatures. For example, in New Jersey and California, where state courts threw out the death penalty, there currently are strong efforts to restore it.

But the high court's decision will thwart such states' efforts to restore old laws, as well as void apparently all of the death-penalty statutes currently on the books in 40 states and the District of Columbia. The decision seems also to invalidate sections of federal laws that prescribe the death penalty for various offenses, ranging from murder of the President or a member of Congress to aircraft hijacking and treason.

Whether any existing law or any new statute calling for the death penalty would win the approval of a majority of the present members of the court will have to await future decisions.

The five justices who yesterday held death-penalty laws unconstitutional as they exist at present were William O. Douglas, William Brennan and Thurgood Marshall, the court's liberal trio, plus Byron White and Potter Stewart. The latter two frequently vote with the Nixon appointees, and their opinions yesterday gave the dissenters hope of salvaging the death penalty in some form in future rulings.

Justices Brennan and Marshall alone wrote that the Eighth Amendment bars capital punishment for all crimes under all circumstances. Justice Douglas didn't go that far in his opinion, but also didn't suggest any circumstances under which he would find the death penalty to be constitutional.

Long Line of High Court Rulings

Justice Brennan wrote, and most of the other justices seemed to agree, that history doesn't offer any sure guide to the contemporary meaning of the Eighth Amendment as far as capital punishment is concerned. The death penalty existed when the Constitution was adopted and the Supreme Court never before seized any of the opportunities to strike it down. But Justice Brennan traced a long line of high court rulings that barred punishments inflicting pain and suffering on a defendant, and he noted approvingly a prior decision holding that the bar on cruel and unusual punishment must be interpreted according to "the evolving standards of decency that mark the progress of a maturing society."

The Brennan opinion, thus, held that punishment "must not be unacceptable to contemporary society," and "must not be degrading to human dignity." He wrote that, by contemporary standards, "death is today an unusually severe punishment, basing his assertion on statistics showing hat in recent decades actual executions have steadily declined. In the 1930s, executions averaged 167 a year and in the 1950s they declined to an annual average of 72, he said.

"The progressive decline in the infliction of death demonstrates that our society seriously questions the appropriateness of this punishment today," Justice Brennan concluded.

Justice Marshall reached much the same conclusions, but by a somewhat different route. Acknowledging that "capital punishment has been used to penalize various forms of conduct since the beginnings of civilization," he emphasized the moral aspects of the long controversy over such punishment and insisted that its abolition is "a major milestone in the long road up from barbarism.'

Violates Equal Protection Clause

Justice Douglas based his opinion on the conclusion that the death penalty, as it has been carried out, violates the equal-protection clause of the Constitution. Citing various statistics showing that relatively more blacks than whites have been executed for murder and rape, the Douglas opinion said: "It would seem incontestable that the death penalty is 'unusual' if it discriminates against (a defendant) by reason of his race, religion, wealth, social position or class."

Justices Brennan, Marshall and Douglas all insisted that there isn't any valid evidence demonstrating that the death penalty deters potential murderers and other criminals. The Brennan opinion, for example, said that, even if it is assumed that the death penalty is a superior deterrent than life imprisonment, "there is no reason to believe that as currently administered the punishment of death is necessary to deter the commision of capital crimes."

Justices White and Stewart voted against the death penalty on the ground that actual executions have declined to such an extent as to render the penalty itself unusually cruel. Justice White wrote that, "where the penalty is so seldom invoked, it ceases to be the credible threat essential to influence the conduct of others." Justice Stewart said it is "wantonly and freakishly imposed."

U.S. JAYCEES GET FEDERAL FUNDS TO PROVIDE
HELP FOR EX-OFFENDERS

WASHINGTON -- The U.S. Jaycees Foundation has been awarded a $305,119 Federal manpower grant to provide ex-offenders a variety of services through expanded citizen involvement in criminal offender rehabilitation efforts.

Secretary of Labor James D. Hodgson said the one-year program will stimulate voluntary action and bring together public and private resources to meet the needs of ex-offenders and inmates of correctional institutions.

He pointed out that the project responds to President Nixon's appeal for greater voluntarism among Americans and part of the continuing effort by the Administration to provide meaningful services for prison inmates and parolees.

"Community involvement in the rehabilitative services that help ex-offenders become responsible, contributing citizens is the key factor in this project," Hodgson said.

"Training programs alone cannot succeed -- we need the human element that is available only through community involvement," he said.

In addition to direct assistance to ex-offenders and inmates, the Jaycees will also provide training to State and local Jaycee chapters and other public and private groups so they may be better equipped to determine and provide services needed by ex-offenders and inmates of correctional facilities.

The program to expand citizen involvement in helping the ex-offender make a successful re-entry into society will be carried out through the Jaycees' established network of volunteers, communications, and access to resources.

The Jaycees, one of the largest professional volunteer organizations, will provide the following services during the one-year project:

-- Liaison between ex-offenders and community agencies providing such services as job counseling, health care, housing, transportation, budget counseling, and recreation;

-- Development and distribution of training and information materials through a national center;

(MORE)

-- Liaison between local Jaycee chapters and "in-house" prison chapters, including liaison with personnel of correctional facilities;

-- Assistance to State and local Jaycee organizations in providing adequate service programs for ex-offenders;

-- Liaison between Jaycees and public and private agencies to provide a continuing follow-up of progress by ex-offenders.

The Jaycees' program is funded under the Manpower Development and Training Act which is administered by the Manpower Administration, U.S. Department of Labor.

The Jaycees' project is in line with the Labor Department's goal of setting up a national comprehensive system of manpower services for inmates, ex-offenders, and others who are less competitive in the job market because of legal infractions.

Behind Bars

Critics, Inmates Assert That the Nation Is Ignoring Overcrowding and Poor Facilities of Small Jails

By JACK KRAMER
Staff Reporter of THE WALL STREET JOURNAL

LAS VEGAS, N.M.—Eulogio Duran has one ambition: He wants to go to prison.

"Prison is a plenty bad place," he recently explained to a visitor, "but it's better than this."

"This" is the San Miguel County Jail. And even the local sheriff agrees that a term in a federal or state prison is better than a stay in the San Miguel jail—with good reason. Food dangles from the jail's ceiling to keep it from the rats that, prisoners say, scamper through huge cracks in the crumbling walls. In winter, icy winds sweeping down off the Sangre de Cristo mountains rush in through broken windows, rustling ripped-open mattresses into which prisoners burrow to keep from freezing. In the summer, everything reeks of urine.

Unfortunately, San Miguel's jail is far from unique. In fact, as its condition suggests, while national attention is concentrated on state and federal prisons, the country's 4,037 local jails —which hold 45% of all prisoners—constitutes one of the gloomiest aspects of the penal picture.

"Jails are the weakest, most neglected link in our criminal justice system," says Richard W. Velde, assistant administrator of the Justice Department's Law Enforcement Assistance Administration. "On the whole, jails are brutal, filthy cesspools of crime."

Violence, Rape and Drugs

Problems common to all penal institutions —violence, homosexual rape, drugs, too little money and too many inmates—are often at their worst in municipal or county jails, which are least able to combat them. On the average, for example, jails are able to spend only about $1,046 annually on each prisoner, or about 55% of the $1,922 spent by state and federal penitentiaries. According to the nation's first jail census, completed last year, half of the jails have no medical facilities, 47 lack even an operating flush toilet and one in five is overcrowded—some of them seriously so.

Moreover, while state and federal prisons at least make an effort to keep inmates busy with such activities as making license plates or learning to cook, most jail inmates while away the days in complete idleness, lacking not only educational but even exercise facilities. And most jails, another survey showed, don't even have such basic operating necessities as plans for handling fires, riot or contagious disease.

Topping it off, says Mr. Velde of the Justice Department unit, jail personnel are "the most uneducated, untrained and poorly paid of all personnel in the criminal justice system—and furthermore, there aren't enough of them."

True, most jail inmates don't have to put up with their privations all that long: The average jail term is slightly less than two months, while the average prison stay is about 20 months. But penal experts say that plus for jails is offset by many factors.

One jail minus is the fact that while everyone in prison is a convicted criminal, more than half of those in jail are untried defendants —legally presumed to be innocent. They may be detained for months or longer simply because they cannot afford to post even a nominal bail. Moreover, 5% of the inmates are juveniles, two-thirds of whom are unconvicted and some of whom are under arrest for offenses that aren't adult crimes, such as possession of alcohol or running away. (In Conroe, Tex., last year, a 14-year-old boy in jail for truancy from school hanged himself.)

"It's not simply the injustice of throwing them in jail for such 'crimes', it's the contamination that's bound to happen when you throw them in with hardened criminals," asserts Robert Weddle, a professional jail consultant. According to the national jail census, 70% of all jails accept juveniles.

As a legal matter, the convicted criminals in jails are both misdemeanants—those guilty of lesser crimes—and felons awaiting transfer to the penitentiary or whose cases are on appeal. However, only about 7% of the estimated three million persons who pass through the nation's jails every year are charged with or convicted of felonies. For the most part, jails are catch-alls, playing social roles for which, critics say, they are ill-suited.

A way of Life

In many cities, the jail is primarily used to rid the streets of homeless drunks, to check prostitutes for venereal disease, and to punish gamblers, thieves and other petty offenders for which one brief jail term after another is a way of life.

(A Supreme Court decision handed down last month may change this situation, however. The decision gives the right of free counsel to any defendant who faces jail and who wants a lawyer but is too poor to afford one. Previously, misdemeanants weren't eligible for such counsel. In order to avoid the added costs of providing free lawyers in misdemeanor cases, some states have begun to rewrite misdemeanor statutes to eliminate the threat of imprisonment.)

However, despite rising concern, even outrage, by lawmen and penologists about the sad state of local jails and the damage they do, other attempts to reform thus far have a dismal record. "We are doing little more than fighting a holding action," says Michael N. Canliss, former president of the National Sheriffs' Association.

The traditional remedy is to replace crowded, dilapidated jails with new ones. But many authorities, such as Hans W. Mattick, co-director of the Center for Studies in Criminal Justice at the University of Chicago Law School and former assistant warden at Illinois' Cook County jail, contend this is a serious mistake. Too often, the real motive behind this approach is "monument building, contract letting and patronage" on the part of the sheriff and other politicos, Mr. Mattick says, and it usually amounts to "pouring the same old milk into new bottles while the "old continues to flourish."

What's really needed, critics insist, isn't more and larger jails but fewer prisoners. Yet many experiments that show promise of reducing jail populations, such as those given na-

tional publicity five years ago by the President's Commission on Law Enforcement and the Administration of Justice, tend to stagnate rather than spread.

The presidential commission, for example recommended "work-release" programs in which selected jail inmates would work in the community during the day, earning wages and paying for part of their keep, and then return to jail at night. Advocates say such programs have been highly successful since their introduction in Wisconsin nearly 60 years ago.

Yet a recent survey for the Justice Department discovered that work-release isn't widely used. Only 35 of the 50 states even have legislation authorizing it. In those states a total of merely 11% of the eligible jail inmates are participating, and most of the participants are located in five states.

The bail system in jails is also faulty, critics say. In the traditional bail system, they contend, the very defendants who are most likely to show up for trial are often held, not because they are guilty, but because they cannot buy their liberty. Yet the habitual criminal, who may be of more danger to the community, goes free merely because he has money.

To remedy this situation, the President's commission recommended that inmates who are good risks be released without money bail; and in the early 1960s, nearly a hundred bail-reform projects were established across the country to carry out this recommendation. But now the movement is "stagnating, even retrenching in some cities," according to Paul Wice, a political scientist at Washington and Jefferson College, Washington, Pa., who recently completed a nationwide survey of bail reform projects for the Justice Department.

The presidential commission also concluded that by handling alcoholics in medical treatment centers, so-called detoxification centers, rather than in jails, their periods of sobriety would be lengthened, and the load on jails would consequently be reduced. Proponents cite Kings County in the state of Washington as one successful example. The detoxification center there costs about $9 daily for each patient, compared with a cost of only $6.50 a day in the county jail, according to center Director Ron Fagan. But the special center has cut the number of alcoholic repeaters by about 40%, resulting in a significant savings of tax dollars, Mr. Fagan says.

"No Progress"

Nevertheless, according to researchers at the American Bar Foundation, which recently completed a study of detoxification centers and other reform proposals, there has been "no significant progress since 1966." Ray Nimmer, a research attorney who worked on the study says that in 1966 there were 246 detoxification centers. "Now, I'd be surprised if there are more than 250," he says.

But experts blame the dismal plight of local jails on a number of other factors as well—and some see little hope of improvement. Fragmented jurisdictions, for example, are a major source of trouble. Although there are only 250 state and federal prisons, there are more than 4,000 jails, each controlled and financed by separate, often overlapping governmental units. The result, according to a Justice Department survey, is "needless duplication of effort, inefficient use of funds, and rather substantial gaps and inequities in the administration of justice." One example of the difficulty is Waco, Tex., where the county houses the bulk of the area's prisoners in a cramped, rundown facility while the brand new city jail stands almost empty.

The rising crime rate also looms as a troublesome psychological factor. For instance, many bail reform projects "had their local funds cut off because people became convinced—wrongly, I believe—that suspects free on bail were playing a large role in the spiraling crime statistics," says Washington and Jefferson's Prof. Wice.

Lack of standards further compounds the sad state of jails. Although the Federal Bureau of Prisons publishes standards for state and federal penitentiaries, it publishes none for local jails. Moreover, fewer than half the states set jail standards, and most of these focus almost exclusively on construction and health. Usually, there are no educational requirements for custodial officers or jail administrators. Thus, while prison wardens are usually trained specifically and have exclusive responsibility for handling prisoners, sheriffs and other jail administrators usually aren't required to have training in penology, or even the formality of a high school education.

"Not only are sheriffs uneducated in penology, they usually couldn't care less about it," says Chicago Law School's Mr. Mattick. They're elected politicians, and political sex appeals is in enforcement and crack crime-fighting units, not in the jail."

But even if adequate standards were widespread, there's considerable doubt among experts that they would be enforced. In most localities, it's the responsibility of newly-convened grand juries—few of whose members have ever seen the inside of a jail before—to inspect the local jail and assess its quality.

Such checks are frequently no more than a formality, critics say. Last November, the Dallas grand jury dismissed prisoners' complaints about the county jail, giving it a clean bill of health. The next day, Sheriff Clarence Jones suspended three male jailers, two for accepting loans from inmates and one for having sexual relations with a female inmate.

Kicking a Habit

More Firms Begin to Hire Ex-Drug Addicts; 'These People Don't Have Horns and Tails'

By SANFORD L. JACOBS
Staff Reporter of THE WALL STREET JOURNAL

NEW YORK—Linda Bartonas, an 18-year-old receptionist for the Stamm Personnel Agency Inc. here, can't believe her boss knows the truth about her background and still wants her to work for him.

"I figured nobody would hire a dope fiend," she says.

Actually, Linda is an ex-"dope fiend." She recently made it through the rigorous rehabilitation program run by Phoenix House, a New York City treatment facility.

When Linda applied for the job, she did what many former addicts do. She lied about her background. But she didn't lie too well. The employment agency to which she went for help discovered her former drug problem. Instead of turning her away, however, the head of the agency discussed her treatment with Phoenix House and subsequently hired her himself.

A Reversal in Two Years

Linda's boss isn't typical. Most employers don't want any part of ex-drug addicts, but the hard line against employing them is beginning to ease. A few companies have started hiring former addicts, and a growing number of other concerns are reassessing policies that bar such persons from their work rolls. The trend contrasts sharply with just two years ago, when companies were interested only in trying to identify drug users so they could be fired.

In 1970, for example, police broke up a ring of dope pushers who were employes of a big New York bank. "Our reaction then was protective and punitive. We thought we had to get the barricades up and man the walls to keep these people out," recalls the personnel director. But today, despite that experience, the bank is recruiting among graduates of drug-treatment centers such as Phoenix House, and so far it has hired five ex-addicts and has six more under consideration. (The bank is not proud enough of its changed attitude to want its name in the paper, however.)

One reason for the change in corporate attitudes is that more money is being spent on drug rehabilitation, so there are simply more ex-addicts looking for work. More important, though, companies are coming to regard such hiring as good corporate citizenship, something that's receiving heavy emphasis in the business world these days. But until they gauge public reaction, many of these corporate citizens are asking to remain anonymous.

Many Problems

Of course, companies, including those that hire former addicts, aren't dropping their guard against employing active drug users. (The New York bank still requires a urinalysis from all new employes to screen out addicts, a policy adopted two years ago.)

Hiring former addicts raises problems. Corporate security people who are paid to worry about such things as thievery aren't happy about the prospect of having people around who were once forced to steal to support their habit.

Getting the new workers bonded can prove troublesome, too, particularly for banks and brokerage firms where the theft of a few pieces of easily concealed paper could mean a million-dollar loss. Another New York bank that plans to hire ex-addicts fears it may run into just such a roadblock. The bank hopes to circumvent the problem, however, by "appealing to the social conscience of the bonding firm's top executives," rather than dealing with underlings who usually decide whether to provide such coverage, says a bank vice president.

Public reaction is another consideration. One small home-improvement contractor lost thousands of dollars of business and was forced to move to another area after he hired ex-drug users. "A competitor found out and started asking the man's customers whether they wanted junkies working in their homes," says a New York State narcotics official. Big companies worry about the same effect.

Companies also have to guard against prejudice within their own ranks. Where possible, they limit knowledge of the past problem to corporate medical workers. At General Motors' Detroit Allison diesel division, which employs 75 former heroin users, even the workers' supervisors are unaware of the employes' backgrounds. "We have several ex-users who have subsequently been promoted. I don't think they would have been rated so highly if their supervisors knew the situation," says Dr. Robert G. Weincek, the division's medical director.

Higher Standards?

To help dispel such fears and prejudices the Chicago-based Kemper Insurance Group sent its supervisors to rehabilitation centers to meet and talk with patients. "Our guys were surprised to learn these people didn't have horns and tails," says James Kemper Jr., president. The concern has hired 11 ex-addicts since it implemented its program about a year ago.

Many companies are still skeptical and say they want more information before they do any hiring. The medical directors of 15 large New York companies, for instance, met on the matter for more than a year and concluded there wasn't enough known about addicts for them to make knowledgeable policy recommendations to their employers. The medical directors asked Cornell University to do a thorough study of about 200 addicts. Cornell is considering the request.

A New York state commission to evaluate drug laws is holding hearings this week to determine if legislation is needed to surmount discriminatory employment practices that keep rehabilitated addicts from getting jobs. Assemblyman Chester R. Hardt, chairman of the commission, says, the failure by employers to hire rehabilitants may be a "significant obstacle" to getting addicts "from a role of dependence on society to the role of asset to society."

Drug-rehabilitation people laud the new trend, but they also complain that employers seem to want absolute assurances of sterling performance by any former addicts they hire. "They don't expect it from any other group they employ, and they shouldn't set different, higher standards for these people," says a researcher for New York City's Addiction Services Agency.

There is a shortage of data on how former addicts behave. But one man who has worked extensively in the drug field has what he considers encouraging indications. Dr. Norman Gordon, a research psychologist at New York's Rockefeller University, found that one group of former heroin users who were being treated with methadone as a substitute for their heroin had higher IQs than a comparable group of non-addicts and performed their physical tasks just as well.

Ironically, some of the state and local governments that are pushing industry to hire former drug users are reluctant to do so themselves. New York State is one. "It won't get off the dime and revise its thinking. We can't place people in the most menial state jobs," says Howard Jones, chairman of the state's Narcotics Addiction Control Commission.

In addition, the State Liquor Authority refuses to allow the commission to place former addicts in jobs at restaurants where liquor is sold, although concerns such as Schrafft's say they are willing to employ them. The liquor authority maintains that it has a rule prohibiting people with criminal histories from working where alcohol is sold.

A group of 75 New York business and labor leaders recently formed a group called Provide Addict Care Today (PACT), which they hope will be able to cut through such bureaucratic bogs as well as sell other employers on the idea of hiring ex-addicts. Most of PACT's members already employ these people, and because of their experience, they believe they can do a better job than the government drug agencies can when it comes to convincing others to hire these people, says Rexford Tompkins, PACT chairman and chairman of the New York City Real Estate Board.

Adm. of Justice

Court Firm on Death Penalty

Atl. Const 10/11/72

WASHINGTON (UPI) — A petition to reconsider a decision banning capital punishment as unconstitutional was denied Georgia and Texas Tuesday by the U.S. Supreme Court.

The decision came on a vote of 5-4, the same as the original decision of last June 29.

Geogia's attorney general, Arthur K. Bolton, had sought to restore the death penalty to two inmates directly affected by the Supreme Court's earlier decision — William Henry Furman and Lucious Jackson Jr.

Bolton was unavailable for comment, and officials of the Department of Offender Rehabilitation were uncertain as to how they would cope with the latest decision or what affect it will have on those on death row.

At the time of the Supreme Court's original ruling, there were 22 inmates in death row cells at Reidsville.

Furman and Jackson were given death sentences at Savannah in 1968 for, respectively, murder and forcible rape.

Joe Hopper, the deputy commissioner of offender rehabilitation, said, "These men will probably be worked into the general population of the prison system. We are not sure at this time what status these men are in. We do not know whether their death penalty will automatically revert to a life sentence or whether they will have to go into court for resentencing. We are going to have to wait until we consult with the attorney general."

Commissioner Ellis MacDougall was out of the state and unavailable for comment.

In his petition for a rehearing, Bolton argued that the court paid "little attention" to the individual cases of Furman and Jackson and the other Georgia prisoners.

He said the court did not consider "whether the juries acted arbitrarily, the penalties were excessive, or even . . . whether the death penalty is being applied constitutionally . . . in Georgia."

The attorney general had announced earlier that the Supreme Court's banning the death penalty does not authorize a state to alter the sentence of inmates facing execution.

Advisory Commission on Intergovernmental Relations Washington, D. C. 20575

Advisory Council

November 1972 No. 72-7

STATE-LOCAL SURPLUS: For the first time in many years, the fiscal position of State and local governments showed a surplus for the second quarter of 1972, according to the *Survey of Current Business*. On a seasonally adjusted annual rate, the fiscal picture in the second quarter for State and local governments (excluding social insurance funds) registered a "surplus" of $6.4 billion. Even though that includes two once-only factors--a $4 billion advance public assistance payment from the Federal Government and $0.8 billion in unusually high income tax settlements in Pennsylvania--the States and localities still show a $1.6 billion surplus. That is up from a $1 billion deficit for the first quarter of 1972, $2.7 billion deficit in 1971 and a $5.9 billion deficit in 1967. The *Survey* notes, of course, that despite an improved aggregate budget position, "many individual States and localities continue to face severe fiscal problems." It also recognizes that large surpluses probably will not be realized as States and localities will either raise expenditures or reduce revenues to adjust to their new position. An excerpt from "The Business Situation" from the October 1972 *Survey of Current Business* of the U.S. Department of Commerce is reprinted here.

CORRECTIONAL REFORM: The 1972 Massachusetts legislature adopted omnibus correctional reform legislation to make far-reaching improvements both in corrections administration and management and in the rehabilitation programs offered. The Act is based, in part, on the ACIR draft legislation, "State Department of Correction Act." Massachusetts legislature started with the ACIR draft and then tailored the measure to suit the needs of the State. The Massachusetts Act follows the ACIR bill in provisions for community based programs, greater State fiscal role and State standards. A description of the Massachusetts Omnibus Corrections Reform Act is reprinted from *Achievements: Massachusetts Legislature 1971-1972* by Speaker David M. Bartley. For more information on the ACIR corrections bill--or the entire ACIR legislative program--write: Rochelle L. Stanfield, ACIR, 726 Jackson Place, N. W., Washington, D.C. 20575.

LOCAL GOVERNMENT REORGANIZATION: California is taking a sharp look at local governments in the State with an eye toward reforming their structure and functions, eliminating overlap and duplication of services, and improving communication. A task force under the leadership of Lieutenant Governor Ed Reinecke is studying such major changes as redrawing county boundaries, consolidating and eliminating government units, reassigning revenue sources to other levels of government, revising the State tax structure (particularly regarding school finance) and finding new management methods. A speech by the Lieutenant Governor, describing the situation in California and the objectives of the task force, is reprinted here. ACIR--as well as the California Council on Intergovernmental Relations--is very interested in learning what other States are doing along these lines. Please send information and materials to: Rochelle L. Stanfield, ACIR, 726 Jackson Place, N.W., Washington, D.C. 20575.

the BUSINESS SITUATION

State-Local Fiscal Position

Final congressional approval in October of a Federal program of revenue sharing is expected to accelerate the improvement in the fiscal position of the State-local government sector taken as a whole that has been evident during the last several years.

Federal grants-in-aid for revenue sharing for calendar 1972 are expected to total $5.3 billion, current plans call for at least half of these funds to be paid in the current quarter. For calendar 1973, $6 billion will go to State-local governments under the revenue sharing legislation. During the 5-year period covered by the new law (1972–1976) more than $30 billion will be allocated to States and localities.

These large increases in Federal aid come at a time when the State-local budget on national income account (NIA) has moved into a substantial surplus (Table 1). As indicated in the table, this shift has emerged in recent years as social insurance fund surpluses have grown steadily and as the deficits in other funds, mainly operating funds, have been shrinking. From 1968 to 1971, the overall State-local fiscal position shifted from a deficit of $0.3 billion to a surplus of $4.8 billion. It should be recognized that even though the aggregate budget position has improved, many individual States and localities continue to face severe fiscal problems.

The surplus increased further in the first half of 1972, reaching a record $14.8 billion (annual rate) level in the second quarter. The overall second quarter surplus was swelled by two nonrecurring factors—a $4 billion advance payment of public assistance grants and $0.8 billion of unusually high income tax settlements in Pennsylvania—but a surplus would have been recorded in operating funds even in their absence.

Impact on full-employment deficit

Revenue sharing is a major factor contributing to the anticipated full-employment deficit in the Federal budget for fiscal 1973. According to recent congressional testimony by administration officials, if outlays on the unified budget basis are held to the $250 billion ceiling proposed by the President, the full-employment deficit in fiscal 1973 will total $4.5 billion (unified budget basis). Since revenue sharing is expected to add over $8 billion to fiscal 1973 outlays, the projected full-employed budget positions in the absence of revenue sharing would be a surplus of about $3½ billion.

The fiscal impact of the projected Federal full-employment deficit is dependent on how States and localities use revenue sharing funds. To the extent that these governments spend the new Funds, reduce existing taxes, or defer tax increases otherwise planned, revenue sharing will have an expansionary impact on the economy in line with

Table 1.—Fiscal Position of State and Local Governments (NIA Basis)

[Billions of dollars; quarterly data seasonally adjusted at annual rates]

	1946–53 (avg.)	1954–61 (avg.)	1962–66 (avg.)	1967	1968	1969	1970	1971	1972

its impact on the Federal full-employment deficit. However, to the extent that State and local governments use the revenue sharing funds to retire existing debt, or to invest in financial assets, they may well offset the fiscal stimulus implied by the Federal full-employment deficit.

Recent fiscal shifts

Large budget surpluses for all State and local governments combined represent a considerable departure from the past. Between World War II and 1969, the State and local fiscal position on the NIA basis has been in the range between plus and minus $2 billion every year except 1958. In the 1960's, there was no improvement in the budget position even though Federal aid increased sharply. For the years 1960–69, the average annual State-local surplus was only $0.5 billion.

The recent improvement can be attributed to strong growth of receipts coupled with moderate expenditure increases. On the receipts side, Federal grants have continued to grow, and State-local receipts from their own sources have also increased rapidly. With respect to the latter, these governments have (1) expanded their tax sources (especially new personal and corporate income taxes which are particularly responsive to economic growth); (2) increased tax rates on existing sales and income taxes; and (3) obtained more funds from nontax sources, such as charges at public hospitals and tuition payments to public educational institutions.

The moderate growth rate of expenditures has been chiefly a result of the relative stagnation in construction activities. Despite very sharp short-term increases and decreases, overall growth of construction outlays in the past four years has been very slow. In particular, school construction has declined every year since 1968. Demographic changes and voter reluctance to approve school bond issues have both contributed to this trend. High interest rates were also a factor during the tight money period of 1969–70, but interest rates have declined sharply since that time and no longer appear a deterrent to increased capital spending.

Huge surpluses unlikely

Although the fiscal outlook for State and local governments is brightening, there are reasons to believe that the extremely large surpluses suggested for the longer run by some recent studies may not be realized. Expenditure growth is likely to pick up and the growth of receipts other than from revenue sharing may be slowed.

Expenditures should accelerate, not only due to revenue sharing but also because liquidity positions of State-local governments, which were run down during the credit squeeze of 1969–70, have been largely rebuilt. With the restoration of normal liquidity positions, public construction activities should strengthen. There is no evidence that this pickup has occurred as yet; June construction outlays were the lowest since early 1970. State-local pay levels may also be raised; the rapid growth of unions in the public sector is likely to be a contributing factor.

Over the longer run, the growth rate of receipts may slacken. It is unlikely that State income tax growth will continue at the recent pace. Also, local property taxes (which still represent a quarter of all State and local receipts), traditionally the primary source of funds for education, are under increasing pressure from both the courts and the voting public. Third, revenue sharing itself, together with restrictions on other Federal expenditures, may well stimulate reduction of other Federal grants to State and local governments, or restrict their growth.

CORRECTIONS

Omnibus Corrections Reform Act: chapter 777, 1972: a Correctional Reform Act:

A correctional reform act was prepared by a Task Force of the Joint Correctional Planning Commission and was filed in the Massachusetts Legislature on February 9, 1972. The original version was criticized by Legislators on grounds that it covered many areas which did not require new legislative authority. Following meetings with the Senate President, Speaker of the House and the Joint Committee on Social Welfare the bill was subsequently amended to reflect these objections; all matters which the Commissioner of Correction now has sufficient authority to implement were eliminated. Also, the provisions to transfer parole officers to the Department of Corrections and to pay inmates a minimum wage were deleted. The following is a summary of this legislation which was prepared by the Department of Correction.

Chap. 777 seeks to help Massachusetts correctional agencies protect citizens from crime more effectively. The bill changes corrections laws in five areas: administration, community services, employment programs, security and state-county relations. Its central purpose is to improve the custody and rehabilitation of offenders and to prepare them more effectively for their reintegration into the community.

Administration

The bill revises the powers and duties of the Commissioner of Correction. It provides the Commissioner with the authority to establish and designate correctional facilities and clarifies his authority to contract with competent public and private entities for the purchase of services.

The bill creates the position of Deputy Commissioner for Community Services. He will plan and develop community programs in coordination with the Parole Board and supervise and direct Department of Corrections employees working in community-based correctional programs. It authorizes the Parole Board to hire an attorney and an excecutive secretary thereby strengthening its decision-making role and its ability to bring Parole Board expertise to bear on the planning and development of community programs.

Other provisions of the bill which help to improve corrections management include introduction of administrative procedures for rulemaking and expanded training provisions for correctional officers and employees. The bill broadens the range of training, provides for pre-service training and allows for the possibility of state-county agreements for training.

Community services

To enable the sound development of community-based correctional programs to meet the pre-release and post-release rehabilitation needs of offenders, the bill allows the Commissioner to establish some education, training, and employment programs outside of correctional facilities. Inmates now excluded from work release could be eligible to participate in such programs but only on special joint approval by the Superintendent and the Commissioner.

Employment Programs

In the area of offender employment, the bill makes four major changes. It clearly states that correctional employment programs are to be judged first by their training value, second by their relevance to the free employment market, and third by their profitability. The bill also permits appropriate deductions from inmate wages; for example, to defray expenses of incarceration, to pay court-ordered family support, and to reimburse local welfare departments. Third, the bill opens the private market, under certain conditions, to the goods and services produced in correctional industries. Fourth, the bill creates a Correctional Employment Fund, which will allow proceeds from employment programs to be used for operating expenses of the programs, including inmate wages.

Reprinted with permission from Achievements: Massachusetts Legislature 1971-1972, by Speaker David M. Bartley

Security

The bill strengthens security in two ways. It requires the Commissioner to make contingency plans with the Commissioner of Public Safety. It also doubles the maximum penalty for state inmates who escape from work release programs; it accomplishes this by repealing the present penalty (maximum: five years for men, one year for women), leaving those who escape from a work release program liable to the general escape penalty (maximum: ten years for men, two years for women).

State-County Relations

The provisions of the bill affecting state-county relationships consistently reflect two principles:

1. State take-over or any substantial state incursion into the operation of county facilities is neither feasible nor desirable.

2. The responsibility for operation and supervision of county programs should be clearly delineated.

The bill provides the Commissioner with regulatory powers and the duty to enforce minimum standards for all correctional facilities. The operational responsibility for county facilities continues to reside with county authorities.

The bill gives clear guidance as to the scope and content of regulations, outlines the process for promulgation of regulations, and provides for collaboration among state and county officials in setting standards and insuring compliance. The powers of county commissioners, city councilmen and other officials are otherwise unchanged by the bill.

Financial and Human Costs

Chap. 777 does not commit the Commonwealth to any significant expenditure of funds in the immediate future. The only cost directly associated with the bill is the salary of the new Deputy Commissioner for Community Services. Otherwise, any other costs there may be from the implementation of Ch. 777 will largely be borne by Federal funds. $510,000 in Law Enforcement Assistance Administration funds have already been committed to support the development of community-based correctional programs, pending the passage of this legislation.

The programs included in Ch. 777 are expected to help reduce some correctional costs. One important area of cost savings is that of capital outlay. Presently all institutions for male offenders are overcrowded. Population projections indicate that at least one new correctional institution will be needed in the immediate future at a cost of at least $7.5 million in capital outlay. This cost can be avoided with the development of the community-based correctional facilities provided for in this bill. Capital outlay costs could be avoided if these facilities were established on a contract basis; in any event, the capital outlay cost would be much less than for traditional facilities.

Some cost savings will also be derived from the work release program. Participants in this program will be paying such costs as room and board, support to families, taxes, and reimbursement to the Department of Public Welfare.

Most importantly, a significant savings will occur in financial and human costs associated with a reduction in recidivism which is expected to result from the implementation of programs under Ch. 777. In jurisdictions where these types of programs have been instituted the reduction in recidivism has been substantial.

Ch. 172 of 1972:

An Act expanding the eligibility of certain prisoners sentenced to life to serve part of their sentence at a prison camp.

Ch. 297 of 1972:

An Act requiring that applicants for appointment as correction officers shall be high school graduates or the equivalent.

Ch. 311 of 1972:

An Act providing for the appointment of school teachers in the Department of Correction. This measure will increase the opportunity for inmates to receive the education so many of them lack.

LIEUTENANT GOVERNOR ED REINECKE

FOR IMMEDIATE RELEASE

NO. 59

(Anaheim)
58-100-407-1140-4155 . . . These are signals all right, but they really should be considered warning signals which have absolutely no connection to a football game. These particular numbers represent only a portion of the classic problem of the multiplicity of governments which the citizens of our state face daily.

Most citizens have no idea of the numbers of units of government they support until they receive their annual property tax bill and even then many of us are not aware of what we are paying for.

The numbers I have just mentioned are a game. It's the "numbers game," the game nobody wins. Those numbers stand for the units of governments which we have in the State of California. We have 58 counties, 110 substate regional districts, 407 incorporated cities, 1,140 school districts and 4155 separate special districts. These governments are run by 18,000 officials elected to manage government.

.....MORE

Let me add a few more numbers to the boiling pot...such as...this state has a population of 20,524,000...There are 250 state and federal boards and commissions, each of which can have some effect on local programs...Federal and state laws and regulations have been established for more than 100 different sets of sub-state administrative areas to deal with local jurisdictions...More than 1,400 federal grant-in-aid programs have been made available to citizens of the state and local governments and offer $40 million in grant funds. The estimated total cost of the more than 5,700 units of local governments in California has been placed at just over $14 billion annually. The service provided to the purchaser (the taxpayer) is substantially less.

What makes these figures even more frightening is the fact that they do not decrease, but seem to continue to grow each and every year and as a result will require more and more in the way of tax dollars...much of which must come from taxes on property.

If you were to sit down today and conscientiously design a system of local government which would provide needed public services, you would not construct the same system of government that we have now in California. What we have now is the result of accumulated demands for public services plus the ad hoc efforts to meet those demands. Californians demand a certain level of fire and police protection; they want proper lighting in their residential areas; people need water for home, industrial and farm use. Recreational facilities, libraries and marinas are asked for by the people. The list of public service demands goes on and on.

.....more

Citizens are searching for protection of the environment in which they live; and for improvement of the living conditions in the inner cities. Other new demands will be made as people expand their needs for additional requirements which they consider part of the "good life" in California. What we have failed to realize or recognize, up to this point, is that with the establishment of each new level of government service in response to public demand...there must be the readiness and willingness to spend the funds needed to pay the cost of new government structures. And that cost does not come cheap. Those of you who have the responsibility for management of local governments are well aware of the dramatic increase in the cost of providing the services which your constituants demand.

A corollary problem is the difficulty of educating the public and communicating to them the complexity of the issues with which you must deal in administering the services which they demand. As you know, voter participation in city, county and school and special elections is considerably lower than participation in state and national elections.

The Governor and I have always felt that government governs best when it is closest to the people and when the people have the opportunity to see what is going on and have a chance to influence those decisions at the local level. The record of voter participation in these elections, however, indicate many citizens have a great deal of difficulty in understanding what goes on at the local level. Often, citizens are not even aware some of these local governments exist.

.....more

Anonymity, whether by design, or stroke of luck, seems to be the formula for long life by many of our local governments including special districts. We need to know more about the ways in which citizens are either offered opportunities to become involved or else, perhaps, are denied access to the local government decision making process. We need to know the history of citizen participation through the election process in order to find better ways in which to stimulate more popular interest in local government in the future. Your Council is the appropriate state agency to deal with this problem.

The increasing demands made upon cities, counties and special districts for public services is bound to require an increase in public employment. The CIR conducted a survey last year throughout the state and produced a report that predicted that 45,000 additional administrators, professional, and technical personnel will be needed by local entities by the year 1975.

The survey was a collection of employment projections provided by the local units themselves. They said that by 1975 there would be a need for more than 10,000 new employees in health services, nearly 9,000 new policemen, and over 7,000 employees who could deal with welfare problems, plus many others in a variety of skills.

.....more

In addition, new employees will be needed to deal with the problems of pollution control, urban planning, housing, communication, race and minority problems and human relations development.

The Council on Intergovernmental Relations should work closely with educational institutions to insure an appropriate coordination of their curriculum programs and the future needs for manpower by local governments. By better manpower development we might be able to hold the line on increased numbers. The Council should also work closely with educational institutions to insure that their curriculum adequately prepares their graduates to be interested and concerned citizens of all levels of government.

You are all aware of the remarks which the Governor made recently on the matter of reforming local government in order to provide the citizen a greater opportunity for participation in the political process and to make local activities more visible to the citizens who must pay for them. The Governor has announced his intention of making local government reform one of his high priority efforts for immediate action. He has asked me to be chairman of the Steering Committee, of the Task Force for Local Government reform and to request the leadership of the Council on Intergovernmental Relations in this effort. I want to request you to move forward to implement various aspects of the public service reallocation study, which you have already accomplished, and to develop through public hearings and other research a new and innovative approach toward local government reform within California. Your Council can play a key role by maintaining constant contact

The question to which the Task Force will address itself will include but not be limited to:

Redrawing county boundaries

Consolidation of government units

Elimination of government units

Reassigning revenue sources to other levels of government

Reevaluation of methods of school finance

Reevaluation of methods of other governmental finances

Real equity of present tax programs means to handle regional problems without forming another level of government

Examination of equal rights under the 14th amendment

Extention of Serrano to services other than education

Appropriate conduit for direct federal-local programs

Simplification of information systems

Uniformity of information systems and language for cost reduction without compromising confidentiality

Proposals for methods of handling new problems without formation of new regimes of government

Methods of information exchange to eliminate duplication of studies by equal levels of government

Examination of new management methods to include uniform systems for comparison of performance

The Governor and the Cabinet have been closely studying the work which the CIR has done in the area of the reallocation of public service responsibilities and it is our hope that we can build upon this initial effort in order to develop a comprehensive program of local government reform.

.....more

It is very appropriate that you are here at the League of California Cities meeting to launch the first hearing and to receive comments from city officials on this proposed reform. Involvement of the local government official in this whole process is essential to the success of the Governor's program. There must be a continuing conversation between all major groups of local officials and the members of your Council and your staff.

The Governor and I are especially concerned that the CIR serve as the principle conduit for new and creative ideas that should be studied in this entire project.

Because of your experience and knowledge of this area, the Governor and I are looking to you for leadership. The problem of local governments within California are really the problems of this State's citizens. We are looking to you for innovative and substantial recommendations for change. The challenge which confronts the members of the Council on Intergovernmental Relations is to discover a solution for the problem of the multiplicity of government and to insure greater opportunities for citizens' participation and understanding of the governmental process

A Clean Slate

Some Suspects Now Sent to Work or Class Instead of to Trial

'Pretrial Diversion' Concept, An Alternative to Jail, Lets People Off Without Record

1/23/73

An Ex-Convict Talks Tough

By LIZ ROMAN GALLESE
Staff Reporter of THE WALL STREET JOURNAL

BOSTON — Pat Greene lost control of his Volkswagen on a hot night last June. It leapt a curb and narrowly missed hitting two policemen's wives. Their husbands, already irate with the antics of local teen-agers, promptly hauled him to the local police station and booked him on charges of dangerous driving and assault and battery.

Frightened and angry after a night in jail, 19-year-old Pat was convinced he'd be tried, convicted and sent to prison. He wasn't. He never even got to trial.

Instead, an organization called Boston Court Resources Project stepped in and made him an offer he couldn't refuse. The project got him a job in a gas station and gave him counseling and remedial reading work. Later, he re-enrolled in high school. After 90 days, his arrest was erased from his record. He hasn't been in trouble since.

Pat Greene was a beneficiary of a new alternative to traditional trial and punishment called pretrial diversion. As administered by groups like Boston Court Resources Project, it consists of selecting good prospects for voluntary rehabilitation and in effect putting them on probation before they go to trial. If they successfully complete their probation, they're spared the ordeal of a prison term and the stigma of a prison record. If they go astray during their diversion period, they can always be called to trial for their original offense.

A Dozen Programs

Courts have long provided alternatives to trial and imprisonment for persons such as the mentally retarded. Now, the concept is gaining broader appeal. "There's a tremendous stream of interest building around alternatives to sentencing," says James Meeker, staff director of the Senate subcommittee on national penitentiaries. Sen. Quentin Burdick (D., N.D.), chairman of the subcommittee, this month will refile a bill providing funds for programs like the one in Boston. (The original bill died when Congress adjourned last year.)

From a pair of pilot projects founded in 1967 in New York and Washington, pretrial diversion has grown to encompass a dozen programs in major cities around the country. Another dozen more specialized projects have sprung up to treat juveniles or drug offenders. Most are financed by one or more federal agencies, though a few draw on state, city or private monies.

Though these programs aren't yet very large, together "graduating" no more than a few thousand persons a year, their importance is insisted upon by many who feel prisons are failing in their function—that, in fact, prisons produce criminals instead of rehabilitating them. "We (judges) don't want to commit kids who haven't yet become criminals," says Franklin N. Flaschner, chief justice of the district courts of Massachusetts. "Most of us have thrown up our hands at the prison system as a rehabilitative tool." Judge Flaschner calls the Boston program "a model example of early or classical probation, a working partnership between the courts and outside resources of rehabilitation."

The Department of Labor, which provides funds for many pretrial diversion programs, reports that 65% to 70% of the "clients" in these programs have the charges against them dropped. The department says that in one program it studied, 17% of these successful "clients" were arrested again within 12 months, compared with 34% of a control group that had been sent to prison.

Cheaper Than Prison

Not everyone looks on these programs so favorably, of course. Some judges refuse to release any offenders to pretrial diversion programs. Some critics, too, feel any program will look good if it limits itself to "clients" who are highly motivated to straighten out their own lives.

Pretrial diversion is unquestionably cheaper than prison. The Department of Labor says the programs it supports cost about $1,000 per man for a three-month stint, compared with about $1,500 to keep a man in prison for the same amount of time. Penologists say the real savings are considerably greater, because that $1,500 figure doesn't include the costs of processing a man through the courts and providing welfare or social services to his family, nor the loss of tax revenue from jobs he might have held if not imprisoned.

Typical of most pretrial diversion services, the Boston plan operates like an independent probation service. It scouts six district courts for potential clients. Most are young first offenders charged with such crimes as car theft or mugging or breaking and entering. When workers think they can help such an offender, they obtain permission from the court, then look to see if the offender can be motivated to join and complete the diversion program.

The talking, and all dealing with clients, is done by ex-convicts known as "advocates." "No one can talk to a kid in trouble as effectively," says Judge Flaschner. "An ex-convict can say he understands, mean it and be able to demonstrate it with his own case."

"You're Full of It"

One such man is Tom Childs, a burly, tough-talking advocate supervisor who has spent 17 of his 31 years behind bars. Confronting Mark, a 19-year-old charged with possessing a burglar tool, he asks why the youth wants to enroll:

"I'm poor, man," comes the response. "I come from poverty. I heard this is a real good program that can help me."

"You're full of it, Mark," snaps Mr. Childs. "Let's start again. Why do you want to come into the program?"

"Because I don't want to go to jail."

Mr. Childs admits that's an honest reason, but he asks, "Then why didn't you make orien-

Information Bulletin

Advisory Commission on Intergovernmental Relations Washington, D. C. 20575

Admin of Justice

Bulletin No. 73-1 January 1973

TWO STATE CRIMINAL JUSTICE BILLS

IN BRIEF

Two areas of criminal justice reform needing State legislative attention are tort liability for police and legislative oversight of law enforcement and criminal justice programs. ACIR, in cooperation with the International Association of Chiefs of Police and the Council of State Governments, makes available two bills to meet these needs outlined in the 1971 report, *State-Local Relations in the Criminal Justice System*. The bills, with explanatory matter, are attached.

States should enact comprehensive tort liability statutes for police employees at State and local levels and should establish joint legislative committees on the improvement of law enforcement and criminal justice. These two recommendations were among the 44 policy positions taken by the Advisory Commission on Intergovernmental Relations in its 1971 report, *State-Local Relations in the Criminal Justice System* (A-38).

ACIR staff has prepared draft State legislation to implement these two recommendations. The tort liability act was drafted with the help of the International Association of Chiefs of Police (IACP). Both acts have been published by the Council of State Governments (CSG) in the 1973 volume of *Suggested State Legislation*.

Tort Liability

The police function, almost by definition, necessitates the use of discretionary powers. In the course of a day's work, a police officer must decide many times whether to arrest, to search, to detain and to interrogate.

When these powers are used legitimately, the police officer should be entitled to protection from tort actions. When these powers are mis-

used, the citizen should be able to collect for damages to person and property.

Once, all governments were immune from tort actions. But in the last several years, States have taken legislative action to waive governmental immunity in many instances. Twenty-four States completely waive the immunity of the State and its local governments, another 10 waive immunity for the State alone and 16 eliminate it for local governments only. However, in very few instances does this legislation cover the kinds of actions of which law enforcement officers might be accused, such as assault, battery, false arrest, false imprisonment, malicious prosecution, abuse of process, libel, or slander.

Early in 1972, Nebraska enacted a comprehensive tort liability statute that specifically covered the actions of police officers. This was the only State to do so, according to IACP information.

ACIR urged this kind of legislation in the criminal justice report, noting:

"Tort liability legislation also retains public confidence in the integrity of the police function. Such legislation assures the public that it will be compensated for damages that might arise out of use of discretionary police powers. It also may increase the effectiveness of police use of discretionary powers -- a fact that should insure a more efficient and responsible State-local police system. The Commission hastens to add that policemen, of course, still would be liable for intentional abuse of their discretionary powers. Properly drafted tort liability legislation would see to that."

The draft of "Governmental Tort Liability for Law Enforcement Actions" is attached, along with explanatory material and a section-by-section analysis.

Joint Legislative Committee

ACIR's criminal justice report explained the need for a joint standing committee on the improvement of law enforcement and criminal justice:

"The Commission recommends that State legislatures establish joint standing committees or take other appropriate measures to analyze the progress that is being made in achieving a more coordinated criminal justice system. The State criminal code, regulations affecting court organization and procedures, and legislation dealing with correctional alternatives are but a few instances of legislative impact on the process. Given this degree of control over criminal justice operations, it is time that State legislatures take a continuing, comprehensive look at the operation of the system. Indeed, with the recent amendments to the Safe Streets Act relating to State 'buying in,' State legislatures more than ever before, will need to insure that State funds and Federal aid are creating a more coordinated criminal justice system."

Attached is a draft concurrent resolution to establish such a joint legislative committee.

Related Criminal Justice Bills

The Commission staff has drafted State legislation to implement its other recommendations in all phases of criminal justice. They are published in "action packets" on police reform (seven draft measures); court reform (a judicial constitutional article and Omnibus Judicial Act); prosecution reform (Omnibus Prosecution Act); and corrections reform (State Department of Correction Act). The action packets are available on request from ACIR, 726 Jackson Place, N.W., Washington, D.C. 20575.

GOVERNMENTAL TORT LIABILITY FOR LAW ENFORCEMENT ACTIONS

Over the past several years the doctrine of governmental immunity for torts committed by state and local police officers has been undergoing a steady erosion. Courts and legislatures have taken the position that governmental entities should compensate persons injured as a result of wrongful acts committed by their officers, employees, and agents in the performance of governmental functions. It has also been recognized that, although the officer, employee, or agent may be personally liable to the person injured, any judgment obtained by the injured party is likely to be uncollectible.

Twenty-four states have adopted legislation completely or partially waiving the immunity of the state and its units of local government. Another 10 have waived immunity for the state only, while 16 have eliminated immunity for local governments only. But many of these states have legislation specifying that immunity still applies to claims arising from cases of assault, battery, false arrest, false imprisonment, malicious prosecution, abuse of process, libel or slander, and for claims arising from the performance of – or failure to perform – a discretionary act, whether or not the discretion was abused. Still others have legislation that waives immunity only for injuries caused by motor vehicles or by negligent – as opposed to intentional or willful – conduct.

Thus, law enforcement officers in many cases remain largely unprotected. The actions for which they later may be held personally liable usually are intentional, based on instant judgments made in times of stress, and are likely to involve the types of torts for which governmental immunity has not been waived in many jurisdictions. Effective law enforcement requires police officers who are free to perform their duties without fear that the financial security of their families will be jeopardized.

There is a need for comprehensive tort liability legislation to protect the law enforcement officer against liability for his honest errors in judgment and to enable the citizen to collect for damages to person and property that may arise from the use of police discretionary powers. Police tort liability legislation should also provide a way to compensate the citizen for damages caused by an errant police officer who willfully and maliciously abuses his power, while making the officer personally liable for the consequences of his actions. This sort of legislation will help to raise public confidence in the law enforcement process and, in the long run, should generate greater cooperation with the police.

Of all the states, only Nebraska has legislation (adopted early in 1972) that specifically performs much the same functions as does the proposed bill.

The suggested legislation is divided into seven sections.

Sections 1 and 2 set forth the basic purpose and definitions of the legislation.

Section 3 renders the state and its units of local government liable in those cases where a law enforcement officer would otherwise be liable.

Section 4, which is optional, provides a suggested administrative procedure for receiving and processing of claims by the state and its units of local government and requires the filing of a claim under that procedure as a condition preceding the right to file a civil suit.

Section 5 limits governmental liability according to a statutory maximum or insurance policy limit and makes the officer personally liable for the portion of any judgment that exceeds that limit or results from malicious abuse of his powers.

Section 6 provides full immunity to officers when the claim is less than the statutory maximum or policy limit.

Section 7 authorizes state and local governments to purchase insurance covering their officers, provides optional language in case the state elects to act as a self-insurer or to purchase a statewide policy covering both state and local officers, allows for bonding or insuring of special officers, and establishes the mode of payment of claims.

The draft statute is a model developed in cooperation with the International Association of Chiefs of Police and is based, in part, on the Federal Tort Claims Act and on the codes of Hawaii, chapter 662 et seq., and Idaho, chapter 9, section 6-901 et seq. Section 5(b) of the proposed bill is based on legislation in effect in a number of states, including Minnesota, Oklahoma, Idaho, Kansas and Utah.

Suggested Legislation

[Title should conform to state requirements. The following is a suggestion: "An act waiving governmental tort immunity for certain acts of law enforcement officers."]

1 *Section 1. Purpose.* The purpose of this act is to protect state and local law enforce-
2 ment officers from personal liability arising from acts committed during the performance of
3 their activities, in the conduct of their office, or within the scope of their employment, and
4 to compensate the individuals harmed by these actions.

5 *Section 2. Definitions.* As used in this act:

6 (1) "Law enforcement officer" means any employee of this state or any of its units of
7 local government who is authorized or required to enforce some or all of the criminal statutes
8 of this state or local penal ordinances or resolutions.

9 (2) "Employee" includes any officer, special officer, agent, or servant of this state or
10 any of its units of local government, whether elected or appointed, serving with or without
11 compensation and whether temporarily or permanently employed, and any other person lawfully
12 summoned to assist an employee.

13 (3) "Claim" means any alleged or actual legal liability arising from any act committed
14 or duty omitted by a law enforcement officer during the performance of his activities, in the
15 conduct of his office, or within the scope of his employment.

16 *Section 3. Assumption of Liability.* This state and any and all of its units of local

1 government waive any governmental immunity from suit or other liability for any claim as
2 defined in this act and assume liability for the claim under circumstances in which a law
3 enforcement officer would otherwise be personally liable for a claim, to the extent provided
4 in this act.

5 [*Section 4. Procedure for Filing Claims (Optional).*[1]

6 [(a) All claims arising under this act must be filed with the [secretary of state] if the
7 claim is against the state, or with the [clerk] [official designated for that purpose by the
8 governing body] of the appropriate unit of local government if the claim is against that unit
9 of local government, within [90] days after the act or omission giving rise to the claim
10 occurred or reasonably should have been discovered, whichever is later.

11 [(b) All claims filed with the state or unit of local government shall set forth accurately
12 and completely the acts and circumstances giving rise to the claim, describe the injury or
13 damage and the time and place of its occurrence, cite the names and addresses of participants
14 and witnesses, if known, and state the nature and amount of damages sought. If the claimant
15 is incapacitated from filing his claim within the prescribed time limit or if the claimant is a
16 minor or non-resident of this state or necessarily absent during the prescribed filing time, the
17 claim may be filed on behalf of the claimant by any relative, attorney, or agent representing
18 the claimant.

19 [(c) Within [10] days after the filing of a claim under section 4 (a) of this act, the
20 [secretary of state] or the [appropriate official] of the unit of local government, shall refer
21 the claim to the attorney general of this state if it is against the state or to the legal officer
22 of the unit of local government if it is against the unit of local government.

23 [(d) Upon receipt of the claim the attorney general or appropriate local legal officer shall
24 cause it to be investigated and, subject to the provisions of any applicable policy of liability
25 insurance, may recommend a compromise, settlement, or denial of the claim. The recommenda-
26 tion of the attorney general or local legal officer shall be referred to the state or local agency
27 involved for its concurrence prior to settlement.

28 [(e) After a recommendation for compromise, settlement, or denial of a claim has been
29 agreed upon, the recommendation shall be transmitted to the appropriate governing body, agency,
30 or employer for final action.

1. Some states may wish to eliminate entirely the administrative claims procedure provided in section 4, leaving all claims to be filed directly in court. Others may wish to adopt the procedure for the state government and leave the administrative details of handling local claims to the discretion of the local units of government.

[(f) If after [90] days from the filing of a claim under this act, the state or unit of local government has failed to approve or has denied the claim, the claimant may institute a civil action in any court of competent jurisdiction in this state.

[(g) No claim may be allowed by any court of this state unless it has been filed within the prescribed time limits.

[(h) No action on a claim may be initiated against this state or any of its units of local government or any law enforcement officer after the expiration of [two years] from the date of the occurrence giving rise to the cause of action.

[(i) If the state or unit of local government agrees to settle or compromise a claim, or, subject to the approval of the state or unit of local government, its insurer so agrees and the claimant accepts the offer, the claimant shall execute a release which constitutes a complete bar to any future actions instituted by the claimant arising out of the same subject matter as the claim.

[(j) If the claimant is a minor, the settlement and release are subject to approval by a court of competent jurisdiction.]

Section 5. Limitation of Amount of Damages of State or Unit of Local Government.

(a) The liability of this state or any of its units of local government for a claim recognized in this act is limited to [$25,000] if the claim is one for a wrongful death, [$50,000] in the case of any other claim or claims brought by any one claimant, and [$300,000] for any number of claims by numerous claimants arising out of the same occurrence or subject matter.[2]

(b) The liability of the state or a unit of local government for a claim recognized in this act may exceed the maximum amounts herein specified to the extent of the maximum coverage available in a policy of insurance if a policy was in force at the time the liability was incurred.

(c) A law enforcement officer is personally liable for the amount of any judgment rendered in excess of the maximum liability that may be imposed on the state or a unit of local government.

(d) A law enforcement officer is personally liable to the state or unit of local government for the reimbursement of any civil judgment rendered against the state or a unit of local government caused by the intentional and malicious abuse of his discretionary powers.

2. Some states may wish to establish a graduated scale of liability limits according to the size of jurisdiction.

1 *Section 6. Immunity of Officers.* No claim may be brought against a law enforcement
2 officer unless the amount of damages sought exceeds the maximum liability that may be
3 imposed on this state or any of its units of local government and the state or unit of local
4 government also is made a party defendant to the action in the manner described in this act.
5 *Section 7. Insurance; Payment of Claims and Judgements.*[3]
6 [(a) The [appropriate state agency] may purchase insurance to protect the state from
7 liability as provided by this act. Premiums for insurance protecting the state shall be paid
8 from the annual appropriation of the agency.]
9 [(a) Any claim or judgment arising under this act affecting state law enforcement
10 officers shall be paid from funds appropriated by the legislature to the [appropriate state
11 agency].]
12 (b) The units of local government of this state may purchase insurance against liability
13 as provided in this act.
14 (1) Premiums for insurance protecting local law enforcement agencies shall be paid by
15 [the state] [the unit of local government concerned, in the manner prescribed by its governing
16 body].
17 (2) If insurance has not been obtained by or provided for a unit of local government,
18 any claim or judgment arising under this act shall be paid from funds appropriated for this
19 purpose by the local governing body.
20 (c) This state [or any of its units of local government] may require any person
21 specially commissioned or deputized as a law enforcement officer under its jurisdiction and
22 who is not compensated from public funds to post an indemnity bond secured by a licensed
23 carrier or a policy of professional liability insurance with the same limits of liability imposed
24 by this act, or to tender a sum equal to the amount of premium required to cover the
25 specially commissioned or deputized law enforcement officers in any policy obtained by the
26 state or unit of local government, whichever is the case.
27 (d) When any claim is prosecuted in any court of this state as a civil cause of action,
28 the court may award a reasonable attorney's fee and costs to the party prevailing.
29 *Section 8. Separability.* [Insert separability clause.]
30 *Section 9. Effective date.* [Insert effective date clause.]

3. Alternative sections 7(a) are intended to give a state the options of purchasing insurance covering state law enforcement agencies and their officers or of acting as a self-insurer.

JOINT LEGISLATIVE COMMITTEE ON THE IMPROVEMENT OF LAW ENFORCEMENT AND CRIMINAL JUSTICE

To develop an effective state-local criminal justice system, the legislature should be an integral part of the planning process. State legislation has a profound effect on this process whether it deals with crime prevention, law enforcement, the criminal code, court organization and procedures, or corrections and treatment matters.

In spite of the interrelated objectives of the components of the criminal justice system, legislative committee jurisdiction over law enforcement and criminal justice matters in most States is split among several standing committees. There is no organizational structure within these legislatures that can give the kind of continuing and comprehensive review that embraces the total criminal justice system. Moreover, the significant amount of Federal dollars and State "buying in" funds now being spent on such programs calls for effective legislative oversight to insure coordination.

Some state legislatures may prefer to broaden the jurisdiction and responsibilities of existing standing committees, such as the House and Senate committees on the Judiciary, to accomplish the purpose of this resolution, rather than creating a new joint legislative oversight committee.

Concurrent Resolution *

"Providing for the Establishment of a Joint Legislative Committee on Improvement of Law Enforcement and Criminal Justice"

1 WHEREAS, the increasing incidence of crime presents a serious threat to the political, social,
2 and economic institutions of the State and local governments; and
3 There is a need to formulate and implement a State comprehensive criminal justice plan to
4 guide public policies and programs for achieving a coordinated criminal justice system; and
5 There also is a need for continuing overall review by the [legislature] of the comprehensive
6 State criminal justice plan and related functional plans; and
7 A joint legislative committee is a means of assuring continuing and systematic review and
8 study of the progress toward a comprehensive State criminal justice plan and providing the
9 framework within which relevant policies and programs may be evaluated;
10 NOW, THEREFORE, BE IT RESOLVED, by the [legislature] of the State of [ ],
11 that a joint legislative committee on the improvement of law enforcement and criminal justice is
12 created to: (1) receive the comprehensive State criminal justice plan from the State criminal

*Some states may find it more appropriate to enact the following in the form of a statute rather than a concurrent resolution.

1 justice planning agency and related functional plans from the planning agency and other State
2 agencies, and submit reports and recommendations thereon to the [legislature]; (2) review all
3 relevant proposed State legislation for conformance to the comprehensive criminal justice plan and
4 related functional plans, including but not limited to improvements in techniques, organization,
5 coordination and administration of police, court, prosecution, counsel for the indigent, correctional
6 and rehabilitation activities; (3) encourage cooperation and coordination of law enforcement and
7 criminal justice efforts between state and local jurisdictions and among local units of government;
8 (4) stimulate greater citizen involvement in crime reduction and promote better relationships
9 among law enforcement officials and members of the community; and (5) develop and introduce
10 legislation affecting the plan.

11 AND BE IT FURTHER RESOLVED, that the joint legislative committee on the improvement
12 of law enforcement and criminal justice shall consist of [ ] members, [ ] of whom shall be
13 members of the Senate to be appointed by the [president of the Senate], and [ ] of whom shall
14 be members of the [House of Representatives] to be appointed by the [Speaker of the House of
15 Representatives].

16 AND FURTHER, that any vacancy of the committee shall be filled by appointment by the
17 officer authorized to make the original appointment.

18 AND FURTHER, that the committee shall choose a chairman, a vice-chairman, and a
19 secretary from its membership, and may employ professional, clerical, stenographic, and other
20 assistants and fix their compensation. Members of the committee shall serve without compensation
21 but shall be reimbursed for any expenses incurred by them in the performance of their common
22 duties.

23 AND FURTHER, the committee may: (1) request from any department, division, board,
24 commission, or other agency of the State or any political subdivision of the State such information
25 and assistance as may be necessary for the committee's review of proposed legislation; (2) [sub-
26 poena] [request the appearance of] witnesses, take testimony, and [compel] [request] the
27 production of books, records, documents, papers, and other sources of information deemed by
28 the committee to be relevant to its investigation; [(3) have access to all books, records, documents,
29 and papers of any political subdivision of the State;] (4) exercise all powers and authority of other

1 standing committees of the [legislature]; and (5) sit anywhere within or without the State to
2 conduct the review herein described.

SOUTHERN REGIONAL COUNCIL
PROJECT ON THE ADMINISTRATION OF JUSTICE

THE NEW APPROACH TO POLICE-COMMUNITY RELATIONS

BY
JOHN O. BOONE
DIRECTOR, PROJECT ON THE ADMINISTRATION OF CRIMINAL JUSTICE

Speech made at the University of Oklahoma
Norman, Oklahoma

THE NEW APPROACH TO POLICE-COMMUNITY RELATIONS

BY
JOHN O. BOONE
DIRECTOR, PROJECT ON ADMINISTRATION OF CRIMINAL JUSTICE
SOUTHERN REGIONAL COUNCIL

As long as there are in fact black communities, separate and distinct from white communities, there will be no appreciable respect for the law. Moral relations undergird moral codes and the ability of officials to administer the codes. In this connection, I do not see how in this world we can expect people to behave morally in some situations and wink at the immorality in others.

Consequently, as long as the church and religious institutions such as YMCA's endeavor to select those services that will be shared freely while withholding those that have a personal flavor from a large segment of society, the segment that is discriminated against will likewise select the rules of such a game that they will respect. Honesty, loyalty, cooperativeness, helpfulness, responsibility, and justice are essential aspects of moral behavior. In my opinion, if just one of these virtues is weakened in the application of the rules, all of them will be weakened. Consequently, injustice and dishonesty breed disloyalty and irresponsibility. Can a black man be expected to respect the ideals of one nation, indivisible, when he knows that a large majority of the nation's citizens cannot stand to live with him, play with him, worship with him? These are the hard decisions that the Commission presented to the nation.

If the law is designed to promote the welfare of both the individual and the larger social group and the rules must be mutually enhancing, it is the black man who is in trouble and fighting for

his life, since the law is white, invoked by a white majority that condones moral conduct in one area and winks at its violation in another that is designed to keep the undesirable in his place.

I acquired my image of a policeman from a small southern city cop named Bob Barrett. He was a trigger happy white southerner who was extremely harsh in the application of his power in the black community, except in one case. Most probably he was also punitive of poor whites, but their plight was invisible to me at that time. One black man carried a pistol under his belt and let it be known that all of the bullets were ear-marked for Bob Barrett. This black man was notorious for his accurate marksmanship. Bob Barrett, who had several notches on his gun, notably avoided a confrontation with the black man who carried the loaded gun. Harassment, brutality and flagrant discourtesies marked his treatment of other black residents, who responded to his efforts with anxiety and fear. It was often death for one who ventured out of "nigger town" after dark. Mr. Barrett was run out of this small city several years ago after he ran over a white woman while driving under the influence of liquor.

Bob Barrett's law was the gun used to keep the black man in his place. In order to protect himself, one black man took the law into his own hands.

I am sure there must have been other police officers in this small city of 8,000 persons, but is it strange that only the image of Bob Barrett remains in my mind?

A few weeks ago, I was privileged to visit Washington, D. C., when hordes of people camped in our Nation's Capitol, many of them expecting to get the attention of powerful men who believe they have the destiny of the world in their hands. And, while Solidarity Day was not so solid in several important aspects, the rallying cries were earnest, if disarrayed, and it was refreshing to observe slogans and mottoes calling for justice, peace, honesty and fair play. They defined the crucial need for a greater commitment by public figures directed toward those ideals of respect for human lives and for individual worth. Solidarity Day made visible these surges for human dignity. One group that appeared most impressively, wore a bold message reading simply, "I am a man," and it was not until I returned to Atlanta that I learned this was the idea, actually, for which Dr. Martin Luther King, Jr., had died. The men who proudly carried this message were garbage collectors from Memphis, Tennessee. Many other groups were also present pleading for justice, dignity and an equal chance for the poor and the black. It was significant that so many took the time to say I care about a standard of living for all Americans that guarantees the health and decency of all.

To be very, very frank with you -- and you are wasting your time if we cannot be frank -- until this is done, until no child's hunger goes unappeased, until no mother's sickness goes unattended, no one can earnestly expect the black man and the poor man to support a system which permits the black and the poor to receive treatment

different from the white and the well-off in all of our basic institutions. Looters, reasonably, were both black and white -- well-off and poor. One who would receive stolen goods is in a sense a looter and just as guilty of a crime as the actual thief. I know people who would not have dared to seek "hot" items a few years ago that are doing it today. It is reported that underground stores are thriving in some of our plagued cities. Could it be that the black market is becoming popular in the same manner that it does during all wars and states of violent disorders? Also, before looting became widespread, crime was supported by those who obey the law selectively according to their interest and seek illegal sex relations, gambling opportunity and narcotics. Could it be that acting out in this manner is a signal that something is wrong in the "personality" of society just as stealing, restlessness and tantrums -- indicate that something is wrong in the environment of a child? Inconsistent application of the rules breeds disrespect on all levels.

Primarily, in this paper, I want to talk about those circumstances that are now more supportive of crime than of law and order; those injustices that have besmirched the character of a large segment of our nation and generated a cauldron of hostility.

This acute situation calls for action now. This quandary involves the question which comes first, the chicken or the egg? Black men want justice and honesty now even if it is necessary to make use of the threats of violence. The white man requires law

and order now, and Congress recently passed legislation that will assist localities in boosting instruments of police control. There are many indications that problem management strategies will not include an earnest approach to the creation of support for law and order. It is obvious that decision makers favor financial support for police action rather than a serious program of prevention and correction.

One case in point is the designation of state level control of financial support for local programs. This will especially hinder police programs in the South. There are currently no statesmen in the political arena powerful enough to have an influence upon the direction in which we are moving. Senator Robert F. Kennedy was silenced. It seems that all decent Americans must depend upon such organizations as ACLU, NAACP, AND SCLC to take up the slack in the fight for equal justice under the law.

The black man is certain to continue the fight for his freedom and the fight for the salvation of his country by the most effective means possible. That this is to be done should be accepted by all who believe in democracy and the American ideal. Because it is true that killing a man does not kill his dream, I am optimistic that we shall over come -- we always have. If this were not true, our state today would be anarchistic. It is just too bad that there are no political figures on the scene today such as Thomas Jefferson, Abraham Lincoln, John F. Kennedy and Robert F. Kennedy, to appreciate how fundamentally relevant these problems are to the state of the union.

Yes, Negroes are in a dilemma over strategy, but this dilemma does not mean that the movement toward equality is ended. Black men have always made progress by sweating and bleeding every step of the way and there are no reasons to believe that he will not continue to proceed in this manner. He was urged to seek change by utilizing an enduring capacity to suffer, defending his oppressor with love and "soul power." This strategy might change. The messenger of love and enduring suffering is also silenced; his message is alive and we are going on, but how do we go from here? Conflicts are now very apparent in university circles, organized religion, NAACP, CORE, SNCC, SCLC, and even the Urban League is sending up smoke signals through its Executive Director, Whitney M. Young, Jr. Strategies will differ in the final analysis, but the objective of justice and honesty in public policy is fundamental in the philosophy of all of these organizations.

As for strategy, some will risk a state of martial law, suppression and widespread violent disorder in the pursuit of peace and prosperity; the other position would utilize non-violent tactics to achieve the same end.

The National Advisory Commission on Civil Disorders became aware of this dilemma, but what about the more powerful decision makers who are ignoring the urgency of the report? The Commission was impressed sufficiently by its findings to appreciate the gravity of the crises in the nation and decided to "tell it like it is." Furthermore, one can be sure that even as critical as the report

appeared, the actual situation is worse. The Commission concluded that our nation is moving toward two societies, one black, one white, separate and unequal. Left unsaid is the fact that the movement is toward two warring societies.

In my opinion, the Commission's observations concerning the police and the community contains the key to the solution of our problems of law and order. The police is the law personified. Behavior of the police is behavior of the law in the sight of a large segment of the population. I only wish I could be as confident in the value of the Commission's proposed remedies as I am in their diagnosis. The conclusion that the policeman in the community is a symbol not only of the law, but of the entire system of law enforcement and criminal justice is a crucial factor, superimposed over all of the other factors that were so well defined in the report, including those factors presented by Dr. Kenneth B. Clark concerning the socio-economic elements in our society that contribute to disrespect for law and order. [1] Poor people of all races are relegated to rural and urban ghettoes; subjected to criminally inferior education; committed to houses unfit for human habitation; subjected to unspeakably low levels of municipal services and in varying degrees discriminated against in the economic arena -- except where "freedom of choice" favors the white poor, who can rise up out of poverty and,

because they are white, lose this identity and move about freely as they choose. No one can argue with the fact that the socio-economic factor in cities influences law enforcement practices toward the black and the poor, but given color as an added element double jeopardy prevails.

The mental and emotional frustration that results from the fear of the law and the lack of confidence that justice can prevail is just as much related to widespread disorder in urban environments as those physical deprivations that have affected the mental and emotional make up of black youth and hindered their ability to tolerate conditions in the ghettos. Consider the relevance of the following findings that are being tested in both North and South America today by Medical Researchers.

> "In my experience with families in the Delta -- some of whom I've known and observed for many years -- their kind of life can produce a chronic state of mind, a form of withdrawn, sullen behavior that the word "depression" only begins to describe. I have seen some of the families I know in the South go North and carry with them that state of mind; they get more food, more welfare money, and in the public hospitals of Northern cities certain minimal medical services -- but as one tape-records their expressed feelings and attributes month after month, as I am now doing in a Northern ghetto, one sees how persistently sickness and hunger in children live on in adults -- who doubt any offer, mistrust any goodness or favorable turn of events as temporary and ultimately unreliable. I fear that we have among us hundreds of thousands of people who have literally grown up to be and learned to be tired, fearful, anxious, suspicious, and (as a physical fact of life), in a very basic, inflexible and tragic sense, unbelieving." [2]

---

[2] Hearings on Hunger and Malnutrition in America, Senate Committee on Labor and Public Affairs, July 11-12, 1967, p. 53.

I believe that this problem is acute today, not merely because one is poor and disadvantaged, but importantly -- because masses of people who are black and disadvantaged believe now that it is useless to ever expect justice to prevail. They are no longer willing blindly to support an unfair system of administering criminal justice. When burnings accompany disorders, middle class black people respond with polite platitudes when their personal environments seem to call for such response. In intimate circles, however, statements such as "why didn't they go farther downtown instead of burning their own stuff" are often the reaction.

The American policeman has comfortably pursued his legal responsibility, I am afraid, only when he has dealt with people who are not powerful politically and who are, in many senses, helpless. Perhaps I should say, were helpless and powerless, because the threat of violent destruction is resulting in some changes in police practices. It is unfortunate for change to come as a result of disorders, but, nothing else seems to be working. The loud noises of the riots are now heard by the powerful and interpreted as widely dangerous to health and safety. So, they are grudgingly considering changes in public policy, at least to the extent that they are willing to buy some "fly swatter programs." Use of DDT is still too extreme, too threatening of ideas, of sovereign rights.

We would have been ahead in the game had the umpire called foul the murders and injustices toward black people in the South years ago, and more recently the murders of black and white civil rights

workers, and not succumbed to do-nothing policies that accompany pleas for states rights and local autonomy. We would be ahead had we not winked at the unfairness of a system that sends the poor and black to prison -- and rewards bigots with economic and political success. These clear-cut indications of inequality and deprivation dramatize our plight, but they are soon forgotten. But, like a cancer, painless until the end, they now threaten to destroy our "social body."

In other terms, the tendency of law enforcement, judicial and correctional agencies to select black clients for unfair treatment has been quietly destroying the system for years. These practices have fostered distrust of the officials who administer the rules and devastating lack of faith in the entire system. In all games, when the rules are applied in an unfair manner, various types of disorder will emerge as a direct reaction. Likewise, the dishonesty that prevails in the agencies that enforce society's rules of order is generating widespread unfaithfulness among the persons that are exposed to unequal protection of the law.

The anger that causes bricks and bottles of fire to be hurled at law enforcement officers and other symbols of oppression develops the same manner as that anger which causes one to cry, "kill the umpire" and results in the tossing of beer cans and other available missiles in the direction of any one who is designated responsible for fair play. Black people are notoriously tolerant. They have been urged to keep the faith even by some of the most militant

leaders who are themselves victims of disparity and unequal treatment under the law. Even Rap Brown, who is considered lawless, is appealing his case within the framework. The question is raised, however, how much longer will the oppressed tolerate the widespread evidence of dishonesty and immorality? Therefore, what we wish to say in this paper, in the most concrete manner possible, is simply that dishonest decision making on the local, state and national levels is making people angry and producing anarchistic conditions that threaten to destroy our basic institutions.

Now the question is raised concerning the Commission's recommendations to enhance police-community relations.

Summarily, local governments were advised to review police operations in the ghetto particularly regarding conduct and abrasive practices of police officers; provide better police protection for ghetto residents in order to relieve them of their high sense of insecurity and pursue a single standard of law enforcement rather than the dual standard which is, in my opinion, the primary reason for disrespect of the law; establish effective mechanisms for the redress of grievances against municipal employees, especially police; adopt policy guidelines to assist officers in making critical decisions where poor judgment could create tension; stimulate development of innovative programs to insure community support for law enforcement; establish fair recruitment and promotion policies that will attract Negroes; and, establish a Community Service Officer Program.

The recommendations of the Commission were addressed to a dilemma that plagues all urban police departments. They are faced

with demands for increased protection and service in the ghetto. Yet, the aggressive patrol practices thought necessary to meet these demands themselves create tension and hostility. Grievances as a result of both poor police protection, police attitudes of over-protection, and ineffective mechanisms for redress are direct causes of poor police-community relations.

The recommendations are starting points, efforts to start where the problems are, but seemingly only expedient program ideas. The most positive thing that can be said is that the adoption of these programs may give us time more fully and frankly to define our problems. An examination of the police function should be next on the national agenda.

The Task Force on the Police of the President's Commission on Law Enforcement and the Administration of Justice devoted considerable attention to law enforcement policy and the police role. It was observed that law enforcement is especially difficult in a society such as ours that has so heterogeneous and mobile a population; that has so prosperous an economy; that has so high a degree of urbanization, with accompanying congestion and anonymity; and that places so high a value on individual freedom, upon equality under the law, and upon local control over the police power.

The group called for a rethinking of the function of the police in American society. Reassessment of the kinds of resources and support that the police need in order to respond to the demands that we make upon them. The police spend more time keeping order, settling

disputes, finding missing children, helping drunks than responding to criminal conduct.

The police role is especially pertinent as the administration of criminal justice, in the South especially, tends to select black people for the harsher aspects of control and punishment.

If the system of criminal justice truly reflects the value society places on the individual, citizens should be more alarmed about the nature of a justice that places a disproportionate number of black people and poor white people in prison than about crime. They should be shocked at how justice is meted out to black people in the Southern Region.

It seems that perhaps the law in the South has been used to sustain values that prevailed during the slave plantation era. Black people are property to be used as those who have the power desire. The law essentially provides cheap labor for public works and revenue for poorly administered local governments and keeps the black man "in his place." A few examples.

A few months ago, a high public official in Alabama observed that as long as one white woman and one black man remain in Alabama, the death sentence for rape will remain. It is no secret that, since 1930, more than 400 of the 465 men executed in the South for rape were black, although they represent less than 30% of the population. Randomly selected news reports of capitol sentences in the South reveal that it is the black man that get life and death. In such offenses where the offender is white and the victim is black, reports of conviction were rare. Punishment for whites found guilty of rape of a black victim amounted to little more than a rap on the knuckles.

In Atlanta, Georgia, heralded as a most progressive city, it was headline news nationally for an ex-convict to have received life for the murder of a 16-year-old boy which set off a riot. In the same city, a few months ago, a deal was made to give probation to a white man who had killed a Negro, because the white man was "old and sick."

The problem is probably as difficult as it is perceived by Ralph Ellison who said the problems exist because white people refuse to see the black. The following excerpt from "The Invisible Man" is highly relevant to our thesis.

> "One night as I accidentally bumped into a man, and perhaps because of the near darkness he saw me and called me an insulting name. I sprang at him, seized his coat lapels and demanded that he apologize. He was a tall blond man, and as my face came close to his he looked insolently out of his blue eyes and cursed me, his breath hot in my face as he struggled. I pulled his chin down sharp upon the crown of my head, butting him as I had seen the West Indians do, and I felt his flesh tear and the blood gush out, and I yelled, 'Apologize! Apologize!' But he continued to curse and struggle, and I butted him again and again until he went down heavily, on his knees, profusely bleeding. I kicked him repeatedly, in a frenzy because he still uttered insults though his lips were frothy with blood. Oh yes, I kicked him! And in my outrage I got out my knife and prepared to slit his throat, right there beneath the lamplight in the deserted street, holding him by the collar with one hand, and opening the knife with my teeth -- when it occurred to me that the man had not seen me, actually; that he, as far as he knew, was on the midst of a walking nightmare! I stopped the blade, slicing the air as I pushed him away, letting him fall back to the street. I stared at him hard as the lights of a car stabbed through the darkness. He lay there, moaning on the asphalt; a man almost killed by a phantom. It unnerved me. I was both disgusted and ashamed. I was like a drunken man myself, wavering about on weakened legs. Then I was amused. Something in this man's thick head had sprung out and beaten him within an inch of his life. I began to laugh at this crazy discovery. Would he have awakened at the point of death? Would Death himself have freed him for wakeful

> living? But I didn't linger. I ran away into the dark, laughing so hard I feared I might rupture myself. The next day I saw his picture in the Daily News, beneath a caption stating that he had been 'mugged.' Poor fool, poor blind fool, I thought with sincere compassion, mugged by an invisible man."

The suspicion, fear, and paranoia that is generated in the child -- black and white -- through disappointments and deprivations do not go away. They emerge at every stage of his growth and influence his human relations -- black and white -- resident or official -- in our plagued urban ghettos.

SRC PROJECT ON PENAL REFORM AND CRIMINAL REHABILITATION

INITIAL PROGRESS REPORT

The SRC Project on Penal Reform and Criminal Rehabilitation is designed to examine correctional policies and practices in the southern region and to support improvement of social welfare services and institutional prevention, treatment and training programs by means of sponsorships, technical advice, research and social action.

Staffing is complete since the services of Mr. William Farmar have been secured as Office Manager - Assistant.

Survey Report

The project's initial effort will take the form of a relatively brief, state-by-state survey on the current situation in Corrections in the South. This report, the research for which is being done by Dr. Vernon Fox of Florida State University, will examine the field in terms of: racial integration; official attitudes toward corrections in state and local penal systems; manpower requirements and utilization; comparative financial resources and expenditures; size, condition and efficiency of correctional facilities; industrial and farm operations; institutional treatment programs; custodial practices; institutional and system-wide classification procedures; parole board policies and practices; facilities for post-release care and guidance; disciplinary practices; patterns of recidivism, and trends toward staff professionalization.

The same type of analysis will be made of Police Departments and other law enforcement agencies, and, to a limited extent, the courts -- with a particular emphasis on policies and practices recently adopted to facilitate compliance with Escobedo and its companion Supreme Court decisions.

Data concerning these and other areas of interest will be obtained from official reports; new inquiries by Dr. Fox and staff; previously published material; observations by qualified persons interested in penal reform, and other relevant sources.

Before November 1, Dr. Fox and SRC staff members will correlate and evaluate this material and publish a Special SRC Report which will provide a comprehensive review of present conditions and prospects. It is hoped that this report will also serve as an effective springboard for the initiation and/or support of projects designed to bring about desirable changes.

A number of other projects are developing, and an Advisory Committee (list of participants attached), will be convened on October 20th at the Biltmore Hotel.

Other Projects

1. Research is planned on comparative sentencing policies in felony cases with particular emphasis on disparity in length of sentence attributable to race or socio-economic level.

2. The Arkansas Council on Human Relations, in conjunction with other organizations, has expressed an interest in starting action to improve their state's penal system. The present situation there is deplorable - as recently demonstrated by a strike of prisoners and occasions of officially sanctioned brutality. In one Arkansas prison, there are thirty-five civilian staff members to supervise more than three thousand prisoners.

3. Mr. Kenneth Dean, Director of the Mississippi Council on Human Relations, has indicated that there are a number of people in his state who have an abiding interest in penal reform. These people will be contacted and preliminary discussions, designed to foster this interest and support some action, will be begun in the near future.

4. Technical assistance to state prison systems is planned, especially in the areas of racial integration, establishment of classification systems and development of helping programs. Assistance will be available both from the Project Director and a panel of consultants.

5. Cooperation with and support of The Fellowship of the Concerned, who launched a program of visiting the courts in November, 1965. This federation of eighteen women's organizations, convened by Mrs. M. E. Tilly, is a vital force in the field of social welfare. After a recent meeting of the Georgia Unit of the Fellowship, Mrs. Tilly indicated that the women are determined to visit penal institutions as well as the courts. SRC staff will foster this interest and provide orientation and information which will assist the group in evaluating what they observe in courts and penal institutions.

6. In the wake of crisis situations culminating in the recent riotous demonstration, Atlanta needs to re-evaluate its social problems, especially delinquency among its youth. In view of this, many local agencies and institutions should be willing to invest time and money in

a demonstration project designed to facilitate the task of coping with our most crucial social problems. In this connection, SRC plans to convene a meeting, soon after the first of the year, involving representatives of many public and private agencies and institutions, to determine if there is a readiness to cooperate in a concerted effort in this direction. At the meeting, SRC staff will offer specific suggestions, and, should a specific project be decided upon, we will consider funding a separate research activity to evaluate the project.

7. Inasmuch as there is a great shortage of manpower in the field of corrections - and there are few Negroes in the field - we are interested in cooperating with universities in the southern region to recruit Negroes for professional correctional training, and to assist the universities in securing grants for developing curriculum and faculty in this field. There is also a need for interesting Negroes in employment in the field on a non-professional level. In this connection, a project involving high school and college guidance counselors might be appropriate.

8. We also hope to encourage cross-fertilization of ideas in correctional practice, probably through support of an inter-state staff exchange program.

9. In support of a wider dissemination of information about corrections among the general public, we hope to issue, in fact sheet or brochure form, separate state-by-state abstracts of our survey report. These abstracts will be presented in illustrated, easy-to-read form, and should serve as useful tools for organizations and individuals interested in penal reform.

General Observations

Preliminary observations through travel and correspondence would seem to indicate that, while there are many serious problems - including the continued commission of atrocities in some penal systems - the situation is somewhat more encouraging than anticipated.

Florida has integrated all of its institutions and has invited us to visit the system. Whether this alleged integration, however, is token or real remains to be seen.

There has been some integration in North Carolina, South Carolina and Georgia (the Girls' Training School in Atlanta), and some degree of integration must be assumed in all institutions which have accepted Federal grants (including Draper Prison in Alabama).

Personnel changes in the Arkansas Correctional System in the wake of the recent lashing publicity, while sadly belated and totally inadequate, nevertheless represent some small improvement.

Many top-level correctional administrators in the region privately reveal an unexpectedly progessive orientation. This leaves room for hope that state correctional systems will be willing to accept help and at least entertain suggestions for specific changes.

In sum, there is considerable reason to believe that this project, through the judicious extension of grants and technical assistance for specific projects; initiation and support of basic research in neglected areas; organization and encouragement of groups working for the passage of sound reform bills in state legislatures, and the wide dissemination of information about corrections and the processes of criminal law at meetings and through the mass communications media, can make a substantial contribution to the upgrading and increased humanization of all of the processes in which the criminal offender is involved, before, during and after imprisonment.

PROPOSED PARTICIPANTS FOR INITIAL SRC MEETING ON

PRISON REFORM AND CRIMINAL REHABILITATION PROJECT

Mr. McNeill Smith, Attorney at law
700 Jefferson Street Building
Greensboro, North Carolina

Mr. Joseph Haas, Attorney at law
1116 First National Bank Building
Atlanta, Georgia

Mr. Donald Hollowell, Attorney at law
859½ Hunter Street, S.W.
Atlanta, Georgia

Miss Barbara Jordan, Attorney at law
5303 Lyons Avenue
Houston, Texas

Mr. Sylvan Meyer, Editor
The Daily Times
Gainesville, Georgia

Dr. Hollis F. Price, President
LeMoyne College
Memphis, Tennessee

Rabbi Jacob M. Rothschild
3205 Arden Road, N.W.
Atlanta, Georgia

Mr. V. Lee Bounds, Director of Prisons
840 West Morgan Street
Raleigh, North Carolina

Mr. Richard Chappell
Institute of Government
University of Georgia
Athens, Georgia

Mr. George Randall, Administrator
Corrections Division
Oregon State Board of Control
Salem, Oregon 97310

Dr. E. Preston Sharpe, General Secretary
American Correctional Association
15th & H Streets, N.W.
Washington, D. C.

Mr. Myrl Alexander, Director
Federal Bureau of Prisons
101 Indiana Avenue, N.E.
Washington, D.C.

Mr. Ralph McGill, Publisher
The Atlanta Constitution
Atlanta, Georgia

Mr. Homer Benson, Member
United States Board of Parole
Washington, D. C.

Mr. Milton Rector, Executive Director
National Council on Crime & Delinquency
44 East 23 Street
New York, N. Y.

Mr. Christopher Edley
Ford Foundation
477 Madison Avenue
New York, New York

Mr. Burt Struby, General Manager *
Macon Telegraph & News
Macon, Georgia

Father Farrell, Chaplain
Howard University
Washington, D. C.

Mr. John Wheeler, President
Mechanics & Farmers Bank
Durham, North Carolina

Dr. Raymond M. Wheeler
1900 Brunswick Avenue
Charlotte, North Carolina

Mr. Ellis MacDougall, Director
South Carolina Department of Corrections
Columbia, South Carolina

Mr. Austin MacCormick
Osborne Association
114 E. 30th Street
New York, N. Y.

* Has indicated he will be unable to attend.

E.V.a
PENAL REFORM

SOUTHERN REGIONAL COUNCIL, INC.
PROJECT ON PENAL REFORM
& CRIMINAL REHABILITATION

Administration of Criminal Justice

Examination of the functional structures of correctional systems in the United States is analogous to a trip through Europe where, in traveling relatively short distances one may encounter many different languages, types of government, patterns of culture, and artifacts. In the Southern Region one finds penal systems which range from the enlightened to the reactionary from the progressive to the mediaeval from the humane to the brutal. Even within a single state one may observe, on one level, trends toward a system in accordance with the most progressive correctional philosophy, while, on another level, one finds hangovers from the days of degrading stripes and chains. In the same way, law enforcement agencies and the judicial process will invoke, selectively, both primitive and modern practices, the choice of treatment reflecting, in the main, the social characteristics of the community's officials and/or the economic resources of the offender.

The Project

It is particularly fortunate that, in an area which is almost exclusively the domain of public policy and administration, the Ford Foundation has provided an opportunity for a private agency to intervene and, perhaps, make a contribution toward advancing these crucial processes. Law enforcement agencies and correctional systems, as government agencies controlled by relatively rigid public policies, are understandably sensitive to the opinions of community groups. This tendency has often been demonstrated in the wake of exposed corruption and public disorder. As responsible arms of public policy, the systems are able to innovate only within the limits imposed by laws which govern their operations. A private agency that is not bound by official restrictions and the burden of tradition can offer assistance to correctional administrators and interested groups of citizens who desire to implement reforms, conduct pertinent research and institute programs designed to bring about construcitve change in governmental systems and new approaches to dealing with crime.

Advisory Committee

In order to develop a creditable three year program, reconciling philosophy and feasability as much as possible, we have convened a group of knowledgeable persons, broadly representative of society's institutions, who are acutely interested in the social task of coping with the problems presented by violations of societal mores.

The following propositions are submitted primarily to stimulate your thinking and give some direction to our meeting. They are not meant to imply that we are committed to carrying out any particular proposal, except for the initial survey that is already underway.

A. Southern Regional Council Special Report: The Prevention of Crime and Treatment of Offenders in the Southern Region (to be published this year.)

Include Local Jails Misdemeanants

Will be available in Pres. Comm. report

This will be a state-by-state survey report describing the current situation of crime prevention and corrections in the South. Dr. Vernon Fox and associates at Florida State University's Department of Criminology and Corrections and SRC staff members are assisting us in this publication. The report will describe: racial integration; philosophy of corrections; manpower utilization and needs; comparative financial resources and expenditures; physical plants and facilities, including farms and industrial operations; treatment programs, both community and institutional; classification systems; parole policies and practices; facilities for post-release assistance and community treatment centers; institutional populations and patterns of recidivism; nature of professional staffs. Similar analyses will be made of law enforcement agencies and courts, to a limited extent, to determine any new developments stemming from recent legislation and court decisions. The survey will be based on official reports and inquiries, other publications, and observations of authorities in the field.

The survey will provide both a vehicle for public education and a basis for the project's programs.

Public Education -

B. Research Conference: While no one can be certain that any particular research project will produce practically useful results, we would like to be sure, at least, that our projects will be pertinent to the problems of the Southern Region. Our means of providing this assurance would be to bring together a small group of academicians of the region, under the leadership of a nationally known social scientist, for the purpose of presenting papers and designing research that we could practically pursue. Such a conference would have the added advantage of providing a needed forum for ideas of regional rather than national interest. Such ideas are often neglected at more broadly based meetings. Another approach would be to select research without formally weighing its value relative to regional concerns, and some suggestions are proposed in this outline.

$200T fund study / 5yr project - Ga. has a interim legis. study committee

C. Other Research:

1. A study to determine whether underdeveloped correctional systems consistently make for a higher rate of recidivism than systems considered more progressive.

careful of lack of records or selectivity records -

2. Update comparative sentencing study done by SRC in 1954 - referring to both the Garfinkle and Foley studies. Each of these studies pointed to significant disparities between the nature of sentences for Negroes and white persons. Have these practices changed since the Supreme Court School Desegregation Decision in 1954?

3. A candid review of industry's attitudes toward the employment of persons with records of crime and delinquency. Is there a need for a more concerted public or private project to encourage industry to use this manpower more appropriately, somewhat in the manner of the "Hire the Handicapped" program?

4. Study how Negroes use correctional services. (Could be part of study of undeveloped systems.)

5. Study effectiveness of the North Carolina Plan (such a study may be already underway.)

6. Demonstration Project in an urban area, focused on crime and delinquency, and utilizing multi-method techniques involving public and private agencies and graduate schools. Such a project would be accompanied by a research and evaluation instrument.

7. Report on institutional visiting (prisons, jails, training schools, etc.) by small teams of women - utilizing a modified John Howard approach. This is in connection with a group of church women who have already requested us to provide orientation on penal practices, because they intend to visit the prisons in their various states. Our orientation efforts should be helpful both to the women and to correctional managers.

8. The procedures by which society deals with delinquent or criminal behavior are often themselves causative factors in later offenses. A study of the background and characteristics of men who have histories of Dyer Act violation (Interstate Transportation of a Stolen Motor Vehicle) should throw some light on this hypothesis.

D. Education and Consultative Programs:

1. Supportive work with human relations groups and the Fellowship of the Concerned, throughout the Southern Region, as they demonstrate interest in the administration of criminal justice.

2. Prepare legislative handbook, summarizing the codes under which corrections operates, state by state, and presenting accepted standards, such as those developed by the National Council on Crime and Delinquency or the American Correctional Association. This book will be distributed to public and private agencies, legislators, and interested groups.

3. Prepare booklet on the administration of criminal justice for use in public schools, in order to encourage wider

acceptance of this process as a normal function of social welfare. It has been proposed that this be done in co-operation with the Joint Commission on Correctional Manpower. (The approach would be to influence attitudes toward corrections as a career and as a helping agency.)

4. Consultation Service. Secure a panel of knowledgeable professional correctional workers and facilitate its use by systems in the region. Organizations and groups could secure our support through regional conferences and their own action groups. This program would provide for fees and expenses for consultants and technical advisors.

5. Technical Advice. As far as possible, the project staff would provide technical advice to correctional systems, law enforcement agencies and other official bodies concerning correctional procedures, training, and new programs and policies.

6. Would a Regional Conference on Racial Integration in Prisons provide significant support for state efforts in this area? While a policy of racial integration would require the repeal of restictive statutes in many states, a conference on the problems and processes of integration which are peculiar to correctional systems might serve to alleviate the anxiety of administrators concerning the effects of desegregation in their prisons. Would a sharing of experiences by those who have already effectuated integration be helpful? Another idea would involve an even larger conference, co-sponsored, perhaps, by such organizations as NCCE and ACA, for all interested managers without considering regional limitations.

7. Provision of resource material to public and private agencies, groups and individuals. For example, some Human Relations Councils will receive copies of Ferguson vs. Buchanan, which resulted in desegregation of the Dade County Jail. This will be used as the Councils urge

officials to begin to desegregate. Also, film and other aids would be used in this program.

8. Cross-fertilization of ideas and programs. This program would facilitate an exchange of top-level and middle management administrators of criminal justice in the Region. Properly implemented, such a program would encourage the spread of progressive correctional principles in day-to-day operations.

9. Recruitment of Negroes for correctional work. Studies reveal that very few Negroes are employed in correctional administration. (This could be an area for significant research.) Would schools and agencies be benefited by a private recruitment service?

10. Training for correctional work. How could a private agency assist in this endeavor?

General Observations

Preliminary observations through travel and correspondence would seem to indicate that, while there are many serious problems - including the continued commission of atrocities in some penal systems - the situation is somewhat more encouraging than anticipated.

Florida has integrated all of its institutions and has invited us to visit the system. Whether this alleged integration, however, is token or real, remains to be seen.

There has been some integration in North Carolina, South Carolina and Georgia (the Girls' Training School in Atlanta), and some degree of integration must be assumed in all institutions which have accepted Federal grants (including Draper Prison in Alabama.)

Personnel changes in the Arkansas correctional system in the wake of the recent lashing publicity, while sadly belated and totally inadequate, nevertheless represents some small improvement.

Many top-level correctional administrators in the region privately reveal an unexpectedly progressive orientation. This leaves some room for hope that state correctional systems will be willing to accept help and at least entertain suggestions for specific changes.

In sum, there is considerable reason to believe that this project, through the judicious extension of grants and technical assistance for specific projects; initiation and support of basic research in neglected areas; organization and encouragement of groups working for the passage of sound reform bills in state legislatures, and the wide dissemination of information about corrections and the processes of criminal law at meetings and through the mass communications media, can make a substantial contribution to the upgrading and increased humanization of all of the processes in which the criminal offender is involved, before, during and after imprisonment.

Administration of Justice

A Presidential report: union has role in prison reforms

By Tom Castor

The nation's crime rate is not going to be reduced until the country's correctional institutions have sufficient financial resources and personnel to rehabilitate rather than confine or harass those convicted of crime.

That is the conclusion reached by the President's Joint Commission on Correctional Manpower and Training after a three-year study in which it found that "salaries of correctional employees provide an index to the retarded development of personnel policies in corrections.

"Position by position," the report says, "salaries in this field are generally lower than those in the private sector, or in other governmental occupations requiring comparable educational preparation and job responsibility."

Role of unionism. The report also makes it clear that the trade union movement will play a role in the reform of the corrections system.

"The rise of public employee unions and the legislative authorization for collective bargaining may prove to be important catalysts for change in corrections. In more and more states and local jurisdictions, unions are gathering significant numbers of correctional employees into increasingly strong groups.

"The involvement of correctional employees in this growing movement should be a matter of interest to correctional administrators," the report notes. "The impact of this trend on recruitment, job classification, salaries, administrative prerogatives, conditions of employment and retention of personnel will undoubtedly be intense and far-reaching."

Would educate management. The commission recommends that collective bargaining education and training be given a top spot on the agenda for improved prison management.

"A top priority should be given to the education and training of correctional managers in the areas of collective bargaining and labor-management relations. Corrections should borrow heavily from the work accomplished in the private sector in this area," the report says.

"Correctional administrators can also take advantage of a number of training programs already existing in the field of management."

Wurf comments. AFSCME President Jerry Wurf said the report underscores the International's belief that decent wages and working conditions must be provided for prison personnel before the system can rehabilitate prisoners.

"All too often our prisons serve as social trash cans where we simply detain people," he said. "And all too often they serve as graduate schools of crime."

Wurf hailed the commission's recommendation for a "Correctional Manpower Development Act," with a minimum Federal funding of $25 million a year, but he cautioned that it may be too little, too late.

"The report notes that it would take at least 10 years before the effects of the proposed program would be felt," he said. "At the same time, the commission tells us that by 1975, the prison population will increase by about a half-million, or one-third its present size."

The proposed Correctional Manpower Act, if passed, would provide the authority for coordination of all Federal programs involving education, training and utilization of correctional manpower for administration of comprehensive educational and training programs. It also would provide for technical assistance to agencies, educational institutions and others working to improve educational and training opportunities for correctional personnel.

The report states that corrections suffer from totally inadequate funding and a lack of public support and understanding. And a dearth of resources hampers the development of correctional programs and personnel.

Quality of personnel. Of the many recommendations for reform laid down by the commission, most of them deal primarily with improving the quality of prison personnel and prisoner rehabilitation programs.

Here are just a few of those dealing with personnel:

- "Salaries, retirement plans and other employee fringe benefits should be continually assessed and efforts made to keep them in line with comparable positions in government and industry and in the same geographical area. Annual cost-of-living increases should be made an integral feature of salary negotiations.
- "Corrections must make provision for greater advancement opportunities in order to attract and retain high quality personnel. Systems should be opened to provide opportunities for lateral entry and promotional mobility within jurisdictions as well as across jurisdictional lines.
- "The establishment of a national retirement fund, which would permit correctional workers to transfer from one jurisdiction to another without loss of pension rights, should be a major goal of every agency and association seeking the betterment of correctional services."

But the commission also reports that today's prison inadequacies do not stem from staff deficiencies alone.

"Corrections today is characterized by an overlapping of jurisdictions, a diversity of philosophies and a hodgepodge of organizational structures" that have created conditions over which prison staffs have little or no control.

Then there is the problem of public opinion.

"The public and the legislators must understand," the report says, "that there can be no solution to the problem of recidivism (repeating offenders) as long as harsh laws, huge isolated prisons, token program resources and discriminatory practices which deprive offenders of employment, education and other opportunities are tolerated."

Nation must care. The present rate of recidivism among the nation's more than one million offenders is 40%, the report notes.

And its most relevant conclusion is that national leaders must immediately act in an effort to lower that figure.

"In the last analysis," says the report, "those about whom this report is written—and those to whom it is addressed—have to care."

Dec. 1969

File – Crime & Correction Program

NEGRO YOUTH SURVEY

You, along with other Negro youth in Atlanta, are taking part in a study of youthful attitudes and behavior. You do not have to put your name on the questionnaire. No one at the school will see the answers you give, so you should feel free to respond to each question as truthfully and honestly as possible.

This is not a test. We are interested in your attitudes and opinions. There are no right or wrong answers.

— Two kinds of questions — factual 1-8 28-30, 16

The Southern Regional Council, Inc.
Atlanta, Georgia

NEGRO YOUTH SURVEY

1. What was your age at your last birthday? _____

2. Sex: ____male ____female

3. Where were you born? City or Town _____ State _____

4. How long have you lived in Atlanta?

   ____All my life

   ____more than three years, but not all my life

   ____one to three years

   ____less than one year

5. If you have not lived in Atlanta all your life, where else have you lived? (IF YOU ALWAYS LIVED IN ATLANTA SKIP TO QUESTION 6)

Town or City	State	How old were you when you left?
_____	_____	_____
_____	_____	_____
_____	_____	_____
_____	_____	_____

6a. Which of the following people do you live with? (Check as many as apply and indicate their ages)

		AGE
1.	___ your mother	_____
2.	___ your father	_____
3.	___ your aunt	_____
4.	___ your uncle	_____
5.	___ your grandmother	_____
6.	___ your grandfather	_____
7.	___ an older brother	_____
8.	____ an older sister	_____
9.	___ none of these	

6b. If you checked any answer above except number 9, write in the kind of work they usually do for a living. (Check the correct box.)

	KIND OF WORK	CURRENTLY WORKING	UNEMPLOYED	RETIRED
Mother	_____	_____	_____	_____
Father	_____	_____	_____	_____
Aunt	_____	_____	_____	_____
Uncle	_____	_____	_____	_____
Grandfather	_____	_____	_____	_____
Grandmother	_____	_____	_____	_____
Older Brother	_____	_____	_____	_____
Older Sister	_____	_____	_____	_____

EVERYONE SHOULD ANSWER THIS QUESTION

7a. Other than those listed above, write in any other people who live in your home and state their age and relation to you. If none, skip to question 7c. (For example, my sister's husband)

	RELATIONS	AGE
1.	_____	_____
2.	_____	_____
3.	_____	_____
4.	_____	_____
5.	_____	_____

b. In the same order you have written them, what kind of work does each of these people usually do for a living? (Check the correct box.)

	KIND OF WORK	CURRENTLY WORKING	UNEMPLOYED	RETIRED
1.	_____	_____	_____	_____
2.	_____	_____	_____	_____
3.	_____	_____	_____	_____
4.	_____	_____	_____	_____
5.	_____	_____	_____	_____

c. What is your family's main source of income?

1. _____ Father's salary
2. _____ Mother's salary
3. _____ Social Security
4. _____ Welfare
5. _____ Other (Please specify) _____

8. Do the persons with whom you live (check one)

____own or are buying their home

____rent

9. Below is a list of some things every neighborhood is concerned about. How do you feel about these things in your own neighborhood?

I think it:

	Is very poor	Needs some improvement	Is pretty good	Don't know
a. Bus service	_____	_____	_____	_____
b. Garbage and trash collection	_____	_____	_____	_____
c. Location of schools	_____	_____	_____	_____
d. Quality of schools	_____	_____	_____	_____
e. Sewers	_____	_____	_____	_____
f. Crowded conditions	_____	_____	_____	_____
g. Washing facilities for clothes	_____	_____	_____	_____
h. Police protection	_____	_____	_____	_____
i. Cleanliness and appearance	_____	_____	_____	_____
j. Parking facilities	_____	_____	_____	_____
k. Hot water facilities	_____	_____	_____	_____
l. Condition of homes	_____	_____	_____	_____
m. Proper heating during winter	_____	_____	_____	_____
n. Recreational facilities	_____	_____	_____	_____
o. Street lights	_____	_____	_____	_____
p. Condition of roads	_____	_____	_____	_____
q. Condition of sidewalks	_____	_____	_____	_____
r. Shopping facilities	_____	_____	_____	_____
s. Bathroom facilities	_____	_____	_____	_____
t. Cooking facilities	_____	_____	_____	_____
u. Churches	_____	_____	_____	_____

10. Are any of the following a problem in your neighborhood?

	Yes	No	Don't know
a. Too much noise	_____	_____	_____
b. Too much drinking	_____	_____	_____
c. Too much fighting	_____	_____	_____
d. Too much trouble with police	_____	_____	_____
e. Poor study conditions	_____	_____	_____
f. Drug use (heroin, "pep" pills, etc.)	_____	_____	_____
g. Speeding cars	_____	_____	_____
h. Gangs	_____	_____	_____
i. Unemployment	_____	_____	_____
j. Stealing	_____	_____	_____

11. Do you agree or disagree with the following statements?

	Agree	Disagree	Don't know
a. No one cares about us where I live.	_____	_____	_____
b. Most people are unfriendly	_____	_____	_____
c. I wish someone would do something about where I live.	_____	_____	_____
d. Sometimes I feel all alone in the world.	_____	_____	_____
e. One can always get help if he tries.	_____	_____	_____
f. Most policemen are pretty good guys.	_____	_____	_____
g. Schoolteachers really want to help you.	_____	_____	_____
h. Sometimes I have the feeling that other people are using me.	_____	_____	_____
i. If you worry about the next guy you'll never get ahead.	_____	_____	_____
j. Most older people usually give good advice.	_____	_____	_____
k. It is smartest to believe that all people will be mean if they have a chance.	_____	_____	_____

THE DEMOCRATIC POLICEMAN

Administration of justice

Are police in Western Europe more democratic than in the United States? George E. Berkley answers "yes" in an exciting and controversial book, The Democratic Policeman, (Beacon Press, $7.50) Why? He gives a two-pronged answer, training and unionism.

In West Germany, he notes, police recruits receive three to four years of training, with heavy emphasis on political science and applied psychology. Recruits get two years and nine months of training in Italy, one full year in Sweden, six months in France and 13 weeks in Great Britain. In the United States, the vast majority of policemen begin carrying guns and enforcing the law with less than five weeks' training.

- more -

"Let's Be Human" AJC Inst. Human Relations NY 10022 165 E. 56 St.

Police trade unions in Western Europe provide opportunities for ventilating grievances and taking part in democratic processes, and serve as a "safety valve for a group which is always under pressure." In addition, says Berkley, the unions provide a two-way communications link between the police and society, offering the public better access to the policeman's point of view. At the same time, police union spokesmen and publications receive and transmit to their members ideas from the non-police world.

In Nazi Germany, Section 53 of the penal code authorized the police to use weapons even when they could deal with the situation by other means, because "The bearer of an SS uniform cannot offer the spectacle of a tussle to his folk comrades. Such a spectacle is incompatible with the SS uniform." In contrast, the Trade Union of German Police, which includes over 65 per cent of West German policemen, called for de-escalating the use of force. Rejecting training in the use of machine guns, the union demands a clear demarcation between the police and the armed services.

In England, where Bobbies are unarmed, the Police Federation of Britain has turned down suggestions to arm the police and rejected the use of non-lethal chemical sprays. In Norway too, police do not carry guns, and although policemen elsewhere in Scandinavia are issued guns, they frequently leave them in their lockers when on daytime assignments. In virtually no European democracy do policemen carry guns when off duty.

American policemen carry heavier weapons than their European counterparts, and wear them almost constantly. And they tend to be far more aggressive in the use of force.

Police unionism in the United States is in its infancy. A few thousand policemen are in locals of the American Federation of State, County and Municipal Employees, AFL-CIO, while many larger urban forces have benevolent associations which engage in collective bargaining. Where police unions have taken root in America, they appear to have a democratizing effect.

On both continents, says Berkley, "The police do not create a political culture; they reflect it. They behave in a way the society they serve expects them to behave. Thus, if European systems operate in a manner more consistent with democratic norms than do ours, it should tell us something about American democracy, and what it tells us should give us cause for some concern if not alarm."

EVOLUTION

When a friend of mine, Bernard Backer, was in Britain last fall, he visited Westminster Abbey with his family. Explaining that many famous people were buried there, he told his daughter, "Just think, Joey, you're walking over Charles Darwin's grave." The 15-year old, nonchalently replied, "Uh huh - survival of the fittest."

ETHNIC JOKES

Telling "Polish" jokes can be a violation of fair employment rights. A Polish-born employee charged harassment because of his national origin,

- more -

including the use of vulgar 'Polish' names in addressing him, telling 'Polish' jokes in his presence, and making generally derogatory remarks about his ancestry." Other employees called him "hypersensitive" and said "other employees of Polish descent had taken such 'jokes' good-naturedly." The U.S. Equal Employment Opportunity Commission ruled that the employer violated the fair employment law by tolerating the use of "ridicule of national origin as either a common or allowable condition of employment." The claimant's union had processed his grievance about the matter, and persuaded another employee to remove a sign that offended the claimant.

WOMEN'S RIGHTS

When coeds at the University of California held a "bra-less Thursday" demonstration for equality for women, the National Observer headlined its report: "Coeds Present Untied Front in Berkeley Protest."

OUR BROTHER'S KEEPER

"I don't blame our Indians for being discouraged," writes Harry Oliver in The Home Book of Humorous Quotations, (Dodd, Mead and Co., $10.00). "They are the only ones to be conquered by the United States and not come out ahead."

The only thing wrong with that gag is that it's too true to be funny. Edgar S. Cahn has edited a heartbreaking recital of the Indian's plight today, Our Brother's Keeper: The Indian in White America (World, $5.95). At the Pine Ridge Reservation in South Dakota, $8,040 a year is spent per family, theoretically to help the Oglala Sioux Indians out of poverty. Yet median family income among these Indians remains at $1,910. Over 60 per cent of the reservation's work force is without steady employment while there is nearly one Federal bureaucrat for every family on the reservation. (The cynical conclusion must be that it is the bureaucrat's, not the Indian's poverty that has been attacked.)

The last chapter, "Civilizing the White Man," discusses some of the values of Indian culture - a respect for the land and support for his brothers. In 1886 Black Elk, an Oglala Sioux holy man, went east to "learn some secret of the Wasichu (white man) that would help my people somehow ... I did not see anything to help my people. I could see that the Wasichus did not care for each other the way our people did before the nation's hoop was broken. They would take everything from each other they could use, while crowds of people had nothing at all and maybe were starving. They had forgotten that the earth was their mother. This could not be better than the old ways of my people."

QUOTE OF THE MONTH

Man is the only animal that laughs and weeps, for he is the only animal that is struck by the difference between what things are and what they ought to be. - William Hazlitt.

STRETCHING HIS KNOWLEDGE

A rubber worker, Yaakov Homri, who works in the vulcanization department of the Gamid Rubber and Plastics Company Limited, of Natanya, Israel, won

Bus-Visits to Prisoners

There are over 1100 men and women from the San Antonio area who are in the Texas Department of Corrections. TDC has its 14 units scattered throughout East Texas. Seven units are north of Houston surrounding or in the city of Huntsville while the other seven are 30 to a 100 miles south of Houston.

In the past, in order for a visitor to make the trip from San Antonio, he or she many times would have to travel the 500 mile-round-trip alone in a car or bus. Since the majority of the visitors are women, there was the added fear of a car breakdown on Sunday or a four to five hour midnight to early morning wait in a bus lobby in Houston.

The trip by bus and taxi cost 30 to 50 dollars depending on the location of the unit, and how much the taxi driver would charge for the ride from the bus station to the unit, wait during the two hour visit, and return to the bus depot.

Last October, we began to gather information to provide a bus service for visitors, and we scheduled our first trip for January 2nd.

The prison administration was very cooperative but emphasized that they would not change their visiting hours. This presented a coordination challenge since each unit has different visiting hours.

Because of 200 dollars in donations, we decided to sell tickets the first time for 3 dollars an adult and $1.50 for children. Now, the tickets are $5 an adult and $2.50 for children for the 500 mile trip. The Catholic chaplain at TDC made certain that the inmates received the news of our bus trip in sufficient time to write their families. Also, the local papers gave us ample publicity. We had hoped for two busses but were pleasantly surprised to find that five busloads would be taking advantage of our service.

Essentially, from January to March, this is the way the bus service functioned. We had six buses on February 13th and five on March 12th.

In late March, we decided to enter an agreement with Inner-City, an organization helping poor children on the Westside. They have leased a brand new bus here in San Antonio and we have sub-leased from them on travelling days. Bus Service for Visitors will pay most of the money on Inner-City's lease and put most of the mileage on the bus. The bus is schedule for delivery on May 20th.

In preparation for the new bus, we have changed to one bus every week to different units rather than covering all the units one Sunday a month.

The Referral is a building with two large rooms across the street from the Bexar County Jail. We thought that this would be an excellent location to provide referral service for the families of the incarcerated.

Our goal in both the referral and the bus service projects would be for the people themselves to take over the work and the decision-making. Volunteers from the riders are selling the tickets, phoning and coordinating the bus trips. One of the volunteers is planning a stamp drive to purchase a mini-bus to be used with our bus on trips. We need a smaller vehicle because we are expanding our service.

The most ambitious bus trip is tentatively planned for late August to Alderson, West Virginia where 30% of the women having federal sentences are confined. We feel very strongly about this trip because we have learned that the women are the group most forgotten in prisons. As yet, we have not had one person on our bus trips visit the Goree Unit where the women who comprise almost 5% of the TDC population are located.

There have been many spin-offs from the bus service. Austin begins its own service this week and people in Dallas are thinking about it.

Another product has been the community-formation of the visitors. The bus service having people with the same problems and travelling an entire day together every month is providing support for their struggle. As one lady said, "We look forward to the trip as well as the visit."

Communication is the result then of the bus service and this is true not only of families who were separated by prison and people with common problems, but also the guards we encounter every trip.

The key to reform and eventual abolishment of prisons is to have prisons become the responsibility of the community. Communication between the prisoners and the community then is the first step. By bringing their loved ones to the prisoners, we are beginning to bring the prison to the community.

Anyone interested in learning more about the Bus Service and the Referral should contact Charlie Sullivan, 806A S.W. 36th St., San Antonio, Texas 78237.

"It is individuals who are killing us today. Why should individuals not manage to give the world peace?"
Camus

AFSC PRISON SERVICE:

AFSC Prison Service is ready to recruit volunteers. If you are interested, let them know be checking the services below that you would like to help with, and return this sheet to: American Friends Service Committee, 2002 Monroe Street, Madison, Wiscons n 63711. Volunteers are encouraged to suggest other services that could be useful.

1. Contacting families, employer (in general, taking care of immediate needs upon arrest). This may require a car.
2. Babysitting for families visiting prisoner.
3. Providing transportation for families wishing to visit prisiners.
4. Providing rooms for families who must travel long distances to visit prisoners.
5. Job-hunting, especially for Huber Law prisoners.
6. Educational counseling and aid.
7. Providing educational material (books, etc.)
8. Providing miscellaneous necessities (tooth paste, wash cloths etc), to be distributed through the jail canteen.
9. Tutoring (especially toward high school equivalency diploma).
10. Medical services, especially diagnosis and minor treatment.
11. Ministers, religious counselor of all faiths.
12. Contacting social agencies for the prisoner (legal aid, psychological and marriage counseling).
13. Transporting inmates to visit families, employers, etc., when that is allowed.
14. Translating, especially for Spanish-speaking inmates. Taking inmates out for exercise.

"Every Gun, a Theft"....

Every gun that is made, every warship launched, every rocket fired signifies, in the final sense, a theft from those who hunger and are not fed, who are cold and are not clothed.

This world in arms is not spending money alone.

It is spending the sweat of its laborers, the genius of its scientists, the hopes of its children.

The cost of one modern heavy bomber is this: a modern brick school in more than 30 cities.

It is two electric power plants, each serving a town of 60,000 population.

It is two fine, fully equipped hospitals.

It is some 50 miles of concrete highways.

We pay for a single fighter plane with a half million bushels of wheat.

We pay for a single destroyer with new homes that could have housed more than 8,000 people.

This, I repeat, if the best way of life to be found on the road the world has been taking.

This is not a way of life at all, in any true sense. Under the cloud of threatening war, it is humanity hanging from a cross of iron.

------President Dwight D.
Eisenhower
April 16, 1953

WHAT YOU CAN DO ABOUT IT.

1. Congress holds the purse strings. Let your congressman know how <u>you</u> think the Federal Government should spend <u>your</u> tax dollars.

2. Keep telling him or her. No single letter, phone call, or visit will persuade a congressman. Get your friends to help you maintain a continuing dialogue with your elected representatives.

3. Finally, seek out your firends and discuss alternatives for action. There are many actions you can take, be creative for your situation.

Police Com Pilot

The Beat Commander

New concept of city crime control

Certain long established concepts of police operations have been challenged by the Beat Commander project, a bold experiment in crime control and police-community relations.

For the past nine months, in Detroit's tough Tenth Precinct, the theories and practices of the Beat Commander system have been subjected to feasibility tests. The project was devised by Patrick V. Murphy and Peter B. Bloch. Murphy at the time was director of the Urban Institute's Public Safety Studies; then he

Patrick V. Murphy

Peter B. Bloch

went to Detroit as Police Commissioner and subsequently moved to New York City in that same capacity. Bloch, as current leader of the project at the Institute, works closely with Detroit police officials in this Ford Foundation funded project.

Surprisingly, there has been no opposition to the program

Nobody is certain at this point that the Beat Commander system will stem the rising crime rate. But among the many strategies for dealing with crime, it holds considerable promise both for improving police crime-fighting techniques and for building substantially improved police-community relations.

How It Works

As the name implies, the Beat Commander system focuses on the beat—the small neighborhood equivalent to two squad car territories—rather than on the much larger precinct or entire jurisdiction of a police department. In Detroit a beat includes about 15,000 people compared to a precinct with 130,000 people. A key feature is that the Beat Commander Team is assigned on a permanent basis to this small beat. In Detroit such a team consists of about 23 foot and squad car patrolmen plus a commander, who holds the rank of sergeant. It was anticipated that police-community rapport would develop from this attachment to the physical boundaries of the small beat.

Once Murphy and Bloch propounded this idea, it sounded like such a useful approach that it became difficult for those who were not involved in police work to realize that it represents a distinct departure from common practice. The fact is, nevertheless, that this effort to instill a personal relationship between police officers and one small segment of the community runs counter to the established practice of frequently moving both patrolmen and their immediate commanders to many different beats and precincts. For many decades, familiarity between police and the people under their jurisdiction has been positively discouraged as a matter of policy in America's larger cities.

Part of the separation of citizens and police grew out of the change from foot patrols to squad car work. More important, widespread concern about police graft led to systematic devices for preventing familiarity. Those who designed the Beat Commander project are aware of the risks but believe they can be dealt with in other ways and consider the dangers of unfamiliarity to be even greater.

The policemen's intimate contact with their beat begins to give them a sense of the trouble spots and troublemakers so they can do a better job of crime prevention. Equally important for police effectiveness, the patrolmen learn to know who are the law abiding citizens with whom they can work.

This knowledge of what is going on in the beat is not allowed to remain the private asset of each patrolman. Rather, the Beat Commander makes the sharing of such information a central feature of meetings and other communications channels involving the entire Beat Commander Team. Such formal communications at this level of operations are rare among most police departments. In extending the par-

Advisory commission on intergovernmental Relations, washington D.C. 20575

Better Prosecution and Defense Vital to Justice (F-9)

The American way of justice—the adversary system—assumes that "truth will out". But that outcome requires a "good, clean fight" between competent, well-prepared prosecution and defense counsel.

The reality of our criminal justice system too often presents a different picture . . . in the cities, a politically beholden prosecutor may be more interested in the next election than the present case . . . in rural areas, a part time prosecutor may be more involved in his private practice than the government's business. Across the room, an indigent defendant may be represented by an overworked, poorly paid public defender with no time to learn the details of the case . . . or by an inexperienced or begrudging lawyer assigned at random to the case by the court.

The upgrading of both sides in the courtroom struggle are essential to improve our adversary system. To this end, the Advisory Commission on Intergovernmental Relations makes four recommendations for systematizing and improving the prosecution function, a suggestion on grand juries and a proposal for upgrading procedures for providing counsel to the indigent defendant. The recommendations are among 44 proposals in the Commission's comprehensive report, *State-Local Relations in the Criminal Justice System.* Other recommendations deal with courts, police and corrections as well as interfunctional cooperation throughout the criminal justice system.

The Commission is a 26-member, permanent, bi-partisan, national body established in 1959 by Federal law to monitor on a continuing basis the operations of the federal system. It's membership includes representatives of the executive and legislative branches of Federal, State and local government and the general public.

The Prosecutor

The prosecutor's role is not only deeply important but broad in scope. His decisions can affect the future freedom and even life of many people. He is a major link between the police and courts. The

Making the Safe Streets Act Work: an intergovernmental challenge

One of the most controversial measures considered by Congress in the 1960s, the Omnibus Crime Control and Safe Streets Act has been marked by heated debate at every step of its implementation.

The most virulent debate was on the issue of block grants. This concept – pioneered in Title I of the Act – channels Federal funds through the States on a broad program basis. Advocates hail it as opening a new era in intergovernmental relations. The more traditional approach is for direct Federal grants to State agencies or localities on a narrow categorical basis. Adherents to the traditional procedure assert that block grants permit States to misdirect urgently needed funds.

Debate has focused also on the efficiency of the Federal administrative structure under the Act – the three-member Law Enforcement Assistance Administration (LEAA) in the Justice Department – and on sub-state regional bodies established by most of the States to help administer the Act.

THE ACIR STUDY

The Advisory Commission on Intergovernmental Relations studied these and other intergovernmental conflicts and tension points in implementing the Act as one part of a comprehensive ACIR study of Federal-State-local relations in the Nation's criminal justice system. *Making the Safe Streets Act Work: An Intergovernmental Challenge* (ACIR Report A-36) has been published separately and is available from the Superintendent of Documents, U. S. Government Printing Office (Washington, D. C. 20402) at $1.00. A summary of findings and recommendations is presented here.

The report is based on material provided by LEAA as well as data from 48 of the 50 States. To assure the greatest objectivity, the Commission staff worked closely with groups reflecting the different shades of opinion throughout the course of the study. Among others, they included: the Council of State Governments, International City Management Association, National Association of Counties, National Governors' Conference, National League of Cities and U. S. Conference of Mayors, as well as organizations of law enforcement officials and the U. S. Bureau of the Budget and the Department of Justice. Of course, the findings and conclusions are solely the responsibility of ACIR.

RETAIN THE BLOCK GRANT

The Commission unanimously urged retention of the block grant approach, which, it stated, "represents a significant device for achieving greater cooperation and coordination of criminal justice efforts between the States and their political subdivisions." The Commission noted "some gaps in State performance," and suggested that "States make further improvements in their operations under it."

The basic criticism of the block grant approach is that the States are not equipped to handle the money and not really interested in the urgent crime problems of large cities and counties.

That the States were both concerned and equipped to move on the anti-crime front was demonstrated in the speed with which the program was implemented. The legislation required the States to set up a State law enforcement planning agency within six months of the measure's enactment to devise a comprehensive plan, receive block grants, and disburse subgrants. Otherwise, the Federal Government could deal directly with localities. Every State complied within the stringent time limit.

Each State received at least $100,000 to enable a minimum planning effort; additional planning grants were based on population. As a consequence of this two factor formula, the largest States received less total planning funds *per capita* than many smaller States with lower crime rates. This was due to the flat grant device and to the relatively modest amount of funds available – $19 millon the first year.

State & Local Taxes

acir

Advisory commission on intergovernmental Relations,
washington, D.C. 20575

THE COMMUTER AND THE MUNICIPAL INCOME TAX

Caught in the fiscal vise between rising expenditures and limited revenue sources, hardpressed cities are looking beyond their borders to commuters to raise needed money. The mechanism is the local income tax, generally levied on the wages and salaries of both residents and suburban commuters.

More than 3500 cities in ten States now charge a local income tax. They range from New York City to villages of a few hundred people, but include such major cities as Detroit, St. Louis, Philadelphia, Pittsburgh, Cincinnati, Baltimore and Louisville. Additional cities across the Nation are considering adoption of this levy which taps a new source of funds and eases reliance on the property tax, but which also can touch off intergovernmental conflict.

These facts emerge from a Background Report, *The Commuter and the Municipal Income Tax,* prepared by the Advisory Commission on Intergovernmental Relations. This paper provides a condensation of the report, which is available from the U. S. Government Printing Office, Washington, D. C. 20402, at 25 cents.

THE SPREAD OF MUNICIPAL INCOME TAXES

Philadelphia, in 1939, imposed the first local income tax that is still in existence. The second major city (over 50,000 population) to adopt a municipal income tax was Toledo, in 1946. The post war period began the real move to local income taxes. By 1949, 12 cities levied the tax; during the fifties, another 11 joined the movement; and another 26 since 1960.

There are now 49 cities of over 50,000 population with municipal income taxes in effect. They are only a small minority of the localities that levy the tax, but of the 3500 taxing localities, 3191 are in Pennsylvania and 267 in Ohio. The levy -- particularly the commuter tax element of it -- is both more noticeable and of greater revenue significance in the large cities. And more major cities, including Atlanta, Boston, Chicago, Dallas, Fort Worth, Minneapolis and San Francisco, , have had adoption under consideration. This would indicate a spread in the geographical range of the tax, also, as up till now Bernalillo County, New Mexico has been the only jurisdiction in the West to impose the local income levy.

Three factors dominate in the spate of municipal income tax adoptions: fiscal stringency, rising property tax loads and broadening the taxing jurisdiction of the locality.

The desperate fiscal situation of the cities has been the leading cause of adoption of the local income tax. When Philadelphia enacted its levy in 1939, its bonded indebtedness was more than $40 million in excess of the constitutional limit and it had real estate delinquencies of nearly $25 million. Cincinnati, Pittsburgh, St. Louis and Detroit also enacted the levy when their budgets were dangerously out of balance.

The second major force has been rising property tax rates, which in many areas have reached the limits of taxpayer toleration. The property tax, traditionally the prime source of local revenue, long has been under attack for hitting hardest at the less affluent while having a sluggish response to economic growth; also, for being poorly administered and for the multitude of exemptions. The income tax is a simpler and more progressive levy. Indeed, it frequently has been sold to the electorate as part of a package to reduce the property tax. An analysis by Elizabeth Deran published in the *National Tax Journal* showed that property taxes were generally lower in income tax cities and the income tax tended to substitute for the property tax rather than supplement it.

The third factor favoring adoption of a municipal income tax, particularly for large central cities, is that it broadens the taxing jurisdiction to nonresidents who work in the city. The justification -- articulated explicitly in a 1950 Ohio Supreme Court decision -- is that nonresidents should contribute to the jurisdiction that affords them a place to work protected by a

Dear Emory,

Enclosed is a statement about our intentions which we have just released to the press. I thought you would like to have a copy from us, just in case the press version does not come out quite like the original. We hope to release something specifically on the Communist issue today.

We certainly appreciate your concern and efforts on our behalf.

Sincerely,

Norman

Dear Emory,

When the statement from the United Church Women is available we would like to have about 100 copies if it could be arranged.

The grand jury is giving us quite an exciting time. They have some case against us described as the case of "The State vs. Conrad Browne". They have not yet made clear just what it is, other than a misdemeanor involving soliciting of funds contrary to some Georgia code. They summoned (for hearing yesterday) Clarence, John Eustice, Wally Nelson, and Alma Jackson. They also sub-poenaed all of our financial records and the mailing list. These we refused to hand over voluntarily since we did not see that the corporation records related to a case of this nature against Conrad Browne personally, but they took them anyway over our protest. They have already made photstats of the mailing list. Clarence is in again this morning and their plan was to go further into the financial records. We don't know what to expect from here.

Thanks again for your continuing diligence on our behalf. We do hope you can get a chance soon to come down to the quiet and relaxing atmosphere of the farm.

Sincerely,

Norm

Dear Emory,

In response to your questions about practical ways of being of help here, we would like to make the following suggestions:

First, in the light of our labor situation here at the present time, we do not feel that it would be wise to press the egg marketing arrangement. Even if a satisfactory market could be developed, at the present moment we simply do not have anyone who could efficiently handle the management of such an operation. Egg prices now are very poor and it would take very efficient management to make it a paying operation. We think, therefore, that it might be better to hold up on this and to use these buildings for other purposes. We think, for instance, that one of them might be converted for our pecan and peanut processing plant.

Second, it would be very helpful to have a contractor come to make suggestions about our building needs. We do not have any definite plans about proceeding with anything, but a few suggestions would help us to determine what we could proceed with. Tentatively, we are thinking of developing our meat curing facilities at the New Jersey community and our nut plant here. Also possibilities here would be a new machinery shed and a dwelling house. We should like to know a little in advance if the contractor is coming so that we can collect our ideas a little more clearly.

Third, the weekend work parties are a very good possibility. If they could come with the idea of helping with our night watch, this would be a real contribution. If they arrived on Friday evenings and thus could help with both the Friday night and the Saturday night watches, it would be a considerable relief to us. There are also other jobs of a miscellaneous nature which such parties could assist with. However, we would seriously question the working on Sundays. This is one of the areas where we might want to be considerate of the attitudes of our neighbors. They have not yet come to realize that every day belongs to the Lord and that work is a sacred activity.

Thanks once again for your thoughtfulness and your diligence in seeking to be of help to us. Our hearts go out to you in your own personal experience of suffering. We keep hoping that you will find that opportunity to drop in on us for a personal visit.

Sincerely,

Norman/jn

Dear Emory:

We certainly appreciate your efforts on behalf of Koinonia Farm Inc. The material which your organization has distributed and published in this connection has been extremely helpful.

Osgood Williams has had to spend a great deal of time on the legal problems of the Farm. This plus the great distance between Atlanta and Americus has undoubtedly created quite a problem. However, from what I have been able to determine it seems to me that the Farm has had more than adequate legal representation. In any attorney-client relationship communication sometimes break down and this is almost universally the fault of the client. Even with the best people, and even in the best circles, clients sometimes fail to apprise their attorneys of what they expect to do prior to the act. This may sometimes have occurred in connection with Koinonia, but fortunately has not thus far produced adverse consequences.

In the normal sort of legal representation it would certainly have been advisable for Osgood Williams to associate with him an attorney located in or near Americus. In this particular case this has been impossible to carry out because of the identity of the client.

I know that your cooperation with us and with Osgood Williams has been extremely helpful in the past and anything that you can do in the future will be very much appreciated.

Again, let me thank you for sending me copies of the Grand Jury presentment as well as the answer prepared on behalf of Koinonia.

Sincerely yours,

Fred

AMERICUS, GEORGIA

Dec. 27, 1957.

Dear Emory:

A few days ago an Atlanta lawyer, Ellis M. Creel, wrote and said he'd heard his pastor mention Con's beating in a sermon. He was quite shocked, and volunteered his services. I phoned him, and he said he had to be in this section and would stop by. He came, and we spent several hours together going over the whole situation. He seemed to be deeply interested and concerned from the standpoint of his own Christian conscience. When he left here, he said he was going by to see the solicitor about Con's case. We haven't had time to hear from him yet as to the outcome.

Do you know anything about Mr. Creel? We were favorably impressed, but I imagine Ed Friend might also give such an impression. We don't want to stumble into the mouth of the lion. Creel's home address is 3201 Poplar St., Doraville, Ga., phone Glendale 7-4869. He's with the law firm of Goode and Creel. If you have any word, we need it pronto. Am enclosing Wofford's speech. It's excellent. We were glad to get a copy from him today.

Best regards,

Clarence

THE NEW REPUBLIC AUGUST 22, 1964

MISSISSIPPI

From Conversion to Coercion

by Christopher Jencks

There was a time, only a few years back, when the civil rights movement in the South was largely a Christian crusade and Martin Luther King its prophet. Non-violent protest was seen as a device for producing a "moral confrontation" between the races. Such a confrontation, the early leadership believed, would lead to a "crisis of conscience" in the white South, which could only end in the white supremacists' accepting their black brothers as equals (or even as moral teachers).

This "conversion strategy" failed – although not everyone perceived its failure immediately and some clerics in the movement (occasionally including King) still talk as if it could eventually work. But by the time the civil rights movement entered Mississippi in 1961, the "conversion strategy" was becoming a minority faith. The movement was going secular, and the assault on Mississippi was led by Robert Moses, a former Harvard graduate student, and the Student Non-Violent Coordinating Committee, not by Dr. King or the Southern Christian Leadership Conference. The movement had begun to evolve what might be called a strategy of limited coercion. The new strategy still relied heavily on non-violence and direct action, and it was supported by many who still talked about religion and morality. But the hope was no longer to win over the white supremacists to brotherly love; it was to make life so unpleasant for them that they would find compromise easier than massive resistance. Boycotts would hurt white business, demonstrations would cut into tourism. Perhaps more important, Negro protest of all kinds would provoke the white community into violent retaliation, and this would make it easier to pass federal civil rights legislation and harder for the offending community to attract Northern investors.

The "limited coercion" strategy worked fairly well in some parts of the "new" South, where the business community has become influential and a middle-class distaste for disorder and violence is pervasive. When the demonstrators forced such communities to choose between brutal repression and modest reforms, some chose reform. But Mississippi proved to be still part of the "old," unreconstructed South. Most Mississippians care more for preserving white supremacy than for profits, lawfulness or other symbols of "progress." In such a setting demonstrations were useful only to build interest among local Negroes and to show the North that the right to vote was still not honored in Mississippi. Soon after entering the state, SNCC leaders began to realize that ending white supremacy in Mississippi would ultimately require the use of force.

This was not an easy thing for people committed to non-violence to believe, nor is it easy for white Northerners to believe today. Over and over we have been told that eventually the Southern white "moderates" would speak out and take control from the "extremists," that the "younger generation" of whites would have different views from the older, that industrialization and prosperity would eventually change Mississippi's outlook, or that some other "evolutionary" force would save the day. An outsider cannot judge such matters confidently, but I can report that very few of those with whom I talked last month in Mississippi, black or white, had much faith in any of these accommodating influences. Listening to them it seemed to me that if Mississippi were left to its own devices, racial conflict would steadily increase.

The present balance between violent whites, moderate whites, and non-violent blacks did not seem to me likely to change radically this year or next. So long as young Mississippi Negroes imagine that they can better their lot in the North, there well be a safety valve of sorts, and Negro violence will probably focus on the Northern ghettoes where unemployed Negro adolescents and young adults are concentrated. But in the long run this very violence may persuade many black Mississippians that there is no point in moving North. If the young Negroes despair and stay in Mississippi, and if they cannot find jobs, regular meals, or even safety from the police in Mississippi's "niggertowns," they will presumably respond eventually as Harlem has long responded. The results could then be much worse than in the North. In most Northern cities public officials depend on Negro votes for office, and have some sympathy with the "legitimate" aspirations of the "decent, law-abiding Negroes." In Mississippi, Negro votes don't count and a "decent, law-abiding Negro" is not expected to have any aspirations. Once violence begins, there is not even a common set of ideals on the basis of which a compromise can be sought.

But while white violence against Negroes will probably continue, and may evoke more sporadic counter-violence than in the past, an organized upheaval seems unlikely. Negroes in New York, like Malcolm X and Jesse Gray, talk about giving bloodshed a purpose by resorting to guerrilla tactics in Mississippi. Most Negroes on the scene know that such a venture, while appealing to some frustrated young adolescents in Mississippi's few miniature Harlems, could only end in disaster. Mississippi is not South Africa. Its black inhabitants are less numerous than its white ones, and they live on a largely white continent where outside sympathy or help would be unlikely once they started shooting. If black Mississippians were to attempt a violent attack on white supremacy, it is hard to be sure what would happen. Much would depend on the form violence took. Terrorism aimed at specific, objectionable sheriffs or businesses would be one thing; guerrilla warfare aimed at seizing power would be quite another. In the latter case the Negroes would probably end up decimated and "pacified" on "reservations," like the Indians before them. (The fate of the American Indian seldom gets the attention it deserves from black nationalists; it does not suggest that all-out violence or separatism holds much promise of success in America.)

Yet if Mississippi Negroes cannot hope to employ force successfully themselves, they can hope to play their cards cleverly enough so that the federal govern-

ment will do their job for them. The present strategy of the civil rights movement in Mississippi rests on this hope. I do not mean that civil rights leaders in Mississippi are sitting on their hands waiting for the Justice Department to take over. If anything, the reverse is the case. But it is true that the civil rights workers spend as much time, energy, and blood trying to push the Administration harder and faster as trying to push white Mississippi.

What's the Problem?

Northern whites often find this kind of pressure on Washington irritating or puzzling. They feel the Negroes got as much as they had any right to hope for in the new Civil Rights Act, and they feel that "the problem is now one for the courts." This feeling is understandable, for it is based on the notion, widely disseminated by civil rights organizations in the past, that "the problem" is primarily one of segregation and discrimination. This may be true in some places. It is not true in Mississippi, and SNCC spokesmen have been saying as much since President Kennedy (for whom they had little love) sent his proposals to Congress more than a year ago.

The fact is that the new civil rights law, even if rigorously enforced, would do little for the overwhelming majority of Mississippi Negroes. The Act is relevant largely to the Negro middle classes, a mere handful of whom are allowed to exist in Mississippi. The middle classes are the ones who can afford to eat in hitherto white restaurants and stay in hitherto white hotels. They are the ones whose children will be emotionally and intellectually prepared to profit from white middle-class teachers, and who will not have to drop out of school to work in the fields. They are the ones who will qualify for better jobs if and when discriminatory hiring is abandoned. It will mostly be they who will pass the voter registration tests if and when these are fairly administered.

The lives of most Mississippi Negroes, however, will remain unchanged, and they mostly know it. The Act does not speak either to their poverty or to their fear. Two-thirds of Mississippi's Negro families now have total income from all sources of less than $2,000. The Act will have very little effect on that statistic. Almost all Mississippi Negro families have at least one breadwinner who could be fired tomorrow for displeasing a white employer. The Act will not change that either. Almost all rural Negro families subsist on credit from local storekeepers, who can cut it off at the whim of the white community. The Act will not change that. All Negroes, urban and rural, old and young, exist on the suffrance of local law enforcement officers, from whose kindness or brutality the Act offers no real appeal. Finally and most fundamentally, if a Mississippi Negro is to redress his grievances, the US Constitution requires him to go before a jury. This jury may not be all white, but it will inevitably include enough white supremacists to prevent a Negro's obtaining the unanimous vote in his favor which he would need to get his due from a white man. White supremacy is founded on social and economic relationships such as these, far more than on mere segregation or legally-provable discrimination.

The SNCC leadership in Mississippi seems to understand all this, perhaps too clearly. The Mississippi Summer Project has not sought to desegregate anything (except SNCC itself, which had been almost entirely black in Mississippi until this summer). There have been no sit-ins, and no boycotts of lily-white employers. Even the testing of the new public accommodations law has been left to visiting firemen like King and the NAACP delegation. SNCC represents a new generation of Negroes, unlike the Kings and Farmers and Wilkinses – or the Malcolms – and they have far less interest than their elders in such symbols of white supremacy as lunch counter segregation. They are rebellious and radical, and for the moment they have rejected their parents' hope that they would earn a place in white middle-class society and be satisfied with it. Over and over they tell a visitor (echoing James Baldwin), "We don't want to be integrated into *your* society," or say of the whites who endlessly harass them, "We want more than equality with *them*." In part, such talk reflects the anti-white feeling of many young Negroes. But even more important in SNCC is bitter hostility to the middle classes, black or white. Why be integrated into white schools when white schools are so square – and lousy? Why fight to go to a fancy restaurant with white table cloths? Why struggle for the right to type some industrial baron's mail?

To Remake America

What these young radicals are looking for is not a chance to "make it" in white America, but a chance to remake America along more egalitarian and proletarian lines. They have chosen to begin in Mississippi for many reasons. Mississippi is "the worst," which appeals to the evangelical element in SNCC – to convert the greatest sinner would be the greatest triumph. Then too, all that SNCC's workers dislike in America is written bold in Mississippi, with ambiguities and shadings eliminated. Mississippi dramatizes the problems of the American Negro better than any other place, North or South. And drama is important not only in moving white liberal opinion but in activating Negroes. At the same time, the more ideological SNCC workers are fascinated by Mississippi because to their minds it comes closer to being a "pre-revolutionary situation" than any other in America. The poor, and especially the black poor, are a larger proportion of the population than in any other state. Furthermore, the black poor are largely free from what SNCC inevitably regards as the malign influence of the black bourgeoisie. The NAACP, traditional organ of the black middle class, has provided the state with a martyr (Medgar Evers) and with the current president of the Council of Federated Organizations (COFO), a federation of all civil rights organizations in the state. Yet in day-to-day practice COFO is a mere umbrella under which SNCC veterans, and particularly Robert Moses, run the Mississippi Summer Project, the Mississippi Freedom Democratic Party and other ventures.

A word is perhaps in order here about charges of Communist infiltration in SNCC and the Summer Project. There is no doubt that at the rhetorical and ideological level, SNCC has been receptive to all the left-wing clichés of the 1930's. Why not? Until very recently the "mainstream" of the American intellectual tradition has hardly even recognized the possibility that a state like Mississippi could exist in modern America. Even so, SNCC's thinking is very "American," especially in its faith that the Constitution drafted by the Founding Fathers (and revised by the Radical Republicans) means what it says and will be their salvation. To plan a revolution on the assumption that it can be carried out by the federal government, to believe that the "power structure" can be won over to your side is hardly Marxist. These young men seem to me to owe more to C. Wright Mills and the Populists

than to Marx or Lenin.

When one turns from ideology to personnel, Communist influence wanes to the vanishing point. There are a number of white people on the fringes of SNCC, and among the volunteers working in Mississippi this summer, who have a history of association with left-wing causes. That any of these hangers-on or volunteers is actually a Communist Party member I doubt. Some are certainly verbal supporters of Castro, but few have a good word to say for Khrushchev. Some would undoubtedly like to use SNCC as a focus for a radical revival in America, concerned not just with civil rights but with other domestic and foreign issues. On the basis of my observation, however, it seems to me that there is fairly little danger of SNCC being "used" by anyone white. SNCC will not conduct an anti-Communist purge for public relations purposes, but nor will it submit to outside influence. Among the Negroes who make policy in SNCC the whole issue of "Communism" is simply irrelevant. They may be radical; they may even be dangerous; but this is because of their own experience and dreams as Negroes in America, not because of anything Moscow or Havana might have said or paid for.

What SNCC wants in Mississippi is nothing less than a second effort at Reconstruction, backed by whatever federal force and funds are necessary to make the venture successful. Desegregation would be an inevitable by-product. Every activity of the Summer Project – voter registration, the freedom schools, the community centers, the study of federal programs in the state, the effort to proselytize among poor whites – all relate to the overriding hope of redistributing political power.

SNCC's basic aim is now a political realignment in the state. First, SNCC hopes the Democratic Administration will repudiate the Mississippi Democratic Party, deprive its Congressional delegation of party privileges (notably the party seniority which makes them committee chairmen), and refuse to distribute pork and patronage through the present party machinery. A new Northern-style Democratic Party would then be organized in the state, with Negroes, labor unions and poor whites as the major shareholders. Conservative plantation owners and industrial managers, as well as small businessmen and die-hard segregationists, would presumably turn to the Republican Party. The new "liberal" Democratic Party could use its control of federal offices and federal spending (SNCC thinking does not seem to include the possibility that the Republicans might capture Washington) to make major social and economic changes in the state. The magnitude of potential federal influence is indicated by the fact that two years ago Mississippi families each were contributing, directly or indirectly, an average of $455 to the federal Treasury, while getting back (mostly indirectly) more than $1,050 per family. Only a small fraction of this $1,050 is available for social renovation, but even a small fraction would make a big difference in a state where almost half the Negro families now earn less than $1,050 a year from all sources. Through control of federal patronage and broad appeal to the poorer residents of the state, the new-style Democrats might even capture state and local power – especially if there were enough federal intervention to enable large numbers of Negroes to vote. And if this were to happen not only in Mississippi but elsewhere in the South, the balance of power in Congress would shift left, and much more generous federal help in dealing with poverty would be forthcoming.

Their Chosen Hell

At first glance this all adds up to a very improbable scheme. But then any scheme which holds out real hope for Mississippi's 900,000 black inhabitants is inherently improbable. Probability is all on the side of despair, and the only "rational" plan SNCC could formulate would probably be massive emigration. But where can Mississippi Negroes go? Most of SNCC's top leaders come from the cities, North and South, to which Mississippi Negroes might flee. It was their disillusion with these places that set SNCC's veterans on the semi-revolutionary path which led to Mississippi. And it is the hope that Mississippi can ultimately be raised not just to the level of North Carolina or Maryland or New York, but something better than any existing model, that keeps not only the old-timers who set the tone in SNCC but the dozens of new recruits from within Mississippi in their chosen hell.

SNCC's political ambitions are increasingly focussed on the Mississippi Freedom Democratic Party – an organization which usually follows American rather than African tradition by calling itself the "Freedom Party," not the "MFDP." In theory, the Freedom Party is to become the nucleus of a new Democratic Party in Mississippi. It has already put up candidates in the Democratic primary for the US Senate and House. These candidates, unlike their incumbent opponents, supported the national Democratic platform and the Johnson Administration's program. They lost. Now the Freedom Party is sending a delegation to the Democratic National Convention, challenging the credentials and loyalty of the "official" Democratic delegation, and asking to be seated instead. The challenge is based partly on the fact that the traditional Mississippi Democrats refused to give Negro voters a voice in the selection of the delegation, partly on the fact that most of the traditional Democratic Party in Mississippi is overtly or covertly backing Barry Goldwater for President.

President Johnson's attitude toward this challenge was uncertain at the time this was written. He is said to have no hope of carrying the state in November. He is mainly concerned with the effect of the Mississippi fight on the November balloting in other states. He could lose a lot of Southern support if he questioned the legitimacy of Mississippi's white Democrats. He could lose Northern Negro votes by spurning Mississippi's black Democrats. He could lose Northern white votes if he seated the white Mississippians and if the thousands of Negro demonstrators expected in Atlantic City rioted.

Whatever happens in Atlantic City, the Freedom Party's long-term prospects depend on creating a black-white coalition within Mississippi which can win state and local elections. The difficulty is that so long as Negroes remain a tiny minority among registered voters, no white group has any incentive to negotiate with the Freedom Party. Today its support would be a liability, not an asset.

The only way to make a coalition viable would be to increase substantially the number of Negroes registered to vote. In 1960 Negroes made up 42 percent of Mississippi's inhabitants; if they also constituted 42 percent of the electorate, enough of Mississippi's white voters could probably be lured to some compromise candidate for him to win statewide office. This would certainly be true if the candidate had been promised a voice in distributing federal largesse within the state. In many counties Negroes are an absolute majority, and no such coalition would be needed.

In order to make Negroes anything like 42 percent of the electorate, however, major changes would have to be made in Mississippi's present voting laws. The present laws require, for example, that would-be voters answer, to the satisfaction of white supremacists, ques-

tions about the meaning of the state constitution and the duties of a citizen. These questions have no objectively "right" or "wrong" answers, and they invite discrimination by local registrars. Most registrars have accepted the invitation eagerly. The Justice Department has sought an injunction preventing the use of such questions throughout the state, but so far has not obtained it. Even if such an injunction were issued (and there is a good chance that it eventually will be), many literate Negroes would still be reluctant to apply. Black voters would probably not exceed 10 percent of the total. If the law requiring the publication of would-be voters' names were invalidated, if local registrars were replaced by federal ones, if the FBI were more energetic in investigating charges of harassment, intimidation and reprisals, and if the Justice Department were more eager to prosecute, perhaps Negro registration might rise to 15 or 20 percent of the total.

Beyond that, a major revolution would be required. This is true because, although there are more Negroes than whites born each year in Mississippi, the combined effect of rural mechanization and employment discrimination forces a substantial fraction of young Negroes to leave the state soon after leaving school. White supremacists welcome the emigration and encourage it where possible. As a result, Negroes constitute only about 34 percent of all Mississippi adults, and by 1970 the proportion can be expected to drop to 30 percent.

More important, even a "color-blind" literacy test sharply reduces the proportion of Negroes in the electorate. The new Civil Rights Act says that completion of sixth grade establishes a "presumption" of literacy. But less than half Mississippi's adult Negroes meet this standard, for they began working in the fields when they were ten or eleven. *If Mississippi confined voting to those who had completed the sixth grade or passed some equivalent test Negroes would constitute only 21 percent of the eligible voters.* There is not a single county in which a majority of the elementary school graduates is black. Since today's young Negroes are getting a better education than their parents, one might expect their potential weight in the educated electorate to rise over the years. But it probably won't, because Mississippi's brighter and better educated Negro youngsters keep moving to Memphis or points North. Negroes today constitute almost exactly the same percentage of the elementary school graduates living in the state as their parents did in 1940. The only way to raise the proportion of black voters much above 20 percent in the foreseeable future would be for Congress to establish a huge adult literacy program. And for such a program to reach the mass of Mississippi Negroes, it would have to be administered directly from Washington, rather than working through state or local authorities. Yet direct federal control goes very much against the Congressional temper and is hardly likely. (It is of course also conceivable, though hardly probable, that a Constitutional Amendment might bar literacy tests for voting or that the Supreme Court might ban them on the ground that they violate the "equal protection" clause.)

Task for a Coalition

The probability is, however, that Negroes will not soon constitute more than a fifth of Mississippi's voters. Politically, this means that a liberal Democratic coalition would have to win the allegiance of about 40 percent of the state's white voters in order to capture statewide office. At present it is hard to imagine a candidate who could both win support from Negro voters and from 40 percent of the whites. J. P. Coleman, for example, got about 40 percent of the white vote in last year's gubernatorial primary, but he would probably have lost some of this support if he had had "official" Negro support and had made compromises on white supremacy to rally the Negro vote. Still, times change and politicians seldom remain permanently hostile to a fifth of the electorate. If Washington made a more energetic effort to get literate Negroes registered and if the White House were to make it clear that federal "goodies" would only be distributed through a local party that included Negroes, perhaps Mississippi's politics would gradually become like Tennessee's. But President Johnson has shown little sign yet of moving in this direction.

Today most Mississippi Negroes still seem to believe in the American dream, if not for themselves then for their children. (At bottom, this goes for most SNCC workers too.) Should they stop believing, as much of Harlem has, should they at long last strike back at white Mississippi, Northern support for their cause would be reduced to a whisper. If the military were to be used at that point it would be for repression, not reconstruction. The only obvious way to avoid such a potential disaster is to give Mississippi Negroes a major voice in their own destinies before they despair, making them part of the Mississippi "power structure." Only the federal government has the power to do this; certainly white Mississippians will not do it voluntarily.

What would make the federal government move decisively in time? Only killings, I fear. The Neshoba County tragedy was a beginning, but its effects lasted only a few weeks. It will probably take repeated and dramatic white violence against Negroes to elicit the necessary federal action. Such violence can hardly be welcomed, but it could at least have therapeutic consequences. If the present situation is simply allowed to deteriorate, and if large-scale black violence against whites eventually begins, it is hard to see how the circle of fear, violence and repression will ever be broken.

A COMMON GOAL – Equal Employment Opportunity

by Walter G. Davis

Desegregating a lunch counter in the South and opening up job opportunities for skilled workers in the North obviously are different problems.

In the first instance, once the individual is served at the lunch counter, the problem is resolved. This could take but a minute.

To place a skilled, non-white mechanic or craftsman on a job requires much more than mere willingness on the part of employers to hire non-discriminatorily. There must be a job opportunity and the job applicant must be trained and qualified to fill it. Matching all these separate elements might sound simple but recent experiences indicate otherwise.

To deal with this complex problem, unions, employers and employment agencies have been gearing their operations to meet the deadline date of July 2, 1965, when Title VII of the Civil Rights Act of 1964 will become effective.

Congress allowed a one-year period to elapse since the passage of the law to enable those covered by its provisions to prepare for compliance.

This action tells a story—a story of the formidable task that lies ahead for the civil rights movement and in fact for the nation. Furthermore, it points to a new direction in the civil rights field.

No serious observer of the civil rights struggle in America expects a loss of momentum in the movement, although in contrast to 1960-1964 it may appear so. This is because the fundamental nature of the problems have changed.

The plain fact is the nation's non-white population is currently suffering from the fall-out of 100 years of discrimination. Substandard housing and education have contributed substantially to the inability of many who seek the new job opportunities available to them to qualify.

Since most of the training programs in the highly skilled occupations require from 4 to 5 years of concentrated work in the trade, it will take at least that much time before sufficient numbers of qualified Negroes and other minorities present themselves for job opportunities that do exist. There are qualified non-whites, to be sure, but few remain unemployed if their skill is in demand.

The hard work ahead lies in the areas of training, education and motivation of minority-group youth. These are the areas on which the civil rights movement is expected to focus in the future.

One also must understand that there are two revolutions occurring concurrently in America, each having a bearing on the other. One is the civil rights revolution. The other is the technological revolution which is wiping out a great many semi-skilled and unskilled jobs through automation. The effect of this phenomena is to further complicate the problems facing the civil rights organizations in terms of their ability to conduct meaningful and effective programs for equal job opportunity.

The law and the voluntary efforts of scores of organizations and individuals can help attain the goal for several reasons:

- The declaration of public policy that it is unlawful in the job field to discriminate because of race, color, religion, sex or national origin will help educate all Americans to the injustice of barring an individual from an opportunty to earn a decent living because of some artificial distinction which has no bearing on his ability to perform.

- As Negroes and other minorities acquire new skills and bring them to the job market, they will

WALTER G. DAVIS, formerly executive vice-president of the United Transport Service Employes, is Assistant Director of the AFL-CIO Department of Civil Rights.

EQUAL EMPLOYMENT OPPORTUNITY

Title VII of Civil Rights Act of 1964 — Effective July 2, 1965

	COVERAGE	UNLAWFUL PRACTICES
Employers		
July 2, 1965	100 employes	Cannot discriminate against any individual with respect to hire or discharge, compensation, terms, conditions or privileges of employment. Also forbids employers from limiting, classifying or segregating employes in any way that would tend to discriminate.
July 2, 1966	75 employes	
July 2, 1967	50 employes	
July 2, 1968	25 employes	
Unions		
July 2, 1965	100 members	Cannot exclude or expel on basis of race, color, religion, sex or national origin. Cannot segregate, limit or classify by race, color, religion, sex or national origin. Unions cannot cause or attempt to cause an employer to discriminate or fail or refuse to refer for employment because of race, color, religion, sex or national origin.
July 2, 1966	75 members	
July 2, 1967	50 members	
July 2, 1968	25 members	
Employment Agencies		
All, including U.S. Employment Service and the system of state and local employment services receiving federal assistance.		Cannot refer a person for employment on basis of race, color, religion, sex or national origin or classify on such grounds.

Exemptions

— All government employment — federal, state or local
— Indian tribes
— Bona fide private tax-exempt membership clubs

ENFORCEMENT PROCEDURE

Federal

1. An aggrieved individual may file a charge in writing, under oath, with the Equal Employment Opportunities Commission in Washington, D. C.

2. Any member of the Commission may file a charge with it.

3. The Attorney General may bring suit in a three-judge federal district court to enjoin "a pattern or practice" of violation.

State

In states which have FEP laws, aggrieved persons must file with the state commission first.

States which have Fair Employment Practices laws meeting federal standards must be given first opportunity to handle charges brought by individuals. At present, 25 states have laws which appear to meet these standards. They are Alaska, California, Colorado, Connecticut, Delaware, Hawaii, Idaho, Illinois, Indiana, Iowa, Kansas, Massachusetts, Michigan, Minnesota, Missouri, New Jersey, New Mexico, New York, Ohio, Oregon, Pennsylvania, Rhode Island, Vermont, Washington and Wisconsin.

No charge may be filed under Title VII before the expiration of 60 days after proceedings have been started under the state or local laws unless such proceedings have been terminated earlier.

Equal employment opportunity means a wider variety of jobs will become open to all, with ability the only test.

help promote the economic growth of the nation.

- By closing the gap in earnings between whites and non-whites, the entire economy will benefit through increased purchasing power, which will in turn strengthen business, create more jobs and give unions greater growth potential.
- Better job opportunities for minority group citizens will enable them to break out of the vicious circle which confines them to ghetto housing and overcrowded, substandard schools.
- The new law certainly can operate as a catalyst in bringing new encouragement to the American Negro and inspiring him to strive towards his potential.

All of these things can be accomplished with the sincere support of the general community. Once the American people arrive at the full realization that equal job opportunities will not only help Negroes and other minorities but each individual and the nation, full support of the law should be no problem.

How Will Title VII Operate?

Like other laws of its kind, Title VII is not self-implementing. It merely provides a remedy for any aggrieved person who can validly claim he has been denied a job opportunity because of his race, color, religion, sex or national origin.

Title VII of the new law provides machinery for dealing with such charges of discrimination and leaves the enforcement of the law to the courts. However, in the 25 states with similar laws, an individual must first institute proceedings under state law and then allow 60 days for state authorities to handle the matter before filing a charge with the federal commission.

The law applies to employers and unions having, respectively, 100 employes or members as of July 2, 1965. On July 2, 1966, the test becomes 75 employes or members; on July 2, 1967, it becomes 50 employes or members; and on July 2, 1968, it becomes 25. However, a union which operates a "hiring hall or hiring office" is covered, regardless of the number of its members, if it makes referrals to a covered employer. National or international unions, local unions and other subordinate bodies, as well as state and local central bodies, are covered.

Of the prohibited practices under Title VII, employers are forbidden to discriminate against any individual with respect to hire or discharge, or compensation, terms, conditions or privileges of employment. Employers also are forbidden to limit, segregate or classify employes in any way that would tend to discriminate against them.

Unions are forbidden to cause or attempt to cause employers to discriminate. In addition, unions are forbidden to discriminate with respect to membership or to classify members in any way that would tend to discriminate against them.

Employment agencies are forbidden from referring individuals for employment on the basis of race, color, religion, sex or national origin.

A separate provision of Title VII prohibits discrimination in apprenticeship or other training programs by an employer, union or joint labor-management committee.

Employers, unions and employment agencies are forbidden to use discriminatory advertisements.

Among the exceptions set forth in Title VII, discrimination is permitted in those certain instances where race, sex or national origin is a bona fide occupational qualification reasonably necessary to the normal operation of the particular business.

An employer may apply different standards of compensation, pursuant to a bona fide seniority, merit or incentive system so long as the differences are not the result of an intention to discriminate. Employers are likewise permitted to use any professionally developed ability test so long as it is not designed or used to discriminate. Nowhere in Title VII, by implication or otherwise, can language be found to require anyone to grant preferential treatment to any group on account of the existence of a racial imbalance with respect to employment or admission to union membership. In-

deed, preferential treatment to any group would itself be a violation of the Act.

On the federal level, enforcement proceedings may be started in three ways:

1. An aggrieved individual may file a charge, under oath, with the Equal Employment Opportunity Commission.
2. Any member of the Commission may file a charge with it.
3. The Attorney General may bring suit in a three-judge federal district court to enjoin a pattern or practice of violation.

In the first two instances, if the Commission is unable to secure voluntary compliance, the aggrieved person may bring suit himself in federal district court.

It is hoped that the effective implementation of Title VII will strengthen and supplement the efforts of unions in the enforcement of existing non-discrimination clauses in collective bargaining agreements. Most of these clauses cover current employes only and leave to management the prerogative of hiring at its own discretion. Technically, an employer could have a lily-white workforce, a non-discrimination clause in his contract and not be guilty of discrimination. Also, an employer can have a workforce, for example, composed of 80 percent Negro workers and 20 percent white, with separate terms and conditions for the Negro workers inferior in quality to those granted the white employes. He might claim he is not guilty of discrimination because of the high percentage of Negro workers in his plant. Yet it might be considered that, in the latter case, this would represent discrimination on its face.

These are just two minor examples of the nature of the problems to be faced by state fair employment commissions and the new federal commission.

Labor's program in the equal job opportunity field will attempt to strengthen the role of the federal and state agencies. In many instances, trade unions, through the implementation of non-discrimination clauses and the effective processing of grievances, will eliminate many complaints from aggrieved persons before these matters reach the commissions having jurisdiction over them. It cannot be overemphasized that effective implementation of Title VII will in part depend upon the willingness of workers, job applicants or applicants for apprenticeship training to take the initiative in filing complaints.

The road is now open for employers and unions, where bargaining relationships exist, to negotiate non-discrimination clauses which will extend to hiring.

At the national AFL-CIO Equal Employment Opportunity Conference held on April 13, 1965, in Washington, D.C., President George Meany declared:

"It must be clearly understood that our goal is not just employment at the bottom, but equal rights as to wages, working conditions and also for advancement."

Meany went on to say that "we would be fighting this fight if there were no laws on the books. And, in fact, we were enlisted long before the laws were passed; we sought the help of law in a battle we were already waging."

At the national conference, 74 union representatives representing 10.2 million members of AFL-CIO unions discussed labor's program for voluntary compliance with Title VII. They reviewed the whole range of problems which call for affirmative action programs.

These union leaders were designated by the presidents of their international unions to represent their respective unions in the equal employment opportunity field. They will be responsible for the development of programs within the jurisdiction of their unions and within the trades or industry where such unions have a collective bargaining relationship. They also will serve as contact persons for the new federal Equal Employment Opportunity Commission, other government agencies and the AFL-CIO Department of Civil Rights.

The number of representatives is expected to top the 100 mark soon. Of the few dozen remaining unions, the principal officer of the union will be responsible for the development of programs.

Aside from action on equal employment opportunity, labor's commitment requires vigorous efforts to improve education and housing for everyone. Local central bodies have been urged to develop community action programs in concert with other groups.

Labor thus has reinforced its determination to speed up the rate of progress so all Americans can share in building a great society.

The Cost of Discrimination

". . . The Civil Rights Act is likely to extend the horizons and motivations of non-white youth as it opens up new employment opportunities.

"There will be greater incentive to stay in school and to obtain training. Incomes will rise and the circle of poverty in which many Negroes are trapped will be broken.

"Discrimination against minorities—Negroes, Puerto Ricans, Spanish-Americans, Indians and others—has significant economic and social costs. It is estimated that society loses up to $20 billion per year of potential production as a result of employment discrimination and poorer educational opportunities for non-whites.

". . . The voluntary cooperation of businesses and unions has been enlisted to open both jobs and union membership to non-whites. One of the most critical remaining barriers to the employment prospects of non-whites is the lack of sufficient openings in apprenticeship programs. Until younger Negroes can acquire the skills necessary to compete in today's labor market, equality of opportunity will not be realized. . . ."

Labor-Negro Alliance

A POWERFUL political alliance is being forged between organized labor and the Negro community. It is much in evidence on Capitol Hill this summer. The AFL-CIO is fighting shoulder to shoulder with key Negro groups to win Congressional adoption of the voting rights bill, while the Negro groups in turn are pressing for enactment of the minimum wage bill and for repeal of the labor-despised Sec. 14B of the Taft-Hartley Act.

The labor-Negro alliance has been warming ever since the late President Kennedy entered the White House. Labor and Negro legislative representatives now meet daily—and some times throughout the night—when important bills reach the action stage.

It isn't as cosy on the production lines or even at the union officer level in all locals and internationals. There still is bitter anti-Negro feeling in many unions.

But labor and the Negro have come a long way.

International Association of Machinist members, for example, were implacable foes of Negroes in the huge aircraft industry after World War II. But the machinists union now is a prime mover in the Negro-labor alliance here.

The United Automobile Workers are key members. So are the Steel Workers, Amalgamated Clothing Workers, International Ladies Garment Workers, Amalgamated Meat Cutters, Textile Workers and the State, County and Municipal Employees.

The AFL-CIO helps support Bayard Rustin's tiny A. Philip Randolph Institute in New York's Harlem and the brainy Mr. Rustin wrote the testimony that widely respected NAACP Washington director Clarence Mitchell gave as the Negro spokesman on minimum wages.

The close alliance was dramatically signaled when Mr. Mitchell appeared before the House Labor subcommittee to support repealing Sec. 14B—the provision that allows states to ban the union shop. Repeal of 14B is labor's No. 1 goal. Significantly, it is a straight labor issue—not a broad economic question like the minimum wage or Social Security.

Mr. Mitchell presented the agreed view of a group of leading Negroes—as he did again when he supported a more generous minimum wage law. He spoke for Roy Wilkins, NAACP executive director; A. Philip Randolph, American Negro labor council president; Martin Luther King jr., Southern Christian leadership conference president, and CORE national director James Farmer.

It is as certain as anything can be that Congress will be seeing more labor-Negro cooperation on major economic issues in the future.

From: Don Slaiman, Director, Civil Rights Department DS

Enclosed for your information is a copy of a recent speech which Clarence Mitchell, Director of the Washington Bureau, NAACP, gave at the Maryland State and District of Columbia AFL-CIO Convention.

Also enclosed is an article from the New York Herald Tribune that I would like to bring to your attention, entitled "Labor-Negro Alliance". This rather current editorial reflects the thinking in another article I have enclosed, from the February '65 edition of COMMENTARY, by Bayard Rustin.

Mr. Rustin, in "From Protest to Politics" discusses the future of the civil rights movement in the United States. "At issue", according to Mr. Rustin, " is not civil rights, strictly speaking, but social and economic conditions."

The article speaks of needs in the total American society as well as those relating chiefly to Negroes. No agency or group can achieve social progress alone according to Rustin. "We all need allies."

I think you will find these articles of considerable interest. If you have any further inquiries, please do not hesitate to contact us.

Rights Movement Leads Hundreds to Join RWDSU

BIRMINGHAM, Ala.—The fight of Negroes in the South for social equality through the civil rights movement appears to be broadening into a fight for economic equality through trade unionism. At least, the experience of the RWDSU in the South in recent weeks indicates such a trend.

In four communities across the South—Griffin, Ga., Memphis, Dallas and Greensboro, Ala., large groups of workers, predominantly Negro, have joined the RWDSU within the past two months to fight for equality on the job.

In addition to the organization of 350 workers by Local 315 at Pomona Products in Griffin and the winning of a first contract for them, reported in the last issue of The Record, the RWDSU has signed up overwhelming majorities among the 300 employees of the Massengale Poultry Co. in Greensboro, the 275 employees of the Kimco Corp. in Memphis and the 250 workers of the Industrial Uniform & Towel Service in Dallas.

Ass't Southern Dir. Frank Parker hailed the drives as the beginning of a great advance for Negro workers in the South.

"Civil rights workers are now using a tactic that gives permanence to raising the standard-of-living of the Negro people," he said. "To demonstrate for the right thing is good; when you tie it to economics, it puts the gains on a permanent basis. This tying together of economic and political gains will produce the greatest lasting good."

Parker said that the RWDSU is proud that civil rights workers trust the union.

"The leaders of the civil rights movement have confidence that in the RWDSU all workers get the same treatment regardless of race or color," he said, "That is the reputation that our union has built over a long period of years."

Freedom March Brings 250 To Union in Ala.

GREENSBORO, Ala.—Spurred by last spring's freedom march from Selma to Montgomery and a voter registration drive among Negroes now underway in Hale County, 250 of the 300 workers at the Massengale Poultry Co.—all but 18 of them Negroes—have joined the RWDSU.

The NLRB will hold a hearing Sept. 8 on the union's petition for a bargaining election.

The company is using state troopers in an attempt to intimidate the workers, but its drive has had little effect.

Greensboro is 40 miles from Selma, the starting point for the freedom march last spring. This summer, civil rights organizations have been running a voter registration drive in this area—which is in the heart of Alabama's Black Belt—and a number of marches and demonstrations have been held in Greensboro.

Early last month a member of the Student Nonviolent Coordinating Committee (SNCC) called Org. Henry Jenkins—they had met in Selma recently—and asked if the RWDSU was interested in organizing Massengale, a chicken processing plant.

Jenkins said yes and set up a meeting with the workers at a Negro church Aug. 11.

"The meeting was kept secret because otherwise people would throw rocks and everything else," he said. "I passed out cards to the 50 employees there and all present signed. Twenty workers took more cards to the plant and when we met again on the 15th, they had signed up more than 200 of the workers. The petition was filed the next day."

'$30 or $35 is a Big Check'

Wages and working conditions in the plant are extremely bad.

"Men go to work six days a week, all night and some of the day, and $30 or $35 is a big check," Jenkins said. "They work 90 minutes for an hour's pay. They're told they're being paid $1.25 an hour, but they're never allowed to check their time card. They're not allowed to punch their cards; the company punches all time cards.

"The company never lets them make more than 40 hours. There's no overtime. They get no vacations, no paid holidays, and if somebody gets hurt on the job, the company won't allow him to draw workmen's compensation. No one in the plant has ever drawn it.

"The company has a cafeteria at the plant. They were charging Negro workers more for food than the white workers."

The company has started an anti-union drive. It fired one worker with nine years' service who refused to spy on the union, and it is bringing two state troopers into the plant every day for several hours.

So far the union members at Massengale have not been scared away by the company, and signed cards are continuing to come in. More than 80 percent of the employees have joined.

Marching into the RWDSU: Southern workers are seeking economic justice through the union.

For 275 in Memphis, Union Means Decency

MEMPHIS, Tenn.—For the 275 Negro workers at three Kimco Corp. installations in Memphis, Sept. 22 will be an important day—a day that will mark the beginning of a fight against discrimination, intimidation and inhuman working conditions. It is the date set by the NLRB for a bargaining election.

The date also marks the fruition of an organizing drive that began June 1 when several Negro employees at Kimco, an auto parts outfit, contacted Earl Fisher, president of Local 19, and told him about conditions at the plants.

For the 275 workers, mostly women, working at Kimco is like driving slowly down a dead-end street. The hourly pay is always $1.35—after one year, after ten years, after 20 years. Their white co-workers start at $1.45, and go higher.

There are no seniority provisions for Negroes, and virtually no vacations. Each installation closes down for a period during the summer, but by transferring Negro employees from one installation to another, the chances for vacation are slim. Negro employees eat lunch standing up wherever there is room — the white employees have lunchroom facilities. There are no breaks during the day for Negro workers, and there are only the most primitive restroom facilities.

Union cards were handed out during the days following June 1, until the Kimco management got wind of the campaign. On July 16, ten employees were called in and summarily fired, several for "misdemeanors and bad conduct," some for "unsatisfactory work," and several two-year employees for "lack of work." In addition the usual union-busting tactics were employed — threats, lectures and more threats.

On July 17, Local 19 filed a petition for an election with the NLRB after getting the Kimco attorney to forego a hearing, and on July 29, the board granted the election request.

The organizing campaign has continued at Kimco despite the firings, and Wednesday night, Aug. 18, at a union meeting, close to 200 cards were collected, including those of five white employees.

"There's a very good chance we'll win this election," said Fisher, "and for these workers the union will mean the beginning of decency."

250 in Dallas Seek Justice On the Job

DALLAS, Tex.—The RWDSU has borrowed the hope and the technique of passive resistance from the civil rights movement, and it is using both in its campaign to win bargaining rights for 250 workers, most of whom are Negro women, at the Industrial Uniform & Towel Service plant.

"The civil rights movement has given the Negroes hope," Int'l Rep. Jake Stewart, who is heading the drive, said. "And now that they've seen labor's weapons — picketlines and demonstrations—work for the civil rights movement, they want to see them work for economic justice."

The hope for economic justice has brought every one of the workers, including eight whites, into the union.

"The whites' attitude is, 'we've worked with the Negroes all these years and we're going to stick with them now,'" Stewart said.

The NLRB has set a bargaining election for Sept. 7. The company has filed an objection, but the board in Washington is expected to turn the company down and order that the vote be held.

To counter one of the company's anti-union tactics, the baiting of workers by supervisors, the workers are practicing passive resistance.

"They let the supervisors 'cuss' them out and then they walk away when it's over," Stewart said.

In addition to the baiting, the company has interrogated Victor Marie Templeton, chairman of the union's 39-member in-plant organizing committee, several times; it has suspended Corene Hardin, the committee's secretary, for four days; questioned a number of union supporters and hired a notorious union-busting attorney.

"There's tremendous pressure on the workers, but they're standing up under it," Stewart said.

The union plans to file unfair labor practice charges against the company.

The drive, which is being conducted with the AFL-CIO's Industrial Union Dept., began in mid-June when Stewart started talking to one of the women leaving the plant. The woman was Mrs. Templeton, and within a month a majority of the employees had signed RWDSU cards.

Plant Conditions Very Bad

Conditions at the firm, which rents uniforms to industrial plants in the Dallas area, were described as horrible.

The workers start at 7 a.m. and never know when they will finish—they may get off at 2:30 in the afternoon or at eight that night. Before the union began organizing, there were no paid holidays and no breaks during the day.

Most workers earn only the $1.25 an hour Federal minimum.

"It's a pretty pathetic situation," Stewart said. "This is the financial capital of the Southwest, and this town is full of places like this. You're either real rich or real poor in Dallas, Texas. There's nothing in the middle."

14(b) Filibuster—the Mildest in History

What happens when argument is drained of passion and there is no conviction in appeal? The result must be very like the Senate filibuster on repeal of Section 14(b) of the Taft-Hartley Act, which began at noon on October 4 and will last until boredom overtakes all parties: which may be soon.

The Senators for and against invalidation of state "right-to-work" laws took their places like actors on a stage, speaking lines written by others to an audience which for the most part was not listening. It all could have been said 18 years ago, and was. Positions hardened then, when the Taft-Hartley Act was passed by a Republican Congress with the help of Southern Democrats, and nothing has happened in the intervening generation to soften the lines. The Republicans and the Southern Democrats are still for the state option on right-to-work. Now, they can command only 40-odd votes, just enough to filibuster. The Northern and Western Democrats are still against.

What has changed is the context in which the debate is taking place. The fine edge of labor's evangelism was dulled by its own leaders the year the Taft-Hartley Act was passed (over President Truman's veto). For the security of an established place in American life, organized labor sacrificed its position for social change. The young Senate liberals today look more to the civil rights movement than to the labor hierarchy, as the instrument for progress. They will vote for repeal of 14(b) – they are not anti-labor – but they cannot work up much enthusiasm about it. They will not fight day and night to break a filibuster.

Social acceptance for labor also brings a commitment from the biggest industries to maintain the current satisfactory relationships. General Motors has as little interest as the United Auto Workers in upsetting the coexistence, and politicians from industrial states undermine the status quo at their peril. Right-to-work lobbyists get most of their support from small-businessmen and Southerners, who have had little experience with unions and fear that organizing efforts will mean new power for Negroes, higher wages, lower profits, and all of that. They will take no chances – even though the chance that repeal of 14(b) will bring a flood of organization to the South is remote.

Labor leaders of two decades ago cannot communicate their emotional abhorrence of 14(b) to their Democratic friends. It comes out sounding harsh and hostile. The most outrageous example is a letter sent on the eve of the filibuster to many Senators by the International Typographical Union:

"Our patience is about exhausted with being double-crossed and the Senators ought to know that they cannot double-cross the labor movement again and get away with it." If necessary, the letter threatened, "the ITU will take part in mobilizing delegations that will make the civil rights demonstrations look like Sunday school picnics."

That was not composed to make friends, or keep them. Instead, it confirmed the opinion of some Senators, who have had no contact with the furious labor wars of the past, that union leaders are irrational, tyrannical, and undeserving of favors.

Labor's *idée fixe* on 14(b) has annoyed Senators who have different priorities for legislative business. Why isn't extension of coverage and increase in the minimum wage the first order of business? The minimum wage bill, which would be of immediate benefit to millions of workers, has not been reported out of the Senate subcommittee. Labor leaders are on record for it, but they have not devoted major effort to its passage this year.

"Union leaders have been talking about 14(b) as the 'slave labor act' for so long that they have a vested emotional interest at stake in repeal," a liberal Democratic Congressman said last week. "It's a matter of status and prestige."

Most of labor's friends do not share that concern for prestige. Foreign policy liberals are annoyed at labor's disposition to jingoism – on matters such as loading ships for trade with East-bloc countries, and "me-first" expressions of support for military adventures. One New York Democratic Congressman refused to vote for a pro-labor bill because the building trades unions, who would benefit most from it, discriminate against Negroes. Although officially labor supports the national civil rights movement, unions (except for the Teamsters, who are under anathema) have not been leaders in the fight.

It all makes the anti-repeal filibuster very hard to beat. The Democratic leadership, though mindful of its lack of votes for cloture, unwisely waited until every weapon of legislative coercion was disposed of before bringing up 14(b). Senators who might have held out against a filibuster because their pet bill was still untended, or were hoping for something from the pork-barrel, have no good reason for hanging on now. Senator Mansfield, the Majority Leader, does not want to hold around-the-clock sessions; he thinks such grueling schedules may kill off older and weaker members. On the other hand, freshmen members in the House, who went out on a limb for repeal (against their conservative districts), are unhappy at the prospect of another 14(b) fight next year, so close to election time. A group of them considered sending a House delegation to Mansfield to seek support for an all-out fight. They decided it would be useless.

As the filibuster wore on last week towards a test

This is the type stuff that needs to be answered — Problems

10/16/65

vote on Friday, it began to look like the 1945 World Series between Detroit and Chicago: in the middle of it, a sports writer decided that neither team could win. It was doubtful whether the filibusterers or their opponents could emerge with any feeling of accomplishment. It was probably the mildest filibuster in history. "The only thing that keeps me from voting to drop the whole thing forever," a Northern Democrat said, "is Strom Thurmond on the other side."

Andrew Kopkind

Looking into the Green Stamp Business

Last year Sperry and Hutchinson, the largest of the trading stamp companies, issued more stamps than the Post Office. In fact, some of their stamps went *to* the Post Office. Congressman Lester Wolff (D, NY) has discovered that government agencies, like everyone else, collect trading stamps. The General Services Administration, the buying agent of the federal government, spends about a billion-and-a-half dollars a year. Most of this money goes for wholesale purchases, and wholesalers generally don't give stamps. But for certain things, notably small retail purchases, car rentals, and the servicing of government vehicles, GSA does receive stamps. The agency considers them a nuisance and makes only feeble attempts to keep track of them.

But the stamps are as valuable as money (a book of 1,200 S&H Green Stamps costs service stations in the Washington, D. C. area $3.60), and Rep. Wolff estimates that stamps may raise the price of a consumer product by as much as two to three percent. They are not "something instead of nothing" as the stamp people contend, and they are not free. The government treats them almost as if they were.

A 1960 regulation requires that stamps be turned in to the agency buying them. If the agency itself has no use for them, they are forwarded to a veterans hospital where they can be pasted in books and redeemed for recreational equipment for the patients. But GSA, considering the stamps "more trouble than they are worth," has no provision for the formal reporting of stamps received by its employes and does not count the stamps turned in. An employe is "on his honor" to turn in the stamps, just as he is on his honor not to make personal calls on government telephones; and he is not supposed to take them home to his wife.

In 1962, the last year that a count was attempted, the GSA office for the region covering Washington, D. C., Maryland and Virginia collected only the equivalent of six books of trading stamps – this in an area where there are more than 3,000 GSA vehicles and where about half the service stations give stamps. (Government contracts with most of the major oil companies permit a government driver to stop at just about any station that is convenient). Now GSA makes a rough "count" by putting incoming stamps on a scale. In fiscal 1964 GSA amassed eight pounds of stamps. An agency spokesman said that this was a negligible amount, but that he "had to assume that all of the stamps were being turned in." It is impossible to say just how many of the stamps disappear and how much of a cash loss to the US Treasury this represents.

When Congressman Wolff asked GSA Administrator Lawson B. Knott, Jr., why the government does not execute contracts with retailers providing for a cash discount in lieu of the unwanted trading stamps, Knott replied that such a provision might put bidders not offering stamps in an unfair competitive position.

So the government is saddled with stamps it doesn't really want and doesn't quite know what to do with. Sending them to VA hospitals is just a way of getting rid of them. (A GSA spokesman with whom I spoke muttered something about licking stamps having some "therapeutic" value.)

Moreover, some purchases made with the stamps are dubious bargains. S&H in a national magazine ad it ran early this year asked the rhetorical question, "Is getting stamps better than getting a discount in cash?" and gave itself the expected answer, "Yes, because a customer receives more value from stamps than if she received an equivalent amount of cash. That's because," the ad continued, "stamp companies buy merchandise directly from manufacturers in large volume. In this way, they are able to give the merchant's customers more value in merchandise than if a customer got cash and spent it herself." Price comparisons by critics of the stamp companies do not bear this out. The Greater Washington Service Station Association compared the advertised prices of a number of items in a local department store with the catalog value of the same products. They multiplied the number of books required to buy an item by the $3.60-per-book rate service stations must pay for the stamps they "give" to their customers. A toaster advertised by the department store at $9.99 cost the equivalent of $25.20 in S&H Green Stamps. A blender sold retail at $29.88 cost $57.60 in stamps. A hair dryer advertised at $24.99 cost $43.20 in stamps.

Not all of those who give Green Stamps, however, pay as much for them as service stations in the Washington area do. According to Sperry and Hutchinson a chain of supermarkets doing a large volume of business may pay as little as $2.50 for a book of stamps. A customer who gets his stamps both at his neighborhood grocery store and the service station, therefore, would get stamps costing the merchants, on the average,

COPE Opens Drive to Register Negro Voters in South

Coalition

Emory

American Federation of Teachers members can continue to help the civil rights movement in the South and elsewhere, AFT President Charles Cogen has announced, by "giving a buck to COPE.

"The Voting Rights Act passed by Congress this session will help make some Southern politicians realize that recent travesties of justice in the South cannot long continue," Cogen said. "But," he added, "this will happen only if enough now-disfranchised voters can be registered to vote."

COPE, the AFL-CIO's Committee on Political Education, is conducting an intensive drive in the South to help Negroes who have not been permitted to register before to register for voting.

COPE reports that in one Louisiana parish (county) registration has increased from 4 percent of eligible Negroes to 65 percent. This is a county in which federal registrars have had to work, because of local refusal to register Negroes.

In a second group of counties, those in which local officials have opened up registration themselves, progress has in many cases been equally good. In Sumter County, Ga., 1,100 Negroes registered for the first time on a recent weekend.

However, COPE officials point out, there is a third group of counties in which nothing is being done, and registration remains at a standstill.

They emphasize the importance of full voting rights for all Americans not only as fulfillment of a basic national guarantee, but as a means of insurance that other basic rights will be preserved for everyone throughout the nation.

FREEDOM SCHOOL

By Eugene A. Kelley

The critics who continue despite the weight of evidence to deplore the labor movement's indifference to anything but bread and butter, should look at the latest in a series of union-sponsored community activities.

They could discover, for instance, the past summer's Freedom Schools in the Deep South—an activity by the American Federation of Teachers that brought hope and courage to several thousand Negroes of all ages who were desperately in need of the kind of reassurance these schools offered.

All the rules of physical criteria for schools were waived in the Freedom School project. The classroom was as likely to be a crossroads church as it was to be a humble dwelling or a store with makeshift accommodations.

The faculties—mainly AFT members from larger cities augmented by volunteers—received stipends of about $10 a week, barely enough for existence. Most of them dipped into their own savings to accomplish a job that sorely needed doing. They lived with the families of their students and most of all, in some areas, they lived under the constant threat of physical harm.

Teachers Union Southern Project brings education where doors were closed before.

There was no formal curriculum. Subject matter varied from place to place, with only such common denominators as teaching of practical skills, Negro history, self-expression, political education and creative action. Teachers were free to select their own subjects with the advice of the class. There were none of the formal school trappings like report cards, principals, or attendance sheets.

The AFT's Freedom School operation was divided in two parts. Coordinating their activities in Gadsden, Ala., and Quincy, Fla., with Rev. Martin Luther King, Jr., and the Southern Christian Leadership Conference for the first time, the AFT established two schools. In Florida they helped with the SCLC voter registration drive and with the Southern Community Organization and Political Education (SCOPE).

It was in Mississippi, though, that the AFT projects achieved their most notable gains. Twenty-six Freedom Schools, staffed by some 30 teacher-volunteers from every part of the country, reached out to more than 2,000 people from the capital city of Jackson to remote rural hamlets.

Two AFT members, Arthur and Carolyn Reese, from Detroit coordinated the schools working closely with the Mississippi Freedom Democratic Party.

The personal hazards involved were made clear to every volunteer. Security bulletins were issued to all personnel with cautions against travel by night, appearing in windows of Freedom Houses after dark, giving police the names of friendly local people, and the avoidance of bizarre or provocative clothing and beards.

Threats against the person and property of the volunteers were common. In Issaqueena City, Miss., the Freedom School held in a church was put to the torch and leveled one night.

Despite all this, the work of the schools was carried out. Teachers soon learned that the most

Some of the children who attended the freedom schools.

popular area of interest was the history of the American Negro—a course giving to previously unaware people a new knowledge of their heritage and contributions.

Next in importance to the students of all ages was political education. They wanted to know who could help them and how, they wondered about what they could expect from the Civil Rights Act.

Valuable lessons discovered in Mississippi in 1964 and in Prince Edward County, Va., two years ago, were put to the test by the AFT volunteers this year. The teachers *learned* as they taught. They sought to draw out the students, to hear from them about their needs, their hopes and even their fears.

Self-expression was encouraged in many ways. Some of the Freedom Schools published their own mimeographed newspapers in which the students articulated problems closest to their hearts. In

Photo: A.F.T.

Freedom schools gave a new meaning to the word for many this past summer.

Canton, Miss., the school led by Nancy Polin and Nancy Lester, AFT teachers from New York City, put out the *Youth Freedom Voice* whose main concern in one issue was an attempt to use the facilities of the public library.

In Amite County, Miss., the Freedom School is named for Herbert Lee, a Negro gunned down in broad daylight by a state senator. To Negroes he is a martyr, killed because he persisted in his efforts to become a registered voter. The Freedom School at Pilgrim Church in Amite County was directed by Sheridan Peterson, an AFT teacher from Seattle, and its publication is understandably concerned with Negro voting rights.

There were health and hygiene classes in all of the schools. The Reeses conducted a secretarial school in Jackson, Miss. Any vehicle that would give confidence and self-expression was tried. In one area a folk festival found Negroes 75 years and older singing folk songs, playing harmonicas and strumming banjoes in the true Mississippi Delta style.

In all the discussions there were patient efforts to impress local groups with the necessity for keeping up the schools' momentum so that none of the ground so painstakingly won would be lost through neglect. As a result, there are now some year-round Freedom Schools with local high school students replacing the teacher-volunteers who have returned to their own classrooms.

Much of the cost of the Freedom School project was financed by contributions from AFT locals, with generous assists from other unions and individuals. Advertisements early in the season pointed out that $10 would provide six to eight weeks of schooling for a Negro youngster, $100 would buy a bus ticket for a Northern teacher and pay her entire summer's expenses. A $1000 gift would open and sustain a school for the summer.

AFT President Charles Cogen pointed out that "this was a free project—all on its own—not connected with any governmental authority." He added that the possibility of later federal assistance through anti-poverty legislation was under study.

Cogen said the volunteer teachers were cautioned to confine their activities to the educational aspects of the civil rights effort and to avoid involvement in local civil rights campaigns. The Freedom Schools, he went on "exist not in competition with public schools, but out of love for the idea of free—really free—public education."

The need for Freedom Schools will continue as long as quality education is not available to all children. The AFT recognizes the need and its convention in August urged greater efforts for the summer of 1966.

Cogen expects that more of his members will staff Freedom Schools next year. "We went into the South," he said, "as much to learn as to teach, to be inspired as to inspire, and to have our own stereotypes demolished as to tear down Southern prejudice."

Eugene A. Kelley, author of this article, is a longtime reporter of labor's activities.

Negroes in South push to sign up

Organizing is gaining momentum as result of ferment on civil rights

Southern Negroes, shaken out of apathy by civil rights movement, show new interest in unionism. These poultry workers meet in a Greensboro (Ala.) church.

Time and again, unionists have prematurely predicted the organization of the South.

Today, it may actually be happening—in a manner few predicted.

Southern Negroes are joining unions as an outgrowth of the civil rights movement. Sometimes the connection is direct. Negro workers at the Pomona Products Co. food packing plant in Griffin, Ga., signed membership cards in the Retail, Wholesale & Department Store Union while picketing the plant to protest the firing of a Negro who had used the white drinking fountain. Sometimes the connection is indirect—a matter of a new willingness to defy Mr. Charlie, union officials say. Either way, the situation offers organizing possibilities that didn't exist a year ago. Unions have reacted by hiring more Negro organizers.

Moreover labor officials insist the civil rights movement has also brought white Southerners into unions by teaching them the value of organization.

"They've learned from the Negro that the way to improve conditions is to join an organization and push," one official says.

Less static. Whatever the explanation, the facts are clear. Unions whose Southern membership had remained static or grown by handfuls during a decade of rapid industrial development now report substantial increases during the past year, often the past few months. A sampling:

- RWDSU claims 17,000 Southern members; 1,500 of them joined since June.
- The independent International Union of Laundry Workers claims 7,000 Southern members; 2,000 of them joined during the past year.
- The International Chemical Workers Union claims 15,000 Southern members; 2,000 of them joined during the past year. This includes the 800 employees of Scripto, Inc., 700 of them Negro, who walked an Atlanta picket line with Dr. Martin Luther King last winter. A "discriminatory" wage increase—2% for unskilled workers (mostly Negro) and 4% for skilled (mostly white)—led both to King's participation and the union's success.
- The American Federation of State, County & Municipal Employees claims 4,000 members in Georgia; 1,000 of them joined during the past year.

Old Confederacy gains. In all cases, Negroes make up a healthy percentage of these unions' Southern membership, ranging from 35% for RWDSU to 90% for the Laundry Workers. Five years ago, AFSCME's Georgia membership was 15% Negro. Today it is 40%.

Records of National Labor Relations Board elections in the 10 states of the Confederacy tell a similar story of increased receptiveness to unionism.

In fiscal 1963, 87,085 workers cast valid votes in NLRB collective bargaining elections. The unions won in bargaining units whose total work force numbered 44,372. In other words, 51% of the workers who participated in NLRB elections wound up with union representation.

In fiscal 1965—which ended June 30—99,351 workers cast valid votes in Southern NLRB elections. The unions won in bargaining units whose total work force numbered 67,104—67%.

The change is less striking when one compares the number of elections won rather than the number of employees covered in winning elections—635 out of 1,138 (or 56%) for 1963; 761 out of 1,286 (or 59%) in 1965. This suggests that union prospects are improving more quickly in large plants than they are in small.

Phenomenon. Even more significant in the view of historically minded unionists, a fair number of the newly organized plants came in "cold." Such plants have no previous record of organizing attempts and, often, no employees who ever worked in union plants elsewhere. They simply respond to their first contact with an organizer by joining the union. It took the RWDSU just three days to sign up the bulk of Pomona Products' 350 workers after hearing about their picket line from the NAACP.

This is phenomenal, especially in the South. There unions have hammered at their targets in campaign after campaign, sometimes with

Republic National Bank Tower

another "Buffalo-quality" air conditioning job

Air conditioning the new 50-story addition adjacent to the 36-story Republic National Bank Building in Dallas, Texas, presented several unusual problems. For example, the systems for the two buildings had to be integrated, and a variety of environmental requirements were encountered in the new building. Buffalo's comprehensive line of air conditioning equipment was able to meet every requirement. In the Tower, over 75 'Buffalo' factory-fabricated air conditioning cabinets handle interior zones. 'Buffalo' fans and coil units serve peripheral zones through a high pressure system. This is one more example of the confidence engineers and contractors place in 'Buffalo's' engineering and fabricating capabilities. For quality equipment correctly applied, see your Buffalo Engineering Representative. He's in the Yellow Pages of the business center near you.

years in between, before painfully amassing a majority.

Large numbers of workers last signed up cold during the great organizing surges of the 1930s in the urban North. Perhaps the South is on the verge of a similar period, some laborites suggest.

Many reasons. Others offer more mundane explanations for union successes. Quicker NLRB elections give employers and anti-union communities less time to wear down union loyalties, one official notes. Others observe that some Southern employers, particularly those connected with national chains, no longer fight so hard.

Another school holds that it's natural for Negroes to join unions once they get over their fear because "they know they belong to the working class—there's no status problem there." And certainly it's true that recent Negro—and white—union recruits work mainly at unskilled, low-paying jobs.

Moreover, tarring unions with the civil rights brush is not the foolproof anti-labor technique it used to be, now that employers must avoid overt discrimination themselves if they want to keep government contracts—or simply keep out of trouble.

Natural direction. Overriding all these explanations is a more basic one: that industrial civilization inevitably brings unionism, and that the time has come for the South. A veteran organizer explains it like this.

"Of course, the civil rights movement has had a tremendous subliminal effect on the Southern worker. It's replaced the old fatalism with a new object lesson: Here are people even more downtrodden than he, helping themselves through their organizations.

"But the Southern worker would be moving in our direction anyway. He's been off the farm long enough. That $1.25 an hour doesn't look so great any more. He's seen other plants around, he's met other kinds of people, he doesn't think the boss and the jackleg preacher between them know everything.

"He's ready to join the union on logical grounds, and he won't be scared off so easily by talk of Red agitators or race mixing."

This official believes that a period of Southern membership growth lies ahead even for those unions—like his, the International Ladies' Garment Workers' Union—that have registered little organizing improvement so far. It's implicit in the new steadfastness shown even in losing campaigns today, he says. **End**

Civil Rights Resolution

Before Sixth Constitutional Convention, AFL-CIO

December 13, 1965

It has been two years since I last stood before this convention. These have been eventful and dramatic years for the Civil Rights Revolution. Indeed, the social and political landscape of the entire country has been changed.

We have won the passage of two historic pieces of legislation -- the Civil Rights Act of 1964 and the Voting Rights Act of 1965. Thus, after centuries of slavery, segregation and discrimination, the American people have spoken out unequivocally -- not merely on behalf of the Negro but in the name of democracy itself. For when men are denied, on grounds of race, the elementary rights of due process and the right to vote, the moral foundations of that society are in doubt.

These victories are, first and foremost, the fruits of the struggle of the Negro people themselves. History will record that our gains, like those of labor, were not handed down from above but were wrested from reluctant hands through courage and sacrifice, often of limb and life.

Medgar Evers, William Moore, James Chaney, Michael Schwerner, Andrew Goodman, Lemuel Penn, Jimmy Lee Jackson, Mrs. Liuzzo, Reverend James Reeb, Jonathan Daniels, the four young girls of Birmingham -- these are but some of those -- black and white, Catholic, Protestant and Jewish -- who have made the ultimate sacrifice in the cause of freedom. President Meany, I request that this convention rise for a moment of silent tribute to the memory of these freedom fighters...

Brothers and sisters, we know that more than courage and determination were required to secure the civil rights legislation. Mass action had to be mobilized. The great Selma-to-Montgomery March, which captured the conscience of the nation and the attention of the world, generated the dynamism behind the Voting Rights Act of 1965. I am proud to tell you, brothers and sisters, that perhaps no single group was so distinctively and honorably present on that occasion as the representatives of the labor movement. President Meany sent Don Slaiman, Director of our Civil Rights Department, with a delegation that included, among others, Dave Sullivan, Robert Powell and Charles Zimmerman.

And so, on the very steps of the capitol of Alabama, labor's voice was raised high and clear in the name of freedom. President Meany, I participated in that historic event, and I can tell you that nothing so inspired the embattled Negroes of Alabama with courage and confidence as the visible and dramatic support of the labor movement in those glorious days.

Not only in Alabama but in Washington, the political power and skill of the Negro's allies were indispensable. The fact of the matter is, brothers and sisters, that the AFL-CIO -- under the able and forthright leadership of President Meany, Brother Reuther and the Executive Council -- did the yeoman's job of lining up Congressional support for the civil rights legislation of the past two years.

Special recognition is due to Andrew Biemiller who, working side by side with Clarence Mitchell, of the National Association for the Advancement of Colored People, and Joseph Rauh, of the Industrial Union Department, coordinated labor's lobbyists on Capitol Hill. Without their tireless efforts, we might not have won the battle. Let these hard facts be properly noted by the hostile critics of the labor movement who profess sympathy for the cause of racial equality.

Brothers and sisters, the Resolution on Civil Rights which is before you is a commendable document which reaffirms labor's

commitment to racial justice and equality. It emphasizes what labor knows from experience -- that the passage of good laws is not sufficient, that the laws must be vigorously and effectively enforced. The agencies responsible for administering the laws must be given the resources to discharge their responsibilities firmly. Where necessary, the laws must be strengthened through amendment.

But we also know that the work of the civil rights movement has just begun. We rightly demand of the government that every barrier to the Negro's full participation in the nation's political life be struck down. Once those barriers have fallen, however, it is our task to mobilize the masses of Negroes at the ballot box.

This is labor's task as well. For when the full political potential of the Southern Negro is realized, the face of Congress will be radically changed. The Dixiecrat politicians who have joined with conservative Republicans in opposition to labor's legislative demands will have to sing a different tune -- or find other jobs. Moreover, brothers and sisters, I submit to you that in the continuation and expansion of the Negro voter registration campaign in the South lays the foundation for labor's drive to organize the unorganized in the South.

The last two years have plainly demonstrated that the Negro-labor alliance is not a one-way street. Virtually the entire national Negro leadership has put its weight heavily behind the Congressional campaign for repeal of 14b, for a 2-dollar minimum wage, for extension of the Fair Labor Standards Act, and for other labor demands. They have testified before Congressional committees and their testimonies have been published and widely distributed by the Randolph Institute.

When the Negro leadership speaks out for labor's demands, they are not merely making a gesture in return for labor's support of civil rights. Rather we are bound together in a coalition of mutual interest.

Negro workers need and demand the repeal of 14b now! And they know why they want it. They know that repeal of 14b helps clear the way for unionization of the South. They know that repeal of 14b is a step toward economic security and better living standards. They know that repeal of 14b means greater dignity on the job - freedom from exploitation and intimidation.

And they know full well where the die-hard resistance to repeal of 14b is coming from. It is coming from the greedy profiteers and the reactionary politicians who have tried to block the Negro's advance every step of the way. That is why, in Oklahoma and other states, the Negro vote was decisive in defeating so-called right to work laws. And I can promise you, brothers and sisters, that throughout this land, the Negro revolution will join hands with labor in saying to the next Congress: Repeal 14b now!

And we say, too, that if there is any single step that will raise Negroes out of poverty, it is labor's demand for a national $2 minimum wage. In this land of affluence, in the year 1965, two out of every three Negro families live in poverty and deprivation. In part, this fact reflects the astronomically high unemployment rates in the Negro community. But in most cases, the head of the Negro family is working -- forty hard hours a week. He does not need to be lectured about self-help. Give him a decent wage, and he will be able to help himself. He will be able to keep his family together, to educate his children, to contribute to the well-being of the community. And he will be in a stronger position to struggle effectively for the dignity and the rights which he has been denied.

A national $2 dollar minimum wage, extended to millions now uncovered, would redress a shame of the nation. It would mean a revolution in Southern racial and economic relations. It would weaken the position of runaway plants that locate in the South in order to escape unionism and exploit a cheap labor market. In many Southern towns and cities, such companies become entrenched in the local power structures and fiercely resist civil rights efforts to change the status quo. The impact of a $2 dollar minimum wage on the ghetto-entrapped Negroes of the North would be no less revolutionary.

In short: if the civil rights revolution is to have meaning outside of the South -- in the teeming slums of the cities, in the industrial centers of the nation -- the needs of the dispossessed Negro masses must be hitched to the economic demands of labor.

More and more, the Negro leadership recognizes that of all the mass institutions in the nation, the labor movement holds out the greatest hope for progress in the daily conditions of life in the Negro community. Yet they do not forget for one moment that labor's own house is not yet entirely in order, that segregated locals and discriminatory practices still exist in some unions. The eradication of these conditions, noted in the Resolution before you, must be high on your priority list in the coming year. We must not permit the existence of any barriers to expanded cooperation between labor and the civil rights movement; and we must not give any ammunition to labor's enemies.

The Civil Rights Department is to be congratulated for the vigor and effectiveness with which it has labored to eliminate the remaining discrimination in our ranks. Even before Title VII, the fair employment section of the Civil Rights Act, went into effect, the Department was hard at work preparing international unions to cooperate in obtaining compliance with the law. At the same time, the AFL-CIO has called for a strengthening of the enforcement machinery of Title VII.

But more than your congratulations, Don Slaiman and the Civil Rights Department need your active support. Union locals must be encouraged to utilize the valuable technical assistance the Department can provide.

Brothers and sisters, two years ago when I stood before you, I spoke of the impact of the technological revolution and its economic dislocations on the Negro community. I said then that large sections of the community, unskilled and uneducated, were being rendered economically obsolete and deprived of social dignity. I spoke of a growing underclass, lacking hope and leadership, bereft of any sense of a stake in the total society. And I said then that, if we listened carefully, we could hear the rumblings of that underclass.

I do not need to tell you that in these two years those rumblings have exploded into thunderous and wildly destructive violence, from the tenements of Harlem to the slums of Watts. That violence cannot be excused or defended, for it took a larger toll in life and limb than has the nonviolent movement in the South -- and with less to show for it. But it serves no purpose simply to denounce the riots without trying to understand their causes. For, of this much we can be certain; if those causes are not identifed and uprooted, radically and finally, we will be courting disaster.

Let me say that I have been greatly encouraged by President Johnson's speech at Howard University and by the Department of Labor's study on the Negro family. Both move in the right direction of pinpointing the social and economic roots of the Negro's discontent. To further explore these roots, the President has, as you know, scheduled a special White House Conference, of which I have the privilege of serving as honorary chairman.

This conference will give special attention to the problem of Negro family instability. This, brothers and sisters, is a major problem with deep historical roots. Under two centuries of slavery, the Negro family was systematically destroyed. The right of Negroes to marry is barely one hundred years old. Following slavery, a system of segregation was introduced which denied the Negro family, particularly the Negro male, even the rudiments of economic security. To this very day, many of our welfare laws encourage family desertion by Negro males.

I do not have to tell you how family breakups encourage delinquency, crime, school drop-outs, and many forms of destructive, anti-social behavior. But when all of this is said, the question remains: How do we strengthen the Negro family and the fabric of the Negro community?

Here again, I think the labor movement knows the answer at least as well as the sociologists and psychologists and other experts. The answer is jobs -- decent jobs at decent wages. We know that when the Negro unemployment rate dropped during World War II, so did the Negro rate of divorce, or illegitimacy, and other indications of family instability. And so, brothers and sisters, the answer to Negro family instability and to Watts is the enactment of labor's programs for full and fair employment.

The record of the last ten years will show that we cannot look to the private sector of the economy to achieve the goal of full employment. But we can meet that goal through expansion of the public sector -- through meeting the vast unmet social needs of the country. We can put the unemployed back to work by clearing our slums and rebuilding our cities, by building schools and hospitals, by modernizing and expanding mass transit facilities, by investing in flood control and by combatting air pollution. We can open new jobs for the poor by expanding our social services.

We can achieve full employment by tearing down the physical environment of poverty and building a great society in its place. It was with this concept in mind that I proposed, at the planning session of the White House Conference, a national Freedom Budget of 100 billion dollars. This is a feasible and realistic budget, which has the support of leading labor economists. We have the means; we lack only the social imagination and the political will.

This is, above all, an imperative budget if we are serious about building the Great Society. As President Meany has said, "We must not let money stand in the way." Either we decide upon massive social investments now, or we face the incalculably more costly alternative of social disintegration and violence. In the long run, it is the budget-balancers and the tight-money boys who will prove to be the most impractical. Let me say right here that the recent action of the Federal Reserve Board may do more to dry up job opportunities for Negroes -- not to mention whites -- than the most overtly racist discrimination.

Brothers and sisters, I cannot close without commenting on a great danger that may lie ahead. In times of war or international crisis, as you know, there is a tendency to divert attention away from crying domestic needs and problems. Even now there are those who would exploit the perilous situation in Vietnam for their own narrow political purposes. Already we have heard the reactionary voices of Senators Stennis and Russell and other segregationists. They call for a cut-back in the war on poverty; they would push the struggle for racial equality off the stage of history; they feel strengthened in their opposition to labor's struggle for industrial democracy.

These tendencies must be vigorously fought. As President Meany has said our efforts to resist Communist totalitarianism will require sacrifices and impose burdens. But those sacrifices and burdens must be evenly distributed.

We must not place the heaviest loads on those least able to bear them -- the poor and dispossessed, black and white. We must not now dash their new hopes for a place in the sun. We must press forward the struggle for justice and democracy at home while we pursue it abroad.

In recent weeks, the Negro leadership has gathered together to discuss the objectives and directions of the civil rights movement during this difficult period of transition. They have concluded that we need to press forward on three major fronts. First is to achieve economic security for the Negro family through full and fair employment. Second is to see to it that the civil rights legislation is vigorously implemented. Third is to secure full protection of individuals in the exercise of the constitutionally-guaranteed rights. There must be an immediate end to the brutalization and murder of civil rights workers, and to a discriminatory jury system which makes a mockery of justice.

President Meany, the Resolution before us speaks forthrightly and directly to these concerns of the Negro leadership. Not coincidentally, but by indisputable social logic, the forces of labor and civil rights again find themselves on the same side of the struggle for justice.

Brothers and sisters, I urge the adoption of the Resolution on Civil Rights.

NEGRO AMERICAN LABOR COUNCIL
SHIFTS FROM STRATEGY OF ATTACK
TO ALLIANCE WITH UNION LABOR

At the first meeting of the National Executive Board of the Negro American Labor Council in 1966 for the reformulation of policy, program and strategy, the position was adopted to shift from its original strategy of attack upon the AFL-CIO on account of race bias to one of alliance and cooperation, because of its change in policy and program to wipe out racial discrimination in the House of Labor. The Negro American Labor Council will continue to combat specific conditions of color bias in unions wherever they may be found, stated A. Philip Randolph, President of Negro American Labor Council, at its headquarters in New York City, today.

The Board was highly conscious and insistent upon the need of stepping up pressure for the implementation of the Civil Rights Act of 1964 and the Voting Rights Act of 1965, for legislation enabling Negroes in the south to serve on juries, and for the protection against violence and murder of civil rights workers.

The Council called for no slowing down in the civil rights revolution. There was, however, general and strong sentiment for shifting emphasis by the Civil Rights movement from conventional civil rights demands to one of focus on economic issues, principally jobs. There

was an expression of some serious concern about the effect of automation upon the future of the black workers who are largely without skills, training and education.

While, the business of eliminating racial discrimination has yet a long way to go, the Board acknowledged that some progress has been and is being made, through a consistent and constant educational action campaign in city central bodies, state federations, national and local unions under the leadership of George Meany and Walter Reuther. Moreover, in terms of political realities, it was felt that it is virtually impossible for the Civil Rights movement to achieve its objectives without the support of labor, in the economic field. Nor can labor win its battles without a coalition with the Negro and liberal forces.

Other objectives of the new program discussed and vigorously urged included: (1) The appointment of a Negro to membership on the AFL-CIO Executive Council, when the next vacancy occurs; (2) placement of Negroes on policy making bodies of national unions, City Central and State bodies; (3) appointment to staff, professional and clerical positions; (4) fight for repeal of Section 14B of the Taft-Hartley Act; (5) join in War on Poverty; (6) cooperate with the AFL-CIO Committee for Political Education to wage a massive nation-wide registration drive, especially in the south to elect a Civil Rights Congress in 1966; (7) support of a minimum wage of $2 an hour, with unlimited and extended coverage applicable to every state in the United States;

(8) massive public works program to provide more jobs; (9) integration of Negroes in apprenticeship training programs; (10) support of the on-job vocational training for integration of Negro workers in mass production industries presented by the Cleveland Chapter of the Negro American Labor Council; (11) support of Transport Workers Union strike; (12) program for organization of the unorganized black and white working poor, especially in the south; (13) an abolition of the Black Ghettoes which will bring billions of dollars into the homes of black and white workers and provide low-cost and middle-income housing for all Americans.

Plans are being developed for a delegation of the Negro American Labor Council to go to Washington to assist the AFL-CIO in its campaign to eliminate Section 14B of the Taft-Hartley Act.

The next national Convention of the Negro American Labor Council will be held in Baltimore, Maryland, May 27-29, 1966. Troy Brailey, President of Baltimore Chapter, was appointed Convention City Chairman, said Mr. Randolph.

Labor, Negro Should Consider Voting GOP If Filibuster Blocks Vote On 14-B Repeal

AN OPEN LETTER TO UNION MEMBERS AND NEGROES

Today in the U.S. Senate, a filibuster is taking place aaginst the rights of union members and management to sit down and bargain collectively in regards to a union shop.

First I would like to set the record straight in regards to repeal of Section 14b of the Taft-Hartley law at which the present filibuster is being directed.

Repeal of Section 14b would not require every worker to join a union as most of its critics claim.

Repeal of Section 14b would not organize a union where employes did not want one as most of its critics claim.

All it would do would be to correct the injustices apparent in the Taft-Hartley law.

If Filibuster Blocks Vote On 14-B Repeal

THE KEY BATTLE facing Congress involves protecting Great Society programs established last year, Legislative Dir. Andrew J. Biemiller (center) told Hobart Rowen (left) of the Washington Post and Richard L. Strout of the Christian Science Monitor on Labor News Conference, the weekly AFL-CIO public service radio interview.

AN OPEN LETTER TO UNION MEMBERS AND NEGROES

Today in the U.S. Senate, a filibuster is taking place aaginst the rights of union members and management to sit down and bargain collectively in regards to a union shop.

First I would like to set the record straight in regards to repeal of Section 14b of the Taft-Hartley law at which the present filibuster is being directed.

Repeal of Section 14b would not require every worker to join a union as most of its critics claim.

Repeal of Section 14b would not organize a union where employes did not want one as most of its critics claim.

All it would do would be to correct the injustices apparent in the Taft-Hartley law.

In a plant where unions are recognized, the unions are now required by the Taft-Hartley law to represent all workers in matters of wages, hours, working conditions and to process their grievances for them at the expense of the union.

All repeal of Section 14b would do would be to allow labor and management to sit down and bargain for a union shop agreement which means when agreed to by a majority of the employes, the people who receive benefits from the union negotiated contracts, would pay their fair share of the costs of negotiating their benefits and help to pay for the operation of their union.

All eleven congressmen, both Democrats and Republicans from North Carolina voted against repeal of 14b in the House. Right now our two Democratic Senators are participating in a filibuster to deny us our right to a vote on Section 14b. The filibuster and the attitude of the present representatives and Senators are the reason that North Carolina factory workers take home 78 cents an hour or $31.20 a week less than the average factory worker in the United States.

We remember the [illegible] of labor in North Carolina to the vote for the Taft-Hartley law by U.S. Senator William B. Umstead in 1947. His vote for the Taft-Hartley law largely contributed to his defeat in his re-election bid in 1948.

If the average factory worker makes 78 cents an hour less, imagine how much less most Negro workers make than the U.S. average of $2.46 per hour.

Labor and Negro voters hold a balance of power in North Carolina now in the General Elections. 1966 is a General Election year. B. Everett Jordan is up for re-election and the Republicans state that they are going to make an all out race to defeat Jordan.

I believe that labor and the Negro should give serious consideration to voting Republican on a state level in 1966 to show the conserative Democrats that we are no longer going to stand for their co-operation with the anti-labor reactionary Republicans of the North.

If we must have Republican votes on the domestic issues championed by the national Democratic Party then lets have them from Republicans and not from so-called Democrats.

This newspaper believes that the AFL-CIO leadership in North Carolina and the Negro leadership in this state should have a summit meeting to discuss ways and means of welding together a coalition of labor and the Negro in N.C. to end their political shenannigans.

Next time we could stand together and elect real Democrats to both the

Labor's Civil Rights Coalition Allies Help Union Win Georgia Vote

AUGUSTA, Ga. — The Painters won a resounding victory in a representation election among the 550 employes of Merry Brothers, manufacturers of brick products here, as the outgrowth of cooperation with the AFL-CIO Dept. of Civil Rights and the National Association for the Advancement of Colored People.

The union's organization drive was explained at a series of meetings with local NAACP leaders and Negro ministers which were arranged by AFL-CIO Civil Rights Dir. Don. Slaiman and Al Kehrer, the department's southern representative, at the request of Painters' Pres. Frank Raftery.

The sessions led to a close relationship that resulted in broad support for the union in the Negro community which was an important factor in winning the election. Organizing Dir. Jack Cox of the union hailed Slaiman and his staff for making "an outstanding contribution to bring this about."

Gonzalez Proposes 'Real R.-To-W.' Law

WASHINGTON — A Texas congressman has introduced what he termed a "real right to work bill" which would oblige the government to provide jobs for persons unable to find employment in private industry.

Rep. Henry B. Gonzalez (D) said

House and Senate in most areas.

We pledge our full support to any effort to bring about a coalition of labor and Negro voters to defeat any Congressman or Senator who has constantly voted against the workers of North Carolina, both black and white.

from 6th Convention Coalition JAN 1966

Civil Rights

". . . good laws by themselves do not automatically solve problems, as we in the labor movement know from our own experience."

In its policy statement on civil rights, the AFL-CIO recalled that the Wagner Act had to be followed up by hard work on the part of unions and added:

"That is just as true of the Civil Rights Act of 1964 and the Voting Rights Act of 1965.

"Vigorous and effective enforcement by government is mandatory if these laws are to be useful tools for eliminating discrimination and opening opportunities for minority group citizens.

"We intend to see to it that there is effective and vigorous enforcement."

In education, the AFL-CIO expressed deep concern over the slow pace of integration.

U.S. Office of Education figures showing 7.5 percent of Negro children attending desegregated schools in 11 southern states represents "meager progress" 11 years after the high court's ruling, the resolution said.

The AFL-CIO called for adequate law enforcement funds and for a cutting off of funds for non-compliance by local officials. De facto school segregation in the North also should be effectively dealt with.

On housing, the resolution noted that de facto school segregation in the North reflects the existence of huge Negro ghettoes. Therefore, it added, the order of the late President Kennedy banning discrimination in federally-aided housing should be extended to cover all mortgage activities of all federally-aided or insured banks and lending agencies.

On equality in employment, the resolution described the new Equal Employment Opportunity Commission created under Title VII of the 1964 Civil Rights Act.

While the AFL-CIO has urged Congress to strengthen Title VII, the resolution noted, each union has been requested to designate an officer to ensure effective and prompt compliance with the law as it now stands.

Noting the Commission's ruling against segregated locals and separate seniority lines—which parallels labor's position—the resolution declared:

"We call upon all affiliates with the few segregated locals that remain in existence to merge such separate locals without delay and to adopt contractual clauses that will eliminate barriers to equal opportunity for promotion and seniority for all workers."

On voting, the resolution observed that some 166,000 Negroes have registered to vote in six southern states since the Voting Rights Act was enacted several months ago. And yet there are federal registrars in only 32 counties, a record "not good enough," the resolution said in urging the Attorney-General to act to ensure the vote for all citizens.

On the equal administration of justice, the AFL-CIO called for "the total elimination of segregation and discrimination in our jury system."

This was said . . .

"When the Negro leadership speaks out for labor's demands, they are not merely making a gesture in return for labor's support of civil rights. Rather we are bound together in a coalition of mutual interest.

". . . if there is any single step that will raise Negroes out of poverty, it is labor's demand for a national $2 minimum wage. In this land of affluence, in the year 1965, two out of every three Negro families live in poverty and deprivation. . . . in most cases, the head of the Negro family is working—forty hard hours a week. He does not need to be lectured about self-help. Give him a decent wage and he will be able to help himself. He will be able to keep his family together, to educate his children, to contribute to the well-being of the community.

"In short: if the civil rights revolution is to have meaning outside of the South—in the teeming slums of the cities, in the industrial centers of the nation—the needs of the dispossessed Negro masses must be hitched to the economic demands of labor.

"More and more, the Negro leadership recognizes that of all the mass institutions in the nation, the labor movement holds out the greatest hope for progress in the daily conditions of life in the Negro community. Yet they do not forget for one moment that labor's own house is not yet entirely in order, that segregated locals and discriminatory practices still exist in some unions. The eradication of these conditions, noted in the resolution before you, must be high on your priority list in the coming year.

". . . the answer to Negro family instability and to Watts is the enactment of labor's programs for full and fair employment. . . ." —A. Philip Randolph

The convention called for . . .

True equality of opportunity. Every affiilated union is urged to establish a functioning civil rights committee. These committees are crucial in the implementation of labor's program, providing technical aid to those filing complaints under Title VII; setting up educational programs to reach the rank and file; forging cooperative links with other responsible community groups to obtain compliance with civil rights laws and aiding local leaders to resist Ku Klux Klan and John Birch Society infiltration.

Dixie Ballot Battle

Growing Negro Power At Polls Spurs Whites To Make Concessions

Negroes Get Improved Roads, Deputy Job; White Senator Relies on Gee's Bend Ferry

A First: 'He Shook My Hand'

By NEIL A. MAXWELL
Staff Reporter of THE WALL STREET JOURNAL

CAMDEN, Ala.—Packed to capacity, the rural Negro church shakes to the stomping of feet as the audience sings:

If you miss me in the white folks' kitchen
And can't find me nowhere,
Come on over to the courthouse,
I'll be clerkin' over there.
If you miss me on the paperwood truck
And can't find me nowhere,
Come on over to Camden,
I'll be the mayor over there.

Thus, in song, does the Southern Negro express desires he now feels may be within his reach—a voice in Dixie politics heretofore denied him, and through this, a better job and other economic benefits. Admittedly, the singers are optimistic. Though Negroes are running for office this year in the Deep South in greater numbers than ever before, few are given a chance of winning. But it is still true that for the first time the Negro vote is a force to be reckoned with in many parts of Dixie—and the white politicians know it.

The Changing Pattern

This new power, derived from heavy registration of new Negro voters, will be felt this spring and summer in primaries held to pick candidates for November's general elections. White office-seekers are already on the hustings currying favor with Negro voters they could once afford to ignore. More than just honeyed promises are being offered; here and there, roads in Negro areas suddenly are being improved and concessions made. Race-baiting speeches to the white electorate are being toned down. Candidates pressed by Negro rivals are being forced to run harder than ever before. As Negro power at the polls continues to mount, it seems certain that the process will accelerate in years to come, forcing change in the old political patterns of the rural South.

To date, registered Negro voters outnumber white voters in about 20 counties in the South. In over 60 other counties there are more potential Negro voters than whites, though the whites still retain an edge in registration. These counties are heavily concentrated in the Deep South states of Mississippi, Georgia, Alabama, and South Carolina, generally in rural areas where resistance to integration and to greater economic opportunities for Negroes has been most fierce.

Here in Wilcox County, in southern Alabama, for example, the 1964 Civil Rights Law didn't mean a thing; schools, cafes, even the jails are still segregated. But the Voting Rights Act of 1965 jolted white politicians, as well it might; before the law passed there was not a single Negro registered to vote, but now 3,512 are on the rolls, giving them a margin of 277 above white registration. What's more, five Negroes are running for offices ranging from sheriff to state senator, leaving the tax collector as the only white unchallenged.

Big Gains in Alabama

Thanks to the voting law, Federal registrars have been able to sign up a total of 106,000 new Negro voters in four Deep South states, the bulk of them in rural areas where few, if any, Negroes had been registered before. Many other Negroes have been enrolled by county authorities who grudgingly took this course rather than have Federal registrars step in. More than half of the Federally enrolled Negro voters are in Alabama, and this buildup has encouraged 45 Negroes to seek public office there in the Democratic primary, far more than are expected to run in any other Deep South state.

A look at some campaigns in rural counties reveals what may be the pattern of the future. First, there is not going to be any "black takeover," as white supremacists have feared. One reason: Many Negro candidates are not well known to constituents and lack experience of any kind in public service. Talks with Negro voters show that these and other factors will lead some of them to vote for whites. So the "black vote" is far from solid.

Also, Negroes generally are not forming all-black slates, but have chosen to support some white as well as Negro candidates. "We would be the biggest phonies in the world if we came up with all-black slates after saying all along we wanted integration," says Charles Evers, head of the NAACP in Mississippi. Zelma Wyche, one of two Negroes running against three whites for alderman's jobs in Tallulah, La., says: "If we elected no one but Negroes, we'd be farther apart than ever." Negro leaders in Tallulah have decided to back some incumbent white officials, including the mayor and police chief, rather than enter candidates against them.

Black Panther Party

There are exceptions to the biracial approach however. In Greene County, Ala., where Negro registrants now outnumber whites two to one, the election of five Negroes running in the Democratic primary is far from certain; the Black Panther Party, backed by the Student Non-Violent Coordinating Committee (SNCC), is urging Negroes to boycott the primary and vote instead for its independent, all-black slate in November. In Lowndes County, the Black Panther Party is so strong that no Negro is running in the primary, but in other places like Greene County there is strong feeling that the Black Panthers can only succeed in fragmenting the Negro vote and leaving white supremacists with the upper hand.

Here in Wilcox County, some of the staunchest segregationist office-holders are confident. They think Negro voters will help re-elect them because they have qualifications and experience their Negro opponents can't match. "I'm going to get the majority of the Negro vote," says 52-year-old Roland Cooper

Please Turn to Page 8, Column 3

Continued From First Page

of Camden, a state senator and one of Gov. George Wallace's floor leaders. "Let's disregard color—they'll vote for me because they know I'm the man who can get the job done." Sen. Cooper is being opposed in the May 3 primary by Lonnie Brown, a 34-year-old Negro insurance salesman.

Sen. Cooper brakes his 1966 Chrysler to a stop at a landing on the Alabama River, where a ferry totes cars across to Gee's Bend, an all-Negro community. "I got them that ferry, and they know it," he says. "Now it's only an eight-mile drive to Gee's Bend instead of 40. They're going to remember that on election day."

Bouncing along in his blue Ford pickup, J. C. Martin, running for his fourth term on the County Commission, also shows confidence. "Ask any of the responsible niggers around here—they'll tell you they're voting for me," he claims.

Sure enough, some of them are. Farmer Sam Kennedy is one. Before Mr. Martin fixed up his road, he says, "I had to use a pole to get my car out after a rain."

In some cases, Negroes aren't planning to vote for Negroes because they fear they would be doing them no favor by putting them in office. Leo Taylor, a middle-aged Negro clad in jeans and a faded tan double-breasted jacket, won't vote for Walter Calhoun, a Negro who is running for sheriff. Mr. Calhoun opposes incumbent P. C. Jenkins, the law in Wilcox County for so long that he finds it unnecessary to go out and arrest most culprits—he just sends word for them to come in and give themselves up. "Calhoun just might get himself killed, and I wouldn't want that on my conscience," says Mr. Taylor.

They Don't Need It Now

There are, of course, many Negroes who will not be able to bring themselves to vote for a white man. William Bridges, who will be eligible to cast a ballot this spring for the first time in his 61 years, says: "Well, it seems to me that if the white folks got along without my vote for all these years, they can get along without it now."

Many white politicos are sweating to change this attitude—and some concrete gains for Negroes are resulting. It's hard to link all these improvements directly to the emergence of the Negro vote, but Negroes themselves can't see any other reason for the new white concern for their welfare.

In Greene County, a Negro deputy has been

hired for the first time (much to the chagrin of the Rev. T. E. Gilmore, a Negro candidate for sheriff who claims the hiring was a blatant attempt to swing votes away from him). In one portion of Wilcox County, where Negroes say you can tell when you progress past white living areas into Negro ones because your car gets stuck in the ruts, a Negro strolling along the road gives a word of warning: "Man, you got to watch it around here now," he says, "or you're goin' to get run over by a gravel truck. They got them running 'round throwing gravel all over the place, even on folks' driveways."

Progress in Selma

In nearby Selma, Negroes say they tried for years to get white leaders to pave their streets, but were always told they would have to put up the money, "just like the white folks do." Now there are almost as many Negroes registered to vote as whites (10,000 Negro, 11,000 white), and there has been a change in attitude. Now the whites are prodding the Negroes to hurry up and name a committee so the city can submit an anti-poverty plan that, it's hoped, would bring in Federal money. Some of this would go for the long-sought paving.

(Negroes in Selma have little chance to elect the five candidates of their race they are backing. But they are convinced they can oust Sheriff Jim Clark, symbol of segregationist resistance during demonstrations last spring, by voting for his white opponent in the primary.)

In Birmingham, attorney Orzell Billingsley Jr., a powerful Negro political leader, hangs up the phone in his office and says: "That was one of them—a white politician wanting to know when we could get together for a talk." Mr. Billingsley is confident that this white desire for Negro support will lead to benefits his race has not been able to get thus far—a substantial number of jobs at the courthouse, for example.

Cooper Runs Hard

The character of politicking is changing drastically in some areas. Though Sen. Cooper in Wilcox County is confident he will win, he's running harder than ever. The other night, he drove from Camden to Excel to make a campaign speech at a political rally—the first time he has felt it necessary to speak at such an affair in 20 years in politics. Two nights later he drove to Monroeville to meet with Negro leaders from the four counties in his district. "Naturally, I never did that before, since they didn't have the votes," he says, claiming that the Negroes pledged their support.

At Suttle, a rural settlement in Perry County, Ala., an elderly Negro reports another "first." "He shook it," he says wonderingly, holding up his right hand. "First time that ever happened. This white man gave me one of his campaign cards and then damn if he didn't shake my hand.!" Ten Negroes, among them the Rev. Martin Luther King's brother-in-law, are opposing white candidates in Perry County.

Negro leaders are pleased that the whites are actively seeking Negro votes for a change, but they make it clear that it will take more than a handshake to win their allegiance. "Up to now Negroes been selling their vote for a Coca-Cola, and after the election they have been getting nothing but a good belch," cries Hosea Williams, one of Mr. King's top strategists, at a meeting of Negro candidates in Selma. "We got to say to the white folks, 'What you going to give us—how many black faces you going to put in trooper suits? How many black barber and beauty shop inspectors we going to get? How many black faces you going to put behind desks at the capitol?' "

Talks Under Way Seek 'Fruits of Organizing' For 415 in Selma, Ala.

SELMA, Ala.—Talks are under way for first contracts for 415 of the 500 workers the RWDSU has organized since it began an organizing sweep in the Selma area of Alabama's "Black Belt" late last summer.

"Now we are bringing the fruits of the organizing campaign to the workers," Ass't Southern Dir. Frank Parker said.

At Massengale Poultry Co. in Greensboro, 40 miles away, where the union won an NLRB election last November, another bargaining session has been set for March 25.

The Alabama Council represents 300 workers at Massengale.

"We hope to complete the first contract with a few more meetings," Org. Henry Jenkins, who is heading the union's negotiating committee, said.

In Selma, the Council will continue negotiations for 60 members at the Henry Brick Co. March 22. The union won an NLRB election at the brickyard in November, and talks for a first contract opened this month.

Bargaining for a first agreement for 55 employees of the Stuart, King & McKenzie wholesale grocery will open March 24. The Alabama Council won an NLRB election among the Stuart, King workers last August, its first NLRB victory in the area, but the company's objections delayed certification of the union until last month.

The RWDSU has also won elections among the 55 workers at the Coca-Cola Bottling Co. and the 30 workers at the W.B.W. food service at Craig Air Force Base, just outside Selma.

At a sixth shop, the Centrala Farmers Co-op, the union has organized a majority of the 40 workers, and the NLRB will hold a bargaining election March 31.

Some of the workers have been employed at Centrala, a fertilizer and soda processor, for as long as 30 years but they earn only $1.25 an hour and have no holidays or vacations and no fringes.

The union has also petitioned the NLRB for an election among the 30 employees of the Central City Laundry and Dry Cleaning Co.

THE BIG CHANGE IN ALABAMA

Negroes Electing Sheriffs, Upsetting Political Applecarts As a Fresh Wind Sweeps the South

By Bernard Stephens

THE state Democratic organization of Alabama has removed the "white supremacy" slogan from its emblem, and a candidate for governor (not Mrs. Lurleen Wallace) has announced that if elected he will place the United States flag atop the state capitol building in Montgomery.

There's a fresh wind blowing in Alabama these bright spring days, and it bodes well for the entire nation. The old Dixiecrat machine that crushed both Negro and white under its iron heel for a hundred years is threatened and running for cover. The Alabama Democrats who gave up their "white supremacy" slogan did so for practical reasons. Charles McKay, who proposed the change, observed that Negroes are registering to vote in Alabama in awesome numbers, and then remarked:

"We can't afford to spend a lot of money nominating candidates this spring and then take a stick and run off 150,000 to 175,000 voters who might vote Democratic."

Frank Parker, native Alabaman and the RWDSU's assistant Southern director, said that virtually all politicians in the state are talking like McKay, except that they put the figure of Negroes newly registered higher—at about 200,000. In a state that cast under 700,000 votes in the Presidential election of 1964, the infusion of that many single-minded voters could be decisive in the race for governor and Alabama's eight congressional seats—and certainly will be decisive in local elections in much of the state's Black Belt area.

A dramatic example of the earth-shaking going on in the Black Belt: Negroes are favored to elect the sheriff in Wilcox, Macon, Sumter, Greene, Bullock and Perry counties. *In Wilcox, not one Negro was registered to vote a year ago; today they are a majority on the voting rolls.*

What has brought about this amazing turn of events? Three key developments are credited, all of course flowing from the civil rights revolution:

- The Voting Rights Act of 1965, which barred literacy tests where it is obvious they are used to keep Negroes from voting, and brought Federal registrars to Alabama and other states to place the Negroes on the voting lists.
- Outlawing of the poll tax through the 24th Amendment, removing one more obstacle to votting by poor folk. Although Alabama is struggling to maintain the poll tax in state and local elections, it is a losing battle. The Federal registrars are accepting voters without requiring the tax, and a panel of three Federal judges is expected to rule shortly that the tax is dead—in state as well as national elections.
- The Supreme Court on March 7 by unanimous vote (Justice Black dissented on a minor aspect) upheld the Voting Rights Act, thereby legalizing all action of the Federal registrars and giving a huge new impetus to the drive for political power by the long disenfranchised Negroes.

The Supreme Court decision was a model of clear-cut language:

> "We here hold that the portions of the Voting Rights Act properly before us are a valid means for carrying out the commands of the 15th Amendment. Hopefully, millions of non-white Americans will now be able to participate for the first time on an equal basis in the Government under which they live.
>
> "We may finally look forward to the day when truly, 'the right of citizens of the United States to vote shall not be denied or abridged by the United States or by any state on account of race, color, or previous condition of servitude.'"

In practical terms, in Alabama, this means that George Wallace's scheme to manipulate the governor's chair with puppet strings is less than an even bet. The "automatic" election of a segregationist is no more. Labor and the expanding Negro electorate are, of course, dead set against the election of Wallace, "'him or her." They are hopeful that Attorney General Flowers, or former Rep. Carl Elliott, or perhaps John Patterson might make a successful race. In the turmoil a Republican may win out, but one thing is clear—the fresh wind blowing through Alabama is stirring things up right smack to the capitol in Montgomery.

Dickerson a Target

The races for Congress appear also to be up for grabs. Labor is particularly anxious to unseat Republican William L. Dickerson, of the 2nd Congressional District, which includes Montgomery. Dickerson bluntly tells his constituents, in a newsletter, that he opposes improved unemployment insurance. Higher benefits for the jobless, he says, are "aimed at weakening the sales talk of Southern states in their recruitment of Northern industries," and would "raise the taxes that employers pay into the program."

This toadying to business at the expense of workers is typical of the kind of representative Alabama has been sending to Congress. The fresh new wind may well blow this trash out of office in May or November. If not, there will be other elections when the liberal forces will be better prepared.

The RWDSU has urged Franklin H. James, a good friend of labor and a sincere liberal, to make the race against Dickerson.

Frank Parker expressed pride that the RWDSU is following up with political action the organizing successes of the past several months, which have brought thousands of new members into the union in the South. The RWDSU is indeed playing its part in the great political upheaval shaking the state of Alabama, whose effects will be felt for many a year to come.

Last November, in a preview performance in Birmingham, no councilman was elected (shades of Bull Connors!) who did not have the support of the Negroes and of the city labor council. The three who where elected, Al Cocoran, E.C. Overton and R.W. Douglas, represent a sign of the changing times in this one-time heart of the stand-pat Southern scene.

But it is in the eleven counties of the Black Belt area (a term used to describe the soil as well as the majority population) that the greatest political revolution in Southern history is centered. Negroes are running for at least 33 offices—half of those up for election this year—including sheriff and state legislator. They are favored to win in most.

Here too is where the growing strength of the RWDSU is being felt most. In Selma, the hub of Dallas County, and in Greensboro, Hale County's big town, Organizer Henry Jenkins has found 95 percent of the RWDSU members and their families registered to vote. In these two cities alone upwards of 500 new members have been added to the union's rolls in the past seven months, and many more are talking union and signing cards as this is being written.

And speaking of Selma, remember Jim Clark, the sheriff who epitomized the tough, swaggering segregationist cop? The fresh wind blowing in Alabama bids fair to sweep this big wind out of office. Negroes are backing Willis Baker, a white moderate, in addition to running their own candidates for a seat in the legislature, for tax collector and two places on the board of revenue, the county governing body.

Organizer Jenkins, active in the political upsurge as well as the union upsurge in the area, observed that in nearby Greene County a Negro was sworn in as deputy sheriff "just the other day."

Yes indeed. Big changes are taking place in Alabama.

Pickets Assaulted as 50 Strike for Union Pact n Memphis

MEMPHIS, Tenn.—The National Mfg. Co. here is the scene of a strike marked by violence as 50 members of Local 19 hit the bricks in an effort to get the management to bargain for a first contract.

The RWDSU won an NLRB election at National on Nov. 27, after an organizing campaign highlighted by an active union-busting drive.

The walkout, voted at a membership meeting March 3, began at 5 a.m. on March 7 after the company refused to discuss wages, grievance procedure and vacations for the 47 Negro employees. The firm's three white employees get higher pay, vacations and other benefits.

On the first day of the walkout, National imported two husky white strike-breakers from Mississippi who attempted to run over some of the men on the picketline as they entered the plant in their car.

Later that day, at the plant's closing time, the strike-breakers tried a repeat performance of their bulldozer-like tactics, but this time the pickets defended themselves. A scuffle broke out and several squad cards were called by the plant foreman. The strike-breakers then singled out one of the pickets, William Bowers, who was arrested, charged with disturbing the peace and disorderly conduct. Local 19 paid bail costs of $77, and Bowers was ordered to stand trial at nine the next morning.

At 2 a.m. the following morning (March 8) the police dragged two strikers, O. C. Riley and Clemen Johnson, out of their beds, arrested them on disorderly conduct charges and told them to appear the next morning with Bowers to stand trial. Bail was set at $26 apiece.

The judge dismissed charges against the three, and ordered bail refunded to the local.

As the week progressed the company made no move to start negotiations. Two more white strike-breakers were brought in, and three Negro women were hired at $1.25 an hour, and escorted to and from work by management officials.

City officials attempted to convince National that the race issue could boil over in the strike, but apparently had little effect.

"The management at National is trying to involve the police at every turn," explained Fisher, "and turn this thing into a full-fledged race riot.

"The morale of our men is very good, though. They know they're fighting more than just a balky management.

"Other unions have been helping us out—RWDSU locals, the Furniture Workers, the Memphis AFL-CIO, and the Teamsters, who are not delivering any goods. Even the Coke machines in the factory are empty. There is no production going on."

At The Record's presstime, Fisher reported that the Federal Mediation Service was attempting to arrange negotiating talks with the company lawyer, but so far, no definite meeting time had been established.

Strikers at National Mfg. in Memphis are determined to win decent pay and union contract.

Race, Labor Split S.C. Democrats

Coalition at Coast

March 31, 1966

COLUMBIA, S.C., (AP)—South Carolina's old guard Democratic leadership took a bitter beating Wednesday in a state party convention that included a demand for recognition of Negro voting strength and passage of a compulsory school attendance resolution with racial overtones.

The five-hour session ended in confusion with less than half of the more than 1,000 delegates present and with those who had remained in their seats shouting down state Sen. L. Marion Gressette of Calhoun, chairman of the state's long-standing segregation committee.

Also passed in the final minutes was a resolution proposed by Negro delegate A. W. Homan of Aiken. It put the convention on record as noting "incidents of racial discrimination" at party precinct meetings and directing "strict adherence" to non-discrimination guidelines set forth in the state party's platform.

John Bolt Culberston, a white Greenville attorney and longtime civil rights spokesman, had warned the convention earlier that Negroes and the labor vote would not tolerate "some of these faint-hearted Democratic candidates . . . who don't believe in giving Negroes the vote or labor a voice."

Culbertson, who ran unsuccessfully for Congress last year, vowed that he would run in the June 14 party primary for the nomination to one of the state's two U. S. Senate seats unless the announced candidates pledged to vote for civil rights legislation and elimination of state right-to-work laws.

He was cheered by all of the more than 200 Negro delegates and applauded by a good many of the white delegates.

RWDSU April 3, 1966

Boss Hoses Rights Marchers Into Union

HERTFORD, N.C.—The tie between civil rights and union organizing in the South has been pointed up again as nearly all 47 Negro workers at Hertford Veneer Inc., a lumbermill, joined the RWDSU last month after a civil rights demonstration here. There are 51 employees in all at the company.

Many of the 3,500 Southern workers who have joined the RWDSU since last May are Negroes, seeking to extend the successes of the civil rights movement to their place of work.

In Hertford, a small lumber town near the North Carolina-Virginia line, the NAACP conducted a demonstration for civil rights and increased job opportunities March 9. During the demonstration, firemen brought out a fire hose, and the owner of the Hertford Veneer Co., a white, was at the front of the hose.

LOCK PARKER

The stream of water knocked down one demonstrator who was the child of a Hertford Veneer worker. When the father rushed out to help his child, he was knocked down also. The police used tear gas as well as the fire hoses against the demonstrators. Thirty of the demonstrators were arrested.

The Negro community was shocked at the brutality against the demonstrators. Workers at the plant noted the involvement of their employer.

Soon afterward the leader of the NAACP in Hertford got in touch with Local 26 Pres. Lock Parker, who drove to Hertford and signed up a majority of the workers in less than an hour.

The union has filed a petition for an election at the plant, and the NLRB will hold a hearing on the petition April 5.

The company employs 47 Negro workers and four whites.

24 Elections Won Out of 26

Ga. Bakery Votes Union, South Drive Rolls On

AUGUSTA, Ga.—New organizing successes in the South, including a smashing 111 to 37 election victory at Claussen's Bakery in this city, have brought the RWDSU Southern campaign to a high pitch. The organizing drive began last May 1, and has been cutting a path as wide as it is long through the deep South, from Virginia to Texas.

Its success can be attributed, in part, to workers who are fed up with traditionally low wages and poor working conditions. Many are Negroes who realize that the dignity won through the civil rights movement requires the "cement" of higher pay through a union contract.

The RWDSU has won elections in 24 shops and lost only two in this 11-month-old campaign, bringing union representation to 2,928 workers in these shops.

In addition to the Claussen Bakery victory March 18, an election was won at Pep Boys of Texas the same day, and at Hertford, N.C., Local 26 has filed for an election among 51 employees at Hertford Veneer Inc.

The Claussen victory, by a vote of 111-37, came as no surprise. "The Claussen employees were so confident that the union would win that workers who lived out of town—about 40 in all—didn't even come in to vote." said James Dickinson, RWDSU representative who headed the drive at Claussen's.

"We were confident we had this wrapped up all along. At the end of January we had 90 percent of the workers signed up."

The NLRB ordered an election among the Claussen employees—bread and cake production workers and driver-salesmen—on Feb. 18. The Claussen management resorted to last-ditch delaying tactics by filing an appeal with the NLRB in Washington, but the board ruled for the union and ordered the election for March 18.

Dickinson cited the hard work of those who assisted the RWDSU drive at Claussen's, including Clifford Rollins, Willard Watson, Henrietta Lockler, Dave McCracken, Arthur Hullman, RWDSU representative, Arthur Perkins, and J.O. Wyatt of the AFL-CIO staff.

'20 Years With Firm . . . Fired'

A membership meeting was held on March 30 to discuss contract demands and elect a negotiating committee. Among the issues under discussion were job security for the Claussen employees as well as wage increases. "There are some people here who have put in 20 years with the firm, and then get several days' notice of discharge," said Dickinson. "This system has got to go."

In another part of the South, on the same day, about 950 miles southwest of Augusta, the RWDSU, working in conjunction with the AFL-CIO's Industrial Union Dept., won its sixth straight NLRB election in the Dallas [illegible] with a victory among 11 office workers and truck drivers at the Pep Boys of Texas warehouse. The vote was ten for the union, none against, and one ballot challenged.

Since September, the RWDSU has won elections among 350 workers at the Coca-Cola bottling plant, among the 250 workers at Industrial Uniform, the 85 employees of the Burton-Dixie Corp., the 20 workers at Lone Star Book Depository, and 16 workers at Central Building Service. Int'l Rep. Jake Stewart heads the Dallas organizing drive.

And in Alabama, where the union has won five straight victories in NLRB elections and organized more than 500 workers in the Selma-Greensboro area since August, a first contract has been negotiated for the 250 recently-organized workers at the Massengale Poultry Co.

An agreement negotiated by the Alabama Council has won job security and wage and fringe benefits for the Massengale employees. It provides wage boosts of five cents an hour this year and five cents next year, bringing the plant minimum to $1.35; a seniority clause, a grievance procedure with arbitration and a dues check-off, one week's vacation after one year of service, rest periods, time-and-a-half for holiday work and—for the first time—report-in pay and one paid holiday.

Negotiating for the union were Amanda Elliott, Andrew Holifield, Rosie Holifield, Mattie Miles, Johnnie Wilson, Jessie Bell Dixon and Org. Henry Jenkins.

Morgan Says:

New Housing Laws With Teeth Needed to Destroy Racial Slums

By Edward P. Morgan

(This column is excerpted from the nightly broadcasts of Edward P. Morgan, ABC commentator sponsored by the AFL-CIO. Listen to Morgan over the ABC network Monday through Friday at 7 p.m., EST.)

SOONER rather than later, the American people are going to be forced to come to grips personally and individually with the facts of life.

I am not talking about the birds and the bees and the flowers, though this does happen to be spring. The facts at issue are pointed up by this question: how long do we think a democratic society can endure when it is not? How long do we think we can get away with paying mere lip service to the principles of individual liberty on which this country was founded without facing a major challenge to our hypocrisy?

Morgan

The answer is, of course, not long, but the majority of us don't seem disposed to accept it. Nevertheless, laws and circumstances are backing us all into a corner from which there is no escape. There and then we are going to have to demonstrate that we do believe in equal rights, or see our system destroyed. For an open society cannot exist half closed. The lack of ventilation will stifle it.

There are some surface signs of hope, but it would be dangerous to read them as indicating that everything is pointed in the right direction. Once more the Supreme Court has come to the rescue of American citizenship by ruling that its rights are indivisible, by again reminding the country that, under the law and the constitution, citizenship cannot be broken up into first, second and third class categories.

It did so by striking down Virginia's poll tax and adding, significantly that such levies anywhere are an unconstitutional burden on the right to vote. This decision surely dooms the poll tax as a voting condition in the only states where it remains, Mississippi, Alabama and Texas. Indeed, lower courts have already ruled the Alabama and Texas poll taxes unconstitutional.

In the past the poll tax had been just one of many devices used to keep Negroes from voting. Last year's voting rights act moved against some of the others. In a practical sense the new decision does not mean a great deal. Only four states were involved and even in them, especially in Texas and Virginia, as our society has become more affluent, many Negroes paid the tax in order to vote. But the court ruled this was a form of economic discrimination.

A much larger and far more explosive form of economic and social discrimination remains. This is in housing. A voting right is hard for even the professional segregationists to deny, though the diehards are still trying to. But a living right is something else again. That hits you right in the home where you live, and in the house next door, if a Negro is trying to move in. Herein lies the great unspoken prejudice of American whites and attached to it is a time bomb.

North and South, East and West, the country is segregated in its living quarters and something has got to give. The irony of it is that governments from the federal level down to the grass roots have conspired with the power structure of every community to make it and keep it that way, almost as formally as if everything were drawn to scale on a blueprint.

The Watts area of Los Angeles, where there have been already two explosions, was, in a very real sense, officially created to absorb the immigration of Negroes from other states, a movement quickened by job opportunities in World War II.

BUT THE PRESSURES generated within the Negro ghettos have not been siphoned off by the fancy plans for urban renewal and public housing. As often as not new slums have been created as others were razed. So serious has the situation become that a veteran of 25 years experience in civil rights, Edward Rutledge, now executive director of the National Committee Against Discrimination in Housing, said he had never seen tensions so high between Negro and white communities at every level in major cities, across the land. He predicted not only still another Watts in Los Angeles but similar riots elsewhere, including Rochester, N.Y., unless integrated housing developments for the poor are speeded up and racial slums are destroyed by housing laws with teeth in them.

The Great Society legislation on housing now in Congress is already so emasculated that Rutledge thinks Pres. Johnson may have to expand Pres. Kennedy's executive order on desegregated housing to deal with the crisis.

The nation's capital has a dramatic test case in its own front yard. A Senate Foreign Relations subcommittee is holding hearings on legislation to authorize development of an "embassy enclave" in an area near the State Dept. This would permit foreign governments to construct new chanceries in the neighborhood without being picketed by the neighbors.

Trouble is, little if any thought has been given to the fate of the people already living there, many of them Negroes. But a lively and integrated little lobby has sprung up called the Lincoln Civic Association to defend the residents' rights. Its members are all for the enclave, they will tell the committee, if it is made part of a balanced complex. The association has the theory that peoples' rights are as important as property rights, and that of course, is revolutionary.

GEORGE MEANY, *Chairman* **WM. F. SCHNITZLER,** *Secretary-Treasurer* **AL BARKAN,** *National Director*

NO. 7-66 APRIL 4, 1966

Boost COPE, Meany Urges

AFL-CIO President George Meany has urged all union members to do everything within their power "to make the COPE organization stronger" to help elect more of labor's friends and to help defend the labor movement against its foes.

Addressing a legislative conference of the AFL-CIO Building Trades, Meany reiterated recent calls to union members to follow labor's traditional nonpartisan political policies to "support people rather than labels, and support them on the basis of their attitude and their voting record. . . ."

Referring to the recent failure of 14(b) repeal to survive a Senate filibuster, led by Everett Dirksen (R.-Ill.) the AFL-CIO president said it means "we have to go out and get the two-thirds vote. We are going to concentrate on more and better political action. We are not going to spend a lot of time crying over spilt milk."

Meany firmly suggested that union members devote their political activity to the basic COPE program of registering members, getting out the vote and collecting voluntary dollars for COPE, not to a political party, whether Democratic or Republican.

He pointed out while most liberals in Congress are Democrats, the party label also is worn by some who are "100 percent against everything we stand for." He said, too, the Democratic Party has shown it "can't deliver" on all its promises.

The Republicans, Meany said, have become known as the conservative party, yet some in their ranks "go along pretty well with labor's programs." Unfortunately, he said, "the minute they get the reputation of going along with labor's program, they lose whatever influence they have in the party."

The Message

Get Organized

Coalition

As Voter Rolls Swell

Jim Clark Isn't Laughing Now

"The whole thing's so ridiculous, I haven't gotten over laughing at it."

These words were uttered by Selma, Ala., Sheriff Jim Clark last August while he watched long lines of first-time Negro registrants sign up with federal registrars.

He's probably stopped laughing by now. More than 10,000 Negroes are registered in Selma, and they remember how Clark led the brutal assault last spring against civil rights marchers protesting voting discrimination.

With this memory still strong, Negroes are expected to vote heavily against Clark and for his white opponent in the forthcoming primary.

As much as anything, this symbolizes the swift changes occurring in southern politics since enactment of the Voting Rights law less than a year ago.

In sheer numbers alone, the story is dramatic, as the accompanying chart shows.

But in attitudes it is even more dramatic. A lengthy *Wall Street Journal* article reveals:

► Changing patterns even in rural counties where previously racist politicians held an iron grip. Many of them for the first time are actively seeking votes from Negroes.

► A record number of Negroes seeking office, 45 in Alabama alone.

► Race-baiting speeches are being toned down.

► Local services to Negro areas are being improved—road-building and repair and other community facilities.

► No wholesale movement toward all-Negro slates is in evidence. In certain communities, Negro groups are backing white candidates including, in some instances, incumbents.

Though resistance to Negro registration and voting has diminished, official resistance to Negroes seeking office still comes on strong in some areas. In Lowndes County, Ala., scene of more than one civil rights slaying, filing fees for the Democratic primary were raised tenfold. It now costs $500 to run for sheriff or tax collector. The median Negro income in the county is $561 a year.

In Bullock County, Ala., the terms of county commissioners were extended two years to nullify the swelling Negro vote (the move is being challenged in a federal court).

And in Baker County, Ala., a Negro filed to run for justice of the peace. He appeared to be a shoo-in, but county officials abolished the office he was running for.

Changing Pattern In the Southland

The following figures show the big jump over the past 10 years in Negro registration in the South. Biggest increase actually came in the past eight months since enactment of the Voting Rights Act.

State	% Registered 1956	% Registered 1960	% Registered 1966 (Feb. 1)
Alabama	12%	15%	26%
Arkansas	28%	38%	54%
Florida	31%	35%	62%
Georgia	26%	29%	46%
Louisiana	25%	31%	39%
Mississippi	7%	*5%	14%
North Carolina	27%	31%	49%
South Carolina	15%	19%	46%
Tennessee	58%	59%	72%
Texas	23%	35%	58%
Virginia	29%	*23%	49%
Entire South	25.4%	28.4%	46.5%

***Decrease reflects stepped-up opposition to Negro registration, civil rights leaders state.**

Accommodating Whites

File

A New Look at Mississippi

by Christopher Jencks

The center of the racial storm which struck Mississippi in the early 1960s appears to have moved east to Alabama. There are still isolated gusts of violence, such as the fire bombing which took Vernon F. Dahmer's life in Hattiesburg on January 10. But systematic intimidation is on the wane, and a visiting journalist is impressed by the fact that both civil rights workers and ordinary Negroes seem far less terrified than two years ago. White Mississippi has evidently begun to accept "the movement" as an evil to be lived with rather than exterminated.

Black and white college students (and dropouts) who worked in Mississippi between 1961 and 1964 played a critical role in whatever change has occurred. They did not register many Negro voters, educate many Negro children or get much federal protection for Negroes against white violence. But by themselves defying what they called "the white power structure" they induced a number of local Negroes to do the same.

White Mississippi's first reaction to the 1961-64 "agitators" was predictable; it went for its guns, as it always had. But violence has its limits. Mississippi did not have the stomach for continuous bombings and widespread shootings. What it wanted was a domestic equivalent to the nuclear deterrent: something a few people could carry conspicuously on their hips, most people could ignore and everyone could use to keep the enemy in his place. When it became clear that the threat of violence no longer deterred, most of white Mississippi began considering appeasement. They sought a formula which would preserve "peace with honor"; they found it in the slogan "orderly change."

Since the summer of 1964 the federal government has also played a significant role in undermining the old order and shaping the new in Mississippi. The Justice Department investigated and prosecuted a few cases of racial violence. Congress passed Title VI of the Civil Rights Act, which raised the financial cost of complete segregation in public programs higher than most Mississippians would pay. Perhaps most important, federal agencies which had had difficulty working with state and local governments began to contemplate circumventing these agencies and dealing directly with poor Negroes and their representatives. To prevent this actually happening on a large scale, white Mississippi has had to make some concessions.

The rules of the antipoverty game today in Mississippi can be described this way: (1) Negroes or their sympathizers seek direct support from Washington for something over which local whites would exercise no direct control or veto. (2) Washington shows an interest but sooner or later makes "broader community support" a condition of the grant. This means that local whites must somehow be bought off. (3) At the same time, Washington encourages local whites to believe that if they don't negotiate in good faith a Negro-dominated program will be funded. The groundwork for compromise is thus laid on both sides. (4) A program emerges which looks outwardly much like the initial Negro proposal, but which is managed by local whites and usually has a white director. The local white elite preserves its ultimate control over poor Negroes' lives, but concedes them more food, money and training.

Consider, for example, the experiences of Aaron Henry, a prominent Mississippi Negro with a long history of civil rights activity. A year ago he came to Washington with a scheme for training thousands of Delta Negroes to do something besides chop and pick cotton. He wanted to give them literacy and job training, and pay them subsistence allowances up to $30 a week. Needless to say, plantation owners who were accustomed to paying $18 for a 60-hour week greeted this proposal with less than wholehearted enthusiasm. Coming at a time when the Mississippi Freedom Labor Union was urging farm workers to walk off the job unless they got substantial pay increases, the subsistence allowances looked remarkably like a federal strike fund. After a great deal of delay the poverty program finally funded Henry's project. But two things had happened in the interim: The MFLU's strike had virtually collapsed, and Henry's program had been put under the supervision of a white-dominated community-action agency run by a white Mississippi director.

CHRISTOPHER JENCKS, *a fellow at the Institute for Policy Studies, has just revisited Mississippi.*

The story of STAR, an even larger literacy and job-training program, is similar. The STAR program originated with the National Sharecroppers' Fund, a vintage civil rights group. Like Henry's project, STAR threatened the prevailing wage scale of rural Mississippi. Under National Sharecropper Fund auspices, STAR would have jeopardized local whites' control over "their" Negroes by offering an alternative source of employment and money. Mr. Shriver's Office of Economic Opportunity was not anxious to challenge white Mississippi that directly, and after a series of complicated maneuvers STAR wound up in the hands of the Catholic Diocese of Mississippi, which was at least willing to undertake it. However, nobody sympathetic to "the movement" was given a leading part in the program. Poor Negroes were allowed no control over anything, including their own course of study. Though generalizations about so large an enterprise are hazardous, those with whom I talked felt that STAR had been unnecessarily patronizing, and insensitive toward its enrollees. And yet it must be said that thousands of people are getting badly needed money and skills.

The distribution of surplus food in Mississippi took a somewhat analogous course. For years the Agriculture Department has handed out surplus commodities through local welfare offices to those whom local white social workers certified for public assistance. Some counties refused to distribute commodities, on the ground that they reduced Negroes' incentive to work (and thus generated pressure for higher farm wages). Other counties used commodities as a club for keeping the Negro poor in line, knocking off those who registered to vote or showed other signs of "poor character." Under the law, Washington could have solved this problem by making food available through some other private, nonprofit agency not controlled by local whites. Aware of this, the Delta Ministry and the National Student Association proposed a pilot project under which they would distribute commodities in Forrest County. The state welfare department then put pressure on Forrest County officials to set up a program of their own. This pressure was repeated in a number of other counties.

At this point the state welfare department, the Agriculture Department and OEO worked out a statewide program for distributing a much larger amount of surplus food. The welfare department even promised to establish an advisory board which would reflect the views of poor Negroes, eliminate discrimination in local distribution centers and hire poor Negroes to staff the program. These promises have not all been fulfilled, and the program is still firmly in the hands of the white establishment. But that it exists at all, and is providing hundreds of thousands of families with commodities for the first time is progress. There have been other occasions, when the white community refused to abide by Washington's rules, and then the Negroes and their allies have taken over. In Holmes County, for example, the Negroes worked out a retraining program for seasonal farm workers under the auspices of Saints Junior College. Instead of organizing a community-action agency and proposing to put it under their own control, Holmes County's white officials simply berated the program. As a result, OEO funded the original Negro project. Only after this setback were local officials persuaded to preempt future Negro bids by getting into the antipoverty business themselves.

Child Development Group

Another and more significant slip-up on the part of white Mississippi officialdom was its failure to respond quickly to OEO's announcement of Project Head Start a year ago. Only a handful of counties had established community-action agencies, and most Mississippi schoolmen were chary of federal activity which seemed likely to involve them in more controversy over integration. The result was that most counties made no move to set up summer preschools.

Foreseeing this, several middle-level OEO officials persuaded a group of civil rights activists to set up a big summer preschool program of their own, known as the Child Development Group of Mississippi. White Mississippi's sluggish response to Head Start ensured that there was money enough for everyone and provided OEO's more adventurous spirits with the excuse they needed for funding CDGM.

Andrew Kopkind described CDGM's remarkable initial results in these pages last summer (August 21, 1965). For many poor but undefeated Negroes CDGM filled the emotional vacuum left by the disintegration of the Council of Federated Organizations (which ran the 1964 civil rights summer project) and the departure of most out-of-state civil rights workers. In principle, this gap was to have been filled by the indigenous Mississippi Freedom Democratic Party. But the MFDP was asking local Negroes to tackle an almost insurmountable problem, namely, organizing an impoverished, semiliterate minority of nonvoters to seize political power. (There are comparatively few counties in which more than half the adults are Negroes, and even fewer in which they constitute a majority of the likely voters.) The Child Development Group of Mississippi, on the other hand, offered a manageable challenge. With federal backing the preschools could not fail completely and often succeeded brilliantly. There was enough money and enough outside expertise to do what was attempted – which there had never been in any previous "movement" venture. Many MFDP leaders and followers therefore turned their energies to

CDGM. Some set up committees which found and repaired buildings, hired teachers, and in general served as a local "school board." Others became teachers or teacher trainees. Still others got jobs as community organizers and administrators.

Even before CDGM's inception the focus of the Mississippi civil rights work had been gradually shifting from registering voters, electing officials and changing laws toward building a Negro "community" through Freedom schools, co-ops, community centers and the like. Since CDGM relied on federal funds and was barred from partisan politics, it inevitably accelerated this shift. Today a visitor gets the impression that the earlier civil rights movement of the early sixties is almost dead in Mississippi; the conditions which brought the Student Nonviolent Coordinating Committee and the Congress of Racial Equality into the state have changed. The faith and courage of SNCC and CORE were enormously helpful in challenging violent racism. It will take something else, as yet unknown, to deal with the more accommodating, more realistic elitism that is based on prior possession of money, education and influence, which is now emerging as the new order. One cannot blame the old-style SNCC guerrillas for moving east to Lowndes County, north to urban ghettoes or west to Watts. Nor can one blame the local MFDP membership for feeling overwhelmed by the difficulty of building a political organization capable of fighting established power.

That the CDGM has become the residual legatee of "the movement" is known to white Mississippians as well as black. The Mississippi delegation to Congress, led by Senator John Stennis (who sits on the appropriations subcommittee which handles OEO requests), fought pertinaciously to cut off CDGM funds last summer and to block its subsequent application for money to run a year-round program. Stennis' hostility forced OEO into a supercautious approach and delayed the year-round program until the end of February. Even then it took enormous pressure from civil rights leaders, churchmen and some labor leaders to persuade Sargent Shriver that CDGM was worth Stennis' hostility. Today, CDGM has a short lease on life, running at least through next September.

Unlike some smaller though equally controversial antipoverty programs such as the one in Syracuse, N.Y., CDGM is big enough to have a substantial impact. It spends almost a million dollars a month, runs 125 centers in 28 counties, and is one of the largest enterprises in the state. (The 1964 COFO Summer Project had about half as many centers and perhaps one-tenth the budget.) CDGM is the only sizable, well-heeled organization in the state which hires uneducated Negroes who are active in the civil rights movement. (More than half its budget goes to pay some 2,000 poor Negroes who teach, feed, transport and clean up after the 9,000 children.) To some, this looks like a sinister conspiracy to "buy off" leading malcontents and redirect their energies into "nonpolitical" work. But without CDGM many local civil rights leaders would have had to quit "the movement," leave the state or starve.

CDGM's other major contribution has been to give thousands of poor Negroes, including many who had never had the nerve to vote or demonstrate, a chance to manage a communal enterprise of real importance to them. Until now churches have been the only Mississippi institutions under Negro control, and they have often been dominated by a single preacher who was more responsive to the expectations of the white community than to the needs of his parishioners. One should not be too hard on these men: the narrow orthodoxies and moralities they preached were perhaps a realistic reaction to the fact that their flock was beholden to the white world. Nevertheless, it is refreshing to see CDGM's white central staff holding out an alternative, "integrated" vision of community, one in which the possibilities are more open and self-respect and self-reliance are rewarded. It is even more encouraging to see local Negro "elders" responding to this vision and creating schools which cultivate it.

Success Assures Failures

Almost all those who have examined CDGM's program regard it as the most daring attempt yet made to grapple with the education of rural Negroes. This goes not only for those handpicked consultants who presumably came with a predisposition in favor of the CDGM approach, but also for OEO officials with whom I have talked in Washington. It therefore comes as something of a shock to discover that OEO officials have no intention of keeping CDGM alive for more than a few years.

The reason is basically very simple. CDGM is politically "hot," and OEO wants as little to do with controversy as possible. It has therefore invented a strategy for fighting poverty without controversy, which is embodied in the Economic Opportunity Act and even more clearly in OEO's administrative guidelines. The basic premise of this strategy is that everyone wants to help the poor and has something to contribute. "The problem" is therefore seen as "mobilizing all available resources." "The solution" is the community-action agency. This panacea, known in Washington shorthand as a CAA, is supposed to "represent all elements in the community," including the poor. All controversies over program are supposed to be "democratically" resolved within it. To ensure that this will happen, and to keep OEO from becoming embroiled in local controversies, Washington has given the CAA

veto over almost all antipoverty programs within their geographical jurisdictions. This includes preschools such as CDGM operates. It follows that a county which wants to keep CDGM out need only organize a CAA acceptable to Washington, set up a white-controlled Head Start program as an earnest of good intentions, and then veto CDGM's application for money to support Negro-run programs in the county. This has already begun to happen.

Stacking the Deck

Bolivar County, for instance, has long been a major center of civil rights activity in the cotton-growing Delta. Last summer most of its towns and hamlets opened preschools under CDGM auspices, and in September, when federal funds ran out, they kept centers going with volunteer teachers and cooks, donated food and transportation, and the hope of federal funds to come. Enrollment averaged around 1,000 children.

Meanwhile the Bolivar County supervisors appointed a board of directors for a community-action agency which was the embodiment of Mississippi's "new look." The board included eight more or less moderate whites – "moderate" in the sense that they were not identified with the Klan or even the White Citizens' Council and favored economic progress so long as it did not upset the hegemony of conservative, middle-class values and individuals. In order to make this board acceptable to OEO, the supervisors also named eight Negro "moderates." Their "moderation" was manifested by their invariable habit of agreeing with whatever their white counterparts said. After phone calls from Bolivar County to presidential assistant Jack Valenti to OEO, this dependable crew was approved as Washington's exclusive instrument for fighting poverty in Bolivar County. When CDGM got its renewal on February 22, all funds for Bolivar County preschools were withheld, on the ground that Bolivar's CAA had not okayed the CDGM operation in the county, and indeed was setting up a competitive program. All eight Negroes on the Bolivar CAA have since voted against funding the CDGM centers, preferring to run their own show.

If Bolivar County were an isolated case, it would not be especially significant. But all over Mississippi white officials are organizing community-action agencies in order to retrieve or maintain their traditional hold on federal funds coming into their jurisdiction. These CAAs will almost all seek money for Head Start programs of their own, just as Bolivar County has. While it is not yet clear that they will get the money in preference to CDGM, there is little reason for optimism in CDGM circles. Nor is there much reason for optimism about the Head Start programs that the CAAs will sponsor. They will not provide many poor Negroes with jobs; they will exclude teachers who are not academically "qualified," irrespective of teaching ability; they will get teachers who have spent many years adapting their ideas and personalities to the rigid exigencies of Southern Negro schools. Nor will it be easy in many counties for Head Start directly under CAA jurisdiction to hire persons with a deep commitment to civil rights. Nor, most important of all, will they try to infect their children with the self-respect and self-discipline which CDGM values. Mostly, they will provide their charges with a foretaste of the do-what-teacher-says world of first grade, emphasizing discipline, restraint and docility, idealizing the future schoolteachers instead of, say, future SNCC field secretaries. In the end, then, CDGM will probably have nowhere to operate and its uneducated but often remarkably adept teachers will have nowhere to work. Hopes will have been aroused; possibilities glimpsed; that is all.

How can OEO have embarked on such a course? If it wishes to back a coalition of white and black "moderates," why did it ever get so deeply involved in this extraordinary experiment of CDGM?

The answer, I think, is that OEO is torn between good intentions and good politics. The war on poverty has been predicated on the notion that there is such a thing as *a community*, which can be defined geographically and mobilized for a collective effort to help the poor. This theory has no relationship to reality in the Deep South. In every Mississippi county there are *two* communities. Despite all the pious platitudes of the moderates on both sides, these two communities habitually see their interests in terms of conflict rather than cooperation. Only when the Negro community can muster enough political, economic and professional strength to compete on somewhat equal terms, will Negroes believe in the possibility of true cooperation and whites accept its necessity. En route to integration, the Negro community needs to develop greater independence – a chance to run its own affairs and not cave in whenever "the man" barks. By demanding what today passes for "cooperation," OEO will only perpetuate the subordination of Negroes to the whites.

Or so it seems to me, and to most of the knowledgeable people with whom I talked in Mississippi. To OEO, this judgment may sound like black nationalism, or a formula for getting one's budget cut on Capitol Hill. So far as OEO is concerned, federal funding of independent Negro-controlled programs seems certain to remain an emergency measure, used only when local whites refuse to make what OEO regards as reasonable concessions. If this kills any hope for daring, effective antipoverty programs in the Deep South, that is the price we pay for the appearance of consensus.

Things Go Better by Mail?

'Dear Coke: It's Spirit That Counts, Not Letters'

DALLAS, Tex.—Negotiations for a first contract between the RWDSU and the Coca-Cola Bottling Works have opened with a rather unusual arrangement.

The union agreed to the company's request to submit all non-economic proposals by mail, after which the company will reply to the union in the same fashion. The union will then submit all of its economic demands, again by mail, and the company will respond by letter to the union.

After the letters have gone back and forth, both sides will sit down, face to face, for serious negotiations May 10.

The wages and conditions of 400 workers are involved in the talks. Led by Int'l Rep. Jake Stewart, the RWDSU won an NLRB election at Coke in January by a vote of 212-157. The company filed objections with the board in Washington, claiming the union had used organizing leaflets that were "unfair, inaccurate and misleading." The board rejected the company's claims, and on March 18 notified the company to begin bargaining for a contract.

The RWDSU members at the Coke plant are production and maintenance workers, over-the-road drivers, driver-salesmen and receiving and sign maintenance employees.

TWO MORE ELECTION WINS SPUR SOUTH DRIVE

MIAMI, Fla.—The RWDSU's Southern organizing drive racked up its 25th and 26th victories in less than a year with NLRB election wins early this month among 80 workers at the Master's discount store here and 40 at the Claxton Insulation Co. in Atlanta. The wins bring to more than 3,100 the number of workers in shops where the union has won elections since last May. The victory at Masters, on April 2, won despite a strong anti-union drive by the company, was by a 36-27 margin, with 19 challenged ballots. Sixteen were supervisors challenged by the union.

"We are confident of winning this," Int'l Rep. Harry Bush, who headed the drive, said.

The NLRB is now investigating the challenges.

Because of the company's continuing anti-union activity, the union is considering an unfair labor practice strike against Master's.

More than half of the workers at the store are Cuban refugees. On the request of Int'l Pres. Max Greenberg to Local 1199 in New York City, Local Vice-Pres. Armando Ramirez went to Miami and participated in the campaign's last two weeks.

"We couldn't have won without him," Bush said.

Local 885's drive at Master's began in late October, and the union filed for an election in December, but company objections delayed the vote until this month.

The employees were formerly members of another union, whose contract expired at the end of December, but the other union had no interest in retaining the unit and kept neutral during the RWDSU's campaign.

Pay Goes From $1.25 to $1.32

Pay of the Master's employees begins at $1.25 an hour, the Federal minimum, and goes to $1.32 after 90 days, but stays there for almost all.

(Four TV salesmen are an exception; they make $75 a week.) The workers also have some fringe benefits.

Leading the drive with Bush were Jose Bango, Mary Higgs, Al Drangle, Buddy Snyder, Francisco Lopez, Arthur Press, Jose Decrisci and Charles Minton. Drangle had been the other union's only shop steward, and as soon as Local 885 began organizing, the store transferred him to another branch 25 miles away, figuring that his transfer would end the drive. It didn't. Drangle remained active, and other workers began pitching in.

The firm, which also has a third store in the Miami area, is a branch of the Master's discount operation, which has its headquarters in New York City.

Win in Atlanta

The union's second Southern victory came in an NLRB election among the 40 Claxton workers April 4, won by a unanimous 22-0 tally—the first unanimous victory for the RWDSU in Atlanta in nearly ten years.

Negotiations for a first contract were to open April 13. The union will ask for substantial wage increases above the current $1.50 an hour minimum, job security, holidays, vacations, sick leave and welfare coverage. Ellie McDuffie, Thomas Alexander and Int'l Rep. Guy Dickinson are negotiating for the union members.

Of the 18 workers who didn't vote, 15 were ineligible, having been hired after the board's eligibility cut-off date.

350 Taste Fruits of Union In 2nd Griffin, Ga. Pact

GRIFFIN, Ga.—By a vote of better than 2-1, members of Local 315 employed at the Pomona Products plant ratified a new three-year agreement April 12.

The existing contract, the first for the workers, was won last July after a one-day strike by 350 employees, mostly Negroes, in a protest against segregated facilities and discriminatory wage rates.

The new agreement, which goes into effect May 1, covers some 200 year-round employees and another 150 workers who work from 800-1600 hours a year. At the peak of the food-processing season, the company also employs 450 additional workers.

The contract provides for wage increases for the regular workers of 4½ percent each year, amounting to 18 to 25 cents an hour, one additional holiday this year and one more next year, for a total of six. For the first time, regular workers with ten years of service will be entitled to three-week vacations.

Seasonal employees will receive an increase of 17 cents an hour spread over three years, and—for the first time—the night shift premium of five cents an hour and report-in pay.

The agreement calls further for upgrading for a few workers and improved holiday pay.

At the contract's end, wage rates will range from $1.45 to $2.02 an hour.

Int'l Rep. Guy Dickinson, who headed the union negotiators at Pomona, said: "We have a long way to go here, but we've made a lot of progress. Next time, we'll have wages up to where the workers can have a decent living, and we're going to ask for a pension plan."

In addition to Dickinson, the negotiating committee consisted of chairman Jean Reid, Ruby Lee Reid—they are sisters-in-law—Mabel Harris, Willie B. Harris, Hamp Owens and Robert Curtis.

N.C. Lumber Mill Vote Apr. 22

HERTFORD, N.C.—The NLRB will hold a bargaining election among the 51 employees of the Hertford Veneer Co. April 22—a month and a half after the NAACP chapter here held a demonstration for civil rights and equal job opportunities that started the organizing campaign.

Local 26 has signed up 42 of the lumber mill's 47 Negro employees, and expects to win the vote without any trouble.

During the NAACP demonstration March 9, the white owner of Hertford joined city firemen in hosing down Negro demonstrators. With water from a hose, he knocked down a young demonstrator, the child of one of the employees, and when the father went to help his child, he too was knocked to his feet.

Shocked by their employer's actions, the workers asked the civil rights group to help them organize a union, and the next day Local 26 Pres. Lock Parker drove the 40 miles from Suffolk, Va., to Hertford. In a short time he had signed up a majority of the workers.

The Hertford drive points up the close tie between union organizing in the South and the civil rights movement. During the past year, some 3,500 Southern workers have joined the RWDSU, many of them Negroes who see unionization as securing, on-the-job, gains that the civil rights movement is making in other areas.

Happy Guy Hits Hole-in-One

ATLANTA, Ga. — Int'l Rep. Guy Dickinson had a golfer's greatest thrill this month when he hit a hole-in-one.

Playing the par-three, 163-yard third hole at the John A. White course here, Dickinson hit a five iron shot onto the green, and the ball rolled in.

"It's my first hole-in-one after six or seven years, and I'm really proud of it," Dickinson said.

Local 343 Vice-Pres. Jim Adams and three local members were in Dickinson's sixsome.

Memphis Strike In Sixth Week

MEMPHIS, Tenn.—The morale of 50 members of Local 19 remains high as their strike for a first contract at the National Mfg. Co. went into its sixth week.

The company is bringing in scabs and filing false accusations against members of the local, and the police appear to be helping by dragging several members from their beds in the middle of the night to jail. Seven arrested workers have been freed of all charges, however, and the move backfired on the company.

"When the jury threw out these cases, it lifted the morale of the people and showed that they are getting some justice out of this," Pres. Earl Fisher said.

The union may sue the company for false arrest.

In the strike, all issues except recognition of the union are in dispute: wages, job security, a dues check-off, a grievance procedure, a classification system, job bidding for promotions, vacations and holidays, and hours of work and overtime.

The local won an NLRB election among National's 50 workers, 47 of whom are Negroes, in November.

Old Dominion Vote May 4

NORFOLK, Va.—The NLRB will hold a bargaining election among the 75 employees of the Old Dominion Peanut Corp. May 4.

Local 26 has signed up a majority of the workers, and expects to win the election.

The local represents nearly 2,000 workers in the peanut industry in southern Virginia, including 1,500 workers at the Planters Peanut plant in Suffolk, 30 miles away.

Coalition COPE MEMO

4/18/66

Atlanta Union Halls Open for Registration

In Fulton County (Atlanta) Ga., they'll be registering citizens to vote in the union halls from now on.

Thanks to the efforts of the Alliance for Social, Economic and Political Progress—a liberal coalition of labor, minority and church groups—more than 40 deputy registrars have been appointed, many of them union members and officials.

Instrumental in starting the program was W. H. Montague Sr., president of the Georgia AFL-CIO, who is chairman of the Alliance voter registration subcommittee.

Montague said union halls would be used as registration sites not just for union members but for all citizens who wish to register. Registrars will be in union halls every day, all day, Montague said.

AM, N. C., FRIDAY, APRIL 29, 1966 Coalition Price Per Copy Five Cents

Do They Think Tobacco Workers Are Fools

Carolina Labor News

Recent events in Durham County politics make us wonder if certain people don't grossly underestimate the intelligence of those workers who toil (and toil certainly is the right word in this day of speed up and automated equipment) in the tobacco factories in Durham County.

These certain people gathered around a certain nonunion building contractor in Durham County recently announced that they couldn't support Nick Galifianakis or Bill Wood of Winston-Salem for Congress in the newly created Fifth Congressional District.

They are telling the tobacco workers that these men are not conservative enough to have their support and are hinting that we should support some other candidate in this race.

They haven't completed the insulting yet because they have not told us exactly who it is that we are supposed to vote for but it is becoming more apparent who that candidate will be every day.

Actually, there are only two other candidates Harold W. Thomerson who has served as chief legislative aid and personal assistant for the last three congressmen from the old Fifth District.

All these congressmen have had staunch ultra-conservative, anti-labor records and have shown little or no concern for the problems of working people. Mr. Thomerson did not appear at the Committee On Political Education screening committee meeting and thus we must assume that he would only carry on the tradition and record of those anti-labor congressmen he has served.

This leaves only Smith Bagley, the millionaire grandson of R. J. Reynolds who founded and has controlled the only nonunion cigarette company in the United States. This money is actually a result of the exploitation of the tobacco workers at the nonunion RJR Tobacco Company and they expect Durham tobacco workers to VOTE for someone who represents everything that Durham tobacco workers have fought against since our unions were organized during the depression.

No We Are Not Fools

They tell us we can't vote for Nick Galifianakis — Why? Because Nick Galifianakis introduced and fought hard to raise the state income tax exemptions for all workers dependents from $300 to $600 each and because he supported the dollar minimum wage and other programs to help workers and farmers.

They tell us we can't vote for Bill Woods—Why because after voting to raise the minimum wage of N.C. Workers to at least $1 per hour; he then introduced and fought for a $1 per hour minimum wage for state and local government workers.

DURHAM TOBACCO WORKERS WILL SHOW THESE PEOPLE ON ELECTION DAY THAT WE KNOW WHERE OUR BREAD IS BUTTERED BY VOTING FOR OUR FRIENDS.

Some People Will Play With Fools Gold! Not Us

This paper has never really been a paying project, it wasn't really meant to be because it was set up to help educate union members on issues the daily press ignored or distorted. We need money now, but we have never sold out any workers and we certainly don't intend to start now. We expect some workers in Durham to take some of the millionaires money, but in spite of the fact that we need money, his millions can't buy an ad in this paper.

Labor's Committee On Political Education consisting of local union people in Durham, Reidsville, Leaksville-Spray-Draper and Winston-Salem have screened the candidates and found only Nick Galifianakis and Bill Wood acceptable and we wholeheartedly concur in this finding. We urge you to register and vote for your bread and butter.

SOUTH

CIVIL RIGHTS-LABOR TIE ADDS A PLANT IN FLORIDA

JACKSONVILLE, Fla.—Ties between the civil rights movement and the RWDSU have once again led to the organization of a group of workers—this time in Florida. The RWDSU has chartered a new affiliate, Local 589, as a result of a highly successful organizing campaign among the 85 workers of the Mullis Poultry Co., processors of frozen poultry products.

The local, under its acting president, Erskine Hepburn, a former Florida state NAACP labor advisor, has signed up 65 of the 85 employees since it began organizing last month, and on April 18 filed for an election with the regional office of the NLRB.

The workers at Mullis, mostly Negro women, earn only the Federal minimum of $1.25 an hour, have no benefits at all, no job security, and no assurance of steady work. Sometimes they work 30 or 35 hours a week, and often they work less.

Int'l Rep. Harry Bush attended several meetings of the workers, and has acquainted them with the RWDSU programs and benefits. He emphasized that the union would give them strength. This was quickly borne out when the company fired four workers for being one minute late—but one week later, on April 26, sent them telegrams to report for work with full back pay, as a result of a strong protest by Hepburn.

Recruitment of the Mullis workers—and the hope that organization of other shops in Jacksonville will follow, came about through discussions last fall involving Cleveland Robinson, secretary-treasurer of District 65 in New York City and a well-known figure in the civil rights movement, officials of the NAACP and the Brotherhood of Sleeping Car Porters, RWDSU Exec. Vice-Pres. Arthur Osman and Bush.

Throughout the South such contacts have led to the organization into RWDSU of most of the 4,000 new members organized in the past year.

Hepburn reported that Local 589 will elect officers at a meeting Friday, May 6.

STATEMENT OF ANDREW J. BIEMILLER, LEGISLATIVE DIRECTOR
AMERICAN FEDERATION OF LABOR AND CONGRESS OF INDUSTRIAL ORGANIZATIONS
TO SUBCOMMITTEE NO. 5 OF THE HOUSE JUDICIARY COMMITTEE
ON H.R. 14765, THE CIVIL RIGHTS ACT OF 1966

May 24, 1966

Mr. Chairman, my name is Andrew J. Biemiller. I am Legislative Director for the American Federation of Labor and Congress of Industrial Organizations. Accompanying me is Thomas E. Harris, our Associate General Counsel. We appreciate this opportunity to present the views of the AFL-CIO on this important matter.

The proposals which this Subcommittee are considering deal with two major problem areas in the functioning of American democracy. The first has to do with the administration of justice; the second with discriminatory housing practices.

In both of these fields there are large and acute evils which must be eradicated; and the AFL-CIO welcomes the determination of the President and the Congress to face and face squarely the difficult issue of how best to remedy the deficiencies which all of us recognize.

We all, I am sure, believe in equal justice under law; and we all, I am sure, believe that no part of our population should suffer discrimination in so vital a matter as a place to live. The question is how to implement these principles.

The AFL-CIO indorses and supports H.R. 14765. We think it provides constructive and effective cures for the evils with which it deals, and we urge its enactment. We believe that the bill could be strengthened in a few particulars which we suggest below, but in general we are for it.

I will discuss successively the various titles of the bill, indicating in each instance what, if any, changes we think might be made.

Titles I and II

Titles I and II undertake to end discrimination in jury systems, in, respectively, the federal and state courts.

Up until now three different groups have been discriminated against in various areas as respects selection for jury service. These

groups are: first, Negroes and perhaps members of certain other minorities; second, women; and third, people with low incomes. The discrimination may be de facto or de jure.

Discrimination against Negroes is unquestionably most acute in the South.

Discrimination against women is also concentrated in the South but is probably also more prevalent de facto in rural and small town areas than in cities. Also, both of these types of discrimination are much more prevalent in state than in federal courts.

On the other hand discrimination in selection for jury service against people having low incomes is decidedly not a peculiarly southern vice, and it is probably more prevalent in federal than in state courts and in cities than in rural areas. Mr. Thomas Dewey, when he was a young district attorney, was an advocate of the so-called blue ribbon jury -- in state courts in New York City. But the use of blue ribbon juries is at least as prevalent in federal courts as in state courts generally.

Prosecutors have the idea that juries drawn from the upper economic strata are readier to convict. We commend Attorney General Katzenbach for his willingness to forgo this advantage for prosecutors, if indeed it is one, and for his recognition that discrimination on grounds of economic status is just as violative of the equal protection of the laws as discrimination on grounds of race or sex.

There is another reason for banning discrimination on the basis of economic status. It is that if such discrimination were permissible it could perpetuate, in a different guise, discrimination against Negroes and other minority groups.

We therefore agree with the sponsor of H.R. 14765 that all three types of discrimination -- i.e. race, sex, and economic status should be ended. Further, we agree that the language of the bill is clear and straightforward, viz. (p.2, lines 9-12):

> "No person or class of persons shall be denied the right to serve on grand and petit juries in the district courts of the United States on account of race, color, religion, sex, national origin, or economic status."

The same terminology is used in the provision as to state courts.

However, we suggest that the procedure for enforcing these standards might well be strengthened.

In the case of state juries, the bill authorizes the Attorney General to bring injunctive proceedings against state jury officials. However, the bill does not contain any such authorization in the case of federal juries, evidently upon the assumption that federal judges and jury commissioners will be readier to effectuate the bill's bans on nondiscrimination than will their state counterparts. Even if this assumption is correct there has been, as the Attorney General acknowledged, some discrimination in the federal courts, and we see no reason why the provision for suits by the Attorney General should not be applicable to federal juries as well as to state.

More important, we are doubtful that the enforcement provisions of the bill are adequate even in the case of state juries. The bill does provide a discovery procedure to make it easier to find out whether unlawful discrimination has occurred in the jury selection process. This procedure is available to the Attorney General in civil suits brought by him and to defendants in criminal prosecutions. However, for enforcement of its bans on discrimination the bill relies exclusively on adjudications in individual law suits, either where the issue is raised by private litigants or in suits brought by the Attorney General.

We are doubtful that this sort of spot policing will be adequate to end jury discrimination. It has not been adequate to end discrimination in other fields.

As respects the right to vote, for example, prior to the Voting Rights Act of 1965 earlier legislation relied for enforcement on suits brought by the Attorney General or by voters. Suit had to be brought in each election district, and in each separate suit there had to be an adjudication whether there had been an unlawful deprivation of the right to vote. We foresaw that these provisions would prove to be inadequate. We testified, when the bill was before Congress that implementing the Fifteenth Amendment by law suits was like trying to paint a wall with a fountain pen.

Our forebodings proved to be well founded, as testified by the Voting Rights Act of 1965.

The 1965 Act utilized several novel devices to counter enforcement difficulties. It provided an automatic triggering test, i. e. whether fewer than 50% of eligible persons were registered or voted. It provided for determinations applicable throughout major geographic units, i. e. States or counties. It provided for the use of federal examiners to register voters, and for federal observers at elections.

These provisions, in contrast to their predecessors, seem to be proving effective.

As respects school desegregation, too, individual law suits proved to be a slow and ineffective way of vindicating constitutional rights.

On the basis of these experiences, we suggest that broader scale procedures for the implementation of Title II may be needed than enforcement through individual law suits. We believe the suggestions on this point made by Roy Wilkins in his testimony for the Leadership Conference on Civil Rights have substantial merit and deserve the attention of this Committee.

TITLE III

This Title deals with discrimination in the schools and other public facilities. It eliminates certain existing limitations on the bringing of suits by the Attorney General, and provides for broadened relief.

We are in favor of the enactment of Title III as written.

Since the Attorney General's testimony of this Title was rather general, we propose to give a concrete illustration of why this Title is needed.

In 1950 some Negro parents brought suit against school officials in Clarendon County, South Carolina, seeking the admission of their children to the white schools. In 1951 the federal district court ruled that the schools were very separate but not very equal, and that the plaintiff's rights under the Fourteenth Amendment were being violated. However, the court did not order that the children be admitted to the white schools: it ordered that the Negro schools be made equal.

In 1954 the Supreme Court likewise held that the Negroes' constitutional rights were being violated, on the ground that segregation by races is inherently unequal. This case was one of the four decided by the Supreme Court in Brown v. Board of Education, 347 U. S. 483. In 1955 the Supreme Court, on reargument, ruled that integration should proceed with "all deliberate speed," and the case went back to the district court.

In the District Court the deliberation has been more evident than the speed. It was not until the fall of 1965 that the district court finally required the admission of six Negro children to white schools in Clarendon County.

Of course these were not the same children whose parents had started the litigation. A child who was six years old in 1950 was 21 in 1965. However, one Negro girl whose parents had intervened later, and were parties in the 1954 Brown cases in the Supreme Court, did finally get into a white school at age 17 after 11 years of litigation. Incidentally, according to news reports, the whites have been giving her a bad time.

Of course the litigation isn't over. The court has retained jurisdiction and has ordered further desegregation next fall. Anyway, Negro parents, with the help of the legal defense fund of the NAACP, have been carrying on this litigation for 16 years, and the end is not in sight.

The Department of Justice has not brought suit in this situation. The burden of the litigation has been left to the parents and to the legal defense fund. The Department of Justice could bring suit under Title III of the Civil Rights Act of 1964 if the Attorney General certified that the parents were unable to maintain appropriate legal proceedings, which means under the statute that they "are unable either directly or through other interested persons or organizations, to bear the expense of the litigation ***."

How can the Attorney General determine such a thing as that? The legal defense fund of the NAACP is presumably able to sustain a certain volume of litigation, but what is the basis for saying that it is able to maintain one particular suit and not another?

More broadly, it is our view that the burden of vindicating these constitutional rights should rest on the Federal Government, and that it should rest there regardless of whether particular parents can or cannot afford to sue. That is one reason why we urge the enactment of Title III.

The other reason is the physical and economic intimidation which faces Negro parents in some areas. Title III authorizes the Attorney General to seek injunctions against such intimidation, and we are of course strongly in favor of that.

Title IV

The AFL-CIO likewise strongly supports Title IV of the proposed Civil Rights Act of 1966.

Organized labor has long been in the forefront in the fight for fair housing legislation. Laws enacted by a large number of states and municipalities to outlaw discrimination in housing have been placed on the statute books with the full backing, and often on the initiative of, organized labor.

The Sixth Constitutional Convention of the AFL-CIO, held last December, called for equal housing opportunity in these words:

> "A key feature of labor's housing program is its drive for equal housing opportunity for all Americans. There is no place in America for racial ghettos. Equal access, without regard to race, creed, color or national origin, to every residential neighborhood in every American community should be assured for every family in America. Equal opportunity in housing should be assured in all programs in which housing is provided with Federal aid or is protected by Federal insurance of mortgages or guarantee or regulation of mortgage loans."

The national purpose was pledged by Congress in the Declaration of National Policy set forth in the National Housing Act of 1949 (Public Law 171, 81st Congress; 63 Stat. 413; 42 U. S. C. 1441), which stated:

> "The Congress hereby declares that the general welfare and security of the Nation and the health and living standards of its people require...the realization as soon as feasible of the goal of a decent home and a suitable living environment for every American family, thus contributing to the development and redevelopment of communities and to the advancement of the growth, wealth, and security of the Nation."

This Congressional affirmation of the national goal in a basic legislative enactment underlying all Federal housing statutes promulgated from 1949 to date, should be viewed in the light of the Nation's resolve proclaimed by the 14th amendment to the Constitution. The 14th Amendment declares that no State should deny "the equal protection of the laws" to any person, regardless of race.

The Supreme Court has said /Shelley v. Kraemer, 334 U.S. 1 (1948)/:

> "It cannot be doubted that among the civil rights intended to be protected from discriminatory state action by the Fourteenth Amendment are the rights to acquire, enjoy, own, and dispose of property. Equality in the enjoyment of property rights was regarded by the framers of that Amendment as an essential pre-condition to the realization of other basic civil rights and liberties which the Amendment was intended to guarantee."

And the Supreme Court has held, in that case, that the 14th Amendment prohibits the courts, as instrumentalities of the states, from enforcing private racially restrictive covenants. In another case /Hurd v. Hodge, 334, U.S. 24, (1948)/, the Supreme Court applied similar prohibitions to the Federal government and its courts, as well.

The U.S. Civil Rights Commission, in its 1961 Report on Housing, reviewed the constitutional problem involved here and arrived at this compelling conclusion:

> ". . . it poses the question whether, as a matter of national policy, the Federal Government can permit itself to be involved in the denial of equal opportunity; whether the Federal Government, which has established national housing programs to achieve a national purpose, should not take affirmative steps to move upward the achievement of equal opportunity in housing for all Americans. The Supreme Court has recognized that 'Equality in the enjoyment of property rights' is 'an essential pre-condition to the realization of other basic civil rights.' If the achievement of this 'essential pre-condition' is not here the explicit command of the Constitution, it is nonetheless its promise."

What opposition there is to the assurance of equal opportunity in housing to all Americans regardless of race, when it is not the result of outright race bias, is usually based on misinformation or ignorance of the facts.

One widely broadcast misconception prompting such opposition is that property values will drop whenever non-white families move into a previously all-white neighborhood. There is absolutely no documentary evidence to support this contention. It is a myth which has been completely exploded.

A comprehensive study of property values was conducted for the Commission on Race and Housing, a distinguished citizens' group which included nationally known specialists in the social sciences, by Dr. Luigi Laurenti. Its findings are included in the volume, Property Values and Race, (University of California Press, 1960). Dr. Laurenti's research involved 20 neighborhoods in San Francisco, Oakland, and Philadelphia, where Negroes had entered during a span of 12 years.

With each of the three cities he studied, Laurenti compared price movements in "test" neighborhoods with those in similar neighborhoods which had remained all-white over the same period. The price transactions studied covered a 12-year period from 1943 to 1955. Over 9,900 sales prices were analyzed comprising about 40 percent of all the sales during the study period. Almost all the neighborhoods consisted of single-family, owner-occupied residences and were not contiguous to other areas of non-white population.

In 44 percent of the comparisons, prices showed gains which ranged from five to 26 per cent. Another 41 per cent of the comparisons showed no significant change in price behavior. The other 15 per cent showed declines but none were over 15 per cent.

Put another way, 85 per cent of the cases either showed upward improvement or remained stable.

The results of the studies in these three cities are consistent with those made by other investigators who studied similar areas in Chicago, Kansas City, Detroit, and Portland, Oregon.

In the volume, Property Values and Race, Laurenti concluded:

> "The major statistical finding of the present study is that during the time period and for the cases studied the entry of non-whites into previously all-white neighborhoods was much more often associated with price improvement or stability than with price weakening. A corollary and possibly more significant finding is that no single or uniform pattern of non-white influence on property prices could be detected. Rather, what happens to prices when non-whites enter a neighborhood seems to depend on a variety of circumstances which, on balance, may influence prices upward or downward or leave them unaffected."

Another myth, long since exploded, is that neighborhood standards will go down whenever Negro families become part of the neighborhood.

Extensive studies have shown that Negro homeowners are just as concerned with neighborhood standards as any other citizens. Even a poll conducted more than twenty years ago by the National Association of Real Estate Boards supported the fact that Negro homeowners maintain their properties as well as whites.

There are good standards and bad standards in both white and non-white neighborhoods.

Overcrowding, economic exploitation, and neglect of buildings by landlords contribute to the creation of slums, regardless of the color or national origin of the residents. But slum areas, with which the Negro stereotype is all too often associated, generally were badly deteriorated before Negro residents fell heir to them.

Equal access to housing, regardless of race, creed or national origin in a free market, should be a part of the American way of life. Equal opportunity in housing is intimately linked to equal opportunity in schooling and to other civil rights.

The AFL-CIO strongly supports the enactment of Title IV because it will remove the obstacles that impede the rights and opportunities of Americans on the unjust basis of their race, creed or national origin. We support it, above all, because its enactment will broaden the horizon of American democracy and will extend the opportunity to contribute to the strengthening of community life to every citizen of our country.

In addition, we believe the committee would be well advised to explore with care the possibility of adding administrative enforcement procedures to this title. As this committee knows from our previous testimony on civil rights matters, we consider administrative enforcement less cumbersome, more immediate and generally more effective in matters of this kind. We hope you will consider carefully adding administrative procedures to this title.

Title V

This Title has to do with crimes against Negroes and civil rights workers.

There have been numerous such crimes in recent years, but very few convictions, particularly in the state courts. Something needs to be done; and if anyone has any doubt of that we suggest that they read the 1965 Report of the U. S. Commission on Civil Rights. The shocking breakdown of law enforcement in the South, as respects Negroes and civil rights workers, is there set forth in horrifying detail.

Certain violent deprivations of civil rights are made criminal by the Federal Criminal Code, Title 18 U. S. C. § § 241 and 242, but these provisions, which date back to Reconstruction days, contain technical deficiencies which make it very difficult for the government to prove a case under them. Title V parallels but does not supplant these existing federal criminal statutes, and undertakes to cure some of their deficiencies.

The jury selection proposals of Titles I and II also of course relate to the general problem of the administration of justice, which is most acute in, though it is not confined to, the South.

Title V was drafted in the light of the recent Supreme Court decisions in United States v. Price, and United States v. Guest. In those decisions the Court sustained the sufficiency of the indictments, but it pointed out that the requirements of proof under existing law are difficult to meet, and the Court suggested that Congress enact more specific provisions. Title V embodies such provisions, and we urge its enactment.

Under Section 241 it is necessary for the government in a case like Guest to prove that the defendants had a specific, wrongful, intent in two different respects. In the first place, the government must prove, as in the case of nearly all criminal statutes, that the defendant intended to commit the prohibited act, as, for example, that the defendant intended to murder or injure the victim, and that the death or injury was not the result of accident. This sort of intent is a normal and proper prerequisite to conviction in criminal cases. Under Section 241, however, the government must also show a second type of specific intent, viz., that the defendant also intended to interfere with the victim's exercise of some right or privilege secured to him by the Constitution or laws of the United States. The government must show, for example, not only that the defendant murdered a Negro, but that he murdered him to keep him from voting, or attending a desegregated school or exercising some other federally protected right. Proof of this sort is unlikely to be available, and one of the purposes of Title V is to obviate the need for it.

Section 501(a) substitutes for the specific intent requirement we have been discussing the requirement that the defendant must have injured the victim (1) because of his "race, color, religion or national origin", (2) while the victim is engaging or trying to engage in the exercise of any of various enumerated federal rights, such as voting or attending a public school.

Under this provision it would still be necessary to show that the defendant injured his victim because of his race, etc. In other words the specific intent requirement is shifted from intent to prevent the victim from voting, for example, to intent to injure him because of his race while he is voting.

Evidence of racial animus is more likely to be available than evidence that the defendant intended to prevent the exercise of some particular federal right. Even with the new provisions on the books, however, the task of the federal prosecutor will still be a most difficult one. In a case like Guest it will still be necessary for the prosecutor to show not only that the defendants deliberately killed their victim, but they did so because he was a Negro.

In general we think the Department of Justice has done a good job in drafting Title V. We suggest, however, that the language should be revised to make it clear that traveling on a public highway is a protected type of activity. That is what was involved in the Guest case; it is clearly sufficient as a constitutional basis for a federal intervention; and there will be cases where it may not be possible to prove that the victim was engaging or seeking to engage in any of the other types of activities enumerated in the bill.

CONCLUSION

Let me conclude with a brief observation. This Congress and its predecessor are certain to go down in history for the trail-blazing legislation passed in 1964 and 1965 in this field. All of us who played any role whatsoever in achieving the civil rights legislation have a right to be proud.

But so much more remains to be done, Mr. Chairman, that none of us can pause for self-congratulations.

We have all read reports that this Congress is tired of the subject; that this Congress believes this is no time for another civil rights battle; that 1966 should be the year of stock-taking, not action.

Well, we just don't believe those reports.

We believe this Congress will recognize -- as did the President in the message

in which he submitted this bill -- that the unresolved problems are many and great but that they can be solved, as indeed they must be solved.

We in the AFL-CIO are dedicated to the belief that true and absolute equality of opportunity is possible in America and we intend to help achieve it. That, we are confident, is the mood of the American people and we believe it to be the intention of this Congress.

House Approves Wage Bill, Adds 8 Million to Coverage

LBJ Vows Battle for Program

Pres. Johnson pledged his Administration to continue the fight for a broad program of economic, social welfare and labor legislation as he addressed 200 members of the Intl. Labor Press Association at a briefing and reception at the White House.

"We will try again and will not relent in our efforts," he said. He listed, among others, repeal of Section 14(b) of the Taft-Hartley Act; revision of the unemployment compensation law, with higher benefits, and federal standards; an increased federal minimum wage, with expanded coverage.

$1.60 Second Step Delayed to 1969

By David L. Perlman

The House voted to increase the federal minimum wage to $1.60 an hour and extend coverage to nearly 8 million workers, including farm workers, but delayed the effective date of the two-step increase until 1969.

After a grueling three-day debate, the House beat back a series of amendments to gut the measure, but a proposal by Rep. Adam Clayton Powell that the second step of the wage increase be delayed from February 1968 to February 1969 carried by a vote of 205 to 193.

The bill would increase the wage floor for 30 million workers now covered by a $1.25 minimum to $1.40 in February 1967. As the House passed the measure, the increase to $1.60 will come two years later.

The AFL-CIO will make a

Pres. Johnson pledged his Administration to continue the fight for a broad program of economic, social welfare and labor legislation as he addressed 200 members of the Intl. Labor Press Association at a briefing and reception at the White House.

"We will try again and will not relent in our efforts," he said. He listed, among others, repeal of Section 14(b) of the Taft-Hartley Act; revision of the unemployment compensation law, with higher benefits, and federal standards; an increased federal minimum wage, with expanded coverage.

In introducing the labor editors, Sec. of Labor W. Willard Wirtz told the President that "no other group says so much to so many and is so little recognized."

The editors were in Washington for a two-day conference arranged by the Dept. of Labor. Among the speakers were Vice Pres. Hubert H. Humphrey, who echoed the President's pledge to continue to press for progressive legislation benefiting workers.

Late for the briefing, the President explained he had been detained by a meeting of congressional leaders, four of whom entered with him. They were House Speaker John W. McCormack, Assistant Senate Democratic Leader Russell B. Long (La.), House Majority Leader Carl Albert (Okla.) and Assistant Leader Hale Boggs (La.).

At the President's request McCormack and Long spoke briefly on the leaders' meeting.

"There is scarcely a measure we have proposed which does not affect

The House voted to increase the federal minimum wage to $1.60 an hour and extend coverage to nearly 8 million workers, including farm workers, but delayed the effective date of the two-step increase until 1969.

After a grueling three-day debate, the House beat back a series of amendments to gut the measure, but a proposal by Rep. Adam Clayton Powell that the second step of the wage increase be delayed from February 1968 to February 1969 carried by a vote of 205 to 193.

The bill would increase the wage floor for 30 million workers now covered by a $1.25 minimum to $1.40 in February 1967. As the House passed the measure, the increase to $1.60 will come two years later.

The AFL-CIO will make a strong bid in the Senate to restore the 1968 date which was in the bill when it was reported out by the House Labor Committee.

The vote for final passage was 303 to 93 and an attempt by opponents to knock out coverage for farm workers and weaken overtime coverage of processing employes was defeated 231 to 168.

A critical rollcall came on reversing an earlier teller vote that would have excluded from coverage 1.6 million workers originally covered in the committee's bill. It carried 200 to 195. Other amendments increased the coverage of the measure to 7.95 million workers.

As sent to the Senate, the bill would extend coverage to large groups of retail, hospital, hotel, restaurant, laundry, school and construction workers and—for the first time in the history of the Fair La-

(Continued on Page 12)

Workers' Purchasing Power Dips

The purchasing power of the average factory worker dropped between March and April and was barely above that of a year ago, the Labor Dept. reported.

The rise in consumer prices—up four-tenths of one percent in April—lowered the real spendable earnings of a worker with three dependents to $87.32 compared to $87.80 a month earlier. In April 1965 the figure was $87.23.

The monthly rise in the consumer price index stemmed mostly from a hike of eight-tenths of 1 percent in cost of services including restoration of the excise tax on telephone services, higher FHA and VA mortgage interest rates and larger price tags on medical care, automobile insurance and other personal services.

Food prices, which have risen sharply in the past few months, increased only slightly and pork prices dropped 5.5 percent.

More than one million workers will receive a cost-of-living wage increase as a result of the

Get Murray-Green Prize:

Shrivers Aid Strike With Award Money

Sargent Shriver and his wife, Eunice Kennedy Shriver, accepted the first joint citation in the history of the AFL-CIO's annual Philip Murray-William Green award—and promptly gave the $5,000 check that accompanied it to the striking grape workers of California.

The Shrivers, honored for outstanding service to the community, at an award dinner climaxing the 11th AFL-CIO National Conference on Community Services, paid warm tribute to the men and women of labor for their long record of concern for the poor. **(Excerpts on Page 6.)**

Mrs. Shriver, who was cited especially for her work as a foster mother for retarded children, said "American trade unionism has brought a more human life to millions of Americans" and added:

"I hope my four sons will grow up to be men like Mr. Murray and Mr. Green, men of peace and men of change."

Murray was president of the former CIO when he died, and Green of the AFL. The award in their names was established by the AFL-CIO Executive Council in 1956 to honor those who work effectively for the common good.

Double Role

Shriver was saluted for his efforts as head of the Office of Economic Opportunity, the anti-poverty arm of the Johnson Administration, and as former head of the Peace Corps.

AFL-CIO Vice Pres. Joseph A. Beirne, chairman of the federation's Community Services Committee, told the audience of more than 400 that the idea of a joint award originated with AFL-CIO Pres. George Meany.

Accepting the nomination of Shriver for the Murray-Green award, Meany asked "How about

Labor Strongly Backs New Civil Rights Bill

Discrimination in justice and in housing are "large and acute evils" that must be eradicated, the AFL-CIO told Congress in testimony calling for enactment of the Administration's 1966 civil rights bill.

AFL-CIO Legislative Dir. Andrew J. Biemiller told a House Judiciary subcommittee that the proposed measure will provide "constructive and effective cures" for the evils of discrimination in housing and in the make-up of juries, as well as in dealing with crimes in the exercise of civil rights and in establishing more realistic methods for rights lawsuits.

"The AFL-CIO welcomes the determination of the President and the Congress to face and face squarely the difficult issue of how best to remedy the deficiencies which all of us recognize," Biemiller declared. He was accompanied by Thomas E. Harris, AFL-CIO associate general counsel.

In giving the federation's "general" support, Biemiller urged that the enforcement provisions in all parts of the bill be strengthened and broadened. Experience with earlier civil rights legislation has taught that "broader scale provisions" are

Labor Law Compliance Urged in U.S. Purchases

The AFL-CIO Executive Council has urged Pres. Johnson and Defense Sec. Robert S. McNamara to reverse present Defense Dept. policy by requiring government contractors to comply with federal labor laws.

A council statement named J. P. Stevens & Co., Inc., as one of a number of firms which flagrantly and persistently violate the law yet continue to benefit from Defense Dept. contracts. McNamara's department awarded $24 million in defense contracts to the nation's second largest textile manufacturer from January 1963 to July 1965 and more than $21.5 million in the third quarter of 1965 alone while Stevens was pursuing a policy of flouting the labor laws, the council noted.

"This is shocking," the council said in a statement adopted May 6 and held by Pres. George Meany for release until the President and McNamara received it.

Meanwhile, Rep. Frank Thompson, Jr. (D-N. J.) urged in a House speech that the Davis-Bacon and Walsh-Healy Acts be amended to spell out authority for government agencies to withhold contracts from companies found by the National Labor Relations Board to be "open, flagrant, knowing and purposeful" violators of federal laws.

Thompson, chairman of a House

necessary to insure rights, he said.

The fair housing guarantees in the new civil rights bill have the backing of the AFL-CIO in convention resolution, Biemiller stated. Laws already on the books of states and municipalities to outlaw discrimination in housing were placed there with "the full backing, and often on the initiative of, organized labor," he said.

"Equal access to housing, regardless of race, creed or national origin in a free market should be a part of the American way of life," he declared. "Equal opportunity in housing is intimately linked to equal opportunity in schooling and to other

a study made for the Commission on Race & Housing of 20 neighborhoods in major cities during a 12-year period. The study disclosed that when a neighborhood became integrated there was more often a price improvement or stability than any price weakening. The report found that "85 percent of the cases either showed upward improvement or remained stable," he reported.

Jury Bias

On selecting juries, Biemiller declared that there is strong need to outlaw discrimination against Negroes and women as well as that which is practiced against persons in low income groups. "Discrimination on grounds of economic status is just as violative of the

Civil Rights Links Credited:

Retail-Wholesale Union Cites Organizing Progress in South

By Gervase N. Love

Miami Beach, Fla.—The Retail, Wholesale & Dept. Store Union has had "amazing success" in organizing during the past year in Georgia and Alabama, Pres. Max Greenberg told some 600 delegates to the union's 10th constitutional convention.

In cooperation with civil rights forces, Greenberg said in his keynote address, the RWDSU has "succeeded in channeling the energies of Negro workers" to the point that "the example set by these most exploited and most downtrodden workers has inspired white workers as well."

"Shops with a total of 5,000 workers have been organized in the past year in such places as Selma and Greensboro, Ala., Griffin, Ga., various towns in Florida and other communities which have never before felt the impact of unionism," he said.

"The success of these efforts is a tribute to the leaders and members of our southern affiliates."

Executive Sec. Jack Paley reported that the union has 239 locals in the United States and Canada. Since the previous convention four years ago, he said, 29 new locals were chartered and 31 went out of existence, half by merger with other locals and the rest in small plants that went out of business or fled to non-union areas.

Sec. of Labor W. Willard Wirtz, making his second speech of the day to a union convention, ridiculed talk of "tired blood" in the labor movement and declared that "most of what we've gained in the last couple of years is what labor has been fighting for for years—and much of the leadership over those years has come from the labor movement."

Earlier in the day he had spoken to the Clothing Workers' convention in Atlantic City, N. J. He left the RWDSU session to fly to St. Louis to appear before the Hotel &

Wirtz, who said he came "to talk over some of our common problems," recounted the country's economic and social gains since the last RWDSU convention in 1962, briefly discussed "where we are" and outlined "where we're going."

In examining the legislative picture, he said flatly that "I don't like the denial of the right to vote" on repeal of Section 14(b).

"But I can't count that year entirely lost despite the failure to repeal 14(b)," he added, "because we've had solid evidence of the resurgence of the organizing spirit, especially in the areas in which this union operates."

He urged letter-writing campaigns to members of Congress in support of consumer legislation, which he said would be the equivalent of a 10 to 20 percent wage increase for those at poverty levels, and for federal unemployment compensation standards.

Wirtz was given a standing ovation when he pleaded for a rethinking of the liberal position and a "new agenda" based on today's needs instead of the "desperation" philosophy of the 1930s.

Greenberg and Wirtz touched common ground in their approach to civil rights, emphasizing the need of translating legal gains into social and economic realities for members of minority groups who have suffered from

Congress. The Canadian section, led by Hugh Buchanan, RWDSU supervisor in Ontario, called for a still further increase of affiliations to the New Democratic Party.

Gen. Sec. Juul Paulsen of the Intl. Union of Food & Allied Workers, with which the RWDSU is affiliated, explained the functioning of the international trade secretariat, its services to members and its aid to unions in developing nations. He thanked Greenberg, a member of the IUFAW Management Committee, or executive board for his "never-failing cooperation."

Facing the delegates was an executive board recommendation that the per capita payments, unchanged since 1958, be raised from 85 cents to $1.15 per member per month. Among speakers still to be heard were Sen. Robert F. Kennedy (D-N.Y.); Pres. Claude Jodoin of the Canadian Labor Congress, Dir. Don Slaiman of the AFL-CIO Dept. of Civil Rights, Executive Dir. Jack Conway of the AFL-CIO Industrial Union Dept., Assistant Dir. H. H. Bookbinder of the Office of Economic Opportunity and Bayard Rustin, civil rights leader.

Laws already on the books of states and municipalities to outlaw discrimination in housing were placed there with "the full backing, and often on the initiative of, organized labor," he said.

"Equal access to housing, regardless of race, creed or national origin in a free market should be a part of the American way of life," he declared. "Equal opportunity in housing is intimately linked to equal opportunity in schooling and to other civil rights."

Testifying to one of the arguments used by the bill's opponents, Biemiller declared that there is widespread misconception that property values will drop whenever non-white families move into a previously all-white neighborhood.

"There is no documentary evidence to support this contention," he said, "it is a myth that has been completely exploded."

The AFL-CIO spokesman cited a study made for the Commission on Race & Housing of 20 neighborhoods in major cities during a 12-year period. The study disclosed that when a neighborhood became integrated there was more often a price improvement or stability than any price weakening. The report found that "85 percent of the cases either showed upward improvement or remained stable," he reported.

Jury Bias

On selecting juries, Biemiller declared that there is strong need to outlaw discrimination against Negroes and women as well as that which is practiced against persons in low income groups. "Discrimination on grounds of economic status is just as violative of the equal protection of the laws as discrimination on grounds of race or sex."

The AFL-CIO, he said, approves the bill's provision removing present limitations on the power of the attorney general to initiate lawsuits. It should be the duty of the federal government to carry the burden of "vindicating these constitutional rights," Biemiller declared, and not be the responsibility of individuals or interested organizations, regardless of whether or not they can afford the expense of protracted lawsuits.

He cited an instance where parents in a South Carolina community sued to force admission of their children into segregrated schools. Today, 17 years later, when all of their children except one are above school age, the litigation is continuing and the end is not in sight.

The bill's proposal for dealing with crimes against Negroes and civil rights workers will remain, even if enacted, a difficult matter for federal prosecutors, Biemiller observed.

A prosecutor will be required to first prove, as is generally required, that the accused intended to harm his victim; the prosecutor must then also prove that the assailant acted because of the victim's "race, color, religion or national origin" while engaged in the exercise of his rights.

"Something needs to be done," Biemiller warned, noting that the 1965 Report of the U.S. Commission on Civil Rights had set forth in "horrifying detail" the "shocking breakdown of law enforcement in the South."

The AFL-CIO spokesman rejected the contention that Congress is tired of civil rights legislation and prefers that 1966 be a year of stocktaking.

"We just don't believe those reports," he said. The "mood of the American people" is for equality of opportunity and we intend to help achieve it, he declared.

Wirtz Shifts Rule Banning Race Records

The federal government will identify employes by race as a means of combatting discrimination and uncovering problem areas, Labor Sec. W. Willard Wirtz announced.

Wirtz reversed his department's four-year-old ban on racial identification on job records—including records maintained by the U. S. Employment Service and its network of state offices.

He told a meeting of the NAACP Legal Defense & Educational Fund that statistical data on employment by race is often needed as part of an "affirmative action campaign" against discrimination.

"I am sick and tired," he said, "of the false piety of those who answer inquiries about the racial aspects of their employment or membership practices with the bland, smug answer that 'we don't know because of course we wouldn't keep records on anything like that.'"

Wirtz said no person would be required to list his race against his will and exceptions would be made at present in states with laws prohibiting racial identification on employment records.

of our southern affiliates."

Executive Sec. Jack Paley reported that the union has 239 locals in the United States and Canada. Since the previous convention four years ago, he said, 29 new locals were chartered and 31 went out of existence, half by merger with other locals and the rest in small plants that went out of business or fled to non-union areas.

Sec. of Labor W. Willard Wirtz, making his second speech of the day to a union convention, ridiculed talk of "tired blood" in the labor movement and declared that "most of what we've gained in the last couple of years is what labor has been fighting for for years—and much of the leadership over those years has come from the labor movement."

Earlier in the day he had spoken to the Clothing Workers' convention in Atlantic City, N. J. He left the RWDSU session to fly to St. Louis to appear before the Hotel & Restaurant Employes convention. In 16 days, he said, he was traveling 27,000 miles and making nine speeches in six states and two countries.

Wirtz read to the delegates a message of greeting from Pres. Johnson, who hailed the union's contribution to the "dramatic social and economic progress" the nation has made, and to the country's high level of prosperity.

The President pointed out, however, that much remains to be done and declared he would "welcome the continued efforts" of the RWDSU to built the Great Society.

peal 14(b)," he added, "because we've had solid evidence of the resurgence of the organizing spirit, especially in the areas in which this union operates."

He urged letter-writing campaigns to members of Congress in support of consumer legislation, which he said would be the equivalent of a 10 to 20 percent wage increase for those at poverty levels, and for federal unemployment compensation standards.

Wirtz was given a standing ovation when he pleaded for a rethinking of the liberal position and a "new agenda" based on today's needs instead of the "desperation" philosophy of the 1930s.

Greenberg and Wirtz touched common ground in their approach to civil rights, emphasizing the need of translating legal gains into social and economic realities for members of minority groups who have suffered from discrimination and inadequate training and education.

Dir. Al Barkan of the AFL-CIO Committee on Political Education declared that in the coming congressional and gubernatorial elections the labor movement "faces a crisis of the first magnitude."

The convention COPE committee filed two reports—one for the U.S. and the other for Canada, where the union has 20,000 members. The U.S. section, headed by Vice Pres. Jack Kirkwood, outlined a detailed program for increased political action aimed at strengthening the liberal and labor forces in

veloping nations. He thanked Greenberg, a member of the IUFAW Management Committee, or executive board for his "never-failing cooperation."

Facing the delegates was an executive board recommendation that the per capita payments, unchanged since 1958, be raised from 85 cents to $1.15 per member per month. Among speakers still to be heard were Sen. Robert F. Kennedy (D-N.Y.); Pres. Claude Jodoin of the Canadian Labor Congress, Dir. Don Slaiman of the AFL-CIO Dept. of Civil Rights, Executive Dir. Jack Conway of the AFL-CIO Industrial Union Dept., Assistant Dir. H. H. Bookbinder of the Office of Economic Opportunity and Bayard Rustin, civil rights leader.

Rights Leaders Gather For White House Parley

Organized labor will participate in the White House Conference on Civil Rights, called to seek the means to assist the American Negro toward practical achievement of his newly-won legislative rights.

The June 1-2 conference was conceived a year ago by Pres. Johnson, who proposed that scholars, experts, Negro leaders and government officials gather to follow up civil rights legislation with new programs "to help the American Negro fulfill the rights which, after the long time of injustice, he is finally to achieve."

The conference is viewed as an attempt to involve the total society in the Negro revolution and will consider proposals in four broad categories—administration of justice, education, housing, and economic security and welfare.

The 2,400 persons to whom invitations have been sent are said to represent a cross-section of the nation. Each will be given a chance to speak out on any proposal, on or off the agenda, and whatever consensus is reached will be transmitted to the President, state and local governments and to a wide range of private interests for action.

Arrangements for the conference began in November when a planning session, in which organized labor was a participant, developed recommendations reflecting a variety of viewpoints.

In February the President named AFL-CIO Vice Pres. A. Philip Randolph as honorary chairman of a 30-member council which was given the responsibility for developing a substantive agenda for the first civil rights conference under White House sponsorship.

Johnson, in his speech at Howard University which announced the conference, said the theme and title would be "To Fulfill These Rights."

The conference's objective would be, the President declared, "to move beyond opportunity to achievement. To shatter forever not only the barriers of law and public practice, but the walls which bound the condition of man by the color of his skin."

Jobless Drop Shifts Ratings Of Six Areas

Six of the nation's major manpower areas moved in March to classifications denoting lower unemployment, the Labor Dept. announced.

One of the areas—Lawrence-Haverhill, Mass.—moved from a substantial unemployment listing (6 to 8.9 percent of the workforce jobless) to a moderate unemployment group (3 to 5.9 percent).

This is the first time since 1955 that the area has moved out of the former category, the department said.

The nation's third and fifth largest manpower centers—Chicago and Detroit—moved from the moderate jobless grouping to the low unemployment category (1.5 to 2.9 percent unemployed). Two major steel centers—the Gary-Hammond-East Chicago area and the Lorain-Elyria, O., area—and Wichita, Kan., an expanding aircraft center. also moved down to the low unemployment listing.

In all, 133 major centers now are in low or moderate jobless categories compared to 121 for the corresponding month a year ago, the department reported.

E. S. Haines Named To Organizing Post

Appointment of Edward S. Haines as assistant director in the Dept. of Organization has been announced by AFL-CIO Pres. George Meany.

Haines, 48, had served as assistant director of AFL-CIO Region 14 —Illinois and Iowa—since 1955.

Before that he was on the organizing staff of the former CIO after service as assistant director of organization for the Packinghouse Workers; as a UPWA international representative and, earlier, as president of UPWA Local 580 in New York City.

NEWS from the AFL-CIO

NA. 8-3870

FOR RELEASE: A.M. PAPERS, WEDNESDAY, JUNE 1, 1966

AFL-CIO President George Meany today wished the White House Conference on Civil Rights "every success" emphasizing that to fulfill its goals "the United States must achieve and maintain a full employment economy."

Referring to the conference table, "To Fulfill These Rights," Meany said the goal required the establishment of additional rights as well. He cited the pending Civil Rights Act of 1966, faster school desegregation and wage-hour law improvements as examples.

But "above and beyond these essentials" is the need for "jobs at good wages for all who can work," Meany said, which requires a "continuing effort" by both government and private enterprise.

"Equal opportunity is an empty right when opportunities themselves are too few," he continued.

"By facing up to this fundamental fact, the White House conference can do much to accelerate the fulfillment we all seek -- the fulfillment of true and absolute equality of opportunity throughout America."

The text of Meany's statement follows:

The AFL-CIO welcomes the White House conference on civil rights.

The ultimate success of the conference will depend upon the implementation of programs it will discuss. Its purpose, "To Fulfill These Rights," cannot be achieved without securing additional rights for Americans as a whole.

For example:

The Civil Rights Act of 1966 must be passed.

Segregated education, de facto or otherwise, must be eliminated at a far faster pace. Compliance must be more vigorously enforced. As the labor movement first proposed 12 years ago, there should be a special multi-billion dollar federal school fund to assist affected communities to desegregate effectively and to assure a high quality of education in the process.

The Fair Labor Standards Act must be improved to the full extent voted by the House Committee on Education and Labor.

Above and beyond these essentials, the United States must achieve and maintain a full employment economy. There must be jobs at good wages for all who can work. There must be an adequate system of income maintenance for those who cannot. This demands a continuing effort by both government and private enterprise.

As the AFL-CIO has pointed out many times, equal opportunity and full opportunity go hand in hand. Equal opportunity is an empty right when opportunities themselves are too few.

- more -

By facing up to this fundamental fact, the White House conference can do much to accelerate the fulfillment we all seek -- the fulfillment of true and absolute equality of opportunity throughout America. We wish it every success.

Rights Sessions Center On 4-Point Plan of Action

WHITE HOUSE CONFERENCE "to fulfill these rights" is opened by A. Philip Randolph, elder statesman of the civil rights movement and AFL-CIO vice president. The applause is led by Vice Pres. Hubert H. Humphrey, the keynote speaker.

Taxi-Union Wins First N.Y. Pact

New York—With an emphatic vote of approval, representatives of 24,000 taxi drivers and garagemen ratified a landmark first contract providing better wages, shorter hours, pensions, health and life insurance and a full union shop for all drivers, full-time and part-time.

The vote at an overflow meeting in the Hotel Commodore signified the close of one era for the AFL-CIO Taxi Drivers Organizing Committee and the start of another keyed to building the union.

Contract terms, agreed to by labor and management in 80 garages after a five-day strike and mediation by Mayor Lindsay, will go into effect retroactive to May 17. It took the TDOC, formed by the New York City Central Labor Council, more than 20 months to unite industry employes and achieve a contract.

"We've laid the foundation," Council Pres. Harry Van Arsdale told the union's wage and policy committee. "Our job now is to build solidly and well."

Great Achievement

AFL-CIO Regional Dir. Michael Mann told the assembly it had won "the greatest single organizing achievement since the late Thirties."

Among major provisions of the 18-month contract are:

- An increase in driver commissions from 44 percent of meter income to 46 percent as of last May 17, rising to 47 percent next Dec. 1 and averaging $4.50 a week for the contract term.
- Retirement pay of $50 a month for those aged 65 with 25 or more years of service with any New York cab fleet.
- Full union shop

Meany Cites Basic Need For Jobs

By David L. Perlman

An action program to bridge the gap between America's promise and performance in overcoming centuries of racial injustice was laid before 2,400 delegates summoned by Pres. Johnson to a White House civil rights conference.

Delegates were also urged, in a message from AFL-CIO Pres. George Meany, to keep in mind the overriding importance of a full employment economy to make equal opportunity meaningful.

The program drawn up by conference leaders called for bold new steps at every level of government and by private groups to:

- Create immediate job oppor-

Great Achievement

AFL-CIO Regional Dir. Michael Mann told the assembly it had won "the greatest single organizing achievement since the late Thirties."

Among major provisions of the 18-month contract are:

- An increase in driver commissions from 44 percent of meter income to 46 percent as of last May 17, rising to 47 percent next Dec. 1 and averaging $4.50 a week for the contract term.
- Retirement pay of $50 a month for those aged 65 with 25 or more years of service with any New York cab fleet.
- Full union shop.
- Breakdown pay for time spent with a disabled cab.
- Life insurance with a special $5,000 benefit for death while on duty.
- Grievance procedure ending in arbitration of disputes.
- Call-in pay.
- A scholarship program for children of covered workers.
- Health and welfare benefits.

The mayor made a final and binding decision on several disputed points. Expressing regret that all issues could not be settled in collective bargaining, Lindsay said "it is time for the parties to learn to live together for the good of all."

Special Arbitrator Eric J. Schmertz, named by Lindsay, awarded mechanics and other inside workers a pay raise of $4 a week; a five-day 45-hour week now, going to 40 hours in December; overtime premium pay; three paid holidays and other improvements.

Yarborough Heads Senate Labor Unit

Sen. Ralph W. Yarborough (D-Tex.) has been named chairman of the Senate Labor subcommittee, succeeding the late Sen. Pat McNamara (D-Mich.).

Yarborough's appointment clears the way for subcommittee action on the House-passed minimum wage bill. The panel also has jurisdiction over the on-site picketing bill and other labor legislation.

Labor is one of three major subcommittees of the Senate Labor & Public Welfare Committee. Sen. Lister Hill (D-Ala.), chairman of the full committee, serves as chairman of the subcommittee on health and Sen. Wayne Morse (D-Ore.) heads the subcommittee on education.

WHITE HOUSE CONFERENCE "to fulfill these rights" is opened by A. Philip Randolph, elder statesman of the civil rights movement and AFL-CIO vice president. The applause is led by Vice Pres. Hubert H. Humphrey, the keynote speaker.

If House Action Stands:

Wage Floor Delay Priced At $2 Billion

America's lowest-paid workers will lose nearly $2 billion unless a House-passed amendment to the minimum wage bill is knocked out by the Senate.

The amendment was hastily tacked on the bill in a surprise "compromise" engineered by Rep. Adam C. Powell (D-N. Y.). It would delay for an additional year the second-step increase in the wage floor for 30 million persons now covered by the Fair Labor Standards Act.

The extra year's delay would mean an estimated $1.96 billion less in pay envelopes.

Under the bill brought to the floor by the House Labor Committee, which Powell heads, the present $1.25 minimum would rise to $1.40 next Feb. 1 and to $1.60 on Feb. 1, 1968.

At Powell's suggestion, made without consulting other committee members and without touching base with the Labor Dept., White House or congressional leaders, the House put off the $1.60 wage level to Feb. 1, 1969.

AFL-CIO economists say the extra year's delay will deprive a full-time worker paid at the legal minimum of more than $400 in wages.

Suggested Delay

Powell suggested, but did not sponsor, the postponement while the House was considering an even more drastic three-year gap between the $1.40 and $1.60 wage steps.

The three-year delay was proposed in an amendment by Rep. Thomas G. Morris (D-N. M.).

Labor legislative experts, who were following the progress of the bill closely, are firmly convinced the House would have rejected the Morris amendment. They believe that Powell's willingness to go along with a 1969 effective date impaired support for the committee bill—even though on the eventual rollcall Powell voted against the amendment he suggested.

Here's how the situation developed on the afternoon of May 26, as the House was nearing the end of its three-day debate on the bill:

The Morris stretchout amend-

LBJ Pledges No Turnback On Rights

The United States will not "turn back" from the path of racial justice and full as well as equal opportunity, Pres. Johnson told 2,400 delegates to the White House conference on civil rights.

He warned segregationists of both races that America is a single nation and that if its diverse people "are to build just and fruitful lives for themselves and their children . . . they must do it together."

Johnson, in an unscheduled appearance at a dinner meeting of the conference, assured the delegates that he was not asking "that righteous anger be silenced" or "that harmony be purchased at the price of individual freedom."

The President stressed, however,

For Jobs

By David L. Perlman

An action program to bridge the gap between America's promise and performance in overcoming centuries of racial injustice was laid before 2,400 delegates summoned by Pres. Johnson to a White House civil rights conference.

Delegates were also urged, in a message from AFL-CIO Pres. George Meany, to keep in mind the overriding importance of a full employment economy to make equal opportunity meaningful.

The program drawn up by conference leaders called for bold new steps at every level of government and by private groups to:

- Create immediate job opportunities for Negroes at all levels of skill, coupled with stepped-up training for better jobs.
- Provide "quality education for all" equal to that now available to "the fortunate few," while reducing racial concentrations in schools through "color-conscious" planning.
- **Provide adequate open housing for low and moderate income families and, in the process, break down the ghetto walls of inner cities and the exclusion barriers of the suburbs.**
- Assure equality in justice and law enforcement, protect Negroes seeking to exercise new-won rights in the South, and strive to defuse the powder-keg relations between police and Negro communities.

The action program was drafted by a 30-member leadership council, headed by Ben W. Heineman, chairman of the Chicago & North Western Railway. AFL-CIO Vice Pres. A. Philip Randolph, dean of civil rights leaders, served as honorary chairman and delivered the welcoming speech to the conference.

Vice Pres. Hubert H. Humphrey

5 Negroes Win County Nominations In Alabama Primary Run-Off Votes

Five Negro candidates won Democratic nomination for county offices in Alabama's party run-off primary May 31, but voting was light and apathetic generally. Eight Negro candidates for nomination to the state legislature were defeated, including some in districts where the Negro population heavily outnumbers white residents.

The massive "bloc" voting appealed for by both white segregationists and civil rights leaders did not materialize. In Macon County, where there are 23,000 Negroes to slightly more than 4,000 white residents. Lucius D. Amerson, a Negro Korean War veteran, won nomination for sheriff by a margin of only 3,497 to 3,113. Three other Negro candidates also won nomination by narrow margins for such offices as tax collector and Board of Revenue member.

In Perry County, Isom Atkinson defeated a white opponent for nomination for a seat on the county commission.

Federal observers watched the polls in six counties but the balloting was orderly as well as light. Run-off primaries for three statewide offices and three congressional seats proved insufficient to attract voters in large numbers.

In North Carolina primaries on May 29 all incumbent House members, including veteran Rep. Harold D. Cooley, chairman of the House Agriculture Committee, were renominated easily in Democratic races. So was Sen. B. Everett Jordan.

Two run-off primaries are scheduled for June 25. In the 5th Congressional District, Democrats Nick

$6 Million Budgeted:

Clothing Workers Press Organizing

Atlantic City, N. J.—The Clothing Workers have cleared the way for a vigorous organizing campaign by doubling the organizing budget to $6 million in the coming two years, Pres. Jacob Potofsky announced at the close of the union's 25th biennial convention here.

ACWA's current organizing progress has been satisfying but "now is the time to really drive hard" in the unorganized apparel plants, mainly in the South and Southwest, Potofsky said.

Convention delegates representing 385,000 workers in the U.S., Canada and Puerto Rico pledged the union's resources to a continuing campaign of organization.

They nominated Potofsky and Sec.-Treas. Frank Rosenblum for additional two-year terms without opposition and approved a constitutional change raising their salaries from $25,000 to $30,000 a year. Both have held their present posts since 1946.

Board Enlarged

The delegates voted to expand the executive board from 23 seats to 25 and nominated 21 incumbent vice presidents and 33 additional candidates. Balloting will be by mail, with the names only of those accepting nomination on the referendum ballot.

The convention approved strong policy statements on apparel imports, foreign affairs, consumer legislation, civil rights and other issues.

It also called for establishment of a national Dept. of Consumer Affairs and passage by Congress of improved minimum wage and consumer protection laws.

Vice Pres. Hubert H. Humphrey, in a major address to the delegates, called for a national drive against "slumism," which he described as poverty, illiteracy, discrimination and hatred—"not just broken-down buildings" but "poverty of the person" and the spirit.

The war against slums and deprivation is "a war in which all of us must enlist" because "we have the resources and capacity to abolish the scourge of slumism—we must have the will," Humphrey said.

NAACP Executive Dir. Roy Wilkins praised organized labor for its support of civil rights for all and said he is confident labor will "continue in the path its more enlightened units, such as the ACWA, have charted and followed."

Assistant Labor Sec. Esther Peterson, who is also special assistant to the President for consumer affairs, called for technical assistance by the government to help industries meet higher labor standards, protection for consumers such as the truth-in-lending and truth-in-packaging bills, and strengthening of the rights of women workers.

Pres.-elect Louis Stulberg of the Ladies' Garment Workers brought delegates a message of friendship from ILGWU Pres. David Dubinsky and saluted the ACWA for its pioneering achievements in the field of cooperative housing. The two unions have helped achieve a better life for

THE CLOTHING WORKERS' 25th biennial convention approved a $6 million budget for an expanded organizing drive in the next two years. More than 1,500 delegates attended general sessions.

IUE Recruits Job Trainees In 12 Cities

Members of the Electrical, Radio & Machine Workers will conduct a house-to-house drive in 12 key cities to recruit 1,500 disadvantaged persons for on-the-job training programs in the electrical manufacturing industry.

Under a $156,000 Labor Dept. contract, the IUE will seek out unemployed and underemployed persons for training and assist them during the training period, Labor Sec. W. Willard Wirtz announced.

The cities selected for the first

Stronger Labor Role Urged in Health Field

Sharply stepped-up labor involvement in the organization of community health services will be necessary under the new medicare amendments to the Social Security Act, participants in the first AFL-CIO conference on health care agreed.

Conferees from a dozen unions, and from medical schools, the federal government and labor education departments of six universities agreed that all hospital and health manpower resources will be under severe strain when the medicare amendments become effective July 1.

Reporting on the conference theme, After Medicare, What?

sity of California at Los Angeles; Dr. S. J. Axelrod, University of Michigan School of Public Health and spokesmen for the Group Health Association of America, Inc., the Machinists and the Community Health Foundation.

The delegates voted to expand the executive board from 23 seats to 25 and nominated 21 incumbent vice presidents and 33 additional candidates. Balloting will be by mail, with the names only of those accepting nomination on the referendum ballot.

The convention approved strong policy statements on apparel imports, foreign affairs, consumer legislation, civil rights and other issues.

It also called for establishment of a national Dept. of Consumer Affairs and passage by Congress of improved minimum wage and consumer protection laws.

TWU Vote Backs Officer Changes

New York—Members of the Transport Workers voted by an 8-1 margin in a national referendum for constitutional changes involving union officers. The changes confirm the appointment of Sec.-Treas. Douglas L. MacMahon and Executive Vice Pres. James F. Horst.

MacMahon and Horst were named by the executive council after the death of former Pres. Michael J. Quill Jan. 28. Quill was succeeded by Matthew Guinan, who had been secretary-treasurer and executive vice president.

have charted and followed."

Assistant Labor Sec. Esther Peterson, who is also special assistant to the President for consumer affairs, called for technical assistance by the government to help industries meet higher labor standards, protection for consumers such as the truth-in-lending and truth-in-packaging bills, and strengthening of the rights of women workers.

Pres.-elect Louis Stulberg of the Ladies' Garment Workers brought delegates a message of friendship from ILGWU Pres. David Dubinsky and saluted the ACWA for its pioneering achievements in the field of cooperative housing. The two unions have helped achieve a better life for members but one continuing problem remains—that of achieving sufficient earnings, Stulberg said.

Boss Glove Boycott Backed by AFL-CIO

The AFL-CIO pledged its "full cooperation" with the Clothing Workers' expanded consumer boycott campaign against Boss Manufacturing Co. voted at the union's 25th biennial convention.

Federation Pres. George Meany told ACWA that major unions with members in large plants will be contacted to guard against purchase of Boss gloves and to support the boycott.

Job Trainees In 12 Cities

Members of the Electrical, Radio & Machine Workers will conduct a house-to-house drive in 12 key cities to recruit 1,500 disadvantaged persons for on-the-job training programs in the electrical manufacturing industry.

Under a $156,000 Labor Dept. contract, the IUE will seek out unemployed and underemployed persons for training and assist them during the training period. Labor Sec. W. Willard Wirtz announced.

The cities selected for the first recruiting drive are Pittsburgh, Philadelphia, New York, Cleveland, Cincinnati, Chicago, Milwaukee, St. Louis, Indianapolis, Boston, Newark, N.J., and Springfield, Mass.

IUE Pres. Paul Jennings signed the Manpower Development & Training Act contract with Manpower Administrator Stanley H. Ruttenberg and assigned IUE Civil Rights Dir. William S. Gary to the drive.

Ruttenberg said the IUE is the first union to launch an on-the-job training program on a wide scale with a "buddy" system to aid the disadvantaged.

Stronger Labor Role Urged in Health Field

Sharply stepped-up labor involvement in the organization of community health services will be necessary under the new medicare amendments to the Social Security Act, participants in the first AFL-CIO conference on health care agreed.

Conferees from a dozen unions, and from medical schools, the federal government and labor education departments of six universities agreed that all hospital and health manpower resources will be under severe strain when the medicare amendments become effective July 1.

Reporting on the conference theme—After Medicare, What?—the delegates agreed that labor central bodies, city and state, should take the initiative in developing comprehensive care programs on a community and multi-union basis. Cited as one example on the city level was the program of the Cleveland, O., AFL-CIO and other community groups.

Unions have a long history of leadership in advancing health services in this country and have been "the single most powerful influence in the improvement of health benefits," Dr. Carruth J. Wagner, chief of the bureau of medical services of the U. S. Public Health Service, told the conference.

The close cooperation of labor, education, the health professions and government will be needed to meet the need for many more health workers—records personnel, nurses' aides, and other paramedical staff members, Dr. Wagner said.

Dr. William Kissick of the Office of the U. S. Surgeon General said the public has come to recognize that "every American should be entitled to the best possible medical care without regard to economic status." This will require the involvement of labor as the "largest organized body of consumers of medical care," Dr. Kissick reported.

Other speakers included Dir. Lawrence Rogin of the AFL-CIO Dept. of Education; Assistant Dir. Richard E. Shoemaker of the Dept. of Social Security; Frank Emig of AFL-CIO Community Service Activities; Malcolm Evans, Auto Workers; Ted Ellsworth, University of California at Los Angeles; Dr. S. J. Axelrod, University of Michigan School of Public Health and spokesmen for the Group Health Association of America, Inc., the Machinists and the Community Health Foundation.

Five Negroes Win Run-Offs In Alabama

(Continued from Page 1)

Galifianakis and Smith Bagley ran first and second in a four-candidate race but Galifianakis, a state representative, fell short of an absolute majority. The seat is being vacated by Democratic incumbent Rep. Ralph J. Scott.

Republicans have a run-off primary scheduled in the 10th Congressional District between W. Hall Young and Donald W. Wirick to pick a nominee to challenge Democratic incumbent Rep. Basil V. Whitener in November.

Otherwise, politically, a replay of a 1964 battle shaped up in Tennessee when Gov. Frank G. Clement said he would challenge incumbent Sen. Ross Bass for Democratic nomination to a full six-year term. Bass defeated Clement two years ago in a contest to fill the remainder of the unexpired term of the late Sen. Estes Kefauver.

Republicans also have a primary battle set for the Senate nomination. Howard H. Baker, Jr., beaten by Bass in the general election in 1964, is seeking the GOP nomination again. His opponent is Kenneth L. Roberts, state campaign manager two years ago for Republican presidential candidate Barry Goldwater.

Clement in his 1964 campaign criticized Bass for having supported civil rights legislation although the governor has since then sought to mend relations with the state's Negro voters. He has indicated that this year he will assail Bass' "support" of repeal of Section 14(b).

Two filibusters by Sen. Everett McKinley Dirksen (R-Ill.) prevented the Senate from ever actually having a vote on repeal, but Bass voted three times for cloture to shut off the filibusters.

Extra Year Delay in $1.60 Pay Base Priced at $2 Billion in Lost Wages

(Continued from Page 1)

ment was on the floor and the New Mexico congressman had just finished a speech urging the delay on the ground that a jump from $1.40 to $1.60 one year later would be too abrupt and would "overheat" the economy.

The committee bill, which Morris sought to amend, was itself a carefully fashioned compromise—the result of an agreement by labor, the Administration and the ranking members of the House Labor Committee. Powell himself, on March 10, announced before television cameras a final "meeting of the minds" on the timing of the increase.

As Morris finished his speech, Powell asked him whether he would "accept an amendment to his amendment" which would delay the second-step increase for two years instead of three years.

With alacrity, Morris agreed, declaring:

"I would personally rather have the 36 months, but if the gentleman from New York and the committee feel they can compromise on 24 months, I would certainly yield to their great wisdom and judgment."

Powell absolved the committee from the deal, replying:

"I am doing this unilaterally and not on behalf of the committee. We have not discussed it at all."

Any Sponsors?

After this exchange, Morris inquired whether anyone was offering the two-year stretch-out amendment Powell had suggested.

Powell replied that he was not "personally" offering such an amendment, "just engaging in colloquy" to find out if such an amendment would be agreeable to Morris.

A few minutes later, Rep. William H. Ayres, an Ohio Republican, formally offered the amendment, declaring that he was "very happy that the chairman of the full committee," referring to Powell, "has agreed to accept it."

The floor manager of the bill, Rep. John H. Dent (D-Pa.), made it clear that he wasn't accepting any such amendment and the issue went to two votes.

The first test was a non-record vote while the House was meeting as a Committee of the Whole. With a number of members absent, the teller count was 160 for the Ayres amendment, 121 opposed.

As observers noted and newspaper stories reported, Powell did not vote either way on that test.

Later, on the rollcall which hammered the amendment into the bill, Powell voted against the stretch-out amendment he had suggested—thus ending up with a "right" vote on the AFL-CIO scoreboard.

The rollcall for the Ayres amendment was a close 205-194—a switch of only six votes would have reversed the outcome.

The narrow margin appears to bear out the contention of legislative analysts that the more drastic three-year wage stretch-out could certainly have been defeated.

White House Conference:

Rights Parley Keyed To Action Program

(Continued from Page 1)

sounded the keynote, declaring the 20 million Negro Americans "will no longer be pacified by slogans or tokens . . . nor should they."

The program presented to the conference, Humphrey readily conceded, would appear startlingly "radical" to many. But, he asked, "What are the alternatives?"

Fulfilling the legitimate expectations of the civil rights revolution, Humphrey said, "will be America's most urgent domestic task for many years to come."

Meany's message called for passage of the pending civil rights bill and urged "a far faster pace" of school desegregation aided by "a special multi-billion dollar federal school fund."

Above all, he said, "there must be jobs at good wages for all who can work. There must be an adequate system of income maintenance for those who cannot."

Dialogue Begins

In a dozen workshops, the delegates began the dialogue—seeking to break down broad generalities into specific actions they can undertake in their home communities and programs they can present to their organizations.

Joining in the two days of discussions was a cross-section of concerned America—Negro and white, college deans and slum dwellers, union officials and corporation presidents, civil rights militants and moderate white southerners, clergymen of all faiths and ranks. Labor's contingent of about 100 came from large and small unions and from state and city central bodies.

It was an audience wrenched in the heart by Randolph's account of "the destructive and devastating impact of the ghetto" and his warning that: "Every day's delay in breaking down the barriers of segregation in housing, schools and discrimination in jobs means irreparable damage to hundreds of thousands of human beings."

The solution, he said, can't wait until people "are educated out of their prejudices" or "until everyone loves his neighbor."

Negroes, he stressed, are not asking for "love" but for "their rights as citizens and human beings."

The conference marked a new step in the move towards self-isolation from the mainstream of the civil rights movement by the Student Non-Violent Coordinating Committee, which boycotted the conference even though one of its spokesmen had served as a member of the leadership council.

Resolutions Allowed

A controversy over conference rules was apparently averted by a compromise which permitted introduction and voting on resolutions in the final sessions of the 12 workshops.

The council had originally barred formal resolutions on the ground that the limited time of the conference and its broad scope made it impractical to devote hours to parliamentary maneuverings.

The no resolution policy was

Factory Hiring Down for April

LATIN AMERICAN UNITY among nations as well as among workers is vital to the material welfare of all, Felipe Herrera, president of the Inter-American Development Bank, tells the 13th graduating class of the American Institute for Free Labor Development. Others who took part in the ceremonies are, from left, AFL-CIO Sec.-Treas. William F. Schnitzler, AIFLD Board Chairman J. Peter Grace, AIFLD Administrator William C. Doherty and, at right, Deputy U.S. Coordinator for Alliance for Progress David Bronheim.

USWA Canned Milk Aids Viet Children

Five hundred cases of canned chocolate milk are en route to Viet Nam—a gift of the Steelworkers to children attending schools organized by the Vietnamese Federation of Labor.

Steelworkers Pres. I. W. Abel wrote Pres. Tran Quoc Buu of the Vietnamese federation that the milk is a "token of solidarity" from USWA local unions throughout the nation. He said the union is also furnishing through CARE 800 school kits along with quantities of sewing, physical education, needle trade and classroom supply kits for distribution by Viet Nam unions.

Free Labor Institute Graduates 13th Class

The American Institute for Free Labor Development is educating 20,000 Latin American workers and union leaders yearly, the graduating class of the 13th training program was told in ceremonies at AFL-CIO headquarters.

The 19 newest graduates of the four-year-old school now return to eight Latin American nations to extend further the teachings of trade unionism "tailored to the needs of the workers and their country," AIFLD Administrator William C. Doherty, Jr. declared.

The students, who completed the first program of advanced training for trade union educators, were urged by AFL-CIO Pres. George Meany to "work not for themselves alone, not for their members alone but for their entire society as a whole" upon their return home

for a democracy with bread, peace and freedom."

The graduates also were addressed by the president of the Inter-American Development Bank, Felipe Herrera, and Rev. Benjamin L. Masse, associate editor of America magazine.

The students represented unions in Argentina, Bolivia, Colombia, Chile, Ecuador, Peru and Venezuela.

In a dozen workshops, the delegates began the dialogue—seeking to break down broad generalities into specific actions they can undertake in their home communities and programs they can present to their organizations.

Joining in the two days of discussions was a cross-section of concerned America—Negro and white, college deans and slum dwellers, union officials and corporation presidents, civil rights militants and moderate white southerners, clergymen of all faiths and ranks. Labor's

conference even though one of its spokesmen had served as a member of the leadership council.

Resolutions Allowed

A controversy over conference rules was apparently averted by a compromise which permitted introduction and voting on resolutions in the final sessions of the 12 workshops.

The council had originally barred formal resolutions on the ground that the limited time of the conference and its broad scope made it impractical to devote hours to parliamentary maneuverings.

The no resolution policy was sharply attacked by spokesmen for the Congress of Racial Equality and the council, after determining that a substantial number of delegates favored some form of voting, adopted the workshop resolution policy on the eve of the conference.

Workshop sessions were still in progress as the AFL-CIO News went to press and the conference was scheduled to wind up with a final dinner meeting. A summary of the views expressed at workshops, as well as resolutions adopted, was to be presented to Pres. Johnson.

Factory Hiring Down for April

The factory hiring rate declined nearly 10 percent in April—from 52 to 47 per 1,000 workers, the Bureau of Labor Statistics of the Labor Dept. reported. This was accompanied by slight fall-offs in the seasonally adjusted layoff and quit rates.

The decline in hirings resulted, BLS said, from a reduction in new hires. But the April figures may represent only a temporary drop since both the accession and new hire rates had reached high levels in March, according to the report.

Clean Elections Bill Proposed by Johnson

Pres. Johnson sent a proposed "clean elections" bill to Congress, in line with a pledge in his State of the Union message last January, intended to change radically the traditional methods of financing political campaigns.

Principal features of the Administration measure are designed, the President said, to eliminate the "evasion" and "circumvention" invited by existing laws covering political contributions and to encourage wider public participation in the financing of campaigns to reduce "undue influence of large contributors."

The wider public participation would be encouraged by allowing citizens a maximum of a $100 tax deduction for political contributions —federal, state or local.

The "evasion" of existing election expenditure laws would be attacked by eliminating technical "ceilings" of $3 million for a national committee during presidential years while there is no limit on the proliferation of committees that may raise funds and spend them in behalf of a candidate.

The Administration bill is marked by several features that represent, in part at least, departures from previous "clean elections" proposals considered by Congress for more than a decade:

- It seeks to put teeth into the theoretical maximum of $5,000 in contributions from any person for any candidate by requiring that all contributions—to committee, candidate's treasurer or any other group —be counted in the total.
- The maximum $100 tax deduction for political contributions would be allowed any taxpayer whether he itemizes deductions on his federal income tax return or takes the "standard deduction" of 10 percent.

The AFL-CIO has urged an actual tax credit—a reduction from the tax owed—for political contributions rather than a mere deduction from taxable income.

- The Administration bill would apply to primary elections as well as to general elections.
- It would recognize tax deductibility for contributions to political committees working for a candidate as well as contributions to formal party organizations.

the Steelworkers to children attending schools organized by the Vietnamese Federation of Labor.

Steelworkers Pres. I. W. Abel wrote Pres. Tran Quoc Buu of the Vietnamese federation that the milk is a "token of solidarity" from USWA local unions throughout the nation. He said the union is also furnishing through CARE 800 school kits along with quantities of sewing, physical education, needle trade and classroom supply kits for distribution by Viet Nam unions.

LBJ Pledges No Turnback On Rights

(Continued from Page 1)

his conviction that "we shall either move this nation toward civil peace and social justice for all of its citizens, or for none."

He added: "We shall either find the means to open employment to all our workers, to find decent housing for all our families, to provide a good education for all our children, or we shall see the American promise spoiled for each of them."

There is no "sanctuary" for anyone, Johnson affirmed, "from the effects of widespread poverty and discrimination."

In tackling the problems of jobs, education and housing—"the tap roots of poverty"—mistakes have been made and "we will make others," the President said. "We will arouse hopes as we have already done, that cannot be quickly fulfilled. But," he stressed, "we are moving. We shall not turn back."

Johnson took note of the diversity of views expressed at the conference, telling the delegates: "Your President may not agree with everything you do, but he will consider everything you say."

4 Douglas Plants Go to Auto Union

A representation election in four Tennessee plants of the Douglas Aircraft Corp., conducted by the National Labor Relations Board, resulted in a 115-35 victory for the Auto Workers.

The plants are in Sparta, Monterey, Cookeville and Carthage, and turn out components for military and space purposes. Present employment totals 158 persons, with plans for expansion to 3,000.

20,000 Latin American workers and union leaders yearly, the graduating class of the 13th training program was told in ceremonies at AFL-CIO headquarters.

The 19 newest graduates of the four-year-old school now return to eight Latin American nations to extend further the teachings of trade unionism "tailored to the needs of the workers and their country," AIFLD Administrator William C. Doherty, Jr. declared.

The students, who completed the first program of advanced training for trade union educators, were urged by AFL-CIO Pres. George Meany to "work not for themselves alone, not for their members alone but for their entire society as a whole" upon their return home.

Meany told the students that the path their unions took in achieving these ends was of their own choosing, though U. S. unions admittedly have a selfish interest in the AIFLD.

"It is in the interest of American labor that free unions exist all over the Western Hemisphere," he said. "Where workers are not free, soon all social institutions are not free."

Preceding his remarks, Meany read a message from Pres. Johnson who saluted the "conscientious students" for their eagerness and knowledge which will "open new vistas of hemispheric progress and achievement."

David Bronheim, deputy coordinator for the Alliance for Progress told the graduates that they "return to the hemisphere on the march."

"Your job is to lift the heads of those who have been unable to lift their own," he said.

Joint Program

The AIFLD is an international program by the AFL-CIO in conjunction with business and government to develop democratic trade unions and encourage free collective bargaining in Latin America. The program also includes projects for worker-owned housing and "impact projects" ranging from disaster aid to playgrounds.

AIFLD's educational impact on Latin America was noted by Doherty, who pointed out that during the last three years, the institute had established in-resident training centers in 20 different countries. Workers who attend these centers return to their unions in the outlying villages and provinces to put their new knowledge into practice.

The program in Washington is primarily aimed at advanced training for union specialists.

Speaking for the graduating students, Angel Sandoval Esponoza of Peru declared their hopes were "now fortified by the armor of newly-gained ideas and knowledge" to help in their "struggle for a democracy with bread, peace and freedom."

The graduates also were addressed by the president of the Inter-American Development Bank Felipe Herrera, and Rev. Benjamin L. Masse, associate editor of America magazine.

The students represented unions in Argentina, Bolivia, Colombia, Chile, Ecuador, Peru and Venezuela.

Court Upholds New Districts In Maryland

The State of Maryland became one of the last to learn what its congressional districts will be for this year's election when the Supreme Court upheld a lower court decree dividing the state into eight districts substantially equal in population.

The Maryland General Assembly failed in both 1965 and 1966 to devise a congressional districting plan that met the "one man, one vote" standards laid down by the high court.

A 1965 redistricting bill passed by the state legislature was suspended when it was petitioned to popular referendum and later held unconstitutional by a three-judge special federal court.

A 1966 special session summoned to devise a new plan collapsed in bickering and adjourned without action. The federal court then issued its own redistricting decree and prohibited any referendum on the legislature's 1965 plan.

The Supreme Court upheld the lower court in a summary order rejecting last-ditch protests without discussing them.

Convening in Baltimore, the 5,000-member Negro American Labor Council stressed cooperation with the AFL-CIO.

LABOR

EU – Coalition

Negro unionists try a new tack

Instead of focusing solely on remaining discrimination in unions, the Negro American Labor Council is now working toward broader cooperation with AFL-CIO on legislative and job aims

Father and son—Horace Sheffield, head of NALC's Detroit unit, and his boy—watch convention proceedings. Detroit is among largest, most militant chapters.

When the Negro American Labor Council held its founding convention in Detroit in 1960, a casual visitor might have concluded that it saw unions as its major enemy. Didn't unions condone segregated locals, separate seniority lists for white and Negro, and the Negro's lot at the bottom of the job heap, fire-breathing speakers asked.

But at last week's Baltimore convention, it was obvious that NALC had mellowed. There was praise for the AFL-CIO's support of civil rights legislation and efforts to desegregate member unions. And there was strong support for an alliance between the Negro and labor, not only as a logical way to improve the lot of both white and Negro workers, but—in the words of retiring President A. Philip Randolph—as the core

of a "coalition of conscience" to serve wide humanitarian aims.

Such an alliance, it was argued, also made sense politically—for instance, as a means to exchange the help of Negro organizations in defeating right-to-work laws for labor help in achieving Negro job breakthroughs.

It was a theme that the major guest speaker, United Steelworkers President I. W. Abel, found congenial. Abel told an NALC rally: "Organized labor has had its revolution, with the assistance and active support of the American Negro. Now, the American Negro is in the throes of his revolution, and he has organized labor as an active partner."

Togetherness, however, apparently stopped short of the building trades unions.

Building bias. If building trades employers and union leaders can't end bias in apprenticeship programs ("And how can they when they're committed to it historically?" one delegate asked), then control of the programs should be taken out of their hands, the convention agreed. Either the Labor Dept. or the U. S. Employment Service would do the job better, several delegates suggested—a proposal that is certain to arouse violent

Grand old man of civil rights and labor movement, A. Philip Randolph, listens to his successor, Cleveland Robinson, before retiring as NALC president.

mind your own business.

Sure, Congress sells you the franchise.

But you operate your own Inn.

Experts plan and develop your new motel—or convert your existing property. You get an advanced nationwide reservations system. National promotion and publicity. Major credit-card recognition. Professional management, if requested.

Congress Inns is one of America's leading motor-hotel chains. Its members earn consistently higher profits than independent motels.

That's what minding your own business gets you.

Defeated candidate was Frank Evans of Allied Industrial Workers.

opposition among the building trades.

But the NALC was careful not to include all of organized labor in its criticism of apprenticeship programs and other alleged remnants of discriminatory practices.

"We don't like it when someone puts down all Negroes because of something a few did. We're not going to pick on the entire labor movement because a few unions are slow to change," a delegate said.

New priority. In part, this deliberately fair-minded approach sprang from recognition of the AFL-CIO's real accomplishments in enforcing integration on member unions during the past six years. Delegates referred to the "turnaround" in AFL-CIO President George Meany's attitude ("He was always against bias, but he used to put other things first. Now it gets priority"). Some even explained their attacks against discrimination in specific unions in terms of strengthening Meany's hand to move against those unions.

But in addition, the nature of its membership almost forces the NALC to be a cooperating organization rather than an antagonistic one. The majority of its active members—an estimated 5,000—are officials or paid staff members of AFL-CIO unions.

As president of the Brotherhood of Sleeping Car Porters—and an elder statesman of both labor and the civil rights movement—Randolph presumably does not feel fettered by his union connections. His successor as NALC president, Vice-President Cleveland Robinson of the Retail, Wholesale & Department Store Union (who defeated Frank Evans of the Allied Industrial Workers), presumably also occupies a post lofty enough to give him substantial freedom.

Nature of cooperation. But the typical NALC activist might find it awkward for his career to become known as "that guy who's always knocking unions." His job qualifies him as an informed internal critic of the labor movement. But that same job—plus the union loyalties that led him to it in the first place—incline him toward the positive rather than the negative view, toward mutual interests rather than conflicting ones.

As a result, some Negro and labor leaders question the NALC's usefulness. They call it a paper organization.

Others say this misses the point. They regard the combination of pressure and support as potentially the NALC's unique contribution to Negro-labor relations.

For the short term, the NALC emphasized two aims at its convention: (1) cooperation with the AFL-CIO both in organizing and in waging the political fight for minimum wage, housing, health, and other legislative reforms, (2) pressure for more and better job training.

In the latter field, the NALC's local units were urged to take the initiative in sponsoring training projects under various Great Society programs.

Several such projects were reported in the works. One, in Cleveland, involves a joint effort with the United Steelworkers and the Grabler Mfg. Co., with the Labor Dept. financing the planning. **End**

Senate Action Urged: Coalition

Cut in Rights Funds Assailed as 'Tragic'

The AFL-CIO urged the Senate to restore a deep cut made by the House in the civil rights enforcement budget of the Dept. of Health, Education & Welfare.

Legislative Dir. Andrew J. Biemiller said the $927,000 budget cut—a reduction of more than 20 percent—would be "a tragic mistake."

He told members of the Senate Appropriations subcommittee handling the bill that the cut would greatly hamper enforcement of non-discrimination policies in schools, hospitals and other federally-aided programs. There is already, he warned, "too much paper compliance" based on "a perfunctory examination of forms and too little on-the-spot checking."

Biemiller stressed that "full and honest compliance" with non-discrimination in federally-assisted programs "is essential to avoid outbreaks of frustration and anger by those who continue to suffer the burden of discrimination. "It should have the support of Congress," he added.

The House cut was a prime target of resolutions passed at the recent White House Conference on civil rights. Delegates described it as "a particularly disquieting example of the tendency to weaken enforcement" of civil rights laws "by failing to provide enough funds." The conference resolution

Biemiller noted that the $927,000 cut would mean eliminating 70 full-time civil rights compliance positions in the department and would greatly curtail studies of the "complex and difficult" problems of school segregation in the North.

On another legislative front, a House Judiciary subcommittee approved four of the five sections of the administration's civil rights bill, but left it up to the full committee to decide on the issue of housing discrimination.

Sections approved are aimed at barring discrimination in selection of juries, speeding desegregation of schools and public facilities, and strengthening federal laws against racial violence.

The proposed ban on housing discrimination has run into heavy Republican opposition and has been attacked by Senate GOP Leader Everett McKinley Dirksen (Ill).

Civil rights groups are pressing for early action by the House committee to overcome two obstacles ahead—a likely House Rules Committee bottleneck which would require use of the "21-day rule" to get the bill to the House floor in August, and the threat of a filibuster when the bill reaches the Senate.

Carolina Labor News 6/24/66 Cont

NOBODY Tells YOU How To VOTE

The labor movement does not attempt to tell its members how to vote. The decision is made individually—by each member of a Union—in the privacy of the booth. This "Voter's Guide is simply a service to trade union members." We offer this list of endorsements as a guide so you can be thoroughly familiar with the candidates for key state and local offices.

The real and final test of democracy is at the ballot box. Therefore, be sure you cast your ballot Saturday, June 25, 1966.

Remember: Your right to vote is a right. It is also a duty. We urge you to vote on Saturday, June 25.

This column carries a complete list of the endorsements of the Durham Central Labor Union which is composed of all the AFL-CIO Unions in Durham. Endorsements were not made lightly. Voting records, statements by the candidates and the candidates background were carefully researched, developed and evaluated prior to endorsement by the delegates. The screening committee, with delegates representing the tobacco workers, communicatioons workers, retail clerks, meat cutters and machinists spent several hours of four nights interviewing candidates before finally making its recommendations. The screening committees recommendations to the meeting of the Durham Central Labor Union were unanimous and the delegates to the meeting attended by most unions in Durham was also passed unanimously.

LET'S LOOK AT THE RECORD:

SMITH BAGLEY—Born 31 years ago in Connecticut, he is the millionaire grandson of the anti-labor tobacco multi-millionaire R. J. Reynolds Sr. Bagley has never in his life had to worry about a mortgage payment, automobile payment, family doctor bills and has not the slightest idea of the problems of the people of the Fifth District. Bagley has absolutely NO EXPERIENCE in governmental affairs at any level. His only qualification appears to be that through exploitation of tobacco workers in the Reynolds plant that he thinks he has enough money to buy himself a seat in Congress. We are confident that the voters will repudiate this blatant attempt to buy a congressional seat. Just look at the amount of posters, billboards, newspaper ads and radio and TV adverisements, Bagley has bought.

NICK GALIFIANAKIS—An experienced state legislator who has a record of supporting progressive legislation. He introduced and fought hard to raise the state income tax exemptions for all workers dependents from $300 to $600 each and he supported the dollar minimum wage and other programs to help workers and farmers.

In the field of education, Galifianakis has worked and voted for better schools and higher pay for teachers. Contrary to smear reports he has always voted for the highest minimum wage law introduced in the Legislature.

Two Things Brighten Political Outlook

Two developments of recent years exert a big influence toward making government more favorable to the working man. These are:

- The Supreme Court decisions which have forced reapportionment of state legislatures on the basis of equal population in each district.

- The Voters Rights Act of 1965 which is bringing about the registration of hundreds of thousands of Negroes, members of other minorities, and poor people.

Reapportionment of legislatures already has resulted in improvement of laws in some states. The results will be even more noticeable in the future.

The influence of newly-registered Negro voters is limited in extent thus far, but beginning with 1968 elections it is likely to mean some new and better faces in the national Congress.

Reapportionment of legislatures has already meant a shift of the majority vote from low-population rural areas to cities in some states. Additional states will be affected in 1966 elections.

The number of state legislators coming from the suburbs, as well as from the cities, is increased as the number from farms is decreased. Some suburban legislators will be anti-labor, but on balance they and the typically pro-labor city legislators will pass state laws more to the liking of working people than did rural-dominated legislatures.

The shift of political power to urban areas will affect all politics and will tend to cause election of more liberal congressmen, senators and governors.

Sen. Everett Dirksen (R.-Ill.) tried to turn legislative reapportionment around. He proposed a constitutional amendment which would permit each state to district one of its houses by measurements other than equal population. This needed a two-thirds vote to carry and fell seven votes short in the U.S. Senate. That's the third time the Senate had turned it down.

The influence of Negro voters in several southern states will not be limited to the issue of civil rights. The congressmen elected with the aid of heavy Negro votes generally will be more pro-labor and more liberal on issues of education and welfare.

Back in New Deal days, most southern congressmen were liberal on economic issues — they championed "the poor man" — although anti-civil rights and often anti-labor. Congressman "Cheap Juice John" Rankin of Mississippi, for example, was a major force in building the TVA.

In the 1940s most of these congressmen turned reaction-

privately, that the new Negro vote will not cause a dramatic change in 1966. Results of the Alabama primary bear this out. But, by 1968 more Negroes will be registered, they will have themselves better organized, more suitable candidates will have come to the fore. Civil Rights leaders confidently expect substantial results that year.

More pro-labor legislatures in states with a heavy Negro vote can mean better labor laws, better workmen's comp and unemployment comp, better safety laws and many other measures of benefit to white-skinned as well as dark-skinned working people.

If more liberal congressmen are elected from only a dozen southern districts in 1968, due to the new Negro vote, it can mean the difference between win and loss for some items of national legislation.

Labor's Man for Governor

John W. Hooker, Jr., candidate for governor of Tennessee, who has been endorsed by the AFL-CIO Tennessee State Labor Council, is pictured at right above with, from left, Pres. K. R. Gibson of a Memphis, Tenn., local of the International Chemical Workers, OCAW Intl. Reps. Hugh Owen and Paul Palmer and Pres. Joe Alsup of OCAW Memphis Local 3-94.

Schultz Heads District Six

Fred A. Schultz of St. Paul, Minn., Local 6-715, was elected president of the Dist. 6 Council at the council meeting April 16-17 in Cloquet, Minn.

Others elected were Vice Pres. James Sturdevant, Ft. Dodge, Iowa, Local 6-503; Sec.-Treas. Anthony Buss, Hastings, Minn., Local 6-418; executive board members Joe Tucker, St. Paul local 6-75; Ralph Wheaton, Ft. Dodge Local 6-502; Duane Smith, Hastings Local 6-717, Henry C. Miller, Cumberland,

Support Boycott

The AFL-CIO Executive Council has called for full support of a nationwide boycott of products of the Di Giorgio company, largest grape grower in the Delano, Calif., valley. The boycott was called by the National Farm Workers Association because Di Giorgio has not recognized the NFWA and armed guards have attacked grape strikers.

a two-thirds vote to carry and fell seven votes short in the U.S. Senate. That's the third time the Senate had turned it down.

The influence of Negro voters in several southern states will not be limited to the issue of civil rights. The congressmen elected with the aid of heavy Negro votes generally will be more pro-labor and more liberal on issues of education and welfare.

Back in New Deal days, most southern congressmen were liberal on economic issues — they championed "the poor man" — although anti-civil rights and often anti-labor. Congressman "Cheap Juice John" Rankin of Mississippi, for example, was a major force in building the TVA.

In the 1940s most of these congressmen turned reactionary on most all issues. In recent years, few southern congressmen have voted pro-labor or liberal on any legislation.

That will change with the increase in Negro vote in their districts. The change already is noticeable in a few districts where Negroes got the right to vote before the Voters Rights Act was passed. Soon Negroes will have the balance of power in a number of districts and the result will almost automatically tend to be more liberal public officials.

Civil rights leaders concede,

Labor's Man for Governor

Be Sure You Give Hairy-Chested Answers on Personality Test!

(Or, Vice Versa if You're a Woman)

To get a good management job and hold it today a man has to be a "strong, boorish, vigorous, hairy, hardboiled character with no cultural inclinations."

This is the warning advanced in a new book, "How to Beat Personality Tests," by Charles Alex. The book, which is becoming a surreptitious best-seller among management people, is a comprehensive manual for job-seekers on what to say and what not to say and what-to-admit and what-not-to-admit on company personality tests. (Incidentally, 100,000,000 of these tests are given in the U.S. each year.)

Here's one personality test trick on which Author Alex gives advice. Frequently the tests will ask the male applicant to draw a man and a woman. This is designed to discover whether the jobseeker has any sexual maladjustment. The trick is that the applicant must draw his own sex first or lose points for masculinity. Moreover, his male figure must be fully-clothed but the woman must be nude "to represent a good clean-cut American girl."

If the woman is well-endowed "the applicant will get good marks for wholesome heterosexuality." If the applicant admits that he is religious or says a daily prayer, this is wrong, according to Alex's book, "because he would be revealing an excessive and dangerous degree of religiosity which could cause a conscience-conflict in making a ruthless decision."

If the job-seeker is a woman she must be careful to give exactly opposite answers to those required of the men, Alex warns, "because firms do not generally like mannish women."

The payoff warning on how to lie to beat the personality test has to do with culture. Says Author Alex: "Don't ever tell a prospective employer that you could spend an evening alone reading Shakespeare. This would put you out of the running for a job right away, because it would indicate an unhealthy interest in esthetics which is definitely a feminine trait!"

OCAW Leaders Boost California Governor

Sec.-Treas. Al Chandler of Long Beach, Calif., Local 1-128, second from left above, introduced California Governor Pat Brown, center, when the governor spoke to some 200 Los Angeles area labor leaders recently at Wilmington, Calif. Brown, running for re-election, lashed out at extremists of both the left and right and asked for the continued support of organized labor. Left to right in the picture are Rep. Odell Clayton of Local 1-128, Chandler, Gov. Brown, OCAW Dist. 1, Dir. William J. Forrester and Sec.-Treas. George Froom of South Bay Local 1-547.

LBJ Names Beirne

President Joseph A. Beirne of the Communications Workers, a vice president of the AFL-CIO and chairman of its Community Services Committee, has been named by President Johnson to a two-year term on the President's Committee on Mental Retardation.

For Milk Program

National AFL-CIO is supporting a U.S. Senate proposal which would provide a special $335 million, three-year milk program for school children.

Automation Strikes Again

What are we going to do with all the people?

For some time we have had a few service stations where customers can serve themselves by dropping coins in the gas pump. Now the pumps are going to take credit cards.

Oilgram, daily industry newsletter, says the system has already been started in Sweden by Sevenska Esso, and the publication "hears" that several oil companies will install such pumps.

The publication reports a special type of punched credit cards are used which turn on the pumps; gasoline sales data are automatically registered on punch tape, which is used by Esso's computers for billing.
